Enclosures: ANGLOGOLD REPORT FOR THE QUARTER AND SIX MONTHS ENDED 30 JUNE 2003,
PREPARED IN ACCORDANCE WITH INTERNATIONAL FINANCIAL REPORTING STANDARDS (IFRS)

Report

for the quarter and six months ended 30 June 2003

Group results for the quarter ...

- ◆ Operating profit¹ down 4% to \$140m and total cash costs up 6% to \$223/oz, due to stronger currencies against the US dollar in operating regions
- ◆ Operations steady, with higher volume mined offsetting lower grades – Production increased 2% to 1.43Moz
- ◆ Received gold price² up 3% to \$354/oz
- ◆ Further 7% reduction in hedge book to 8.73Moz

... and for the six months

- ◆ Headline earnings³ down 20% to \$140m or 63 US cents per share
- ◆ Lower grades and stronger currencies reduced operating profit to \$286m and increased total cash costs to \$217/oz
- ◆ Gold production slightly higher at 2.84Moz
- ◆ Interim dividend declared at R3.75 or 51 US cents per share

Letter from Chairman and CEO

Russell Edey
Chairman

Bobby Godsell
Chief Executive Officer

Dear Shareholder

AngloGold has, for a second successive quarter, produced results which are operationally sound, with gold production 2% higher, despite the expected lower grades at many of the operations. Again this quarter, as we anticipated in our report for the first three months of 2003, the company's results were adversely affected by local currency strength in seven of the eight countries in which we do business - total cash costs rose 6% to \$223/oz and operating profit was 4% lower at \$140m. Headline earnings were 11% down, to \$66m for the quarter.

The effects of the lower grade and stronger currencies were moderated by a higher received price for gold, which was 3% higher, at \$354/oz, despite the marginal decline in the average spot gold price for the quarter. Going forward, we expect the company's prudent management of its hedge book, which declined by a further 610,000 oz this quarter, to ensure that the price we receive for gold will continue to be close to the dollar spot price. The Board has decided to change the targeted level of hedging commitments from 50% to 30% of five years' production. It was also confirmed that management would continue to have the latitude to put new contracts in place where circumstances make this prudent.

We were disappointed with the company's safety performance during the quarter, as reflected in both our fatal accident and lost time injury frequencies. Workplace safety remains a priority and operating management has measures in place to improve our performance in this critical area.

Looking ahead to the operations for the rest of the year, we expect performance to improve as the grade at Geita

strengthens and production levels at CC&V increase during the third and fourth quarters.

This year's biennial wage negotiations for our South African operations have now been completed. The agreement will have the effect of increasing employment costs at these operations by approximately 10% per annum, including the provisions for increased leave and employer contributions to retirement funding. It remains management's commitment, as in previous years to ensure that this increase does not lead to a material increase in unit labour costs on AngloGold's South African operations, through continuing productivity improvement programmes, which have seen individual employee productivity improve by 18% over the last five years.

We understand that Ashanti Goldfields has been advised by the Government of Ghana that it has appointed a consortium led by Société Générale to act as advisors to the government as a shareholder, holder of the golden share in Ashanti and as a regulator of the mining industry in Ghana, and to assist the Government in arriving at a decision on the proposed merger of Ashanti and AngloGold.

As we note elsewhere in this report, AngloGold and our partners in the Jerritt Canyon joint venture, Meridian Gold, have concluded the sale of Jerritt Canyon to Queenstake Resources. With the consequent rationalising of AngloGold's regional activities, our offices in Denver are being rightsized. Jim Komadina, who had the position of President, AngloGold North America, has left the company. We take this opportunity to thank Jim for his contribution to AngloGold and wish him well in the future.

AngloGold has declared an interim dividend of 375 South African cents per share, or 51 US cents per share¹ (the interim dividend paid in 2002 was 675 South African cents per share, or 63.8 US cents per share). This level of dividend is consistent with AngloGold's established practice of paying out a significant proportion of its earnings to shareholders, after providing for its organic growth objectives.

Russell Edey
Chairman
30 July 2003

Bobby Godsell
Chief Executive Officer

Financial and Operating Review

Overview of the quarter

Gold production increased by 32,000oz, or 2%, during the quarter, with higher production from the South African, East & West African and North American operations. Anticipated lower grades at some operations were more than offset by higher volumes. The gold price received increased by \$10/oz despite a \$6/oz reduction in the spot price. However, as was the case in the first quarter this year, the stronger currencies in South Africa – where the rand firmed by 7% over the period – South America, Australia and Mali, resulted in a 6% increase in total cash costs to \$223/oz. This more than offset the higher production and gold price, reducing operating profit by \$6m, or 4%, in comparison with the March quarter to \$140m.

The lower operating profit together with exchange losses of \$6m reduced headline earnings for the quarter by 11% to \$66m or 30 US cents per share.

Returns on capital and equity decreased from 11% to 10% and from 14% to 12% respectively, primarily due to stronger local currencies.

The board has approved capital expenditure on two organic growth projects which have been referred to in previous quarterly reports. Approval has been given for the R1.2bn projects at TauTona – two VCR and one CLR extension. These will deliver 1.8Moz over the next ten years. In addition, A\$87m has been set aside for the underground feasibility study at Sunrise Dam. This cost will be more than offset by revenue generated from the 300,000oz produced, from the trial mining that will form part of this study.

AngloGold's net hedge position at the end of the quarter was 8.73Moz – 610,000oz or 7% less than its net hedged position at the end of the first quarter this year, reflecting the company's continued strategy of reducing the hedge book in the context of a sustained stronger dollar gold price. AngloGold will continue to manage its forward sales position to ensure that the price received tracks the dollar spot price.

