

Science advancing health

MDS 2004 ANNUAL PROGRESS REPORT

OUR PLAN IN

Action

2004 Annual Progress Report

Last year we launched an action plan focused on four key priorities: achieving the right mix of businesses, focusing on customers, building a new platform for growth and driving enhanced performance. This year's annual progress report provides an update on our progress in executing that Plan.

Our Plan in ***Action.***

MDS is an international health and life sciences company that provides products and services that our customers need for the development of drugs and the management of disease. We are a leading global provider of clinical research and diagnostic services, advanced detection instruments, and nuclear material used in imaging, cancer treatments and material sterilization.

MDS operates in two segments—Life Sciences and Health.

Life Sciences 	Our products and services support pharmaceutical and biotech companies in the drug development process and medical practitioners in the management of disease.	Isotopes \$348 million 20% of revenues	> Medical isotopes for diagnostic and radiotherapeutic applications > Radiopharmaceutical development and manufacturing services > Radiation treatment systems for oncology > Sterilization technology for medical and consumer products
		Analytical instruments \$282 million 16% of revenues	> Advanced analytical instrumentation
		Pharmaceutical research services \$536 million 30% of revenues	> Drug discovery and development services
Health 	Our products and services enable medical practitioners and hospitals to better manage their patients' health care needs.	Diagnostics \$407 million 23% of revenues	> Clinical, anatomical, esoteric and genetic laboratory testing and information > Transformation and management of hospital laboratories
		Distribution \$191 million 11% of revenues	> Distribution of medical/surgical products

WORLDWIDE LOCATIONS

MDS has locations in 25 countries on 5 continents.

1 Africa Johannesburg, South Africa	23 Europe Brussels, Belgium Fleurus, Belgium Prague, Czech Republic Odense, Denmark Sittingbourne, England Wokingham, England Baillet-en-France, France Lyon, France Sèvres, France Sophia Antipolis, France Hamburg, Germany Langenfeld, Germany Munich, Germany Budapest, Hungary Milan, Italy Belfast, Northern Ireland Krakow, Poland	Bucharest, Romania Madrid, Spain Lund, Sweden Geneva, Switzerland Zurich, Switzerland	272+ North America Calgary, Alberta Edmonton, Alberta* Burnaby, British Columbia Vancouver, British Columbia Victoria, British Columbia Winnipeg, Manitoba* Moncton, New Brunswick* Mount Pearl, Newfoundland* Dartmouth, Nova Scotia* Concord, Ontario London, Ontario Mississauga, Ontario Ottawa, Ontario St. Catharines, Ontario Sudbury, Ontario Toronto, Ontario Blainville, Quebec Châteauguay, Quebec Dollard-des-Ormeaux, Quebec Laval, Quebec Montreal, Quebec Pointe-Claire, Quebec* Sainte-Dorothée, Quebec Saint-Laurent, Quebec Westmount, Quebec	Phoenix, Arizona Irvine, California San Francisco, California Fort Lauderdale, Florida* Tampa, Florida New Orleans, Louisiana Boston, Massachusetts Lincoln, Nebraska Neptune, New Jersey King of Prussia, Pennsylvania Bothell, Washington Mexico City, Mexico	3 South America Buenos Aires, Argentina Santiago, Chile Lima, Peru

- * Indicates joint venture partnership
- + Indicates 240 Patient Service Centres related to our diagnostics business

2004 Achievements

What to Expect in 2005

<ul style="list-style-type: none"> > Achieved record revenues in gamma sterilization business > Developed new Theratron product with expanded capabilities and efficiencies > Achieved record financial results > Launched new therapeutic isotopes > Defined strategy to expand radiopharmaceutical services offering 	<ul style="list-style-type: none"> > Resolution of outstanding issues with Atomic Energy of Canada Limited (AECL) and Canadian government > Continued focus on expansion of cobalt-60 capacity > Launch new generation Theratron > Implementation of new service offering for radiolabelled compounds and drug development
<ul style="list-style-type: none"> > Expanded scope of Applied Biosystems/MDS Sciex joint venture in mass spectrometry with the acquisition of Applied Biosystems MALDI-TOF systems and software > Announced plans to open a new manufacturing facility in Singapore as part of a larger business strategy to maintain market leadership and low cost capability > Achieved record financial results 	<ul style="list-style-type: none"> > Integration of MALDI-TOF acquisition into MDS Sciex > Further progress on future products development > Launch new product based on CDS (Cellular Dielectric Spectroscopy) technology for use in the drug discovery and development process
<ul style="list-style-type: none"> > Three of four segments outperformed target growth rates: Discovery and Preclinical: 21% Early Clinical Research: 15% Global Clinical Research: 14% > Grew drug development programs with 19 active programs and 41 in negotiations to date 	<ul style="list-style-type: none"> > Improved performance in each business segment targeting growth in excess of market rates > Continue to grow drug development programs > Expand biomarker alliances
<ul style="list-style-type: none"> > Exited Memphis, Georgia, New York and Duke lab operations > Achieved objective of increasing operating income by >8% > Achieved record financial results 	<ul style="list-style-type: none"> > Complete exit from US joint venture diagnostics businesses > Continue operational excellence initiatives to enhance performance > Complete fee negotiations with Ontario government > Work to implement the terms of the lab reform agreement between the Government of British Columbia and the BC Medical Association > Develop a long-term growth strategy to build on Canadian leadership position
<ul style="list-style-type: none"> > Announced intention to monetize investment > Achieved record financial results 	<ul style="list-style-type: none"> > Further progress on monetization

2004 was a year of progress. While we made incremental improvements in performance, we made significant strides in how we operate our businesses. These steps will position us well for the future.

Years ended October 31	2004	2003	2002
FINANCIAL RESULTS			
(millions of Canadian dollars, except EPS)			
Revenues	\$ 1,764	\$ 1,665	\$ 1,636
Operating income	\$ 150	\$ 191	\$ 214
Net income	\$ 51	\$ 48	\$ 105
Earnings per share—basic	\$ 0.36	\$ 0.34	\$ 0.75
Earnings per share—core businesses*	\$ 1.14	\$ 1.21	\$ 1.07
Cash from operating activities	\$ 179	\$ 240	\$ 186
Capital expenditures	\$ 112	\$ 121	\$ 152
FINANCIAL POSITION			
Total assets	\$ 2,657	\$ 2,565	\$ 2,542
Net debt	\$ 198	\$ 282	\$ 431
Shareholders' equity	\$ 1,497	\$ 1,426	\$ 1,354

* Core businesses include Life Sciences and Health. See table in Management's Discussion and Analysis for details.

Early in 2004, the management of MDS committed to dealing with a number of significant issues that were impacting our performance. The management team delivered on virtually all of these commitments in the last year

A YEAR OF PROGRESS

- > In **reorganizing MDS Proteomics**, the Company worked with the management team to develop a new services related business model and reduced its ownership to 48% and its carrying value to nil, thereby eliminating any future impact of operating losses on MDS's operating results.
- > The management team at MDS Diagnostic Services committed to **exiting the US laboratory market** and has over the last year, sold or exited four of the five operations in the US.
- > **Improving operating income by 5%–8%** in the Canadian diagnostics business was achieved reflecting our operational excellence program in the diagnostics business.
- > The Company met its first major go-live objective in November 2004 in **implementing the Oracle system with the Corporate and Enterprise Services** groups. The implementation at the business unit level will follow as we move through 2005.

"When we launched our action plan last year, we knew it wouldn't be easy, but we also knew it was essential. Achievements and challenges of the past year have proven us right on both counts. We have been going through the proverbial period of short-term pain for long-term gain."

John A. Rogers President and CEO

Our plan in action

First and foremost, we have proceeded with the action plan and made good progress on many fronts, as indicated in the report that follows this letter. We have not achieved all our targets nor have we completed every initiative, but we are well on our way.

While managing the implementation of our action plan, three of our four business divisions produced record levels of revenues and earnings. As well, we restructured our proteomics business, exited our US lab business and made a significant acquisition in our analytical instruments business.

The scope and scale of the change we are undertaking at MDS is significant and the speed of change is increasing as we move along the implementation path. To date, we have implemented the Oracle system with the Corporate and Enterprise Services groups. MDS Nordion, MDS Diagnostic Services, MDS Sciex and MDS Pharma Services will follow as we move through 2005. In addition, we have established Enterprise Services and are continuing with the renewal of our IT infrastructure in collaboration with IBM.

Our financial results in 2004 reflect a number of issues, including the impact of the sharp decline in the US dollar, the costs of implementing our action plan and change initiatives, and a disappointing performance in an important segment of our pharmaceutical research services business where a number of operational issues persist. These issues indicate just how important it is to stay the course with our action plan and change initiatives. We need to become more efficient and more effective in order to realize the extraordinary potential of this Company during challenging times.

Although we are not satisfied with our current level of earnings, we have continued to strengthen the financial position of the Company, improving the net cash position and our capital structure. We are in very good shape financially to maintain our momentum, proceed with change initiatives and aggressively pursue growth strategies.

Growth strategy

While building a new platform for growth, we have been developing strategies to leverage this platform and resume our historical growth trajectory in the months and years ahead.

As we look ahead, we have a vision of enabling improved outcomes in the treatment of disease. That vision is the basis of our strategic focus on customer relationships and is key to unlocking future growth opportunities. Our platform will be the foundation—accommodating growth and ensuring that we maximize returns and shareholder value. We will be building on that foundation within a strategic framework that makes sense for MDS.

The central pillars of that framework are:

- maintaining the right mix of businesses to mitigate the risk to participate in different markets and business cycles;
- enhancing customer relationships by developing the products and services that they need; niche development—focusing on strong niches within the life sciences and health fields where we have the opportunity to establish global leadership;
- moves into adjacent or overlapping businesses—expanding our business base in markets we know, where we can leverage our expertise, customer relationships and infrastructure;
- development of strategic alliances to participate in opportunities for enhancing customer relationships by providing integrated solutions; and
- pursuing strategic acquisitions as we complete the implementation of our change initiatives.

Within this framework, our overall approach is straightforward. We aim to build leading positions in our core businesses and platforms and identify and pursue opportunities in adjacent or related spaces. This approach will fuel the ongoing evolution of MDS as we continue to change and position ourselves for changes in global health care, for breakthroughs in technology and for the industry dynamics that are transforming our world.

As we pursue our growth targets, we are confident that we can achieve substantial growth internally. Indeed, over time we expect to generate our growth through the enhanced performance of our existing businesses, as they improve operating margins, exceed market growth rates, enhance their customer value propositions and pursue initiatives in adjacent areas.

We will continue to augment internal growth with external acquisitions. Clearly, any acquisition target must be in the life sciences and health field and must be in the scope of our vision. Beyond those basic considerations, we have established clear criteria. Acquisitions should be accretive in the near- to mid-term; we must be able to integrate them effectively and leverage our infrastructure, systems, expertise, technology and relationships effectively.

Our decision to expand the scope of our Applied Biosystems/MDS Sciex joint venture in Time of Flight mass spectrometry is an example of our adjacency strategy in action—providing new opportunities with next-generation products in a field where we have strong leadership in key global niches.

Our purchase of a 50% interest in Applied Biosystems' MALDI-TOF business is a model transaction meeting the criteria we have established for acquisitions. The market is a growth market, it is in an area that we know well, it allows us to leverage our expertise in this field and it has low integration risk.

Driving forward

Many challenges lie ahead as we complete the action plan and proceed with growth strategies. We expect 2005 to be a demanding year. The issues we have been facing with respect to the impact of the weak US dollar on our Canadian dollar reported results and our pharmaceutical research services business persist. Implementation of Common Business Systems, other change initiatives and increased corporate compliance costs associated with Sarbanes-Oxley and related Canadian legislation will continue to result in elevated levels of cost and absorb considerable time and effort. We are maintaining our momentum and holding the course with our action plan. Indeed, we are accelerating. Some results will be evident in the year ahead; others will take longer to bear fruit.

Through this challenging and active period, we have continued to strengthen the management team to meet the challenges ahead. We are continuing our global search for the position of Chief Operating Officer. This senior executive role will be key to driving the operating performance of the Company and so we are looking to recruit the very best candidate and expect to conclude this search as we move through 2005.

In the last year, two of our most senior executives retired from the Company. Wilf Lewitt announced his intention to retire from his role as Executive Chairman after 34 years with MDS. Wilf joined MDS as President and CEO in 1970 and remained in that position until 1996. He then assumed the role of Executive Chairman of the Board. Under his guidance, MDS grew from a small lab business in Ontario, Canada, to a global health and life sciences company. Those of us who have had the opportunity to work with Wilf over the years could not have had a better role model: bright, intuitive, a superb negotiator, strategic and entrepreneurial, with an impeccable value set. Wilf's tremendous integrity established a high standard of ethical leadership at MDS. This is one of the many legacies he will leave with us.

As well, Ron Yamada, one of the Company's founders, retired from MDS in May of 2004. Ron, whose entrepreneurial spirit was instrumental in building the Company from the start, had an unwavering commitment to the success of the Company and a clear vision of what it would take to build an enduring company. His enthusiasm, intelligence and curiosity led us into a number of great opportunities over the years.

Ron and Wilf, we are so grateful to have had the benefit of your leadership and talent for so many years—and while we recognize that this is part of the normal evolution of the Company, we miss your wisdom and intelligence already.

At the end of the year, we were pleased to appoint John Mayberry as the Company's first Non-Executive Chairman. As well, Wendy Dobson will not stand for re-election to the Board. Wendy's contribution to the Board during her nine years of service was significant and we thank her for her commitment. With Wendy's departure from the Board, we welcome Kathleen O'Neill as a board nominee.

As I look beyond 2005 to the longer term future of MDS, I see the evolution of our management team to one that is more focused than ever on executing the business plans of the organization, an emerging technology infrastructure that will position us well for the future and a great portfolio of businesses on which we can grow in the exceptional markets in which we are so well positioned. We have a bright future and are totally dedicated to realizing the full potential of this great Company.

John A. Rogers President and CEO

Last year, we identified four key priorities:
achieving the right mix of businesses,
focusing on customers, building a new
platform for growth and driving enhanced
performance. **We are making progress**

OUR PLAN IN

Action

Achieving the right mix of businesses

Focused on strong and growing markets with a strategic balance of products and services, we are building on our current areas of strength and seizing opportunities to gain market leading positions that reflect the needs of our customers in drug development and disease diagnosis

PROGRESS

- > **US lab business**
 - **Achievements:** Exited the majority of our US lab businesses, divesting Memphis, New York and Georgia operations, and exceeded targeted reorganization savings
 - **Next:** Complete exit of US lab business in early 2005
- > **Proteomics**
 - **Achievements:** Completed reorganization, gained access to tax assets and reduced investment position eliminating profit and loss impact
 - **Next:** Realize benefits to MDS of new business plan and potential upside in technology developments
- > **Generic Radiopharmaceuticals** (Fleurus, Belgium)
 - **Achievements:** Discontinued operations
 - **Next:** Reallocate resources to higher growth opportunities
- > **MDS Sciex**
 - **Achievements:** Validated relevance of CDS technology with scientific community at Society of Biomolecular Screening 2004
 - **Next:** Launch new product based on CDS technology in late 2005
- > **MDS Sciex/ABI joint venture**
 - **Achievements:** Expanded joint venture to include MALDI-TOF and TOF/TOF technologies, gaining access to attractive market segment with an established partner
 - **Next:** Integrate acquisition and solidify market lead in segment

We are concentrating on our higher growth businesses, repositioning underperforming operations and reallocating financial and human resources to focus on high-potential opportunities in attractive markets—with a focus on drug development and disease diagnosis

Goal	Actions	Outcomes	Next Steps
> Reallocate resources to high performing businesses	<ul style="list-style-type: none"> > Sold: New York and Georgia lab operations to LabCorp > Sold: Memphis lab operations to American Esoteric Laboratories Inc. > Exited: Duke management contract 	<ul style="list-style-type: none"> > Restructured infrastructure supporting US lab operations > Contributed to improved Health segment operating margins 	> Complete exit of remaining US lab operation
> Eliminate negative impact of losses generated, while maintaining access to high-potential technology	<ul style="list-style-type: none"> > Reorganized Proteomics 	<ul style="list-style-type: none"> > Eliminated impact of operational losses > Maintained access to technology potential > Gained access to tax credits and benefits of tax losses carried forward 	> Access benefits of new business plan and technology potential
> Reallocate resources to high performing businesses	<ul style="list-style-type: none"> > Exited non-strategic generic radiopharmaceutical business in Europe 	<ul style="list-style-type: none"> > Increased ability to focus on high-potential opportunities 	> Complete exit in early 2005
> Focus on high growth markets	<ul style="list-style-type: none"> > Expanded MDS Sciex/ABI joint venture through acquisition of leading MALDI-TOF and TOF/TOF technologies as well as next generation products 	<ul style="list-style-type: none"> > Gained additional access to growing proteomics segment > Merged two first-class MS R&D teams > Leveraged existing expertise to mitigate risk and expand market 	<ul style="list-style-type: none"> > Integrate acquisition > Strengthen leading position in segment

Focusing on customers

We are asking our customers how we can add value—enhancing and leveraging our client relationships to move up the value chain as we continue to offer differentiated solutions and capture competitive advantage

PROGRESS

- > **MDS Inc.—customer focus review**
 - **Achievements:** Completed extensive review with customers to better understand emerging trends, challenges and value drivers
 - **Next:** Continue to solicit input to ensure alignment with our customers' needs and perceptions
- > **Pharmaceutical research services—development programs**
 - **Achievements:** Continued growth in program sales that bundle services, offering turnkey solutions versus one-off contracts—19 active programs already in place
 - **Next:** Expand drug development programs to accommodate rising biotech demand
- > **Analytical instruments—software improvement initiative**
 - **Achievements:** Implemented software improvement initiative where customers are an integral part of development
 - **Next:** Release software with critical improvements in usability
- > **Isotopes—expanded radiolabelling capabilities**
 - **Achievements:** Explored opportunities to enable end-to-end development of novel radiopharmaceuticals from bench to commercialization
 - **Next:** Build integrated development services for the biopharma industry

MDS Sciex has developed an innovative way to bring the end user into design meetings. Virtual end users, called "Personas," are created to make sure the end users' goals, tasks, and environment are considered in all product design decisions. Each Persona represents a different role that exists in the customer's organization and demonstrates how that role interacts with the products.

As the product develops, a series of usability tests are performed with several end users to make sure that the products reflect the way customers think and interact with them. This allows the development team to make sure they are on the right track and refine designs while the product is still in development.

The result is a product that not only reflects the level of innovation that MDS Sciex has always been known for, it is also designed to meet the needs of the customer from start to finish.

Molecular Insight Pharmaceuticals selected MDS Nordion as their supplier of BMIPP, a lead molecular imaging pharmaceutical candidate under evaluation for the detection of cardiac ischemia in an emergency department setting. The BMIPP is labelled with MDS Nordion's high-purity iodine-123 to provide superior imaging quality. Molecular Insight places high value on the experience and proven expertise that MDS Nordion provides in the manufacturing of radionuclides and the development of radiolabelled processes for novel radiopharmaceuticals. They also depend on a reliable source of I-123 as they move through clinical trials and on to commercial success. With access to multiple cyclotrons in Vancouver, MDS Nordion has the capacity to provide a scalable supply of I-123. Quality and timely delivery of products is critical when manufacturing and distributing molecular imaging pharmaceuticals with short-lived isotopes.

