

Fiscal 2Q 2016

October 25, 2016

"We took another step forward in our plan toward sustainable profitability and cash generation with this quarter's results. The top line is now growing, we continue to take costs out of the business, and we are successfully raising money at materially lower rates to reduce our future cash interest expenses."

Marcelo Claure (CEO)

More than \$1.1B of year-to-date

or year-to-date reductions in CoS and SG&A

Total

Connections[^]

Sprint ended the quarter with nearly **60.2 million connections**, including 31.3 million postpaid, 13.5 million prepaid, and 15.4 million wholesale and affiliate connections.

The company had **740,000 net additions** in the current quarter compared with 377,000 in the prior quarter and 1.1 million in the year-ago period.

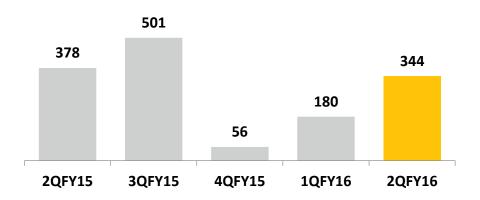

The company has added nearly **2.1 million net additions^** over the last four quarters.

Customer Metrics

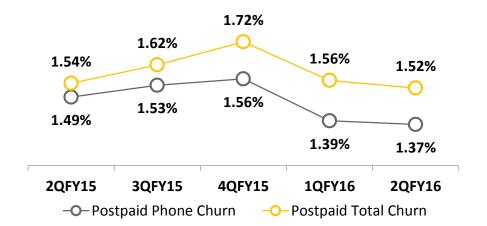

Postpaid net additions[^] were 344,000 during the quarter compared to 378,000 in the yearago period and 180,000 in the prior quarter. The year-over-year decline was driven by tablet net losses in the current quarter, partially offset by higher phone net additions. The sequential increase was primarily driven by higher phone gross additions as well as lower postpaid phone churn.

Postpaid Net Adds^

In Thousands

Postpaid Total Churn and Postpaid Phone Churn^

Postpaid Phone Churn

1.37%

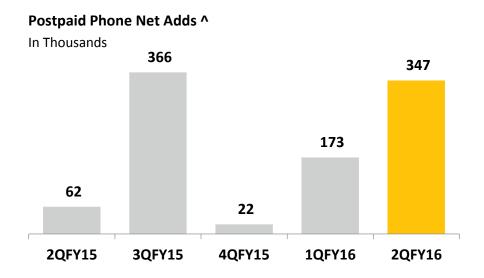

Best Ever

Postpaid phone churn^{*} of 1.37 percent, once again a record low, compared to 1.49 percent in the year-ago period and 1.39 percent in the prior quarter. The year-over-year improvement was driven by continued focus on the quality of customers and improving the network experience. Sequentially, network improvements more than offset seasonal pressure.

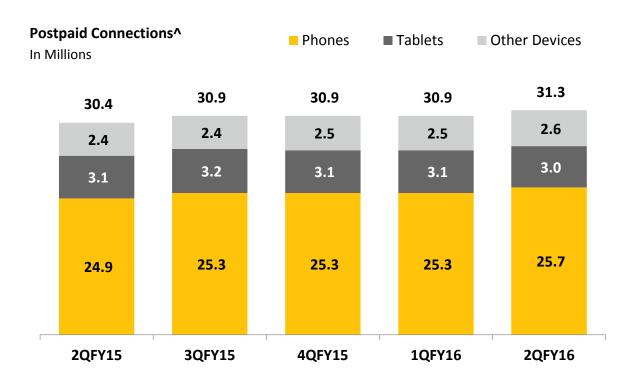

Postpaid churn^a of 1.52 percent for the current quarter decreased from 1.54 percent in the year-ago period and 1.56 percent in the prior quarter. Year-over-year, lower phone churn was offset by higher tablet churn related to fewer promotional offers. The reduction in churn from the prior quarter was due to lower phone churn more than offsetting seasonal pressure.

Customer Metrics

Postpaid phone net additions^a of 347,000 compared to net additions of 62,000 in the year-ago period and 173,000 in the prior quarter. Both the year-over-year sequential improvements and were primarily driven by higher gross additions combined with lower churn. This quarter was the fifth consecutive quarter positive phone net additions and the company ended the quarter with 25.7 million phone connections.

