# A New Era

NORDION INC.  
2010 ANNUAL REPORT

## 2010 FINANCIAL HIGHLIGHTS

(US\$ in thousands, except loss per share)

	2010	2009	2008
Revenue	\$ 240,352	\$ 231,263	\$ 296,234
Operating loss for continuing operations	\$ (106,405)	\$ (1,616)	\$ (354,591)
Loss per share:			
From continuing operations	(1.16)	(0.10)	(1.99)
Total	(2.60)	(1.12)	(4.54)
Capital expenditures	\$ 7,639	\$ 9,983	\$ 12,420
<b>FINANCIAL POSITION</b>			
Cash and cash equivalents	\$ 122,802	\$ 298,203	\$ 117,052
Total assets	553,956	1,625,870	1,835,898
Long-term debt (including current portion)	44,150	267,772	273,804
Shareholders' equity	\$ 337,589	\$ 993,911	\$ 1,089,113

> Global revenue of US\$240 million, following the restart of AECL's NRU reactor in Q4 2010 after a 15-month shutdown

> Completed the strategic repositioning of the company to focus solely on Nordion's operations

> Completed US\$450 million share buyback during 2010

> Loss of US\$2.60 per common share, largely due to the combined impact of the NRU reactor shutdown and the company's strategic repositioning

## REVENUE HIGHLIGHTS

2008–2010

US\$ millions

# A new era begins

Nordion Inc. is a specialty health science company with a track record of successful execution in delivering quality products to our global customers for more than 60 years. We develop, manufacture and commercialize specialty health science products for the prevention, diagnosis and treatment of disease. Our product portfolio includes medical isotopes, targeted therapies and sterilization technologies.

Nordion employs more than 600 highly skilled people. The company's corporate headquarters and main processing facilities are located in Ottawa, Ontario with additional facilities in Vancouver, British Columbia; Montreal, Quebec; and Fleurus, Belgium.

Following a year of transition characterized by the strategic repositioning of the company and the consolidation of headquarters in Ottawa, our company emerged stronger, focused on generating value for shareholders and, consistent with the strategic repositioning, bearing a new name: Nordion Inc.

William D. Anderson

## Building a sustainable future

**As I approach my first anniversary as Chairman, Nordion Inc. launches what is rightly called a new era. Before addressing the strengths the company brings to this new era, it is important to look back at what has been achieved in the recent past in preparation for the company's future.**

As many shareholders and observers will know, in February 2009, the company embarked on a strategic review aimed at improving shareholder value. That review led to the sales, in early 2010, of the Analytical Technologies and Pharma Services businesses and the return of \$450 million to shareholders through the repurchase of 52.9 million shares of the company.

During this time, there were also a number of challenges to overcome with the 15-month disruption of medical isotope supply due to the shutdown of Atomic Energy of Canada Limited's (AECL) National Research Universal (NRU) reactor, completing the transition to a stand-alone public entity, and consolidating the company's headquarters in Ottawa, Canada. Despite the medical isotope disruption and its impact on the company, customers and patients alike, Nordion continued to deliver positive results from its Targeted Therapies and Sterilization Technologies segments. The company exited fiscal 2010 with a number of important achievements under its belt and with strong fourth quarter results as it leveraged and built on its customer interactions, supplier relationships and core competencies in manufacturing, regulatory compliance and logistics.

As part of the transition to focus solely on Nordion's operations, the company took steps to solidify the senior management team, with the appointments of Steve West as Chief Executive Officer and Peter Dans as Chief Financial Officer.

Over the past 12 months the Board of Directors has also undergone changes. James McDonald and Gregory Spivy stepped down from the Board. I am grateful for the leadership role that they played during the transition period as we repositioned the company to focus on Nordion. In addition, William Etherington will not be standing for re-election and I thank him for his consistent contribution over the years. In the meantime, with Ken Newport and Oye Olukotun having joined the Board and with Sean Murphy and Janet Woodruff being proposed for election, we are strengthening the required range of strategic skills and experience of the Board of Directors to be able to contribute to the company's future success. You will be able to find detailed biographies of these new Board members in the proxy circular.

The Board of Directors has been actively engaged with the management team in developing a strategic plan for Nordion and we are confident the company is now well positioned for global success in its chosen market segments and geographies. The senior management team has a proven track record of successful execution and the company has a solid financial foundation on which to build the business for the long term.

On behalf of all shareholders, I express thanks to all the employees who worked so diligently to achieve continued business success in a period that brought significant challenges on multiple fronts.

Our new era is beginning with great momentum. The Board of Directors looks forward to working with management to grow the company and create value for all our stakeholders.

**William D. Anderson**  
Chairman of the Board

Steve M. West

## Nordion: Embarking on a new era

**The past year has brought extraordinary change for Nordion. We focused on completing our transition to a stand-alone public company, fostering customer relationships and protecting our core businesses – all essential to improving long-term shareholder returns and embarking successfully on a new era.**

Fiscal 2010 highlighted Nordion's ability to respond effectively to significant business challenges. The 15-month loss of medical isotopes from AECL's NRU reactor significantly affected our financial performance and business operations. The medical isotope molybdenum-99 (Mo-99) is used in approximately 80 per cent of nuclear medicine procedures worldwide, so the impact on patients was profound.

As we prepared for the NRU reactor's return to service, we implemented multiple internal strategies. These included re-training employees, so our customers would experience seamless service when their isotope supplies were restored, as well as extensive maintenance, equipment repairs and upgrades – activities we could not perform in normal circumstances. Rather than lay off experienced, skilled workers, we deployed employees not required for these activities to our other businesses. We also invested in the long-term future of our medical isotopes business by introducing specialized new shipping containers expected to last 20 years.

With the NRU reactor's return to service in August and resumption of the flow of isotopes, Nordion again began generating revenues from the medical isotopes business and has been fully operational since then.

### Strengthening our businesses

To protect customer relationships and our business interests, we signed a 10-year Mo-99 supply agreement with Isotope, a subsidiary of Russia's Rosatom State Corporation. Nordion is now Isotope's exclusive partner for Mo-99 processing, distribution and sale outside the Russian Federation. While we continue to seek a reliable long-term supply of medical isotopes, this agreement strengthens Nordion's back-up isotope supply and partially offsets the impact of AECL's planned NRU reactor shutdowns. The restart of the MAPLE reactors, however, remains our preferred long-term supply solution.

During the year, we also signed a new Mo-99 supply contract with our largest customer, Lantheus Medical Imaging. Lantheus relies on Nordion so their customers, and in turn patients, receive vital scans and treatments when needed. Our depth of industry expertise, world-class logistical team and proven capability in medical isotope processing provides our customers with a reliable supply chain.

While the Medical Isotopes business experienced challenges, both our Sterilization Technologies and Targeted Therapies businesses realized significant growth – a reflection of our overall business strength and financial performance potential.

During the year, Nordion extended its long-term agreement to acquire cobalt-60 (Co-60) from Ontario Power Generation for use in gamma sterilization. Approximately 40 per cent of the world's single-use medical devices – as well as food and cosmetics – are sterilized with gamma technologies.

We expect both our Sterilization Technologies and Targeted Therapies businesses to continue to grow in the years ahead.

### Increasing acceptance for TheraSphere

TheraSphere, our targeted therapy for liver cancer, has gained further market acceptance with reimbursement approval for primary liver cancer patients in northern Italy, a milestone, since European reimbursement requirements can be complex. Growing use of TheraSphere is also being driven by physician training at our four European centers of excellence and acceptance of TheraSphere is also increasing in attractive new markets, including Russia and the Middle East.

TheraSphere clinical research continues to provide data that supports the use of this innovative treatment. Results of the first large investigator led non-controlled European study, published in the November 2010 edition of *Hepatology*, suggest that TheraSphere extends liver cancer patients' lives, which supports earlier results, and is expected to lead to more physicians employing the treatment.

### Recognizing our employees

The past year has also been marked by internal changes. Late in 2010 we completed the consolidation of our headquarters in Ottawa. Despite the many pressures brought by the transition program, our people have continued to perform effectively in challenging times. They deserve our thanks.

We're also proud that our company was recognized – the second year running – as one of Canada's Top 100 employers by employment publisher MediaCorp Canada. MediaCorp commended Nordion's strong corporate values, employee engagement and community contributions. Our employees do make a difference – in our business and in our community.

### Focus on our strengths

Nordion has led the way in essential diagnostic and therapeutic medical isotopes for more than 30 years. Moving forward in our core business, we intend to concentrate on performance, cost management, product investment and diversification to drive greater cash flow and cultivate sustainable growth.

We plan to manage our product portfolio to drive business performance by leveraging our best-in-class manufacturing capabilities, regulatory expertise and extensive distribution infrastructure to develop and deliver new products. We also aim to maximize financial returns through value-focused pricing and reliable supply.

Our objective is to grow through disciplined product investment where we see opportunities for sustainable, solid returns, particularly in current and adjacent product areas. TheraSphere, in particular, represents an attractive commercial platform on which to expand our targeted therapies business in the high-growth interventional oncology market.

Managing our business also includes managing the confidential arbitration process with AECL regarding the AECL-Government of Canada decision to abandon the MAPLE project. We expect proceedings to continue into the second half of fiscal 2011 before a decision is announced.

In our drive to optimize the business through cost management and increased efficiencies, we continue to review our global business operations carefully for current and future value. During the past year we have undertaken a number of activities to reposition our operations at Fleurus, Belgium.

Although the year has brought significant change, challenge and reinvention, the company continues to focus on customers and operations as key to delivering improved financial performance. Nordion is now positioned to capitalize on its core businesses, to drive excellence through its operations and to cultivate sustainable growth for ongoing shareholder value.

**Steve M. West**  
Chief Executive Officer

# Business strategy for a new era

**Nordion Inc. is a specialty health science company** that provides market-leading products and services worldwide for the prevention, diagnosis and treatment of disease. Our innovation touches the lives of millions of people in more than 60 countries around the world. We focus on three markets that, combined, are estimated at US\$5 billion and growing at 3%–6% annually, driven by demand for the sterilization of medical devices, earlier diagnoses of disease and safe and effective targeted therapies.

Our business strategy builds upon the company's core competencies in operational excellence and leverages its investments in human capital, specialized infrastructure and innovation to drive business growth. Our key strategic initiatives are: Maximize value of core business, Drive commercial excellence, and Cultivate sustainable growth through disciplined investment.

## Nordion Market Segments (US\$ billions)

		
<b>Medical Isotopes</b>	<b>Targeted Therapies</b>	<b>Sterilization Technologies</b>
Market in transition Leader in medical isotopes (Mo-99)	High growth market Leader in primary liver cancer treatment (TheraSphere)	Mature market Leader in gamma sterilization (Co-60)
<b>\$2.0+</b>	<b>\$1.0+</b>	<b>\$2.0+</b>

Maximize value of core business

Nordion is focusing on its core business, working to enhance revenue generation from our industry-leading medical isotopes and sterilization technologies product lines.

In the short term, Nordion intends to maximize the value of its two main products (Co-60 and Mo-99) through targeted customer segmentation and promoting its value proposition of global access to high quality and reliable supply.

One of Nordion’s key business priorities is enhancing and sustaining the reliable supply of medical isotopes, a key value driver for our customers. With the company’s new relationship with Isotope (which employs three reactors and is

expected to provide up to 20 per cent of global requirements), Nordion has diversified its source of supply and strengthened the supply chain for its customers.

Looking at the longer term, the MAPLE project remains the preferred solution for Nordion and its customers due to proximity of supply and the built-in back-up provided by having two identical reactors on call to support physicians and their patients.

Medical isotope business priorities

The dynamics of the nuclear medicine industry are changing. Increasing recognition of the importance of access to high quality and reliable supply of specialty medical isotopes highlights the value of our products. Accordingly, Nordion plans to maximize returns in this business through managing costs and offering a flexible supply chain and a premium value proposition. These initiatives reflect the importance of the products in the overall medical isotopes

value chain, linking isotope production and end patient use. We currently anticipate only modest capital expenditure investment requirements for this business.

Sterilization technologies business priorities

Nordion is the world’s leading supplier of cobalt-60, which is the active source for gamma sterilization. Co-60 and related gamma sterilization products are used to sterilize approximately 40 per cent of the world’s single-use medical supplies and devices, such as bandages, catheters and

syringes. This technology is also used to sterilize many consumer products, including food, contact lens solution and cosmetics. Nordion customers in this segment include contract sterilization service providers and medical product manufacturers.

The company expects to maximize its return in this business by building on its leading market position, managing supplies of Co-60, expanding product related services and enhancing the product life cycle of its production irradiator offerings. As with the Mo-99 business, the company plans to drive value through its distribution capabilities and the strength of its established product and service offering.

Drive commercial excellence

Nordion’s plan to drive commercial excellence throughout the business has three interrelated components which, together, are expected to enhance Nordion’s established leadership positions, while improving the company’s financial performance.

1. Optimize

Optimize business through cost management, including restructuring business lines where necessary to generate attractive returns. We plan to streamline our processes and remove bottlenecks that add cost and do not provide value to our customers.

2. Leverage

Leverage our specialized distribution infrastructure and world-class quality and regulatory processes to develop, manufacture and commercialize new specialty health science products and innovations.

3. Build

Build upon our best-in-class manufacturing and customer centric sales and marketing resources to increase the frequency of use and expand the geographic reach of our portfolio of specialty health science

products. Effective, dedicated operations and resources are critical to protect quality and value, and deliver essential medical isotope supplies where and when needed for the medical community.

Cultivate sustainable growth through disciplined investment

The company will assess investment opportunities, primarily in our current and adjacent product areas, based on the prospects for sustainable growth, alignment with the business strategy and mid- to long-term returns.

Targeted therapies business priorities

Nordion develops and manufactures treatments for various cancers including liver and non-Hodgkin’s lymphomas, which target the disease from within the body with a higher concentration of treatment directed to the tumor. This approach minimizes both damage to surrounding healthy tissue and unpleasant side effects for the patient.

Grow TheraSphere global market position

Nordion’s innovative targeted therapy, TheraSphere, continues to gain market acceptance as the knowledge and application of radioembolization, localized internal radiation, becomes more widely used and accepted for the treatment of liver cancer. Progress in reimbursement of the treatment, increased physician use through ongoing training, and additional supporting clinical data for this liver cancer treatment continue to contribute to the growth and adoption of TheraSphere in the market.

Assess TheraSphere clinical trial program

TheraSphere is a proprietary product licensed, developed and commercialized by Nordion, and it is distributed directly to healthcare professionals worldwide. It is also Nordion’s third largest and fastest growing product. Investment in further clinical trials and medical marketing programs are required to accelerate global market adoption. Globally, the incidence of hepatocellular carcinoma,

the most common form of primary liver cancer, is growing due to increased incidence of hepatitis.

TheraSphere represents an attractive commercial platform to expand our targeted therapy product offering in the high growth interventional oncology market.

# A New Era

NORDION INC.  
2010 ANNUAL REPORT  
FINANCIAL REVIEW

## MANAGEMENT'S DISCUSSION AND ANALYSIS

January 20, 2011

In this Management's Discussion and Analysis (MD&A), "we", "Nordion", and "the Company" refer to Nordion Inc., formerly MDS Inc. This MD&A explains the results of operations for the year ended October 31, 2010, and its financial position as of October 31, 2010, and should be read in conjunction with the audited consolidated financial statements and related note disclosures for the same period. Readers are also referred to the unaudited quarterly financial statements and quarterly MD&As for fiscal 2010, the Company's Annual Information Form for fiscal 2010 (AIF), and the Company's Annual Report on Form 40-F. Each of these documents is available on Nordion's website at [www.nordion.com](http://www.nordion.com) or at [www.sedar.com](http://www.sedar.com) and [www.sec.gov](http://www.sec.gov).

Our MD&A is intended to enable readers to gain an understanding of Nordion's current results of operations and financial position. To do so, the Company provides information and analysis comparing the results of operations and financial position for the current year with those of the preceding two fiscal years. We also provide analysis and commentary that we believe will help investors assess the Company's future prospects. Accordingly, certain sections of this report contain forward-looking statements that are based on current plans and expectations. These forward-looking statements are affected by risks and uncertainties that are discussed in this document, as well as in the AIF, and that could have a material impact on future prospects. Readers are cautioned that actual events and results may vary.

We have implemented two significant changes in the reporting of our fiscal 2010 annual disclosure documents with the objective of improving the clarity of our business and financial performance. These changes include our redefined segmented reporting and reporting in thousands of U.S. dollars.

Our consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America.

### **Our business**

Nordion is a global specialty health science company that provides market-leading products and services used for the prevention, diagnosis and treatment of disease. Our operations are organized into three business segments: Medical Isotopes, Targeted Therapies, and Sterilization Technologies, as well as certain corporate functions and activities reported as Corporate and Other.

#### ***Medical Isotopes***

Medical Isotopes products are used in the diagnosis and treatment of disease. We sell a breadth of isotopes which our customers incorporate into products that are used in medical procedures. Governments in the U.S., Canada, Europe and elsewhere in the world have recognized the benefits of medical procedures that help provide for early diagnosis of disease and generally support reimbursement of these procedures, which in turn encourages use by physicians and patients. Nordion's sources of medical isotopes are nuclear reactors and cyclotrons. Nordion's primary product is the reactor-based molybdenum-99 (Mo-99). Other reactor-based isotopes include xenon-133 (Xe-133) (used in lung scans), iodine-131 (I-131) (used to treat hyperthyroidism, thyroid cancer and non-Hodgkin's lymphoma), and iodine-125 (I-125) (used to treat prostate cancer).

Nordion purchases reactor-produced medical isotopes in an unfinished, non-purified form, and transports them to its own facilities in Ottawa, Canada for further processing. Currently, Nordion's principal source of such isotopes is the Atomic Energy of Canada Limited (AECL) owned National Research Universal (NRU) reactor.

Nordion purifies isotopes using its proprietary manufacturing processes to meet the regulatory requirements for incorporating active pharmaceutical ingredients into radiopharmaceuticals that are used to diagnose and treat numerous serious disease states, such as heart disease and cancer. Technetium-99 (Tc-99m), which is obtained from the decay of Mo-99, is the most widely used diagnostic imaging isotope in the world.

Nordion also manufactures and processes cyclotron-produced isotopes such as iodine-123 (I-123), thallium-201 (Tl-201), and strontium-82 (Sr-82) at its facilities in Vancouver, Canada.

#### ***Targeted Therapies***

Targeted Therapies products are primarily focused on the treatment of various cancers by targeting the disease from within the body with a higher concentration of radiation directed to the tumor, thereby minimizing both damage to surrounding healthy tissue and unpleasant side effects for the patient. Using our expertise and capabilities, the Targeted Therapies segment sells services for radiopharmaceutical development and provides clinical and commercial manufacturing.

Nordion's main Targeted Therapies product is TheraSphere® which is used in the treatment of inoperable liver cancer. Nordion is also a contract manufacturer for two commercially available radiopharmaceuticals: Bexxar®, a radiotherapeutic, for non-Hodgkin's lymphoma for

## MANAGEMENT'S DISCUSSION AND ANALYSIS

GlaxoSmithKline, Inc. and CardioGen-82™, a cardiovascular Positron Emission Tomography (PET) imaging agent, for Bracco Diagnostics, Inc. (part of Bracco Group).

### ***Sterilization Technologies***

The Sterilization Technologies segment is focused on the prevention of disease through the sterilization of medical products and devices, as well as food and consumer products. This business segment includes the design, construction, and maintenance of commercial gamma sterilization systems. We are also the world's leading supplier of Cobalt-60 (Co-60), the isotope that produces the gamma radiation required to destroy harmful micro-organisms. Co-60 is used in gamma sterilization technologies for customers around the world. Approximately 40% of single use medical products produced worldwide are sterilized using gamma sterilization technologies. These include disposable medical devices and supplies such as surgeon's gloves, syringes, sutures, and catheters, as well as pharmaceuticals. Gamma sterilization can also be used for disinfestations of fruits and vegetables to meet international quarantine regulations, to sterilize cosmetic products and to enhance the material properties of polymers.

We contract with power reactor sites in Canada and Russia to produce Co-60. We supply cobalt-59 (Co-59) targets to the reactor sites, which is converted to Co-60 in the reactor. The cobalt remains in the reactor until the desired level of Co-59 to Co-60 conversion has occurred (from 18 to 30 months in Canada and approximately 5 years in Russia). The Co-60 is then removed from the reactors (the reactors in Canada must be shutdown for this to occur), disassembled, and shipped to Nordion's facility where it is processed into finished sources for sale to customers. When customers purchase and install Co-60, they need to shut down their production irradiator operations while the Co-60 is being loaded into the irradiator. The process therefore needs to be coordinated closely with customers to minimize disruption to their operations.

Nordion also markets and sells related equipment and services such as commercial scale production irradiators. Delivery or construction of this equipment is usually followed by an initial shipment of Co-60. A production irradiator is a warehouse-size unit that houses Co-60 and processes the products to be sterilized.

The Sterilization Technologies segment also includes the Agiris product line of equipment and sources for non-destructive testing of welds. The revenue for Agiris is primarily generated at our Fleurus, Belgium facility.

### **Recent business and corporate developments**

#### ***Medical Isotopes***

##### *A Supplemental Mo-99 Supply Agreement with the Open Joint Stock Company "Isotope" (Isotope)*

In September 2010, Nordion entered into a framework agreement with the Open Joint Stock Company "Isotope" (Isotope), the authorized subsidiary of Rosatom State Corporation, to explore and define areas of collaboration in the field of supply, marketing and sale of isotopes produced in Russia. This framework agreement is intended to facilitate the collaboration and build the business relationship between Nordion and Isotope. Under the umbrella of this framework agreement, Nordion has entered into a supply agreement with Isotope for a supplemental supply of Mo-99 until 2020.

Under the terms of the agreement, Isotope will supply Mo-99 to Nordion on an exclusive basis for processing, distribution and sale outside of the Russian Federation. The agreement provides Nordion with a new source of Mo-99 for its customer base and strengthens its commitment to the market by providing additional supply to help offset the impact of planned shutdowns of the NRU reactor. In December 2010, Nordion received its first sample shipment from Isotope for evaluation purposes. We expect the initial commercial shipment of Mo-99 from Isotope to commence in the first half of fiscal 2011.

##### *Mo-99 Supply from NRU Reactor Resumed*

On August 17, 2010, the NRU reactor at AECL Chalk River Laboratories returned to operation. In August 2010 we received, processed, and shipped the first supply of medical isotopes from AECL to our customers. During the shutdown of the NRU reactor, we maintained relationships with our customers and, in July 2010, Nordion signed a contract with our largest customer, Lantheus Medical Imaging, Inc. (Lantheus), for the supply of Mo-99, the main isotope from the NRU reactor, until July 2011. Based on the contract, Nordion expects to supply Mo-99 on a weekly basis. Subsequent to the end of fiscal 2010, we signed an amendment to our contract with Lantheus. Under the terms of the amended agreement, the contract has been extended until December 31, 2013. After 2012, the contract provides for potential changes in pricing and volume commitments in the event of possible changes in the market.

#### ***Targeted Therapies***

Nordion announced in July 2010 that TheraSphere® an innovative yttrium-90 (Y-90) radioembolization treatment for liver cancer, was approved for reimbursement by the General Directorate for Health for the Lombardy Region (Sanità Regione Lombardia) in northern Italy

## MANAGEMENT'S DISCUSSION AND ANALYSIS

for patients suffering from hepatocellular carcinoma (primary liver cancer). The decision to provide reimbursement can be attributed to a Phase II-b investigator initiated study.

In February 2010, two of the largest health insurers in the U.S. approved coverage of radioembolization to treat liver cancer.

We continued to experience increased demand for CardioGen-82™ (Rubidium-82 generators), which we manufacture and distribute for Bracco Diagnostics, Inc. We began production of the CardioGen-82™ in the third quarter of fiscal 2009. Rubidium-82 is used as a PET imaging tracer for perfusion studies of the heart to examine blood flow through heart vessels.

### ***Sterilization Technologies***

#### *Extension of Cobalt Supply Agreement*

On August 13, 2010, we announced an extension of an existing agreement with Ontario Power Generation, Inc., a Canadian-based electricity generation company. This extension provides supply of Co-60 for Nordion until 2020.

#### *Production Irradiator Sales in 2010*

In the second half of fiscal 2010, Nordion shipped two full-scale production irradiators, one to Mexico for the disinfection of food products and another to a European customer for the processing of medical devices.

### ***Corporate and Other***

#### *Our strategic repositioning and divestitures*

During fiscal 2010, we completed our strategic repositioning, which culminated in the following key events:

- completing the sale of MDS Analytical Technologies to Danaher Corporation;
- completing the sale of MDS Pharma Services Early Stage (Early Stage);
- cancelling the C\$500 million revolving credit facility, which had no outstanding amounts;
- full repayment of the outstanding balance of the senior unsecured notes;
- repurchasing and cancelling 52,941,176 Common shares under a substantial issuer bid; and,
- completing the transition of the Company's corporate headquarters from Toronto, Canada to Ottawa, Canada.

The completion of the sale of Early Stage marked the end of our strategic repositioning, including the disbanding of the Company's Special Committee, and enabled MDS Inc. to move forward with a focus on Nordion. On March 11, 2010, at the Annual and Special Meeting of Shareholders of then MDS Inc., a special resolution authorizing a change in name to Nordion Inc. was approved, which became effective as of November 1, 2010.

### ***Uncertainty in the medical isotope market***

Events related to AECL, our primary supplier of reactor-based medical isotopes, along with other changes in the industry have created uncertainty in our medical isotope business and in the market, in general. First, in May 2008 the Government of Canada and AECL unilaterally cancelled the MAPLE project (refer to the Litigation section of this MD&A), which was intended to be Nordion's long term source of supply for reactor-based medical isotopes. This was followed by an unplanned and extended shutdown of AECL's NRU reactor, our current source of reactor-based medical isotopes, for 15 months from May 2009 to August 2010 to repair the NRU's reactor vessel. These events had a significant negative impact on our financial results and have impacted our competitive position in the medical isotope market. As well, given our historical position as the market leader in medical isotopes, the cancellation of MAPLE and the extended shut down of the NRU reactor have also had a significant impact on the overall market for medical isotopes. The shut down of the High Flux Reactor (HFR) in Petten, Netherlands from February 2010 to September 2010, further increased the impact on the global medical isotope market. The NRU reactor and HFR historically supplied the majority of medical isotopes, in particular Mo-99, for the global market, and during the period while both reactors were shut down there were significant shortages relative to global demand.

During the period of shortage of Mo-99, while the NRU reactor and HFR were shut down, a number of changes took place in the medical isotope market including;

- cancelling or deferring patient procedures;
- using alternate products, such as Tl-201, or other technologies;
- optimized utilization of Mo-99 through the matching of scheduling of patients with receipt of product; and,
- efficiencies gained in the manufacture, distribution and dispensing of the product.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

Since the NRU reactor and HFR restarted production, there has been more than sufficient supply to meet demand. In the cases where other products and technologies were being used, we understand these have largely reverted back to using Mo-99 based products. We believe, however, that while the number of procedures using Mo-99 may be returning to the level prior to the shortages of Mo-99 that started in 2009, some of the efficiencies and certain aspects of optimized utilization remain. This has resulted in a reduction in the global demand for Mo-99 compared with the period before the NRU reactor shut down in May 2009. While practices where efficiency gains and utilization improvements were made may revert over time to previous practices, which would result in an increased demand for Mo-99, it is uncertain as to whether this will occur and when, and to what extent.

In addition to being negatively impacted by lower overall demand for Mo-99, we have also lost market share as a result of:

- demands on our customers to diversify their supply: where in the past they purchased all or a large majority of their Mo-99 requirements from us, they are now only willing to purchase a portion of their requirements from us;
- multi-year commitments certain of our customers were required to make to secure purchases Mo-99 from competitors while the NRU reactor was shutdown;
- changes in our customer's share of their segment of the market; and,
- increased availability of Mo-99 in market through existing suppliers increasing their capacity and new suppliers entering the market.

While the NRU reactor was shut down for 15 months, the other reactors that historically were part of the global supply of medical isotopes increased their production levels. In addition, to help mitigate some of the shortage of Mo-99, reactors in Poland, Czech Republic and Australia that were capable of producing medical isotopes, began to export or supply Mo-99, at combined volumes of approximately 10% of global demand. With the NRU reactor and HFR now back in production, combined with the increased production capability from other reactors and lower overall global demand, we believe there currently is a surplus of Mo-99 relative to demand, which has resulted in increased competition. This increased competition is taking place both with the suppliers of Mo-99, as well as with the suppliers of end-user productions (our customers). In particular, we have seen increased competition from NTP Radioisotope (Pty) Ltd. (NTP) of South Africa on a global basis. NTP is leveraging their reliability relative to the recent shutdowns of the NRU reactor and HFR and their conversion to low enriched uranium (LEU) based Mo-99, which is discussed in more detail in the next paragraph. We continue to work with existing customers and potential new customers to recapture market share based on our strengths in delivering a quality product on time by leveraging our manufacturing, regulatory and logistical expertise.