The Canadian Information Productivity Awards (CIPA), which awards excellence through innovation, has recognized MDS Diagnostic Services and its partners, the University Health Network and Mount Sinai Hospital, for Patient Results Online (PRO), a web-based application that enables authorized personnel from the three health care organizations to access and share secure patient information and test results online. Physicians can instantly access patient results when they need them, reducing the reliance on paper copies of results sent between hospitals and improving patient care by making patient transfers between hospitals faster, safer and more convenient.

In British Columbia, a joint venture between MDS Metro Laboratory Services and BC Biomedical Laboratories is providing the same single point of access to integrated diagnostic information in a community setting through PathNET. PathNET, which was designed and developed by the joint venture, is a secure web-based electronic system for transmitting diagnostic information. This is PathNET's second CIPA nomination.

Pharmaceutical companies are continuously challenged to meet and address the pressures of time, cost and human resources inherent in the pharmaceutical development process. In order to meet these challenges, they look to MDS Pharma Services for innovative solutions.

The MDS Pharma Services Pharmacology Services group has developed a unique offering of proprietary assays that when combined with their partner's own assays enable the development process in a highly cost-effective manner.

Partners of MDS Pharma Services have the opportunity to integrate their proprietary assay inventory with MDS's own assay pool, creating a unique partner-specific array of profiling tools. The reports that are generated can be customized to the partner's specifications. MDS Pharma Services also continues to develop new, innovative assays to add to their proprietary menu of assays and so does their partner.

This is one example of how MDS Pharma Services creates value for both parties while achieving the partnership objectives—time, quality and cost benefits to their partner, and larger, longer client relationships from value-sharing solutions based on innovation for MDS Pharma Services.

OUR PLAN IN
Action

Building a new platform for growth

We have made significant investments in change initiatives—necessary investments in capital, people and processes—aimed at increasing efficiency, lowering costs and enhancing return on capital

PROGRESS

- > **Information technology**
 - **Achievements:** IT platform outsourced with employee transfer completed and in place
 - **Next:** Realize benefits including improved quality, reduced risks and lower cost
- > **Enterprise Services**
 - **Achievements:** Launched Enterprise Services June 1, 2004
 - **Next:** Accelerate change, address challenges and realize benefits including cost savings, best practices, lower risk and improved quality
- > **Common business systems**
 - **Achievements:** First go-live date met and successfully implemented November 1, 2004; Corporate and Enterprise Services now converted to new platform
 - **Next:** Complete implementation across business units over the balance of fiscal 2005

In order for MDS to be as successful in the future as in the past, we are changing the way we do things across the Company—we are implementing enabling technologies to increase our flexibility and connectivity, while enhancing our culture of performance and our customer focus

Goal	Actions	Outcomes	Next Steps
> Outsource non-strategic IT functions and implement global IT platform	<ul style="list-style-type: none"> > Outsourced IT infrastructure support to IBM > Implemented a Global IT Helpdesk 	<ul style="list-style-type: none"> > Transferred 93 people to IBM and eliminated a further 37 positions > Established a reliable, stable and robust IT infrastructure 	<ul style="list-style-type: none"> > Improve infrastructure and processes to drive down cost of IBM contract > Further consolidation of infrastructure
> Implement Common Business Systems and IT infrastructure improvements	<ul style="list-style-type: none"> > Selected Oracle ERP system > Selected IBM as implementation partner > Completed system design and implementation planning 	<ul style="list-style-type: none"> > Converted Corporate and Enterprise Services on time and as planned on November 1, 2004 	<ul style="list-style-type: none"> > Conversion of remaining businesses through fiscal 2005
> Establish consolidated shared services to generate cost savings and benefit from synergies	<ul style="list-style-type: none"> > Launched Enterprise Services June 1st 2004 > Transferred approximately 350 people from business units to Enterprise Services > Developed service level agreements for all functions 	<ul style="list-style-type: none"> > Identified and began aggressively implementing cost reductions totalling \$20 million in fiscal 2004 > Eliminated redundancies 	<ul style="list-style-type: none"> > Continue to implement cost-reduction initiatives > Drive maximum value from CBS > Realize \$40 million in cost savings in fiscal 2005

Driving enhanced performance

We are building a lean organization with a high-performance culture—we have raised the bar on accountabilities and established clear metrics to execute on plans, deliver on promises, achieve milestones and strive to exceed targets

PROGRESS

- > **Accountability**
 - **Achievements:** Metrics-driven compensation aligned to performance across MDS
 - **Next:** Realize benefits of enhanced performance
- > **High-performance culture**
 - **Achievements:** 30% of top 150 leadership positions changed over the last two years—34 senior positions eliminated
 - **Next:** Continue to seek efficiencies and organizational excellence
- > **Breadth and depth of management team**
 - **Achievements:** Created COO position and initiated global search for this key executive role
 - **Next:** Strengthen and focus our resources at every level of the organization

2004 TARGETS (as set in 2003 and including discontinued US operations)

Metric	Target	Result
Operating margin	Improve 1% to 16%	13%
Earnings per share	10%–15% 5-year CAGR	(6%)
Return on equity	Improve 1% to 12%	10%

We continue to drive towards our goal of enhancing performance and we have taken the steps to strengthen our team and find ways to be more efficient—**instituting new performance measures, financial metrics and management accountabilities** while strengthening, motivating and empowering the management team

Goal	Actions	Outcomes	Next Steps
> Strengthen management teams	> Restructured leadership	> Announced John Mayberry as Non-Executive Chairman of the Board	> Appoint COO > Continued evolution of senior management team, including strengthening scientific/technical capabilities
> Drive improved operating metrics: Operating margin Return on capital Earning per share	> Continued implementing Action Plan	> Impact of foreign exchange > Lack of performance in bioanalytical > Higher than expected cost of change > Operating margin: 13% compared to 16% target > Return on equity: 10% compared to 12% target > Earnings per share: \$1.14 compared to \$1.21 in 2003	> It must be recognized that foreign currency has the potential to significantly impact our operating results in 2005 > We remain committed to achieving improved operating metrics including: • Operating margin • Return on capital • Earnings per share growth—10%–15% 5 year compound growth
> Lower the cost of doing business	> Announced Singapore manufacturing plant for MDS Sciex > Continued to implement lean manufacturing processes at MDS Sciex > Implemented supply chain management initiatives	> Low cost capability in the manufacturing of scientific instruments > Increased unit output 40% in same space and decreased stockroom space by 30% > Achieved annualized savings of \$20 million	> Realize savings of 15%–30% over next three years > Optimize product development and manufacturing processes > Continue to identify further savings initiatives
> Improve operating performance within Canadian diagnostics business	> Support/infrastructure redesigned and realigned > Restructured BC lab management and support	> Contributed to operating income improvement of >8%	> Continue to implement operational excellence initiatives > Deliver quality at lower cost > Build an environment of operational excellence and continuous improvement

Strong and effective corporate governance has been and remains a key priority for MDS. Over the past several years our corporate governance practices have evolved and grown with the Company. We believe that the Company's current governance practices are fundamental to the overall success of the Company and comply in all material respects with all regulatory requirements and guidelines of the Canadian and US securities regulatory agencies and stock exchanges. Any material differences are outlined in the proxy circular, and to the extent there are differences between the Canadian and US requirements, the Company has determined to follow the Canadian requirements. None of such differences are, in the Company's view, material. Key governance policies and practices are highlighted below:

- The Chairman of the Board and the four committees of the Board are 100% independent.
- Directors have access to outside advisors at the Company's expense.
- Directors are required to hold shares or deferred share units.
- The Board evaluates its effectiveness on an annual basis.
- Directors receive orientation and ongoing learning.
- The Board reviews the CEO's performance and objectives annually.
- The Board approves the Company's strategic plans, business plans and strategic investments.
- Succession planning reviews are conducted annually for both senior management and the Board of Directors.
- The Company has a disclosure policy to keep stakeholders informed.

"As MDS proceeded with its growth and change initiatives in 2004, the Company also made further strides in ensuring strong and effective corporate governance to maintain accountability and balance the interests of its shareholders and other stakeholders. We believe that our practices support the key drivers of good governance—accountability and transparency—and position the Board well as active participants in the enhancement of shareholder value at MDS."

John T. Mayberry
Chairman, MDS Board of Directors

FPO

Paul S. Anderson^E

Paul S. Anderson, of Lansdale, PA has served on the Board of the Company since 2003. Dr. Anderson is a Corporate Director, having retired in 2002 after a 40-year career in the pharmaceutical industry. From 2001 to 2003, Dr. Anderson was Vice President, Drug Discovery at Bristol-Myers Squibb (a global pharmaceutical company in Wilmington, DE). Dr. Anderson is also a director of Albany Molecular Research and is a member of the Chemical and Engineering News advisory board and the editorial board of Medicinal Chemistry Research.

Clarence J. Chandran^H

Clarence J. Chandran, of Cary, NC has served on the Board of the Company since 2001. He retired as President of Business Process Outsourcing, CGI Group Inc. (an information technology services firm headquartered in Montreal, QC) and is a member of its International Advisory Group. Mr. Chandran retired in 2001 as Chief Operating Officer and Director of Nortel Networks Corp. after spending 28 years in the telecommunications industry. Mr. Chandran is Chair of Conros Corporation and Chair of the Chandran Family Foundation Inc.

Wendy K. Dobson^H

Wendy K. Dobson, PhD, of Uxbridge, ON has served on the Board of the Company since 1995. Dr. Dobson is Professor and Director, Institute for International Business, Joseph L. Rotman School of Management, University of Toronto. She has served as Associate Deputy Minister of Finance and President of the C.D. Howe Institute. Dr. Dobson is also a director of TransCanada Corporation and Toronto-Dominion Bank.

William A. Etherington^{A, C}

William A. Etherington, of Toronto, ON has served on the Board of the Company since 2001. Mr. Etherington is Chairman, Canadian Imperial Bank of Commerce. Prior to 2001, Mr. Etherington was Senior Vice President & Group Executive, Sales & Distribution, IBM Corporation (a global information technologies company headquartered in Armonk, NY) and Chairman, President and CEO, IBM World Trade Corporation. Mr. Etherington is also a director of Celestica Inc., Dofasco Inc. and Relison, as well as a member, President's Council, University of Western Ontario.

John R. Evans^{C, H}

John R. Evans, of Toronto, ON has served on the Board of the Company since 1989. Dr. Evans is Chair, Torstar Corporation (a newspaper and book publishing company headquartered in Toronto, ON) and Vice-Chair of NPS/Allelix Biopharmaceuticals Inc. Dr. Evans also chairs the boards of the Canada Foundation for Innovation and MaRS (Medical and Related Sciences) Project.

Wilfred G. Lewitt

Wilfred G. Lewitt, of Toronto, ON has served on the Board of the Company since 1970. Mr. Lewitt retired as Executive Chairman, MDS Inc., effective October 31, 2004, but continues as a member of the Board until March 10, 2005. He is also a director of International Group Inc. and Hemosol Inc.

Robert W. Luba^A

Robert W. Luba, of Toronto, ON has served on the Board of the Company since 1996. Mr. Luba is President, Luba Financial Inc. Prior to 1994 he was President and CEO of Royal Bank Investment Management Inc., President of Crown Life Insurance Company and Sr. Vice-President of John Labatt Limited. Mr. Luba is also a director of Vincor International Inc., Vector Aerospace, AIM Trimark Investments, ATS Automation Tooling Systems, Menu Foods Income Fund, KPC Income Fund and Associated Brands Income Fund.

FPO

John T. Mayberry^{C, H}

John T. Mayberry, of Burlington, ON has served on the Board of the Company since 2004. Mr. Mayberry is a Corporate Director. From 2002 to 2003 Mr. Mayberry was Chair of the Board & CEO, Dofasco Inc. (an international steel manufacturer headquartered in Hamilton, ON). Mr. Mayberry is also a director of Scotiabank, Decoma International, Inco Limited and CFM Corporation.

Mary Mogford^{C, E}

Mary Mogford, of Newcastle, ON has served on the Board of the Company since 1998. Ms. Mogford is a Corporate Director and a former Deputy Minister of Finance and Deputy Minister of Natural Resources for the Province of Ontario. Ms. Mogford is also a director of Falconbridge Limited, Potash Corporation of Saskatchewan, Sears Canada and the Sears Canada Bank, and is also a member of the Altamira Advisory Council.

John A. Rogers

John A. Rogers, of Toronto, ON has been with MDS since 1973 and served on the Board of the Company since 1993. Mr. Rogers is President & Chief Executive Officer, MDS Inc. Mr. Rogers is also Chairman of Humber River Regional Hospital Foundation and a director of Marsulex Inc. and Source Medical.

Nelson M. Sims^{A, E}

Nelson M. Sims, of Key Largo, FL has served on the Board of the Company since 2001. Mr. Sims is President & CEO, Novavax, Inc. (a biopharmaceutical company headquartered in Malvern, PA). Prior to 2001 Mr. Sims was an Executive with Eli Lilly and Company (a global pharmaceutical-based health care company) and President, Eli Lilly Canada, Inc. Mr. Sims is also a director of Novavax.

> **Health Related Charities and Events**

MDS has identified the fight against cancer as our major cause. We actively support, both financially and through direct involvement, many initiatives such as the Canadian Cancer Society's Relay For Life, the Nordion 10K Run, Ottawa Hospital Fundraising Challenge, Colorectal Cancer Screening Initiative Foundation and Wellspring to name a few.

The fundamental objective of our Corporate Citizenship program is to support our purpose of making a distinctive contribution to the health and well-being of people around the world. We do this by supporting initiatives, both financially and through direct involvement, at all levels—globally, nationally and locally.

Our purpose and values in action

At MDS, our purpose is to make a distinctive contribution to the health and well-being of people around the world. We operate according to our core values of mutual trust, genuine concern and respect for people, integrity and commitment to excellence.

Our purpose encompasses all our stakeholders, and our values drive our commitment to strong corporate citizenship and social responsibility. What we achieve through our businesses is important for all stakeholders and for society, and we take great pride in the achievements of charitable organizations and community groups that share our purpose.

Our focus, in keeping with our purpose, is health related charities, scientific research and education, and our communities—organizations that make a direct contribution to health and well-being. We also take great pride in the way employees across the Company put our values into action through their own contributions to their communities and we recognize and encourage their exceptional efforts through our Employee Volunteer Program.

Our commitment is unwavering, and our ability to act on it will be strengthened as we change, grow and build on global leadership. As we achieve our business goals, we will be in a position to contribute more and have an ever-growing impact, building sustainable value for all stakeholders.

Many of the projects we support involve a significant commitment over a number of years. We participate in these projects because the outcome will make a distinctive difference to health and well-being within the communities where we operate.

> **Scientific Research and Education**

MDS recognizes the importance of scientific research in the efforts to understand and cure disease. We are committed to applying science to advance health, and the education of our future scientists is of significant importance. MDS is a founding sponsor of the Medical and Related Sciences (MaRS) Discovery District—a not-for-profit corporation dedicated to accelerating the commercialization of scientific discovery. MDS is also proud to sponsor and partner with a number of academic institutions in recognizing outstanding scientific contributions through the funding of bursaries, scholarships and scientific chairs.

> **Communities**

MDS supports registered charities and events in the communities where we are located and where MDS employees and their families work and live. MDS makes contributions to various health related charities and programs as well as community hospitals and health care facilities. Many of these initiatives provide opportunities for employees to get involved and make a difference on a personal level. Just a few of the organizations that MDS supports include Médecins Sans Frontières/Doctors Without Borders, African Medical and Research Foundation (AMREF), Camp Oochigeas, Special Olympics Foundation and the Juvenile Diabetes Research Foundation.

> **Employee Volunteer Program**

We take great pride in our employees' putting our values into action within their communities. We are pleased to recognize and encourage their efforts through our Employee Volunteer Program. This program is designed to support the causes that are important to our employees. Through the Employee Volunteer Program, MDS makes donations to cultural and sports organizations, health related causes, humanitarian projects and a wide variety of other charitable activities and organizations.

Photo: Francesco Zizola/Magnum Photos

“With over 200 medical field volunteers and 2,000 local staff, Médecins Sans Frontières/Doctors Without Borders is running feeding centres and health care clinics, and ensuring access to clean water in 26 camps for displaced families from Darfur Region in Sudan. The raging war forced 1.2 million people to flee to the neighbouring country of Chad or seek refuge in our camps scattered along the border.

With the generous support of MDS and countless other donors around the world, our teams are able to provide around-the-clock emergency medical care for 700,000 Sudanese. This intervention represents the largest operation undertaken by MSF in 2004.

Working in over 70 countries, Médecins Sans Frontières is the leading medical humanitarian relief organization and has been providing emergency care in crisis situations for over 30 years.”

Médecins Sans Frontières/Doctors Without Borders

Financial Review

18	Management's Discussion and Analysis
37	Responsibility for Financial Statements and Auditors' Report
38	Consolidated Financial Statements
41	Notes to Consolidated Financial Statements
62	Eleven-Year Financial Summary
64	Board of Directors and Executive Management

January 4, 2005

Following is management's discussion and analysis (MD&A) of the results of operations for MDS Inc. (MDS or the Company) for the year ended October 31, 2004 and its financial position as at October 31, 2004. This MD&A should be read in conjunction with the consolidated financial statements and notes that follow. For additional information and details, readers are referred to the quarterly financial statements and quarterly MD&A for fiscal 2004 and the Company's Annual Information Form (AIF), all of which are published separately and available at www.mdsintl.com and at www.sedar.com.

This MD&A is intended to provide readers with the information that management believes is required to gain an understanding of MDS's current results and to assess the Company's future prospects. Accordingly, certain sections of this report contain forward-looking statements that are based on current plans and expectations. These forward-looking statements are affected by risks and uncertainties that are discussed in this document, as well as in the AIF, and that could have a material impact on future prospects. Readers are cautioned that actual events and results will vary.

In our MD&A and elsewhere, we discuss the results of our core businesses in the Life Sciences and Health segments separately from those of the formerly 89%-owned MDS Proteomics Inc. (MDS Proteomics). Our core operations are mature businesses that generate cash flow and operating results that are consistent with other well-established businesses in their markets. MDS Proteomics is an early-stage research and development company that did not generate significant revenue and incurred substantial operating losses and negative cash flow. We believe that mixing the results of MDS Proteomics with those of our core businesses gives a potentially misleading picture of the results of our businesses. During fiscal 2004, MDS restructured its ownership interest in MDS Proteomics, and as a result, subsequent to July 2004, no longer consolidates the results of this company, now renamed Protana Inc.

In this MD&A we describe certain income and expense items that we label as unusual or non-recurring. These terms are not defined by generally accepted accounting principles ("GAAP"). Our usage of these terms may vary from the usage adopted by other companies. We identify the impact of these amounts on operating income and on earnings per share. We provide this detail so that readers have a better understanding of the significant events and transactions that have had an impact on our reported results.

In addition, terms such as backlog are not defined by GAAP, and our use of such terms or measurement of such items may vary from that of other companies.

Earnings per share and other figures that are reported separately for our core businesses and for MDS Proteomics include all items required to be included under GAAP. We believe that disclosing components of earnings per share along with the consolidated results provides information to readers to enable them to better understand the fundamental trends affecting our businesses. We provide a table in this document that summarizes earnings per share figures for comparison to amounts reported on the face of the income statement.

Tabular amounts are in millions of Canadian dollars, except where noted.

Introduction

MDS is a global health and life sciences company. We provide enabling technologies, products, and services to a global market to improve patient outcomes. Our primary areas of focus are drug discovery and development and disease diagnosis. Our primary customers are pharmaceutical and biotechnology companies and health care providers such as doctors and hospitals. Our products and services include:

1. pharmaceutical research services;
2. radioisotopes used for nuclear medicine and for sterilization;
3. advanced analytical instruments based on mass spectrometry used primarily in drug development;
4. laboratory testing services, the results of which are used by doctors to diagnose disease and plan medical treatment; and
5. distribution of medical supplies and equipment.