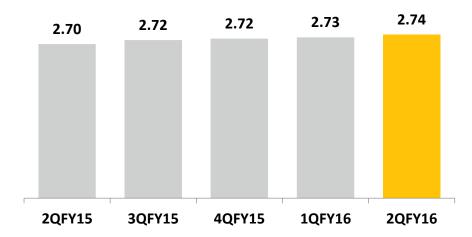

Tablet net losses[^] were 50,000 in the quarter compared to net additions of 228,000 in the year-ago period and net losses of 31,000 in the prior quarter. The year-over-year decline was due to lower gross additions and higher tablet churn rates as the company continues to focus on growing phone connections. The company ended the quarter with 3.0 million tablet connections.

Average postpaid subscribers per account^ of 2.74 at quarter
end compared to 2.70 in the
year-ago period and 2.73 in the
prior quarter. The growth has
been driven by higher phones
per account, partially offset by
recent tablet pressure.

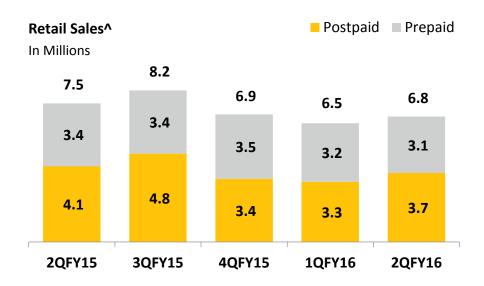

Prepaid net losses[^] of 427,000 during the quarter compared to 188,000 in the year-ago period and 331,000 in the prior quarter. The year-over-year increase in net losses was mostly due to the Assurance brand, as the company continues to emphasize higher value contribution brands such as Boost and Virgin Mobile. The sequential increase was mostly related to less aggressive Boost offers designed to improve profitability.

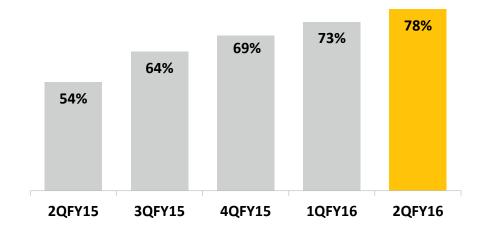

Prepaid churn[^] was 5.63 percent compared to 5.06 percent for the year-ago period and 5.55 percent for the prior quarter. The year-over-year increase was primarily due to higher churn in the company's Assurance brand.

Wholesale & affiliate^ net additions were 823,000 in the quarter compared to 866,000 in the year-ago period and 528,000 in the prior quarter. Connected devices represented the majority of the net additions.

Retail sales[^] were 6.8 million during the quarter compared to 7.5 million in the year-ago period and 6.5 million in the prior quarter. Lower postpaid upgrade volumes and prepaid gross additions were the biggest drivers of the year-over-year decline, while seasonally higher postpaid upgrade rates impacted the sequential change.

Postpaid Tri-band Phones as a Percentage of Phone Connections ^

Postpaid tri-band LTE phones^a represented 78 percent of the 25.7 million ending postpaid phone connection base compared to 54 percent at the end of the year-ago period and 73 percent at the end of the prior quarter. During the quarter, 94 percent of postpaid phones sold were tri-band.

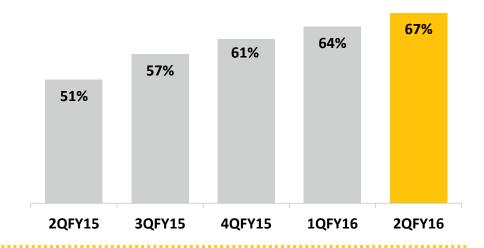

Postpaid smartphones[^]

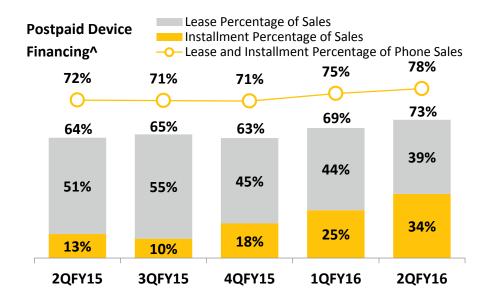

represented 93 percent of the ending postpaid phone connection base compared to 90 percent at the end of the year-ago period and 93 percent at the end of the prior quarter. During the quarter, 98 percent of postpaid phones sold were smartphones.