Security of long-term supply of medical isotopes has been an important consideration in the medical isotope market as all of the major reactors involved in the global supply of medical isotopes are over forty years old. The MAPLE project was expected to provide us with long-term reliable supply. The MAPLE project included two reactors dedicated to medical isotope production and a new processing facility, which provided redundancy and significant capacity relative to global demand. As such, we believe the industry, in general, viewed Nordion and the MAPLE Facilities as being a major source of reliable long-term supply of medical isotopes. While parties had been working on other proposed projects prior to the cancellation of the MAPLE project and the shutdowns of the NRU reactor and HFR, the number of projects that Nordion and others were considering for long-term supply following these events, increased. The situation was further complicated by proposed U.S. legislation to further restrict the export of highly enriched uranium (HEU), the current source material for the production of Mo-99. The U.S. government is also targeting to have at least 50 percent of U.S. supply of Mo-99 from suppliers that do not use HEU in their processes domestically. Recently, this legislation did not become a law, however, new legislation may be proposed in the future relating to the use of HEU in medical isotope production. Projects to provide new supply, which currently are at various stages, from assessment to implementation, include converting existing reactors to produce Mo-99, converting reactors from the use of HEU to LEU, developing new reactors or other technologies, and building new processing facilities. A number of these projects are government funded or subsidized. Governments of several countries, in particular the U.S., have been increasing the funding of domestic and foreign projects both to support reliable isotope supply and the conversion to non-HEU based supply of Mo-99. While it would take from 3 to 10 years for most of these projects to be completed, if they were all completed we expect there would be a significant surplus in supply relative to demand.

With the uncertainty related to the outcome of the MAPLE arbitration, and in order to maintain a leadership position in the medical isotope market, we entered into the previously described 10-year agreement with Isotope for the supply of Mo-99. Initial quantities of supply will be supplemental to our NRU reactor supply. However, over several years the expectation is to have supply available of up to 20% of global Mo-99 demand to back up our long term requirements. This supply agreement also provides us with additional supply to help offset the impact of the planned shutdowns of the NRU reactor. The NRU reactor is required to shutdown for extended periods, currently estimated by AECL to be approximately one month annually, for inspections. We will not receive Mo-99 from AECL for the majority of the shutdown period. However, we believe that once the back-up supply from Isotope ramps up our competitive position will improve due to having a larger availability of supply from multiple reactors.

We expect our profitability associated with medical isotopes may decline as the amount of Mo-99 we receive from Isotope increases, as the cost of Mo-99 from Isotope is higher than the cost of Mo-99 from AECL at current prices. In addition, the majority of our revenue and

## MANAGEMENT'S DISCUSSION AND ANALYSIS

profitability associated with medical isotopes is generated from sales of Mo-99 to Lantheus. If pricing and/or the volume of Mo-99 we sell to customers, in particular Lantheus, decline, our profitability would decline and we could incur losses on this product, which could be significant and extend over a number of years based on our 10-year contract with Isotope. As well, an extended shutdown of the NRU reactor in the future would have a negative impact on our business and profitability, particularly if it were to occur prior to Isotope reaching its planned level of production, which is forecast to be 20% of global Mo-99 demand. In addition to entering into an agreement to supply Mo-99 to our largest customer, Lantheus, we continue to work with our other customers and are having discussions with potential new customers to increase our global market share of Mo-99.

### ***Intent to sell MDS Nordion S.A.***

In November 2010, we signed a non-binding letter of agreement with Best Medical International Inc. (Best Medical) for the divestiture of MDS Nordion S.A. in Fleurus, Belgium, which currently supports four lines of business including Agiris (non-destructive testing equipment and sources); GlucoTrace (FDG imaging agent); TheraSphere® (targeted liver cancer radiotherapeutic); and Radiochemical business (generic cyclotron and reactor isotopes). The proposed divestiture transaction is expected to include three lines of business excluding the TheraSphere® business, which will be retained by Nordion. The proceeds received for the divested operations are expected to be nominal and we expect to leave sufficient working capital in the business to support its operations through an initial transition period.

In July 2010, the performance of the GlucoTrace and Radiochemical businesses at its Fleurus, Belgium facility resulted in Nordion announcing its intention to restructure operations at that facility. To that end, the Company initiated a Loi Renault process, which involves an information and consultation process with the Belgian Works Council to determine the best way to move forward with the identified businesses. With the signing of the recent agreement with Best Medical, the Loi Renault process has been paused until the negotiations with the potential acquirer have concluded.

### ***Appointment of new Chief Executive Officer and Chief Financial Officer***

In January 2010, Steve West, then President of MDS Nordion and Chief Operating Officer of MDS Inc., was appointed as Chief Executive Officer of Nordion and a member of the Company's Board of Directors. Mr. West became President of MDS Nordion in 2003. He began his career at Nordion in 2001 as a senior partner with MDS Capital Corporation. Prior to that, he was President of DiverseyLever Canada and has held a variety of CEO assignments in Asia and the Pacific Rim, as well as international business development responsibilities in the specialty chemicals field. Mr. West holds a degree in Genetics from the University of London.

Peter Dans, then Senior Vice-President, Finance of MDS Inc., became Chief Financial Officer of Nordion, effective February 1, 2010. Mr. Dans joined the Company in 2007 from Nortel Networks, where he spent more than 15 years in global finance leadership roles, including positions in North America, South Korea, Singapore and the Philippines.

### ***Changes to the Board of Directors***

Two new Directors were appointed to the Company's Board of Directors (the Board) in fiscal 2010. During the third quarter of fiscal 2010, Dr. Oye Olukotun joined the Board, while Mr. Gregory P. Spivy and Mr. James S.A. MacDonald stepped down. In September 2010, Mr. Kenneth Newport was appointed to the Board. The changes to Nordion's Board of Directors reflect the Company's continued focus on preparing Nordion to become a strong, stand-alone business.

## **Critical uncertainties and estimates**

### ***Fluctuation in net income from changes in foreign exchange rates***

As a Canadian company that operates globally, holds a large percentage of its cash and has a large number of transactions in U.S. dollars, our net income may have significant fluctuations as result of foreign exchange movements primarily between the Canadian and U.S. dollar. The majority of our operations are located in Canada, however the vast majority of our sales (97% in 2010) are to customers outside of Canada. We also have a number of supply agreements with companies outside of Canada. These supply agreements include the agreement for a 10-year supply of Mo-99 from Isotope in Russia and a contract that was transferred to Isotope for the supply of Co-60 to 2024. In addition to being a common currency for international transactions, the majority of our sales are in U.S. dollars. Therefore we believe that contracting in U.S. dollars for certain international contracts, including the agreements with Isotope, is preferred with respect to the economic impact on the cash flow of the Company as it better matches the currency of the cash outflows of the Company to our cash inflows (revenues) in U.S. dollars.

Despite using a U.S. dollar reporting currency, these U.S. dollar contracts may create significant fluctuations in our net income. Under U.S. accounting guidelines, an embedded derivative may be created when companies enter into transactions that are not denominated in the currencies of the parties to the transaction. For accounting purposes, the functional currency of our Canadian operations is the Canadian

## MANAGEMENT'S DISCUSSION AND ANALYSIS

dollar and all our future purchase and sale commitments with non-U.S. based enterprises that are denominated in U.S. dollars usually result in an embedded derivative being present. These embedded derivatives are revalued at the end of each reporting period based on the change in foreign exchange rates, in our case primarily the Canadian to U.S. dollar exchange rate. The most significant embedded derivatives in our business relate to the long-term supply agreements with our Russian supplier Isotope. The remaining purchase commitments associated with these agreements, over 10 and 14 years respectively for Mo-99 and Co-60 purchases are revalued at the end of each quarterly period. Although the calculation is complicated and involves a number of variables including current and forward Canadian to U.S. dollar exchange rates and discount rates, an indicative impact of a one cent movement in the Canadian to U.S. dollar exchange rate may result in a gain or loss of approximately \$7 million for accounting purposes. During two quarters in the past three years, the Canadian to U.S. dollar exchange rate has moved by more than 10 cents, with a maximum change of 18 cents in one quarter during this period. As a result, embedded derivative gains and losses are expected to be significant in our operating and net income in the future.

In addition, at the end of each quarter, we revalue all monetary assets and liabilities that are expected to be realized in cash that are in a currency other than the functional currency of the entity within Nordion in which they are recorded. This revaluation creates a foreign exchange gain or loss that is reflected in Other expenses, net, which is included in operating income and net income. We generally hold the majority of our cash in our Canadian functional currency entity in U.S. dollars, which is revalued at the end of each quarter.

The gain or loss from embedded derivatives and/or the revaluation of monetary assets and liabilities reflects the movement of foreign exchange rates within the period and, therefore, a gain or loss in one quarter will not imply that there will be a similar gain or loss in a subsequent quarter unless there is a similar movement of foreign exchange rates within the quarter.

Currently our Canadian dollar costs are significantly higher than our Canadian dollar revenue and therefore our operating income and net income are negatively impacted by the strengthening of the Canadian dollar relative to the U.S. dollar, and vice versa. While we may be able to increase our revenue in Canadian dollars, or hedge all or a portion of the Canadian to U.S. dollar difference between our costs and revenues for a period of time, changes in foreign exchange rates may still have an impact on our operating and net income.

### ***Critical estimates in deferred tax assets and certain long-term assets***

As of October 31, 2010, we reported \$86.8 million of deferred tax assets, all of which relate to our Canadian operations and could be used to reduce future cash taxes in Canada. We made critical estimates and judgments, primarily related to our forecast of future income, that the Company will significantly benefit from existing tax losses, research and development (R&D) tax credits, and other carryovers that can be applied to reduce cash taxes. As of October 31, 2010, we also reported at fair value \$16.2 million and \$1.5 million of long-term note receivable and investment in Celerion Inc. (Celerion), respectively, received as part of the sale proceeds of Early Stage. We made critical estimates and judgments in determining the fair value of these assets, the going concern assumption for Celerion, and associated credit risk.

While we believe these estimates and key judgments are reasonable, different assumptions regarding such factors as industry outlook, customer demand, competitor actions, and other unforeseen events may cause future results to differ from our current estimates.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Financial highlights

<b>Basic loss per share from continuing operations</b>	<b>\$ (1.16)</b>	<b>\$ (0.10)</b>	<b>\$ (1.99)</b>
<b>Cash and cash equivalents</b>	<b>\$ 122,802</b>	<b>\$ 298,203</b>	<b>\$ 117,052</b>

#### Medical Isotopes

- The annual decreases in revenue were driven primarily by the medical isotope supply disruption caused by the NRU reactor going out of service at the beginning of our third quarter in May 2009 and not resuming production of reactor-based isotopes until the beginning of our fourth quarter in August 2010.

#### Targeted Therapies

- Targeted Therapies revenue continues to grow on a year-over-year basis driven primarily by CardioGen-82™ which started production in the third quarter of 2009, and the global performance of TheraSphere® for which revenue grew over 25% in 2009 compared to 2008, and a further 40% in 2010.

#### Sterilization Technologies

- Sterilization revenue fluctuates due to the availability of Co-60 supply from the power reactor sites, the timing of demand from customers and the sale of production irradiators. Co-60 supply and revenue were higher in 2010 and 2008 compared with 2009.
- 2008 and 2009 revenue included one full-scale production irradiator in each year, while 2010 included two full-scale production irradiators, one to Mexico and one to Europe.

#### Corporate and Other

Corporate and Other expenses in fiscal 2010 were mainly comprised of the costs associated with our corporate offices in Toronto and Ottawa, the associated transition and certain costs related to the strategic repositioning including the provision of transition services. As well, the following items impacted Corporate and Other:

- \$14.0 million of Other income associated with the transition services provided to the businesses we sold; and
- Approximately \$27 million of non-cash foreign exchange loss on revaluation of \$450.0 million of proceeds from the sale of MDS Analytical Technologies

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Other costs and expenses

In addition, we incurred the following costs:

- \$62.5 million restructuring charges related to our strategic repositioning;
- \$8.9 million non-cash impairment charges primarily related to Nordion's Belgium operations;
- \$9.2 million of expense in relation to the ongoing conduct of the MAPLE arbitration proceedings; and
- \$13.1 million from embedded derivative gain associated with our Russian Mo-99 and Co-60 supply agreements.

### Cash and cash equivalents

Our cash and cash equivalents balance of \$122.8 million as of October 31, 2010, decreased \$175.4 million from October 31, 2009, primarily due to:

- \$246.1 million related to the repayment of our senior unsecured notes;
- \$450.0 million for the repurchase of Common shares under a substantial issuer bid; and
- \$83.5 million for restructuring costs associated with the strategic repositioning.

These were partially offset by \$654.2 million received as proceeds from the sale of MDS Analytical Technologies and Early Stage.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Financial Results Analysis

This section provides detailed information and analysis about our performance for the year ended October 31, 2010, compared with the same periods in fiscal 2009 and 2008.

#### Consolidated Financial Results

<i>(thousands of U.S. dollars)</i>	2010	% of revenues	2009	% of revenues	2008	% of revenues
<b>Revenues from continuing operations</b>	<b>\$ 240,352</b>	<b>100%</b>	<b>\$ 231,263</b>	<b>100%</b>	<b>\$ 296,234</b>	<b>100%</b>

<b>Total assets</b>	<b>\$ 553,956</b>		<b>\$ 1,625,870</b>		<b>\$ 1,835,898</b>	

#### Revenues from continuing operations

Revenues from continuing operations of \$240.4 million in fiscal 2010 increased by \$9.1 million or 3.9% compared with fiscal 2009. Excluding the impact of foreign exchange, revenues in fiscal 2010 decreased approximately 2% compared with last year. This decrease was mainly due to the reduction in revenue from the reactor-based isotopes due to the shutdown of the NRU reactor in the first three quarters of fiscal 2010. The NRU reactor stopped producing isotopes in May 2009 and resumed its production in August 2010. This decrease was substantially offset by increases in revenues from Sterilization Technologies, Targeted Therapies' products, and cyclotron products.

Sales in the fourth quarter of 2010 accounted for approximately 36% of total year revenue primarily due to the NRU reactor restart, higher Co-60 shipments and the sale of a production irradiator.

Revenues from continuing operations of \$231.3 million in fiscal 2009 were \$65.0 million lower than in fiscal 2008. The decrease was primarily due to a reduction in revenue from the reactor-based isotopes due to the shutdown of the NRU reactor in May 2009, lower Co-60 shipments, the negative impact of foreign exchange, and lower revenues due to the fiscal 2008 divestiture of external beam therapy and self-contained irradiator product lines, partially offset by increased pricing and growth in certain Targeted Therapies' products.

See further detail analysis on revenues in the "Medical Isotopes", "Targeted Therapies" and "Sterilization Technologies" sections of this MD&A.

#### Gross margin from continuing operations

Gross margin from continuing operations of 47% in fiscal 2010 was lower than 49% in fiscal years 2009 and 2008, primarily due to lower Mo-99 revenue, which has a higher gross margin, as a result of the shutdown of the NRU reactor from May 2009 to August 2010. As well, the growth of CardioGen-82™ has had a negative impact on gross margin as it provides a lower contribution to gross margin depending upon the source of supply of Sr-82. These decreases were partially offset by the growth of TheraSphere® in 2009 and 2010, and Co-60 in 2010.

In the fourth quarter of 2010, primarily as a result of higher Mo-99 and Co-60 revenue, gross margins were 53%.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Costs and expenses

#### *Selling, general and administration (SG&A)*

SG&A expenses of \$106.9 million in fiscal 2010 increased by \$26.9 million compared with fiscal 2009. During fiscal 2010, we recorded \$9.2 million of cost associated with ongoing conduct of the MAPLE arbitration proceedings, \$2.4 million of sales tax liability proposed by an Ontario audit of sales tax returns, and \$11.6 million of transition cost related to external service providers. The transition costs, along with the internal SG&A costs expended in support of the transitions, have been invoiced to the buyers under the Transition Services Agreements (TSAs) related to the divested MDS Analytical Technologies and MDS Pharma Services businesses. Costs related to these transitional services were offset by \$14.0 million of income earned for these services in fiscal 2010, as reported in Other expenses, net in the consolidated statements of operations. In addition, the strengthening of the Canadian dollar relative to the U.S. dollar had an unfavorable impact on reported SG&A compared with fiscal 2009. Offsetting these increases was a reduction in spending relating to the corporate restructuring activities and the reduced scope of the business following the divestitures.

SG&A expenses of \$80.0 million in fiscal 2009 were \$27.0 million lower compared with fiscal 2008. The decrease was primarily due to the impact of foreign exchange on Canadian dollar spending, lower compensation cost from workforce reductions, lower annual incentive payouts, lower pension expense, and cost control initiatives, partially offset by higher stock-based compensation expense as compared to stock-based compensation credits recorded in fiscal 2008.

#### *Depreciation and amortization (D&A)*

D&A expense of \$29.2 million in fiscal 2010 was \$5.6 million and \$3.9 million higher than fiscal 2009 and 2008, respectively, primarily due to accelerated amortization of leasehold improvements related to the wind down of the former head office in Toronto, Canada. D&A expense in fiscal 2009 and 2008 was relatively consistent representing 10% and 9% of revenues in those years.

#### *Restructuring charges*

The restructuring charges of \$62.5 million in fiscal 2010 are primarily for \$42.1 million of workforce reductions including \$16.0 million of severance, \$8.2 million of stock-based compensation due to accelerated vesting of stock options, restricted stock units (RSUs) and performance share units (PSUs), \$6.7 million of a tax gross-up amount for certain executive officers subject to U.S. tax requirements, and \$11.2 million of transaction incentive payments payable to certain executive and other senior officers of the Company triggered by the sale of MDS Analytical Technologies and Early Stage. A charge of \$7.2 million was also recorded for future rent payments net of estimated sublease revenue related to the Company's corporate office space in Toronto, Canada, and cancellation of certain contracts for information technology that contained minimum purchase or fixed price commitments that became uneconomical for the remaining business. The remaining \$13.2 million is for fees related to financial advisory services provided by investment bankers on the overall strategic repositioning activities of the Company, which were finalized through negotiations with the Company's investment bankers during the third quarter of fiscal 2010.

The fiscal 2010 restructuring activities have been substantially completed and the remaining restructuring provision is expected to be utilized in the first half of fiscal 2011, except future rental payments which may extend over 5 years. The restructuring charges of \$9.3 million and \$1.2 million in fiscal 2009 and 2008, respectively, were primarily for workforce reduction, lease termination costs on moving of our headquarter office in Toronto, Canada and various initiatives focused on improving profitability. We have completed our activities associated with the fiscal 2008 and 2009 restructuring plans and have utilized all of the related prior year provisions.

#### *Change in fair value of embedded derivatives*

Nordion has Russian supply contracts for Co-60 and Mo-99 denominated in U.S. dollars. This creates embedded derivatives as Nordion's Canadian operation has Canadian dollars as its functional currency. We mark-to-market any changes in the fair value of the embedded derivatives and record these increases and decreases as gains and losses within operating income (loss).

In fiscal 2010, we recorded a gain of \$13.1 million, of which \$11.7 million was recognized in the fourth quarter, for the change in the fair value of the embedded derivatives compared with a gain of \$7.9 million in fiscal 2009 and a loss of \$14.5 million in fiscal 2008. The significant change in fair value of embedded derivatives in fiscal years 2010, 2009, and 2008 was primarily driven by fluctuations in the U.S. to Canadian dollar exchange rate and large purchase obligations with durations of up to 14 years.

#### *Other expenses, net*

Other expenses, net, in 2010 primarily consisted of \$8.9 million in asset impairment charges and \$32.0 million of foreign exchange losses, which were partially offset by \$14.0 million of TSA revenue. R&D, which is included in Other expenses, net, was \$4.9 million in 2010 compared to \$4.4 million and \$3.6 million in 2009 and 2008, respectively, with increase in R&D spending primarily in Targeted Therapies segment. In 2009 and 2008, we recorded a \$4.6 million loss and \$6.8 million gain, respectively, related to foreign exchange. In 2008, we recorded \$10.7 million in valuation provisions related to investments and a \$3.9 million loss on the sale of certain product lines.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### **Operating loss from continuing operations**

Operating loss from continuing operations in fiscal 2010 of \$106.4 million was \$104.8 million higher compared with the \$1.6 million operating loss in fiscal 2009. The increase in loss was primarily due to an increase of \$53.2 million in restructuring charges associated with our strategic repositioning, an impairment charge of \$8.9 million related to our Belgium operations and Corporate information technology related assets, \$27.0 million non-cash foreign exchange loss primarily as a result of the revaluation of the \$450.0 million of proceeds from the sale of MDS Analytical Technologies, and higher SG&A and D&A expenses. These losses were partially offset by TSA revenue of \$14.0 million and a favorable change of \$5.1 million in the fair value of embedded derivatives in fiscal 2010.

Operating loss from continuing operations in fiscal 2009 of \$1.6 million was significantly lower than the \$354.6 million operating loss in fiscal 2008. The decrease in loss was primarily due to a \$341.0 million pre-tax MAPLE Facilities write-off on the discontinuance of the development work on the MAPLE Facilities by AECL in fiscal 2008, a favorable change of \$22.4 million in the fair value of embedded derivatives and lower SG&A and D&A expenses in fiscal 2009, partially offset by lower revenues and higher restructuring charges in fiscal 2009.

### *Interest income, net*

Net interest income in fiscal 2010 was \$2.5 million compared with the net interest income of \$4.7 million in fiscal 2009. The decrease in net interest income was primarily due to \$1.8 million accrued interest expense related to Ontario sales tax audits in fiscal 2010.

Net interest income in fiscal 2009 was \$9.4 million lower compared with fiscal 2008 mainly due to recording of a \$6.0 million capitalized interest expense for construction-in-progress of the MAPLE Facilities in fiscal 2008 and lower interest rates in fiscal 2009.

### *Income tax recovery (expense)*

Tax recovery for fiscal 2010 was \$1.2 million on a \$104.5 million pre-tax loss from continuing operations. At our statutory tax rate of 30%, we expected an income tax recovery of approximately \$31 million for the year. The reported tax recovery is impacted primarily by a \$25.0 million valuation allowance on deferred tax assets. The sale of MDS Analytical Technologies necessitated an \$18.6 million increase to valuation allowances for U.S. deferred tax assets and a further valuation allowance of \$6.4 million related to tax losses generated in our Belgium and other operations. Conversely, our 2010 tax rate was favorably impacted by the conclusion of Canadian federal R&D tax credit audits and appeals which resulted in the release of reserve for uncertain tax positions in the amount of \$10.2 million for the period from 2005 to 2009.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Medical Isotopes

<i>(thousands of U.S. dollars)</i>	2010	% of revenues	2009	% of revenues	2008	% of revenues
<b>Revenues</b>	\$ 57,958	100%	\$ 94,412	100%	\$ 120,987	100%
<b>Costs and expenses</b>						
Direct cost of revenues	36,432	63%	47,750	51%	58,431	48%
Selling, general and administration <sup>(a)</sup>	17,316	30%	14,207	15%	17,828	15%
Other expenses (income), net	64	-	643	-	(472)	-
<b>Segment earnings</b>	\$ 4,146	7%	\$ 31,812	34%	\$ 45,200	37%

(a) Excludes AECL arbitration and legal costs of \$9.2 million (2009 - \$1.5 million; 2008 - \$nil), which are not included in the calculation of segment earnings.

#### Revenues

Revenues of \$58.0 million in fiscal 2010 decreased by \$36.5 million or 39% compared with fiscal 2009. Excluding the effects of foreign exchange, revenue declined by 40%. The majority of Medical Isotopes' revenues are currently denominated in U.S. dollars.

The decrease was primarily due to the outage of the NRU reactor, which went out of service in May 2009 and did not resume production of medical isotopes until August 2010, resulting in a 55% decrease in reactor-based product revenues. While back-up supply was secured for some of the NRU reactor produced isotopes (I-125, I-131, Xe-133), which helped partially offset the negative impact of the reactor outage, no back-up supply was available for Mo-99 our largest revenue contributor. In 2009, we had Mo-99 supply for approximately six and one half months and in 2010 for two and one half months. During 2009, while the NRU reactor was operating, a competitor's reactor, the HFR in Petten, the Netherlands was shut down for approximately three months, and we were able to increase supply and we recognized incremental revenues.

The decrease in reactor supplied product revenues was partially offset by cyclotron product revenues, which were 22% higher in fiscal 2010 compared with fiscal 2009, mainly driven by demand for Tl-201, which was used as a substitute for Mo-99 due to shortages resulting from the NRU reactor shutdown and disruption to supply from HFR in fiscal 2010. Since the return to service of the NRU reactor and HFR, demand for Tl-201 has returned to normal levels. As a result of the NRU reactor restart we recognized approximately 70% of our fiscal 2010 reactor-based isotope revenue in the fourth quarter. However with the decline in Tl-201 revenues, we recognized approximately 19% of our fiscal 2010 cyclotron-based isotope revenue in the fourth quarter of fiscal 2010. Historically, when the NRU and other major reactors that supply competitors are operational, our Medical Isotope revenues do not vary significantly from quarter to quarter. However, with the restart of the NRU reactor, Mo-99 demand in the fourth quarter of fiscal 2010 was significantly lower than in the periods prior to May 2009, and the price for which we sold Mo-99 was significantly higher, as previously discussed in the section "Uncertainty in the Medical Isotope Market."

Revenues of \$94.4 million in fiscal 2009 decreased by \$26.6 million or 22% compared with fiscal year 2008 due primarily to the NRU reactor shut down, which began in May 2009. Excluding the impact of foreign exchange, revenues declined by 16%.

#### Gross margin

Gross margin of the Medical Isotopes segment of 37% in fiscal 2010 was lower than gross margins of 49% and 52% in fiscal 2009 and 2008, respectively, primarily due to the lower revenue from Mo-99, a relatively higher gross margin product, as a result of the shutdown of the NRU reactor. In addition, gross margins were negatively impacted by higher cost of sourcing reactor-based isotopes during the NRU reactor shutdown and the impact of foreign exchange. The majority of Medical Isotopes' revenue is currently denominated in U.S. dollars while costs are primarily Canadian dollars based so fluctuations in U.S. dollar to Canadian dollar exchange rates will have an effect on gross margin. The production of cyclotron-based isotopes involves a high level of fixed costs and therefore the incremental revenues from Tl-201 had a positive impact on gross margin.

#### Selling, general and administration (SG&A)

SG&A expenses of \$17.3 million in fiscal 2010 increased by \$3.1 million compared with fiscal 2009 primarily due to higher annual incentive plan payouts and the unfavorable foreign exchange impact on strengthening of the Canadian dollar relative to the U.S. dollar. These increases were partially offset by lower commissions paid, due to lower Mo-99 revenues.

SG&A expenses of \$14.2 million in fiscal 2009 decreased by \$3.6 million compared with fiscal 2008 primarily due to the favorable impact of foreign exchange on Canadian dollar spending, lower annual incentive compensation and higher pension income.

#### Other expenses (income), net

Other expense, net in fiscal 2010 decreased by \$0.6 million compared with Other expense, net in fiscal 2009 primarily due to foreign exchange revaluation gain in fiscal 2010 compared to a loss on revaluation in fiscal 2009.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

Other expenses, net of \$0.6 million in fiscal 2009 was unfavorable by \$1.1 million compared with other income, net of \$0.5 million in fiscal 2008 primarily due to the foreign exchange loss in fiscal 2009 compared with the foreign exchange revaluation gain in fiscal 2008 resulting from strengthening of the US dollar.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Targeted Therapies

<i>(thousands of U.S. dollars)</i>	2010	% of revenues	2009	% of revenues	2008	% of revenues
<b>Revenues</b>	<b>\$ 65,552</b>	<b>100%</b>	<b>\$ 42,261</b>	<b>100%</b>	<b>\$ 40,367</b>	<b>100%</b>
<b>Costs and expenses</b>						
Direct cost of revenues	38,771	59%	26,380	62%	28,596	71%
Selling, general and administration	15,436	24%	11,047	26%	12,895	32%
Other expenses, net <sup>(a)</sup>	4,763	7%	4,573	11%	3,025	7%
<b>Segment earnings (loss)</b>	<b>\$ 6,582</b>	<b>10%</b>	<b>\$ 261</b>	<b>1%</b>	<b>\$ (4,149)</b>	<b>(10%)</b>

(a) Excludes impairment of long-lived assets of \$7.4 million in 2010, which are not included in the calculation of segment earnings.

### Revenues

Revenues of \$65.6 million in fiscal 2010 increased by \$23.3 million or 55% compared with fiscal 2009. Excluding the impact of foreign exchange, revenues increased by 53%. The majority of Targeted Therapies' revenues are denominated in U.S. dollars. The increase was due to the continued strong performance of a number of products, primarily CardioGen-82™ along with the global performance of TheraSphere® which grew by approximately 40% in 2010 compared to 2009. CardioGen-82™ production began in the third quarter of fiscal 2009. Growth in other Targeted Therapies was primarily driven by Glucotracer, which is produced out of our Fleurus, Belgium facility.

