
DREYFUS FIXED INCOME SECURITIES

DREYFUS HIGH YIELD SHARES DREYFUS MORTGAGE SHARES

STATEMENT OF ADDITIONAL INFORMATION MARCH 1, 2007

AS REVISED, APRIL 5, 2007

This Statement of Additional Information, which is not a prospectus, supplements and should be read in conjunction with the current Prospectus of Dreyfus High Yield Shares and Dreyfus Mortgage Shares (each, a "Fund" and collectively, the "Funds"), each a series of Dreyfus Fixed Income Securities (the "Company"), dated March 1, 2007, as the Prospectus may be revised from time to time. For a copy of the Fund's Prospectus, please call your financial adviser, or write to the Funds at Dreyfus Separate Accounts, Dreyfus Service Corporation, 200 Park Avenue, 10th Floor, New York, New York 10166, or call 1-877-460-5620.

The most recent Annual Report and Semi-Annual Report to Shareholders for each Fund are separate documents supplied with this Statement of Additional Information, and the financial statements, accompanying notes and report of the independent registered public accounting firm appearing in the Annual Report are incorporated by reference into this Statement of Additional Information.

DESCRIPTION OF THE COMPANY AND FUNDS

The Company is a Massachusetts business trust that commenced operations on June 10, 2002. Each Fund is a separate portfolio of the Company, an open-end management investment company, known as a mutual fund.

The Dreyfus Corporation (the "Manager" or "Dreyfus") serves as each Fund's investment adviser.

Dreyfus Service Corporation (the "Distributor") is the distributor of each Fund's shares.

Certain Portfolio Securities

The following information supplements for each Fund (except as noted) and should be read in conjunction with the Funds' Prospectus.

Corporate Debt Securities. Corporate debt securities include corporate bonds, debentures, notes and other similar instruments, including certain convertible securities. Debt securities may be acquired with warrants attached. Corporate income-producing securities also may include forms of preferred or preference stock. The rate of interest on a corporate debt security may be fixed, floating or variable, and may vary inversely with respect to a reference rate such as interest rates or other financial indicators. The rate of return or return of principal on some debt obligations may be linked or indexed to the level of exchange rates between the U.S. dollar and a foreign currency or currencies. Such securities may include those whose principal amount or redemption price is indexed to, and thus varies directly with, changes in the market price of certain commodities, including gold bullion or other precious metals.

High Yield-Lower Rated Securities. Dreyfus High Yield Shares invests at least 80% of its assets, and Dreyfus Mortgage Shares may invest up to 10% of its assets, in higher yielding (and, therefore higher risk) debt securities. These securities include those rated below Baa by Moody's Investors Service, Inc. ("Moody's") and below BBB by Standard & Poor's Ratings Services ("S&P") and Fitch Ratings ("Fitch," and with the other rating agencies, the "Rating Agencies") and as low as the lowest rating assigned by the Rating Agencies. Securities rated Ba by Moody's are judged to have speculative elements; their future cannot be considered as well assured and often the protection of interest and principal payments may be very moderate. Securities rated BB by S&P or Fitch are regarded as having predominantly speculative characteristics and, while such obligations have less near-term vulnerability to default than other speculative grade debt, they face major ongoing uncertainties or exposure to adverse business, financial or economic conditions which could lead to inadequate capacity to meet timely interest and principal payments. Securities rated C by Moody's are regarded as having extremely poor prospects of ever attaining any real investment standing. Securities rated D by S&P and Fitch are in default and the payment of interest and/or repayment of principal is in arrears. Such securities, though high yielding, are characterized by great risk. See "Appendix" for a general description of securities ratings.

The average distribution of investments of Dreyfus High Yield Shares in corporate bonds (excluding preferred stock, convertible preferred stock and convertible bonds) by ratings for the fiscal year ended October 31, 2006, calculated monthly on a dollar-weighted basis, was as follows:

<u>Moody's</u>	or	<u>S&P or Fitch</u>	<u>Dreyfus High Yield</u> <u>Shares Percentage</u>
Aaa		AAA	5.1%
A		A	1.0%
Baa		BBB	7.5%
Ba		BB	43.8%
B		B	38.7%
Caa		CCC	1.9%
C		D	0.4%
NR		NR	.9%*
			<u>99.3%^{**}</u>

*The Manager has determined these unrated securities to be of comparable quality to securities rated in the following rating categories: B/B (.4%), and C/D (.5%).

**The Fund also owns convertible bonds rated A/A (.2%), Ba/BB (.1%) and convertible preferred stocks rated Caa/CCC (.4%).

The actual distribution of Dreyfus High Yield Shares' corporate bond investments by ratings on any given date will vary, and the distribution of the Fund's investments by ratings as set forth above should not be considered as representative of the Fund's future portfolio composition.

The ratings of Moody's, S&P and Fitch represent their opinions as to the quality of the obligations that they undertake to rate. Ratings are relative and subjective and, although ratings may be useful in evaluating the safety of interest and principal payments, they do not evaluate the market value risk of such obligations. Although these ratings may be an initial criterion for selection of portfolio investments, the Manager also will evaluate these securities and the ability of the issuers of such securities to pay interest and principal. The Fund's ability to achieve its investment objective may be more dependent on the Manager's credit analysis than might be the case for a fund that invested in higher rated securities.