Overview of the half-year

Although gold production for the first half of 2003 was marginally higher than for the corresponding period last year at 2.84Moz, it was at a lower grade, primarily at Geita, and at Great Noligwa. This together with stronger currencies, increased total cash costs by \$61/oz to \$217/oz. The \$53/oz increase in the received price of gold to \$349/oz was not sufficient to offset the increased costs and operating profit also decreased by 7% to \$286m. Higher corporate and exploration costs and increased effective tax rates resulted in headline earnings for this period decreasing by 20% to \$140m, or 63 US cents per share.

Operating results for the quarter

South Africa

Great Noligwa's gold production was up by 8% or 389kg (14,000oz) due to an additional 5% or 5,000m² mined and despite a 3% decrease in yield to 10.06g/t. Grades are expected to increase only slightly above this level during the second half of 2003. Total cash costs at R53,096/kg (\$214/oz) were 3% lower than those of the previous quarter. Treatment costs were higher owing to the additional tons of ore treated. Despite the increased volume, operating profit was down by 1% at R206m (\$27m) as a result of the reduced yield, higher total cash costs and lower price received. Two employees lost their lives in separate incidents, one from a fall of ground and the other as a result of being struck by falling rock.

At Kopanang, lower volumes mined contributed to the 7% or 285kg (10,000oz) reduction in gold produced to 3,589kg (115,000oz). Total cash costs were 4% higher at R66,409/kg (\$268/oz) mainly because of the lower gold production. Operating profit was down 31% to R68m (\$9m), primarily as a result of lower volumes, a slightly reduced yield (1%), and a decrease in the rand gold price. During the quarter Projek Katleho came to an end. At the conclusion of this three-year project, valuable experience has been gained in using technology and team training to improve productivity. Two separate falls of ground resulted in two fatalities during the quarter.

Tau Lekoa's gold production was in line with the previous quarter at 2,539kg (82,000oz). The effect of an 11% decrease in grade to 4.2g/t as grades returned to targeted levels, was offset by productivity improvements. Total cash costs were marginally higher at R67,347/kg (\$271/oz) while operating profit decreased by 8% to R46m (\$6m) largely as a result of the lower rand gold price. One employee was killed as a result of a fall of ground in June.

At Mponeng, gold production was up by 5% or 187kg (6,000oz) to 3,976kg (128,000oz) because of higher volumes. Total cash costs were marginally lower in rand terms at R57,851/kg (\$233/oz), while operating profit rose by 7% to R91m (\$12m) resulting from an 8% increase in volume mined. The additional volumes were achieved by working additional production shifts during the quarter and improved productivity. A fall of ground as a result of seismic activity resulted in one fatality.

Savuka's gold production increased by 10% or 161kg (5,000oz) to 1,653kg (53,000oz) although the area mined was down by 7% as mining of uneconomic VCR panels was

stopped. The recovered grade was 10% higher at 6.27g/t as a result of improvements in vamping. Total cash costs at R95,444/kg (\$384/oz) were 11% lower than those of the previous quarter due to the increase in gold produced and cost-saving initiatives such as a reduction in labour and contractor costs. Downsizing of the labour force will continue over the next six months in order to ensure that the number of people employed is appropriate for the level of production. The operating loss for the quarter decreased by 33% to R16m (\$2m) due in large part to the higher yield. A seismic-related fall of ground resulted in the death of one employee.

At **TauTona**, gold production was 6% higher than that of the previous quarter at 5,024kg (161,000oz) mainly as a result of a 7% increase in grade to 11.93g/t. The volume mined was down as a result of production delays following the seismic incidents. The higher gold output resulted in a 6% decrease in total cash costs to R46,091/kg (\$186/oz) while operating profit increased by 6% to R195m (\$25m). During the quarter, nine employees lost their lives in two seismic-related falls of ground, after the mine had achieved record-breaking safety performances during 2001 and 2002. Management and safety representatives continue to look for ways of managing seismicity and improving safety underground.

At **Ergo** gold production was 1,532kg (49,000oz), 14% lower than the previous quarter due to a decline in the head-grade and reduced contribution from the pyrite gold circuit. Throughput was down on the previous quarter due to thickening constraints from the lower settling rate of material during the cooler weather. Total cash costs were 13% higher at R87,137/kg (\$351/oz) due to the reduced throughput and lower gold production. Largely as a result of lower yields, reduced volumes and the lower rand gold price, Ergo showed an operating loss for the quarter of R8m (\$1m), from an operating profit of R7m (\$1m) in the previous quarter.

East and West Africa

At **Geita** (50% attributable), gold production decreased by 3% to 62,000oz and recovered grade was down 9% to 2.58g/t. Mill throughput was up 7% for the quarter while costs associated with the additional throughput coupled with the decreased production resulted in total cash costs increasing by 6% to \$230/oz. As indicated in October 2002, grades are expected to improve in the next quarter. Operating profit decreased by 20% to \$3m. There was one lost time injury recorded at Geita. The throughput increase that was contemplated (5.6Mtpa) with the completion of the plant expansion project at the end of 2002, is being achieved and exceeded.

Production at **Morila** (40% attributable) is consistent with the previous quarter at 95,000oz. A 7% decrease in milled plant

throughput was partially offset by a 7% increase in recovered grade to 9.54g/t. Throughput was affected by damage to the SAG mill motor which caused a 39-hour plant shutdown. Total cash costs increased by 12% to \$94/oz, whilst operating profit for the quarter decreased by 6% to \$17m. There was one lost time injury recorded this quarter. Morila's throughput rates should increase from 270,000 to 350,000tpm with expansion to the plant, which is expected to be commissioned during the fourth quarter.