Revenues of \$42.3 million in fiscal 2009 increased by \$1.9 million or 5% compared with fiscal 2008 primarily due to the global growth in TheraSphere® which experienced revenue growth of over 25% compared with fiscal 2008 revenues, which was partially offset by a decline in revenue from contract services for customers developing new radiopharmaceutical products. Excluding the impact of foreign exchange, revenues increased by 6%.

### Gross margin

Gross margin of Targeted Therapies segment of 41% in fiscal 2010 was higher than 38% and 29% in fiscal 2009 and 2008, respectively, primarily due to the growth in TheraSphere® revenues. TheraSphere® has a relatively fixed cost over certain volumes so incremental revenue has a positive impact on gross margin. The increases in gross margin due to TheraSphere® growth were partially offset by growth in CardioGen-82™ and Glucotracer, which have lower gross margins, and the impact of foreign exchange. Revenues for Targeted Therapies are largely denominated in U.S. dollars while costs are primarily Canadian dollar based. Gross margin for CardioGen-82™ will fluctuate on a quarterly basis depending upon the source of supply for Sr-82, the isotope used in CardioGen-82™ production. Nordion currently sources Sr-82 at a lower cost from its facility in Vancouver, Canada, however, due to supply constraints we also purchase Sr-82 from South Africa, and the U.S.

### Selling, general and administration (SG&A)

SG&A expenses of \$15.4 million in fiscal 2010 increased by \$4.4 million compared with fiscal 2009 primarily due to an increase in marketing programs for TheraSphere®, higher annual incentive plan payouts, and the unfavorable foreign exchange impact on strengthening of Canadian dollar relative to US dollar. In addition, in the fourth quarter of 2010 we recorded a \$1.1 million charge related to the decommissioning of one of our production facilities in Fleurus, Belgium.

SG&A expenses of 11.0 million in fiscal 2009 decreased by \$1.8 million compared with fiscal 2008 primarily due to favorable impact of foreign exchange on Canadian dollar spending, lower annual incentive compensation and higher pension income.

### Other expenses, net

R&D is included in Other expenses, net. R&D expense of \$4.9 million in fiscal 2010 was up \$0.5 million from fiscal 2009 due to increased spending on TheraSphere® clinical programs and the impact of foreign exchange.

The remaining offsetting decrease in Other expenses, net of \$0.3 million in fiscal 2010 compared with fiscal 2009 was primarily due to a foreign exchange gain on revaluation of net monetary assets and liabilities in fiscal 2010 compared to a loss on revaluation in fiscal 2009.

Other expenses, net of \$4.6 million in fiscal 2009 increased by \$1.5 million compared with fiscal 2008 primarily due to higher R&D expenses and foreign exchange revaluation loss in fiscal 2009 compared to a revaluation gain in fiscal 2008, partially offset by favorable operational foreign exchange impact on Canadian dollar spending.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### *Sterilization Technologies*

<i>(thousands of U.S. dollars)</i>	2010	% of revenues	2009	% of revenues	2008	% of revenues
<b>Revenues</b>	<b>\$ 116,842</b>	<b>100%</b>	<b>\$ 94,590</b>	<b>100%</b>	<b>\$ 118,099</b>	<b>100%</b>
<b>Costs and expenses</b>						
Direct cost of revenues	53,209	46%	44,285	47%	49,216	42%
Selling, general and administration	16,676	14%	14,629	15%	16,082	14%
Other expenses (income), net	96	-	591	1%	(695)	(1%)
<b>Segment earnings</b>	<b>\$ 46,861</b>	<b>40%</b>	<b>\$ 35,085</b>	<b>37%</b>	<b>\$ 53,496</b>	<b>45%</b>

#### **Revenues**

Revenues of \$116.8 million in fiscal 2010 increased by \$22.2 million or 24% compared with fiscal 2009. Excluding the impact of foreign exchange, revenues increased by 12%, as the majority of revenue for Sterilization Technologies is in Canadian dollars. The increase was primarily due to increased volume and pricing of Co-60 and the shipment of two production irradiators in fiscal 2010 compared with one in fiscal 2009. As well, services associated with Co-60 and production irradiators also increased. Partially offsetting this growth was a decline in the sales of equipment for non-destructive testing in the Agiris product line. In 2010, as in prior years, the quarterly profile of revenues for Sterilization Technologies varies significantly due to the timing of the receipt of Co-60 from our suppliers and shipments to customers, as well as the sales of production irradiators. In 2010, revenues from Co-60 were significantly higher in the second and fourth quarters and we shipped production irradiators in the third and fourth quarter. These trends may vary in the future.

Revenues of \$94.6 million in fiscal 2009 decreased by \$23.5 million or 20% compared with fiscal 2008 primarily due to decreased Co-60 shipments as a result of the timing of Co-60 receipt from reactors, the timing of customer shipments and the negative impact of foreign exchange. In addition, the global economic downturn experienced in 2009 had an effect on the sterilization business as customers deferred major capital expenditures, found ways to be more efficient in their production processes and in the utilization of Co-60. Excluding the impact of foreign exchange, revenues declined by 11%.

#### **Gross margin**

Gross margins of the Sterilization Technologies segment of 54% and 53% in fiscal 2010 and 2009, respectively, were primarily driven by fluctuations in the level of Co-60 revenues (both volume and pricing), as the gross margin for Co-60 is greater than that of production irradiators and the Agiris products.

The decline in gross margins from 58% in 2008 to 53% in 2009 was a result of lower Co-60 revenues, a higher proportion of the reduction in Co-60 revenue to customers that have higher pricing and the impact of Co-60 transportation costs, which are billed to customers at cost.

#### **Selling, general and administration (SG&A)**

SG&A expenses of \$16.7 million in fiscal 2010 increased by \$2.1 million compared with fiscal 2009 primarily due to higher annual incentive plan payouts and the unfavorable foreign exchange impact on strengthening of the Canadian dollar relative to the U.S. dollar. SG&A expenses of \$14.6 million in fiscal 2009 decreased by \$1.5 million compared with fiscal 2008 due to favorable impact of foreign exchange on the Canadian dollar spending, lower annual incentive compensation and higher pension income.

#### **Other expenses (income), net**

Other expenses, net in fiscal 2010 decreased by \$0.5 million compared with Other expenses, net in fiscal 2009 and Other expenses, net of \$0.6 million in fiscal 2009 was unfavorable by \$1.3 million compared with Other income, net of \$0.7 million in fiscal 2008 primarily due to foreign exchange revaluation of net monetary assets and liabilities.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Corporate and Other

(thousands of U.S. dollars)

	2010	2009	2008
<b>Revenues</b>	\$ -	\$ -	\$ 16,781
<b>Costs and expenses</b>			
Direct cost of revenue	-	-	13,858
Selling, general and administration	48,238	38,168	60,326
Other expenses (income), net <sup>(a)</sup>	17,871	2,708	(5,475)
<b>Segment loss</b>	\$ (66,109)	\$ (40,876)	\$ (51,928)

(a) Excludes impairment of long-lived assets of \$1.5 million and loss on sale of investment of \$1.1 million in 2010; write-down of investments of \$0.9 million, AECL arbitration and legal costs of \$0.4 million in 2009; loss on sale of investment of \$10.7 million, loss on sale of business 3.9 million and AECL arbitration and legal costs of \$0.7 million in 2008, which are not included in the calculation of segment loss.

### Selling, general and administration (SG&A)

SG&A expenses of \$48.2 million in fiscal 2010 increased by \$10.0 million compared with fiscal 2009. The increase was due to higher costs associated with transition activities, higher Directors and Officers insurance for the periods prior to the completion of the strategic repositioning, sales tax expense based on an audit of Ontario sales tax returns, mark-to-market valuation of deferred share units, and the unfavorable impact of foreign exchange. The increase was partially offset by the impact of workforce reductions resulting from the wind down of the Toronto, Canada headquarters.

SG&A expenses in fiscal 2009 of \$38.2 million decreased by \$22.2 million compared with fiscal 2008 due to the impact of foreign exchange on Canadian dollar spending, lower compensation cost from workforce reductions, and lower annual incentive payouts, partially offset by higher stock-based compensation expense as compared to stock-based compensation credits recorded in fiscal 2008.

### Other expenses (income), net

Other expenses, net of \$17.9 million in fiscal 2010 increased by \$15.2 million compared with fiscal 2009 primarily due to a \$27.0 million non-cash foreign exchange loss recorded in the second quarter of fiscal 2010 primarily resulting from revaluation of \$450.0 million of proceeds from the sale of MDS Analytical Technologies that were held in a Canadian dollar functional currency entity in U.S. dollars to fund the substantial issuer bid. The offset to this non-cash revaluation loss is reflected as foreign currency translation gain in Accumulated other comprehensive income (AOCI) as part of Shareholders' equity. In addition, we recorded a \$1.1 million loss on the sale of Asset-Backed Commercial Paper that we sold in the fourth quarter of 2010. These increases were partially offset by TSA revenues of \$14.0 million related to the sales of MDS Analytical Technologies and MDS Pharma Services as well as a \$1.2 million gain on settlement of the Proxena loan. The income earned from the TSAs was largely offset by related costs, which were reported in SG&A.

Other expenses, net of \$2.7 million in fiscal 2009 increased by \$8.2 million compared with Other income, net of \$5.5 million in fiscal 2008 primarily due to the loss on foreign exchange revaluation which resulted in an approximate loss of \$3.5 million in fiscal 2009 compared with an approximate gain of \$5.0 million in fiscal 2008 partially offset by TSA revenue related to post close transition services provided to MDS Pharma Services Phase II-IV in fiscal 2009.

### Divestiture of certain product lines in fiscal 2008

In May 2008, we completed the sale of the external beam therapy and self-contained irradiator product lines to Best Medical. This sale did not qualify for discontinued operations reporting in fiscal 2008. As a result, revenues and costs of divested product lines were included in Corporate and Other for fiscal 2008.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Sale of MDS Pharma Services Early Stage (Early Stage)

On March 5, 2010, we completed the sale of Early Stage to Ricerca Biosciences, LLC (Ricerca) and Celerion, Inc. (Celerion) for total consideration of \$45.0 million including \$12.9 million in cash after a \$7.1 million reduction for preliminary net working capital closing adjustments, a \$25.0 million note receivable (the Note) from Celerion, and 15% minority interest in Celerion. The sale was structured as a stock and asset purchase transaction. Total net assets disposed of were \$120.2 million.

Final net working capital and other closing adjustments resulted in final cash proceeds of \$10.7 million. The Ricerca deal resulted in a final cash proceed of \$9.4 million. The Celerion deal resulted in a final cash proceed of \$1.3 million, the Note at a fair value of \$16.2 million and 15% minority interest in Celerion at a fair value of \$1.5 million as of October 31, 2010. We recorded an after-tax loss on the sale of Early Stage of \$72.1 million, of which losses of \$59.3 million and \$12.8 million were recorded in fiscal 2010 and fiscal 2009, respectively. The loss on the sale of Early Stage included employee severance and transaction costs of \$20.9 million and the recognition of an unrealized foreign currency translation gain of \$42.1 million.

As part of the sale of Early Stage, we signed Transition Services Agreements (TSAs) to provide certain post closing transition services to the buyers. The TSAs completed in November 2010. The Company recorded TSA revenue of \$7.0 million in Other expenses, net for the year ended October 31, 2010.

Following the sale of Early Stage, we retained certain assets related to the operations of Early Stage, which are included in "Assets of discontinued operations" in the consolidated statements of financial position. We revised our estimates of recoverability of the retained assets and performed impairment analyses during fiscal 2010. Based on undiscounted cash flows and prices for similar assets, we recorded impairment charges on long-lived assets of \$13.6 million (2009 - \$8.9 million; 2008 - \$10.6 million) for the year ended October 31, 2010 in "Loss from discontinued operations, net of income taxes" in the consolidated statements of operations.

### Sale of MDS Analytical Technologies

On January 29, 2010, we completed the sale of MDS Analytical Technologies, which included the Company's 50% interest in two joint ventures, Applied Biosystems MDS Analytical Technologies Instruments (AB/MDS) and PerkinElmer Sciex Instruments (PKI/Sciex), for an initial purchase price of \$641.3 million received in cash. The sale was structured as a stock and asset purchase transaction. Total net assets disposed of were \$597.6 million. Final net working capital and other closing adjustments resulted in net cash proceeds of \$623.5 million. We recorded an after-tax gain on the sale of MDS Analytical Technologies of \$3.5 million in fiscal 2010.

As part of the sale, the Company's joint venture partnership with Applied Biosystems, a division of Life Technologies Corporations (Life), was dissolved. A disagreement has arisen between the former partners (MDS Inc. and Life) as to the appropriate treatment of certain inventory sold by the partnership to Applied Biosystems prior to the dissolution of the joint venture partnership. The overall financial impact to us could be approximately \$10 million. We have filed a Statement of Defence and intend to vigorously defend this action. No provision has been accrued related to this disagreement as of October 31, 2010. We expect that the process to settle this dispute to extend well into fiscal 2011. A hearing has been set for the arbitration of this matter in the second quarter of fiscal 2011.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

As part of the sale of MDS Analytical Technologies, the Company signed a TSA to provide certain post closing transition services for a period of six months from the closing date, which expired on July 31, 2010. We recorded TSA revenue of \$3.0 million in Other expenses, net for the year ended October 31, 2010.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Quarterly Financial Information

The following tables provide a summary of selected financial information for each of the eight most recently completed quarters.

<i>(thousands of U.S. dollars, except per share amounts)</i>	Trailing four quarters	October 31 2010	July 31 2010	April 30 2010	January 31 2010
Revenues from continuing operations					
Medical Isotopes	\$ 57,958	\$ 27,907	\$ 11,910	\$ 10,261	\$ 7,880
Targeted Therapies	65,552	19,851	16,026	14,923	14,752
Sterilization Technologies	116,842	38,083	24,371	31,546	22,842

Items that impact the comparability of the operating income (loss) from continuing operations include:

- Results for the quarter ended October 31, 2010 reflect an after-tax \$2 million for restructuring charges.
- Results for the quarter ended July 31, 2010 reflect a \$7 million impairment of long-lived assets and an after-tax \$6 million for restructuring charges.
- Results for the quarter ended April 30, 2010 reflect an after-tax \$14 million for restructuring charges and \$1 million for an impairment of long-lived assets.
- Results for the quarter ended January 31, 2010 reflect an after-tax \$23 million for restructuring charges.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

- Results for the quarter ended October 31, 2009 reflect an after-tax \$8 million for restructuring charges.
- Results for the quarter ended April 30, 2009 reflect a \$12 million write-down of certain tax assets.
- Earnings per share amounts were impacted by number of Common shares repurchased and cancelled under the substantial issuer bid during the second quarter ended April 30, 2010.

### Fourth quarter fiscal 2010 compared to the fourth quarter fiscal 2009

<i>(thousands of U.S. dollars)</i>	Three months ended October 31			
	2010	% of revenues	2009	% of revenues

#### Revenues from continuing operations

Revenues from continuing operations of \$85.8 million in the fourth quarter of fiscal 2010 increased by \$34.4 million or 67% compared with the same period of fiscal 2009, primarily due to increased revenues from Medical Isotopes as a result of the NRU reactor resuming operations in August 2010, higher Targeted Therapies revenues primarily due to increases in TheraSphere® and CardioGen-82™ products and from Sterilization Technologies as a result of increased shipments of Co-60 and the sale a production irradiator.

#### Selling, general and administration (SG&A)

SG&A expenses of \$29.3 million in the fourth quarter of fiscal 2010 were \$8.4 million higher compared with same period of fiscal 2009, primarily due to higher costs associated with MAPLE arbitration, transition activities, higher annual incentive payouts, mark-to-market valuation of deferred share units, unfavorable operational foreign exchange impact and the decommissioning of one of our production facilities in Fleurus, Belgium. The increase was partially offset by the impact of workforce reductions resulting from the wind down of the Toronto, Canada headquarters and lower stock option compensation costs.

#### Other expenses (income), net

Other expenses, net of \$4.0 million in the fourth quarter of fiscal 2010 increased by \$5.4 million compared with same period of fiscal 2009 driven by increased research and development spending on TheraSphere® clinical programs and foreign exchange loss on revaluation of net monetary assets and liabilities compared to a revaluation gain in the fourth quarter of fiscal 2009. These increases were partially offset by higher TSA revenues related to the divested businesses. The income earned from the TSAs was largely offset by related costs, which were reported in SG&A.

#### Change in fair value of embedded derivatives

We recorded a gain of \$11.7 million for the change in fair value of embedded derivatives in the fourth quarter of fiscal 2010 compared with a loss of \$1.3 million in the same period of fiscal 2009, primarily driven by fluctuations in the U.S. to Canadian dollar exchange rate and larger purchase obligations due to our new supply agreement with Isotope entered in the fourth quarter of fiscal 2010 for a supplemental supply of Mo-99 until 2020.

#### Segment earnings (loss)

##### Medical Isotopes

Segment earnings of \$8.0 million in the fourth quarter of fiscal 2010 increased by \$10.0 million compared with the same period of fiscal 2009 driven by higher Mo-99 volume due to the restart of NRU reactor partially offset by unfavorable operational foreign exchange impact, higher annual incentive compensation, and an agency commission payment associated with the Mo-99 contract with Isotope.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### *Targeted Therapies*

Segment earnings of \$2.0 million in the fourth quarter of fiscal 2010 decreased by \$0.3 million compared with the same period of fiscal 2009 due to higher R&D spending, decommissioning costs of a production facility at our Fleurus, Belgium site, higher annual incentive payouts and unfavorable foreign exchange impact on the Canadian dollar spending partially offset by higher TheraSphere® and CardioGen-82™ volume.

### *Sterilization Technologies*

Segment earning of \$17.7 million in the fourth quarter of fiscal 2010 increased by \$4.5 million compared with same period of fiscal 2009 due to higher Co-60 and production irradiator volume partially offset by inventory write-off relating to our Fleurus, Belgium operations, higher facilities spending and higher annual incentive compensation payouts.

### **Income (loss) from continuing operations**

Income from continuing operations of \$9.3 million in the fourth quarter of fiscal 2010 improved by \$27.5 million compared with the same quarter in fiscal 2009. The increase was primarily due to improved segment earnings from Medical Isotopes and Sterilization Technologies. Additionally, we incurred lower restructuring costs and a favorable change in the fair value of embedded derivatives partially offset by foreign exchange revaluation loss in the fourth quarter of 2010 compared with the revaluation gain in the same quarter in 2009.

### **Cash flow**

The primary cash inflows in the fourth quarter of fiscal 2010, excluding those associated with our product revenues included:

- \$10.4 million from the sale of ABCP investment;
- \$5.0 million of cash proceeds, previously held in escrow, related to the sale of MDS Pharma Services Phase II-IV;
- \$3.2 million of payments from AECL related to a note receivable; and,
- \$2.0 million in income associated with transition service provided to the buyers of the businesses we sold.

With these cash inflows, and our cash on hand, we used cash in the following activities:

- \$17.0 million related to restructuring and deal costs, including severance, change of control payments, and banker and advisory fees;
- \$10.1 million in income and sales tax payments resulting from prior year audits;
- \$3.8 million payment in pension plan contributions; and,
- \$1.3 million in capital expenditures.

The remaining net cash inflow of \$13.6 million is from our operations, primarily due to restart of NRU reactor in August 2010 partially offset by corporate SG&A costs and other operating working capital changes.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Liquidity and capital resources

#### Cash flows

Cash flows from operating, investing and financing activities, as reflected in the consolidated statements of cash flows, are summarized in the following table:

*(thousands of U.S. dollars)*

<b>Years ended October 31</b>	<b>2010</b>	<b>2009</b>	<b>2008</b>
Cash (used in) provided by continuing operating activities	\$ (69,499)	\$ 96,125	\$ (109,687)
Cash (used in) provided by continuing investing activities	(13,234)	(14,319)	114,083
Cash used in continuing financing activities	(669,936)	(6,237)	(115,523)
Cash (used in) provided by discontinued operations	568,138	86,532	24,943
Effect of foreign exchange rate changes on cash and cash equivalents	9,130	19,050	(18,302)
Net (decrease) increase in cash and cash equivalents during the period	\$ (175,401)	\$ 181,151	\$ (104,486)

Our cash flow in 2010 was impacted by a number of significant transactions related to our strategic repositioning. The primary cash inflows, excluding those associated with our product revenues included:

- \$654.2 million in net proceeds from the sale of Analytical Technologies and Early Stage;
- \$12.8 million of payments from AECL related to a note receivable;
- \$14.0 million in income associated with transition service provided to the buyers of the businesses we sold;
- \$10.4 million from the sale of ABCP; and,
- \$3.0 million in dividends from Lumira, which we hold as an equity investment.

With these cash inflows, and our cash on hand, we used cash in the following activities:

- \$450.0 million to buy back our Common shares through a substantial issuer bid;
- \$246.1 million in payments to the holders of our senior unsecured notes for the full repayment of principal, interest and associated make-whole payment;
- \$103.6 million related to restructuring and deal costs, including severance, change of control payments, and banker and advisory fees;
- \$16.1 million increase in restricted cash primarily related to cash used as security against letters of credit;
- \$12.5 million in income and sale tax payments resulting from prior year audits;
- \$7.6 million in capital expenditures; and,
- \$6.5 million in pension plan contributions.

The remaining net cash outflow of \$27.4 million of continuing and discontinued operations, primarily related to corporate SG&A costs and Early Stage losses and capital expenditures prior to the sale of the business and changes in operating working capital.

In 2009 cash inflow of \$181.2 million included collection of a \$59.7 million note related to the sale of our Diagnostics business in 2007; \$40.5 million in proceed from the sale of Pharma Services Phase II-IV and Central Labs business; and \$11.1 million of payments related to the AECL note receivable. These were partially offset by \$11.7 million of principal and interest payment on our senior unsecured notes and \$36.4 million in capital expenditures. The remaining \$118.0 million cash inflow primarily related to the operating activities of continuing and discontinued operations.

The cash outflow of \$104.5 million in 2008 included \$89.1 million in principal and interest on our senior unsecured notes; \$88.0 million of cash taxes, \$56.0 million of which related to the sale of the Diagnostics business; \$43.6 million to buyback our Common shares, \$13.6 million for an acquisition in MDS Analytical Technologies business and \$51.8 million in capital expenditures. These were partially offset by \$108.4 million from the sale of investments, \$7.3 million in proceed received from issuance of shares under the employee stock option program and \$15.4 million in net proceeds from the sale of certain of Nordion's product lines. The remaining \$50.5 million cash inflow primarily related to the operating activities of continuing and discontinued operations.

#### *Continuing investing activities*

Cash used in investing activities for fiscal 2010 was \$13.2 million compared with \$14.3 million of cash used in fiscal 2009. The decrease in cash used of \$1.1 million was primarily due to \$10.6 million of cash received from the sale of our long-term investments and \$2.3 million of lower capital expenditures partially offset by a net increase of \$11.8 million in restricted cash for insurance liabilities and cash collateral for outstanding letters of credit.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

Cash used in investing activities in fiscal 2009 was \$14.3 million compared to cash provided by investing activities of \$114.1 million provided in fiscal 2008. In fiscal 2009, we incurred capital expenditures of \$10.0 million and had an increase in the restricted cash of \$10.0 million resulting from the sale of MDS Pharma Services Phase II-IV, which was partially offset by a decrease of \$5.7 million for restricted cash relating to the insurance liabilities. In fiscal 2008, we received \$100.5 million on the maturity of the short-term investments, \$15.4 million from the sale of external beam therapy and self-contained irradiator product lines, and \$7.1 million from the sale of long-term investments, partially offset by \$12.4 million used to purchase property, plant and equipment. In fiscal 2008, we used the proceeds from the maturity of short-term investments to repay the long-term debt.

### *Continuing financing activities*

For fiscal 2010, cash used in financing activities was \$669.9 million compared with \$6.2 million cash used financing activities in the same period of fiscal 2009. In fiscal 2010, we repaid \$221.5 million of the outstanding senior unsecured notes and capital lease obligations compared to debt repayments of \$6.2 million in fiscal 2009. We also completed the substantial issuer bid for a total cost of \$450.0 million and drew bank indebtedness of \$1.2 million in fiscal 2010.

Cash used in financing activities in fiscal 2009 of \$6.2 million was significantly lower than the \$115.5 million of cash used in financing activities in fiscal 2008. In fiscal 2009, we made debt repayments of \$6.2 million compared to \$79.2 million in fiscal 2008. In fiscal 2008, we also repurchased \$43.6 million of shares under the normal course issuer bid, retiring 2.9 million of the Common shares and received proceeds of \$7.3 million as part of the employee stock option program.

### Liquidity

<i>(thousands of U.S. dollars)</i>		October 31 2010	October 31 2009	Change
Cash and cash equivalents	\$	122,802	\$ 298,203	(59%)
Current ratio <sup>(1)</sup>		2.1	2.9	(28%)

(1) Excludes current assets and current liabilities related to discontinued operations.

Cash and cash equivalents of \$122.8 million as of October 31, 2010 was \$175.4 million lower compared with \$298.2 million as of October 31, 2009. As discussed in the Cash flows section above, in the first half of fiscal 2010 we used \$246.1 million to fully repay both the matured and outstanding balance of the senior unsecured notes, which included the principal balance of \$221.3 million, accrued and unpaid interest of \$1.5 million and a make-whole payment of \$23.3 million. We also used \$450.0 million for share buyback under the substantial issuer bid. In addition, approximately \$103.6 million was paid for transaction costs related to divestitures and restructuring costs associated with the strategic repositioning. The cash outflow was largely offset by \$641.3 million net cash proceeds received from the sale of MDS Analytical Technologies, \$12.9 million in cash proceeds received from the sale of Early Stage, and \$10.4 million in cash proceeds from the sale of asset backed commercial paper.

The current ratio as of October 31, 2010, was 2.1 compared with 2.9 as of October 31, 2009, mainly due to the decrease in cash and cash equivalents as discussed above.

On January 29, 2010, Nordion cancelled its C\$500.0 million (US\$490.1 million) revolving credit facility. There were no amounts drawn or outstanding as of this date.

We have credit facilities in place, expressly for letters of credit and letters of guarantee. Under the terms of the facilities, cash for the full amount of the outstanding letters of credit and letters of guarantee must held in account as security, which represents restricted cash and is not available for operations. As of October 31, 2010, restricted cash of \$32.4 million (October 31, 2009 - \$16.3 million) included \$17.4 million of cash collateral for outstanding letters of credit, \$5.0 million of cash proceeds related to the sale of MDS Pharma Services Phase II-IV and \$10.0 million of funds for insurance liabilities.

### *Pension*

During fiscal 2010, an actuarial valuation was updated for the Company's defined benefit plan as of January 1, 2010 for funding purposes. Based on this actuarial valuation, we expected to have annual funding requirements of approximately \$4 million to \$5 million in each of the next five years, with aggregate estimated contributions of approximately \$23 million. We are required to complete an updated actuarial valuation as of January 1, 2011 and although asset values have increased, due primarily to a decline in real interest rates, we currently expect funding requirements of approximately \$8 million in each of the next five years to fund the solvency deficit. The actual funding requirements over the five-year period will be dependent on subsequent annual actuarial valuations. These amounts are estimates, which may change with actual investment performance, changes in interest rates, any pertinent changes in government regulations, and any voluntary contributions. We made a \$3.8 million payment to the pension plan in the fourth quarter of fiscal 2010, which represents the deficit funding for the period from January 1, 2010. In the future we may be able to issue a letter of credit instead of making a cash payment, however, we are currently required to cash collateralize our letters of credit.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

In addition, we retained a defined benefit pension plan associated with Early Stage. The current estimated under funded status based on an actuarial valuation completed in the second quarter of fiscal 2010 is approximately \$3 million.

### ***Decommissioning***

During fiscal 2010, we reassessed and revised the asset retirement obligation relating to future site remediation costs of our facility in Kanata, Ontario. Based on our revised assessment, we currently expect approximately \$16 million increase in the letter of credit required in support of future site remediation costs for our Kanata facility.

### ***Taxes***

In fiscal 2010, we received an assessment from the Quebec government in connection with an audit of tax credits associated with our former MDS Pharma Services business that resulted in us paying \$10.1 million in taxes and accrued interest during the fourth quarter. Approximately one third of this amount will be repaid to us as a result of a favorable resolution of a federal R&D claim.

### ***Future liquidity requirements***

We believe that cash on hand, cash flows generated from operations, coupled with new borrowings if needed, will be sufficient to meet the anticipated requirements for operations, capital expenditures, R&D expenditures, pension funding, retained obligations from the sold businesses, litigation costs including the MAPLE arbitration, contingent liabilities including FDA settlements, and restructuring costs. The FDA liability and restructuring reserves are \$8.6 million and \$11.5 million, respectively, as of October 31, 2010. At this time, we do not anticipate any issues in collecting amounts owed to Nordion with respect to the notes receivable from AECL.