Variable and Floating Rate Securities. Variable and floating rate securities provide for a periodic adjustment in the interest rate paid on the obligations. The terms of such obligations must provide that interest rates are adjusted periodically based upon an interest rate adjustment index as provided in the respective obligations. The adjustment intervals may be regular, and range from daily up to annually, or may be event based, such as based on a change in the prime rate.

Each Fund may invest in floating rate debt instruments ("floaters"). The interest rate on a floater is a variable rate which is tied to another interest rate, such as a money-market index or Treasury bill rate. The interest rate on a floater resets periodically, typically every six months. Because of the interest rate reset feature, floaters provide the Fund with a certain degree of protection against rises in interest rates, although the Fund will participate in any declines in interest rates as well.

Each Fund also may invest in inverse floating rate debt instruments ("inverse floaters"). The interest rate on an inverse floater resets in the opposite direction from the market rate of interest to which the inverse floater is indexed or inversely to a multiple of the applicable index. An inverse floating rate security may exhibit greater price volatility than a fixed rate obligation of similar credit quality.

Convertible Securities. Convertible securities may be converted at either a stated price or stated rate into underlying shares of common stock. Convertible securities have characteristics similar to both fixed-income and equity securities. Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer, although convertible bonds, as corporate debt obligations, enjoy seniority in right of payment to all equity securities, and convertible preferred stock is senior to common stock of the same issuer. Because of the subordination feature, however, convertible securities typically have lower ratings than similar non-convertible securities.

Although to a lesser extent than with fixed-income securities, the market value of convertible securities tends to decline as interest rates increase and, conversely, tends to increase as interest rates decline. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stock. A unique feature of convertible securities is that as the market price of the underlying common stock declines, convertible securities tend to trade increasingly on a yield basis, and so may not experience market value declines to the same extent as the underlying common stock. When the market price of the underlying common stock increases, the prices of the convertible securities tend to rise as a reflection of the value of the underlying common stock. While no securities investments are without risk, investments in convertible securities generally entail less risk than investments in common stock of the same issuer.

Convertible securities provide for a stable stream of income with generally higher yields than common stocks, but there can be no assurance of current income because the issuers of the convertible securities may default on their obligations. A convertible security, in addition to providing fixed income, offers the potential for capital appreciation through the conversion feature, which enables the holder to benefit from increases in the market price of the underlying common stock. There can be no assurance of capital appreciation, however, because securities prices fluctuate. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality because of the potential for capital appreciation.

Each Fund may invest in so-called "synthetic convertible securities," which are comprised of two or more different securities, each with its own market value, whose investment characteristics, taken together, resemble those of convertible securities. For example, a Fund may purchase a non-convertible debt security and a warrant or option. The "market value" of a synthetic convertible is the sum of the values of its fixed income component and its convertible component. For this reason, the values of a synthetic convertible and a true convertible security may respond differently to market fluctuations.

Preferred Stock. Each Fund may invest in preferred stock. Preferred stock is a form of equity ownership in a corporation. The dividend on a preferred stock is a fixed payment which the corporation is not legally bound to pay. Certain classes of preferred stock are convertible, meaning the preferred stock is convertible into shares of common stock of the issuer. By holding convertible preferred stock, a Fund can receive a steady stream of dividends and still have the option to convert the preferred stock to common stock.

Each Fund may invest in convertible preferred stocks that offer enhanced yield features, such as PERCS (Preferred Equity Redemption Cumulative Stock). PERCS are preferred stock that generally feature a mandatory conversion date, as well as a capital appreciation limit that is usually expressed in terms of a stated price. Each Fund also may invest in other classes of enhanced convertible securities, such as ACES (Automatically Convertible Equity Securities),

PEPS (Participating Equity Preferred Stock), PRIDES (Preferred Redeemable Increased Dividend Equity Securities), SAILS (Stock Appreciation Income Linked Securities), TECONS (Term Convertible Notes), QICS (Quarterly Income Cumulative Securities) and DECS (Dividend Enhanced Convertible Securities). These securities are company-issued convertible preferred stock. Unlike PERCS, they do not have a capital appreciation limit. They are designed to provide the investor with high current income with some prospect of future capital appreciation, issued with three- or four-year maturities, and typically have some built-in call protection. Investors have the right to convert them into shares of common stock at a preset conversion ratio or hold them until maturity. Upon maturity they will convert mandatorily into either cash or a specified number of shares of common stock.

Warrants. A warrant is a form of derivative that gives the holder the right to subscribe to a specified amount of the issuing corporation's capital stock at a set price for a specified period of time. Each Fund may invest in warrants to purchase equity or fixed income securities. Bonds with warrants attached to purchase equity securities have many characteristics of convertible bonds and their prices may, to some degree, reflect the performance of the underlying stock. Bonds also may be issued with warrants attached to purchase additional fixed income securities at the same coupon rate. A decline in interest rates would permit a Fund to buy additional bonds at the favorable rate or to sell the warrants at a profit. If interest rates rise, the warrants would generally expire with no value.

Common Stock and Other Equity Securities. From time to time, a Fund may hold common stock sold in units with, or attached to, debt securities purchased by the Fund. A Fund also may hold common stock received upon the conversion of convertible securities. In connection with its investments in corporate debt securities, or restructuring of investments owned by a Fund, the Fund may receive warrants or other non-income producing equity securities. A Fund may retain such securities until the Manager determines it is appropriate in light of current market conditions for the Fund to dispose of such securities.