At **Navachab**, an 11% increase in milled tonnage throughput, coupled with a 4% higher recovered grade, resulted in a 17% rise in gold production to 21,000oz. Total cash costs decreased by 8% to \$220/oz while operating profit for the quarter dropped by 50% to \$2m, mainly as a result of a stock valuation adjustment in the first quarter. There were two lost time injuries recorded at Navachab this quarter.

Production at **Sadiola** (38% attributable) was maintained at similar levels to that of the previous quarter at 39,000oz. A 9% increase in milled throughput was largely offset by a 7% decrease in average recovered grade to 2.52g/t. Total cash costs for the quarter increased by 3% to \$213/oz, due to the higher throughput and lower recovered grades, while operating profit for the quarter fell by 25% to \$3m mainly as a result of a 3% reduction in gold price received and lower sales. Sadiola recorded one lost time injury during the quarter.

At **Yatela** (40% attributable), gold production rose by 43% to 30,000oz, largely as result of a 49% increase in recovered grade to 3.35g/t. The higher grades are unlikely to be sustained at these levels. Total cash costs decreased by 3% to \$198/oz and operating profit increased by 68% to \$2m as a result of higher production. The increased production was partially offset by a reduction in the gold price and higher amortisation charges. Yatela incurred three lost time injuries during the quarter. Road construction has begun on the 10km stretch between Yatela and Alamatoula. The mining fleet has been ordered and stripping is expected to begin in the third quarter. The Alamatoula project is on schedule to deliver ore during the fourth quarter of 2003.

North America

Production at **Cripple Creek & Victor** (67% ownership with 100% interest in production until the initial loans are repaid) was up by 24% quarter-on-quarter at 78,000oz due to the improvements in leach solution chemistry, which had adversely affected gold production during the first quarter. Total cash costs were consistent with those of the first quarter at \$188/oz. Operating profit increased to \$3m, primarily due to higher gold sales. The mine recorded one lost time injury for

the quarter. The new processing facilities exceeded design capacity in June while haulage fleet availability was still below target levels. The plant upgrades were completed by the end of the quarter. Phase 4B of the leach pad construction is ahead of schedule and stacking has commenced. This should see improved gold production during the second half of 2003.

Jerritt Canyon's (70% attributable) production increased by 10% to 56,000oz this quarter due to higher grades milled. Total cash costs were consistent with those of the previous quarter at \$270/oz. The higher production contributed to a decrease in operating loss from \$3m in the first quarter to \$2m in the second quarter. The Jerritt Canyon joint venture partners, AngloGold and Meridian, made effective an agreement under which Queenstake Resources would purchase the assets of the Jerritt Canyon Mine. The second quarter group results include an extraordinary gain on the sale of the Jerritt Canyon Mine of \$10m. The sale was effective as of 30 June 2003. Consequent to the sale of Jerritt Canyon, a decision has been taken to substantially downsize the AngloGold office in Denver. This process will continue over the next few months.

South America

At **Cerro Vanguardia** (92.5% attributable), gold production decreased by 18% to 49,000oz, in part due to lower recovered grades, down by 22% to 6.70g/t. The problem of excess water in the pits continues and this quarter restricted the amount of high-grade material delivered to the plant for processing. As a result, the plant was fed with lower-grade dry ore from a contingency stockpile, which also affected the production levels. It is anticipated that this will continue through the third quarter as a scrubber is planned for commissioning in late September. The scrubber will enable the treatment of wet, higher-grade material. Total cash costs were 27% higher than those of the previous quarter at \$152/oz, chiefly due to the appreciation of the Peso and a decrease in gold production. Operating profit fell by 33% to \$6m largely as a result of a 16% decrease in sales volume and higher total cash costs.

At **Morro Velho**, gold production was 4% higher than that of the previous quarter at 55,000oz, due to a 10% increase in the ore treated but this was partially offset by lower grades, down by 5% to 6.16g/t. Total cash costs were 13% higher at \$143/oz due to the appreciation of the Real, while operating profit decreased by 18% to \$9m due to higher cash costs and a lower gold price received.

At **Serra Grande** (50% attributable) production was consistent with the previous quarter at 24,000oz. Total cash costs were

12% higher at \$104/oz, with operating profit remaining at a similar level to that of the first quarter at \$5m.

Australia

At **Sunrise Dam**, production decreased by 12% to 84,000oz, primarily due to an expected reduction in milled grade from 3.98g/t to 3.87g/t and a decline in recovery rates from 83% to 80%, due to a marginally higher proportion of the more refractory ore types. In line with the decreased production, total cash costs increased by 14% to A\$380/oz (\$244/oz) and operating profit was down 36% to A\$9m (\$6m). The number of lost time injuries continued to decline from four in the first quarter to one in the second quarter. The underground development scoping study was completed with underground development expected to commence in the fourth quarter of 2003. This development will allow additional exploration of the full potential of the Sunrise Dam orebody.

At **Union Reefs**, mining is in its final stages and has focused on one remnant resource in the vicinity of the plant. Processing of low-grade stockpiles has continued. This final mining activity has lifted production to 28,000oz compared with 19,000oz for the previous quarter and has resulted in a 44% reduction in cash costs to A\$364/oz (\$233/oz). There were again no lost time injuries recorded for the quarter. Mining will be completed during the third quarter and milling operations will close down in the final quarter of 2003. Progressive rehabilitation of the site means that only minor works which have been pre-funded, will be required after operations cease. Operating profit increased to A\$4m (\$3m) quarter-on-quarter.

Negotiations with AngloGold's partners in respect of the **Boddington** Expansion project are continuing.

Note:

All references to price received includes the realised non-hedge derivative gains (losses).