Through our mix of products and services, we are intimately involved in the discovery, development and manufacture of life-saving pharmaceuticals and medical devices. In addition, MDS is the largest operator of clinical laboratories in Canada and a critical link in the overall health care system in the country.

Restatement of Prior Years' Results

During 2004, MDS decided to make an orderly exit from our US laboratory business. This decision reflected a further step in our long-term strategic priority of creating the right mix of businesses for the Company, and followed the decision made last year to close our generic radiopharmaceutical manufacturing facility. We have now substantially completed our exit from the US laboratory business and, as required by GAAP, these businesses have been classified as discontinued operations. Results for the prior years have been restated to reflect this treatment. Revenues for 2003 and 2002 have been reduced by \$134 million and \$141 million, respectively, to reflect the discontinuation of US labs.

Operating Highlights

Fiscal 2004 proved to be a challenging year for MDS. While revenues rose 6% to nearly \$1.8 billion, excluding the impact of MDS Proteomics and unusual items, our operating income dropped \$20 million to \$258 million. This was due to two principal causes. To begin with, our pharmaceutical research services division performed poorly, largely because margins in bioanalytical services were below normal levels due to an unfavourable change in revenue mix and other events which will be discussed in more detail below.

In addition to these issues, we invested \$66 million in various change initiatives in our core operations this year, expensing \$45 million. As a result, selling, general and administrative ("SG&A") expenses remained higher than we would have liked, at 17.6% of revenues. While this is down from 18.4% last year, we believe reductions will be seen in this area as our change initiatives are completed. Based on our current plans for these initiatives, we expect this elevated level of SG&A spending to be sustained throughout 2005.

Highlights this year included strong revenue growth in late-stage pharmaceutical research (up 15%) and in ion technologies (up 22%). In addition, our Canadian laboratory business performed very well, largely because anticipated fee cuts affecting our British Columbia ("BC") operations were deferred and did not begin until July 1, 2004. Expecting these cuts to be phased in effective September 1, 2003, we began to implement our mitigation strategies in the Fall of 2003. As a consequence of these cuts, operating margins in our Health segment reached 11%, up from 6% for 2003.

We achieved considerable progress against the key initiatives we announced last year. In pursuit of the right mix of businesses, we completed the sale of two money-losing US laboratory operations in March. These sales, coupled with our decision to cease business development activities in the US diagnostics market, resulted in the closure of our Nashville, Tennessee, office at that time. In September, we completed the sale of our Memphis operations. We are now in the late stages of an orderly exit from our final US laboratory business in Florida, and we have ended our laboratory management contract with Duke University Health System.

Our US laboratory business, together with our generic radiopharmaceutical business, generated a net loss of \$17 million for the year, inclusive of all required asset write-offs and restructuring charges. Operating losses from these businesses totalled \$12 million in 2003. These results are reflected in discontinued operations for the year.

In July 2004, we announced the completion of the reorganization of MDS Proteomics and the new name of the company, Protana Inc. The reorganization reduced our share interest to 48% and our carrying value was written off. As a result of

this reorganization, our involvement in the day-to-day management of Protana has been essentially eliminated. In addition, we expect no impact on our reported results from Protana next year.

To complete the reorganization, MDS contributed \$15 million to Protana; in return, we acquired a license to certain biomarker technology and gained access to \$19 million of tax assets of MDS Proteomics that could not be used by that company. These assets already belonged to the consolidated MDS group but had been fully provided for and had nil carrying value due to the record of losses in MDS Proteomics. Tax accounting rules required that this transaction be reported as an income tax recovery in our third quarter.

We also participated in a corporate reorganization of Hemosol Inc. and as a result now benefit from tax assets belonging to Hemosol Inc. (since renamed LPBP Inc.). For \$16 million cash (excluding transaction costs) contributed to Hemosol, we now report the benefit of tax loss carryforwards, investment tax credits, and research and development expense pools having a cash value of \$120 million. These tax assets will effectively shelter our Ontario laboratory operations from income taxes for the next eight years.

Considerable progress was also made on our efforts to improve our operating platform this year. In June, we reorganized our major functional support services including human resources, facility services, and information technology into a new operating unit, Enterprise Services ("ES"). In addition, by year-end, we completed the design and preliminary implementation work for our new enterprise resource planning system. Effective November 1, 2004, ES and our Corporate office were transitioned from their existing financial system to the new system. Other business units will be converted to the new platform by early 2006.

In fiscal 2004 we faced significant economic challenges due to the changing global economy. Most of the revenue generated in our Life Sciences businesses comes from exports from Canada or from foreign operations. Much of this revenue is generated in US dollars. Compared to fiscal 2003, the average exchange rate between the Canadian and US dollar declined by 12¢. The effective rate that we realized on exports of products and services into the US market in 2004 declined by 7¢, as a result of the effectiveness of our hedging program. Overall, the effective rate at which we translated all US dollar-denominated revenue fell by 9¢. This decrease translates into a revenue decline of \$50 million and an operating income decline of \$26 million for the year. Comparing 2003 to 2002, these decreases were 13¢, 3¢ and 7¢, respectively. This corresponds to a \$32 million decline in revenues and an \$11 million drop in operating income for 2003. In isolation, the decrease in the value of the US currency translates into a drop in earnings per share ("EPS") of \$0.12 for 2004 versus 2003, following a drop of \$0.05 for 2003 over 2002.

Four of our five businesses had solid results this year despite the challenges posed by the depreciated US dollar, discussed in more detail in the sections that follow.

Earnings per share for the year were as follows:

	2004	2003	2002
EPS from continuing operations			
before MDS Proteomics and other items	\$ 1.14	\$ 1.21	\$ 1.07
MDS Proteomics	(0.55)	(0.24)	(0.27)

Health segment	598	3	581	—	580
Proteomic segment	—	—	1	(67)	3
Consolidated revenues	\$ 1,764	6	\$ 1,665	2	\$ 1,636

Revenue growth in our Life Sciences businesses was 8%, led by ion technologies where growth was driven by significantly improved supply conditions for cobalt. After three years of tight cobalt inventories, supply improved in 2003 and 2004. Strong revenue growth, particularly in the second and fourth quarters, was experienced in this division. Although deliveries of cobalt will continue to fluctuate quarter over quarter, due to our dependence on the maintenance schedule for the nuclear reactors in which the cobalt is produced, we expect similar annual revenue from cobalt in 2005.

Our cobalt business is primarily an export business with most sales priced in Canadian dollars. As a result, revenues in this line of business have not been adversely affected by the declining value of the US dollar. On the other hand, revenues from nuclear medicine isotopes, which form the balance of our isotopes division, are largely from sales priced in US dollars. Despite the drop in the US dollar, revenues in this line of business were up 7% on an as-reported basis, and shipments reached record levels.

Early in the year, we concluded an agreement with Biogen Idec Inc., enabling them to buy out certain minimum purchase commitments related to the supply of yttrium-90. Under this agreement, we were paid US\$25 million, which has been recorded as deferred revenue. We are amortizing this deferred revenue over the remaining 40-month life of the continuing supply contract with Biogen Idec.

We also had continued strong revenues from analytical instruments, which, at \$282 million, were up 4% year-over-year. Revenue growth for this division was driven by continued customer demand for our high-end 4000 class of equipment. While sales of lower end units remain healthy, it is our high-end instruments that drive revenue growth and higher operating margins. Sales by our joint ventures to our partners, which are a good reflection of sales to end users, were up 16% in US dollars, and shipments were at record levels.

In the second quarter of 2003, we announced that we had been successful in a US patent infringement suit against Micromass/Waters ("Micromass"). This year, we reached an agreement with Micromass granting them access to certain technology. We were paid \$14 million as part of the final agreement, augmenting the \$39 million we reported last year. In addition, the agreement provides for a small royalty on future sales by Micromass.

Reported revenues from pharmaceutical research services were up 6%; however, revenue growth was restrained by the falling US dollar. A significant portion of our pharmaceutical research revenue originates in US dollars, either as exported services from our Canadian operations or as revenues of foreign-based operations located principally in the US. The

"Over the past year, we have redeployed people and financial resources to focus on building a global platform for growth. We are focusing our talents and resources on those initiatives that enhance organizational effectiveness and efficiency, improve quality and reduce costs for our businesses."

David Poirier

President, Enterprise Services and Chief Information Officer

Canadian dollar and the Euro form the base currencies for the majority of remaining revenues. While the impact of the Euro was marginally positive for the division this year, it was more than offset by the negative impact on growth rates from the US dollar. Had we reported revenues for last year in US dollars, as our major competitors do, we would have reported revenue growth of 16% for 2004 instead of the 6% shown in the revenue table.

Late-stage revenue growth was strong this year with demand for global studies the major contributor. This line of business also saw strong sales growth contributing to our higher backlog, which ended the year at US\$300 million, up 30% from a year ago and nearly double the October 2002 level. Growth in late-stage backlog accounts for most of the US\$70 million increase in backlog since October 2003.

Early-stage growth was more modest as strong performance in our early clinical, pharmacology and drug safety businesses was offset by a decline in bioanalytical revenues. Although the number of bioanalytical studies we conducted this year was roughly the same as in 2003, the average study size based on samples processed was down. This resulted in lower revenues from this business and lower operating income, reflecting the high fixed cost nature of work performed.

While difficult to measure, the impact of the FDA review of our bioanalytical operations this year was negative. The review, which related to observations by the FDA pertaining to a 2001 bioequivalence study conducted at our Montreal facility, rose in significance following the posting of correspondence from the FDA on their website. The review resulted in disruption to the normal operations of our Montreal site. We dedicated considerable resources to addressing this issue with the FDA and responding to questions from customers. There is no doubt that this unusual level of activity reduced the efficiency and effectiveness of that facility.

Although the FDA situation was not given as a reason for study cancellations, the pace of workflow slowed during the period of the review. In addition to the direct impact on our operations and the possibility of study cancellations related to the uncertainty, we have no way to estimate the degree to which our ability to win new work was affected.

Overall, revenues from bioanalytical work were down 15% year-over-year, while the contribution of this business to segment operating income was down 42% due to the higher fixed cost structure typical of the business. The decline in revenues was most pronounced in the third and fourth quarters, and revenue from bioanalytical hit its low point for the year in the third quarter. Based on recent trends, we believe we are seeing a stabilization of the business as operating income for the unit was level for the last two quarters of the year but still below prior year levels.

The FDA review is ongoing at the date of this report. Subsequent to year-end, we received a second untitled letter pertaining to this review, in which the FDA expressed further concerns. We are continuing to review the study data from trials from the period in question and we are making every effort to meet with the FDA to ensure we fully understand their requirements of us.

We have been diligent in keeping our customers apprised of the situation throughout the period of the review. While our revenues from bioanalytical services dropped significantly in the second and third quarters, revenues levelled off in the fourth quarter, leading us to believe that revenues had stabilized. Given the issuance of the second letter by the FDA, we anticipate a continuation of the uncertainty that currently exists. This may significantly impact the financial position and future results of our bioanalytical operations.

Revenues from laboratory services, which now exclude the results of our discontinued US operations, grew modestly until the third quarter, although we expected a reduction this year resulting from fee schedule changes proposed in BC. These reductions took force in July, resulting in a drop in revenues in the fourth quarter. For the year as a whole, diagnostic revenues were up 2% over 2003, repeating the growth seen from 2002 to 2003.

In preparation for the BC fee cuts (which were to take place in September 2003 and April 2004), we took steps last Fall to reduce operating costs in the province. These steps proved effective, and when combined with the deferral of the fee cuts, significantly improved our operating margin for the first three quarters. Although offset by the fee cut implemented July 1, 2004, the strong results for the first three quarters resulted in a better margin for the full year compared to prior years.

Distribution revenues were up modestly compared to 2003 and 2002. While revenue growth was evident in most months this year, strong SARS-related sales in the second and third quarters of 2003 were not repeated this year.

Operating income

	2004	2003	2002
Operating income before MDS Proteomics and other items	\$ 258	\$ 278	\$ 273
MDS Proteomics —Operations	(26)	(33)	(52)
—Writedown of goodwill and other assets	(63)	(2)	—
—Gain resulting from reorganization	8	—	—
Operating income from continuing operations, before other items	\$ 177	\$ 243	\$ 221
Valuation provisions	(35)	(75)	—
Restructuring charges	(13)	(28)	—
Tax credits from MDS Proteomics reorganization	3	—	—
Patent settlement	14	39	—
Gain (loss) on sale of businesses and other	4	12	(7)
Operating income from continuing operations	\$ 150	\$ 191	\$ 214

Excluding the impact of MDS Proteomics and other items, our continuing operations achieved an operating margin of 15% this year compared to 17% last year and in 2002.

After considering other items, our operating margin from continuing operations was 9% compared to 11% in 2003 and 13% in 2002.

We failed to achieve the 1% improvement target for our operating margin in 2004 for two primary reasons. To begin with, results in pharmaceutical research were below plan. This primarily reflects disappointing results in our key bioanalytical market, as the majority of the other business units in this division performed well.

Another factor that had an impact on our operating margin this year was our ongoing investment in change. In fiscal 2004, we invested a total of \$28 million in design and implementation of our new business platform and improved information technology infrastructure. Of this total, \$7 million has been expensed, while the balance has been treated as a capital asset. In addition, we incurred \$38 million of incremental costs as we switch over to outsourced support for our desktop information technology environment and to ramp-up Enterprise Services as a shared services organization for our business support services.

Research and development ("R&D") expense for the year was down 21% to \$37 million, following a 25% decrease last year. Gross cash spending on new product development remained strong at \$83 million compared to \$90 million in 2003 and \$91 million in 2002. Most of the 2004 spending occurred in our instrumentation business. Spending at MDS Proteomics was considerably lower this year, accounting for the drop from 2003. In fiscal 2004 we realized \$9 million of investment tax credits that related to R&D spending by MDS Proteomics in previous years, including \$3 million resulting from the July 2004 reorganization. These credits have been recorded to reduce the net R&D expense for the year.

Depreciation and amortization expense of \$71 million was down slightly from 2003. An expected increase in this expense related to commencing operations at our MAPLE facility did not occur due to continuing commissioning delays for the reactors.

"MDS is on the path to becoming a high-performance company. The foundation of core values, upon which MDS was built, will remain constant as we move towards that goal."

Jim Reid

Executive Vice-President,
Organization Dynamics

Other income and expenses includes the following items:

	2004	2003	2002
Cash award on patent settlement	\$ 14	\$ 39	\$ —
Gain (loss) on sale of businesses and investments	4	12	(6)
Valuation provision on long-term investments	(22)	(77)	—
Writedown of other long-term assets	(25)	—	—
Writedown of MDS Proteomics goodwill	(53)	—	—
Gain on reorganization of MDS Proteomics	8	—	—
	\$ (74)	\$ (26)	\$ (6)

During the fourth quarter of 2004, we recorded the following non-cash provisions:

- a \$15 million reduction in the carrying value of certain deferred development costs;
- a \$10 million reduction in the carrying value of our investment in Iconix Pharmaceuticals, Inc.;
- a \$10 million reduction in the value of our holdings in Evolved Digital Systems Inc., bringing the value of this investment to its current market value.

For segment reporting, the first two charges above are recorded in the Life Sciences segment and the final provision is recorded in the Health segment.

The writedown of other long-term assets includes \$10 million, which along with the writedown of goodwill, relates to the reorganization of our interest in MDS Proteomics. These charges were recorded at the time the company filed for protection from its creditors. As a result of the final reorganization, MDS was relieved of its responsibility for certain liabilities of MDS Proteomics, resulting in a one-time gain.

In fiscal 2003, we recorded valuation provisions related to certain long-term investments and recorded a gain resulting from the sale of our European-based Oncology Software Solutions business. We recorded a further gain in 2004 following the sale of shares of the acquirer that we received as part of the consideration.

The operating income and operating margins by segment for the past three years were:

	2004		2003		2002	
	Operating Income	Operating Margin	Operating Income	Operating Margin	Operating Income	Operating Margin
Life Sciences	\$ 168	14%	\$ 192	18%	\$ 205	19%
Health	63	11%	32	6%	61	11%
Core Businesses	231	13%	224	13%	266	16%
Proteomics	(81)	n/m	(33)	n/m	(52)	n/m
	\$ 150	9%	\$ 191	11%	\$ 214	13%

Impact of the US dollar on reported results

During the course of the past three years, the value of the US dollar has declined precipitously. Comparative rates for the past three years, based on a monthly average rate as determined by the Bank of Canada ("BOC") were:

	Average BOC Rate	MDS Effective Rate	Average MDS Hedge Rate	Hedge Gain (Loss)
2002	\$ 1.57	\$ 1.56	\$ 1.54	\$ (4)
2003	\$ 1.44	\$ 1.49	\$ 1.56	\$ 22
2004	\$ 1.32	\$ 1.40	\$ 1.49	\$ 44

The MDS effective rate reflects the rate at which US dollar-denominated revenues were, on average, translated into Canadian dollars. It reflects a blend of actual exchange rates and the rate applied to revenues sheltered by our hedges.

During this time, we maintained an active hedge book that sheltered our results from a portion of this decline, realizing average hedge rates and hedging gains as noted above. Our hedge program focuses on US dollar revenues earned by our Canadian-based export businesses. We do not hedge the results of our foreign-based operations.

Revenues denominated in US dollars accounted for approximately 43% of total revenues in fiscal 2004 and 2003 compared to 38% in 2002. In 2004, approximately one-half came from Canadian-based export operations. Traditionally, the balance of US dollar revenues came from operations based in the United States. More recently, with the growth in global pharmaceutical research trials, an increasing amount of the revenue of our European operations is denominated in US dollars.

Revenues generated in our US operations are naturally hedged by the costs incurred at those locations. While the declining value of the US dollar has the effect of reducing reported revenue growth rates for those businesses, the natural hedge serves to limit the impact of currency fluctuations on operating income. European operations for which no currency hedges were in place did see a drop in both reported revenues and reported operating income.

The overall impact of the declining US dollar on 2004 operating income was limited due largely to our significant hedge position. Entering fiscal 2005, we have a US dollar hedge portfolio of \$179 million at an average rate of \$1.45. As at October 31, 2004, this portfolio had an unrealized gain of \$41 million. This portfolio represents approximately 42% coverage of our estimated net US dollar-denominated revenues for fiscal 2004.

Interest expense

On a net basis, interest expense was \$24 million, down slightly from the \$28 million incurred last year. Interest rates have remained low this year, and the majority of our long-term debt is in fixed rate instruments. The 25% of our Senior Unsecured Notes that is subject to floating rates based on interest rate swap agreements benefited from these sustained low rates.

During the year, we capitalized \$8 million related to the MAPLE construction project (2003—\$8 million; 2002—\$7 million).

Minority interest

Minority interest is incurred with respect to non-controlling ownership interests in our BC and Ontario laboratory operations and MDS Proteomics (prior to July 29, 2004). The increase in this expense this year results from the reduced minority interest recovery related to MDS Proteomics and strong results from our BC operations.

Income tax expense

The 36% tax rate applicable to our core businesses approximates the combined federal and provincial tax rate on our Canadian businesses. At 46%, the effective rate for 2004 was higher than this due primarily to the operating losses from MDS Proteomics. These losses could not

"2004 has been a year of high intensity, transition and change. We expect that the high level of activity will continue through 2005, executing the change initiatives of our Action Plan."