Equity-Linked Securities. Each Fund may invest to a limited extent in equity-linked securities. Equity-linked securities are privately issued securities whose investment results are designed to correspond generally to the performance of a specified stock index or "basket" of stocks, or sometimes a single stock. To the extent Dreyfus High Yield Shares invests in an equity-linked security whose return corresponds to the performance of a foreign securities index or one or more foreign stocks, investing in equity-linked securities will involve risks similar to the risks of investing in foreign equity securities. Equity-linked securities may be considered illiquid and thus subject to the Funds' restrictions on investments in illiquid securities.

Participation Interests. Each Fund may invest in short-term corporate obligations that are originated, negotiated and structured by a syndicate of lenders ("Co-Lenders"), consisting of commercial banks, thrift institutions, insurance companies, financial companies or other financial institutions one or more of which administers the security on behalf of the syndicate (the "Agent Bank"). Co-Lenders may sell such securities to third parties called "Participants." The Fund may invest in such securities either by participating as a Co-Lender at origination or by acquiring an interest in the security from a Co-Lender or a Participant (collectively, "participation interests"). Co-Lenders and Participants interposed between the Fund and the corporate borrower (the "Borrower"), together with Agent Banks, are referred herein as "Intermediate Participants."

Each Fund also may purchase a participation interest in a portion of the rights of an Intermediate Participant, which would not establish any direct relationship between the Fund and the Borrower. A participation interest gives the Fund an undivided interest in the security in the proportion that the Fund's participation interest bears to the total principal amount of the security. These instruments may have fixed, floating or variable rates of interest. The Fund would be required to rely on the Intermediate Participant that sold the participation interest not only for the enforcement of the Fund's rights against the Borrower but also for the receipt and processing of payments due to the Fund under the security. Because it may be necessary to assert through an Intermediate Participant such rights as may exist against the Borrower, in the event the Borrower fails to pay principal and interest when due, the Fund may be subject to delays, expenses and risks that are greater than those that would be involved if the Fund would enforce its rights directly against the Borrower. Moreover, under the terms of a participation interest, the Fund may be regarded as a creditor of the Intermediate Participant (rather than of the Borrower), so that the Fund may also be subject to the risk that the Intermediate Participant may become insolvent. Similar risks may arise with respect to the Agent Bank if, for example, assets held by the Agent Bank for the benefit of the Fund were determined by the appropriate regulatory authority or court to be subject to the claims of the Agent Bank's creditors. In such case, the Fund might incur certain costs and delays in realizing payment in connection with the participation interest or suffer a loss of principal and/or interest. Further, in the event of the bankruptcy or insolvency of the Borrower, the obligation of the Borrower to repay the loan may be subject to certain defenses that can be asserted by such Borrower as a result of improper conduct by the Agent Bank or Intermediate Participant.

U.S. Government Securities. Each Fund may invest in U.S. Treasury securities, which include Treasury Bills, Treasury Notes and Treasury Bonds that differ in their interest rates, maturities and times of issuance. Treasury Bills have initial maturities of one year or less; Treasury Notes have initial maturities of one to ten years; and Treasury Bonds generally have initial maturities of greater than ten years. In addition to U.S. Treasury securities, each Fund, may invest in securities issued or guaranteed by the U.S. Government or its agencies or instrumentalities. Some obligations issued or guaranteed by U.S. Government agencies and instrumentalities are supported by the full faith and credit of the U.S. Treasury; others by the right of the issuer to borrow from the Treasury; others by discretionary authority of the U.S. Government to purchase certain obligations of the agency or instrumentality; and others only by the credit of the agency or instrumentality. These securities bear fixed, floating or variable rates of interest. While the U.S. Government currently provides financial support to such U.S. Government-sponsored agencies or instrumentalities, no assurance can be given that it will always do so, since it is not so obligated by law.

Municipal Obligations. Municipal obligations are debt obligations issued by states, territories and possessions of the United States and the District of Columbia and their political subdivisions, agencies and instrumentalities, or multistate agencies or authorities, generally to obtain funds for various public purposes and include certain industrial development bonds issued by or on behalf of public authorities. Municipal obligations are classified as general obligation bonds, revenue bonds and notes. General obligation bonds are secured by the issuer's pledge of its full faith, credit and taxing power for the payment of principal and interest. Revenue bonds are payable from the revenue derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise or other specific revenue source, but not from the general taxing power. Industrial development bonds, in most cases, are revenue bonds that do not carry the pledge of the credit of the issuing municipality, but generally are guaranteed by the

corporate entity on whose behalf they are issued. Notes are short-term instruments that are obligations of the issuing municipalities or agencies and are sold in anticipation of a bond sale, collection of taxes or receipt of other revenues. Municipal obligations include municipal lease/purchase agreements that are similar to installment purchase contracts for property or equipment issued by municipalities. Municipal obligations bear fixed, floating or variable rates of interest, which are determined in some instances by formulas under which the municipal obligation's interest rate will change directly or inversely to changes in interest rates or an index, or multiples thereof, in many cases subject to a maximum and minimum. Certain municipal obligations are subject to redemption at a date earlier than their stated maturity pursuant to call options, which may be separated from the related municipal obligation and purchased and sold separately. A Fund also may acquire call options on specific municipal obligations. The Fund generally would purchase these call options to protect the Fund from the issuer of the related municipal obligation redeeming, or other holder of the call option from calling away, the municipal obligation before maturity.