Postpaid carrier aggregation capable phones^, which allow for higher data speeds, were 75 percent of postpaid phones sold during the quarter, increasing the number of these phones within the phone base to 42 percent.

on unsubsidized service plans[^] represented 67 percent of the base at the end of the quarter, compared to 51 percent in the year-ago period and 64 percent in the prior quarter.

Postpaid Phone Customers on Unsubsidized Service Plans^

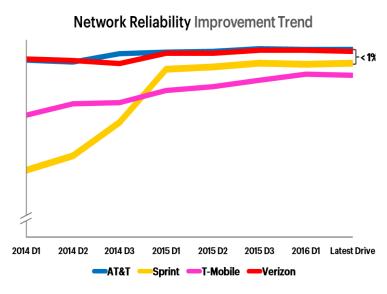

Postpaid device financing take rate^{*} was 73 percent of postpaid sales for the quarter (39 percent on leasing and 34 percent on installment plans) compared to 64 percent for the year-ago period and 69 percent in the prior quarter.

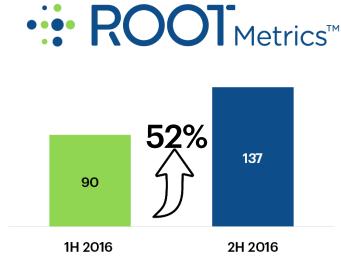

Postpaid phone financing take rate^{*} was 78 percent of phone sales for the quarter compared to 72 percent for the year-ago period and 75 percent in the prior quarter.

Postpaid upgrade rate[^] was 6.4 percent during the quarter compared to

7.8 percent for the yearago period and 5.4 percent for the prior quarter. The year-overyear decline was driven by a lower percentage of the overall base being eligible for an upgrade. The sequential increase was driven by normal seasonality combined with the iPhone 7 launch.

Sprint aims to unlock the value of the **largest spectrum holdings in the U.S.** by densifying and optimizing its network to provide customers the best experience. The company's LTE Plus Network, which combines a rich tri-band spectrum portfolio with the LTE Advanced features of carrier aggregation and antenna beamforming, has been deployed across the country. Third party sources, along with record low postpaid phone churn, continue to validate the network improvements.

- Sprint ranked second for wireless network quality performance in five out of six geographic regions of the U.S. according to J.D. Power, a leader in independent industry benchmark studies, in its 2016 Wireless Network Quality Performance Study Volume 2.
- Sprint's LTE Plus Network continued to outperform Verizon, AT&T, and T-Mobile by delivering the fastest LTE download speeds based on recent crowd-sourced data from Nielsen.¹ Additionally, Sprint's reliability beat T-Mobile and performed within 1 percent of AT&T and Verizon.²
- Independent mobile analytics firm RootMetrics® awarded Sprint 52 percent more first or shared first place RootScore® Awards (from 90 to 137) in the 70 markets measured in the second half of 2016 compared to the prior testing period.³

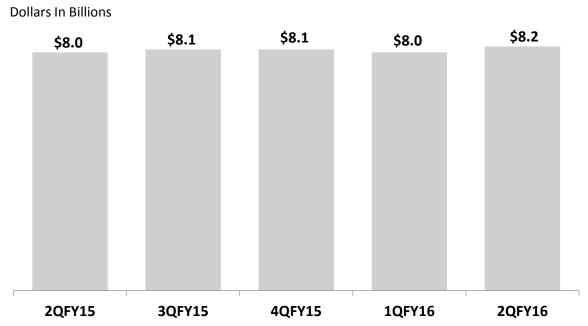

Sprint's LTE Plus Network is now available in more than 250 markets and the company has started to deploy three-channel carrier aggregation in such markets as Chicago, San Francisco, Minneapolis, Dallas, Denver, Kansas City, Cleveland, and Columbus. These deployments will provide peak download speeds of more than 200Mbps on capable devices when available. The company currently has 10 three-channel carrier aggregation capable devices, including the recently launched iPhone 7 and Samsung Galaxy S7.

¹ Sprint's analysis of Nielsen NMP data for average LTE download speeds, based on a population weighted average of all 99 Sprint markets in the U.S.

² Average network reliability (voice & data) based on Sprint's analysis of Nielsen drive test data in the top 106 metro markets.

³ Rankings based on RootMetrics 70 Metro RootScore Reports (January-October 2016) for mobile performance as tested on best available plans and devices on 4 mobile networks across all available network types. Your experience may vary. The RootMetrics awards are not an endorsement of Sprint. Visit www.rootmetrics.com.