All references to operating profits and headline earnings excludes unrealised non-hedge derivative gains (losses).

Rounding of figures may result in computational discrepancies.

In the case of Joint Venture operations, all production and financial results are attributable to AngloGold.

Exploration

AngloGold's exploration strategy is to replace existing production ounces through brownfields exploration – the identification of new ounces to sustain or grow existing operations – and greenfields exploration – the discovery of production ounces in new areas from new operations.

AngloGold's exploration activities are focused on finding long-life, low-cost orebodies at less than \$150/production ounce, using multidisciplinary teams and state-of-the-art technology.

During the quarter

Overall, exploration work undertaken during the quarter showed some promising results. In particular, at Sadiola and Yatela potential to increase oxide resources has been shown and at Sunrise Dam, new geological information indicates that the underground resources could increase substantially.

1. Brownfields exploration at Sadiola in **Mali** continued to focus on the satellite oxide targets within the existing lease areas. Promising results from drilling of the FE3 Southern Extension target included: 20m at 3.14g/t from 28m; and 6m at 6.31g/t from 16m.

Resource delineation drilling of the Western Lobe at FE4 continued with encouraging results intersected and mineralisation appears open-ended to the northwest and west of the current pit position. Results include: 36m at 2.21g/t from 32m; and 18m at 9.50g/t from 132m.

