(1) See Schedule A for relative location; (2) True thicknesses are estimated to be 65% of the interval for 07KV1029, 73% and 75% of intervals for 07KV1030 and 07KV1028 respectively and 98% to 99% of intervals for 07KV1026 and 07KV1031.

The first three in-fill holes drilled in Area 107, 07KV1026, 07KV1031 and 07KV1022, all returned high gold values. Hole **07KV1022**, which was previously reported in release of October 16th, 2007, showed **10.85g Au/t over 3.6m**. Hole 07KV1028 is located in the central part of the west edge of Area 107 West, whereas 07KV1027 and 07KV1030 lie on the up-section extension of Area 107 West. An estimated 13,600m of in-fill drilling on Area 107 and Area 107 West is to be completed prior to August of 2008 to allow for the development of engineering plans to accelerate production from this zone.

Exploratory: Carlés and El Valle Area 208

(1) True thicknesses are estimated to be 65% of interval for 07KC1001, 80% for 07KVAL234 and 25% for 07KC235.

07KC1001 lies 100m down-dip from closest previously reported drill hole on Carles North, C120, which intercepted 3.75m of 4.6g Au/t and 0.14% Cu. A total of 1,150m of exploratory drilling is to be completed in early 2008 at Carlés North and Carlés East. **07KVAL235** and **07KVAL236** are the first of two exploratory holes along the eastward extension of Area 208; a total of 1,750m (6 holes) is planned. Both holes intersected thick sections of jasperoid breccia and silicified dolomites, which generally host gold. Area 208 is open at depth and to the west where exploratory drilling will now be concentrated.”