Net operating revenues of \$8.2 billion for the quarter were up \$272 million year-over-year and \$235 million sequentially, as higher equipment revenue was partially offset by lower wireless and wireline service revenue. The growth in equipment revenue both year-over-year and sequentially was primarily driven by higher leasing revenue and more installment billing sales.

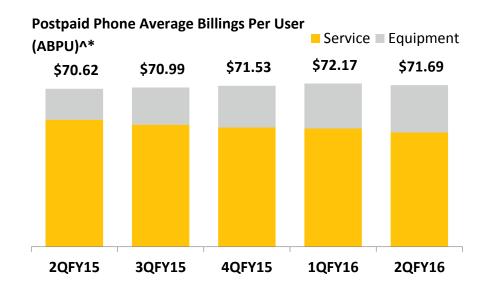

Wireless service revenue of \$6.0 billion declined \$404 million year-over-year and \$84 million sequentially. The year-over-year and sequential decreases were driven by lower postpaid phone Average Revenue Per User (ARPU)^, as customers continued to migrate to rate plans offered in conjunction with device financing, partially offset by growth in the postpaid phone customer base. Lower prepaid revenues related to customer losses also impacted year-over-year and sequential service revenue.

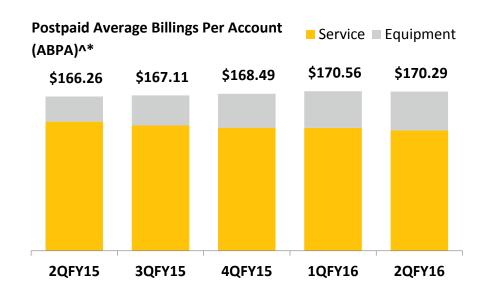

Wireline revenues of \$521 million for the quarter declined \$88 million year-over-year and \$24 million sequentially. The year-over-year and sequential declines were primarily driven by lower voice rates and volumes as the company continues to de-emphasize certain voice services.

options.

Postpaid phone Average Billings Per User (ABPU)^{*} of \$71.69 for the quarter increased nearly 2 percent year-over-year and was relatively flat sequentially. The year-over-year increase was primarily related to higher billings associated with

equipment, partially offset by a shift to service plans offered in conjunction with device financing

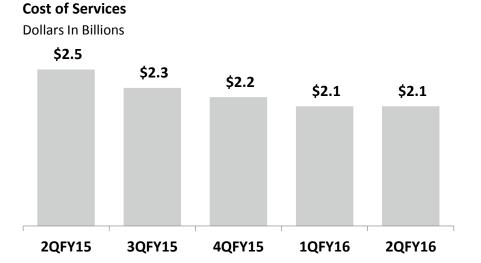

Increased

2%
Year-Over-Year

Postpaid Average Billings Per Account (ABPA)^{*} of \$170.29 for the quarter increased 2 percent year-over-year and was flat sequentially. The year-over-year increase was due to higher equipment billings, in addition to growth in lines per account, partially offset by service plans offered in conjunction with device financing options.

Prepaid Average Revenue Per User (ARPU)[^] of \$27.31 for the quarter decreased 1 percent year-over-year and was flat sequentially. Cost of services (COS) of \$2.1 billion for the quarter decreased \$352 million year-over-year and was flat sequentially. The year-over-year decrease was primarily driven by lower wireless roaming expenses including impacts from the NTelos transaction, the shutdown of the WiMax network, and lower wireline costs, consistent with our decision to de-emphasize certain voice services. Sequentially, savings in wireline and wireless network costs were offset by seasonally higher service and repair and roaming expenses.

\$2.2 \$2.1 \$1.9 \$1.9 \$2.0

2QFY15 3QFY15 4QFY15 1QFY16 2QFY16

Nearly \$600M **Reduction**

Year-Over-Year

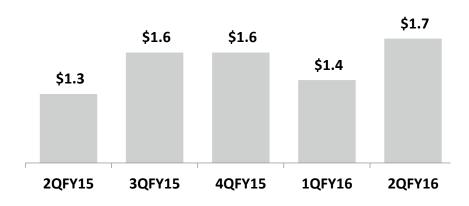

COS and SG&A

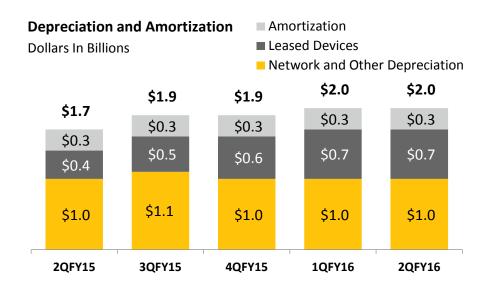

Selling, general and administrative expenses (SG&A) of \$2.0 billion for the quarter decreased by \$229 million year-over-year and increased \$78 million sequentially. The year-over-year reduction came from several areas of the business, including marketing, information technology, and customer care expenses. The sequential increase was driven by seasonally higher wireless selling expenses and higher bad debt expense related to an increase in installment billing sales, as more bad debt expense is recognized at the point of sale relative to the leasing model.