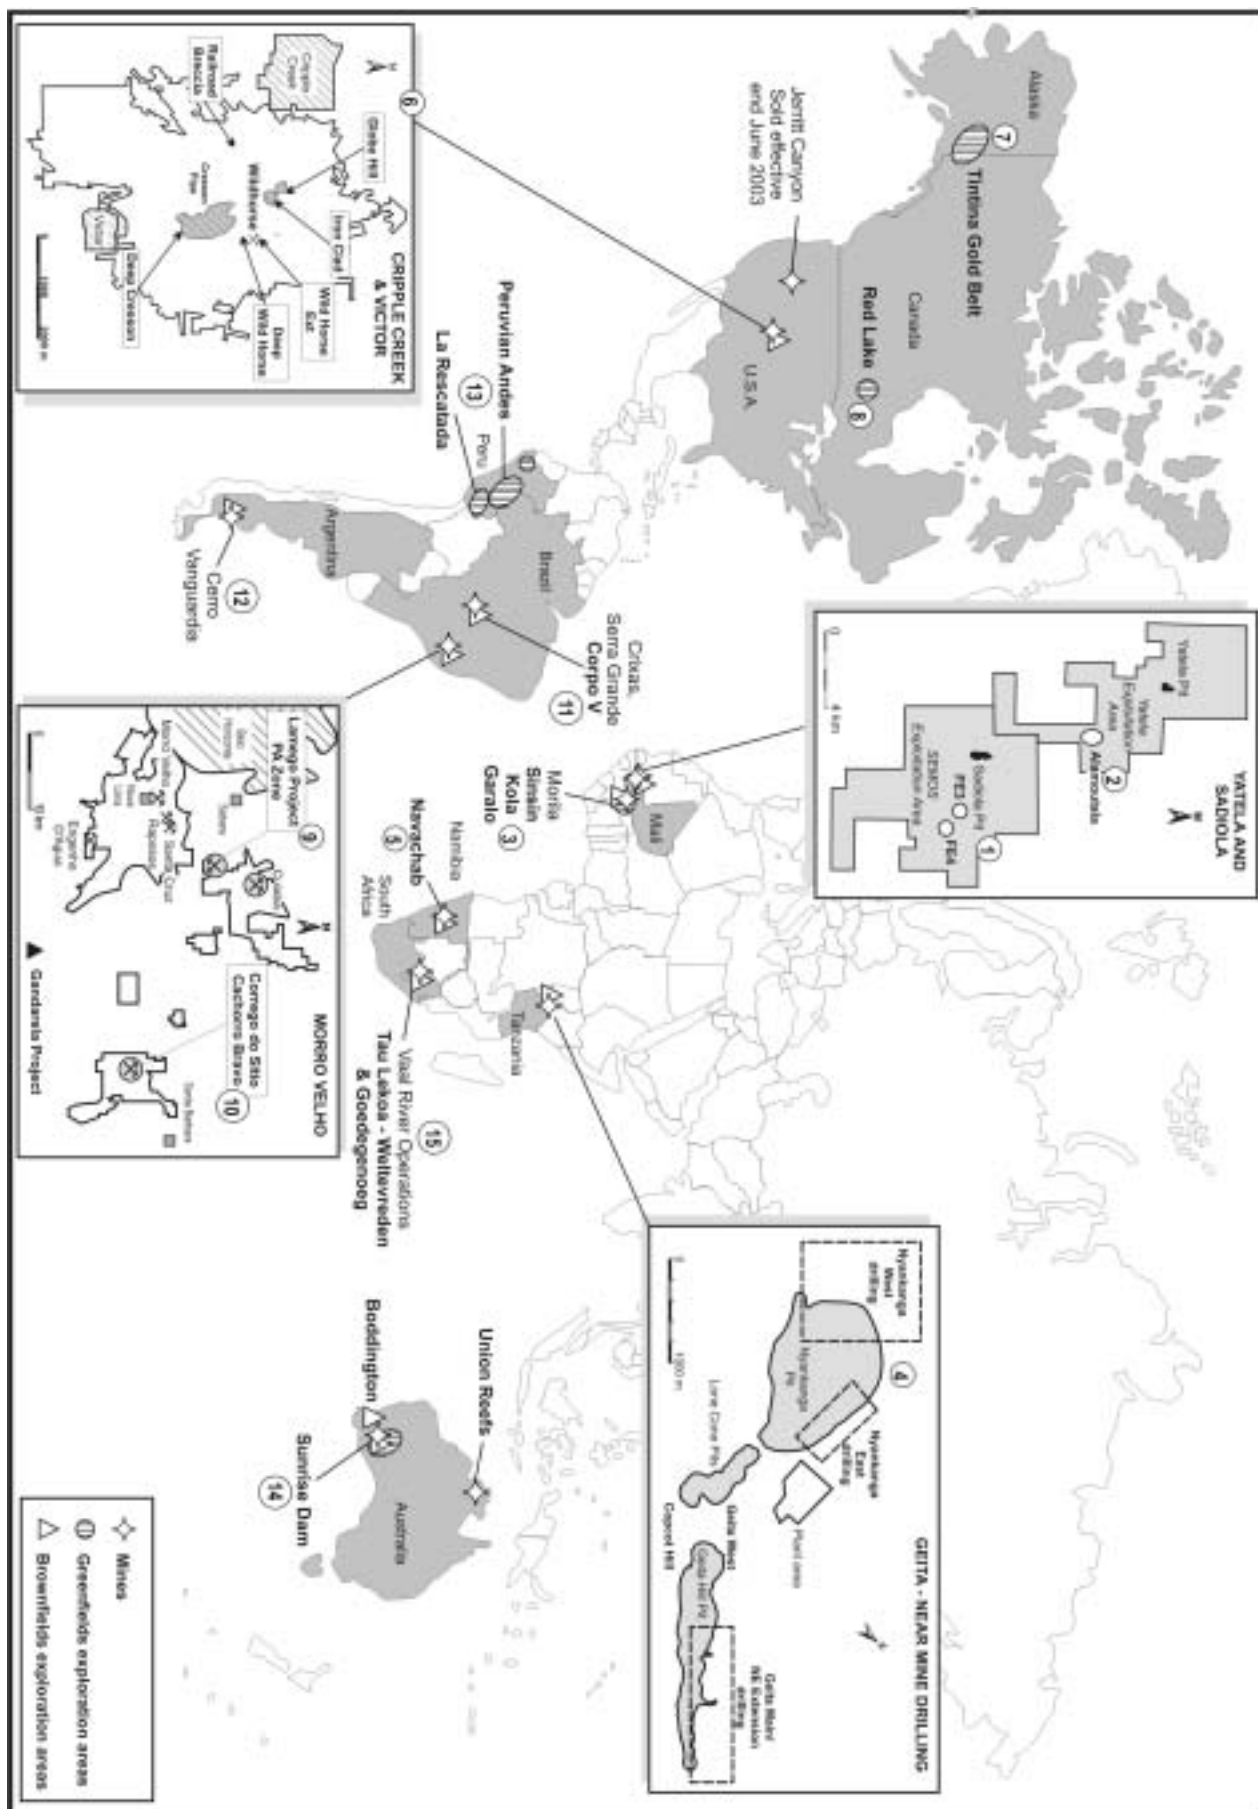

2. Extension drilling at Alamatoula, some 10km from the Yatela operation has yielded additional drill targets and promising intersections comprising: 20m at 4.15g/t from 8m; and 14m at 7.02 g/t from 36m.
3. Rotary Airblast (RAB) testing of geochemical anomalies was completed on the greenfields prospects Sinsin and Kola in southern Mali, adjacent to the Morila Mine. To date, results have been mixed with further testing planned for the third quarter. At Garalo, some 100km to the south-west of Morila, encouraging results were obtained from a first-pass RAB drilling campaign.
4. At Geita in **Tanzania**, brownfields exploration drilling continued at Nyankanga West and East and at Geita Hill. At Nyankanga, depth and strike extension drilling has encountered further mineralisation, including promising

intersections of 23m at 5.21g/t from 113m; and 5m at 34.39g/t from 179m.

Step out drilling to the north-east of the known Geita Hill orebody has identified additional mineralisation consisting of 3.5m at 11.42 g/t from 337m; and 8m at 9.7g/t from 204m.

5. The Expansion Project drilling at Navachab in **Namibia**, continued to focus on footwall extensions to the main pit. Forty holes were completed during the quarter bringing the project to 60% completion. Noteworthy intersections included 75m at 4.2g/t from 70m; 38m at 8.2g/t from 182m; and 118m at 2.9g/t from 52m.
6. In **North America**, brownfields exploration was primarily concentrated at Cripple Creek where extensive drilling was conducted to expand and define new, potentially surface-mineable mineralisation at the Wild Horse extension project and commence testing for deep, high-grade mineralisation in the district. Encouraging results were obtained and additional drilling is scheduled for later in the year.
7. In **Alaska** exploration drilling was conducted on two greenfields projects within the Tintina Gold Belt, a region of intrusion-related gold deposits that extends from central Alaska to the Yukon Territory of Canada. Follow-up drilling and exploration on three additional targets in Alaska are planned for the third quarter.
8. In **Canada** at the Red Lake JV, exploration was devoted to the western end of the property, with further targets planned for drill testing during the third quarter.
9. In **South America**, drilling of the northern end of the Lamego deposit near Cuiabá in **Brazil** continues, confirming a thickening of the ore zone below the 250m level. Test mining and further exploration drilling from the existing ramp will be initiated in 2004 to fast-track the project.
10. Drilling of the Cachorro Bravo orebody at Córrego do Sítio has further extended mineralisation down-plunge with intersections grading between 4g/t and 13g/t over widths of 2 to 4m. The exploration ramp is expected to intersect the footwall-mineralised horizon in the third quarter.

Continued...