### ***Contractual obligations***

The following table summarizes the contractual obligations for the continuing operations as of October 31, 2010 and the effect such obligations are expected to have on the liquidity and cash flows in future years. The table excludes amounts already recorded on the consolidated balance sheet as current liabilities and certain other purchase obligations discussed below:

<i>(thousands of U.S. dollars)</i>	2011	2012	2013	2014	2015	Thereafter
Long-term debt	\$ 4,050	\$ 4,034	\$ 3,921	\$ 3,921	\$ 28,224	\$ -
Interest on long-term debt	3,122	3,034	2,973	2,900	1,179	-
Operating leases	4,804	3,723	3,066	2,036	1,878	7,125
Purchase obligations	45,895	47,507	82,597	111,771	102,965	574,979
	\$ 57,871	\$ 58,298	\$ 92,557	\$ 120,628	\$ 134,246	\$ 582,104

Long-term debt consisted of a \$43.9 million, non-interest bearing, government loan; and other commitments totaling \$0.3 million which represent capital lease obligations.

The amounts for operating leases primarily relate to the rental of offices, laboratory facilities and equipment to support global operations.

We have long-term supply arrangements totaling approximately over \$900 million primarily related to the supply of Mo-99 and Co-60 from certain domestic and international suppliers of isotopes and IT infrastructure service providers. These agreements including certain take-or-pay contracts provide for minimum purchase quantities, and certain prices are based on market rates at the time of delivery. Amount of purchase obligations are based on management's best estimate in respect of these agreements. The terms of these long-term supply or service arrangements range from 1 to 14 years.

We have entered into contracts for other outsourced services; however, the obligations under these contracts are not significant and the contracts generally contain clauses allowing for cancellation without significant penalty.

The expected timing of payment of the obligations discussed above is estimated based on current information. The timing of payments and actual amounts paid may be different depending on the time of receipt of goods or services, foreign exchange fluctuations, or, for some obligations, changes to agreed-upon amounts.

### ***Indemnities and guarantees***

In connection with the Company's various divestitures, we agreed to indemnify buyers for actual future damage suffered by the buyers related to breaches, by Nordion, of representations and warranties contained in the purchase agreements. In addition, we have retained certain existing and potential liabilities arising in connection with such operations related to periods prior to the closings. To mitigate our exposure to certain of these potential liabilities, the Company maintains errors and omissions insurance and other insurance. Nordion is not able to make a reasonable estimate of the maximum potential amount that the Company could be required to pay under these indemnities. The Company has not made any significant payments under these types of indemnity obligations in the past; however, the Company has had early discussions with buyers related to certain indemnities provided.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Capitalization

As previously discussed in this MD&A, in December 2009 we repaid \$22.7 million of the senior unsecured notes that matured. On February 3, 2010 with the completion of the sale of MDS Analytical Technologies, we fully repaid the outstanding senior unsecured notes at a cost of \$223.4 million, which included the principal amount of \$198.6 million, accrued and unpaid interest of \$1.5 million and a make-whole amount of \$23.3 million. In addition, \$4.0 million of debt was forgiven in accordance with an agreement with the lender upon the completion of the sale of MDS Analytical Technologies. Our remaining long-term debt of \$44.2 million as of October 31, 2010, is primarily a non-interest-bearing Canadian government loan maturing in 2015, which has been fully secured by a long-term financial instrument that is included in "Other long-term assets" in the consolidated statements of financial position.

Shareholders' equity as of October 31, 2010, was \$337.6 million compared with \$993.9 million as of October 31, 2009. During fiscal 2010, we repurchased 52,941,176 Common shares for cancellation for an aggregate purchase price of \$450.0 million.

### Off-balance sheet arrangements

Nordion does not have any relationships with unconsolidated entities or financial partnerships, such as entities referred to as structured finance or special purpose entities, which are established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes. We do not have any off-balance sheet arrangements that have or are reasonably likely to have a current or future effect on the financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity or capital expenditures or capital resources that are material to investors other than operating leases and derivative instruments.

### Derivative instruments

As of October 31, 2010, the Company held no derivatives designated as fair value, cash flow or net investment hedges.

The U.S. dollar denominated senior unsecured notes had been designated as a hedge of net investment in foreign operations to reduce foreign exchange fluctuations associated with certain of the foreign currency investments of the Company, the U.S. operations of MDS Analytical Technologies and MDS Pharma Services included in the discontinued operations. As the net investment hedge had been deemed to be effective, the U.S. dollar denominated senior unsecured notes were measured at each reporting date to reflect changes in the spot rate since the previous measurement date and recorded in other comprehensive income. We did not record any ineffectiveness relating to this net investment hedge in the consolidated statements of operations for fiscal 2010 and 2009.

During the second quarter of fiscal 2010, the sale of Early Stage resulted in a liquidation of the Company's net investment in its self-sustaining U.S. operations of Early Stage and the termination of the net investment hedging relationship. This resulted in recognition of the unrealized foreign exchange loss of \$106.8 million, which was offset by a release of \$106.8 million unrealized foreign exchange gain relating to the net investment hedge, both recorded in AOCI as part of shareholders' equity. During the first quarter of fiscal 2010, the sale of MDS Analytical Technologies resulted in a liquidation of the Company's net investment in its self-sustaining U.S. operations of MDS Analytical technologies and the termination of the net investment hedging relationship. This resulted in recognition of the unrealized foreign exchange loss of \$39.9 million, which was offset by a release of \$39.9 million unrealized foreign exchange gain relating to the net investment hedge, both accumulated in AOCI as part of shareholders' equity.

As of October 31, 2010, we identified certain embedded derivative assets with a fair value of \$10.5 million (October 31, 2009 - \$nil) and embedded derivative liabilities with a fair value of \$2.0 million (October 31, 2009 - \$4.2 million), which have a total notional amount of over \$700 million (October 31, 2009 - \$80 million). During fiscal 2010, we recorded a \$13.1 million gain for the change in the fair value of the embedded derivatives compared with a \$7.9 million gain in fiscal 2009.

### Litigation

#### MAPLE

Nordion is involved in an arbitration related to the MAPLE Facilities and an associated lawsuit with AECL and the Government of Canada. AECL and the Government of Canada unilaterally announced in fiscal 2008 their intention to discontinue the development work on the MAPLE Facilities. At the same time, AECL and the Government of Canada also publicly announced that they would continue to supply medical isotopes from the current NRU reactor, and would pursue a license extension of the NRU reactor operations past its current expiry date of October 31, 2011. On July 8, 2008, Nordion served AECL with a notice of arbitration proceedings seeking an order to compel AECL to fulfill its contractual obligations under an agreement entered into with AECL in February 2006 (the 2006 Agreement) to complete the MAPLE Facilities and, in the alternative and in addition to such order, seeking significant monetary damages. In the lawsuit, Nordion is claiming \$1.6 billion (C\$1.6 billion) in damages from AECL and the Government of Canada. Nordion's current emphasis is on arbitration proceedings. Hearings for the arbitration are expected to continue into the second half of fiscal 2011 and we expect a decision from the panel thereafter. Under the arbitration provisions the parties have limited appeal rights as to matters of law. In addition to the legal proceedings initiated by Nordion against AECL and the Government of Canada, we are currently exploring supply alternatives to mitigate lack of supply from AECL, for both the long-term supply of reactor-based medical isotopes and isotopes produced

## MANAGEMENT'S DISCUSSION AND ANALYSIS

by other modalities. Nordion has also urged the Government of Canada and AECL to consult with international experts and obtain their assistance toward activating the MAPLE Facilities project.

### **Bioequivalence studies**

During fiscal 2009, Nordion was served with a Complaint related to repeat study costs and mitigation costs of \$10 million and lost profits of \$70 million. This action relates to certain bioequivalence studies carried out by the Company's former MDS Pharma Services business unit at its Montreal, Canada facility from January 1, 2000, to December 31, 2004. We maintain reserves in respect of repeat study costs as well as errors and omissions insurance. Nordion has assessed this claim and amounts related to the direct costs associated with the repeat study costs have been provided for in the FDA provision. No specific provision has been recorded related to the claim for lost profit, other than insurance deductible liabilities. The Company has filed an Answer and intends to vigorously defend this action.

During fiscal 2009, Nordion was served with a Statement of Claim related to repeat study and mitigation costs of \$5 million (C\$5 million) and loss of profit of \$29 million (C\$30 million). This action relates to certain bioequivalence studies carried out by the Company's former MDS Pharma Services business unit at its Montreal, Canada facility from January 1, 2000, to December 31, 2004. We maintain reserves in respect of repeat study costs as well as errors and omissions insurance. Nordion has assessed this claim and amounts related to the direct costs associated with the repeat study costs have been provided for in the FDA provision. No specific provision has been recorded related to the claim for lost profit, other than insurance deductible liabilities. The Company has filed a Statement of Defence and intends to vigorously defend this action.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### Strategy and outlook

Nordion's business strategy is to maximize the value of our core business, to drive commercial excellence through optimizing, leveraging and building on our product lines and capabilities, and to cultivate sustainable growth through disciplined investment.

### Business outlook

#### *Optimization of business*

Aligned with Nordion's strategy to optimize product lines, in November 2010, we signed a non-binding letter of agreement with Best Medical for the divestiture of MDS Nordion S.A. in Fleurus, Belgium, which currently supports four lines of business including Agiris (non-destructive testing equipment and sources); GlucoTrace (FDG imaging agent); TheraSphere® (targeted liver cancer radiotherapeutic); and Radiochemical business (generic cyclotron and reactor isotopes). The proposed divestiture transaction is expected to include three lines of business, excluding the TheraSphere® business, which will be retained by Nordion. The proceeds received for the divested operations are expected to be nominal and we may be required to leave sufficient working capital in the business to support its operations through an initial transition period.

In July 2010, the performance of the GlucoTrace and Radiochemical businesses at its Fleurus, Belgium facility resulted in Nordion announcing its intention to restructure operations at that facility. To that end, the Company initiated a Loi Renault process, which involves an information and consultation process with the Belgian Works Council to determine the best way to move forward with the identified businesses. With the signing of this recent agreement with Best Medical, the aforementioned Loi Renault process is currently paused until the negotiations with the potential acquirer have concluded.

#### *Medical Isotopes*

As mentioned earlier in the "Recent Business and Corporate Developments" section of this MD&A, the NRU reactor at the AECL Chalk River Laboratories returned to operation on August 17, 2010. In August 2010, the Company received, processed and shipped the first supply of medical isotopes from AECL to its customers.

Although the NRU reactor has returned to service and Nordion has signed a supply agreement with Isotope, as described in the "Recent business and corporate developments" section of this MD&A, we do not expect the volume of medical isotopes we sell to fully return to previous levels. Various factors have influenced the demand we are seeing for medical isotopes, as described in the section "Uncertainty in the medical isotope market" of this MD&A. The pricing for medical isotopes has increased from the levels prior to the NRU reactor shutdown in May 2009, although there are continued competitive pressures due to higher levels of available supply. We continue to work with our existing customers and potential new customers to secure additional sales of medical isotopes and increase our global market share of Mo-99, including the recently signed amendment to our contract with our largest customer Lantheus, extending the length of the contract until December 31, 2013. Based on contractual commitments, current demand and pricing dynamics, we currently expect revenues and segment earnings in the first and second quarter of fiscal 2011 to be similar to our results for medical isotopes in the fourth quarter of fiscal 2010.

Based on discussions with AECL, AECL currently expects the NRU reactor to shutdown for approximately one month during our third quarter of fiscal 2011 to complete the first scheduled annual inspection since its return to service. While supply of Mo-99 is planned from Isotope during this NRU reactor outage, it will not be in sufficient quantity to replace the quantity that would have been available from AECL and therefore we expect revenue and segment earnings to decline during the third quarter of 2011. The extent of the decline is expected to reflect the duration of the actual time that the NRU reactor is out of service. Furthermore, at the current pricing levels that we sell Mo-99, the cost of Mo-99 from Isotope is higher than the cost from AECL and therefore as supply from Isotope comes on line and increases, our segment earnings are expected to decrease.

Securing reliable long-term supply of medical isotopes remains a priority for Nordion. The Company continues to pursue the arbitration proceeding to compel AECL to complete the MAPLE reactors as discussed in the "Litigation" section of this MD&A.

#### *Targeted Therapies*

TheraSphere® revenue grew by 40% in fiscal 2010 compared with fiscal 2009, due to continued increased adoption in North America and Europe as a result of the product's efficacy, and reimbursement and insurance coverage. We also continued to invest in expansion into new markets. In fiscal 2011, we expect to continue to invest to increase acceptance in existing markets, as well as enter into new markets globally. In addition, we are currently assessing future clinical trials for TheraSphere®, including trials that would provide the data to support the submission to the U.S. Food and Drug Administration (FDA) for the product to be sold in the U.S. with full approval. TheraSphere® is currently authorized by the FDA for use under a humanitarian device exemption as a radiation treatment for primary liver cancer or hepatocellular carcinoma. A trial to obtain full FDA approval for TheraSphere® would be significantly larger than any of the clinical trial activity that we have completed to date and would result in a significant increase in our level of R&D investment.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

In fiscal 2011, we expect to see further growth globally for both CardioGen-82™ and TheraSphere® however the rate of revenue growth is not expected to be as high compared with fiscal 2010. We started manufacturing CardioGen-82™ in mid-2009 with fiscal 2010 growth reflecting the start up of this product. Therefore, the growth rate for this product is expected to be significantly lower in fiscal 2011. In addition, based on the limited global supply of Sr-82, the isotope that is required to manufacture CardioGen-82™, there may be periods in the middle of fiscal 2011 where we may not be able to fully meet the demand for this product. We currently expect that TheraSphere® may not grow at the same rate in fiscal 2011 compared to fiscal 2010 as a result of potential clinical trial activities described above and lower growth rates in the second half of fiscal 2010 compared to the first half of fiscal 2010.

### ***Sterilization Technologies***

In fiscal 2011, while we will have a higher level of supply of Co-60 available, we currently expect the shipments of Co-60 to be relatively flat compared with fiscal 2010. In addition, we expect a positive impact on revenues from the pricing of Co-60. We anticipate the amount of Co-60 shipped in each quarter to continue to fluctuate based on the timing of receipt from suppliers and timing of demand from customers. Cobalt shipments in the first quarter of fiscal 2011 are expected to be at lower levels compared with the fourth quarter of fiscal 2010.

In the second quarter of fiscal 2011, we expect to ship a production irradiator to Europe for the sterilization of medical devices. This would result in the shipment of three commercial scale production irradiators in a twelve-month period commencing Q3 2010, which is at a higher level than in past two years.

### **Financial outlook**

#### ***Corporate SG&A***

In the first quarter of fiscal 2011, we completed our final activities associated with the transition service agreements that were in place with the buyers of the businesses we sold in fiscal 2010, and have completed the transition of our Corporate headquarters to Ottawa. As a result, we are able to move to contractual arrangements that are better aligned with the Nordion business, in particular with our information technologies service providers, and complete the reduction of employees and contract employees. We continue to expect our Corporate SG&A, as reported in Corporate and Other, to be approximately \$3 million per quarter starting in the second quarter of fiscal 2011.

#### ***Deferred tax assets and liabilities***

At the end of the quarter, we reported \$86.8 million of net deferred tax assets comprised of operating losses, R&D tax credits and other tax carryovers arising from our Canadian operations. These tax assets are available to reduce cash income taxes in the future. The recognition of these assets is based on our earnings outlook and our view that we can utilize these tax assets in the foreseeable future. If those future profitability expectations significantly decline, we will be required to write-off some portion, if not all, of these deferred tax assets.

#### **Cash outlook**

We ended fiscal 2010 with \$122.8 million in cash and cash equivalents, \$32.4 million of restricted cash, a note receivable from AECL with a carrying value of \$24.0 million and essentially no debt. Our outstanding debt of \$44.2 million primarily consists of a \$43.9 million loan from the Government of Canada, which is fully defeased by a funded financial instrument issued by a major Canadian bank. In fiscal 2011, we expect to generate positive cash flow from operations primarily as a result of increased profitability. We do not expect to pay significant cash taxes or interest expense in fiscal 2011 and our capital expenditure levels are currently expected to be below \$10 million, which is approximately our average spend over the past three years.

In relation to activities associated with our strategic repositioning, net cash payments associated with post-close adjustments and other payments to and from the buyers of the businesses we sold are expected to be approximately \$12 million. In addition, \$5 million of our restricted cash relates to an escrow amount associated with the Phase II-IV business we sold, which we expect to released in fiscal 2011. We currently expect to make payments in aggregate of approximately \$18 million related to severance, contract termination and rent for facilities we have exited that are recorded in both continuing and discontinued operations. In addition, the three lines of business in our Belgium operations that we intend to sell, in aggregate do not currently generate positive cash flow and as a result we expect to fund these operations while we retain ownership and may be required to leave sufficient working capital in the business to support its operations through an initial transition period.

Based on preliminary estimates for our defined benefit pension plan and future decommissioning of our Ottawa facilities we may be required to issue letters of credit or make funding payments related to these obligations. As previously discussed, we may have approximately an \$8 million funding requirement for our pension plan that may be funded in cash or by issuing a letter of credit, pending the finalization of regulations in relation to this option. We are also required to submit a plan for the future decommissioning of our Ottawa facilities to the Canadian nuclear regulator in Canada. A letter of credit is generally required for the estimated future decommissioning costs. Our estimate of the future costs has increased by approximately \$16 million to approximately \$31 million from our

## MANAGEMENT'S DISCUSSION AND ANALYSIS

previous submission that was made five years ago. Based on our current credit facilities for letters of credit, we are required to provide cash as collateral in the full amount of the letters of credit issued.

In fiscal 2011, we expect to assess establishing a credit facility that would not require us to provide cash as security for letters of credit and to potentially provide us with an additional source of liquidity. The amount of credit available to us and the terms and conditions under which it would be provided, if at all, will have to be assessed at the time of finalizing a credit facility. If we are able to arrange a credit facility with a sufficient level of available credit that does not require cash for security, we may be able to have available for operations the \$17.4 million that is currently recorded in restricted cash related to the security for letters of credit. In addition, we may issue letters of credit for the estimated \$8 million of our future pension funding requirement and \$16 million potential increase in the letter of credit for decommissioning costs.

### Returns to shareholders

Nordion recognizes the importance of providing returns to shareholders. In January 2011, the Company announced the introduction of a dividend and a re-initiation of a normal course issuer bid (NCIB).

We have set our initial quarterly dividend rate at \$0.10 per share. The dividend rate reflects what we believe is a reasonable balance between providing shareholders with what we expect will be a sustainable return of capital, while leaving the business with financial flexibility. When arriving at the dividend level, the Company also took into account potential investments, including the previously discussed clinical trials to support TheraSphere® growth, as well as the uncertainty in levels of cash flow that the medical isotope business will generate over the medium- to long-term.

In setting a dividend and when looking at our capital structure more broadly, we consider, among other things, requirements for operations, including working capital fluctuations, our ability to access capital, our risk profile, and the flexibility provided by cash and liquidity sources. In addition, with the uncertainty in the Medical Isotopes business, in particular Nordion's current reliance on the NRU reactor, and the liabilities that could arise from the business that have been sold, we intend to maintain a certain level of liquidity and access to capital. Given these factors, when we considered our current cash balance, other investments and debt level, we believed we have sufficient cash to fund the repurchase of shares through an NCIB.

Nordion has been authorized by the Toronto Stock Exchange (TSX) to purchase for cancellation up to 5,677,108 common shares of its 67,238,653 common shares outstanding as of January 12, 2011. The authorized number of shares for repurchase represents approximately 8% of its outstanding common shares. Annual purchases to a maximum of US\$65 million under the NCIB may begin on January 26, 2011 and will end no later than January 25, 2012. Subject to any block purchases made in accordance with the TSX, daily purchases will be limited to 21,209 common shares, which represents 25% of the average daily trading volume on the TSX for the most recent six calendar months. Subject to required regulatory approvals, purchases will be made on the open market through the facilities of the TSX and the New York Stock Exchange (NYSE) in accordance with their respective rules. The price to be paid will be the market price at the time of acquisition. While we intend to repurchase the majority, if not all, of the allowed eight percent of our outstanding shares, we expect to continue to monitor and assess our cash requirements, liquidity and access to capital in determining the final amount we repurchase and/or whether to continue to implement NCIBs in future years.

## Accounting and control matters

### Recent accounting pronouncements

#### United States

On April 29, 2010, the FASB issued ASU No. 2010-17, "*Revenue Recognition (Topic 605), Milestone Method of Revenue Recognition*" (ASU 2010-17), which establishes a revenue recognition model for contingent consideration that is payable upon the achievement of an uncertain future event, referred to as a milestone. The scope of ASU 2010-17 is limited to research or development arrangements and requires an entity to record the milestone payment in its entirety in the period received if the milestone meets all necessary criteria to be considered substantive. Entities are not precluded from making an accounting policy election to apply another appropriate accounting policy that results in the deferral of some portion of the arrangement consideration. ASU 2010-17 is effective for fiscal years beginning on or after June 15, 2010 and for interim period within those fiscal years. The Company plans to adopt ASU 2010-17 on November 1, 2010 and it is not expected to have a significant impact on the Company's consolidated financial statements.

On April 16, 2010, the FASB issued ASU No. 2010-13, "*Stock Compensation (Topic 718), Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Currency of the Market in Which the Underlying Equity Security Trades*" (ASU 2010-13), which clarifies that a share-based payment award with an exercise price denominated in the currency of a market in which a substantial portion of the entity's equity securities trades must not be considered to contain a market, performance or service condition. An entity should not classify such an award as a liability if it otherwise qualifies for classification in equity. ASU 2010-13 is effective for fiscal years beginning on or after December 15,

## MANAGEMENT'S DISCUSSION AND ANALYSIS

2010 and for interim periods within those fiscal years and is to be applied prospectively. The Company plans to adopt ASU 2010-13 on November 1, 2011 and it is not expected to have a significant impact on the Company's consolidated financial statements.

In January 2010, the FASB issued ASU No. 2010-06, "*Fair Value Measurements and Disclosures (Topic 820), Improving Disclosures about Fair Value Measurements*" (ASU 2010-06), which provides amendments that clarify existing disclosures and requires new disclosures related to fair value measurements. In particular, ASU 2010-06 requires more disaggregated information on each class of assets and liabilities and further disclosures on transfers between levels 1 and 2 and activity in level 3 fair value measurements. ASU 2010-06 is effective for interim and annual reporting periods beginning after December 15, 2009, except for the disclosures about activity in level 3 fair value measurements, which are effective for fiscal years beginning after December 15, 2010 and for interim periods within those fiscal years. The Company plans to adopt ASU 2010-06 on November 1, 2011 and it is not expected to have a significant impact on the Company's consolidated financial statements.

In December 2009, the FASB issued ASU No. 2009-17, "*Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities*" (formerly, SFAS No. 167, "*Amendments to FASB Interpretation No. 46(R)*") (ASU 2009-17) to improve financial reporting by enterprises involved with variable interest entities. ASU 2009-17 is effective as of the beginning of each entity's first annual reporting period that begins after November 15, 2009 and earlier application is not allowed. The Company plans to adopt ASU 2009-17 on November 1, 2010, and it is not expected to have a material impact on the Company's consolidated financial statements.

In October 2009, the FASB issued ASU No. 2009-13, "*Revenue Recognition (Topic 605), Multiple - Deliverable Revenue Arrangements, a consensus of EITF 08-01, Revenue Arrangements with Multiple Deliverables*" (ASU 2009-13), which modifies the fair value requirements of ASC subtopic 605-25, "*Revenue Recognition - Multiple Element Arrangements*" by providing principles for allocation of consideration among its multiple-elements, allowing more flexibility in identifying and accounting for separate deliverables under an arrangement. An estimated selling price method is introduced for valuing the elements of a bundled arrangement if vendor-specific objective evidence or third-party evidence of selling price is not available, and significantly expands related disclosure requirements. This guidance is effective on a prospective basis for revenue arrangements entered into or materially modified in fiscal years beginning on or after June 15, 2010 with earlier application permitted. The Company plans to adopt ASU 2009-13 on November 1, 2010 and it is not expected to have a material impact on the Company's consolidated financial statements.

### International Financial Reporting Standards

We have been monitoring the deliberations and progress being made by accounting standard setting bodies and securities regulators both in the U.S. and in Canada with respect to their plans regarding convergence to International Financial Reporting Standards (IFRS). We currently expect to adopt IFRS as our primary reporting standard when the U.S. Securities and Exchange Commission requires domestic registrants in the U.S. to transition to IFRS.

### Critical accounting policies and estimates

Our discussion and analysis of the financial condition and results of operations is based on the consolidated financial statements, which have been prepared in accordance with U.S. GAAP applied on a consistent basis. Beginning with its fiscal 2007 year-end, we adopted the U.S. dollar as the Company's reporting currency and U.S. GAAP as its primary reporting standard for the presentation of its consolidated financial statements.

### Use of estimates

The preparation of the consolidated financial statements requires management to make estimates and assumptions. These estimates and assumptions affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenue and expenses during the reporting period. The Company's estimates are based on the facts and circumstances available at the time estimates are made, historical experience, risk of loss, general economic conditions and trends, and the Company's assessments of the probable future outcomes of these matters. Actual results could differ from those estimates. Estimates and assumptions are reviewed periodically, and the effects of changes, if any, are reflected in the consolidated statements of operations in the period that they are determined.

### Allowance for doubtful accounts

We maintain allowance for doubtful accounts based on a variety of factors, including the length of time the receivables are past due, macroeconomic conditions, significant one-time events, historical experience and the financial condition of customers. We record a specific reserve for individual accounts when we become aware of a customer's inability to meet its financial obligations, such as in the case of bankruptcy filings or deterioration in the customer's operating results or financial position. If circumstances related to a customer change, we would further adjust estimates of the recoverability of receivables.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### **Inventories**

Inventories of raw materials and supplies are recorded at the lower of cost, determined on a first-in, first-out (FIFO) basis, or market. Finished goods and work-in-process include the cost of material, labor and manufacturing overhead and are recorded on a FIFO basis at the lower of cost or market. We reduce the carrying value of inventories for those items that are potentially excess, obsolete or slow-moving based on changes in customer demand, technology developments or other economic factors.

### **Property, plant and equipment**

Property, plant and equipment, including assets under capital leases, are carried in the accounts at cost less accumulated depreciation. Gains and losses arising on the disposal of individual assets are recognized in income in the period of disposal.

The costs associated with modifications to facilities owned by others to permit isotope production are deferred and recorded as facility modifications and amortized over the expected contractual production.

Costs, including financing charges and certain design, construction and installation costs, related to assets that are under construction and are in the process of being readied for their intended use are recorded as construction in-progress and are not subject to depreciation.

Depreciation is recorded from the date on which each asset is placed into service, is generally provided for on a straight-line basis over the estimated useful lives of the property, plant and equipment.

### **Asset retirement obligations**

We record asset retirement obligation costs associated with the retirement of tangible long-lived assets. We review legal obligations associated with the retirement of these long-lived assets. If it is determined that a legal obligation exists and it is probable that this liability will ultimately be realized, the fair value of the liability for an asset retirement obligation is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made. The fair value of the liability is added to the carrying amount of the associated asset and this additional carrying amount is depreciated over the expected life of the asset. The present value of the asset retirement obligation is accreted with the passage of time to its expected settlement fair value.

### **Impairment of long-lived assets**

We evaluate the carrying value of long-lived assets, including property, plant and equipment, for potential impairment when events and circumstances warrant a review. Factors that we consider important that could trigger an impairment review include, but are not limited to, significant underperformance relative to historical or projected future operating results, significant changes in the manner of use of the acquired assets or the strategy for the overall business, significant negative industry or economic trends, a significant adverse legal or regulatory development, a significant decline in the Company's stock price for a sustained period, and the Company's market capitalization relative to its net book value. In assessing long-lived assets for impairment, assets are grouped with other assets and liabilities at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities.

The carrying value of a long-lived asset is considered impaired when the anticipated net recoverable amount of the asset is less than its carrying value. In that event, a loss is recognized in an amount equal to the difference between the carrying value and fair value less costs of disposal by a charge to income. The anticipated net recoverable amount for a long-lived asset is an amount equal to the anticipated undiscounted cash flows net of directly attributable general and administration costs, carrying costs, and income taxes, plus the expected residual value, if any.

When required, the fair values of long-lived assets are estimated using accepted valuation methodologies, such as discounted future net cash flows, earnings multiples, or prices for similar assets, whichever is most appropriate under the circumstances.

### **Long-term investments**

We account for long-term investments where the Company has the ability to exercise significant influence using the equity method of accounting. In situations where we do not exercise significant influence over a long-term investee that is not publicly listed, the investments are recorded at cost. Investments in public companies are accounted for at fair value. We periodically review these investments for impairment. In the event the carrying value of an investment exceeds its fair value and the decline in fair value is determined to be other than temporary, we write down the value of the investment to its fair value.

### **Revenue recognition**

Revenues are recorded when title to goods passes or services are provided to customers, the price is fixed or determinable, and collection is reasonably assured. For the majority of product revenues, title passes to the buyer at the time of shipment and revenue is recorded at that time.