Jim Garner

Executive Vice-President, Finance and Chief Financial Officer

be tax effected in the period prior to the reorganization of that company, increasing the effective tax rate in those periods as a result. This increase was partially offset later in the year, as we were able to utilize a portion of the MDS Proteomics losses following the reorganization, along with losses from certain other operating units that had not previously been recognized.

Discontinued operations

We now classify our US laboratory operations along with our European generic radiopharmaceutical business as discontinued operations. The results of these businesses over the last three years were:

	2004	2003	2002
Revenues	\$ 100	\$ 149	\$ 156
Cost of revenues	(89)	(130)	(129)
Selling, general and administrative	(26)	(31)	(29)
Net operating loss	(15)	(12)	(2)
Provision for discontinuance	(2)	(23)	—
Loss from discontinued operations	\$ (17)	\$ (35)	\$ (2)
Basic earnings per share	\$ (0.12)	\$ (0.24)	\$ (0.01)

We ceased production at our Fleurus radiopharmaceutical site as planned on December 8, 2004, and the final shutdown of this generic radiopharmaceutical business is expected to occur by mid-2005. Our exit from the US laboratory business is expected to be completed by the second quarter of 2005. Under the terms of sale of certain assets associated with the US laboratory business, contingent proceeds of \$10 million were available, subject to certain conditions. We received \$2 million of such payments in October 2004, but further receipts appear unlikely; consequently, no recognition has been given to these additional contingent proceeds in the accounts.

Liquidity and capital resources

WORKING CAPITAL	2004	2003	Change	2002	Change
Net cash	\$ 296	\$ 260	14%	\$ 184	41%
Operating working capital	\$ 124	\$ 83	49%	\$ 101	(18%)
Cash from operating activities	\$ 179	\$ 240	(25%)	\$ 186	29%
Current ratio	1.9	1.9		1.7	
Accounts receivable turnover	5.5	6.1		5.0	
Inventory turnover	9.7	8.4		10.7	

Our measure of operating working capital equals accounts receivable plus inventory less accounts payable, accrued liabilities, and current deferred revenue. The increase over the October 2003 balance relates mostly to an increase in accounts receivable. Our accounts receivable turnover for the year was 5.5 times, in line with our traditional levels, though slightly slower than last year. We maintained a strong current ratio throughout the year, anchored by a significant cash position.

By their nature, our businesses do not require significant investments in working capital and we are ordinarily able to maintain our operating working capital at levels similar to those seen this year.

Cash flow from operations for the year was \$179 million. Valuation provisions booked in the fourth quarter, depreciation and amortization of long-term assets, and non-cash charges associated with the reorganization of MDS Proteomics totalled \$168 million and represent the significant operating charges that did not affect cash flow.

Cash from Operating Activities

(\$ millions)

Operating cash flow has been affected by the declining currency, although again the gains on our forward contracts offset some of this impact. We treat these forward contracts as hedges for accounting purposes, and therefore all hedge gains are realized in cash at the time they are reported.

Our cash position was bolstered this year with the cash proceeds from the final Micromass settlement (\$14 million) and the cash proceeds from the sale of our US laboratory operations (\$35 million). Significant uses of cash included capital asset purchases, which at \$112 million were below the level of the last couple of years, as well as investing activities related to the MALDI-TOF purchase (\$10 million), the Hemosol tax losses transaction (\$19 million), and dividends and minority interest distributions (\$20 million). In addition, we spent \$18 million under the terms of our Normal Course Issuer Bid to buy back 942,100 shares. The reorganization of MDS Proteomics in July resulted in a \$10 million payment for certain technology access agreements and tax losses, and the removal from the balance sheet of \$18 million of cash belonging to MDS Proteomics, as we no longer consolidate that company.

Our current cash position is strong, and we have corporate credit facilities provided by a syndicate of banks amounting to \$225 million that is available and undrawn. These capital resources are sufficient to meet all expected requirements related to our current business plans. Certain of our business units also have small operating credit facilities, none of which was being utilized at year-end.

We remain in compliance with all covenants for our Senior Unsecured Notes and our corporate bank credit facility.

CAPITALIZATION	2004	2003	Change	2002	Change
Long-term debt	\$ 494	\$ 542	(9%)	\$ 615	(12%)
Minority interest	22	63	(65%)	56	13%
Shareholders' equity	1,497	1,426	5%	1,354	5%
Capital employed	1,717	1,771	(3%)	1,841	(4%)
Book value per share	\$ 10.56	\$ 10.10	5%	\$ 9.63	5%

Capital employed is represented by shareholders' equity, long-term debt, and minority interest, less net cash.

Long-term debt decreased from \$542 million to \$494 million between October 2003 and October 2004. Loan payments were \$4 million this year, reflecting scheduled payments on our MAPLE project funding. In addition, the reorganization of MDS Proteomics resulted in the elimination of \$64 million of long-term debt. A long-term note payable in connection with our MALDI acquisition amounting to \$29 million was added to long-term debt. Otherwise, the change in long-term debt reflects the revaluation of our Senior Unsecured Notes to year-end exchange rates. The US dollar depreciated by 10¢ over the course of fiscal 2004, resulting in a further unrealized gain on this debt of \$30 million, bringing the total unrealized gain to \$113 million. This unrealized gain is recorded in the cumulative translation adjustment.

Contractual obligations

The Company is obligated in the normal course of business to make certain payments over the next five years and thereafter as set out below:

	2005	2006	2007	2008	2009	Thereafter
Long-term debt	\$ 6	\$ 18	\$ 24	\$ 113	\$ 24	\$ 309
Operating leases	42	37	30	20	16	45
Other contractual obligations	99	61	55	47	46	52
	\$ 147	\$ 116	\$ 109	\$ 180	\$ 86	\$ 406

"Over the next 12 months we will focus on building on the core business, streamlining our operations and infrastructure, enhancing our financial performance by leveraging our programs of operational excellence and growing the business."

Cam Crawford

President, MDS Diagnostic Services

Debt to Total Capitalization (%)

In addition to these commitments, MDS has guaranteed the bank debt of Hemosol Corporation to a maximum of \$20 million. The guarantee expires June 20, 2005, and is backed by a first security interest in essentially all of the assets of Hemosol.

Our 11 million shares in Evolved Digital Systems Inc. (Evolved) are optioned to another shareholder of Evolved until March 2006. Subject to certain conditions, the option entitles the holder to acquire our shares in Evolved at a price of \$1.50 per share and grants the holder voting rights for our shares. Our current carrying value for Evolved is \$3 million.

Share capital

SUMMARY OF ISSUED SHARE CAPITAL

Repurchased and cancelled	(857)	(8)
Balance—October 31, 2004	141,826	\$ 833

Risks and uncertainties

This section outlines risks and uncertainties that can have an impact on our operating results and financial position over the course of a year. A more detailed discussion of long-term risks and uncertainties and industry trends is contained in our Annual Information Form.

Exposure to foreign currencies

Approximately 31% of Life Sciences revenue is earned outside of Canada, and a further 66% results from exports from Canada. The majority of our export product revenues and a significant component of our foreign activities are denominated in US dollars. We believe that continued expansion outside of Canadian markets is essential if we are to achieve our growth targets. This expansion will subject MDS to volatility associated with changes in the value of the Canadian dollar.

We manage exchange rate risk principally through the use of foreign exchange contracts. At October 31, we had outstanding US dollar contracts totalling US\$179 million at an average rate of \$1.45 covering the period November 2004 to October 2005. We treat these contracts as hedges for accounting purposes. The value of the Canadian dollar approached historic lows in the early part of fiscal 2002, and we purchased a substantial portfolio of hedge contracts at that time. In the latter part of 2002 and throughout 2003 and 2004, the Canadian dollar strengthened and, as a result, we realized significant gains on our maturing contracts. Our outstanding contracts have incurred an unrealized increase in market value of \$41 million (2003—\$56 million; 2002—\$3 million). We do not hedge our revenue or expense streams for locations based outside of Canada and we are, therefore, exposed to the impact of currency fluctuation in these areas.

In addition to foreign operations and export sales, our Senior Unsecured Notes payable are denominated in US dollars. This long-term debt is hedged by our net investment in our US operations. Depending on changes in the value of the US dollar, repayment of this debt may require more cash than the value of this debt, as it is currently recorded.

Capital Expenditures
(\$ millions)

MAPLE project

We have contracted with Atomic Energy Canada Limited ("AECL") for the construction and operation of two new, special purpose reactors and a processing facility for the production of reactor-based isotopes. This project is currently four years behind schedule and more than 100% over the initial budget. The project has encountered significant delays, and we have not been able to achieve satisfactory solutions to certain financial issues.

During the third quarter, we were advised by AECL that a technical problem was experienced during an operating test, and the shut-off rod safety system, which forms a central part of the emergency shutdown system of the MAPLE reactor, failed to function within its specifications. AECL is currently conducting an investigation into the cause of this event.

We continue to be disappointed with AECL's performance in resolving technical and regulatory issues on this project. AECL has advised us that they remain confident that, in time, all technical issues will be resolved and the reactors and associated processing facility will receive the requisite regulatory approvals. At this time, we do not have sufficient, reliable information from AECL to predict with any reasonable degree of accuracy when commercial production will commence in the new facilities.

AECL's existing NRU reactor is able to satisfy all customer requirements for reactor-based isotopes. The current operating license issued by CNSC for the NRU reactor expires in December 2005. We are advised by AECL, the owner and operator of the reactor, that they expect an extension to the existing license will be obtained, which will ensure an uninterrupted supply of the critical products we supply to the global medical community.

During the year, \$48 million of costs were capitalized with respect to the MAPLE reactor project, including \$40 million of design, construction and installation costs, and \$8 million of interest. At year-end, the total amount capitalized on this project was \$330 million. This amount is net of cost-sharing payments which we have received to date from AECL, and which are significantly less than the amount to which we believe we are entitled.

We expect to continue our current accounting practices for this project until construction is completed, following which we will cease capitalizing costs and will commence recording amortization expense. The change from capitalization to amortization is expected to take place gradually over a period of several months as production volumes from the older NRU reactor are transitioned to the new facility. Financial responsibility for decommissioning costs of both the NRU and the MAPLE facilities and liabilities related to any nuclear incidents are now and will remain the responsibility of AECL.

Construction costs for this project, as well as AECL's current estimates of operating costs, significantly exceed initial estimates. Financial responsibility for construction cost over-runs and portions of pre- and post-commissioning operating costs are the subject of a dispute with AECL. We intend to vigorously pursue our interests in this dispute, and we are currently in negotiations with AECL and the Government of Canada to develop a process to resolve these issues.

Given current uncertainties, it is not possible, at this time, to predict the final construction costs or operating costs that will be borne by MDS. Accordingly, it is also not possible to predict the overall impact on our operating profitability following the transition from the current operating environment to the new facility.

While we remain confident that the facility will eventually be completed and commissioned and will secure the necessary regulatory approvals, it is not possible to predict when these steps will occur. In the meantime, we depend upon the NRU reactor to supply the majority of our reactor isotopes.

"As we move forward and continue our growth trajectory, we will continue to invest in new technologies and explore opportunities in new markets. Managing the cobalt-60 supply and seeking resolution to MAPLE's financial dispute will be key issues for us in 2005."

Steve West

President, MDS Nordion

Intellectual property

Our Life Sciences businesses are each dependent on intellectual property either in the form of patent protection of key technologies or unpatented proprietary methods and knowledge. We are exposed to the risk that others may gain knowledge of our proprietary methods, infringe on patents, or develop non-infringing competitive technologies. While we take vigorous action to defend our positions, we may not be able to control usage of this intellectual property by others to compete against us.

Acquisition and integration

During the past several years, MDS has made acquisitions of various sizes, particularly in the pharmaceutical services industry. Our acquisition strategy has focused on identifying and purchasing companies that fit specific niches within our overall corporate strategy. These acquisitions involve the commitment of capital and other resources, and large acquisitions will have a major financial impact in the year of acquisition and later. The speed and effectiveness with which we integrate the acquired companies into existing businesses can have a significant short-term impact on our ability to achieve our growth and profitability targets.

Research and development

During fiscal 2004, we spent \$100 million on research and development, principally within our analytical instruments and proteomics business units. All of our businesses depend to one extent or another on our ability to maintain technological superiority and our ability to provide leading-edge solutions to our customers. Ongoing investment in R&D will be required to maintain our competitive position. The likelihood of success for any R&D project is difficult to predict. We manage our R&D projects against tightly defined project outlines that prescribe expected deliverables for each stage of a project. Projects must deliver certain measurable outcomes that we believe are indicators of the likelihood of future success in order to proceed through these design gates and qualify for additional funding.

The R&D we conduct supports a portfolio of intellectual property (IP) in our businesses. We believe that this technology, and other know-how which is not subject to patent-protection, provides us with an important competitive advantage. Certain of our businesses, particularly in analytical instruments, operate in highly competitive environments where technological advance is a key success factor. We vigorously defend our IP from unauthorized use by other parties. In 2002, we were successful in our claims against Micromass and were awarded substantial damages that were received in 2003. A further voluntary settlement was reached in 2004 that allows Micromass access to our technology. Despite our best efforts, we cannot ensure that we will be able to prevent unauthorized use of our IP in all cases.

A significant portion of our Canadian research and development activities is funded in part by tax credits. These credits are recorded as a reduction in R&D expense. A change in taxation policy or regulations regarding the nature of R&D activities supported could have a material impact on the overall cost of our R&D program.

Change initiatives

In 2003, we began a series of initiatives designed to change the way in which we provide a variety of support services for our business units. These changes will require a significant investment of time and resources and are expected to deliver cost savings and other operational efficiencies. In addition, these changes are expected to make possible more rapid integration of future acquisitions. We have a plan in place that is intended to ensure these change initiatives are completed on time and on budget. Nevertheless, given the size and scope of these changes, a risk of delay and budget overruns exists. As a result, it may be possible that the total investment in change may exceed our current expectations, and the returns realized may be less than planned.

Research and Development, Gross Spending
(\$ millions)

Supply of reactor isotopes

Interest in radiation-based sterilization applications has been strong; however, worldwide supplies of the cobalt isotope used for sterilization are limited. We have taken steps to build additional cobalt processing capacity with a major supplier, Ontario Power Generation Inc. This new supply became available to us in 2003. Production of cobalt takes 18 to 24 months in certain reactors used for generating electricity. Availability of the cobalt for our use is dependent on maintenance schedules for the reactors and on our ability to maintain contractual relationships with our suppliers. Changes in maintenance schedules or the continued operations of the reactors supporting our contracts could impact the availability and timing of our cobalt purchases.

Government regulation and funding

Our Life Sciences businesses operate in an environment in which government regulations play a key role. Changes in regulations can have the effect of increasing the costs we incur to provide our products and services. Delays in achieving required government approvals impact the timing and cost of our capital expansion programs, as is the case for our MAPLE isotope facility. We manage this risk to the degree possible through active participation in the review and approval process with regulatory bodies such as the Canadian Nuclear Safety Commission.

In addition, our pharmaceutical research facilities and our isotope manufacturing facilities are subject to audit and approval by the FDA and other similar agencies. Failure to achieve approval by these agencies would impact our ability to secure contracts to perform work.

Delays can also impact our drug development revenues if our customers are unable to move compounds from one stage to the next in a timely manner. We mitigate this risk by limiting our exposure to individual compounds and customers and maintaining a balanced portfolio of development contracts.

Our Diagnostics businesses in Canada are heavily dependent on both government licensing and government funding. The level of government funding directly reflects government policy related to health care spending, and decisions can be made regarding funding that are largely beyond our control. A change in the level of reimbursement for diagnostic testing could have a material impact on our operating results and cash flows in a year.

Venture capital investments

The financial markets have been difficult for biotechnology companies in recent years. We are monitoring these markets both for the impact on our own long-term investments and for possible opportunities to invest in new technologies at attractive valuations. We carry venture investments on our books at cost. Many companies have had difficulty raising funds, and from time to time, it is a possibility that financings may occur at values that are lower than our current carrying value. While we believe that our portfolio, taken as a whole, is reasonably valued, future financings may lead us to record provisions that further reduce the carrying value of specific investments.

Litigation and insurance

From time to time during the normal course of business, the Company and its subsidiaries are subject to litigation. At the present time there is no material outstanding litigation that is not covered by our insurance policies and that could have a material adverse impact on the Company's results or its financial position. We are aware of no threatened or pending litigation which could have a material adverse impact. We maintain a global insurance program with liability coverage up to \$80 million to protect us from the financial risk associated with a claim made against us. Recent events have made liability insurance considerably more expensive and have reduced the availability of coverage. Our ability to maintain insurance coverage with adequate limits and at a reasonable cost may be impacted by market conditions beyond our control.

"The pharmaceutical research services business faced a number of challenges this past year, particularly in our bioanalytical business. In 2005, we will continue to work our way through these issues. The prospects for sustained levels of investments by our clients in the discovery and development of new drugs will provide MDS Pharma Services with unique opportunities."

Gilbert Godin

President, MDS Pharma Services

QUARTERLY HIGHLIGHTS

	Fiscal 2004				Fiscal 2003			
(\$ millions, except EPS)	Jan	Apr	July	Oct	Jan	Apr	July	Oct
Net revenues	\$ 431	\$ 441	\$ 447	\$ 445	\$ 400	\$ 420	\$ 426	\$ 419
Operating income	60	5	71	14	53	41	65	32
Income from continuing operations	32	(22)	51	7	28	(2)	35	22
Net income	27	(35)	50	9	24	(5)	33	(4)
Earnings per share from continuing operations								
Basic	\$ 0.22	\$(0.15)	\$ 0.36	\$ 0.05	\$ 0.19	\$(0.01)	\$ 0.25	\$ 0.15
Diluted	\$ 0.22	\$(0.15)	\$ 0.36	\$ 0.05	\$ 0.19	\$(0.01)	\$ 0.25	\$ 0.15
Earnings per share								
Basic	\$ 0.20	\$(0.25)	\$ 0.35	\$ 0.06	\$ 0.17	\$(0.03)	\$ 0.23	\$(0.03)
Diluted	\$ 0.20	\$(0.25)	\$ 0.35	\$ 0.06	\$ 0.17	\$(0.03)	\$ 0.23	\$(0.03)

While our businesses experience only limited seasonality, results of the past two years have reflected some unusual transactions that have had a significant impact on quarter-to-quarter comparisons:

- The second quarter of 2003 included investment writedowns partially offset by gains from a patent infringement lawsuit and the sale of an operating unit. These items reduced operating income by \$26 million.
- The fourth quarter of 2003 reflected restructuring charges of \$28 million.
- The second quarter of 2004 reflected charges related to the writedown of our investment in MDS Proteomics to net realizable value, partially offset by other net gains, leading to a net charge of \$58 million.
- The fourth quarter of 2004 reflected restructuring charges of \$7 million and valuation provisions totalling \$35 million.

Outlook

Fiscal 2005 will be a challenging year for MDS. That said, by this time next year we expect to have some significant accomplishments to report.

Current market sentiment appears to call for continued weakness in the US currency, a risk that we foresaw in 2002 when we increased our rate of foreign currency hedging and converted the majority of our borrowings to US dollar-denominated debt. Shortly after that, and throughout fiscal 2003, we worked to develop a response to the drag that a decline in the US dollar would create on our operating results.

This year we began to implement our change initiatives and we are taking concrete steps to improve our operating efficiency. Indeed, each of the initiatives we have underway is aimed at gains in effectiveness or efficiency. This year we broadened our definition of the steps we would be prepared to take and announced the beginning of an initiative to move a portion of the parts sourcing and manufacturing for certain analytical instruments to Singapore.