11. At Crixás, drilling intersected the upper Corpo V ore zone south of Mina III at 350m yielding 5.9m at 10.71g/t. The intersection is approximately 140m down-plunge of the previous deepest intersection with follow-up drilling underway to confirm the strike and continuity of the zone.
12. At Cerro Vanguardia in **Argentina**, drilling continued in order to define depth and strike extensions of the Loma del Muerto, Loma Sur and Mangas Sur veins for possible future open-pit and underground resources.
13. In **Peru**, regional greenfields exploration was focused on further reconnaissance and property-scale investigation in different parts of the Peruvian Andean region. At La Rescatada the present diamond drilling programme will be completed in the third quarter and all drill data will subsequently be evaluated.
14. At Sunrise Dam in **Australia**, diamond drilling focused on deep targets at Northern Deeps and beneath the recently discovered Carey Shear. Evidence to date suggests that the Carey Shear is a structure similar to the Sunrise Shear, providing positive indications for replication of mineralisation at depth.

Drill testing of the newly defined Hammerhead lode to the east of the current pit also continued, with significant results including 8m at 5.30g/t from 264m; and 11m at 36.60g/t from 274m.

Reverse circulation drilling at the Duckpond prospect to the west of the current pit intersected several encouraging results beneath the near-surface mineralisation. Results include 6m at 4.15g/t from 44m; and 12m at 3.01g/t from 99m.

A review of AngloGold's Tanami exploration tenements, including the Coyote project, has concluded that further exploration is unlikely to lead to an attractive investment opportunity for the company. Divestment options are being considered.

15. In **South Africa**, drilling at Weltevreden to the east of Tau Lekoa for a Ventersdorp Contact Reef (VCR) resource suitable for open-pit mining was completed but intersected uneconomic mining grades.

Two boreholes are currently in progress at Goedgenoeg to the west of Tau Lekoa and are expected to intersect the VCR in the next quarter.

**Variance June 2003 quarter on March 2003 quarter – Increase (decrease)

Review of the gold market

The closing spot price of gold of \$345/oz for this quarter was \$8 higher than the opening price; the average price for the quarter of \$347/oz was slightly lower than the average for the previous quarter. These price markers conceal an active quarter, however, and the gold price within the quarter was again volatile, reaching a high of \$374/oz, and covering a range of \$56/oz. Currency markets showed similar volatility, with the US dollar reaching an all-time low against the Euro of \$1.19, or almost 10% weaker than its opening rate of \$1.09 to the Euro. The Australian dollar was similarly active, gaining 10% against the US dollar, whilst the rand exchange rate against the US dollar ranged by almost 20% between its strongest point of R7.02 and the weakest rate of R8.33 to the US currency.

The rand gold price covered a range of almost 30% between the high for the quarter of R97,240/kg and the low of R75,375/kg. The local price closed the quarter close to the lows at R82,770/kg.

Activity in the market reflected ongoing interest in gold in a period of widespread financial, economic and political uncertainty. With the exception of the spur to the spot price at

the time of the announcement of Newmont Mining's offer of settlement to the Yandal creditors, the gold price was driven mostly by movement of the US dollar against the Euro. The weakening dollar has been good for a range of commodities, including base metals and oil, but investor and speculator interest has been particularly focussed on gold as the most consistent beneficiary of the weaker dollar.

Expectations of the gold price for the next 12 to 24 months are tied closely to the fate of the US dollar and, more broadly, of the US economy. As the dollar weakens, so the gold price is expected to rise.

The overwhelming consensus of commentators on currency markets is for a continued weakening of the US currency, specifically against the Euro, with some major players looking for exchange rates as low as \$1.40 against the Euro by the end of 2004. These forecasts seem to ignore some of the fundamental weaknesses in the European economies today (particularly as a stronger Euro will continue to squeeze growth in Europe), which would argue against further strengthening of the common European currency. However, the reality is that many of the Asian economies – Japan and

US \$ Euro and US \$ Gold Indexed: First Half 2003

China especially – are resisting the re-valuation of their currencies against the dollar by actively buying US bonds, and as a result the Euro might well have to bear a disproportionate burden of the market's concerns over the US dollar. For that reason, the Euro could move to an overvalued exchange rate against the dollar.

Whilst the weakening of the US dollar has been the indicator for gold price movements, the vehicle for effecting those price movements has been the New York Comex. Speculators and investors who trade gold on the Comex have so far shown a consistent pattern in gold buying, with a core net long holding since 2001 of some 4–5Moz, and opportunistic trading up to aggregate net long positions of 10–14Moz. It will be important for gold that Comex continue to support the price by sustained buying as the economic indicators continue to favour gold.

The physical market continues to react negatively to higher prices. Ongoing spot price volatility has also not helped the physical markets to adjust their buying thresholds to new price ranges. During May, Indian imports all but ceased, and offtake is unlikely to resume until post-monsoon seasonal buying in August. Italian offtake for the first quarter of 2003 declined by 27% year-on-year, and there are indications that consumer offtake of gold jewellery in the USA has been weak.

This fall in offtake has been offset by sustained de-hedging from producers. After a reduction of some 430t in net gold producer hedge positions during 2002, the first quarter of 2003 saw hedges fall by a further 143t. This has provided an important offset to weaker physical demand, as well as assisting to balance sharply higher flows of scrap gold onto the physical markets throughout 2002. This was particularly so in the first quarter of 2003, when scrap flows reached a rate equivalent to almost 1,000tpa. The current levels of scrap sales or recycling of gold exceed by a significant margin the previous record levels of selling seen during the Asian currency crises of late 1997 – 1998. With producer sales reduced by de-hedging, these scrap sales have been absorbed by the market, but some long-term equilibrium will

be required in the physical market in order for this level of selling not to weigh on the price of the metal.