We recognize revenue and related costs for arrangements with multiple deliverables as each element is delivered or completed based upon

## MANAGEMENT'S DISCUSSION AND ANALYSIS

its relative fair value. If a fair value is not available for any undelivered element, revenue for all elements is deferred until delivery is completed. When a portion of the customer's payment is not due until acceptance, we defer that portion of the revenue until acceptance has been obtained. Revenue for training is deferred until the service is completed. Revenue for extended service contracts is recognized ratably over the contract period. Provisions for discounts, warranties, rebates to customers, returns and other adjustments are provided for in the period the related sales are recorded.

### **Stock-based compensation**

The fair value of stock options granted on and after November 1, 2003 is recognized as compensation expense on a straight-line basis over the applicable stock option vesting period. The expense is included in selling, general, and administration expenses in the consolidated statements of operations and as additional paid-in capital grouped within shareholders' equity on the consolidated statements of financial position. The consideration received on the exercise of stock options is credited to share capital at the time of exercise along with the associated amount of additional paid-in capital.

Certain incentive compensation plans of the Company base the determination of compensation to be paid in the future on the price of the Company's publicly traded shares at the time of payment or time of the grant date. Expenses related to these plans are recorded as a liability and charged to income over the period in which the amounts are earned, based on an estimate of the current fair value of amounts that will be paid in the future.

Stock-based compensation expenses relating to certain employees of MDS Analytical Technologies and MDS Pharma Services are included in the results of discontinued operations.

### **Pension, post-retirement and other post-employment benefit plans**

We offer a number of benefit plans that provide pension and other post-retirement benefits. The current service cost of benefit plans is charged to income. Cost is computed on an actuarial basis using the projected benefits method and based on management's best estimates of investment yields, salary escalation, and other factors.

We recognize the funded status of our defined benefit plans on its consolidated statements of financial position; recognizes gains, losses, and prior service costs or credits that arise during the period that are not recognized as components of net periodic benefit cost as a component of accumulated other comprehensive income, net of tax; measures its defined benefit plan assets and obligations as of the date of the Company's fiscal year-end consolidated statements of financial position; and discloses additional information in the notes to the consolidated financial statements about certain effects on net periodic benefit cost for the next fiscal year that arise from delayed recognition of the gains or losses, prior service costs or credits, and transition assets or obligations.

The expected costs of post-employment benefits, other than pensions, for active employees are accrued in the years in which employees provide service to the Company. Adjustments resulting from plan amendments, experience gains and losses, or changes in assumptions are amortized over the remaining average service term of active employees. Other post-employment benefits are recognized when the event triggering the obligation occurs.

### **Income taxes**

Deferred tax assets and liabilities are recognized for future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. We provide a valuation allowance against its deferred tax assets when it believes that it is more likely than not that the asset will not be realized.

We determine whether it is more likely than not that a tax position will be sustained upon examination. The tax benefit of any tax position that meets the more-likely-than-not recognition threshold is calculated as the largest amount that is more than 50% likely of being realized upon resolution of the contingency. To the extent, a full benefit is not expected to be realized on the uncertain tax position, an income tax liability is established. Interest and penalties on income tax obligations are included in income tax expense.

The calculation of the Company's tax liabilities involves dealing with uncertainties in the application of complex tax regulations in a multitude of jurisdictions across the Company's global operations. Due to the complexity of some of these uncertainties, the ultimate resolution may result in a payment that is materially different from current estimates of the tax liabilities. If the Company's estimate of tax liabilities proves to be less than the ultimate assessment, an additional charge to expense would result. If payment of these amounts ultimately proves to be less than the recorded amounts, the reversal of the liabilities may result in income tax benefits being recognized in the period when it is determined that the liabilities are no longer necessary. Substantially all of these potential income tax liabilities are included in income taxes payable or netted against income taxes recoverable on the consolidated statements of financial position.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

Investment tax credits related to the acquisition of assets are deferred and amortized to income on the same basis as the related assets, while those related to current expenses are included in the determination of income for the year. All non-refundable investment tax credits recognized in income are recorded as a reduction in income tax expense for the year.

### Foreign currency translation

Although we report our financial results in U.S. dollars, the functional currency of the Company's Canadian operations is Canadian dollars. The functional currencies of the Company's foreign subsidiaries are their local currencies. Monetary assets and liabilities denominated in foreign currencies are translated into the functional currencies of operations at prevailing year-end exchange rates. Non-monetary assets and liabilities are translated into functional currencies at historical rates. Assets and liabilities of foreign operations with a functional currency other than U.S. dollars are translated into U.S. dollars at prevailing year-end exchange rates, while revenue and expenses of these foreign operations are translated into U.S. dollars at average monthly exchange rates. The Company's net investments in foreign subsidiaries are translated into U.S. dollars at historical exchange rates.

Exchange gains and losses on foreign currency transactions are recorded in Other expenses (income), net. Upon the sale or upon complete or substantially complete liquidation of an investment in a foreign (non-Canadian functional currency) entity, the amount attributable to that entity and accumulated in the translation adjustment component of the equity is removed from the separate component of equity and reported as part of the gain or loss on sale or liquidation of the investment in the period during which the sale or liquidation occurs.

Exchange gains or losses arising on translation of the Company's net equity investments in these foreign subsidiaries and those arising on translation of foreign currency long-term liabilities designated as hedges of these investments are recorded in Other comprehensive income (OCI).

Upon reduction of the Company's investment in the foreign (non-Canadian) subsidiary, due to a sale or complete or substantially complete liquidation, the amount from the reporting currency translation as well as the offsetting amount from the translation of foreign currency long-term liabilities included in Accumulated other comprehensive income (AOCI) are recognized in income.

### Derivative financial instruments

In the normal course of business, we use derivative financial instruments to manage foreign currency exchange rate risks. Derivative transactions are governed by a uniform set of policies and procedures covering areas such as authorization, counterparty exposure and hedging practices. Positions are monitored based on changes in foreign currency exchange rates and their impact on the market value of derivatives. Credit risk on derivatives arises from the potential for counterparties to default on their contractual obligations to the Company. We limit our credit risk by dealing with counterparties that are considered to be of high credit quality. We do not enter into derivative transactions for trading or speculative purposes. We record derivatives at fair value either as other current assets or accrued liabilities on the consolidated statements of financial position. We determine the fair value of the derivative financial instruments using relevant market inputs when no quoted market prices exist for the instruments. The fair value of the derivative financial instruments is determined by comparing the rates when the derivatives are acquired to the market rates at period-end. The key inputs include interest rate yield curves, foreign exchange spot and forward rates. We classify cash flows from its derivative programs as cash flows from operating activities in the consolidated statements of cash flows.

The accounting for changes in the fair value of a derivative depends on the intended use of the derivative and the resulting designation. In order for a derivative to qualify for hedge accounting, the derivative must be formally designated as a fair value, cash flow or net investment hedge by documenting the relationship between the derivative and the hedged item. The documentation includes a description of the hedging instrument, the hedged item, the risk being hedged, the Company's risk management objective and strategy for undertaking the hedge, the method for assessing the effectiveness of the hedge and the method for measuring hedge ineffectiveness. Additionally, the hedge relationship must be expected to be highly effective at offsetting changes in either the fair value or cash flows of the hedged item at both inception of the hedge and on an ongoing basis. We assess the ongoing effectiveness of its hedges on a quarterly basis.

Derivatives not designated as hedges are recorded at fair value on the consolidated statements of financial position, with any changes in the mark to market being recorded in the consolidated statements of operations. Interest rate swap contracts may be used as part of the Company's program to manage the fixed and floating interest rate mix of the Company's total debt portfolio and the overall cost of borrowing. We use short-term foreign currency forward exchange contracts to hedge the revaluations of the foreign currency balances. We have also identified embedded derivatives in certain supply contracts.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

### **Management's Annual Report on Disclosure Controls and Procedures and Internal Control over Financial Reporting**

An effective system of disclosure controls and procedures and internal control over financial reporting is highly dependent upon adequate policies and procedures, human resources and information technology. All control systems, no matter how well designed, have inherent limitations, including the possibility of human error and the circumvention or overriding of the controls or procedures. As a result, there is no certainty that our disclosure controls and procedures or internal control over financial reporting will prevent all errors or all fraud. In addition, changes in business conditions or changes in the nature of the Company's operations may render existing controls inadequate or affect the degree of compliance with policies and procedures. Accordingly, even disclosure controls and procedures and internal control over financial reporting determined to be effective can only provide reasonable assurance of achieving their control objectives.

#### **Disclosure controls and procedures**

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported to senior management, including the Chief Executive Officer (CEO) and the Chief Financial Officer (CFO), on a timely basis so that appropriate decisions can be made regarding public disclosure. Management of Nordion, including the CEO and CFO, has evaluated the effectiveness of the Company's disclosure controls and procedures as defined in the rules of the U.S. Securities and Exchange Commission and the Canadian Securities Administrators. Based on that evaluation, management of Nordion, including the CEO and CFO, have concluded that, as a result of the material weakness described below in Management's annual report on internal control over financial reporting, disclosure controls and procedures were not effective as of October 31, 2010.

#### **Internal control over financial reporting**

Management of Nordion, under the supervision of the CEO and CFO, is responsible for the design and operation of internal control over financial reporting and evaluates the effectiveness of these controls on an annual basis using the framework and criteria established in *Internal Control – Integrated Framework*, issued by the Committee of Sponsoring Organizations of the Treadway Commission.

Based on this evaluation and because of the material weakness described below, management has concluded that internal control over financial reporting was not effective as of October 31, 2010. A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of our annual or interim consolidated financial statements will not be prevented or detected on a timely basis.

As of October 31, 2010, the Company did not maintain effective internal control over financial reporting in the accounting for income taxes related to historical transactions. Specifically, management did not complete a process of evaluating the accounting and reporting of its income tax accounts based on the complex transactions of prior years, particularly considering the reduced size and scope of the Company which has resulted in a significantly reduced level of materiality. While this material weakness is not pervasive in scope, it resulted in non-material errors to the financial statements that were identified and corrected prior to release and, accordingly, there is a reasonable possibility that a material misstatement of our annual or interim consolidated financial statements will not be prevented or detected on a timely basis.

Notwithstanding the material weakness mentioned above, management has concluded that the consolidated financial statements included in this annual report present fairly, in all material respects, the Company's financial position as of October 31, 2010 and 2009, and its results of operations and cash flows for each of the three years ended October 31, 2010, in conformity with U.S. GAAP.

Ernst & Young LLP, a registered public accounting firm has audited the consolidated financial statements of MDS for the fiscal year ended October 31, 2010, has also issued a report on the Company's consolidated financial statements and internal control over financial reporting under Auditing Standard No. 5 of the Public Company Accounting Oversight Board (United States). A copy of their reports dated January 20, 2011 are included in the Consolidated Financial Statements.

#### **Remediation of the material weakness from the prior year and related material changes in internal control over financial reporting**

Management previously concluded that, as of October 31, 2009, the strategic repositioning plan and its associated technical complexities and volume of work created a combination of deficiencies which in the aggregate were determined to be a material weakness in the Company's internal control over financial reporting. Specifically, the design of an integrated system of controls over the accounting and reporting for discontinued operations, including incomes taxes, was not adequate. In addition, the technical complexity and volume of work associated with the strategic repositioning plan placed substantial demands on the Company's tax resources, which in turn diminished the operating effectiveness of our internal controls for both routine and non-routine income tax accounting and reporting.

Management implemented a number of measures during fiscal 2010 designed to remediate these identified control deficiencies including:

## MANAGEMENT'S DISCUSSION AND ANALYSIS

- hiring of several new staff members who hold professional accounting designations, and the retention of several key senior finance and tax employees, during the strategic repositioning of the Company and the move of corporate headquarters from Toronto, Canada to Ottawa, Canada. These measures helped mitigate the impact of the departure of a number of finance executives during this period;
- implementing specific transition plans to allow for knowledge transfer to other members of the Company's finance organization, and the retention of key documents;
- augmenting technical accounting and tax resources with external support from professional accounting firms other than our independent registered public accounting firm, and;
- further strengthening of the design of internal controls over complex and non-routine transactions.

Collectively, management considers these actions to represent material changes in the Company's internal control over financial reporting. Further, except for the narrow material weakness described above, management considers the prior year material weakness to be remediated.

During the fourth quarter of fiscal 2010, management has continued to strengthen and improve controls related to the remaining material weakness. This includes the development of a plan to review the historical tax positions and exposures for all legal entities in a complete and effective manner and in light of a lower reporting materiality. The addition of new staff during 2010 has allowed us to make progress on this matter and we expect we will complete it in fiscal 2011.

### Caution regarding forward-looking statements

From time to time, we make written or oral forward-looking statements within the meaning of certain securities laws, including under applicable Canadian securities laws and the "safe harbour" provisions of the United States Private Securities Litigation Reform Act of 1995. This document contains forward-looking statements including the strategy of the continuing businesses, as well as statements with respect to our beliefs, plans, objectives, expectations, anticipations, estimates and intentions. The words "may", "could", "should", "would", "outlook", "believe", "plan", "anticipate", "estimate", "project", "expect", "intend", "indicate", "forecast", "objective", "optimistic", and words and expressions of similar import, are intended to identify forward-looking statements.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, which give rise to the possibility that predictions, forecasts, projections and other forward-looking statements will not be achieved. We caution readers not to place undue reliance on these statements as a number of important factors could cause our actual results to differ materially from the beliefs, plans, objectives, expectations, anticipations, estimates and intentions expressed in such forward-looking statements. These factors include, but are not limited to: management of operational risks; our ability to secure a reliable supply of raw materials, particularly cobalt and critical medical isotopes; the effects of competition in the markets in which we operate; our ability to manage long-term supply commitments; our reliance on one customer for the majority of our sales of medical isotopes; our ability to maintain regulatory approval for the manufacturing, distribution and sale of our products; the strength of the global economy, in particular the economies of Canada, the U.S., the European Union, Asia, and the other countries in which we conduct business; the stability of global equity markets; assets and liabilities that we retained from the businesses sold; obligations retained and projected adjustments thereto; successful implementation of structural changes, including restructuring plans; our ability to complete other strategic transactions and to execute them successfully; our ability to negotiate future credit agreements, which may or may not be on terms favorable to us; the impact of the movement of the U.S. dollar relative to other currencies, particularly the Canadian dollar and the Euro; changes in interest rates in Canada, the U.S., and elsewhere; the timing and technological advancement of new products introduced by us or by our competitors; our ability to manage our research and development; the impact of changes in laws, trade policies and regulations including health care reform, and enforcement thereof; regulatory actions; judicial judgments and legal proceedings, including legal proceedings described in this document; our ability to maintain adequate insurance; our ability to successfully realign our organization, resources and processes; our ability to retain key personnel; our ability to have continued and uninterrupted performance of our information technology and financial systems; our ability to compete effectively; the risk of environmental liabilities; new accounting standards that impact the policies we use to report our financial condition and results of operations; uncertainties associated with critical accounting assumptions and estimates; the possible impact on our businesses from third-party special interest groups; our ability to negotiate and maintain collective-bargaining agreements for certain of our employees; natural disasters; public-health emergencies and pandemics; international conflicts and other developments including those relating to terrorism; other risk factors described in our AIF; and our success in anticipating and managing these risks.

The foregoing list of factors that may affect future results is not exhaustive. When relying on our forward-looking statements to make decisions with respect to the Company, investors and others should carefully consider the foregoing factors and other uncertainties and potential events. We do not undertake to update any forward-looking statement, whether written or oral, that may be made from time to time by us or on our behalf, except as required by law.

## CONSOLIDATED FINANCIAL STATEMENTS

### Report of Independent Registered Accounting Firm on Internal Controls

To the Shareholders and Board of Directors of Nordion Inc. (formerly MDS Inc.)

We have audited Nordion Inc.'s internal control over financial reporting as of October 31, 2010, based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Nordion Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's annual report on internal control over financial reporting. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the company's annual or interim financial statements will not be prevented or detected on a timely basis. The following material weakness has been identified and included in management's assessment. Nordion Inc. did not maintain effective internal control over financial reporting in the accounting for income taxes related to historical transactions and tax positions. Specifically, management did not complete a process of evaluating the accounting and reporting of its income tax accounts based on the complex transactions of prior years and in light of the reduced size of the Company.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated statements of financial position of Nordion Inc. as of October 31, 2010 and 2009 and the related consolidated statements of operations, shareholders' equity and cash flows for each of the three years in the period ended October 31, 2010. This material weakness was considered in determining the nature, timing and extent of audit tests applied in our audit of the 2010 financial statements and this report does not affect our report dated January 20, 2011, which expressed an unqualified opinion on those financial statements.

In our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, Nordion Inc. has not maintained effective internal control over financial reporting as of October 31, 2010, based on the COSO criteria.

## CONSOLIDATED FINANCIAL STATEMENTS

### Report of Independent Registered Public Accounting Firm

To the Shareholders of Nordion Inc. (formerly MDS Inc.)

We have audited the consolidated statements of financial position of Nordion Inc. (the “Company”) as of October 31, 2010 and 2009 and the related consolidated statements of operations, shareholders’ equity and cash flows for each of the three years in the period ended October 31, 2010. These financial statements are the responsibility of the Company’s Management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform an audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by Management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as of October 31, 2010 and 2009 and the result of its operations and its cash flows for each of the three years in the period ended October 31, 2010 in conformity with US generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company’s internal control over financial reporting as of October 31, 2010, based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated January 20, 2011 expressed an opinion that Nordion Inc. has not maintained effective internal control over financial reporting as of October 31, 2010.

The accompanying notes form an integral part of these consolidated financial statements.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### 1. Nature of Operations

Nordion Inc. (Nordion or the Company), formerly MDS Inc., is a global health science company that provides market-leading products and services used for the prevention, diagnosis and treatment of disease. The Company's operations are organized into three business segments: Medical Isotopes, Targeted Therapies, and Sterilization Technologies, as well as certain corporate functions and activities reported as Corporate and Other.

#### Key events of fiscal 2010

During fiscal 2010, the Company completed its strategic repositioning, which culminated in the following key events:

- Completing the sale of MDS Analytical Technologies to Danaher Corporation (Danaher) (Note 3)
- Completing the sale of MDS Pharma Services Early Stage (Early Stage) (Note 3)
- Cancelling the C\$500 million revolving credit facility, which had no outstanding amounts
- Full repayment of the outstanding balance of the senior unsecured notes (Note 13)
- Repurchasing and cancelling a portion of its Common shares under a substantial issuer bid (Note 17)
- Completing the transition of the Company's corporate headquarters from Toronto, Canada to Ottawa, Canada

The completion of the sale of Early Stage marked the end of the Company's strategic repositioning, including the disbanding of the Company's Special Committee, and enabled MDS Inc. to move forward with a focus on Nordion. On March 11, 2010, at the Annual and Special Meeting of Shareholders of then MDS Inc., a special resolution changing its name to Nordion Inc. was approved, which became effective as of November 1, 2010.

### 2. Summary of Significant Accounting Policies

#### Basis of presentation

The consolidated financial statements have been prepared in United States (U.S.) dollars, the Company's reporting currency, and in accordance with U.S. generally accepted accounting principles (GAAP) applied on a consistent basis.

#### Principles of consolidation

The consolidated financial statements of the Company reflect the assets and liabilities and results of operations of all subsidiaries and entities of which the Company is the primary beneficiary. All significant intercompany accounts and transactions have been eliminated. The results of operations disposed of are included in the consolidated financial statements up to the date of disposal.

The equity method of accounting is used for investments in entities for which the Company does not have the ability to exercise control, but has significant influence.

#### Use of estimates

The preparation of the consolidated financial statements requires management to make estimates and assumptions. These estimates and assumptions affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenue and expenses during the reporting period. The Company's estimates are based on the facts and circumstances available at the time estimates are made, historical experience, risk of loss, general economic conditions and trends, and the Company's assessments of the probable future outcomes of these matters. Actual results could differ from those estimates. Estimates and assumptions are reviewed periodically, and the effects of changes, if any, are reflected in the consolidated statements of operations in the period in which they are determined.

#### Cash and cash equivalents

Cash and cash equivalents include cash on hand, balances with banks, demand deposits, and investments with maturities of three months or less at the time the investment is made. The fair value of cash and cash equivalents approximates the carrying amounts shown in the consolidated statements of financial position.

#### Restricted cash

Restricted cash, which is included in other long-term assets, includes cash held for specific purposes related to divestitures, insurance liabilities, or cash collateral for outstanding letters of credit.

#### Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts based on a variety of factors, including the length of time the receivables are past due, macroeconomic conditions, significant one-time events, historical experience and the financial condition of customers. The Company records a specific reserve for individual accounts when it becomes aware of a customer's inability to meet its financial

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

obligations, such as in the case of bankruptcy filings or deterioration in the customer's operating results or financial position. If circumstances related to a customer change, the Company would further adjust estimates of the recoverability of receivables.

### Inventories

Inventories of raw materials and supplies are recorded at the lower of cost, determined on a first-in, first-out (FIFO) basis, or market. Finished goods and work-in-process include the cost of material, labor and manufacturing overhead and are recorded on a FIFO basis at the lower of cost or market. The Company reduces the carrying value of inventories for those items that are potentially excess, obsolete or slow-moving based on changes in customer demand, technology developments or other economic factors.

### Property, plant and equipment

Property, plant and equipment, including assets under capital leases, are carried in the accounts at cost less accumulated depreciation. Gains and losses arising on the disposal of individual assets are recognized in income in the period of disposal.

The costs associated with modifications to facilities owned by others to permit isotope production are deferred and recorded as facility modifications and amortized over the expected contractual production.

Costs, including financing charges and certain design, construction and installation costs, related to assets that are under construction and are in the process of being readied for their intended use are recorded as construction in-progress and are not subject to depreciation.

Depreciation, which is recorded from the date on which each asset is placed into service, is generally provided for on a straight-line basis over the estimated useful lives of the property, plant and equipment as follows:

Buildings	25 – 40 years
Equipment	3 – 20 years
Furniture and fixtures	3 – 10 years
Computer systems	3 – 7 years
Leaseholds improvements	Term of the lease plus renewal periods, when renewal is reasonably assured

### Asset retirement obligations

The Company records asset retirement obligation costs associated with the retirement of tangible long-lived assets. The Company reviews legal obligations associated with the retirement of these long-lived assets. If it is determined that a legal obligation exists and it is probable that this liability will ultimately be realized, the fair value of the liability for an asset retirement obligation is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made. The fair value of the liability is added to the carrying amount of the associated asset and this additional carrying amount is depreciated over the expected life of the asset. The present value of the asset retirement obligation is accreted with the passage of time to its expected settlement fair value.

### Capitalized software

Capitalized software primarily relates to MDS Pharma Services and is included in assets of discontinued operations (Note 3). The Company capitalizes certain internal and external costs incurred to acquire or create internal use software, principally related to software coding, designing system interfaces, and installation and testing of the software. Costs incurred in the preliminary project stage and the post-implementation stage are expensed as incurred. The Company amortizes capitalized costs using the straight-line method over the estimated useful life of the software, generally over a period of three to seven years.

### Goodwill

Goodwill is not amortized but is tested for impairment, at least annually. The Company tests goodwill during the fourth quarter of each year for impairment, or more frequently if certain indicators are present or changes in circumstances suggest that impairment may exist. The Company utilizes a two-step approach. The first step requires a comparison of the carrying value of the reporting units to the fair value of these units. The Company estimates the fair value of its reporting units through internal analyses and valuation, utilizing an income approach based on the present value of future cash flows. If the carrying value of a reporting unit exceeds its fair value, the Company will perform the second step of the goodwill impairment test to measure the amount of impairment loss, if any. The second step of the goodwill impairment test compares the implied fair value of a reporting unit's goodwill with its carrying value. The implied fair value of goodwill is determined in the same manner that the amount of goodwill recognized in a business combination is determined. The Company allocates the fair value of a reporting unit to all of the assets and liabilities of that unit, including intangible assets, as if the reporting unit had been acquired in a business combination. Any excess of the value of a reporting unit over the amounts assigned to its assets and liabilities is the implied fair value of goodwill.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### Intangible assets

Intangible assets all relate to MDS Analytical Technologies and are included in assets of discontinued operations (Note 3). Intangible assets consist of acquired technology, brands, and licenses. Intangible assets acquired through asset acquisitions or business combinations are initially recognized at fair value based on an allocation of the purchase price.

Licenses are amortized on a straight-line basis over their useful life, which is the term of the license. Acquired technology represents the value of proprietary “know-how” that was technologically feasible as of the acquisition date. Acquired technology is amortized on a straight-line basis over its estimated useful life, which ranges between two and seven years. Brands represent the value placed on a corporate brand as well as the product brands used to promote the Company and its products in the marketplace. Brands have a definite life and are amortized on a straight-line basis over their estimated useful life. The Company evaluates the reasonableness of the estimated useful lives of these intangible assets on an annual basis or at other times during the course of the year should an event occur which suggests that the useful lives should be reconsidered. The Company immediately expenses acquired in-process research and development.

### Impairment of long-lived assets

The Company evaluates the carrying value of long-lived assets, including property, plant and equipment, for potential impairment when events and circumstances warrant a review. Factors that the Company considers important that could trigger an impairment review include, but are not limited to, significant underperformance relative to historical or projected future operating results, significant changes in the manner of use of the acquired assets or the strategy for the Company’s overall business, significant negative industry or economic trends, a significant adverse legal or regulatory development, a significant decline in the Company’s stock price for a sustained period, and the Company’s market capitalization relative to its net book value. In assessing long-lived assets for impairment, assets are grouped with other assets and liabilities at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities.

The carrying value of a long-lived asset is considered impaired when the anticipated net recoverable amount of the asset is less than its carrying value. In that event, a loss is recognized in an amount equal to the difference between the carrying value and fair value less costs of disposal by a charge to income. The anticipated net recoverable amount for a long-lived asset is an amount equal to the anticipated undiscounted cash flows net of directly attributable general and administration costs, carrying costs, and income taxes, plus the expected residual value, if any.

When required, the fair values of long-lived assets are estimated using accepted valuation methodologies, such as discounted future net cash flows, earnings multiples, or prices for similar assets, whichever is most appropriate under the circumstances.

### Long-term investments

The Company accounts for long-term investments where it has the ability to exercise significant influence using the equity method of accounting. In situations where the Company does not exercise significant influence over a long-term investee that is not publicly listed, the investments are recorded at cost. Investments in public companies are carried at fair value. The Company periodically reviews these investments for impairment. In the event the carrying value of an investment exceeds its fair value and the decline in fair value is determined to be other than temporary, the Company writes down the value of the investment to its fair value.

### Leases

Leases entered into by the Company in which substantially all of the benefits and risks of ownership are transferred to the Company are recorded as obligations under capital leases, and under the corresponding category of property, plant and equipment. Obligations under capital leases reflect the present value of future lease payments, discounted at an appropriate interest rate, and are reduced by rental payments net of imputed interest. Property, plant, and equipment under capital leases are depreciated, to the extent that these assets are in continuing operations, based on the useful life of the asset. All other leases in continuing operations are classified as operating leases and leasing costs, including any rent holidays, leasehold incentives, and rent concessions, are amortized on a straight-line basis over the lease term.

### Revenue recognition

Revenues are recorded when title to goods passes or services are provided to customers, the price is fixed or determinable, and collection is reasonably assured. For the majority of product revenues, title passes to the buyer at the time of shipment and revenue is recorded at that time.

The Company recognizes revenue and related costs for arrangements with multiple deliverables as each element is delivered or completed based upon its relative fair value. If a fair value is not available for any undelivered element, revenue for all elements is deferred until delivery is completed. When a portion of the customer’s payment is not due until acceptance, the Company defers that portion of the revenue until acceptance has been obtained. Revenue for training is deferred until the service is completed. Revenue for extended service contracts is recognized ratably over the contract period. Provisions for discounts, warranties, rebates to customers, returns and other

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

adjustments are provided for in the period the related sales are recorded.

A significant portion of MDS Pharma Services revenues, which is included in discontinued operations (Note 3), relate to research services revenues provided under long-term contracts that can extend from several months to several years. Revenues on these contracts are recognized using the percentage-of-completion method based on a proportional performance basis using output as a measure of performance. Services performed in advance of billings are recorded as unbilled revenue pursuant to the contractual terms. In general, amounts become billable upon the achievement of certain milestones or in accordance with predetermined payment schedules. Changes in the scope of work generally result in a renegotiation of contract terms. Renegotiated amounts are not included in net revenues until earned and realization is assured. Billings in excess of services performed to date or in excess of costs plus estimated profits on contracts in progress are included in deferred revenue in "Liabilities of discontinued operations". Customer advances on contracts in progress are included in "Liabilities of discontinued operations".

Reimbursement revenues relate to MDS Pharma Services, which is included in discontinued operations (Note 3). In connection with the management of clinical trials, the Company pays, on behalf of its customers, fees to physicians and medical establishments acting as clinical trial investigators, fees to certain volunteers in clinical trials, as well as other out-of-pocket costs for items such as travel, printing, meetings and couriers. The Company is reimbursed at cost, without mark-up or profit, for these expenditures. Amounts paid to volunteers and other out-of-pocket costs are reflected in operating expenses as reimbursed expenses, while the reimbursements due are reported as reimbursement revenues. Revenue and expense associated with fees paid to investigators and the associated reimbursement are netted in discontinued operations as MDS Pharma Services acts as an agent on behalf of the pharmaceutical company sponsors with regard to investigator payments.