While, in general, municipal obligations are tax exempt securities having relatively low yields as compared to taxable, non-municipal obligations of similar quality, certain municipal obligations are taxable obligations offering yields comparable to, and in some cases greater than, the yields available on other permissible Fund investments. Dividends received by shareholders on Fund shares that are attributable to interest income received by the Fund from municipal obligations generally will be subject to Federal income tax. A Fund may invest in municipal obligations, the ratings of which correspond with the ratings of other permissible Fund investments. Each Fund currently intends to invest no more than 25% of its assets in municipal obligations. However, this percentage may be varied from time to time without shareholder approval.

Mortgage-Related Securities. (Dreyfus Mortgage Shares only) Mortgage-related securities are a form of derivative collateralized by pools of commercial or residential mortgages. Pools of mortgage loans are assembled as securities for sale to investors by various governmental, government-related and private organizations. These securities may include complex instruments such as collateralized mortgage obligations and stripped mortgage-backed securities, mortgage pass-through securities, interests in real estate mortgage investment conduits ("REMICs"), adjustable rate mortgages, real estate investment trusts ("REITs"), or other kinds of mortgage-backed securities, including those with fixed, floating and variable interest rates, those with interest rates based on multiples of changes in a specified index of interest rates and those with interest rates that change inversely to changes in interest rates, as well as those that do not bear interest.

Residential Mortgage-Related Securities-Dreyfus Mortgage Shares invests in mortgage-related securities representing participation interests in pools of one- to four-family residential mortgage loans issued or guaranteed by governmental agencies or instrumentalities, such as the Government National Mortgage Association ("GNMA"), the Federal National Mortgage Association ("FNMA") and the Federal Home Loan Mortgage Corporation ("FHLMC"), or issued by private entities. Residential mortgage-related securities have been issued using a variety of structures, including multi-class structures featuring senior and subordinated classes.

Mortgage-related securities issued by GNMA include GNMA Mortgage Pass-Through Certificates (also known as "Ginnie Maes"), which are guaranteed as to the timely payment of principal and interest by GNMA and such guarantee is backed by the full faith and credit of the United States. GNMA certificates also are supported by the authority of GNMA to borrow funds

from the U.S. Treasury to make payments under its guarantee. Ginnie Maes are created by an "issuer," which is a Federal Housing Administration ("FHA") approved mortgagee that also meets criteria imposed by the GNMA. The issuer assembles a pool of FHA, Farmers' Home Administration or Veterans' Administration ("VA") insured or guaranteed mortgages which are homogeneous as to interest rate, maturity and type of dwelling. Upon application by the issuer, and after approval by the GNMA of the pool, the GNMA provides its commitment to guarantee timely payment of principal and interest on the Ginnie Maes backed by the mortgages included in the pool. The Ginnie Maes, endorsed by the GNMA, then are sold by the issuer through securities dealers. Ginnie Maes bear a stated "coupon rate" which represents the effective FHA-VA mortgage rate at the time of issuance, less the GNMA's and issuer's fees.

Mortgage-related securities issued by FNMA include FNMA Guaranteed Mortgage Pass-Through Certificates (also known as "Fannie Maes") which are solely the obligations of FNMA and are not backed by or entitled to the full faith and credit of the United States. Fannie Maes are guaranteed as to timely payment of principal and interest by FNMA. Mortgage-related securities issued by FHLMC include FHLMC Mortgage Participation Certificates (also known as "Freddie Macs" or "PCs"). Freddie Macs are not guaranteed by the United States or by any Federal Home Loan Bank and do not constitute a debt or obligation of the United States or of any Federal Home Loan Bank. Freddie Macs entitle the holder to timely payment of interest, which is guaranteed by FHLMC. FHLMC guarantees either ultimate collection or timely payment of all principal payments on the underlying mortgage loans. When FHLMC does not guarantee timely payment of principal, FHLMC may remit the amount due on account of its guarantee of ultimate payment of principal at any time after default on an underlying mortgage, but in no event later than one year after it becomes payable.

Commercial Mortgage-Related Securities-Dreyfus Mortgage Shares may invest in commercial mortgage-related securities, which generally are multi-class debt or pass-through certificates secured by mortgage loans on commercial properties. These mortgage-related securities generally are constructed to provide protection to the senior classes investors against potential losses on the underlying mortgage loans. This protection generally is provided by having the holders of subordinated classes of securities ("Subordinated Securities") take the first loss if there are defaults on the underlying commercial mortgage loans. Other protection, which may benefit all of the classes or particular classes, may include issuer guarantees, reserve funds, additional Subordinated Securities, cross-collateralization and over-collateralization.