The currency markets continue to be dominated by movements in the value of the US dollar. During May, the US currency reached an all time low of \$1.19 to the Euro. Although it closed the quarter at \$1.15 to the Euro, at its weakest it had lost over 40% in value against the European currency over the past 24 months. As observed above, expectations are that this devaluation will continue. The weakness of the US dollar translated to a strengthening of both the Australian dollar, which touched A\$0.67 to the US currency late in the quarter, and to the rand, which might otherwise have been expected to weaken on the back of favourable corrections to South African consumer inflation rate measurement, and a rate cut of 150 basis points during the quarter. As it was, the South African currency ended the quarter at R7.55 to the dollar, compared with an intra-quarter low of R8.33. As a result, South African producers remain under pressure as the strong local currency continues to impact negatively on the competitiveness of local production costs.

Hedging

As at 30 June 2003, the net delta hedge position of AngloGold was 8.73Moz, 0.61Moz or 18.9t lower than the hedge position at 31 March 2003. The marked-to-market valuation of this position as at 30 June 2003 was negative \$179m. These figures reflect the ongoing reduction in forward price commitments of the company.

At a meeting of the AngloGold board on 30 July 2003, a decision was taken to review the current hedging upper limit of 50% of five years' gold production. In the light of the enduring strength of the dollar spot gold price and the stability of AngloGold's operations, it has been decided to change the targeted level of forward-price commitments to 30% of five years' production. In addition, it was confirmed that management would continue to have the latitude to put new forward-pricing contracts in place where the gold price and operating circumstances make this necessary or prudent.

Hedge position

As at 30 June 2003, the group had outstanding, the following forward-pricing commitments against future production. The total net delta tonnage of the hedge on this date was 8.73Moz or 271.6t (at 31 March 2003: 9.34Moz or 290.5t).

The marked-to-market value of all hedge transactions making up the hedge positions was a negative \$179.3m (negative R1.35bn) as at 30 June 2003 (as at 31 March 2003: negative \$251.5m – negative R1.97bn). These values were based on a gold price of \$346/oz, exchange rates of R/\$7.55 and A/\$0.6761 and the prevailing market interest rates and volatilities at the time.

As at 30 July 2003, the marked-to-market value of the hedge book was a negative \$354.6m (negative R2.61bn), based on a gold price of \$358/oz and exchange rates of R/\$7.37 and A/\$0.6569 and the prevailing market interest rates and volatilities at the time.

These marked-to-market valuations are in no way predictive of the future value of the hedge position nor of future impact on the revenue of the company. The valuation represents the cost of buying all hedge contracts at the time of valuation, at market prices and rates available at the time.

Notes

The results included herein for the quarter and six months ended 30 June 2003, which are unaudited, are prepared using the accounting policies which are in accordance with International Financial Reporting Standards (IFRS) and South African Generally Accepted Accounting Practices (SA GAAP).

1. During the quarter, 21,400 ordinary shares were allotted in terms of the AngloGold Share Incentive Scheme.
2. Orders placed and outstanding on capital contracts as at 30 June 2003 totalled R1,123m (31 March 2003: R927m), equivalent to \$150m (31 March 2003: \$117m) at the rate of exchange ruling on that date.
3. Although AngloGold holds a 66.7% interest in Cripple Creek & Victor Gold Mining Company Limited, it is currently entitled to receive 100% of the cash flow from the operation until the loan, extended to the joint venture by AngloGold North America Inc., is repaid.
4. During the quarter, AngloGold made the following announcements:

4.1 On 16 May 2003, AngloGold issued a cautionary announcement to shareholders in which it confirmed that the boards of Ashanti Goldfields Company Limited and AngloGold were in discussion regarding the proposed merger of the two companies at a ratio of 26 AngloGold shares for every 100 Ashanti ordinary shares and global depositary securities. These proposals may or may not lead to a proposal being made for the entire issued share capital of Ashanti. This announcement was followed by a further cautionary announcement on 13 June 2003 in which AngloGold advised that the Government of Ghana, a substantial shareholder and regulator of Ashanti, was taking appropriate professional advice in considering the proposed merger.

4.2 On 23 May 2003, AngloGold announced that it had signed an agreement to sell its wholly-owned Amapari Project to Mineração Pedra Branca do Amapari, for the total consideration of \$18.2m. The Amapari project is located in the State of Amapá, North Brazil. Since

acquiring the property from Minorco, the Company has sought to prove up additional reserve ounces in order to get it to a size and life that would justify the management resources needed to run it effectively. This was not achieved and AngloGold, on receiving a fair offer from a purchaser who could constructively turn this orebody to account, agreed to sell.

4.3 On 6 June 2003, AngloGold announced that it had finalised the sale of its 49% stake in the Gawler Craton Joint Venture, including the Tunkillia project located in South Australia to Helix Resources Limited. Consideration for the sale comprised cash of \$500,000 (A\$750,000), 1.25m fully-paid Helix shares issued at A\$0.20 per share and 1.25m Helix options exercisable at A\$0.25 per option before 30 November 2003 with an additional payment of \$335,000 (A\$500,000) deferred to the delineation of a mineable resource of 350,000 ounces. Helix's proposed acquisition of AngloGold's rights to the Tarcoola Project, 60km to the south, was excluded from the final agreement. This resulted in a restructure of the original agreement terms, as announced on 8 April 2003.