### **Warranty costs**

A provision for warranties is recognized when the underlying products or services are recorded as revenues. The provision is based on estimated future costs using historical labor and material costs to estimate costs that will be incurred in the warranty period.

### **Stock-based compensation**

The fair value of stock options granted on and after November 1, 2003 is recognized as compensation expense on a straight-line basis over the applicable stock option vesting period. The expense is included in selling, general, and administration expenses in the consolidated statements of operations and as additional paid-in capital grouped within shareholders' equity on the consolidated statements of financial position. The consideration received on the exercise of stock options is credited to share capital at the time of exercise along with the associated amount of additional paid-in capital.

Certain incentive compensation plans of the Company base the determination of compensation to be paid in the future on the price of the Company's publicly traded shares at the time of payment or time of the grant date. Expenses related to these plans are recorded as a liability and charged to income over the period in which the amounts are earned, based on an estimate of the current fair value of amounts that will be paid in the future.

Stock-based compensation expenses relating to certain employees of MDS Analytical Technologies and MDS Pharma Services are included in the results of discontinued operations (Note 3).

### **Pension, post-retirement and other post-employment benefit plans**

The Company offers a number of benefit plans that provide pension and other post-retirement benefits. The current service cost of benefit plans is charged to income. Cost is computed on an actuarial basis using the projected benefits method and based on management's best estimates of investment yields, salary escalation, and other factors.

The Company recognizes the funded status of its defined benefit plans on its consolidated statements of financial position; recognizes gains, losses, and prior service costs or credits that arise during the period that are not recognized as components of net periodic benefit cost as a component of accumulated other comprehensive income, net of tax; measures its defined benefit plan assets and obligations as of the date of the Company's fiscal year-end consolidated statements of financial position; and discloses additional information in the notes to the consolidated financial statements about certain effects on net periodic benefit cost for the next fiscal year that arise from delayed recognition of the gains or losses, prior service costs or credits, and transition assets or obligations.

The expected costs of post-employment benefits, other than pensions, for active employees are accrued in the years in which employees provide service to the Company. Adjustments resulting from plan amendments, experience gains and losses, or changes in assumptions are amortized over the remaining average service term of active employees. Other post-employment benefits are recognized when the event triggering the obligation occurs.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### Research and development

The Company conducts various research and development programs and incurs costs related to these activities, including employee compensation, materials, professional services, facilities costs, and equipment depreciation. Research and development programs costs, including those internally processed, are expensed in the periods in which they are incurred.

### Income taxes

Deferred tax assets and liabilities are recognized for future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax basis. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be realized or settled. The Company provides a valuation allowance against its deferred tax assets when it believes that it is more likely than not that the asset will not be realized.

The Company determines whether it is more likely than not that a tax position will be sustained upon examination. The tax benefit of any tax position that meets the more-likely-than-not recognition threshold is calculated as the largest amount that is more than 50% likely of being realized upon resolution of the contingency. To the extent, a full benefit is not expected to be realized on the uncertain tax position, an income tax liability is established. Interest and penalties on income tax obligations are included in income tax expense.

The calculation of the Company's tax liabilities involves dealing with uncertainties in the application of complex tax regulations in a multitude of jurisdictions across the Company's global operations. Due to the complexity of some of these uncertainties, the ultimate resolution may result in a payment that is materially different from current estimates of the income tax liabilities. If the Company's estimate of income tax liabilities proves to be less than the ultimate assessment, an additional charge to income tax expense would result. If payment of these amounts ultimately proves to be less than the recorded amounts, the reversal of the income tax liabilities may result in income tax benefits being recognized in the period when it is determined that the estimated income tax liability is no longer required. All of these potential income tax liabilities are included in income taxes payable or netted against income taxes recoverable on the consolidated statements of financial position.

Investment tax credits related to the acquisition of assets are deferred and amortized to income on the same basis as the related assets, while those related to current expenses are included in the determination of income for the year.

### Earnings per share

Basic earnings per share is calculated by dividing net income by the weighted average number of Common shares outstanding during the year.

Diluted earnings per share is calculated using the treasury stock method, by dividing net income available to common shareholders by the sum of the weighted average number of Common shares outstanding and all additional Common shares that would have been outstanding shares arising from the exercise of potentially dilutive stock options during the year.

### Foreign currency translation

Although the Company reports its financial results in U.S. dollars, the functional currency of the Company's Canadian operations is Canadian dollars. The functional currencies of the Company's foreign subsidiaries are their local currencies. Monetary assets and liabilities denominated in foreign currencies are translated into the functional currencies of operations at prevailing year-end exchange rates. Non-monetary assets and liabilities are translated into functional currencies at historical rates. Assets and liabilities of foreign operations with a functional currency other than U.S. dollars are translated into U.S. dollars at prevailing year-end exchange rates, while revenue and expenses of these foreign operations are translated into U.S. dollars at average monthly exchange rates. The Company's net investments in foreign subsidiaries are translated into U.S. dollars at historical exchange rates.

Exchange gains and losses on foreign currency transactions are recorded in other expenses, net. Upon the sale or upon complete or substantially complete liquidation of an investment in a foreign (non-Canadian functional currency) entity, the amount attributable to that entity and accumulated in the translation adjustment component of the equity is removed from the separate component of equity and reported as part of the gain or loss on sale or liquidation of the investment in the period during which the sale or liquidation occurs.

Exchange gains or losses arising on translation of the Company's net equity investments in these foreign subsidiaries and those arising on translation of foreign currency long-term liabilities designated as hedges of these investments are recorded in other comprehensive income (OCI). Upon reduction of the Company's investment in the foreign (non-Canadian) subsidiary, due to a sale or complete or substantially complete liquidation, the amount from the reporting currency translation as well as the offsetting amount from the translation of foreign currency long-term liabilities included in accumulated other comprehensive income (AOCI) is recognized in income.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### **Derivative financial instruments**

In the normal course of business, the Company uses derivative financial instruments to manage foreign currency exchange rate risks. Derivative transactions are governed by a uniform set of policies and procedures covering areas such as authorization, counterparty exposure and hedging practices. Positions are monitored based on changes in foreign currency exchange rates and their impact on the market value of derivatives. Credit risk on derivatives arises from the potential for counterparties to default on their contractual obligations to the Company. The Company limits its credit risk by dealing with counterparties that are considered to be of high credit quality. The Company does not enter into derivative transactions for trading or speculative purposes. The Company records derivatives at fair value either as other current assets or accrued liabilities on the consolidated statements of financial position. The Company determines the fair value of the derivative financial instruments using relevant market inputs when no quoted market prices exist for the instruments. The fair value of the derivative financial instruments is determined by comparing the rates when the derivatives are acquired to the market rates at period-end. The key inputs include interest rate yield curves, foreign exchange spot and forward rates. The Company classifies cash flows from its derivative programs as cash flows from operating activities in the consolidated statements of cash flows.

The accounting for changes in the fair value of a derivative depends on the intended use of the derivative and the resulting designation. In order for a derivative to qualify for hedge accounting, the derivative must be formally designated as a fair value, cash flow or net investment hedge by documenting the relationship between the derivative and the hedged item. The documentation includes a description of the hedging instrument, the hedged item, the risk being hedged, the Company's risk management objective and strategy for undertaking the hedge, the method for assessing the effectiveness of the hedge and the method for measuring hedge ineffectiveness. Additionally, the hedge relationship must be expected to be highly effective at offsetting changes in either the fair value or cash flows of the hedged item at both inception of the hedge and on an ongoing basis. The Company assesses the ongoing effectiveness of its hedges on a quarterly basis.

#### *Cash flow hedges*

Cash flow hedges relate to MDS Analytical Technologies, which is reported as part of discontinued operations (Note 3). The Company uses foreign currency forward exchange contracts to manage its foreign exchange risk within the joint venture operations of the Company. Certain Canadian joint venture operations of the Company were expected to have net cash inflows denominated in U.S. dollars in 2009 and subsequent years. The Company entered into foreign exchange contracts to hedge a portion of these cash flows. The Company will hedge anticipated cash inflows that are expected to occur over its planning cycle, typically no more than 24 months into the future. The Company designates these derivatives as cash flow hedges.

#### *Hedges of net investment in foreign operations*

The Company hedges its net investment in certain U.S. dollar investments, the U.S. operations of MDS Analytical Technologies and MDS Pharma Services in discontinued operations (Note 3), by designating a U.S. dollar denominated debt to reduce foreign exchange fluctuations. If the hedge is deemed to be effective, the U.S. dollar denominated debt is measured at each reporting date to reflect changes in the spot rate since the previous measurement date and recorded in OCI. Ineffective portions of changes in the fair value of the derivative in a hedging relationship are recognized in other expenses, net in the period in which the changes occur. If the hedging relationship is no longer highly effective, changes in the fair value of the derivative would be recognized in income beginning in the period in which the changes occur. If the hedge is terminated because the U.S. dollar denominated debt is either extinguished, expired or the relationship is de-designated, the unrealized gain or loss remains in AOCI until the hedged item affects the consolidated statements of operations.

As of October 31, 2010, the Company held no derivatives designated as fair value, cash flow or net investment hedges.

#### *Other derivatives*

Derivatives not designated as hedges are recorded at fair value on the consolidated statements of financial position, with any changes in the mark to market being recorded in the consolidated statements of operations. Interest rate swap contracts may be used as part of the Company's program to manage the fixed and floating interest rate mix of the Company's total debt portfolio and the overall cost of borrowing. The Company uses short-term foreign currency forward exchange contracts to hedge the revaluations of the foreign currency balances. The Company has also identified embedded derivatives in certain supply contracts.

### **Comprehensive income**

The Company defines comprehensive income as net income plus the sum of the changes in unrealized gains (losses) on derivatives designated as cash flow hedges, unrealized gains (losses) on translation of debt designated as a hedge of the net investment in self-sustaining foreign subsidiaries, unrealized gains (losses) on pension liability adjustments, foreign currency translation gains (losses) on self-sustaining foreign subsidiaries and an unrealized gain (loss) on translation resulting from the application of U.S. dollar reporting and is presented in the consolidated statements of shareholders' equity and comprehensive income (loss), net of income taxes.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### Recent accounting pronouncements

On April 29, 2010, the FASB issued ASU No. 2010-17, “*Revenue Recognition (Topic 605), Milestone Method of Revenue Recognition*” (ASU 2010-17), which establishes a revenue recognition model for contingent consideration that is payable upon the achievement of an uncertain future event, referred to as a milestone. The scope of ASU 2010-17 is limited to research or development arrangements and requires an entity to record the milestone payment in its entirety in the period received if the milestone meets all necessary criteria to be considered substantive. Entities are not precluded from making an accounting policy election to apply another appropriate accounting policy that results in the deferral of some portion of the arrangement consideration. ASU 2010-17 is effective for fiscal years beginning on or after June 15, 2010 and for interim period within those fiscal years. The Company plans to adopt ASU 2010-17 on November 1, 2010 and it is not expected to have a significant impact on the Company’s consolidated financial statements.

On April 16, 2010, the FASB issued ASU No. 2010-13, “*Stock Compensation (Topic 718), Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Currency of the Market in Which the Underlying Equity Security Trades*” (ASU 2010-13), which clarifies that a share-based payment award with an exercise price denominated in the currency of a market in which a substantial portion of the entity’s equity securities trades must not be considered to contain a market, performance or service condition. An entity should not classify such an award as a liability if it otherwise qualifies for classification in equity. ASU 2010-13 is effective for fiscal years beginning on or after December 15, 2010 and for interim periods within those fiscal years and is to be applied prospectively. The Company plans to adopt ASU 2010-13 on November 1, 2011 and it is not expected to have a significant impact on the Company’s consolidated financial statements.

In January 2010, the FASB issued ASU No. 2010-06, “*Fair Value Measurements and Disclosures (Topic 820), Improving Disclosures about Fair Value Measurements*” (ASU 2010-06), which provides amendments that clarify existing disclosures and requires new disclosures related to fair value measurements. In particular, ASU 2010-06 requires more disaggregated information on each class of assets and liabilities and further disclosures on transfers between levels 1 and 2 and activity in level 3 fair value measurements. ASU 2010-06 is effective for interim and annual reporting periods beginning after December 15, 2009, except for the disclosures about activity in level 3 fair value measurements, which are effective for fiscal years beginning after December 15, 2010 and for interim periods within those fiscal years. The Company plans to adopt ASU 2010-06 on November 1, 2011 and it is not expected to have a significant impact on the Company’s consolidated financial statements.

In December 2009, the FASB issued ASU No. 2009-17, “*Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities*” (formerly, SFAS No. 167, “*Amendments to FASB Interpretation No. 46(R)*”) (ASU 2009-17) to improve financial reporting by enterprises involved with variable interest entities. ASU 2009-17 is effective as of the beginning of each entity’s first annual reporting period that begins after November 15, 2009 and earlier application is not allowed. The Company plans to adopt ASU 2009-17 on November 1, 2010, and it is not expected to have a material impact on the Company’s consolidated financial statements.

In October 2009, the FASB issued ASU No. 2009-13, “*Revenue Recognition (Topic 605), Multiple - Deliverable Revenue Arrangements, a consensus of EITF 08-01, Revenue Arrangements with Multiple Deliverables*” (ASU 2009-13), which modifies the fair value requirements of ASC subtopic 605-25, “*Revenue Recognition - Multiple Element Arrangements*” by providing principles for allocation of consideration among its multiple-elements, allowing more flexibility in identifying and accounting for separate deliverables under an arrangement. An estimated selling price method is introduced for valuing the elements of a bundled arrangement if vendor-specific objective evidence or third-party evidence of selling price is not available, and significantly expands related disclosure requirements. This guidance is effective on a prospective basis for revenue arrangements entered into or materially modified in fiscal years beginning on or after June 15, 2010 with earlier application permitted. The Company plans to adopt ASU 2009-13 on November 1, 2010 and it is not expected to have a material impact on the Company’s consolidated financial statements.

### International Financial Reporting Standards (IFRS)

The Company has been monitoring the deliberations and progress being made by accounting standard setting bodies and securities regulators both in the U.S. and Canada with respect to their plans regarding convergence to IFRS. The Company currently expects to adopt IFRS as its primary reporting standard when the SEC requires domestic registrants in the U.S. to adopt IFRS.

## 3. Divestitures and Discontinued Operations

### Sale of MDS Pharma Services Early Stage (Early Stage)

On March 5, 2010, the Company completed the sale of Early Stage to Ricerca Biosciences, LLC (Ricerca) and Celerion, Inc. (Celerion) for total consideration of \$45.0 million including \$12.9 million in cash after a \$7.1 million reduction for preliminary net working capital closing adjustments, a \$25.0 million note receivable (the Note) from Celerion (Note 9(c)), and 15% minority interest in Celerion (Note 8(b)). The sale was structured as a stock and asset purchase transaction. Total net assets disposed of were \$120.2 million.

Final net working capital and other closing adjustments resulted in final cash proceeds of \$10.7 million. The Ricerca deal resulted in a final cash proceed of \$9.4 million. The Celerion deal resulted in a final cash proceed of \$1.3 million, the Note at a fair value of \$16.2 million and 15% minority interest in Celerion at a fair value of \$1.5 million as of October 31, 2010. The Company recorded an after-tax loss on the sale

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

of Early Stage of \$72.1 million, of which losses of \$59.3 million and \$12.8 million were recorded in fiscal 2010 and fiscal 2009, respectively. The loss on the sale of Early Stage included employee severance and transaction costs of \$20.9 million and the recognition of an unrealized foreign currency translation gain of \$42.1 million.

As part of the sale of Early Stage, the Company signed Transition Services Agreements (TSAs) to provide certain post closing transition services to the buyers. The TSAs ended in November 2010. The Company recorded TSA revenue of \$7.0 million (2009 – \$nil; 2008 – \$nil) in other expenses, net (Note 20) for the year ended October 31, 2010.

Following the sale of Early Stage, the Company retained certain assets related to the operations of Early Stage, which are included in “Assets of discontinued operations” in the consolidated statements of financial position. The Company revised its estimates of recoverability of the retained assets and performed further impairment analyses during fiscal 2010. Based on forecasted cash flows and prices for similar assets, the Company recorded impairment charges on long-lived assets of \$13.6 million (2009 – \$8.9 million; 2008 – \$10.6 million) for the year ended October 31, 2010 in “Loss from discontinued operations, net of income taxes” in the consolidated statements of operations.

### Sale of MDS Analytical Technologies

On January 29, 2010, the Company completed the sale of MDS Analytical Technologies, which included the Company’s 50% interest in two joint ventures, Applied Biosystems MDS Analytical Technologies Instruments (AB/MDS) and PerkinElmer Sciex Instruments (PKI/Sciex), for an initial sale price of \$641.3 million received in cash. The sale was structured as a stock and asset transaction. Total net assets disposed of were \$597.6 million. Final net working capital and other closing adjustments resulted in net cash proceeds of \$623.5 million. The Company recorded an after-tax gain on the sale of MDS Analytical Technologies of \$3.5 million in fiscal 2010.

As part of the sale, the Company’s joint venture partnership with Applied Biosystems, a division of Life Technologies Corporations (Life), was dissolved. A disagreement has arisen between the former partners (MDS Inc. and Life) as to the appropriate treatment of certain inventory sold by the partnership to Applied Biosystems prior to the dissolution of the joint venture partnership. The overall financial impact to the Company could be approximately \$10 million. The Company has filed a Statement of Defence and intends to vigorously defend this action. No provision has been accrued related to this disagreement as of October 31, 2010. The Company expects that the process to settle this dispute extends well into fiscal 2011. A hearing has been set for the arbitration of this matter in the second quarter of fiscal 2011.

As part of the sale of MDS Analytical Technologies, the Company signed a TSA to provide certain post closing transition services for a period of six months from the closing date, which expired on July 31, 2010. The Company recorded TSA revenue of \$3.0 million (2009 – \$nil; 2008 – \$nil) in other expenses, net (Note 20) for the year ended October 31, 2010.

### Discontinued operations

The following table details the assets and liabilities of discontinued operations.

As of October 31	2010 <sup>(a)</sup>	2009 <sup>(b)</sup>

Income tax (expense) recovery	15,616	3,741	427	(17,136)	(7,954)	(5,504)	(1,520)	(4,213)	(5,077)
<b>(Loss) income from discontinued operations, net of income taxes</b>	<b>\$ (104,900)</b>	<b>\$ (116,171)</b>	<b>\$ (331,549)</b>	<b>\$ (23,762)</b>	<b>\$ (7,420)</b>	<b>\$ 20,570</b>	<b>\$ (128,662)</b>	<b>\$ (123,591)</b>	<b>\$ (310,979)</b>

(a) Revenues for MDS Pharma Services for the year ended October 31, 2010 are related to Early Stage. Revenues for MDS Pharma Services for the years ended October 31, 2009 and 2008 are \$243.5 million and \$295.6 million for Early Stage and \$198.3 million and \$286.6 million for MDS Pharma Services Phase II-IV and Central Labs, respectively.

Included in "Loss from discontinued operations, net of income taxes", pre-tax loss for MDS Pharma Services for the year ended October 31, 2010 are related to Early Stage. Pre-tax loss for MDS Pharma Services for the years ended October 31, 2009 and 2008 are \$57.4 million and \$313.1 million for Early Stage and \$62.5 million and \$18.9 million for MDS Pharma Services Phase II-IV and Central Labs, respectively.

(b) MDS Analytical Technologies included two joint ventures, AB/MDS and PKI/Sciex. Under the terms of these joint venture arrangements, the Company provided manufacturing, research and development and administrative support for the joint venture partnerships on an outsourced service provider basis. All costs, including selling, general and administration expenses, incurred by the Company for direct materials, labor, travel, consulting, and other related expenses, were billed to the joint ventures at cost and recorded as revenue. The Company did not recognize any profits from the sales to the joint ventures as the amounts were billed without any markups. The joint ventures realized net income when products and services were sold to a third-party customer. The Company recorded its share of realized profits from the joint ventures as equity earnings, which is included in "Loss from discontinued operations, net of income taxes". For the year ended October 31, 2010, revenues of \$28.4 million (2009 — \$109.8 million; 2008 — \$148.9 million) are related to the sale of products and services to the joint ventures and equity earnings of \$14.9 million (2009 — \$32.7 million; 2008 — \$49.1 million) are from the joint ventures. The Company also received \$15.5 million (2009 — \$36.2 million; 2008 — \$58.6 million) for the year ended October 31, 2010 in cash distributions from these joint ventures.

(c) All of the interest on the senior unsecured notes was allocated to discontinued operations as the Company repaid its senior unsecured notes following the completion of the sale of MDS Analytical Technologies. As part of the redemption of the senior unsecured notes, the Company made a make-whole payment of \$23.3 million, which was included in interest expense in fiscal 2010. Included in "Other, net", interest expense allocated to discontinued operations for the year ended October 31, 2010 is \$26.5 million (2009 — \$13.5 million; 2008 — \$14.3 million). See Note 13(a), "Long-Term Debt" for details of the senior unsecured notes.

## 4. Accounts Receivable

As of October 31	2010	2009
Trade accounts receivable	\$ 37,567	\$ 27,205

### 7. Other Current Assets

#### Asset backed commercial paper (ABCP)

During the fourth quarter of fiscal 2010, the Company disposed of its Canadian non-bank sponsored ABCP, which had a carrying value of \$11.5 million (2009 – \$10.7 million) designated as held for trading, for cash proceeds of \$10.4 million and recorded a loss of \$1.1 million in other expenses, net (Note 20).

#### Embedded derivatives assets and prepaid expenses and other

As of October 31, 2010, other current assets also include embedded derivative assets of \$10.5 million (2009 – \$nil) as well as prepaid expenses and other of \$2.0 million (2009 – \$3.0 million).

### 8. Long-Term Investments

As of October 31	2010		2009	
Investment in Lumira Capital Corp. <sup>(a)</sup>	\$	1,030	\$	4,561
Investment in Celerion <sup>(b)</sup>		1,464		-
Other long-term investments <sup>(c)</sup>		1,557		902
<b>Long-term investments</b>	<b>\$</b>	<b>4,051</b>	<b>\$</b>	<b>5,463</b>

#### (a) Investment in Lumira Capital Corp. (Lumira)

Long-term investments include an investment in Lumira, an investment fund management company, which has long-term investments in development-stage enterprises that have not yet earned significant revenues from their intended business activities or established their commercial viability. Nordion does not have any significant involvement in the day-to-day operations of Lumira other than to obtain its share of earnings and losses. During fiscal 2010, the Company reported equity (loss) earnings of \$(0.7) million (2009 – \$nil; 2008 – \$0.2 million) from the investment in Lumira. During the third quarter of fiscal 2010, the Company received \$3.0 million (2009 – \$nil) in cash from Lumira as a distribution and reduction in the investment. The Company's exposure to losses is limited to its investment of \$1.0 million (October 31, 2009 – \$4.6 million).

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### (b) Investment in Celerion

On March 5, 2010, as part of the consideration for the sale of Early Stage, Nordion received approximately 15% of the total common stock of Celerion assuming the conversion of all the outstanding preferred stock and issuance and exercise of permitted stock options. The outstanding preferred stock of Celerion are voting, all owned by third parties, convertible into common stock on a 1:1 basis, subject to certain adjustments, and are subordinated to the Note (Note 9(c)). Nordion's ability to transfer its Celerion equity and the Note is subject to the consent of Celerion, which is controlled by third-party investors who collectively hold a majority of the outstanding Celerion equity and have no restrictions on selling their interests. These third-party investors also have majority representation on the Board of Directors of Celerion. This investment in Celerion is recorded at cost and has a fair value of \$1.5 million as of October 31, 2010. The fair value has been determined based on an estimate of the fair value of the business sold using proceeds on sale and a discounted future cash flow model using cost of equity of comparable companies adjusted for risk.

Pursuant to applicable U.S. accounting rules, a business entity may be subject to consolidation if it is determined to be a variable interest entity (VIE) and if the reporting entity is the primary beneficiary. The Company has determined that Celerion is a VIE but Nordion is not the primary beneficiary and, therefore, consolidation is not required. The Company continues to assess any reconsideration events and monitor the status of its relationship with Celerion. The fair value of the Company's investment in Celerion and the Note (Note 9(c)) is currently estimated to be \$17.7 million in aggregate. The Company's maximum exposure to loss is limited to the carrying value of the Note and its investment in Celerion.

### (c) Other long-term investments

Other long-term investments include an available for sale investment in a marketable equity security with a fair value of \$1.6 million as of October 31, 2010 (October 31, 2009 – \$0.9 million), which has been determined using a quoted market bid price in active markets.

## 9. Other Long-Term Assets

As of October 31	2010	2009
Restricted cash <sup>(a)</sup>	\$ 32,439	\$ 16,292
Financial instrument pledged as security on long-term debt <sup>(b)</sup>	39,986	38,478
Long-term notes receivable <sup>(c)</sup>	27,186	21,384
Pension assets (Note 24)	8,944	13,571
Goodwill (Note 11)	2,474	2,257
Other	-	195
<b>Other long-term assets</b>	<b>\$ 111,029</b>	<b>\$ 92,177</b>

### (a) Restricted cash

As of October 31, 2010, restricted cash includes \$17.4 million (October 31, 2009 – \$nil) of cash collateral for the Company's outstanding letters of credit, \$5.0 million (October 31, 2009 – \$10.0 million) of cash proceeds held in escrow related to the sale of MDS Pharma Services Phase II-IV and \$10.0 million (October 31, 2009 – \$6.3 million) of funds for insurance liabilities.

### (b) Financial instrument pledged as security on long-term debt

The financial instrument pledged as security on long-term debt is classified as held to maturity and is not readily tradable as it defeases the long-term debt from the Government of Canada related to the construction of the MAPLE Facilities. The effective annual interest rate is 7.02% and it is repayable semi-annually over 15 years commencing October 2, 2000. The carrying value as of October 31, 2010 is \$43.9 million (October 31, 2009 – \$42.2 million), of which \$3.9 million (October 31, 2009 – \$3.7 million) is included in notes receivable in the consolidated statements of financial position. As of October 31, 2010, the fair value is \$52.4 million (October 31, 2009 – \$49.2 million), which has been determined using a discounted cash flow model, in which future cash flows are discounted to present value using the current market borrowing rate pertaining to the remaining life of the receivable.

### (c) Long-term notes receivable

#### Atomic Energy of Canada Limited (AECL)

In fiscal 2006, as a result of a comprehensive mediation process that resulted in an exchange of assets between the Company and AECL related to the MAPLE Facilities, a long-term note receivable of \$38.0 million after discounting, was received by the Company. This non-interest bearing note receivable is repayable monthly over four years commencing November 1, 2008. The long-term note receivable is net of an unamortized discount based on an imputed interest rate of 4.45%. The carrying value of the long-term note receivable as of October 31, 2010 is \$24.0 million (October 31, 2009 – \$33.7 million), of which \$13.1 million (October 31, 2009 – \$12.3 million) is included in notes receivable in the consolidated statements of financial position. As of October 31, 2010, the fair value is \$25.7 million (October 31, 2009 – \$35.9 million), which has been determined using a discounted cash flow model, in which future cash flows are discounted to present value using the current market borrowing rate pertaining to the remaining life of the receivable. All scheduled monthly payments due have been received.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### Celerion

On March 5, 2010, as part of the consideration for the sale of Early Stage, the Company received the Note (Note 3) with a principal amount of \$25.0 million issued by Celerion, which has a five-year term and bears interest at 4% per annum. Celerion can elect to add the interest to the principal amount of the Note. The Note is partially secured with a second-lien interest in certain real estate of Celerion. As part of the sale of Early Stage, the Company also signed a TSA that allowed Celerion to pay for the first three months of TSA services, to a maximum of \$1.8 million, by increasing the principal amount of the Note. The carrying value of the Note as of October 31, 2010 is \$16.2 million (October 31, 2009 – \$nil). The fair value of the Note as of October 31, 2010 is \$16.2 million, which includes \$3.4 million of accreted interest. The fair value has been determined based on discounted cash flows using market rates for secured debt and cost of equity of comparable companies adjusted for risk and any increase in principal amount related to the TSA and interest payments. The Note is being accreted up to its face value using an effective interest rate of 8% for secured cash flows and 28% for unsecured cash flows.

### 10. Impairment of Long-Lived Assets

In the third quarter of fiscal 2010, the Company experienced a continued decline in customer demand and revised downward its projected revenues for certain product lines within its Belgium operations. The Company considered a deterioration of customer demand and declines in forecasted cash flows to represent indicators of impairment. The Company estimated the fair value of the identified property, plant and equipment asset group using the projected future cash flow approach along with a comparison of market values for similar assets. As a result of this assessment, the Company concluded that the fair value of the identified asset group was lower than the recorded carrying value, resulting in a non-cash pre-tax impairment charge of \$7.3 million (2009 – \$nil) for the year ended October 31, 2010. The asset impairment has been recorded in other expense, net (Note 20).

