Seattle, WA 98101

Re: Evaluation, December 31, 2012  
Woodson County Kansas

Dear Mr. Diamond-Goldberg,

I have undertaken an economic appraisal and 10% discount value determination of properties operated by Legend Oil and Gas Ltd (Legend) in Woodson County Kansas. The effective date of this appraisal is December 31, 2012. Information used was taken from records provided by Legend as well as public records. Also determined in this appraisal, are the proved producing reserves for each lease and proved undeveloped reserves on planned 2013 drilling wells. This report was prepared for Legend to fulfill SEC requirements. This report covers oil producing properties held by Legend in the geographic area of Woodson County, Kansas. This report covers less than 11% of the reserves held by Legend. All assumptions, data, methods and procedures used are appropriate for the reports purpose. The economic assumptions are documented. The possible effects of regulation on the ability to recover the estimated reserves are not expected to be significant. The reserve estimates are considered low risk. Unforeseen mechanical problems may influence recovery of the estimated reserves. This report was prepared using all methods and procedures deemed necessary.

All leases produce from the squirrel sand. The oldest producing lease started in 1970 and the newest in 2005. Most began in the 1980's. Total production currently is about 15.02 BOPD from 41 producing wells or .37 BOPD per well. You have indicated that water flooding is planned. This is expected to improve production as it is implemented.

Proved undeveloped reserves have been added to various leases for planned 2013 development. The oil sales projections are based on analogous recoveries from recent wells drilled in this reservoir. This new drilling is reported on separate economic runs from the proved producing reserves. A total of 16 new wells are projected to begin sales in 2013.

For each lease a projection of future cash flow was made using the following parameters:

Working Interest: 100%

Net Revenue Interest: 87.5%

Future Oil: Producing trends were projected into the future.

Operating Costs: Recent operating costs were averaged for each lease accounting for extra work to upgrade. These include ad valorem taxes. Costs were held constant. When new wells are added to existing leases the costs are allocated on a per barrel basis.

Oil Price: The oil price used for 2013 and beyond is 86.47 held constant.

Taxes: Kansas state conservation taxes are 91 mills per barrel sold. The Kansas Petroleum Marketing Assessment is .05% of revenue. These leases are exempt from Kansas Severance taxes.

Valuation: Future cash flow using the above parameters were discounted at 10% to arrive at each leases value as of December 31, 2012.

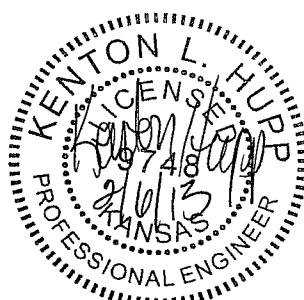

The attached spreadsheet reports for each lease, its name, legal description, net proved producing reserves, 10% discount value, net proved undeveloped reserves and 10% discount value.

The reserve estimates provided in this report were prepared using generally accepted evaluation practices. The reserves reported are in accordance with definitions as stated in SEC Standards and Regulations S-X. See attached definitions sheet.

I have prepared this evaluation based on data available as of January 2013. I make no representation that the projections made and valuations given will remain as stated.

Kenton L. Hupp  
Licensed Petroleum Engineer

## DEFINITIONS

### Regulation S-X Rule 4-10

(22) *Proved oil and gas reserves.* Proved oil and gas reserves are those quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulations prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain, regardless of whether deterministic or probabilistic methods are used for the estimation. The project to extract the hydrocarbons must have commenced or the operator must be reasonably certain that it will commence the project within a reasonable time.

(i) The area of the reservoir considered as proved includes:

(A) The area identified by drilling and limited by fluid contacts, if any, and

(B) Adjacent undrilled portions of the reservoir that can, with reasonable certainty, be judged to be continuous with it and to contain economically producible oil or gas on the basis of available geoscience and engineering data.

(ii) In the absence of data on fluid contacts, proved quantities in a reservoir are limited by the lowest known hydrocarbons (LKH) as seen in a well penetration unless geoscience, engineering, or performance data and reliable technology establishes a lower contact with reasonable certainty.

(iii) Where direct observation from well penetrations has defined a highest known oil (HKO) elevation and the potential exists for an associated gas cap, proved oil reserves may be assigned in the structurally higher portions of the reservoir only if geoscience, engineering, or performance data and reliable technology establish the higher contact with reasonable certainty.

(iv) Reserves which can be produced economically through application of improved recovery techniques (including, but not limited to, fluid injection) are included in the proved classification when:

(A) Successful testing by a pilot project in an area of the reservoir with properties no more favorable than in the reservoir as a whole, the operation of an installed program in the reservoir or an analogous reservoir, or other evidence using reliable technology establishes the reasonable certainty of the engineering analysis on which the project or program was based; and

(B) The project has been approved for development by all necessary parties and entities, including governmental entities.

(v) Existing economic conditions include prices and costs at which economic producibility from a reservoir is to be determined. The price shall be the average price during the 12-month period prior to the ending date of the period covered by the report, determines as an un-weighted arithmetic average of the first-day-of-the-month price for each month within such period, unless prices are defined by contractual arrangements, excluding escalations based upon future conditions.

(31) *Undeveloped oil and gas reserves.* Undeveloped oil and gas reserves are reserves of any category that are expenditure to be recovered from new wells on undrilled acreage, or from existing wells where a relatively major expenditure is required for recompletion.

(i) Reserves on undrilled acreage shall be limited to those directly offsetting development spacing areas that are reasonably certain of production when drilled, unless evidence using reliable technology exists that establishes reasonable certainty of economic producibility at greater distances.

(ii) Undrilled locations can be classified as having undeveloped reserves only if a development plan has been adopted indicating that they are scheduled to be drilled within five years, unless the specific circumstances, justify a longer time.

(iii) Under no circumstances shall estimates for undeveloped reserves be attributable to any acreage for which an application of fluid injection or other improved recovery technique is contemplated, unless such techniques have been proved effective by actual projects in the same reservoir or an analogous reservoir, as defined in paragraph (a)(2) of establishing reasonable certainty.