Subordinated Securities-Dreyfus Mortgage Shares may invest in Subordinated Securities issued or sponsored by commercial banks, savings and loan institutions, mortgage bankers, private mortgage insurance companies and other non-governmental issuers. Subordinated Securities have no governmental guarantee, and are subordinated in some manner as to the payment of principal and/or interest to the holders of more senior mortgage-related securities arising out of the same pool of mortgages. The holders of Subordinated Securities typically are compensated with a higher stated yield than are the holders of more senior mortgage-related securities. On the other hand, Subordinated Securities typically subject the holder to greater risk than senior mortgage-related securities and tend to be rated in a lower rating category, and frequently a substantially lower rating category, than the senior mortgage-related securities issued in respect of the same pool of mortgage. Subordinated Securities generally are likely to be more sensitive to changes in prepayment and interest rates and the market for such securities may be less liquid than is the case for traditional fixed-income securities and senior mortgage-related securities.

Collateralized Mortgage Obligations ("CMOs") and Multi-Class Pass-Through-Securities- Dreyfus Mortgage Shares may invest in CMOs, which are multiclass bonds backed by pools of mortgage pass-through certificates or mortgage loans. CMOs may be collateralized by (a) Ginnie Mae, Fannie Mae, or Freddie Mac pass-through certificates, (b) unsecuritized mortgage loans insured by the Federal Housing Administration or guaranteed by the Department of Veterans' Affairs, (c) unsecuritized conventional mortgages, (d) other mortgage-related securities, or (e) any combination thereof.

Each class of CMOs, often referred to as a "tranche," is issued at a specific coupon rate and has a stated maturity or final distribution date. Principal prepayments on collateral underlying a CMO may cause it to be retired substantially earlier than the stated maturities or final distribution dates. The principal and interest on the underlying mortgages may be allocated among the several classes of a series of a CMO in many ways. One or more tranches of a CMO may have coupon rates that reset periodically at a specified increment over an index, such as the London Interbank Offered Rate ("LIBOR") (or sometimes more than one index). These floating rate CMOs typically are issued with lifetime caps on the coupon rate thereon. Dreyfus Mortgage Shares also may invest in inverse floating rate CMOs. Inverse floating rate CMOs constitute a tranche of a CMO with a coupon rate that moves in the reverse direction to an applicable index such as LIBOR. Accordingly, the coupon rate thereon will increase as interest rates decrease. Inverse floating rate CMOs are typically more volatile than fixed or floating rate tranches of CMOs.

Many inverse floating rate CMOs have coupons that move inversely to a multiple of the applicable indexes. The effect of the coupon varying inversely to a multiple of an applicable index creates a leverage factor. Inverse floaters based on multiples of a stated index are designed to be highly sensitive to changes in interest rates and can subject the holders thereof to extreme reductions of yield and loss of principal. The markets for inverse floating rate CMOs with highly leveraged characteristics at times may be very thin. The Fund's ability to dispose of its positions in such securities will depend on the degree of liquidity in the markets for such securities. It is impossible to predict the amount of trading interest that may exist in such securities, and therefore the future degree of liquidity.

Stripped Mortgage-Backed Securities- Dreyfus Mortgage Shares may invest in stripped mortgage-backed securities, which are created by segregating the cash flows from underlying mortgage loans or mortgage securities to create two or more new securities, each with a specified percentage of the underlying security's principal or interest payments. Mortgage securities may be partially stripped so that each investor class receives some interest and some principal. When securities are completely stripped, however, all of the interest is distributed to holders of one type of security, known as an interest-only security, or IO, and all of the principal is distributed to holders of another type of security known as a principal-only security, or PO. Strips can be created in a pass-through structure or as tranches of a CMO. The yields to maturity on IO and POs are very sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets. If the underlying mortgage assets experience greater than anticipated prepayments of principal, the Fund may not fully recoup its initial investment in IOs. Conversely, if the underlying mortgage assets experience less than anticipated prepayments of principal, the yield on POs could be materially and adversely affected.

Real Estate Investment Trusts- Dreyfus Mortgage Shares may invest in REITs. A REIT is a corporation, or a business trust that would otherwise be taxed as a corporation, which meets the definitional requirements of the Internal Revenue Code of 1986, as amended (the "Code"). The

Code permits a qualifying REIT to deduct dividends paid, thereby effectively eliminating corporate level Federal income tax and making the REIT a pass-through vehicle for Federal income tax purposes. To meet the definitional requirements of the Code, a REIT must, among other things, invest substantially all of its assets in interests in real estate (including mortgages and other REITs) or cash and government securities, derive most of its income from rents from real property or interest on loans secured by mortgages on real property, and distribute to shareholders annually a substantial portion of its otherwise taxable income.

REITs are characterized as equity REITs, mortgage REITs and hybrid REITs. Equity REITs, which may include operating or finance companies, own real estate directly and the value of, and income earned by, the REITs depends upon the income of the underlying properties and the rental income they earn. Equity REITs also can realize capital gains (or losses) by selling properties that have appreciated (or depreciated) in value. Mortgage REITs can make construction, development or long-term mortgage loans and are sensitive to the credit quality of the borrower. Mortgage REITs derive their income from interest payments on such loans. Hybrid REITs combine the characteristics of both equity and mortgage REITs, generally by holding both ownership interests and mortgage interests in real estate. The value of securities issued by REITs are affected by tax and regulatory requirements and by perceptions of management skill. They also are subject to heavy cash flow dependency, defaults by borrowers or tenants, self-liquidation and the possibility of failing to qualify for tax-free status under the Code or to maintain exemption from the Investment Company Act of 1940, as amended (the "1940 Act").