### 11. Goodwill

As of October 31, 2010, management determined that the fair value of goodwill exceeds its carrying value of \$2.5 million (2009 – \$2.3 million) resulting in no impairment of goodwill. During the fourth quarter of fiscal 2010, the Company changed its segment reporting structure (Note 25) following the completion of its strategic repositioning. Accordingly, the goodwill was allocated to two of the Company's business segments: \$0.9 million to Medical Isotopes and \$1.6 million to Sterilization Technologies.

During the third quarter of fiscal 2009, management determined that the implied fair values of goodwill for the reporting units within MDS Pharma Services were less than each of its carrying values and the Company wrote off the total remaining goodwill of \$36.9 million, which was reported in "Loss from discontinued operations, net of income taxes" (Note 3).

### 12. Accrued Liabilities

As of October 31	2010	2009
Employee-related accruals (Note 23)	\$ 13,031	\$ 14,385
FDA provision <sup>(a)</sup>	8,620	18,527
Restructuring provision (Note 19)	7,356	7,904
Accrued transaction costs and closing adjustments for divestitures and discontinued operations (Note 3)	13,470	15,204
Captive insurance liability	6,402	1,755
AECL revenue share and waste disposal	6,677	925
Other <sup>(b)</sup>	27,478	23,919
<b>Accrued liabilities</b>	<b>\$ 83,034</b>	<b>\$ 82,619</b>

(a) The FDA provision was established in fiscal 2007 to address certain U.S. Food and Drug Administration (FDA) issues related to the Company's bioanalytical operations in its Montreal, Canada, facilities. Although the bioanalytical operations are part of MDS Pharma Services, Nordion has retained this potential liability following the sale of Early Stage (Note 3). The Company may, where appropriate, reimburse clients who have incurred or will incur third party audit costs or study re-run costs to complete the work required by the FDA and other regulators. Management regularly updates its analysis of this critical estimate based on all currently available information. Based on this analysis, the Company recorded a \$9.9 million (2009 – \$10.3 million; 2008 – \$10.0 million) benefit from the revised estimate for future costs in "Loss from discontinued operations, net of income taxes" for the year ended October 31, 2010. As of October 31, 2010, management believes that the remaining provision of \$8.6 million (October 31, 2009 – \$18.5 million) is sufficient to cover any agreements reached with clients for study audits, study re-runs, and other related costs (Note 27). Included in this potential liability are amounts for two legal claims the Company has been served with related to repeat study costs.

(b) Other includes derivative liabilities, royalties, tax reassessments and various miscellaneous payables.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### 13. Long-Term Debt

As of October 31	Maturity	2010	2009
Senior unsecured notes <sup>(a)</sup>	2010	\$ -	\$ 221,357
Other debt <sup>(b)</sup>	2010 to 2015	44,150	46,415
Total long-term debt		44,150	267,772
Current portion of long-term debt <sup>(a)(b)</sup>		(4,050)	(30,492)
<b>Long-term debt</b>		<b>\$ 40,100</b>	<b>\$ 237,280</b>

(a) The senior unsecured notes had fixed interest between 5.52% and 6.19% per annum and matured in several tranches up to December 2014. On December 18, 2009, the Company repaid \$22.7 million of the senior unsecured notes that matured. On February 3, 2010, in conjunction with the completion of the sale of MDS Analytical Technologies (Note 3), the Company used \$223.4 million of the net proceeds from the sale of MDS Analytical Technologies to fully repay the outstanding balance of the senior unsecured notes, which included the principal balance of \$198.6 million, accrued and unpaid interest of \$1.5 million and a make-whole payment of \$23.3 million. The fair value of the senior unsecured notes as of October 31, 2009 was \$237.9 million and was determined using a discounted cash flow model, in which future cash flows were discounted to present value using the current market borrowing rate pertaining to the remaining life of the notes.

(b) As of October 31, 2010, other debt includes a non-interest-bearing Canadian government loan with a carrying value of \$43.9 million (October 31, 2009 – \$42.2 million) discounted at an effective interest rate of 7.02% and repayable at C\$4.0 million (US\$3.9 million) per year with the remaining balance due April 1, 2015. The fair value of this financial instrument is \$53.1 million (October 31, 2009 – \$50.8 million), which has been determined using a discounted cash flow model, in which future cash flows are discounted to present value using the current market borrowing rate pertaining to the remaining life of the related receivable. A long-term financial instrument has been pledged as full security for the repayment of this debt (Note 9(b)).

On January 29, 2010, upon the completion of the sale of MDS Analytical Technologies (Note 3), other debt of \$4.0 million (October 31, 2009 – \$4.0 million) for a note payable relating to assets purchased for the MALDI-TOF mass spectrometry operations was forgiven in accordance with an agreement with the lender.

#### Principal repayments

Principal repayments of long-term debt over the next five fiscal years and thereafter are as follows:

2011	\$	4,050
2012		4,034
2013		3,921
2014		3,921
2015		28,224
Thereafter		-
	<b>\$</b>	<b>44,150</b>

### 14. Deferred Revenue

As of October 31	2010	2009
Payment in advance of services rendered	\$ 4,872	\$ 2,551
Deferred credit related to government loan <sup>(a)</sup>	5,348	7,261
Deposits for reimbursable costs	6,343	6,137
Other	410	2,420
	<b>16,973</b>	<b>18,369</b>
Less: current portion	(7,542)	(4,667)
<b>Long-term portion of deferred revenue</b>	<b>\$ 9,431</b>	<b>\$ 13,702</b>

(a) The deferred credit is related to the Canadian government loan associated with the MAPLE Facilities, which is being amortized over the remaining six-year term of the debt using the sum of the years' digits method.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

### 15. Other Long-Term Liabilities

As of October 31	2010	2009
Post-retirement obligations (Note 24)	\$ 19,761	\$ 17,136
Asset retirement obligation (Note 28)	10,598	4,474
Captive insurance liability (Note 26)	3,860	4,108
Restructuring provision (Note 19)	4,153	-
Other	2,410	2,858
Other long-term liabilities	\$ 40,782	\$ 28,576

### 16. Earnings Per Share

The following table illustrates the reconciliation of the denominator in the computations of the basic and diluted earnings per share:

(number of shares in thousands)	2010	2009	2008
Weighted average number of Common shares outstanding – basic	89,279	120,137	121,711
Impact of stock options assumed exercised	1	-	61
Weighted average number of Common shares outstanding – diluted	89,280	120,137	121,772
Basic and diluted loss per share from continuing operations	\$ (1.16)	\$ (0.10)	\$ (1.99)
Basic and diluted loss per share from discontinued operations	\$ (1.44)	\$ (1.02)	\$ (2.55)

### 17. Share Capital

As of October 31, 2010 and October 31, 2009, the authorized share capital of the Company consists of unlimited Common shares. The Common shares are voting and are entitled to dividends if and when declared by the Company's Board of Directors.

#### Summary of share capital

(number of shares in thousands)	Common Shares	
	Number	Amount
Balance as of October 31, 2007	122,578	\$ 491,652
Issued	462	7,256
Repurchased and cancelled	(2,903)	(11,781)
Other	-	1,781
Balance as of October 31, 2008	120,137	488,908
Issued	-	-
Repurchased and cancelled	-	-
Other	-	(100)
Balance as of October 31, 2009	120,137	488,808
Issued	42	327
Repurchased and cancelled	(52,941)	(215,304)
Other	-	28
Balance as of October 31, 2010	67,238	\$ 273,859

During fiscal 2010, the Company completed a Substantial Issuer Bid in which it repurchased and cancelled 52,941,176 Common shares for a total cost of \$450.0 million. During fiscal 2009, the Company did not repurchase or cancel any Common shares. During fiscal 2008, the Company repurchased and canceled 2,903,200 Common shares under a Normal Course Issuer Bid for a total cost of \$43.6 million. Of the total cost, \$215.3 million (2009 – \$nil; 2008 – \$11.8 million) is charged to share capital and the excess of the cost over the amount charged to share capital, totaling \$234.7 million (2009 – \$nil; 2008 – \$31.8 million), is charged to retained earnings and other comprehensive income.

During fiscal 2010, the Company issued 42,000 (2009 – nil; 2008 – 462,100) Common shares under the stock option plan for proceeds of \$0.3 million (2009 – \$nil; 2008 – \$7.3 million).

#### Stock dividend and share purchase plan and employee share ownership plan

The Company sponsors a non-compensatory employee share ownership plan. Until June 2007, eligible employees were able to purchase Common shares at 90% of the Average Market Price for the five days preceding the purchase. Effective June 30, 2007, the Company changed the terms of this plan and replaced the 10% market price discount with a 10% matching cash contribution. During fiscal 2010, 2009, and 2008, no Common shares were issued under this plan.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### 18. Financial Instruments and Financial Risk

#### Derivative instruments

The Company uses short-term foreign currency forward exchange contracts to hedge the revaluations of the foreign currency balances, which have not been designated as hedges. The Company has also identified embedded derivatives in certain of its supply contracts as a result of the currency of the contract being different from the functional currency of the parties involved. Changes in the fair value of the embedded derivatives are recognized in the consolidated statements of operations.

The following table provides the notional and fair value of all Company derivative instruments:

As of October 31	2010		2009	
	Fair Value		Fair Value	
<b>Assets</b>				
Embedded derivatives <sup>(a)</sup>	\$	10,520	\$	-
<b>Liabilities</b>				
Embedded derivatives <sup>(a)</sup>	\$	1,955	\$	4,179

(a) As of October 31, 2010 and 2009, total notional amounts for certain of the Company's supply contracts identified for embedded derivatives were approximately over \$700 million and \$80 million, respectively. As of October 31, 2009, excludes embedded derivatives with assets related to discontinued operations, which had a fair value of \$0.5 million with notional amount of \$3.9 million.

During the second quarter of fiscal 2010, the sale of Early Stage resulted in a liquidation of the Company's net investment in its self-sustaining U.S. operations of Early Stage and the termination of the net investment hedging relationship. This resulted in recognition of the unrealized foreign exchange loss of \$106.8 million, which was offset by a release of \$106.8 million unrealized foreign exchange gain relating to the net investment hedge, both accumulated in AOCI as part of shareholders' equity. During the first quarter of fiscal 2010, the sale of MDS Analytical Technologies resulted in a liquidation of the Company's net investment in its self-sustaining U.S. operations of MDS Analytical technologies and the termination of the net investment hedging relationship. This resulted in recognition of the unrealized foreign exchange loss of \$39.9 million, which was offset by a release of \$39.9 million unrealized foreign exchange gain relating to the net investment hedge, both accumulated in AOCI as part of shareholders' equity.

The following table summarizes the activities of the Company's derivative instruments:

Years ended October 31	2010		2009		2008
Realized gain on foreign currency forward contracts under cash flow hedges <sup>(a)</sup>	\$	-	\$	-	\$ -
Unrealized gain on foreign currency forward contracts under cash flow hedges <sup>(b)</sup>	\$	-	\$	-	\$ -
Unrealized gain on foreign currency forward contracts not under hedging relationships <sup>(c)</sup>	\$	-	\$	-	\$ -
Reclassification of realized gain recorded in OCI relating to net investment hedge	\$	(146,638)	\$	-	\$ -
Unrealized (gain) loss recorded in OCI relating to net investment hedges <sup>(d)</sup>	\$	(2,400)	\$	(23,645)	\$ 63,734
Unrealized gain recorded in OCI expected to be reclassified to consolidated statements of operations in the next 12 months <sup>(e)</sup>	\$	-	\$	-	\$ -
Unrealized (gain) loss for embedded derivatives recorded in change in fair value of embedded derivatives <sup>(f)</sup>	\$	(13,050)	\$	(7,922)	\$ 14,488

(a) Excludes realized loss of foreign currency forward contracts under cash flow hedges of \$nil (2009 — \$6.9 million; 2008 — \$nil) related to discontinued operations.

(b) Excludes unrealized (gain) loss of foreign currency forward contracts under cash flow hedges of \$nil (2009 — \$(2.0) million; 2008 — \$15.4 million) related to discontinued operations.

(c) Excludes unrealized gain of foreign currency forward contracts not under hedging relationships of \$nil (2009 — \$nil; 2008 — \$(0.6) million) related to discontinued operations.

(d) No ineffectiveness was recorded in income for the years ended October 31, 2010, 2009 and 2008 relating to the net investment hedge.

(e) Excludes unrealized gain recorded in OCI expected to be reclassified to consolidated statements of operations in the next 12 months of \$nil (2009 — \$nil; 2008 — \$(9.1) million) related to discontinued operations.

(f) Excludes unrealized loss (gain) for embedded derivatives related to the discontinued operations of \$0.5 million (2009 — \$(1.1) million; 2008 — \$(0.8) million).

#### Credit risk

Certain of the Company's financial assets, including cash and cash equivalents, are exposed to credit risk. The Company may, from time to time, invest in debt obligations and commercial paper of governments and corporations. Such investments are limited to those issuers

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

carrying an investment-grade credit rating. In addition, the Company limits the amount that is invested in issues of any one government or corporation.

The Company is also exposed, in its normal course of business, to credit risk from its customers. As of October 31, 2010, accounts receivable is net of an allowance for uncollectible accounts of \$0.2 million (2009 – \$0.8 million).

Credit risk on financial instruments arises from the potential for counterparties to default on their contractual obligations to the Company. The Company is exposed to credit risk in the event of non-performance, but does not anticipate non-performance by any of the counterparties to its financial instruments. The Company limits its credit risk by dealing with counterparties that are considered to be of high credit quality. In the event of non-performance by counterparty, the carrying value of the Company's financial instruments represents the maximum amount of loss that would be incurred.

### Valuation methods and assumptions for fair value measurements

Cash and cash equivalents, accounts receivable, notes receivable, income taxes recoverable, accounts payable, accrued liabilities, and income taxes payable have short periods to maturity and the carrying values contained in the consolidated statements of financial position approximate their estimated fair value.

### Fair value hierarchy

The fair value of the Company's financial instruments is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value of financial instruments is determined by reference to quoted market prices for the same financial instrument in an active market (Level 1). If Level 1 fair values are not available, the Company uses quoted prices for identical or similar instruments in markets which are non-active, inputs other than quoted prices that are observable and derived from or corroborated by observable market data such as quoted prices, interest rates, and yield curves (Level 2), or valuation techniques in which one or more significant inputs are unobservable (Level 3).

The following table discloses the Company's financial assets and liabilities measured at fair value on a recurring basis:

As of October 31, 2010					
Description	Level 1	Level 2	Level 3	Total	
Cash equivalents	\$ -	\$ -	\$ -	\$ -	\$ -

### 19. Restructuring Charges

The Company has undertaken a number of restructuring activities given its strategic repositioning activities, including the sale of MDS Analytical Technologies and Early Stage (Note 3). As a result of these activities, the Company recorded a total pre-tax restructuring charge of \$62.5 million (2009 – \$9.3 million; 2008 – \$1.2 million) for the year ended October 31, 2010.

The restructuring charges of \$62.5 million in fiscal 2010 are primarily for \$42.1 million of workforce reductions including \$16.0 million of severance, \$8.2 million of stock-based compensation due to accelerated vesting of stock options, restricted stock units (RSUs) and performance share units (PSUs), \$6.7 million of a tax gross-up amount for certain executive officers subject to U.S. tax requirements, and \$11.2 million of transaction incentive payments payable to certain executive and other senior officers of the Company triggered by the sale of MDS Analytical Technologies and Early Stage. A charge of \$7.2 million was also recorded for future rent payments net of estimated sublease revenue related to the Company's corporate office space in Toronto, Canada, and cancellation of certain contracts for information technology that contained minimum purchase or fixed price commitments that became uneconomical for the remaining business. The remaining \$13.2 million is for fees related to financial advisory services provided by investment bankers on the overall strategic repositioning activities of the Company, which were finalized through negotiations with the Company's investment bankers during the third quarter of fiscal 2010. In agreement with the investment bankers, since two of the Company's business units were sold, a fee was payable based on the market capitalization of the remaining business, which was determined by the first sixty days average closing market price of the Common shares following the completion of the sale of MDS Analytical Technologies and MDS Pharma Services.

The restructuring charges of \$9.3 million and \$1.2 million in fiscal 2009 and 2008, respectively, were primarily for workforce reduction and various initiatives focused on improving profitability. The Company has completed its activities associated with the fiscal 2009 and 2008 restructuring plans and has utilized all of the related prior year provisions.

As of October 31, 2010, the restructuring provision of \$11.5 million (October 31, 2009 – \$7.9 million) is included in accrued liabilities (Note 12) and other long-term liabilities (Note 15) in the consolidated statements of financial position. The fiscal 2010 restructuring activities have been substantially completed and the majority of the remaining restructuring provision is expected to be utilized in the first half of fiscal 2011.

The table below provides an analysis of the Company's restructuring activities related to its continuing operations until October 31, 2010.

Expenses					Cumulative Activities		Balance as of October 31
	2010	2009	2008	Total	Cash	Non- Cash	2010
Workforce reductions	\$ 42,161	\$ 9,306	\$ 333	\$ 51,800	\$ (47,527)	\$ (819)	\$ 3,454
Contract cancellation charges	7,175	-	907	8,082	(1,064)	1,037	8,055
Other	13,195	-	-	13,195	(13,181)	(14)	-
<b>Restructuring charges</b>	<b>\$ 62,531</b>	<b>\$ 9,306</b>	<b>\$ 1,240</b>	<b>\$ 73,077</b>	<b>\$ (61,772)</b>	<b>\$ 204</b>	<b>\$ 11,509</b>

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### 20. Other Expenses, Net

Years ended October 31	2010	2009	2008
Research and development	\$ 4,949	\$ 4,440	\$ 3,556
Loss (gain) on sale of investment	1,054	-	(1,513)
Impairment of long-lived assets (Note 10)	8,913	-	-
Write-down of investments /valuation provisions	-	938	10,654
Loss on sale of business	-	-	3,869
Foreign exchange loss (gain) <sup>(a)</sup>	32,010	4,627	(6,757)
Other <sup>(b)</sup>	(14,165)	(551)	1,774
<b>Other expenses, net</b>	<b>\$ 32,761</b>	<b>\$ 9,454</b>	<b>\$ 11,583</b>

(a) The foreign exchange loss for the year ended October 31, 2010 was primarily a result of the revaluation of the \$450.0 million of proceeds from the sale of MDS Analytical Technologies (Note 3) that were held in a Canadian dollar functional currency entity in U.S. dollars to fund the substantial issuer bid. The offset to this non-cash revaluation loss is reflected as foreign currency translation gain in AOCI as part of shareholders' equity.

(b) Included in other is TSA revenue of \$14.0 million (2009 — \$0.6 million; 2008 — \$nil) for the year ended October 31, 2010, relating to the sales of MDS Pharma Services Phase II-IV, Central Labs and Early Stage, and MDS Analytical Technologies.

### 21. Income Taxes

#### Income tax provision

The components of the Company's (loss) income from continuing operations before income taxes and the related provision for income taxes are presented below:

Years ended October 31	2010	2009	2008
Canadian	\$ (61,825)	\$ 4,826	\$ (329,707)
Foreign	(42,697)	(1,821)	(8,308)
<b>(Loss) income from continuing operations before income taxes</b>	<b>\$ (104,522)</b>	<b>\$ 3,005</b>	<b>\$ (338,015)</b>

The components of the income tax (recovery) expense are as follows:

Years ended October 31	2010	2009	2008
Canadian income tax (recovery) expense			
Current	\$ (9,788)	\$ 2,330	\$ 22,125
Deferred	(6,998)	1,452	(117,000)
Foreign income tax expense (recovery)			
Current	121	10,680	12,775
Deferred	15,491	193	(14,217)
<b>Income tax (recovery) expense</b>	<b>\$ (1,174)</b>	<b>\$ 14,655</b>	<b>\$ (96,317)</b>

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

A reconciliation of expected income taxes to reported income tax expenses is provided below.

<b>Years ended October 31</b>	<b>2010</b>	<b>2009</b>	<b>2008</b>
Expected income tax (recovery) expense at the 30% (2009 – 32%; 2008 – 33%) statutory rate	\$ (31,318)	\$ 962	\$ (111,545)
Increase (decrease) in taxes as a result of:			
Deferred tax recovery on the MAPLE Facilities lease reassessment at lower tax rates	-	-	17,550
Valuation allowance on deferred tax assets	24,970	11,757	-
Other investment write-downs	-	-	2,277
Tax (benefit) liability arising on utilization of R&D tax credits	(11)	1,032	(11,100)
Net changes in reserves for uncertain tax positions <sup>(a)</sup>	(10,217)	3,455	3,854
Foreign earnings taxed at rates different from the statutory rate	956	(1,417)	(1,448)
Stock-based compensation	269	1,277	1,830
Foreign losses not recognized	-	-	1,493
Impact of income tax rate changes	1,065	-	6,325
Deferred tax rate differential	(562)	-	-
Non-deductible foreign exchange losses	6,950	-	-
Provision to previously filed tax returns	4,188	-	-
Impact of non-deductible expenses and other differences	2,536	(2,411)	(5,553)
<b>Reported income tax (recovery) expense</b>	<b>\$ (1,174)</b>	<b>\$ 14,655</b>	<b>\$ (96,317)</b>

(a) Excludes net changes in reserves for uncertain tax positions related to discontinued operations.

### Deferred tax assets and liabilities

Components of the deferred tax assets and liabilities consist of the following temporary differences:

<b>As of October 31</b>	<b>2010</b>	<b>2009</b>
Tax benefit of losses carried forward	\$ 74,790	\$ 11,637
Tax basis in excess of book value	8,955	14,905
Investment tax credits	52,149	31,145
Provisions and reserves	2,054	14,073
Other comprehensive income	6,830	(5,573)
Deferred tax assets before valuation allowance	144,778	66,187
Valuation allowance	(57,948)	(11,637)
<b>Net deferred tax assets</b>	<b>\$ 86,830</b>	<b>\$ 54,550</b>

No deferred income taxes have been provided on undistributed earnings, or relating to cash held in foreign jurisdictions as the Company has estimated that any income or withholding taxes on repatriation would not be significant.

Included within the tax benefit of losses carried forward are deferred tax assets relating to capital losses carried forward for continuing operations of \$41.1 million (2009 – \$2.7 million; 2008 – \$2.4 million). The amount of valuation allowance recorded against these assets is \$41.1 million (2009 – \$2.7 million; 2008 – \$2.4 million).

### Tax losses carried forward

As of October 31, 2010, the Company has deferred tax assets relating to net operating loss carryovers for continuing operations of \$33.7 million (2009 – \$8.9 million; 2008 – \$6.5 million). These tax assets relate to \$121.3 million (2009 – \$29.9 million; 2008 – \$24.0 million) of gross tax loss carryovers from continuing operations. Of the total losses, \$79.3 million (2009 – \$3.6 million; 2008 – \$3.3 million) will expire in various years between 2014 and 2030 with the remaining \$42 million (2009 – \$26.3 million; 2008 – \$20.7 million) being carried forward indefinitely.

### Tax contingencies

At October 31, 2010, the gross reserves for uncertain tax positions excluding accrued interest and penalties were \$7.8 million (2009 – \$45.5 million) as noted in the following reconciliation. The Company estimates that the total amounts of unrecognized tax benefits will decrease by \$2.8 million during the year ended October 31, 2011.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

	2010	2009
Gross unrecognized tax benefits, beginning of year, November 1	\$ 45,539	\$ 29,518
Additions for tax positions from prior year	-	1,407
Reductions for tax positions from prior years	(36,003)	-
Additions for tax positions related to the current year	663	11,614
Reduction for tax positions related to the current year	-	(898)
Reduction for tax positions related to discontinued operations	(4,124)	-
Currency translation adjustment	1,767	3,898
<b>Gross unrecognized tax benefits, end of year, October 31</b>	<b>\$ 7,842</b>	<b>\$ 45,539</b>

The Company accrues an estimate for interest and penalties related to uncertain tax positions in income tax expense. At October 31, 2010, accrued interest and penalties related to uncertain tax positions totaled \$2.7 million (2009 – \$4.2 million).

The Company is subject to taxation in its principal jurisdiction of Canada and in numerous other countries around the world. With few exceptions, the Company is no longer subject to examination by Canadian tax authorities for years prior to 2004. However, most tax returns for 2002 and beyond remain open to examination by various tax authorities.

### 22. Supplementary Cash Flow Information

Items not affecting cash flows comprise the following:

Years ended October 31	2010	2009	2008
Depreciation and amortization	\$ 29,230	\$ 23,631	\$ 25,282
Stock option compensation	2,768	2,736	3,370
Deferred income taxes	8,493	1,645	(131,217)
MAPLE Facilities write-off	-	-	341,000
Impairment of long-lived assets	8,913	-	-
Equity loss (earnings), including cash distribution of \$3,034 (2009 – \$nil; 2008 – \$nil)	3,684	49	(160)
Write-down of investments	-	938	10,654
Loss (gain) on sale of investments	1,054	-	(1,513)
Loss on sale of businesses	-	-	3,869

### 23. Stock-Based Compensation

During the first quarter of fiscal 2010, the closing of the sale of MDS Analytical Technologies (Note 3) triggered a change of control (COC) under the Company's stock-based compensation arrangements, which resulted in all of the outstanding unvested stock options, RSUs and PSUs granted to certain executive officers and other employees immediately becoming fully vested and exercisable. Stock-based compensation related to the COC is reported in restructuring charges and other regular stock-based compensation is reported in selling, general and administration expenses, respectively, in "Loss from continuing operations". Stock-based compensation related to discontinued operations is reported in costs and other expenses in "Loss from discontinued operations, net of income taxes". In accordance with the COC policy, the actual payment for the mid-term incentive plans (MTIP) and the RSU awards is based on the average closing price of the Common shares for the five trading days up to and including the date of vesting.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### Stock option plan

At the Company's annual and Special Meeting of Shareholders held on March 8, 2007, shareholders approved the Company's 2007 Stock Option Plan (the Plan), which replaced the Company's 2006 Stock Option Plan. Under the Plan, which conforms to all current regulations of the New York and Toronto stock exchanges, the Company may issue shares on the exercise of stock options granted to eligible employees, officers, directors and persons providing on-going management or consulting services to the Company. The exercise price of stock options issued under the Plan equals the market price of the underlying shares on the date of the grant. All options issued under the Plan are granted and priced on the date on which approval by the Board of Directors of the Company is obtained or a later date set by the Board of Directors in its approval. All options granted after January 29, 2010 vest evenly over three years and have a term of seven years. As of October 31, 2010, 10,887,310 Common shares have been reserved for issuance under the Plan.

During fiscal 2010, the Company granted 1,174,000 C\$ stock options at an average exercise price of C\$9.66, which vest 100% after three years from the grant date and have a seven-year term.

Stock-based compensation expense related to the Company's stock option plan for the year ended October 31, 2010 is \$3.5 million (2009 – \$4.0 million; 2008 – \$5.0 million), of which \$0.2 million (2009 – \$2.8 million; 2008 – \$3.3 million) is included in selling, general and administration expenses and \$2.5 million (2009 – \$nil; 2008 – \$nil) is in restructuring charges (Note 19), respectively, in "Loss from continuing operations", and \$0.8 million (2009 – \$1.2 million; 2008 – \$1.7 million) is included in costs and other expenses in "Loss from discontinued operations, net of income taxes" (Note 3).

<b>Exercisable as at October 31, 2010</b>	<b>802</b>	<b>\$ 15.88</b>	<b>4.6</b>	<b>\$ 15</b>

United States dollar options outstanding as of October 31, 2010 comprise the following:

Range of Exercise Prices (US\$)	Weighted Average Remaining Contractual Life (Years)	Options Outstanding		Options Exercisable	
		Number (000s)	Weighted Average Exercise Price (US\$)	Number (000s)	Weighted Average Exercise Price (US\$)
\$6.13 - \$6.15	5.13	3	\$ 6.15	3	\$ 6.15
\$14.35 - \$17.74	4.61	799	15.92	799	15.92
	4.61	802	\$ 15.88	802	\$ 15.88

The Company utilizes the Black-Scholes option valuation model to estimate the fair value of the options granted based on the following assumptions:

	2010	2009	2008
Risk-free interest rate	2.1%	1.7%	3.6%
Expected dividend yield	0.0%	0.0%	0.0%
Expected volatility	0.365	0.311	0.231
Expected time until exercise (years)	3.64	4.20	4.40

The weighted average fair values of options granted are estimated to be C\$2.91 per Common share in fiscal 2010, US\$1.47 per Common share in fiscal 2009, and C\$4.51 and US\$4.13, respectively, per Common share in fiscal 2008.

The Black-Scholes option valuation model used by the Company to determine fair values was developed for use in estimating the fair value of freely traded options that are fully transferable and have no vesting restrictions. This model requires the use of assumptions, including future stock price volatility and expected time until exercise. The Company uses historical volatility to estimate its future stock price volatility. The expected time until exercise is based upon the contractual term, taking into account expected employee exercise and expected post-vesting employment termination behavior.