Cost of products of \$1.7 billion for the quarter increased \$403 million year-over-year and \$274 million sequentially. The year-over-year increase is mostly due to lease payments associated with the first sale-leaseback transaction with Mobile Leasing Solutions, LLC (MLS) and fewer leased sales. The sequential increase was primarily due to seasonally higher postpaid sales combined with a lower mix of leasing.

Cost of Products

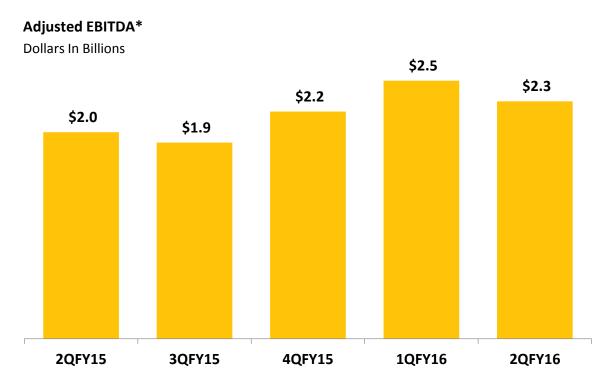

Dollars In Billions

Depreciation and amortization expense of \$2.0 billion for the quarter increased \$238 million year-over-year and \$14 million sequentially. The year-over-year and sequential increases were primarily related to depreciation of devices associated with our leasing options. Leased device depreciation was \$724 million in the quarter, \$420 million in the prior year, and \$644 million in the prior quarter. Due to its off-balance sheet treatment, devices sold in the first transaction with MLS no longer recognize device depreciation and lease payments associated with the devices are recognized in cost of products. Depreciation expense will continue to be recognized on devices sold in the second MLS transaction due to its on-balance sheet treatment.

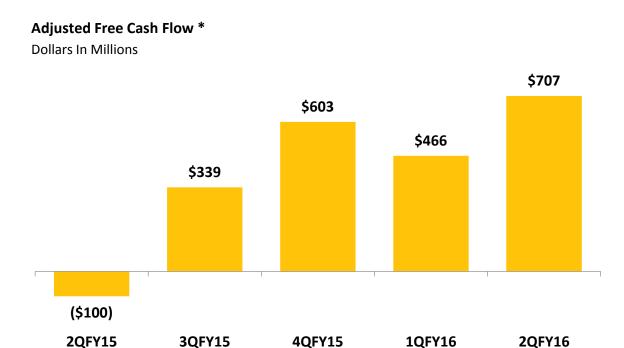

Other, net expense of negative \$145 million for the quarter included а pre-tax non-cash gain of \$354 million related spectrum swaps with other carriers that was partially offset by \$103 million in litigation and other contingency expenses, as well as \$111 million of loss on leased devices, with only the latter impacting Adjusted EBITDA*.

Adjusted EBITDA* was \$2.3 billion for the quarter, compared to \$2.0 billion in the year-ago period and \$2.5 billion in the prior quarter. The year-over-year improvement was primarily due to higher operating revenues and lower cost of services and SG&A expenses, partially offset by higher cost of products expenses. The sequential decline was mostly due to higher cost of products and bad debt expenses associated with higher installment billing sales, partially offset by higher operating revenues.

Operating income of \$622 million compared to an operating loss of \$2 million in the year-ago period and operating income of \$361 million in the prior quarter. The current quarter included a pre-tax non-cash gain of \$354 million related to spectrum swaps with other carriers that was partially offset by \$103 million in litigation and other contingency expenses. The year-ago period included \$267 million of items primarily related to litigation and other contingencies expense and network asset dispositions, while the prior quarter was impacted by \$129 million of items, primarily related to contract termination charges associated with the pre-existing wholesale arrangement with Ntelos Holding Corp. Adjusting for items in each period, operating income would have improved by approximately \$100 million year-over-year and declined approximately \$125 million sequentially.