Adjustable-Rate Mortgage Loans ("ARMs")-Dreyfus Mortgage Shares may invest in ARMs. ARMs eligible for inclusion in a mortgage pool generally will provide for a fixed initial mortgage interest rate for a specified period of time, generally for either the first three, six, twelve, thirteen, thirty-six, or sixty scheduled monthly payments. Thereafter, the interest rates are subject to periodic adjustment based on changes in an index. ARMs typically have minimum and maximum rates beyond which the mortgage interest rate may not vary over the lifetime of the loans. Certain ARMs provide for additional limitations on the maximum amount by which the mortgage interest rate may adjust for any single adjustment period. Negatively amortizing ARMs may provide limitations on changes in the required monthly payment. Limitations on monthly payments can result in monthly payments that are greater or less than the amount necessary to amortize a negatively amortizing ARM by its maturity at the interest rate in effect during any particular month.

Private Entity Securities-Dreyfus Mortgage Shares may invest in mortgage-related securities issued by commercial banks, savings and loan institutions, mortgage bankers, private mortgage insurance companies and other non-governmental issuers. Timely payment of principal and interest on mortgage-related securities backed by pools created by non-governmental issuers often is supported partially by various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance. The insurance and guarantees are issued by government entities, private insurers and the mortgage poolers. There can be no assurance that the private insurers or mortgage poolers can meet their obligations under the policies, so that if the issuers default on their obligations the holders of the security could sustain a loss. No insurance or guarantee covers the Fund or the price of the Fund's shares. Mortgage-related securities issued by non-governmental issuers generally offer a higher rate of interest than government-agency and government-related securities because there are no direct or indirect government guarantees of payment.

Other Mortgage-Related Securities-Other mortgage-related securities that Dreyfus Mortgage Shares may invest in include securities other than those described above that directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans on real property, including CMO residuals. Other mortgage-related securities may be equity or debt securities issued by agencies or instrumentalities of the U.S. Government or by private originators of, or investors in, mortgage loans, including savings and loan associations, homebuilders, mortgage banks, commercial banks, investment banks, partnerships, trusts and special purpose entities of the foregoing.

Asset-Backed Securities. (Dreyfus Mortgage Shares only) Asset-backed securities are a form of derivative. The securitization techniques used for asset-backed securities are similar to those used for mortgage-related securities. These securities include debt securities and securities with debt-like characteristics. The collateral for these securities has included home equity loans, automobile and credit card receivables, boat loans, computer leases, airplane leases, mobile home loans, recreational vehicle loans and hospital account receivables. Dreyfus Mortgage Shares may invest in these and other types of asset-backed securities that may be developed in the future.

Asset-backed securities present certain risks that are not presented by mortgage-backed securities. Primarily, these securities may provide Dreyfus Mortgage Shares with a less effective security interest in the related collateral than do mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities.

Collateralized Debt Obligations. Each Fund may invest in collateralized debt obligations (“CDOs”), which are securitized interests in pools of – generally non-mortgage – assets. Assets called collateral usually comprise loans or debt instruments. A CDO may be called a collateralized loan obligation (CLO) or collateralized bond obligation (CBO) if it holds only loans or bonds, respectively. Investors bear the credit risk of the collateral. Multiple tranches of securities are issued by the CDO, offering investors various maturity and credit risk characteristics. Tranches are categorized as senior, mezzanine, and subordinated/equity, according to their degree of credit risk. If there are defaults or the CDO’s collateral otherwise underperforms, scheduled payments to senior tranches take precedence over those of mezzanine tranches, and scheduled payments to mezzanine tranches take precedence over those to subordinated/equity tranches. Senior and mezzanine tranches are typically rated, with the former receiving ratings of A to AAA/Aaa and the latter receiving ratings of B to BBB/Baa. The ratings reflect both the credit quality of underlying collateral as well as how much protection a given tranche is afforded by tranches that are subordinate to it.

Zero Coupon, Pay-In-Kind and Step-Up Securities. Each Fund may invest in zero coupon U.S. Treasury securities, which are Treasury Notes and Bonds that have been stripped of their unmatured interest coupons, the coupons themselves and receipts or certificates representing interests in such stripped debt obligations and coupons. Zero coupon securities also are issued by corporations and financial institutions that constitute a proportionate ownership of the issuer's pool of underlying U.S. Treasury securities. A zero coupon security pays no interest to its holders during its life and is sold at a discount to its face value at maturity. Each Fund may invest in pay-in-kind bonds, which are bonds that generally pay interest through the issuance of additional bonds. Each Fund also may purchase step-up coupon bonds, which are debt securities that typically do not pay interest for a specified period of time and then pay interest at a series of different rates. The market prices of these securities generally are more volatile than the market

prices of securities that pay cash interest periodically and are likely to respond to a greater degree to changes in interest rates than securities having similar maturities and credit qualities. In addition, unlike bonds that pay cash interest throughout the period to maturity, the Fund will realize no cash until the cash payment date unless a portion of such securities are sold and, if the issuer defaults, the Fund may obtain no return at all on its investment. Federal income tax law requires the holder of a zero coupon security or of certain pay-in-kind or step-up bonds to accrue income with respect to these securities prior to the receipt of cash payments. To maintain its qualification as a regulated investment company and avoid liability for Federal income taxes, the Fund may be required to distribute such income accrued with respect to these securities and may have to dispose of portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements. See "Dividends, Distributions and Taxes."