But change is not aimed solely at reducing costs. In fact, the true purpose of these initiatives is to position MDS for growth. Our growth strategy is focused on adjacent markets and on new opportunities in related markets, and we will only take these steps when we know that we can produce results that our shareholders have a right to expect.

Based on exchange rates that are current at the time of writing of this report (around \$1.21), we know that we are facing a significant drag on our operating results next year. Based on our current revenue projections for 2005, every one-cent change in the value of the US dollar translates to \$2.5 million of revenue on our top line. A significant portion of this also hits our operating income and therefore our earnings per share. We will continue to hedge our US dollar exposure opportunistically, taking advantage of the volatility in the foreign exchange markets when we can.

International Revenues

(\$ billions)

Our pharmaceutical research services business is an important platform for us. The FDA review has created a significant challenge, including the potential need to review the validity of bioequivalence data for studies conducted over the past five years. It is an issue to which we will commit all required resources.

Because we believe strongly in our core value of commitment to excellence, we will deal with the concerns raised by the Agency and ensure that our customers' concerns are also properly addressed. We believe our actions will address the issues raised by the FDA; however, we expect that it may take a considerable period of time to fully satisfy their concerns. In light of this, revenues and operating income from bioanalytical services will remain below historic levels. In addition, there is a possibility that the uncertainty caused by the ongoing review will impact other parts of our pharmaceutical services business.

We are also focused on gaining further leverage from our pharmaceutical research services platform. With the exception of bioanalytical testing, this platform performed well in 2004. We will convert a portion of our existing late-stage backlog into revenues next year, all the while concentrating on a turn-around in the bioanalytical services area.

Both analytical instruments and isotopes are unlikely to repeat their recent strong growth in 2005, as both are affected to a larger degree by the value of the US dollar. Our focus will be on completing the MAPLE project and on new product introductions in these businesses. The integration of the new MALDI-TOF business into the AB/Sciex partnership will be a high-attention item for the early part of fiscal 2005.

In diagnostics, we are looking forward to a period of fee stability in BC and a new fee agreement in Ontario. Although revenue increases are expected to be modest, these businesses remain key components of our overall strategy.

Overall, the combined effect of the drop in the US dollar and our increasing investment in change is expected to cause earnings to be lower in 2005 than they were in 2004. Our current plans anticipate improvement in 2006 as we complete our change initiatives and can start to deliver on the promise of the new platforms.

Appendix

Critical accounting policies

The financial statements of MDS are prepared within a framework of generally accepted accounting policies selected by management and approved by the Audit Committee of the Board of Directors. These policies are set out in note 1 to the financial statements. Certain policies are more significant than others and are therefore considered critical accounting policies. Accounting policies are considered to be critical if they rely on a substantial amount of judgment in their application or if they result from a choice between accounting alternatives and that choice has a material impact on our reported results or financial position. The policies identified as critical to MDS are discussed below.

In addition to accounting policies, the assets, liabilities, revenues and expenses reported in our financial statements depend to varying degrees on estimates and judgments made by management. These estimates and judgments are based on historical experience and may reflect certain assumptions about the future that are believed to be reasonable. Although these estimates and assumptions are re-evaluated on an ongoing basis, the factors upon which these estimates and assumptions are based, as well as actual results, may differ materially.

Revenue recognition

MDS sells a variety of products and services and we use different revenue recognition policies depending on the nature of the product or service sold.

The majority of our products, including our analytical instruments and our radioisotopes and radio chemicals, as well as products we distribute through Source Medical, are sold on terms that require our customers to take ownership of goods upon either shipment or delivery. Revenue is recognized on these transactions at the time title passes to the buyer. Product returns and exchanges and warranty obligations are insignificant in our product-based businesses.

"A number of initiatives were launched in 2004 that will enhance our competitiveness going forward. Our presence in the marketplace is strong; our current product offerings and our continuing investment in R&D promise to deliver the product innovation our customers require."

Andy Boorn

President, MDS Sciex

Certain products, particularly equipment related to cobalt sterilization, involve longer production or delivery schedules and may require formal approval or acceptance by our customers. Approval may not be received until some time after the product has been shipped, and title typically does not pass to our customer until the acceptance has been received. In these cases, revenue is recognized once we have completed all of our obligations under the contract, subject to a reasonable provision set by management to cover any identifiable future costs. Such provisions tend not to be material and we historically have not incurred costs significantly in excess of our provisions, nor have we failed to achieve customer acceptance within reasonable periods of time.

Services are provided to customers on the basis of a per-unit price for work performed or under longer-term contracts that typically define the nature of services to be provided and the terms for billing and payment.

Revenue for services provided on a per-unit pricing basis is recognized when we have completed the requested services and have the contractual right to bill our customer. The majority of our diagnostics revenue is recorded this way, as is our discovery and preclinical revenue and our central lab revenue.

Revenue for services provided under long-term contracts, such as those provided within our early clinical and clinical research businesses, is recognized on a percentage-of-completion basis, usually pro rata as costs are incurred. To calculate revenue, we must estimate the total revenue and total cost, including all costs to complete the contract, as well as the actual stage of completion. The amount of revenue and gross margin appropriate to the percentage of completion is recorded in income based on these estimates. If it becomes evident that a loss will be incurred on a contract, that loss is recorded immediately.

Revenue that is recognized but which cannot be billed is recorded in inventory as service contracts work-in-process. Management conducts a review of all contracts in process at least quarterly to ensure that the appropriate amount of revenue has been recognized and that reasonable estimates of costs to complete have been made. This review also considers the recoverability of all amounts recorded as work-in-process. If recoverability is in doubt, the value of work-in-process is reduced to the expected recoverable amount by a charge to income.

In a significant number of long-term contracts, the billing terms enable us to bill our customers in advance of providing services. The amount of such billings in excess of the amount that we have recognized as revenue is recorded as deferred revenue in the liabilities section of the statement of financial position.

Valuation of long-term investments

MDS maintains portfolio investments in a number of public and private companies, most of which reflect preliminary investments in companies with technology or businesses that are of interest to us. These investments are accounted for at cost or by the equity method depending on our ownership interest and the degree of influence we exert on the management of the investee. Investments are reviewed periodically to determine if there has been a decline in value that is other than temporary. In the event that an impairment has occurred, the carrying value of the investment is written down to an amount that reflects management's estimate of what could be received from a sale of the investment.

Valuation of goodwill

Effective with the beginning of fiscal 2002, companies are no longer required to amortize goodwill on a periodic or routine basis. Instead, the carrying value of goodwill must be assessed at least annually. To assess goodwill, the estimated fair value of the reporting unit or business to which the goodwill relates is compared to the carrying value (including goodwill) of the reporting unit. In the event that the fair value of a reporting unit is determined to be less than its carrying value, and the shortfall relates to the carrying value of goodwill, the carrying value of the goodwill is reduced by a charge to income.

Assessing the fair value of a business requires that management make numerous estimates, including estimating future cash flows and interest rates. Variations in these estimates will cause material differences in the result.

Intangible assets policy

Intangible assets include the value of acquired technology, patents, customer relationships, and long-term service contracts.

In addition to acquired assets, intangible assets include the deferred costs of developing certain products and the pre-opening operating costs associated with new facilities.

Intangible assets are recorded at cost and are amortized over periods that approximate their useful lives, ranging from 3 to 17 years.

Because intangible assets are usually associated with technology that is evolving and for which obsolescence is a significant risk, the carrying value of intangible assets is evaluated at least once per year. In the event that management determines that it is unlikely that the Company will be able to fully recover the carrying value of intangible assets from the undiscounted cash flow that can be generated in the future from related products or services, the intangible assets are written down to approximate our estimate of their net realizable value.

Income taxes

MDS operates globally and is therefore subject to income taxes in multiple jurisdictions. The income tax expense reported in the statement of income is based on a number of different estimates made by management. Our effective tax rate can change from year to year based on the mix of income among the different jurisdictions in which we operate, changes in tax laws in these jurisdictions, and changes in the estimated values of future tax assets and liabilities recorded on our statement of financial position.

The income tax expense reflects an estimate of cash taxes expected to be paid in the current year, as well as a provision for changes arising this year in the value of future tax assets and liabilities. The likelihood of recovering value from future tax assets such as loss carryforwards and the future tax depreciation of capital assets is assessed at each quarter-end and a valuation reserve may be established. Changes in the amount of the valuation reserve required can materially increase or decrease the tax expense in a period. Significant judgment is applied to determine the appropriate amount of valuation reserve to record.

Capital assets

Capital assets are recorded at cost and depreciated at varying rates over their estimated useful lives. Management sets these rates based on experience with these or similar assets.

Costs incurred on assets under construction are capitalized as construction in progress. Costs capitalized on these projects include the direct costs of construction, equipment installation and testing, and interest costs associated with financing large, long-term projects. No depreciation is recorded on such assets until they are placed in service. At each period-end, management reviews the total costs capitalized on all construction projects to determine whether or not the carrying value of the assets can be recovered from the undiscounted, expected, net future cash flow generated by the assets. If there is no reasonable expectation that the costs can be recovered, the carrying value of the asset is reduced to the estimated recoverable amount and the excess is charged to income. This process is subject to significant judgment and could be materially affected by variations in estimates about future cash flows.

Research and development

Costs incurred for research are expensed as incurred. If management expects that a new product has a reasonable likelihood of future commercial success and decides to proceed with product development, costs are capitalized during the remainder of the development process. These costs are identified as deferred development costs and are recorded with other intangible assets on the statement of financial position. Once a product enters commercial

production, deferred development costs are amortized over the estimated product life, generally three to five years.

Management undertakes a periodic review of each project on which deferred development costs have been recorded to determine if the carrying value of the project can be recovered from the undiscounted, expected, net future cash flow generated by sales of planned products. If there is no reasonable expectation that the costs can be recovered, the carrying value of the project is reduced and the excess is charged to income. This process of estimation is subject to significant judgment, in particular about the price and direct cost of the products, as well as expected market acceptance. Deferred development costs generally relate to products on which we have traditionally earned a high gross margin. Although we have not historically recorded any material charges to reduce the carrying value of our deferred development costs, in 2004 we recorded a \$15 million charge to reduce the carrying value of deferred development costs.

Restructuring activities

When we undertake to rationalize certain operations or shut down portions of a facility, we incur expenses such as costs for employee severance and other activities related to exiting the business. When we have announced such activities in a period and identified the costs to be incurred, we record a restructuring provision. This provision may include the difference between management's estimate of the market value of assets and their net book value. It may also include provisions for costs expected to be incurred in the future for expenses such as employee terminations. These provisions are based on management's estimates and reflect plans in place at the time the provision is recorded. Should these estimates change, or should future events prove the estimates wrong, any required adjustments will be recorded in the income statement when identified.

Accounting standards changes

In fiscal 2004, we adopted the new rules for accounting for Stock-Based Compensation, as set out in Canadian Institute of Chartered Accountants (CICA) Handbook Section 3870. Under these new rules, which we adopted on a prospective basis, we now record an expense equal to the fair value of equity options issued to employees. All stock options granted after October 31, 2003 have been accorded such treatment.

We base the expense on an estimate of the fair value of the option where such estimate is determined using the Black-Scholes model of option valuation. The assumptions used for valuation purposes are disclosed in the Notes to the Financial Statements. The fair value of each issued option is amortized to income on a straight-line basis over its five-year vesting period.

In fiscal 2004, we expensed \$1 million related to stock options granted during the year.

We will adopt the CICA's guideline on the consolidation of variable interest entities (VIEs) on November 1, 2004. VIEs include entities where the equity is considered to be insufficient to finance the entity's activities. Under this new guideline, we will be required to consolidate a VIE if the investment we hold in such an entity and/or the relationship we have with them results in us being exposed to the majority of their expected losses, being able to benefit from the majority of their expected residual returns, or both.

We do not expect these new rules to result in our consolidating any VIEs.

We will adopt CICA Handbook Section 3110 – Asset Impairment Obligations on November 1, 2004. Under this new Section, companies are required to recognize the obligations associated with the retirement of capital assets when those obligations result from the acquisition, construction, development or normal operation of such assets. The Section requires that these obligations be recorded at their fair value in the period in which the obligation is incurred and added to the cost of the related capital asset.

We do not expect to record any asset retirement obligations.

Management

The accompanying consolidated financial statements of **MDS Inc.** have been prepared by management in accordance with generally accepted accounting principles consistently applied. The most significant of these accounting principles have been set out in note 1 to the financial statements. These statements are presented on the accrual basis of accounting. Accordingly, a precise determination of many assets and liabilities is dependent upon future events. Therefore, estimates and approximations have been made using careful judgment. Recognizing that the Company is responsible for both the integrity and objectivity of the financial statements, management is satisfied that these financial statements have been prepared within reasonable limits of materiality.

The Board of Directors has appointed an Audit Committee consisting of three outside directors. The Committee meets during the year to review with management and the auditors any significant accounting, internal control and auditing matters, and to review and finalize the annual financial statements of the Company along with the independent auditors' report prior to the submission of the financial statements to the Board of Directors for final approval.

The financial information throughout the text of this annual report is consistent with the information presented in the financial statements.

The Company's accounting procedures and related systems of internal control are designed to provide reasonable assurance that its assets are safeguarded and its financial records are reliable.

External Auditors

The auditors' opinion is based upon an independent and objective examination of the Company's financial results for the year, conducted in accordance with generally accepted auditing standards. This examination encompasses an understanding and evaluation by the auditors of the Company's accounting and internal control systems as well as the obtaining of a sound understanding of the Company's business. The external auditors conduct appropriate tests of the Company's transactions and obtain sufficient audit evidence in order to provide them with reasonable assurance that the financial statements are presented fairly, in all material respects, in accordance with generally accepted accounting principles, thus enabling them to issue their report to the shareholders.

Ernest & Young LLP, Chartered Accountants, having been appointed by the shareholders to serve as the Company's external auditors, have examined the consolidated financial statements of the Company and have reported thereon in their December 14, 2004 report.

AUDITORS' REPORT

To the Shareholders of MDS Inc.

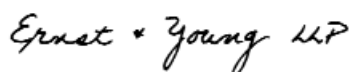

We have audited the consolidated statements of financial position of **MDS Inc.** as at October 31, 2004 and 2003 and the consolidated statements of income, retained earnings and cash flows for each of the years in the three-year period ended October 31, 2004. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at October 31, 2004 and 2003 and the results of its operations and its cash flow for each of the years in the three-year period ended October 31, 2004 in accordance with Canadian generally accepted accounting principles.

The Company changed its method of accounting for stock-based compensation, as described in notes 1 and 19.

1. Accounting Policies

Basis of presentation

These consolidated financial statements of MDS Inc. ("MDS" or "the Company") include all majority owned subsidiaries over which MDS exercises control and have been prepared in accordance with Canadian generally accepted accounting principles ("GAAP"). As recommended by CICA Handbook Section 3475, "Disposal of Long-lived Assets and Discontinued Operations," the Company has reported the results of operations for the year and restated prior years relating to disposal activities initiated by the Company after May 1, 2003.

Principles of consolidation

The financial statements of entities that are controlled by MDS, referred to as subsidiaries, are consolidated. Entities which are jointly controlled, referred to as joint ventures, are accounted for using the proportionate consolidation method, and entities which are not controlled but over which MDS has the ability to exercise significant influence, referred to as associated companies, are accounted for using the equity method. The impact of material differences between Canadian and United States ("US") generally accepted accounting principles are set out in note 28.

Changes in accounting policies

In September 2003, the CICA amended CICA Handbook Section 3870, "Stock-Based Compensation and other Stock-Based Payments" ("Section 3870"), to allow companies who voluntarily adopt the fair value based method for all awards to do so (i) retroactively with restatement of prior periods, (ii) retroactively without restatement of prior periods, or (iii) prospectively. Prospective adoption is only permitted if the fair value method is adopted in fiscal years beginning before January 1, 2004. We have prospectively adopted the fair value method for our 2004 fiscal period beginning November 1, 2003, and therefore will continue to report the impact of stock options granted prior to fiscal 2004 in our pro forma note disclosure to the consolidated financial statements. The impact of stock options granted during 2004 has had an insignificant impact on the Company's results of operations and financial position.

In December 2001, the Accounting Standards Board of the CICA issued Accounting Guideline 13, "Hedging Relationships" ("AcG-13"), which applies to fiscal years beginning on or after July 1, 2003. AcG-13 establishes specific criteria for derivatives to qualify for hedge accounting. Hedge accounting is a method for recognizing the gains, losses, revenues and expenses associated with the separate components in a hedging relationship, such that those gains, losses, revenue and expenses associated with the separate components are recognized in income in the same period when they would otherwise be recognized in different periods. A derivative will qualify as a hedge if the hedging relationship is designated and formally documented at inception. AcG-13 requires the documentation to identify the particular risk management objective and strategy for undertaking the hedge transaction, along with the specific asset, liability or cash flow being hedged, as well as how effectiveness is being assessed. The derivative must be highly effective in offsetting either changes in the fair value of on-balance sheet items or changes in the amount of future cash flows both at inception and over the life of the hedge for hedge accounting to continue. Hedge accounting is discontinued if a hedging relationship becomes ineffective; however, the hedge accounting applied to a hedging relationship in prior periods is not reversed. The adoption of AcG-13 has had an insignificant impact on our results of operations and financial position.

Use of estimates

The preparation of the consolidated financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported values of assets and liabilities and the disclosure of contingent assets and liabilities and the reported amounts of revenues and expenses. Actual results could differ from those estimates.

Significant accounting policies are as follows:

Cash and cash equivalents

Cash and cash equivalents include cash on hand, balances with banks, demand deposits, and investments with maturities of three months or less at the time of investment. The fair value of cash and cash equivalents approximates the amounts shown in the financial statements.

Inventories

Inventories are valued at the lower of cost, determined on a first-in, first-out basis, and net realizable value. The cost of finished goods and work in process is comprised of material, labour and manufacturing overhead.

Capital assets

Capital assets are carried in the accounts at cost less accumulated depreciation and amortization. Gains and losses arising on the disposal of individual assets are recognized in income in the year of disposal.

Costs, including financing charges and certain design, construction and installation costs related to assets that are under construction and are in the process of being readied for their intended use, are recorded as construction in progress and are not subject to depreciation.

Depreciation and amortization, which are recorded from the date on which each asset is placed in service, are provided for on a straight-line basis over the estimated useful lives of the capital assets as follows:

Buildings	2.5% – 4%
Equipment	10% – 33%
Furniture and fixtures	10% – 33%
Computer systems	20% – 33%
Leaseholds	Term of the lease plus all renewal periods, to a maximum of 20 years.
Facility modifications	Costs of modifications to facilities owned by others to permit isotope production are deferred and amortized over the contractual production period.

Long-term investments and other

Investments in significantly influenced companies are accounted for by the equity method. Investments in equity securities of companies over which MDS does not exert significant influence are accounted for using the cost method. Other long-term investments are carried at cost.

MDS regularly reviews its investments for impairment and records an impairment charge when it has determined that there has been a loss in value of the investment that is other than a temporary decline.

Goodwill

Goodwill arises on business acquisitions and comprises the amount paid in excess of the fair value of net identifiable assets acquired.

Goodwill is not amortized but is subject to an impairment review at least annually, to determine if impairment exists. This assessment is based on the estimated fair value of the business to which the goodwill relates.

Intangibles

Acquired technology represents the value of the proprietary “know-how” which was technologically feasible as of the acquisition date, and is charged to net income (loss) on a straight-line basis over its estimated useful life of two to three years.

In-process research and development (“IPR&D”) represents the value on completion of a business combination of the acquired R&D which was not technologically feasible as of the acquisition date and, other than its intended use, had no alternative future use. IPR&D is charged to net income (loss) on a straight-line basis over the estimated useful life of seven years.