4.4 On 2 July 2003, AngloGold announced that it had concluded the sale of its interest in the Jerritt Canyon Joint Venture to Queenstake Resources USA Inc. effective 30 June 2003. This followed negotiations originally announced on 27 February 2003. Queenstake paid the Jerritt Canyon Joint Venture partners, AngloGold and Meridian Gold, \$1.5m in cash and 32m shares issued by a subsidiary, Queenstake Resources Limited, with \$6m in deferred payments and \$4m in future royalty payments. Queenstake accepted full closure and reclamation liabilities. AngloGold's shareholding represents approximately 9.2% of Queenstake Resources Limited's issued share capital and, although it does not currently have any intention to acquire additional shares in Queenstake, depending on the market price of Queenstake shares, general economic and industry conditions and other factors, and subject to applicable securities laws, AngloGold may either sell its shares in Queenstake or acquire additional shares.

5. Dividend:

The directors have today declared Interim Dividend No. 94 of 375 (Interim Dividend No. 92: 675) South African cents per ordinary share for the six months ended 30 June 2003. In compliance with the requirements of STRATE, the salient dates for payment of the dividend are as follows:

To holders of ordinary shares and to holders of CHESS Depositary Interests (CDIs)

Each CDI represents one-fifth of an ordinary share.

	2003
Currency conversion date for UK pounds and Australian dollars	Thursday 7 August
Last date to trade ordinary shares cum dividend	Friday 15 August
Last date to register transfers of certificated securities cum dividend	Friday 15 August
Ordinary shares trade ex dividend	Monday 18 August
Record date	Friday 22 August
Payment date	Friday 29 August

On the payment date, dividends due to holders of certificated securities on the South African share register will either be electronically transferred to shareholders' bank accounts or, in the absence of suitable mandates, dividend cheques will be posted to such shareholders.

Dividends in respect of dematerialised shareholdings will be credited to shareholders' accounts with the relevant CSDP or broker.

To comply with the further requirements of STRATE, between Monday, 18 August 2003 and Friday, 22 August 2003, both days inclusive, no transfers between the South African, United Kingdom and Australian share registers will be permitted and no ordinary shares pertaining to the South African share register may be dematerialised or rematerialised.

To holders of American Depositary Shares

Each American Depositary Share (ADS) represents one ordinary share.

	2003
Ex dividend on New York Stock Exchange	Wednesday 20 August
Record date	Friday 22 August
Approximate date for currency conversion	Friday 29 August
Approximate payment date of dividend	Friday 12 September

Assuming an exchange rate of R7.305/\$1, the dividend payable on an ADS is equivalent to 51 US cents. This compares with the interim dividend of 63.81 US cents per ADS paid on 10 September 2002. However, the actual rate of payment will depend on the exchange rate on the date for currency conversion.

By order of the board

R P EDEY
Chairman

R M GODSELL
Chief Executive Officer

30 July 2003

AngloGold Riches of Africa

Jewellery Design Competition

The neck piece designed by the overall winner of Riches of Africa 2003 (centre) with the shoulder piece placed second (left) and the choker placed third (right)

A leader in gold marketing internationally, AngloGold is involved in a range of projects to increase consumer demand for gold jewellery through enhancing its image and desirability. These have included the sponsorship of a number of gold jewellery competitions, which the company has found to be an effective way of encouraging designers to experiment with new styles and techniques in gold.

When AngloGold established the Riches of Africa gold jewellery design competition in South Africa in 1998, there were further objectives in mind. These were to use the competition to enhance local skills and to support the local

gold jewellery industry, and to use the event to showcase the design and goldsmithing capabilities of South Africans.

With the recent unveiling of the fifth gold jewellery collection – Riches of Africa 2003 – in Johannesburg, it seems appropriate to reflect on what has been achieved since the competition was launched. Support for the event has grown, with the number of entries growing from 204 in 1999 to 1,112 in 2003. Unquestionably, if the collections of the first and fifth competitions are compared the pieces of 2003 are more innovative, more visually arresting and definitely bolder than those of 1999.

This does not detract from the achievements of the first winners. The progress is testimony to the great value of competitions, challenging people to try ever harder to improve standards and to innovate. It is also a consequence of changes to the rules every year. These changes have been made in the interests of fine-tuning competition conditions to give entrants every chance to produce the best work possible. Important changes that have been made are the introduction of a theme; the holding of workshops for all entrants; the opening of the competition to non-jewellers, making the event accessible to people involved in all design disciplines; and the scrapping of separate categories for professionals and amateurs. The most significant development in 2003 has been to allow participants to include both white and coloured gold in their designs.

The overall winner of this year's competition was Cape Town-based Johan Louw, for a neck piece inspired by the wings of dragonflies. Noeline Kruger, also from Cape Town took second place and Alet-Marie van Zyl, from Johannesburg, was placed third.

The Minister of Minerals and Energy, Phumzile Mlambo-Ngcuka, speaking at the award ceremony, recognised the significant contribution made by AngloGold to the development of South African jewellery design talent. She applauded AngloGold's involvement with OroAfrica and that company's success in growing its jewellery exports to the United States during the past two years.

The Riches of Africa collections are exhibited throughout South Africa and abroad, either in fashion shows where they are teamed with designer garments or in exhibitions.

AngloGold is proud of the role that Riches of Africa has played in bringing the talents of South African jewellery designers and goldsmiths to the attention of a wide audience.

Certain forward-looking statements

Certain statements contained in this document including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices and production, the completion and commencement of commercial operations of certain of AngloGold's exploration and production projects, and its liquidity and capital resources and expenditure, contain certain forward-looking statements regarding AngloGold's operations, economic performance and financial condition. Although AngloGold believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government action, fluctuations in gold prices and exchange rates, and business and operational risk management. For a discussion of such factors, refer to the annual report on Form 20-F for the year ended 31 December 2002, which was filed with the Securities and Exchange Commission on 7 April 2003.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.