Inflation-Indexed Bonds. Each Fund may invest in inflation-indexed bonds, which are fixed-income securities whose value is periodically adjusted according to the rate of inflation. Two structures are common. The U.S. Treasury and some other issuers utilize a structure that accrues inflation into the principal value of the bond. Most other issuers pay out the Consumer Price Index ("CPI") accruals as part of a semiannual coupon.

Inflation-indexed securities issued by the U.S. Treasury have varying maturities and pay interest on a semi-annual basis equal to a fixed percentage of the inflation-adjusted principal amount. If the periodic adjustment rate measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed bonds, even during a period of deflation. However, the current market value of the bonds is not guaranteed and will fluctuate. A Fund also may invest in other inflation-related bonds that may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal amount.

The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates in turn are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if the rate of inflation rises at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation-indexed bonds. In contrast, if nominal interest rates increase at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-indexed bonds. Any increase in the principal amount of an inflation-indexed bond will be considered taxable ordinary income, even though investors do not receive their principal until maturity.

While these securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in value. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure.

The periodic adjustment of U.S. inflation-indexed bonds is tied to the Consumer Price Index for Urban Consumers ("CPI-U"), which is calculated monthly by the U.S. Bureau of Labor Statistics. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-indexed bonds issued by a foreign government are generally adjusted to reflect a comparable inflation index calculated by that

government. There can be no assurance that the CPI-U or any foreign inflation index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States.

Catastrophe Bonds. Each Fund may invest in "catastrophe bonds." Catastrophe bonds are fixed-income securities, for which the return of principal and payment of interest is contingent on the non-occurrence of a specific "trigger" catastrophic event, such as a hurricane or an earthquake. They may be issued by government agencies, insurance companies, reinsurers, special purpose corporations or other on-shore or off-shore entities. If a trigger event causes losses exceeding a specific amount in the geographic region and time period specified in a bond, a Fund investing in the bond may lose a portion or all of its principal invested in the bond. If no trigger event occurs, the Fund will recover its principal plus interest. For some catastrophe bonds, the trigger event or losses may be based on company wide losses, index-portfolio losses, industry indices or readings of scientific instruments rather than specified actual losses. Often the catastrophe bonds provide for extensions of maturity that are mandatory, or optional at the discretion of the issuer, in order to process and audit loss claims in those cases where a trigger event has, or possibly has, occurred. In addition to the specified trigger events, catastrophe bonds also may expose a Fund to certain unanticipated risks including but not limited to issuer (credit) default, adverse regulatory or jurisdictional interpretations and adverse tax consequences.

Money Market Instruments. When the Manager determines that adverse market conditions exist, a Fund may adopt a temporary defensive position and invest up to 100% of its assets in money market instruments, including U.S. Government securities, repurchase agreements, bank obligations and commercial paper. A Fund also may purchase money market instruments when it has cash reserves or in anticipation of taking a market position.

Bank Obligations. Bank obligations in which the Funds may invest include certificates of deposit, bankers' acceptances, and fixed time deposits. Certificates of deposit are negotiable certificates issued against funds deposited in a commercial bank for a definite period of time and earning a specified return. Bankers' acceptances are negotiable drafts or bills of exchange, normally drawn by an importer or exporter to pay for specific merchandise, which are "accepted" by a bank, meaning, in effect, that the bank unconditionally agrees to pay the face value of the instrument on maturity. Fixed time deposits are bank obligations payable at a stated maturity date and bearing interest at a fixed rate. Fixed time deposits may be withdrawn on demand by the investor, but may be subject to early withdrawal penalties that vary depending upon market conditions and the remaining maturity of the obligation. There are no contractual restrictions on the right to transfer a beneficial interest in a fixed time deposit to a third party, although there is no market for such deposits.

Repurchase Agreements. For the purposes of maintaining liquidity and achieving income, each Fund may enter into repurchase agreements with domestic commercial banks or registered broker-dealers. A repurchase agreement is a contract under which a Fund would acquire a security for a relatively short period (usually not more than one week) subject to the obligation of the seller to repurchase and the Fund to resell such security at a fixed time and price (representing the Fund's cost plus interest). In the case of repurchase agreements with broker-dealers, the value of the underlying securities (or collateral) will be at least equal at all times to the total amount of the repurchase obligation, including the interest factor. The Fund bears a risk of loss if the other party to a repurchase agreement defaults on its obligations and the Fund is delayed or prevented from exercising its rights to dispose of the collateral securities. This risk

includes the risk of procedural costs or delays in addition to a loss on the securities if their value should fall below their repurchase price.

Commercial Paper. Each Fund may invest in commercial paper. Commercial paper represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations and finance companies. The commercial paper purchased by the Funds may consist of U.S. dollar-denominated obligations of domestic issuers, or, for Dreyfus High Yield Shares, foreign currency-denominated obligations of domestic or foreign issuers.