Maintenance contracts and customer relationships represent the value placed on maintaining products and technology previously sold to customers and the value on existing customer relationships. Maintenance contracts and customer relationships are charged to net income (loss) on a straight-line basis over the estimated useful life of five years.

Impairment of long-lived and intangible assets

When events and circumstances warrant a review, MDS evaluates the carrying value of long-lived and intangible assets for potential impairment. Certain factors that MDS considers important which could trigger an impairment review include, but are not limited to, significant underperformance relative to historical or projected future operating results, significant changes in the manner of use of the acquired assets or the strategy for MDS’s overall business, significant negative industry or economic trends, a significant decline in MDS’s stock price for a sustained period, and MDS’s market capitalization relative to net book value.

The carrying value of such assets is considered impaired when the anticipated net recoverable amount of the asset is less than its carrying value. In that event, a loss is recognized in an amount equal to the difference. Net recoverable amount is an amount equal to the anticipated cash flows net of directly attributable general and administrative costs, carrying costs, and income taxes, plus the expected residual value, if any.

Stock-based compensation plan

Prior to 2004, no compensation expense was recognized for stock options granted under the Company’s stock-based compensation plan as described in note 19.

Commencing November 1, 2003, the fair value of stock options granted is recognized on a straight-line basis over the applicable stock option vesting period as compensation expense included in selling, general and administrative expenses in the consolidated statements of income and contributed surplus within Share Capital on the consolidated balance sheets. On the exercise of stock options, consideration is received and the accumulated contributed surplus is credited to share capital.

For stock options granted prior to November 1, 2003 which are not accounted for at fair value, pro forma earnings disclosure showing the impact of fair value accounting is included in note 19.

Prior to October 31, 2002, if stock options were repurchased from employees, the consideration paid, net of related tax recoveries, was charged to retained earnings. After October 31, 2002, the plan was changed and the Company can no longer repurchase stock options.

Pension, post-retirement and post-employment benefit plans

The current service cost of pensions and other post-employment benefit plans (such as medical and dental care, life insurance and compensated absences) is charged to income annually. Cost is computed on an actuarial basis using the projected benefits

method and based on management's best estimates of investment yields, salary escalation and other factors. Adjustments resulting from plan amendments, experience gains and losses, or changes in assumptions are amortized over the remaining average service term of active employees.

The average remaining service period of active employees covered by the pension plan and the other retirement benefits for 2004 is 14.44 years (2003—15 years).

The expected costs of post-retirement and certain post-employment benefits, other than pensions, to active employees are accrued for in the consolidated financial statements during the years employees provide service to MDS. Other post-employment benefits are recognized when the event triggering the obligation occurs.

Revenues

Revenues are recorded when title to goods passes or services are provided to customers, the price is fixed or determinable, and collection is reasonably assured.

For the majority of product revenues, title passes to the buyer at the time of shipment and revenue is recorded at that time.

Certain services are provided to customers on a per-unit pricing basis. Revenues for such services are recognized when the requisition service has been performed and the contractual right to bill exists.

Fee for service revenues received for diagnostic laboratory testing services are subject to future adjustment on settlement and are recorded based on management's estimate of amounts that ultimately will be realized by the Company. Adjustments, if any, are recorded in the period in which negotiations are completed.

Certain contract revenues are recognized using the percentage of completion method. Losses, if any, on such contracts are provided for in full at the time they are identified. Customer advances and billings in excess of costs plus estimated profits on contracts in progress are shown as liabilities.

Research and development

The Company carries on various research and development ("R&D") programs, some of which are funded in part by customers and joint venture partners. Funding received is accounted for using the cost reduction approach. Net research costs are expensed in the periods in which they are incurred. Development costs that meet generally accepted criteria, including reasonable assurance regarding future benefits, are deferred and amortized over periods ranging from three to five years. Investment tax credits relating to capital assets are applied to reduce the carrying amount of these assets. Investment tax credits attributable to salaries and other research related expenditures incurred in the year are recorded as a reduction of those expenses.

Income taxes

The Company follows the liability method of income tax allocation. Under this method, future tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities and are measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse.

Investment tax credits related to the acquisition of assets are deferred and amortized to income on the same basis as the related assets while those related to current expenses are included in the determination of income.

Earnings (loss) per share

Basic earnings (loss) per share is calculated by dividing the net earnings (loss) by the weighted average number of MDS Common shares outstanding during the period.

Diluted earnings per share have been calculated, using the treasury stock method, by dividing net earnings available to Common shareholders by the sum of the weighted average number of Common shares outstanding and all additional Common shares that would have been outstanding shares arising from the exercise of potentially dilutive stock options outstanding during the year. This method computes the number of incremental shares by assuming the outstanding stock options are exercised, then reduced by the number of Common shares assumed to be repurchased from the total of issuance proceeds, using the average market price of MDS's Common shares for the period.

Foreign currency translation

Foreign operations are considered self-sustaining and are translated using the current rate method. Assets and liabilities are translated using the exchange rate in effect at the year-end and revenues and expenses are translated at the average rate for the year. Exchange gains or losses on translation of the Company's net equity investment in these subsidiaries and those arising on translation of foreign currency long-term liabilities designated as hedges of these investments are recorded as a separate component of shareholders' equity. The appropriate amounts of exchange gains or losses accumulated in the separate component of shareholders' equity are reflected in income when there is a reduction in the Company's net investment in these subsidiaries resulting from a cash distribution.

Derivative financial instruments

Derivative financial instruments are utilized by the Company in the management of its foreign currency and interest rate exposures. The Company does not utilize derivative financial instruments for trading or speculative purposes.

The Company's policy is to document all relationships between hedging instruments and hedged items, as well as its risk management objectives and strategy for undertaking various hedge transactions. This process includes linking all derivatives

to specific assets and liabilities on the balance sheet or to specific firm commitments or forecasted transactions. The Company also assesses, both at the hedge inception and on an ongoing basis, whether the derivatives that are used in hedging transactions are effective in offsetting changes in fair values or cash flows of hedged items.

The Company operates globally, which gives rise to risks that its earnings and cash flows may be adversely impacted by fluctuations in foreign exchange conversion rates and interest rates. In order to manage these risks, the Company enters into foreign currency forward contracts, foreign currency swaps, foreign currency option contracts, interest rate swaps and interest rate option contracts.

Foreign currency gains and losses on contracts, used to hedge anticipated foreign-currency denominated sales, are recognized as an adjustment of the revenues when the sale is recorded.

Interest rate swap contracts are used as part of the Company's program to manage the fixed and floating interest rate mix of the Company's total debt portfolio and related overall cost of borrowing. Interest rate contracts involve the periodic exchange of payments without the exchange of the notional principal amount upon which the payments are based and are recorded as an adjustment of interest expense on the hedged debt instrument. The related amount payable to or receivable from counterparties is included as an adjustment to accrued interest.

Realized and unrealized gains or losses associated with derivative instruments which have been terminated or cease to be effective prior to maturity are deferred and recognized in income in the period in which the underlying hedged transaction is recognized. In the event a designated hedged item is sold, extinguished or matures prior to the termination of the related derivative instrument, any realized or unrealized gain or loss on such derivative instrument is recognized in income.

Derivatives that do not qualify for hedge accounting are marked to market, with the result that any gain or loss is charged to income.

2. Reorganization of Ontario Laboratory Business

Effective May 1, 2004, MDS transferred assets and operations that form part of the Ontario laboratory business into MDS Laboratory Services LP ("Labs LP"), a newly formed partnership in which MDS was the sole partner. The Company then transferred a 99.99% limited partnership interest in Labs LP to Hemosol Inc., in exchange for 100% of the Class B non-voting shares and additional Class A voting shares of that company. Following this transaction, MDS owns 99.56% of the equity of Hemosol Inc., including 47.5% of the Class A voting shares. Hemosol Inc. was subsequently renamed LPBP Inc. ("LPBP").

The remaining 0.01% of Labs LP is owned by a wholly owned subsidiary of MDS Inc., MDS Laboratory Services Inc. ("MDS Labs"), as the general partner. Through MDS Labs, MDS has retained management control of the day-to-day and strategic operations of the Ontario laboratories business and, consequently, the Company continues to consolidate the results of this business. Because other Class A shareholders of LPBP effectively now own 0.44% of the Ontario laboratory business, the Company has recorded minority interest expense relating to the 0.44% of LPBP owned by these other shareholders.

As a result of this transaction, the Company will be able to benefit from significant tax losses carried forward, research and development expense pools, and investment tax credits, having an estimated combined value of \$120 million. These tax assets were accumulated by LPBP from a blood products business operated by that company prior to the reorganization. The cost to MDS to gain access to these tax assets totalled \$19 million, represented by a \$16 million cash transfer to Hemosol Corporation, a successor corporation to Hemosol Inc. in the blood products business, along with \$3 million of transaction costs.

MDS has recorded these future tax assets at an expected value of \$120 million. In addition, and in accordance with Canadian GAAP as set out in EIC 110, "Accounting for Acquired Future Tax Benefits in Certain Purchase Transactions that are not Business Combinations," the Company has recorded a corresponding unrealized benefit on acquisition of tax assets of \$104 million taking into account the \$16 million purchase price for the losses. This benefit has been reduced by the transaction cost to acquire the tax assets and the net amount of \$101 million has been recorded as a long-term deferred credit, the current portion of which has been recorded in current liabilities.

The future tax assets will be recognized in income based on the effective tax rate existing during each future period as these tax assets are utilized. The unrealized benefit of these tax assets will be amortized on a basis that is pro rata to the future income tax asset utilization.

3. Reorganization of MDS Proteomics

On July 29, 2004, the financial reorganization of MDS Proteomics, subsequently renamed Protana Inc. ("Protana"), was completed. Through this reorganization, the Company reduced its ownership in Protana from 89% to 48.4%.

As the Company's share in Protana has been reduced to less than 50%, management has determined that MDS does not control Protana. As a result of the loss of control, effective July 29, 2004, the Company deconsolidated the assets and liabilities of Protana and began accounting for the investment under the equity method. The net investment reduction of \$68 million from October 31, 2003 balances comprised total assets of \$179 million and total liabilities of \$111 million. The decrease in total assets was primarily due to a \$118 million reduction in goodwill, a \$29 million decline in fixed assets, and a \$30 million decrease in cash. The reduction in liabilities was due to the elimination of long-term debt of \$64 million, minority interest of \$43 million, and current liabilities of \$4 million.

The reduction of the net investment in MDS Proteomics began in the second quarter of 2004, when MDS recorded a goodwill writedown in the amount of \$53 million and a reduction in fixed assets of \$10 million related to its investment in Protana. These provisions reduced the carrying value of Protana to nil. Additionally, a reserve for \$10 million was established, reflecting management's assessment of the total exposure for MDS with respect to outstanding guarantees. The operating losses for the third quarter were offset by the gain realized on the dilution of MDS's share ownership of Protana. The net impact of these transactions results in a negative net carrying value at July 31, 2004 of \$10 million.

As a result of an agreement made related to the reorganization and for a payment of \$5 million, MDS will be able to use the tax assets related to the former MDS Proteomics business. A valuation allowance related to these assets is no longer required and was reversed during the year, and these assets are now reflected at their fair value of \$17 million. This resulted in an income tax recovery of \$9 million, and \$3 million of investment tax credits during the year.

Additionally, MDS committed to pay \$10 million to acquire access to Protana's biomarker technology through a five-year licensing agreement. This has been recorded as Other Intangible Assets and will be amortized on a straight-line basis over the term of the agreement. The terms of the agreement required payment of \$5 million on closing and a further \$5 million payment due on the first anniversary of the reorganization date.

4. Acquisitions and Divestitures

a) Acquisitions

On October 22, 2004, the Company acquired a 50% interest in the business and intellectual property assets of the Applied Biosystems MALDI Time-of-Flight ("TOF") mass spectrometry systems. The purchase included a 100% interest in certain MALDI-TOF product-related manufacturing and research and development assets. The combined purchase price was US\$40 million. This acquisition has been accounted for using the purchase method. The purchase price has been allocated to the assets acquired based on management's best estimate of fair values. Goodwill of \$15 million was recorded on this transaction.

Subsequently, MDS and Applied Biosystems each contributed the MALDI-TOF business and related intellectual property to Applied Biosystems/MDS Sciex Instruments, a 50/50 joint venture of Applied Biosystems and the MDS Sciex division. The inventory and fixed assets will remain with MDS Sciex, as will the goodwill generated on this transaction. The assets will be amortized over various periods.

Effective November 17, 2003, the Company, through one of its partnerships, acquired the assets of Vancouver Medical Laboratories (1965) Ltd. for \$2 million in cash. Goodwill of \$2 million was recorded on this transaction.

In fiscal 2003, the Company acquired an early-stage clinical research facility in New Orleans, Louisiana for cash consideration of \$8 million, representing \$2 million of net tangible assets and \$6 million of goodwill. The transaction also included \$1 million of contingent consideration, which has been subsequently paid.

During 2002, the holders of a put option relating to a previous year's acquisition caused MDS Proteomics to indirectly redeem 480,000 of its Common shares at a price of \$25 per share. MDS recorded the payment as goodwill as its interest in MDS Proteomics increased to 89% because of the redemption.

The total cost of the acquisitions described above has been allocated as follows:

	2004	2003	2002
Working capital	\$ 7	\$ 2	\$ —
Other intangible assets	26	—	—
Software	1	—	—
Goodwill	17	6	14
	51	8	14
Long-term debt and other long-term obligations	(39)	—	10
Shares issued (2002—334,225)	—	—	(8)
Total cash consideration	\$ 12	\$ 8	\$ 16

b) Divestitures

During fiscal 2004, the Company reduced its investment in MDS Proteomics from 89% to 48.4% as part of MDS Proteomics' restructuring (see note 3).

In the current year, the Company disposed of certain of its US laboratory operations, which have been treated as discontinued operations (see note 16).

During fiscal 2003, the Company sold isotopes business units for net proceeds of \$35 million (\$32 million in cash; \$3 million in shares). A gain of \$10 million was recognized on these transactions (see note 14). These businesses had annual revenues of \$36 million in 2002 and \$6 million prior to sale in 2003.

During fiscal 2002, the Company disposed of an isotopes business and a distribution business for total proceeds of \$23 million. No gain or loss resulted from the sale of the isotopes business. A loss of \$7 million was recorded on the sale of the distribution business. These businesses had annual revenues of \$14 million and \$46 million, respectively.

5. Inventories

	2004	2003
Raw materials	\$ 95	\$ 101
Manufacturing work in process	42	30
Finished goods	45	36
Service contracts work in process	—	32
	\$ 182	\$ 199

6. Capital Assets

	2004		2003	
	Cost	Accumulated Depreciation	Cost	Accumulated Depreciation
Land	\$ 36	\$ —	\$ 36	\$ —
Buildings	167	45	155	39
Equipment	316	176	332	173
Furniture and fixtures	48	35	49	34
Computer systems	100	68	149	94
Leaseholds	78	41	84	38
Facility modifications	56	27	55	24
Construction in progress	396	—	318	—
	1,197	\$ 392	1,178	\$ 402
Accumulated depreciation	(392)		(402)	
Net book value	\$ 805		\$ 776	

Construction in progress includes \$52 million (2003—\$44) of capitalized financing costs.

7. Long-term Investments and Other

	2004	2003
Investments in significantly influenced companies and partnerships	\$ 52	\$ 62
Financial instruments pledged as security on long-term debt (note 9)	45	46
Venture capital investments	9	21
Other long-term investments	40	44
Deferred development costs	2	—
	96	111
	\$ 148	\$ 173

- a) Operating income for the year includes \$2 million (2003—\$2; 2002—\$8) as the Company's share of earnings of significantly influenced companies and partnerships.
- b) Certain long-term investments are development-stage enterprises that have not yet earned significant revenues from their intended business activities or established their commercial viability. The recovery of invested amounts and the realization of investment returns is dependent upon the successful resolution of scientific, regulatory, competitive, political and other risk factors, as well as the eventual commercial success of these enterprises. During 2003, certain venture capital investments were written down to their estimated net realizable value (see note 14). Further adverse developments could result in additional writedowns of the carrying values of these investments.
- c) Certain of the investments in significantly influenced companies and partnerships are subject to a formal valuation by other parties. The estimated fair value of these investments, as determined by these parties, amounts to \$6 million (2003—\$10) compared with a carrying value of \$5 million (2003—\$6). During the year, certain significantly influenced investments were written down to their net realizable value (see note 14). Further adverse developments could result in additional writedowns of the carrying values of these investments.

Certain of the long-term investments held by the Company are considered to be financial instruments. Among these are several investments in shares of public companies. These marketable securities had a combined market value of \$20 million (2003—\$27) and a combined carrying value of \$9 million (2003—\$16).

In addition to these marketable securities, the financial instrument pledged as security on long-term debt has a fair value that approximates its carrying value. The estimated fair values of the remaining long-term investments are not readily determinable.

8. Goodwill and Other Intangible Assets

a) Goodwill:

	2004	2003
Opening balance	\$ 774	\$ 785
Acquired during the year ⁽¹⁾	17	6
Disposed during the year ⁽²⁾	(127)	(14)
Foreign exchange and other	1	(3)
Closing balance	\$ 665	\$ 774

(1) \$15 million of the 2004 goodwill addition relates to the acquisition of the MALDI-TOF mass spectrometry business from Applied Biosystems. The remaining \$2 million relates to the purchase of a laboratory business. In 2003, goodwill was recorded as part of the acquisition of an early-stage clinical research facility in New Orleans (see note 4).

(2) \$118 million of goodwill reduced in the current year relates to the Company's reduced ownership of MDS Proteomics resulting from the reorganization (see note 3) and \$9 million of goodwill connected with the sale of certain US laboratory operations (see note 16). The goodwill reduction in the prior year relates to the Company's sale of an isotope business (see note 4).

In accordance with the CICA Handbook Section 3062, "Goodwill and Other Intangible Assets," the Company has assessed the carrying value of goodwill for possible impairment and has determined that no such impairment exists as at October 31, 2004.

b) Other intangible assets:

	2004	2003
Opening balance	\$ 44	\$ 33
Acquired during the year	36	10
Technology capitalized during the year	7	7
Amortized during the year	(4)	(6)
Written down during the year	(15)	—
MDS Proteomics writedown	(1)	—
Foreign exchange and other	(1)	—
Closing balance	\$ 66	\$ 44

During the current year, management evaluated the carrying value of the intangible assets and determined certain assets were impaired. These assets were written down to their net realizable value (see note 14).

Intangible assets acquired consist of:

	2004	2003
In-process research and development	\$ 3	\$ 10
Patents	11	—
Acquired technology	2	—
Maintenance contracts and customer relationships	10	—
Licenses	10	—
	\$ 36	\$ 10

9. Long-term Debt

	Maturity	2004	2003
Senior unsecured notes	2007 to 2015	\$ 379	\$ 411
Other debt	2005 to 2015	115	131
Total long-term debt		494	542
Current portion		(6)	(9)
		\$ 488	\$ 533

In 2004, MDS purchased assets from Applied Biosystems Inc. relating to the MALDI Time-of-Flight (TOF) mass spectrometry operations for US\$40 million, of which US\$8 million was paid on closing and the remainder has been recorded as a note payable, with an interest rate of 4%. The Company will pay the remaining US\$32 million evenly over four years beginning on the second anniversary of the closing date.

Due to the reorganization of MDS Proteomics in 2004, the US\$30 million, 5% convertible note issued in the prior year to Cephalon Inc. was converted to an equity holding in Protana Inc. (see note 3). In addition, the Company has a \$225 million 364-day extendible revolving credit facility. This facility remains undrawn as of October 31, 2004.