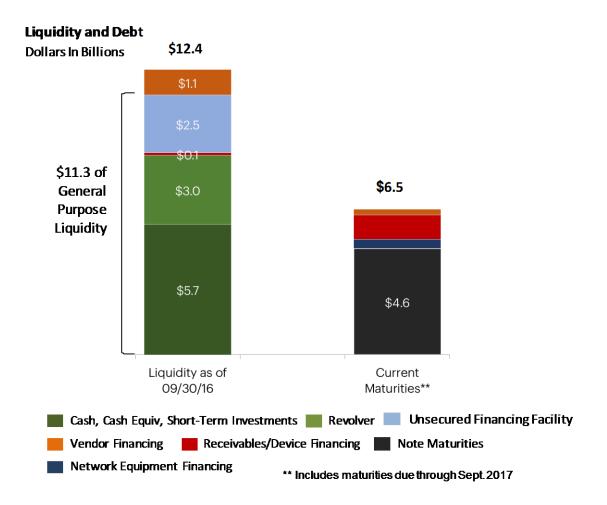

Net loss of \$142 million for the quarter compared to a loss of \$585 million in the year-ago period and \$302 million in the prior quarter. Adjusting for the after-tax impacts of the aforementioned items, the year-over-year and sequential changes in net losses were directionally in line with the operating income changes.

Cash provided by operating activities of \$1.7 billion for the quarter compared to \$1.7 billion in the year-ago period and \$542 million in the prior quarter. Year-over-year, the \$39 million improvement was driven by improvements in Adjusted EBITDA* that were offset by unfavorable changes in working capital. The \$1.2 billion sequential increase was primarily due to favorable working capital changes.

Adjusted free cash flow* of positive \$707 million for the quarter compared to negative \$100 million in the year-ago period and positive \$466 million in the prior quarter. The \$807 million improvement from the prior year was mostly driven by lower capital spending and expense reductions. The \$241 million sequential increase was driven by favorable changes to working capital, partially offset by lower net proceeds from device financings. During the quarter, the company made net repayments of \$184 million related to device financing and sales of future lease receivables.

Cash capital expenditures were \$828 million in the quarter compared to \$1.7 billion in the year-ago period and \$878 million in the prior quarter. Capital expenditures for leased devices were \$358 million in the current quarter compared to \$573 million in the year-ago quarter and \$405 million in the prior quarter. The year-over-year declines in spending was primarily driven by lower network capital expenditures, while the sequential decline was related to leased devices.

Total liquidity was \$11.3 billion at the end of the quarter, including \$5.7 billion of cash, cash equivalents and short-term investments. Additionally, the company also has \$1.1 billion of availability under vendor financing agreements that can be used toward the purchase of 2.5GHz network equipment.

On October 20th, the company priced \$3.5 billion of spectrum-backed senior secured notes at 3.36 percent, which is less than half of the company's current effective interest rate. This transaction represents the latest example of Sprint's strategy to diversify its sources of financing, lower its cost of capital, and reduce future interest expenses by retiring upcoming maturities with higher coupon payments. In conjunction with closing of the spectrum-backed notes, which is expected on October 27th, the company's \$2.5 billion unsecured financing facility will terminate.

⁽a) ARPU is calculated by dividing service revenue by the sum of the monthly average number of connections in the applicable service category. Changes in average monthly service revenue reflect connections for either the postpaid or prepaid service category who change rate plans, the level of wice and data usage, the amount of service credits which are offered to connections, plus the net effect of average monthly revenue generated by new connections and deactivating connections. Sprint platform postpaid phone ARPU represents revenues related to our postpaid phone connections.

⁽b) Sprint platform postpaid ABPA* is calculated by dividing service revenue earned from connections plus installment plan billings and lease revenue by the sum of the monthly average number of accounts during the period.

⁽c) Sprint platform postpaid phone ABPU* is calculated by dividing postpaid phone service revenue earned from postpaid phone connections plus installment plan billings and lease revenue by the sum of the monthly average number of postpaid phone connections during the period.

⁽d) As part of the transaction involving Shenandoah Telecommunications Company (Shentel), 186,000 and 92,000 subscribers were transferred in May 2016 from postpaid and prepaid, respectively, to affiliates. An additional 270,000 nTelos' subscribers are now part of our affiliate relationship with Shentel and are being reported in wholesale and affiliate subscribers during the quarter ended June 30, 2016.