The following table summarizes the intrinsic value of options exercised and the fair values of shares vested:

	2010		2009		2008
Aggregate intrinsic value of options exercised	C\$	-	C\$	-	C\$ 854
	US\$	62	US\$	-	US\$ -
Aggregate grant-date fair value of shares vested	C\$	5,920	C\$	3,657	C\$ 5,475
	US\$	4,518	US\$	1,566	US\$ -

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

As of October 31, 2010, the total remaining unrecognized compensation expense related to non-vested stock options amounted to approximately C\$2.7 million and US\$nil, which will be amortized over the weighted average remaining requisite service period of approximately 32 months and nil months, respectively, for the C\$ and US\$ stock options.

### Incentive plans

During fiscal 2010, all of the outstanding PSUs under the MTIP accelerated and fully vested pursuant to the COC policy. As of October 31, 2010, there are no outstanding PSUs.

The Company records the costs of its MTIP plans at fair value based on assumptions that are consistent with those used to determine the fair value of stock option compensation. The table below shows the liability and expense related to the MTIP plans of the Company. There is no 2010 MTIP.

Liability <sup>(a)</sup>	As of October 31	
	2010	2009
2006 Plan	\$ 930	\$ 1,147
2007 Plan	-	-
2008 Plan	-	-
2009 Plan	-	-
<b>Total</b>	<b>\$ 930</b>	<b>\$ 1,147</b>

Expense (Income) <sup>(b)</sup>	Years ended October 31		
	2010	2009	2008
2006 Plan	\$ (28)	\$ -	\$ (6,773)
2007 Plan	-	-	(2,980)
2008 Plan	3,988	(2,256)	1,739
2009 Plan	6,101	-	-
<b>Total</b>	<b>\$ 10,061</b>	<b>\$ (2,256)</b>	<b>\$ (8,014)</b>

(a) The MTIP liability is included in the employee-related accruals in accrued liabilities in the consolidated statements of financial position (Note 12).

(b) The MTIP expense (income) for the year ended October 31, 2010 is \$10.1 million (2009 — \$(2.3) million; 2008 — \$(8.0) million), of which \$nil (2009 — \$(1.1) million; 2008 — \$(2.7) million) is included in selling, general and administration expenses and \$5.6 million (2009 — \$nil; 2008 — \$nil) is included in restructuring charges (Note 19), respectively, in "Loss from continuing operations", and \$4.5 million (2009 — \$(1.2) million; 2008 — \$(5.3) million) is included in costs and other expenses in "Loss from discontinued operations, net of income taxes" (Note 3).

### Restricted stock units

The Company periodically grants time-based RSUs to certain employees. Outstanding RSUs are strictly time-based and vest at the end of the restriction period, which can be settled in cash or shares. Payout will be made within 60 days of the vesting date. During the first quarter of fiscal 2010, all of the 707,000 outstanding RSUs vested, of which 437,000 RSUs accelerated and fully vested pursuant to the COC policy. As of October 31, 2010, there are no outstanding RSUs.

The Company records the liability and expense relating to RSUs based on the market value of its Common shares. The RSU liability as of October 31, 2010 is \$nil (October 31, 2009 — \$3.3 million), which is included in the employee-related accruals in accrued liabilities in the consolidated statements of financial position (Note 12).

RSU expense for the year ended October 31, 2010 is \$2.1 million (2009 — \$2.8 million; 2008 — \$0.5 million) of which \$nil (2009 — \$1.2 million; 2008 — \$0.2 million) is included in selling, general and administration expenses and \$0.8 million (2009 — \$nil; 2008 — \$nil) is included in restructuring charges (Note 19), respectively, in "Loss from continuing operations", and \$1.3 million (2009 — \$1.6 million; 2008 — \$0.3 million) is included in costs and other expenses in "Loss from discontinued operations, net of income taxes" (Note 3).

## 24. Employee Benefits

The Company sponsors various post-employment benefit plans including defined benefit and contribution pension plans, retirement compensation arrangements, and plans that provide extended health care coverage to retired employees.

### Defined benefit pension plans

The Company sponsors three defined benefit pension plans for certain employees in Canada, Belgium, and the U.S.. The Canadian plan is based on the highest three or six average consecutive years of wages and requires employee contributions. The Belgium plan is based on the average of the last five yearly salaries and also requires employee contributions. The U.S. plan is based on the participants' 60 highest

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

consecutive months of compensation and their years of service. The pension plan in the U.S. is related to MDS Pharma Services and the Company has retained this pension plan subsequent to the sale of Early Stage.

All plans are funded and the Company uses an October 31<sup>st</sup> measurement date for its plans. The most recent actuarial valuations of the majority of the pension plans for funding purposes were as of January 1, 2010. Based on these actuarial valuations, the Company expects to have annual funding requirements of approximately \$4 million to \$5 million in each of the next five years, with aggregate estimated contributions of approximately \$23 million. The actual funding requirements over the five-year period will be dependent on subsequent annual actuarial valuations. These amounts are estimates, which may change with actual investment performance, changes in interest rates, any pertinent changes in government regulations, and any voluntary contributions.

The components of net periodic pension cost for these plans for fiscal 2010, 2009 and 2008 are as follows:

Year ended October 31	Domestic Plan			International Plans		
	2010	2009	2008	2010	2009	2008
Components of net periodic pension cost						
Service cost	\$ 1,980	\$ 1,352	\$ 3,006	\$ 105	\$ 196	\$ 311
Interest cost	12,045	10,291	11,119	875	734	821
Expected return on plan assets	(15,579)	(13,215)	(14,835)	(785)	(676)	(974)
Recognized actuarial (gain) loss	-	(961)	-	344	198	149
Curtailment gain	-	-	(699)	-	-	-
<b>Net periodic pension cost <sup>(a)</sup></b>	<b>\$ (1,554)</b>	<b>\$ (2,533)</b>	<b>\$ (1,409)</b>	<b>\$ 539</b>	<b>\$ 452</b>	<b>\$ 307</b>

(a) Excludes the net periodic benefit cost related to discontinued operations of \$nil (2009 — \$0.7 million; 2008 — \$0.3 million) for the year ended October 31, 2010.

The following weighted average assumptions are used in the determination of the net periodic benefit cost and the projected benefit obligation:

	Domestic Plan			International Plans		
	2010	2009	2008	2010	2009	2008
<b>Projected benefit obligation</b>						
Discount rate	5.40%	6.50%	7.25%	4.97%	4.60%	5.45%
Expected return on plan assets	6.50%	6.90%	6.75%	6.92%	6.11%	5.74%
Rate of compensation increase	3.50%	3.75%	3.75%	3.00%	4.00%	4.28%
<b>Benefit cost</b>						
Discount rate	6.50%	7.25%	5.80%	5.35%	5.94%	4.74%
Expected return on plan assets	6.90%	6.75%	6.75%	6.92%	6.28%	5.74%
Rate of compensation increase	3.75%	3.75%	3.75%	4.10%	4.32%	3.85%

Discount rate assumptions have been, and continue to be, based on the prevailing long-term, market interest rates at the measurement date.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

The changes in the projected benefit obligation, fair value of plan assets, and the funded status of the plans are as follows:

As of October 31	Domestic Plan		International Plans	
	2010	2009	2010	2009
Change in projected benefit obligation				
Projected benefit obligation, beginning of year	\$ 178,296	\$ 138,531	\$ 13,021	\$ 9,872
Service cost - pension	3,135	2,373	1,006	213
Interest cost	12,045	10,291	875	795
Benefits paid	(7,661)	(7,547)	(819)	(358)
Actuarial loss	18,124	17,141	4,663	2,499
Curtailment gain <sup>(a)</sup>	-	-	(1,957)	-
Foreign currency exchange rate changes	11,228	17,507	(751)	-
<b>Projected benefit obligation, end of year</b>	<b>215,167</b>	<b>178,296</b>	<b>16,038</b>	<b>13,021</b>
Change in fair value of plan assets				
Fair value of plan assets, beginning of year	191,867	163,551	8,184	8,539
Actual return on plan assets	20,594	14,119	3,826	(136)
Benefits paid	(7,661)	(7,547)	(819)	(358)
Employer contributions	6,222	542	231	139
Employee contributions	1,133	1,045	32	-
Foreign currency exchange rate changes	11,956	20,157	74	-
<b>Fair value of plan assets, end of year</b>	<b>224,111</b>	<b>191,867</b>	<b>11,528</b>	<b>8,184</b>
<b>Funded status – over/(under) at end of year</b>	<b>\$ 8,944</b>	<b>\$ 13,571</b>	<b>\$ (4,510)</b>	<b>\$ (4,837)</b>

(a) On March 5, 2010, the Company completed the sale of Early Stage (Note 3), which resulted in the termination of employees' services earlier than expected in the U.S. plan. A curtailment gain of \$2.0 million is recorded for the year ended October 31, 2010, which is included in "Total comprehensive loss" in the consolidated statements of shareholders' equity and comprehensive loss and reduces the projected benefit obligation by \$2.0 million as of October 31, 2010.

The funded status, measured as the difference between the fair value of plan assets and the projected benefit obligation, for the Canadian plan is included in other long-term assets (Note 9) and the funded status of the U.S. plan and the Belgium plan are included in other long-term liabilities (Note 15) in the consolidated statements of financial position.

A reconciliation of the funded status to the net plan assets (liabilities) recognized in the consolidated statements of financial position is as follows:

As of October 31	Domestic Plan		International Plans	
	2010	2009	2010	2009
Projected benefit obligation	\$ 215,167	\$ 178,296	\$ 16,038	\$ 13,021
Fair value of plan assets	224,111	191,867	11,528	8,184
Plan assets in excess of (less than) projected benefit obligation	8,944	13,571	(4,510)	(4,837)
Unrecognized net actuarial loss	22,635	9,505	5,891	6,554
<b>Net amount recognized at year end</b>	<b>\$ 31,579</b>	<b>\$ 23,076</b>	<b>\$ 1,381</b>	<b>\$ 1,717</b>
Long-term pension plan assets	\$ 8,944	\$ 13,571	\$ -	\$ -
Non-current liabilities	-	-	(4,510)	(4,837)
Accumulative other comprehensive loss	22,635	9,505	5,891	6,554
<b>Net amount recognized at year end</b>	<b>\$ 31,579</b>	<b>\$ 23,076</b>	<b>\$ 1,381</b>	<b>\$ 1,717</b>

The following table illustrates the amounts in accumulated other comprehensive income that have not yet been recognized as components of pension expense:

As of October 31	2010	2009
Net actuarial loss	\$ 28,526	\$ 16,059
Deferred income taxes	(6,992)	(5,042)
<b>Accumulated other comprehensive loss - net of tax</b>	<b>\$ 21,534</b>	<b>\$ 11,017</b>

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

The weighted average asset allocation of the Company's pension plans is as follows:

Asset Category	Target	Domestic Plan		International Plans	
		2010	2009	2010	2009
Cash	0.0%	0.1%	-	0.5%	48.5%
Fixed income	44.0%	44.9%	39.6%	22.8%	18.2%
Equities	56.0%	55.0%	60.4%	49.8%	33.3%
Other <sup>(a)</sup>		-	-	26.9%	-
Total	100.0%	100.0%	100.0%	100.0%	100.0%

(a) Other asset category represents insurance contracts for the Company's defined benefit pension plan in Belgium.

The Company maintains target allocation percentages among various asset classes based on investment policies established for the pension plans, which are designed to maximize the total rate of return (income and appreciation) after inflation, within the limits of prudent risk taking, while providing for adequate near-term liquidity for benefit payments. The Company's expected return on asset assumptions are derived from studies conducted by actuaries and investment advisors. The studies include a review of anticipated future long-term performance of individual asset classes and consideration of the appropriate asset allocation strategy given the anticipated requirements of the plans to determine the average rate of earnings expected on the funds invested to provide for the pension plans benefits. While the study gives appropriate consideration to recent fund performance and historical returns, the assumption is primarily a long-term, prospective rate.

The following table provides a basis of fair value measurement for plan assets held by the Company's pension plans that are measured at fair value on a recurring basis. See also the discussion of fair value hierarchy in Note 18.

As of October 31, 2010	Level 1		Level 2		Level 3		Total
Cash and cash equivalents	\$	275	\$	-	\$	-	275
Debt securities		-		103,377		-	103,377
Equity securities		-		129,286		-	129,286
Other		-		-		2,701	2,701
Total	\$	275	\$	232,663	\$	2,701	\$ 235,639

Expected future benefit payments are as follows:

Years ended October 31	Domestic Plan		International Plans	
2011	\$	8,060	\$	533
2012		8,552		557
2013		9,161		602
2014		9,728		864
2015		10,411		834
2016 – 2020		60,676		5,533
	\$	106,588	\$	8,923

### Other benefit Plans

Other benefit plans include a supplemental retirement arrangement, a retirement/termination allowance and post-retirement benefit plans, which include contributory health and dental care benefits and contributory life insurance coverage. All non-pension post-employment benefit plans are unfunded.

The components of net periodic cost for these plans are as follows:

Years ended October 31	2010		2009		2008
Components of net periodic cost					
Current service cost	\$	276	\$	162	\$ 304
Interest cost		790		734	888
Recognized actuarial loss (gain)		348		(416)	(39)
Recognized past service cost		(48)		(42)	(56)
Curtailment gain recognized		(486)		-	(1,055)
Net periodic cost <sup>(a)</sup>	\$	880	\$	438	\$ 42

(a) Excludes the net periodic cost related to discontinued operations of \$nil (2009 — \$0.2 million; 2008 — \$nil) for the year ended October 31, 2010.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

The weighted average assumptions used to determine the net periodic pension cost and projected benefit obligation for these plans are as follows:

	2010	2009	2008
<b>Projected benefit obligation</b>			
Discount rate	5.13%	6.09%	7.15%
Rate of compensation increase	3.96%	4.12%	4.13%
Initial health care cost trend rate	9.10%	9.12%	8.84%
Ultimate health care cost trend rate	4.50%	4.85%	4.84%
Years until ultimate trend rate is reached	11	13	9
<b>Benefit cost</b>			
Discount rate	6.08%	7.15%	5.70%
Rate of compensation increase	4.05%	4.12%	4.13%

Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage point change in assumed health care cost trend rates would have had the following impact in fiscal 2010:

	1% Increase	1% Decrease
Change in net benefit cost	\$ 86	\$ (71)
Change in projected benefit obligation	\$ 1,330	\$ (1,099)

The changes in the projected benefit obligation and the funded status of the plans are as follows:

As of October 31	2010	2009
Change in projected benefit obligation		
Projected benefit obligation – beginning of year	\$ 12,801	\$ 10,157
Service cost	404	162
Interest cost	662	734
Benefits paid	(924)	(538)
Actuarial loss	1,992	1,023
Curtailment gain	(487)	-
Foreign currency exchange rate changes	803	1,263
<b>Projected benefit obligation – end of year</b>	<b>\$ 15,251</b>	<b>12,801</b>
<b>Funded status – under at end of year</b>	<b>\$ (15,251)</b>	<b>\$ (12,801)</b>

A reconciliation of the funded status to the net plan liabilities recognized in the consolidated statements of financial position is as follows:

As of October 31	2010	2009
Projected benefit obligation	\$ 15,251	\$ 12,801
Fair value of plan assets	-	-
Plan assets less than projected benefit obligation	(15,251)	(12,801)
Unrecognized past service costs	(1,135)	(2,589)
Unrecognized actuarial gains	-	(325)
<b>Net amount recognized at year end</b>	<b>\$ (16,386)</b>	<b>\$ (15,715)</b>
Non-current liabilities	\$ (15,251)	\$ (12,801)
Accumulative other comprehensive income	(1,135)	(2,914)
<b>Net amount recognized at year end</b>	<b>\$ (16,386)</b>	<b>\$ (15,715)</b>

The other benefit plan liabilities related to continuing operations are included within other long-term liabilities (Note 15). The other benefit plan liabilities related to discontinued operations as of October 31, 2010 of \$nil (2009 – \$1.0 million) are included in liabilities of discontinued operations on the consolidated statements of financial position (Note 3).

As of October 31, 2010, the unrecognized actuarial gains and past service costs of \$1.1 million (2009 – \$2.8 million), net of tax of \$0.3 million (2009 – \$(0.7) million) are included in accumulated other comprehensive income.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

Based on the actuarial assumptions used to develop the Company's benefit obligations as of October 31, 2010, the following benefit payments are expected to be made to plan participants:

### Years ended October 31

2011	\$	995
2012		1,019
2013		981
2014		1,035
2015		1,099
2016 – 2020		5,606
<b>Total</b>	<b>\$</b>	<b>10,735</b>

During fiscal 2011, the Company expects to contribute approximately \$8 million and \$1 million to the Company's pension plans and other benefit plans, respectively.

During fiscal 2010, the Company contributed \$3.5 million to defined contribution pension plans on behalf of its employees (2009 – \$7.6 million; 2008 – \$8.8 million).

### 25. Segmented Information

In accordance with ASC 280, "*Segment Reporting*", the Company discloses financial and descriptive information about its reportable operating segments. Operating segments are components of an enterprise about which separate financial information is available and is regularly evaluated by the Company's chief operating decision maker (CODM) in assessing performance and deciding how to allocate resources.

During fiscal years 2009 and 2010, the Company sold MDS Pharma Services and MDS Analytical Technologies. As a result, MDS Pharma Services and MDS Analytical Technologies have been reported in discontinued operations in the consolidated financial statements for all periods presented herein (Note 3) and have appropriately been excluded from the following segment disclosures.

The Company's remaining operations consist of the Nordion business and related corporate and public-company activities. The Company concluded its strategic repositioning in 2010 and management redefined its business segments to align with the way the CODM now evaluates separate financial information for purposes of assessing performance and deciding how to allocate resources. As discussed in Note 1, Nordion operates as a global life sciences company with three business segments: Medical Isotopes, Targeted Therapies and Sterilization Technologies. These segments are organized predominantly around the products and services provided to customers identified for the businesses. Segmented information has been restated for prior years to conform to the new basis of segmentation.

The accounting policies of the segments are the same as those described in the summary of significant accounting policies. There are no significant inter-segment transactions. Segmented earnings are computed by accumulating the segment's operating income, interest costs, other expenses and foreign exchange translations. The corporate segment results include the incremental cost of corporate overhead in excess of the amount allocated to the other operating segments, as well as certain other costs and income items that do not pertain to a business segment. Management does not track or allocate assets on a business segment basis. Accordingly, assets and additions to assets are not disclosed on a business segment basis in the following financial information. Related expenses, such as depreciation, are allocated to each segment and reported appropriately herein.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

The information presented below is for continuing operations.

### Operating results

	Year ended October 31, 2010

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

Revenues by geographic location are summarized below:

Years ended October 31		Canada		US		Europe		Other		Total	
	2010	\$	6,857	\$	137,054	\$	37,103	\$	59,338	\$	240,352
	2009		6,772		127,556		31,493		65,442		231,263
	2008		10,384		169,083		35,737		81,030		296,234

Property, plant and equipment by geographic location and additions are summarized below:

			Total		Additions
Canada	2010	\$	110,274	\$	7,277
	2009		120,668		8,895
Europe	2010	\$	1,390	\$	362
	2009		9,983		1,088
Total	2010	\$	111,664	\$	7,639
	2009		130,651		9,983

All of the goodwill of the Company is carried in Canada, and is allocated to Medical Isotopes \$0.9 million and Sterilization Technologies \$1.6 million.

### Significant customers

For the year ended October 31, 2010, one major customer in Medical Isotopes segment accounted for \$20.6 million or 9% (2009 – \$38.4 million or 17%; 2008 – \$53.4 million or 18%) of the Company's revenues.

## 26. Commitments and Contingencies

### Leases and other commitments

The Company is obligated under non-cancelable operating leases, primarily for its offices and equipment. These leases generally contain customary scheduled rent increases or escalation clauses and renewal options.

The Company is also obligated under outsourcing agreements related to certain aspects of its information technology and human resources support functions. Actual amounts paid under these outsourcing agreements could be higher or lower than the amounts shown below as a result of changes in volume and other variables. In addition, early termination of these outsourcing agreements by the Company could result in the payment of termination fees, which are not reflected in the table below.

As of October 31, 2010, the Company is obligated under non-cancelable operating leases, primarily for its premises and equipment leases and other long-term contractual commitments to make minimum annual payments of approximately:

	Operating Leases	Other Contractual Commitments
2011	\$ 4,804	\$ 45,895
2012	3,723	47,507
2013	3,066	82,597
2014	2,036	111,771
2015	1,878	102,965
Thereafter	7,125	574,979
	\$ 22,632	\$ 965,714

Net rental expense for premises and equipment leases for the year ended October 31, 2010 was \$16.6 million (2009 – \$19.9 million; 2008 – \$24.8 million).

### Contractual commitments

Included in other contractual commitments is over \$900 million associated with long-term supply arrangements primarily with domestic and international suppliers of isotopes. Other contractual commitments also include a \$5.4 million (2009 – \$18.8 million) relating to the outsourcing of the information technology infrastructure. The terms of these long-term supply or service arrangements range from 1 to 14 years. The amounts purchased under these contractual commitments for the year ended October 31, 2010 are \$47.3 million (2009 – \$56.3 million; 2008 – \$45.4 million).

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

Net sales of certain products of the Company are subject to royalties payable to third parties. Royalty expense recorded in direct cost of revenues for the year ended October 31, 2010 amounted to \$3.6 million (2009 – \$5.8 million; 2008 – \$2.7 million).

### **Captive insurance liability**

The Company is self-insured for up to the first \$5 million of costs incurred relating to a single liability claim in a year and to \$10 million in aggregate claims arising during an annual policy period. The Company provides for unsettled reported losses and losses incurred but not reported based on an independent review of all claims made against the Company. Accruals for estimated losses related to captive insurance are \$10.3 million as of October 31, 2010 (2009 – \$5.9 million).

### **Retained liabilities related to Early Stage**

Subsequent to the sale of Early Stage, Nordion has retained litigation claims and other costs associated with the U.S. FDA's review of the Company's bioanalytical operations (Note 12) and certain other contingent liabilities in Montreal, Canada. Nordion has also retained certain liabilities related to pre-closing matters, a defined benefit pension plan for certain U.S. employees, and lease obligations for the Montreal facility as well as two office locations in King of Prussia, Pennsylvania and Bothell, Washington. The cost of future lease payments offset by expected sublease revenue, where applicable, is estimated at approximately \$5 million.

### **Indemnities and guarantees**

In connection with various divestitures that the Company underwent (Note 3), Nordion has agreed to indemnify various buyers for actual future damage suffered by the buyers related to breaches, by Nordion, of representations and warranties contained in the purchase agreements. In addition, Nordion has retained certain existing and potential liabilities arising in connection with such operations related to periods prior to the closings. To mitigate the Nordion's exposure to certain of these potential liabilities, the Company maintains errors and omissions and other insurance. Nordion is not able to make a reasonable estimate of the maximum potential amount that the Company could be required to pay under these indemnities. The Company has not made any significant payments under these types of indemnity obligations in the past, however the Company has had early discussions with buyers related to certain indemnities provided.

### **27. Litigation**

During fiscal 2009, the Company was served with a Complaint related to repeat study and mitigation costs of \$10 million and lost profits of \$70 million. This action relates to certain bioequivalence studies carried out at the Company's Montreal, Canada facility from January 1, 2000 to December 31, 2004. The Company maintains reserves in respect of study costs as well as errors and omissions insurance. Nordion has assessed this claim and amounts related to the direct costs associated with the repeat study costs have been provided for in the FDA provision (Note 12). No specific provision has been recorded related to the claim for lost profit, other than insurance deductible liabilities included in accrued liabilities. The Company has filed an Answer and intends to vigorously defend this action.

During fiscal 2009, the Company was served with a Statement of Claim related to repeat study and mitigation costs of \$5 million (C\$5 million) and loss of profit of \$29 million (C\$30 million). This action relates to certain bioequivalence studies carried out at the Company's Montreal, Canada facility from January 1, 2000 to December 31, 2004. The Company maintains reserves in respect of study costs as well as errors and omissions insurance. Nordion has assessed this claim and amounts related to the direct costs associated with the repeat study costs have been provided for in the FDA provision (Note 12). No specific provision has been recorded related to the claim for lost profit, other than insurance deductible liabilities included in accrued liabilities. The Company has filed a Statement of Defence and intends to vigorously defend this action.

During fiscal 2008, Nordion served AECL with notice of arbitration proceedings seeking an order to compel AECL to fulfill its contractual obligations under an agreement entered into with AECL in February 2006 (the 2006 Agreement) to complete the MAPLE Facilities and, in the alternative and in addition to such order, seeking significant monetary damages. Nordion concurrently filed a court claim against AECL and the Government of Canada. In this lawsuit, Nordion is seeking against AECL (i) damages in the amount of \$1.6 billion (C\$1.6 billion) for negligence and breach of contract relating to an agreement entered into with AECL in August 1996; and (ii) interim, interlocutory and final orders directing AECL to continue to supply radioisotopes under a certain agreement, i.e., the 2006 Agreement, pending any final judgment and completion of the MAPLE Facilities; and, against the Government of Canada, Nordion is seeking (i) damages in the amount of \$1.6 billion (C\$1.6 billion) for inducing breach of contract and interference with economic relations in respect to the 2006 Agreement; (ii) an order that Nordion may set-off the damages owing to it by the Government of Canada as a result of the Government's conduct set out herein against any amounts owing by Nordion to the Government of Canada under the Fair Debt Collection Practices Act (FDCPA); and (iii) an interim and interlocutory order suspending any payments that may be owing to the Government of Canada under the FDCFA pending the determination of the issues in this litigation and an interim or interlocutory order requiring the return of all security instruments delivered in connection with the FDCFA. Nordion's current emphasis is on the arbitration proceedings. Hearings for the arbitration are expected to continue into the second half of fiscal 2011. The Company expects a decision from the panel thereafter.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

[All amounts in thousands of U.S. dollars, except where noted]

### 28. Asset Retirement Obligation (ARO)

During the fourth quarter of fiscal 2009, given the prolonged shutdown of National Research Universal (NRU) reactor, the Company reviewed the timing of incurring future site remediation costs of the facility located in Kanata, Ontario, and established \$4.5 million of ARO.

During the fourth quarter of fiscal 2010, the Company reassessed cost estimates and other assumptions used in the valuation of ARO based on new information available and changes in circumstances including regulatory requirements and established \$5.5 million and \$1.1 million of additional AROs for its facilities in Kanata, Ontario and Fleurus, Belgium, respectively.

The Company's Kanata and Fleurus AROs represent the present value of future remediation costs and are recorded in other long-term liabilities (Note 15) and accrued liabilities (Note 12), respectively, and increased the carrying amounts of the related assets in property, plant and equipment, net in the consolidated statements of financial position. The capitalized future site remediation costs are depreciated and the AROs are accreted over the life of the related assets.

The fair value of the AROs is determined based on estimates. Considerable management judgment is required in estimating these obligations. The key assumptions include credit adjusted risk free interest rate, timing and the estimate of the remediation activities. Changes in these assumptions based on future information may result in adjustments to the estimated obligations over time.

A reconciliation of the AROs for the years ended October 31, 2010 and 2009 is as follows:

As of October 31	2010	2009
Asset retirement obligation – beginning of year	\$ 4,669	\$ 152
Liability incurred	-	4,474
Liability settled	-	-
Incremental ARO	6,600	-
Accretion expense	675	43
<b>Asset retirement obligation – end of year</b>	<b>\$ 11,944</b>	<b>\$ 4,669</b>

The Company has pledged a \$15.1 million (2009 – \$14.2 million) letter of credit in support of future site remediation costs for the Kanata, Ontario facility.

### 29. Subsequent Events

On December 2, 2010, the Company announced that it intends to sell MDS Nordion S.A. in Fleurus, Belgium. The Company signed a non-binding letter of agreement with a potential buyer for the divestiture of its Belgium operations, which currently support four lines of business including Agiris (non-destructive testing equipment and sources); GlucoTrace (FDG imaging agent); TheraSphere (targeted liver cancer radiotherapeutic); and Radiochemical business (generic cyclotron and reactor isotopes). The proposed divestiture transaction is expected to include three lines of business excluding the TheraSphere business, which will be retained by Nordion. The proceeds received for the divested operations are expected to be nominal and the Company may be required to leave sufficient working capital in the business to support its operations through an initial transition period.

In the first quarter of fiscal 2011, the Company expects to report the net assets of MDS Nordion S.A. at the lower of their carrying value or fair value less costs to sell as "Assets held for sale" in the consolidated statements of financial position and report the results of operations of MDS Nordion S.A. as "Discontinued operations, net of income taxes" in the consolidated statements of operations. As required of discontinued operations accounting, the Company will be assessing the fair value of the MDS Nordion S.A. operation, which may result in the Company incurring a write-down of assets.

### 30. Comparative Figures

Certain figures for the prior years have been reclassified to conform to the current year's consolidated financial statements presentation.