During 2003, the Company completed a private placement of US\$311 million of Senior Unsecured Notes payable (the "Notes"). The Notes bear interest at rates between 5.15% and 6.19% and have various terms between five and twelve years. Proceeds of the Notes were used to repay and cancel other long-term credit facilities.

Other long-term debt includes a non-interest bearing government loan with a carrying value of \$50 million (2003—\$50) discounted at an effective interest rate of 7%. A long-term investment has been pledged as security for the repayment of this debt (see note 7). The remaining debt, amounting to \$26 million (2003—\$81), bears interest at annual variable rates tied to bank prime.

Principal repayments of long-term debt are required as follows:

2005	\$	6
2006		18
2007		24
2008		113
2009		24
Thereafter		309
	\$	494

The Company has operating lines of credit totalling \$48 million. Specific charges on accounts receivable, inventories, and capital assets have been pledged as security for operating lines of credit totalling \$25 million. As at October 31, 2004 the Company has not borrowed with respect to these credit facilities (2003—\$3).

10. Deferred Revenue

Deferred revenue includes a \$27 million deferred credit (2003—\$32), which is being amortized over fifteen years using the sum of the years' digits method.

During 2004, the Company received \$32 million from Biogen Idec Inc. as consideration for amending a supply agreement to buy out certain minimum purchase commitments. The transaction was recorded as deferred revenue and is being amortized over the remaining term of the contract. The Company has reclassified \$10 million as current deferred revenue to reflect the amount to be amortized in the upcoming year.

11. Share Capital

a) Summary of issued share capital

(number of shares in thousands)	Common Shares	
	Number	Amount
Balance—October 31, 2001	139,677	\$ 789
Issued during 2002	878	16
Repurchased & cancelled	(48)	—
Balance—October 31, 2002	140,507	805
Issued during 2003	925	13
Repurchased & cancelled	(310)	(2)
Balance—October 31, 2003	141,122	816
Issued during 2004	1,561	25
Repurchased & cancelled	(857)	(8)
Balance—October 31, 2004	141,826	\$ 833

During 2004, the Company declared and paid cash dividends of \$9 million on Common shares (2003—\$10; 2002—\$10).

During 2004, the Company repurchased and cancelled 857,000 Common shares (2003—310,450; 2002—48,300) for \$8 million (2003—\$6; 2002—\$1) under the terms of a Normal Course Issuer Bid ("NCIB"). The excess of cost over the stated capital of the acquired shares was charged to retained earnings. Under the terms of its NCIB, the Company is entitled to repurchase up to 11,945,440 Common shares between June 20, 2004 and June 19, 2005. Such purchases are made on the open market at prevailing market prices.

b) Stock Dividend and Share Purchase Plan and Employee Share Ownership Plan

Under the Company's Stock Dividend and Share Purchase Plan, shareholders may elect to receive stock dividends in lieu of cash dividends. Stock dividends are issued at not less than 95% of the five-day average market price (the "Average Market Price") of the shares traded on the Toronto Stock Exchange immediately prior to the dividend payment date. Plan participants may also make optional cash payments of up to \$3,000 semi-annually to purchase additional Common shares at the Average Market Price. Participation in this plan for the year ended October 31, 2004 resulted in the issuance of 136,501 Common shares (2003—257,957) as stock dividends and the issuance of 9,535 Common shares (2003—15,428) for cash.

Under the terms of the Company's Employee Share Ownership Plan, eligible employees are able to purchase Common shares at 90% of the Average Market Price for the five days preceding the purchase. During the year, the Company issued 174,728 Common shares (2003—188,671) under this plan for \$3 million (2003—\$3) and as at October 31, 2004, 377,111 are reserved for future issue.

12. Research and Development

	2004	2003	2002
Gross expenditures in the year	\$ 100	\$ 100	\$ 104
Investment tax credits	(20)	(15)	(8)
Recoveries from partners	(23)	(25)	(19)
Development costs deferred	(6)	(7)	(6)
Amortization of amounts previously deferred	3	4	5
Research and development expense	\$ 54	\$ 57	\$ 76

The research and development expenses set out above include capital asset depreciation and amortization expense, which is set out separately in the Consolidated Statements of Income. Excluding depreciation and amortization, research and development expense was \$37 million for the year (2003—\$47; 2002—\$63).

13. Restructuring Charges

	Restructuring Charge	Cumulative drawdowns		Provision Balance at October 31, 2004
		Cash	Non-cash	
2004				
Workforce reductions	\$ 14	\$ (4)	\$ —	\$ 10
Equipment and other asset writedowns—adjustment	(1)	—	1	—
	13	(4)	1	10
2003				
Workforce reductions	17	(13)	(1)	3
Equipment and other asset writedowns	11	—	(11)	—
	\$ 28	\$ (13)	\$ (12)	\$ 3
Restructuring obligation at October 31, 2004				\$ 13

During the year, the Company recorded provisions relating to the continuation of the Company's implementation of certain change initiatives affecting support services, senior management reductions, and other initiatives taking place in the business units, including system implementations, recorded in the fourth quarter of 2003 and subsequently in the second quarter of 2004.

For the year ended October 31, 2003, MDS recorded restructuring charges of \$28 million (after tax—\$20 million) relating to the implementation of certain change initiatives affecting the provision of support services, senior management reductions and other initiatives taking place in the business units, including system implementations. This charge included workforce reduction charges of \$17 million related to the cost of severance and benefits associated with approximately 220 employees. A further \$15 million was added to the provision in 2004 related to these initiatives.

The workforce reduction was primarily in our Life Sciences and Health segments in North America and Europe. We expect the provision to be substantially utilized by 2006.

Equipment and other asset writedowns of \$11 million primarily related to certain computer equipment, which are subject to a sale and leaseback agreement. Immediate recognition of a loss is required because the fair value of the computer equipment is less than its carrying value.

14. Other Expenses—net

	2004	2003	2002
Writedown of long-term investments	\$ (22)	\$ (77)	\$ —
Writedown of intangible assets	(15)	—	—
Writedown of equipment (note 3)	(10)	—	—
Gain on patent litigation	14	39	—
Gain on reorganization of MDS Proteomics (note 3)	8	—	—
Gain (loss) on sale of businesses and investments	4	12	(6)
Write-down of goodwill (note 3)	(53)	—	—
	\$ (74)	\$ (26)	\$ (6)

Certain of the long-term investees of the Company experienced declines in the value that could be realized in the event of a sale. Because this decline was believed to be other than temporary, the Company recorded a writedown of \$22 million (2003—\$77 million) to reduce the carrying value of these investments to an estimate of their net realizable value.

During the year, the Company determined that the value of certain intangible assets was impaired. As a result, these intangible assets were reduced by \$15 million to their net realizable value.

15. Income Taxes

a) Provision

The Company's effective income tax rate has the following components:

	2004 %	2003 %	2002 %
Combined Canadian federal and provincial tax rate	35.7	36.8	38.4
Increase in tax rate as a result of:			
Research and development	(2.0)	(0.9)	(0.7)
Manufacturing and processing rate	(1.8)	(1.6)	(1.9)
Benefit of losses not previously recognized	(6.4)	—	—
Investment dispositions and writedowns	5.2	9.8	1.7
Tax rate on foreign operations	1.8	1.2	1.3
Federal capital taxes	1.4	1.2	1.3
Tax impact of minority interest and equity earnings	(2.7)	(0.2)	(0.4)
Revaluation of future income tax assets	1.6	—	—
Restructuring	—	1.7	—
Other	(3.4)	(6.7)	0.7
	29.4	41.3	40.4
MDS Proteomics operating losses and writedowns	23.2	6.4	4.4
Recognition of MDS Proteomics tax assets	(6.3)	—	—
Effective income tax rate	46.3	47.7	44.8

b) Future tax assets and liabilities

Future tax assets and liabilities consist of the following temporary differences:

	2004	2003
Future tax assets		
Tax benefit of loss carryforwards	\$ 171	\$ 88
Tax basis in excess of book value	(1)	(2)
Investment tax credits	24	—
Provisions and reserves	4	27
Future tax assets before valuation allowance	198	113
Valuation allowance	(61)	(90)
	137	23
Future tax liabilities		
Book value in excess of tax basis	(72)	(64)
Tax on investment tax credits recognized for accounting purposes	(4)	(15)
Provisions and reserves	16	9
	(60)	(70)
Net future tax assets (liabilities)	\$ 77	\$ (47)

c) Tax loss carryforwards

As at October 31, 2004, the Company has recorded future tax assets relating to income tax loss carryforwards of \$171 million (2003—\$89) before valuation allowances. These assets relate to \$472 million (2003—\$271) of tax loss carryforwards. Of the total losses, \$87 million (2003—\$75) expire by 2011, \$100 million (2003—\$93) expire between 2018 and 2024, and the remaining \$285 million (2003—\$103) may be carried forward indefinitely.

d) Investment tax credits

During the year the Company recognized investment tax credits relating to research performed in Canada on its own behalf and on behalf of certain customers of \$30 million (2003—\$41). These investment tax credits were attributable to salaries and other research related expenditures incurred in the year and were recorded as a reduction of cost of revenues and research development. In 2003, \$10 million of the investment tax credits recognized related to capital assets and were applied to reduce the carrying value of those assets.

16. Discontinued Operations

Effective September 24, 2004, MDS sold its interest in the Memphis Pathology Laboratory ("MPL") partnership for \$26 million and recorded a gain of \$9 million on this transaction.

Effective March 15, 2004 and pursuant to a plan to exit the US diagnostic business, MDS sold its laboratory operations in New York and Georgia in an asset purchase transaction. MDS realized a loss of \$10 million on the sale which was subsequently reduced by the receipt of \$2 million of contingent considerations based on the terms of agreement. No further contingent considerations are expected to be received. MDS has recorded its remaining US diagnostic businesses as discontinued operations.

On October 24, 2003, MDS's Board of Directors approved a plan to discontinue the operations of a manufacturing facility in Fleurus, Belgium.

Pursuant to the CICA recommendation Section 3475, "Disposal of Long-lived Assets and Discontinued Operations," the revenues and expenses of the business have been netted and reported as income (loss) from discontinued business on the Consolidated Statements of Income. Figures for 2003 and 2002 have been restated to reflect this presentation. The results of the discontinued operations for the years ended October 31 were as follows:

	2004	2003	2002
Revenues	\$ 100	\$ 149	\$ 156
Cost of revenues	(89)	(130)	(129)
Selling, general and administrative	(26)	(31)	(29)
Net operating loss	(15)	(12)	(2)
Provision for discontinuance	(2)	(23)	—
Loss from discontinued operations	\$ (17)	\$ (35)	\$ (2)

In 2003, the loss from discontinued operations included \$22 million primarily relating to estimated costs directly associated with the plan of disposition. In addition to operating costs of \$1 million, the loss for 2003 reflects provisions for workforce reductions totalling \$14 million, provision for uncollectible receivables of \$1 million, other asset write-offs of \$2 million, and provisions for contractual obligations and other liabilities of \$4 million. No tax effect was recorded for this loss.

Under accounting standards in effect before May 1, 2003, other businesses sold in the years covered by these financial statements did not qualify as discontinued operations and have not been presented as such herein.

17. Earnings Per Share

	2004	2003	2002
Net income available to Common shareholders	\$ 51	\$ 48	\$ 105
Weighted average number of Common shares outstanding—basic	142	141	140
Impact of stock options assumed exercised	1	1	2
Weighted average number of Common shares outstanding—diluted	143	142	142

Options to purchase 1,573, 1,576 and 1,180 thousand for the years ended October 31, 2004, 2003 and 2002 respectively, were not included in the computation of diluted earnings per share because these options have exercise prices which were greater than the average price of MDS's Common shares.

18. Joint Ventures

The Company conducts certain of its businesses through incorporated and unincorporated joint ventures in which it holds various percentage interests. Following are condensed combined balance sheets and statements of income reflecting the Company's interests in joint venture operations:

	2004	2003	2002
Current assets	\$ 83	\$ 93	\$ 104
Other assets	59	38	38
	\$ 142	\$ 131	\$ 142
Current liabilities	\$ 40	\$ 52	\$ 51
Long-term debt	6	8	8
Equity	96	71	83
	\$ 142	\$ 131	\$ 142
Net revenues	\$ 452	\$ 479	\$ 441
Operating income	\$ 110	\$ 129	\$ 90
Cash flow from operating activities	\$ 95	\$ 160	\$ 74

Cash outflow from investing activities for the joint ventures totalled \$6 million (2003—\$18; 2002—\$10) and cash (outflow) from financing activities (excluding transactions with partners) was nil (2003—nil; 2002—(\$2)). During the year, the joint ventures distributed \$207 million (2002—\$150; 2001—\$59), of which the Company's share was 50%.

19. Stock-based Compensation Plan

a) Stock option plan

The Company has a stock option plan (the "Plan") primarily for senior management employees. Under the terms of the Plan, the Company may grant stock options to eligible employees and certain others to maximum amounts as set out below. The exercise price of stock options issued under the Plan equals the market price of the underlying shares on the date of the grant. Stock options vest evenly over five years and have a maximum term of ten years.

	2004		2003	
	Number (000s)	Weighted Average Exercise Price	Number (000s)	Weighted Average Exercise Price
Maximum available for issue	10,522		11,716	
Outstanding November 1	8,462	\$ 16.79	7,722	\$ 15.58
Granted	950	19.67	1,460	21.50
Exercised	(1,194)	12.06	(442)	9.66
Cancelled	(608)	20.08	(278)	19.30
Outstanding October 31	7,610	17.63	8,462	16.79
Options vested at year-end	4,172	\$ 15.69	4,191	\$ 13.93

Stock options compensation expense for 2004 was \$1 million and has been recorded in Selling, general and administration. Options outstanding at October 31, 2004 comprise:

Range of Exercise Prices	Weighted Average	Options Outstanding		Options Exercisable	
	Remaining Contractual Life (Years)	Number	Weighted Average Exercise Price	Number	Weighted Average Exercise Price
\$ 3.45 – \$13.94	1.7	878	\$ 8.63	878	\$ 8.63
\$13.95 – \$15.70	4.2	1,922	\$ 14.57	1,713	\$ 14.65
\$15.71 – \$18.90	7.2	1,384	\$ 18.86	546	\$ 18.83
\$18.91 – \$21.75	8.4	2,388	\$ 20.73	413	\$ 21.11
\$21.76 – \$31.50	6.1	1,038	\$ 22.13	622	\$ 22.13
	6.0	7,610	\$ 17.63	4,172	\$ 15.69

Prior to October 28, 2002, the Plan included terms that enabled stock option holders to request that the Company repurchase vested stock options. Effective October 28, 2002 the terms of the Plan were amended and stock option holders are no longer able to request repurchase of their vested stock options. Consequently, there were no options repurchased during 2004 (2003—nil; 2002—654,000).

b) Pro forma impact of stock-based compensation

Companies are required to calculate and disclose, on a pro forma basis, compensation expense related to the fair value of stock options at the grant date in the notes to the consolidated financial statements, for these options granted prior to November 1, 2003. Compensation expense for purposes of these pro forma disclosures is to be determined in accordance with a methodology prescribed in CICA Handbook Section 3870, "Stock-Based Compensation and other Stock-Based Payments."

The Company has utilized the Black-Scholes option valuation model to estimate the fair value of options granted based on the following assumptions:

	2004	2003	2002
Risk-free interest rate	4.3%	5.5%	4.2%
Expected dividend yield	1.0%	1.0%	1.0%
Expected volatility	.317	.357	.298
Expected time until exercise	5.25	5.25	5.25

The weighted average fair value of options granted is estimated at \$6.83 per Common share in 2004, \$8.01 per Common share in 2003, and \$5.98 per Common share in 2002.

For purposes of these pro forma disclosures, the Company's net income and basic and diluted earnings per share would have been:

	2004	2003	2002
Net income—pro forma	\$ 43	\$ 40	\$ 98
Earnings per share —basic	\$ 0.30	\$ 0.28	\$ 0.70
—diluted	\$ 0.30	\$ 0.28	\$ 0.69

The Black-Scholes option valuation method used by the Company to determine fair values was developed for use in estimating the fair value of freely traded options that are fully transferable and have no vesting restrictions. This model requires the use of highly subjective assumptions, including future stock price volatility and expected time until exercise. Because the Company's outstanding stock options have characteristics that are significantly different from those of traded options and because changes in any of these assumptions can materially affect the fair value estimate, in management's opinion, the existing models may not provide a reliable single measure of the fair value of its stock options.

c) Incentive plans

i) Short-term Incentive Plans

Under the short-term incentive plan an annual cash bonus is paid to senior management following the Corporate's fiscal year-end. These bonuses are subject to the degree of achievement of established corporate goals and objectives and individual performance.

ii) Mid-term Incentive Plans

For fiscal years 2000 through 2003, the mid-term incentive plan was designed to reward participating executives for creating shareholder value that met or exceeded the returns of an appropriate index on the Toronto Stock Exchange over a three-year performance period. The participants were awarded units each year relative to the increase in such index over the three-year performance period. Vested units were received as either Restricted Share Units in which case cash was paid on vesting or Deferred Share Units where payment was deferred until employment with the Company ended. Those units not vested were never paid.

Starting in fiscal year 2004, the mid-term incentive plan is based on specific operating margin improvement targets and achievement of defined change outcomes across the Company over a two-year performance cycle ending October 31, 2005. The plan replaced a portion of the annual stock option grants with Performance Share Units. The units will vest and payout from 0% to 200% of the target grant based on attainment of specified performance levels.

iii) Long-term Incentive Plans

Under the long-term incentive plan annual stock options are awarded to senior management. These stock options are subject to long-term improvement in profitability and shareholder value as measured by reference to market data for a comparable peer group of companies.

20. Employee Future Benefits

The Company sponsors various post-employment benefit plans including defined benefit pension plans, retirement compensation arrangements, and plans that provide extended health care coverage to substantially all of its employees. All defined benefit pension plans sponsored by the Company are funded plans. Other post-employment benefits are unfunded.

Defined Benefit Pension Plans—The formula for Canadian plans is based on the highest three or six average consecutive years' wages and requires employee contributions. The non-contributory Taiwanese plan is based on employee years of service and their compensation during the last month prior to retirement. The American plan is based on the participant's 60 highest consecutive months of compensation and their years of service.

Other Benefit Plans—These include a Supplemental Retirement Arrangement, a Retirement/Termination Allowance and Post-retirement Benefit Plans, which include contributory health and dental care benefits and contributory life insurance coverage. Individuals must retire to be eligible.

Net periodic benefit costs for the Company's post-employment benefit plans comprise the following components:

	Pensions		Other Benefit Plans	
	2004	2003	2004	2003
Service cost	\$ 6	\$ 6	\$ 1	\$ 1
Interest cost	10	10	2	2
Expected return on plan assets	(12)	(12)	—	—
Recognized actuarial gain	—	—	—	—
Amortization of net transition asset	(3)	(3)	—	—
Net periodic benefit cost	\$ 1	\$ 1	\$ 3	\$ 3

The following assumptions were used in the determination of the net periodic benefit cost:

	Pensions		Benefit Plans	
	2004	2003	2004	2003
Expected rate of return on plan assets	7.0%	7.0%	n/a	n/a
Discount rate	6.25%	6.5%	6.25%	6.5%
Rate of compensation increase	4.25%	4.5%	4.25%	4.5%
Health care cost trend rate—first six years	n/a	n/a	10.0%	9.3%
—thereafter	n/a	n/a	5.0%	4.5%

The assumed health care cost trend rate used in determining the benefit cost for 2004 is 10% (2003—9.3%) decreasing to an ultimate level of 5% after five years (2003—4.5%). The assumed dental trend rate used in determining the benefit cost for 2004 is 4.5% (2003—4.5%) decreasing to an ultimate level of 4.5% after five years (2003—4.5%).