*This table excludes (i) our unsecured revolving credit facility, which will expire in 2018 and has no outstanding balance, (ii) \$309M in letters of credit outstanding under the revolving credit facility, (iii) our \$2.5 billion unsecured credit facility, which will expire in 2017 and has no outstanding balance, (iv) outstanding financing obligations of approximately \$3.7 billion, (v) \$471 million of capital leases and other obligations, and (vi) net premiums and debt financing costs.

NOTES TO THE FINANCIAL INFORMATION (Unaudited)

- (1) Sprint platform refers to the Sprint network that supports the wireless service we provide through our multiple brands.
- (2) Postpaid and prepaid connections from transactions are defined as retail postpaid and prepaid connections acquired from Clearwire in July 2013 who had not deactivated or been recaptured on the Sprint platform.
- (3) As more of our customers elect to lease a device rather than purchasing one under our subsidized program, there is a significant positive impact to EBITDA* and Adjusted EBITDA* from direct channel sales primarily due to the fact the cost of the device is not recorded as cost of products but rather is depreciated over the customer lease term. Under our device leasing program for the direct channel, devices are transferred from inventory to property and equipment and the cost of the leased device is recognized as depreciation expense over the customer lease term to an estimated residual value. The customer payments are recognized as revenue over the term of the lease. Under our subsidized program, the cash received from the customer for the device is recognized as equipment revenue at the point of sale and the cost of the device is recognized as cost of products. During the three and six-month periods ended September 30, 2016, we leased devices through our Sprint direct channels totaling approximately \$645 million and \$1,186 million, respectively, which would have increased cost of products and reduced EBITDA* if they had been purchased under our subsidized program. Also, during the three and six-month periods ended September 30, 2016, the equipment revenue derived from customers electing to finance their devices through device leasing or installment billing programs in our direct channel was 68%.

The impact to EBITDA* and Adjusted EBITDA* resulting from the sale of devices under our installment billing program is generally neutral except for the impact from the time value of money element related to the imputed interest on the installment receivable.

- (4) During the second quarter of fiscal year 2016 the company recorded a pre-tax non-cash gain of \$354 million related to spectrum swaps with other carriers. During the second quarter of fiscal year 2015, the company recorded losses on dispositions of assets primarily related to network development costs that are no longer relevant as a result of changes in the company's network plans.
- (5) Severance and exit costs consist of lease exit costs primarily associated with tower and cell sites, access exit costs related to payments that will continue to be made under the company's backhaul access contracts for which the company will no longer be receiving any economic benefit, and severance costs associated with reduction in its work force.
- (6) Contract terminations primarily relate to the termination of our pre-existing wholesale arrangement with Ntelos Holding Corp.
- (7) Litigation and other contingencies consist of unfavorable developments associated with legal as well as federal and state matters such as sales, use or property taxes.
- (8) As a result of the U.S. Cellular asset acquisition, we recorded a liability related to network shut-down costs, which primarily consisted of lease exit costs, for which we agreed to reimburse U.S. Cellular. During the third quarter of fiscal year 2014, we identified favorable trends in actual costs and, as a result, reduced the liability resulting in a gain of approximately \$41 million. During the first quarter of fiscal year 2015, we revised our estimate and, as a result, reduced the liability resulting in approximately \$20 million of income.

*FINANCIAL MEASURES

Sprint provides financial measures determined in accordance with GAAP and adjusted GAAP (non-GAAP). The non-GAAP financial measures reflect industry conventions, or standard measures of liquidity, profitability or performance commonly used by the investment community for comparability purposes. These measurements should be considered in addition to, but not as a substitute for, financial information prepared in accordance with GAAP. We have defined below each of the non-GAAP measures we use, but these measures may not be synonymous to similar measurement terms used by other companies.

Sprint provides reconciliations of these non-GAAP measures in its financial reporting. Because Sprint does not predict special items that might occur in the future, and our forecasts are developed at a level of detail different than that used to prepare GAAP-based financial measures, Sprint does not provide reconciliations to GAAP of its forward-looking financial measures.

