Transforms Traditional Keyboard Bringing New Power to Desktop Computing By Single Keystroke

VANCOUVER, British Columbia, Jan. 20 /PRNewswire-FirstCall/ -- WordLogic Corporation (OTC Bulletin Board: WLGC – News), a progressive developer and licensor of advanced multilingual predictive text input software, today unveiled new details concerning its patent application filed last week with the US Patent and Trademark Office, and the International Patent Offices.

The innovative development covered by the patent filing presents an input management platform, which offers the capability of interfacing with a multitude of applications with a single keystroke.

The same technology provides for interoperability from application to application, such as moving from a word processing program to a spreadsheet program, enabling the user to save and retrieve often-used words and phrases through the Predictive Keyboard. Further, the technology allows for portability among different desktop computers, enabling the transfer of customized dictionaries from desktop to desktop.

By utilizing USB ports, this technology can be used as a PORTABLE, PERSONAL INPUT PLATFORM.

“The technology covered in the patent filing,” stated Franklin R. Evanshen, WordLogic’s CEO, “gives every key on the keyboard the potential to be turned into a function key. This development will create significant changes in the way people and businesses input data in the future. It will reduce input while maximizing output.”

About WordLogic Corporation

WordLogic Corporation is a technology company that delivers predictive interface solutions for computing devices ranging from small hand-held devices to conventional desktop computers. Incorporated in the United States, the company’s research, testing and marketing facilities are located in Vancouver, British Columbia, Canada.