Assumed health care trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage point change in assumed health care cost trend rates would have the following effects in 2004:

	1% Increase	1% Decrease
Change in net benefit cost	—	—
Change in benefit obligation	2	(1)

Changes in the benefit obligation for the plans were as follows:

	Pensions		Other Benefit Plans	
	2004	2003	2004	2003
Benefit obligations—beginning of year	\$ 172	\$ 156	\$ 26	\$ 21
Service cost—pension	6	6	1	1
Interest cost	11	11	2	2
Benefits paid	(3)	(3)	(1)	(1)
Currency translation adjustment	—	—	(1)	—
Actuarial loss	—	2	1	3
Total benefit obligations—end of year	\$ 186	\$ 172	\$ 28	\$ 26

Changes in the assets of the plans were as follows:

	Pensions		Other Benefit Plans	
	2004	2003	2004	2003
Plan assets at fair value—beginning of year	\$ 183	\$ 163	\$ —	\$ —
Actual return on plan asset	18	19	—	—
Benefits paid	(4)	(3)	(1)	(1)
Company contributions	3	2	1	1
Participant contributions	2	2	—	—
Plan assets at fair value—end of year	\$ 202	\$ 183	\$ —	\$ —

Amounts recognized in the Company's consolidated statements of financial position consist of:

	Pensions		Other Benefit Plans	
	2004	2003	2004	2003
Plan assets in excess of projected obligations	\$ 16	\$ 11	\$ (28)	\$ (26)
Unrecognized actuarial gains	2	3	5	3
Unrecognized past service costs	—	—	(2)	—
Unrecognized net transition asset	(2)	(2)	—	—
	\$ 16	\$ 12	\$ (25)	\$ (23)

As at June 30, 2004, the present value of the projected top-up benefits exceeds the assets in retirement compensation arrangement by \$3.8 million.

The percentage of fair value of total pension plan assets held at October 31, 2004 is as follows:

Asset Category	Percentage of Plan Assets
Fixed income	35.4%
Equities	64.5%
Cash	0.1%
Total	100%

21. Cash Flow

Non-cash items affecting net income comprise:

Years ended October 31	2004	2003	2002
Gain on reorganization of MDS Proteomics	\$ (8)	\$ —	\$ —
Writedown of goodwill	63	—	—
Depreciation and amortization	76	78	87
Deferred income	(17)	—	—
Minority interest	4	7	5
Future income taxes	(29)	32	73
Equity earnings (net of distributions)	1	—	(3)
Writedown of long-term investments	22	77	—
Writedown of intangible assets	15	—	—
Loss (gain) on sale of businesses and investments	(4)	(12)	7
Equipment and other asset writedowns	10	11	—
Stock option compensation	1	—	—
Other	1	1	—
	\$ 135	\$ 194	\$ 169

Changes in non-cash working capital balances relating to operations include:

Years ended October 31	2004	2003	2002
Accounts receivable	\$ (50)	\$ 50	\$ (37)
Inventories	23	(49)	(4)
Accounts payable, accrued liabilities and deferred revenue	(15)	11	(33)
Income taxes	26	8	(14)
Other	9	(22)	—
	\$ (7)	\$ (2)	\$ (88)

22. Segmented Information

Management has determined that the Company operates within two dominant segments—Life Sciences and Health. These segments are organized predominantly around customer groups identified for the businesses. Proteomics is provided for comparative purposes only, as the Company no longer consolidates MDS Proteomics due to the reorganization as discussed in note 3.

Life Sciences businesses supply products and services to manufacturers of medical products such as pharmaceuticals, medical devices and supplies. The products and services provided by Life Sciences businesses include pharmaceutical contract research services, medical isotopes and advanced analytical equipment.

Health businesses are focused on the provision of products and services to individuals and to institutions that provide health care services to consumers. Health products and services include clinical laboratory testing and distribution of medical products.

The historical information for Proteomics has been maintained in the following tables for information purposes only. Proteomics is focused on research and development in the field of proteomic-enabled drug discovery. Proteomics' products and services include capabilities in proteomics systems, technology, drug design, screening and biology.

The accounting policies of the segments are the same as those described in the summary of significant accounting policies. There are no significant inter-segment transactions.

The information presented below is for continuing operations, and therefore, excludes the results of discontinued operations.

Operating results

		Net Revenues	Operating Income (Loss) Before Restructuring	Restructuring Charges	Depreciation and Amortization of Capital Assets and Other Intangibles
Life Sciences	2004	\$ 1,166	\$ 175	\$ (7)	\$ 54
	2003	1,083	211	(19)	50
	2002	1,053	205	—	52
Health	2004	\$ 598	\$ 69	\$ (6)	\$ 10
	2003	581	41	(9)	13
	2002	580	61	—	17
Proteomics	2004	\$ —	\$ (81)	\$ —	\$ 7
	2003	1	(33)	—	11
	2002	3	(52)	—	13
Total	2004	\$ 1,764	\$ 163	\$ (13)	\$ 71
	2003	1,665	219	(28)	74
	2002	1,636	214	—	82

Financial position

		Total Assets	Capital Assets	Additions Goodwill	Investment in Investees Subject to Significant Influence
Life Sciences	2004	\$ 2,033	\$ 108	\$ 15	\$ 41
	2003	1,951	101	6	52
	2002	1,915	130	—	33
Health	2004	\$ 624	\$ 4	\$ 2	\$ 11
	2003	428	19	—	10
	2002	448	19	—	9
Proteomics	2004	\$ —	\$ —	\$ —	\$ —
	2003	186	1	—	—
	2002	179	3	15	—
Total	2004	\$ 2,657	\$ 112	\$ 17	\$ 52
	2003	2,565	121	6	62
	2002	2,542	152	15	42

Revenues by customer location

		Canada	US	Europe	Asia	Other
Life Sciences	2004	\$ 63	\$ 607	\$ 322	\$ 88	\$ 110
	2003	80	542	282	120	59
	2002	91	538	278	104	42
Health	2004	\$ 573	\$ —	\$ 1	\$ —	\$ —
	2003	581	—	—	—	—
	2002	568	12	—	—	—
Proteomics	2004	\$ —	\$ —	\$ —	\$ —	\$ —

	2002	30	—	10	—	116
Total	2004	\$ 592	\$ 124	\$ 86	\$ 3	\$ 665
	2003	642	86	46	2	774
	2002	592	54	83	11	779

Revenues by products and services

		Isotopes	Analytical Equipment	Pharmaceutical Research Services	Clinical Laboratory Services	Distribution	Proteomics
Total	2004	\$ 348	\$ 282	\$ 536	\$ 407	\$ 191	\$ —
	2003	309	270	504	398	183	1
	2002	328	217	508	390	190	3

23. Commitments and Contingencies

Operating leases and other long-term commitments

As at October 31, 2004, the Company is obligated under premises and equipment leases and other long-term contractual commitments to make minimum payments of approximately:

	Operating Leases	Other Contractual Commitments
2005	\$ 42	\$ 99
2006	37	61
2007	30	55
2008	20	47
2009	16	46
Thereafter	45	52
	\$ 190	\$ 360

Rental expense under premises and equipment leases for the year ended October 31, 2004 was \$54 million (2003—\$52; 2002—\$50).

Of the other contractual commitments stated above, \$65 million is associated with long-term supply arrangements and other long-term commitments with Ontario Power Generation Inc. and Atomic Energy of Canada Limited ("AECL"), which provide the Company with the majority of its supply of radioisotopes. In addition, the Company has contracted with AECL for the construction of two isotope reactors and a processing facility expected to be in operation by 2006. The estimated remaining cost of construction of these facilities is \$39 million.

In addition, the other contractual commitments included a remaining six-year commitment totalling \$256 million relating to the outsourcing of the information technology infrastructure to IBM, and \$15 million relating to the implementation of Oracle e-Business suite as a common business system across the Company over the next two years.

In 2003, the Company entered into a sale-leaseback transaction for certain of its computer equipment with carrying values of approximately \$12 million. There are two years remaining on this operating lease.

24. Guarantees

In 2003, the Company undertook to guarantee a bank loan of \$20 million on behalf of an investee, Hemosol Corp. (the "Borrower"), in exchange for warrants in the Borrower. This loan was secured by a fixed and floating charge over all the assets of the Borrower. Under the guarantee, MDS was subrogated to and took an assignment of the rights and remedies of the bank under the loan. This guarantee expires on June 20, 2005.

In consideration for providing the guarantee, MDS received six million warrants to purchase common shares of the Borrower, of which five million were immediately exercisable at a price of \$1 per share. The Borrower may extend the term of the loan beyond 18 months to a maximum of 30 months. For each month beyond the initial 18 months of the loan, MDS will be entitled to receive warrants enabling it to purchase an additional 333,333 Common shares at a price to be determined based on market value, to a maximum of an additional four million shares. If the Borrower wishes to extend the loan beyond 18 months, regulatory approval will be required for the additional warrants to be issued to MDS. For each of the first three months of such an extension, MDS will become entitled to exercise 333,333 additional warrants, bringing the total number of exercisable \$1 warrants to six million after 18 months. As part of the reorganization of the Ontario laboratory business, MDS has voided 2.5 million warrants related to this guarantee. The Company believes that the fair value of the units is nominal, and accordingly has ascribed no value to these units.

Other guarantees for which the Company is contractually obligated to make payments in the event of a default by a third party or due to its inability to meet certain performance-based obligations total approximately \$10 million.

25. Financial Instruments

a) Foreign currency and interest rate contracts

The Company operates globally, which gives rise to a risk that its earnings and cash flows may be adversely impacted by fluctuations in foreign exchange conversion rates and interest rates. From time to time, the Company uses foreign currency forward and option contracts to manage its foreign exchange risk. Certain Canadian operations of the Company will have net cash inflows in 2004 and subsequent years denominated in US dollars. The Company enters into foreign exchange contracts to hedge a substantial portion of these net cash flows. The Company uses interest rate swap contracts to manage its exposure to interest rate risk on certain of its debt obligations.

As of October 31, 2004, the Company had outstanding foreign exchange contracts and options in place to sell up to US\$179 million at a weighted average rate of C\$1.45 maturing over the next 12 months. The Company also had interest rate swap contracts that exchanged a notional amount of US\$80 million of debt from a fixed to a floating interest rate.

b) Credit risk

Certain of the Company's financial assets, including cash and short-term investments, are exposed to credit risk. The Company may, from time to time, invest in debt obligations and commercial paper of governments and corporations. Such investments are limited to those issuers carrying an investment grade credit rating. In addition, the Company limits the amount that is invested in issues of any one government or corporation.

The Company is also exposed, in its normal course of business, to credit risk from its customers. A significant portion of the outstanding accounts receivable at October 31, 2004 is due from provincial health authorities. No other single party accounts for a significant balance of accounts receivable.

c) Fair value

Short-term investments, accounts receivable, accounts payable, accrued liabilities and income taxes—These assets and liabilities have short periods to maturity and the carrying values contained in the consolidated statements of financial position approximate their estimated fair value.

Foreign exchange and interest rate swap contracts—These contracts are treated as hedges for accounting purposes. As at October 31, 2004, the carrying amounts and fair values for derivative financial instruments are as follows:

	2004		2003	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Net asset (liability) position:				
Currency forward and option contracts	\$ (1)	\$ 41	\$ —	\$ 56
Interest rate swap and option contracts	\$ —	\$ 3	\$ —	\$ (4)

26. Cumulative Translation Adjustment

Unrealized translation adjustments arise on the translation of foreign currency denominated assets and liabilities of self-sustaining foreign operations. An unrealized foreign exchange gain of \$64 million as at October 31, 2004 (2003—\$38) exists primarily due to the weakening of the US dollar against the Canadian dollar.

27. Comparative Figures

Certain figures for previous years have been reclassified to conform with the current year's financial statement presentation. In addition, segmented information for 2003 and 2002 has been restated to reflect the discontinued operations reported.

28. Reconciliation to Accounting Principles Generally Accepted in the United States

The following information is being provided to comply with certain disclosure requirements of the Securities and Exchange Commission ("SEC") of the United States.

- a) The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in Canada ("Canadian GAAP"), which differ in certain material respects from those applicable in the United States ("US GAAP"). The material differences, as they apply to the consolidated financial statements of the Company, are as follows:
- i) The Company designates certain foreign exchange forward contracts as a hedge of future revenue streams. Under Canadian GAAP, the resulting gains and losses on the contracts are recorded in operations when the contracts mature in future periods. Under US GAAP, these contracts would not qualify for hedge accounting, but rather would be recorded at fair value with changes in fair value included in earnings.
 - ii) Under Canadian GAAP, costs incurred during the start-up phase of new lines of business may be capitalized if certain criteria, related primarily to recoverability, are met. The Company defers such costs of start-up activities and amortizes them over periods ranging from three to seven years.
Under Canadian GAAP, product development costs that meet certain criteria are required to be capitalized and amortized over the future periods benefited.
Under US GAAP, these costs are expensed.
 - iii) Under Canadian GAAP, the premium paid on stock options that are repurchased for cancellation, net of applicable taxes, is charged to retained earnings. Under US GAAP as prescribed by APB 25, where cash payments are made in respect of options issued prior to July 1, 2000, or where options are issued having a strike price below fair market value, the premium paid or the intrinsic value is considered to be compensation expense and deducted from income.
 - iv) Under US GAAP, the cost of in-process research and development acquired as a result of a business combination is charged to income immediately at the date of the acquisition. Under Canadian GAAP, such costs are capitalized and amortized over their estimated useful lives.
 - v) Dilution gains on development stage subsidiaries are not reported in income under SEC accounting requirements.
 - vi) Under US GAAP, investments in certain securities that are considered to be available for sale are to be reported at fair market value. Unrealized holding gains and losses on securities considered available for sale are recorded as a component of comprehensive income until realized. A decline in the fair value of securities available for sale that is considered other than temporary in nature is to be reported as a component of net income. Under Canadian GAAP, these securities are recorded at cost less any provision for declines in value considered to be other than temporary and related gains or losses are included in income when realized.
 - vii) The Company has interests in certain jointly controlled entities that are required to be proportionately consolidated in the Company's Canadian GAAP financial statements. For purposes of US GAAP, these interests would be accounted for by the equity method. Net income, earnings per share and shareholders' equity under US GAAP are not impacted by the proportionate consolidation of these interests in jointly controlled entities. Summary balance sheets and income statements, along with certain cash flow information, for the Company's joint venture investees are provided in note 18.
 - viii) Under Canadian GAAP, CICA Handbook Section 3860, "Financial Instruments," requires the separate presentation of the debt and equity components of a debt instrument when such an instrument can be settled by the issuance of Common shares and is convertible into equity of the Company by the issuer. Interest related to the equity component is charged to shareholders' equity through the accretion of equity component of debentures payable. Under US GAAP, Financial Accounting Standards Board 133, "Accounting for Derivative Instruments and Hedging Activities," does not permit a portion of the proceeds from the issuance of this type of convertible security to be accounted for as attributable to the conversion feature. As a result, under US GAAP, the net loss would have increased by the amount of interest, which is immaterial in 2003, accreted to the equity component of the convertible debentures, and long-term debt would increase by \$11 million and minority interest would decrease by a similar amount. During 2004, the Company deconsolidated MDS Proteomics, where the debt was recorded, and therefore the debt and the equity component no longer exist.

The following table presents the effects on the consolidated statements of income of the above differences:

	2004	2003	2002
Net income under Canadian GAAP	\$ 51	\$ 48	\$ 105
Adjustments:			
Unrealized gains (losses) on forward foreign exchange contracts and interest rate swaps	(10)	46	6
Deferred start-up and development costs	(15)	(17)	(15)
Stock options repurchased	—	—	(8)
Gain from issue of shares by a development-stage subsidiary	(8)	—	—
Impairment of long-term investment ⁽¹⁾	—	21	—
Write-off of required in-process R&D	(3)	—	—
Stock-based compensation	—	(2)	—
Income taxes	12	(10)	7
Net income under US GAAP	\$ 27	\$ 86	\$ 95
Earnings per share under US GAAP:			
Basic	\$ 0.19	\$ 0.61	\$ 0.68
Diluted	\$ 0.19	\$ 0.60	\$ 0.66

(1) Adjustment to reflect write-off of investment recorded in 2003 under Canadian GAAP, which was written off under US GAAP in prior periods.

b) Under US GAAP, the following consolidated statement of comprehensive income is required:

	2004	2003	2002
Net income under US GAAP	\$ 27	\$ 86	\$ 95
Unrealized gain (loss) on share investments, net of tax	(10)	(33)	(62)
Comprehensive income (loss)	\$ 17	\$ 53	\$ 33

c) The following table indicates the significant items in the consolidated balance sheets that would have been affected had the consolidated financial statements been prepared under US GAAP. The revised amounts would have been as follows:

	2004	2003
Accounts receivable	\$ 358	\$ 327
Capital assets	742	724
Long-term future tax assets	133	31
Long-term investments	98	154
Goodwill	664	773
Other intangible assets	60	37
Accounts payable	335	355
Long-term future tax liabilities	52	41
Accumulated comprehensive income	32	40
Additional paid-in capital	90	93
Retained earnings	479	448

d) Under Staff Accounting Bulletin 74, the Company is required to disclose certain information related to new accounting standards that have not yet been adopted due to delayed effective dates. In January 2003, the FASB issued Interpretation (FIN) 46, "Consolidation of Variable Interest Entities." FIN 46 provides a framework for identifying variable interest entities (VIEs) and requires a company to consolidate a VIE if the company absorbs a majority of the VIE's expected losses or receives a majority of the VIE's expected residual returns, or both. FIN 46 is applicable immediately for any new VIEs created after January 31, 2003. There is no current impact on the consolidated financial statements as a result of this adoption. Additional guidance on implementing FIN 46 is evolving through the issuance of FASB Staff Positions. In addition, a draft interpretation modifying FIN 46 has been issued for comment. MDS will continue to review the status of VIEs as this guidance is finalized.

29. Subsequent Event

On December 23, 2004, the Company received a letter from the US Food and Drug Administration pertaining to an ongoing investigation and related regulatory issues including certain procedures which had been in place prior to 2004 at one of the Company's pharmaceutical research services facilities. The impact, if any, of this event cannot be determined at this time.

ELEVEN-YEAR FINANCIAL SUMMARY

Years ended October 31 (millions of Canadian dollars except per share data)

	2004	2003	2002	2001
Operating results

Dividend Policy

MDS has a record of consistent and growing dividends. In September 2004 the Company established a new dividend policy and increased its current dividend to an annualized rate of \$0.13 (\$0.0325 quarterly) per Common share. The new policy is designed to maintain stable and consistent dividends, with a targeted payout ratio of approximately 10%–15% of the previous year's normalized, sustainable earnings per share after consideration of the Company's cash and liquidity position and future cash requirements.

Dividend Reinvestment and Share Purchase Plan

Shareholders are able to participate in this Plan provided it is legally permitted in the jurisdiction where they reside. Under this Plan, shareholders may elect to receive stock dividends in lieu of cash dividends. Participants residing outside of the United States may also make optional cash payments of up to \$1,500 quarterly to purchase additional shares. Shareholders wishing to obtain more information about this Plan should contact the Company's transfer agent listed above.

Stock Listing

MDS shares are listed on the:

TSX: MDS

NYSE: MDZ

MDS is part of the S&P/TSX 60 Index

MDS Stock Split History