The measures used in this release include the following:

EBITDA is operating income/(loss) before depreciation and amortization. **Adjusted EBITDA** is **EBITDA** excluding severance, exit costs, and other special items. **Adjusted EBITDA Margin** represents Adjusted EBITDA divided by non-equipment net operating revenues for Wireless and Adjusted EBITDA divided by net operating revenues for Wireline. We believe that Adjusted EBITDA and Adjusted EBITDA Margin provide useful information to investors because they are an indicator of the strength and performance of our ongoing business operations. While depreciation and amortization are considered operating costs under GAAP, these expenses primarily represent non-cash current period costs associated with the use of long-lived tangible and definite-lived intangible assets. Adjusted EBITDA and Adjusted EBITDA Margin are calculations commonly used as a basis for investors, analysts and credit rating agencies to evaluate and compare the periodic and future operating performance and value of companies within the telecommunications industry.

Sprint Platform Postpaid ABPA is average billings per account and calculated by dividing postpaid service revenue earned from postpaid customers plus installment plan billings and lease revenue by the sum of the monthly average number of postpaid accounts during the period. We believe that ABPA provides useful information to investors, analysts and our management to evaluate average Sprint platform postpaid customer billings per account as it approximates the expected cash collections, including installment plan billings and lease revenue, per postpaid account each month.

Sprint Platform Postpaid Phone ABPU is average billings per postpaid phone user and calculated by dividing service revenue earned from postpaid phone customers plus installment plan billings and lease revenue by the sum of the monthly average number of postpaid phone connections during the period. We believe that ABPU provides useful information to investors, analysts and our management to evaluate average Sprint platform postpaid phone customer billings as it approximates the expected cash collections, including installment plan billings and lease revenue, per postpaid phone user each month.

Free Cash Flow is the cash provided by operating activities less the cash used in investing activities other than short-term investments, including changes in restricted cash, if any, and excluding the sale-leaseback of devices. **Adjusted Free Cash Flow** is **Free Cash Flow** plus the proceeds from device financings and sales of future lease receivables, net of repayments. We believe that Free Cash Flow and Adjusted Free Cash Flow provide useful information to investors, analysts and our management about the cash generated by our core operations and net proceeds obtained to fund certain leased devices, respectively, after interest and dividends, if any, and our ability to fund scheduled debt maturities and other financing activities, including discretionary refinancing and retirement of debt and purchase or sale of investments.

Net Debt is consolidated debt, including current maturities, less cash and cash equivalents, short-term investments and, if any, restricted cash. We believe that Net Debt provides useful information to investors, analysts and credit rating agencies about the capacity of the company to reduce the debt load and improve its capital structure.

SAFE HARBOR

This release includes "forward-looking statements" within the meaning of the securities laws. The words "may," "could," "should," "estimate," "project," "forecast," "intend," "expect," "anticipate," "believe," "target," "plan", "outlook," "providing guidance," and similar expressions are intended to identify information that is not historical in nature. All statements that address operating performance, events or developments that we expect or anticipate will occur in the future — including statements relating to our network, connections growth, and liquidity; and statements expressing general views about future operating results — are forward-looking statements. Forward-looking statements are estimates and projections reflecting management's judgment based on currently available information and involve a number of risks and uncertainties that could cause actual results to differ materially from those suggested by the forward-looking statements. With respect to these forward-looking statements, management has made assumptions regarding, among other things, the development and deployment of new technologies and services; efficiencies and cost savings of new technologies and services; customer and network usage; connection growth and retention; service, speed, coverage and quality; availability of devices; availability of various financings, including any leasing transactions; the timing of various events and the economic environment. Sprint believes these forward-looking statements are reasonable; however, you should not place undue reliance on forward-looking statements, which are based on current expectations and speak only as of the date when made. Sprint undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law. In addition, forward-looking statements are subject to certain risks and uncertainties that could cause actual results to differ materially from our company's historical experience and our present expectations or projections. Factors that might cause such differences include, but are not limited to, those discussed in Sprint Corporation's Annual Report on Form 10-K for the fiscal year ended March 31, 2016. You should understand that it is not possible to predict or identify all such factors. Consequently, you should not consider any such list to be a complete set of all potential risks or uncertainties.

About Sprint:

Sprint (NYSE: S) is a communications services company that creates more and better ways to connect its customers to the things they care about most. Sprint served 60.2 million connections as of Sept. 30, 2016 and is widely recognized for developing, engineering and deploying innovative technologies, including the first wireless 4G service from a national carrier in the United States; leading no-contract brands including Virgin Mobile USA, Boost Mobile, and Assurance Wireless; instant national and international push-to-talk capabilities; and a global Tier 1 Internet backbone. Sprint has been named to the Dow Jones Sustainability Index (DJSI) North America for the past five years.