Investment Companies. Each Fund may invest in securities issued by other investment companies. Under the 1940 Act, the Fund's investment in such securities, subject to certain exceptions, currently is limited to (i) 3% of the total voting stock of any one investment company, (ii) 5% of the Fund's total assets with respect to any one investment company and (iii) 10% of the Fund's total assets in the aggregate. As a shareholder of another investment company, the Fund would bear, along with other shareholders, its pro rata portion of the other investment company's expenses, including advisory fees. These expenses would be in addition to the advisory and other expenses that each Fund bears directly in connection with its own operations. Each Fund also may invest its uninvested cash reserves or cash it receives as collateral from borrowers of its portfolio securities in connection with the Fund's securities lending program in shares of one or more money market funds advised by the Manager. Such investments will not be subject to the limitations described above. See "Lending Portfolio Securities."

Illiquid Securities. Each Fund may invest up to 15% of the value of its net assets in securities as to which a liquid trading market does not exist, provided such investments are consistent with the Fund's investment objective. These securities may include securities that are not readily marketable, such as securities that are subject to legal or contractual restrictions on resale, repurchase agreements providing for settlement in more than seven days after notice, and certain privately negotiated, non-exchange traded options and securities used to cover such options. As to these securities, the Fund is subject to a risk that should the Fund desire to sell them when a ready buyer is not available at a price the Fund deems representative of their value, the value of the Fund's net assets could be adversely affected.

Investment Techniques

The following information supplements for each Fund (except as noted) and should be read in conjunction with the Funds' Prospectus.

Duration and Portfolio Maturity. Each Fund invests without regard to maturity or duration limitations. Under normal conditions, each Fund expects that the average effective duration of its portfolio will not exceed eight years. As a measure of a fixed-income security's cash flow, duration is an alternative to the concept of "term to maturity" in assessing the price volatility associated with changes in interest rates. Generally, the longer the duration, the more volatility an investor should expect. For example, the market price of a bond with a duration of three years would be expected to decline 3% if interest rates rose 1%. Conversely, the market price of the same bond would be expected to increase 3% if interest rates fell 1%. The market price of a bond with a duration of six years would be expected to increase or decline twice as much as the market price of a bond with a three-year duration. Duration is a way of measuring a security's maturity in terms of the average time required to receive the present value of all interest and principal payments as opposed to its term to maturity. The maturity of a security

measures only the time until final payment is due; it does not take account of the pattern of a security's cash flows over time, which would include how cash flow is affected by prepayments and by changes in interest rates. Incorporating a security's yield, coupon interest payments, final maturity and option features into one measure, duration is computed by determining the weighted average maturity of a bond's cash flows, where the present values of the cash flows serve as weights. In computing the duration of a Fund, the Manager will estimate the duration of obligations that are subject to features such as prepayment or redemption by the issuer, put options retained by the investor or other imbedded options, taking into account the influence of interest rates on prepayments and coupon flows.

For purposes of calculating average effective portfolio maturity, a security that is subject to redemption at the option of the issuer on a particular date (the "call date") which is prior to the security's stated maturity may be deemed to mature on the call date rather than on its stated maturity date. The call date of a security will be used to calculate average effective portfolio maturity when the Manager reasonably anticipates, based upon information available to it, that the issuer will exercise its right to redeem the security. The Manager may base its conclusion on such factors as the interest-rate paid on the security compared to prevailing market rates, the amount of cash available to the issuer of the security, events affecting the issuer of the security, and other factors that may compel or make it advantageous for the issuer to redeem a security prior to its stated maturity.

Borrowing Money. Each Fund is permitted to borrow to the extent permitted under the 1940 Act, which permits an investment company to borrow in an amount up to 33-1/3% of the value of its total assets.

Leverage. Leveraging (that is, buying securities using borrowed money) exaggerates the effect on net asset value of any increase or decrease in the market value of a Fund's portfolio. These borrowings will be subject to interest costs that may or may not be recovered by appreciation of the securities purchased; in certain cases, interest costs may exceed the return received on the securities purchased. For borrowings for investment purposes, the 1940 Act requires a Fund to maintain continuous asset coverage (total assets including borrowings, less liabilities exclusive of borrowings) of 300% of the amount borrowed. If the required coverage should decline as a result of market fluctuations or other reasons, the Fund may be required to sell some of its portfolio holdings within three days to reduce the amount of its borrowings and restore the 300% asset coverage, even though it may be disadvantageous from an investment standpoint to sell securities at that time. The Fund also may be required to maintain minimum average balances in connection with such borrowing or pay a commitment or other fee to maintain a line of credit; either of these requirements would increase the cost of borrowing over the stated interest rate.

Each Fund may also enter into reverse repurchase agreements with banks, brokers/dealers or other financial institutions. This form of borrowing involves the transfer by the Fund of an underlying debt instrument in return for cash proceeds based on a percentage of the value of the security. The Fund retains the right to receive interest and principal payments on the security. At an agreed upon future date, the Fund repurchases the security at principal plus accrued interest. To the extent the Fund enters into a reverse repurchase agreement, the Fund will segregate permissible liquid assets at least equal to the aggregate amount of its reverse repurchase obligations, plus accrued interest, in certain cases, in accordance with releases promulgated by the Securities and Exchange Commission. The Securities and Exchange Commission views reverse repurchase transactions as collateralized borrowings by the Fund.

Except for these transactions, a Fund's borrowings generally will be unsecured.

Short-Selling. In these transactions, the Fund sells a security it does not own in anticipation of a decline in the market value of the security. A Fund may make short-sales to hedge positions, for duration and risk management, to maintain portfolio flexibility or to enhance returns. To complete a short-sale transaction, the Fund must borrow the security to make delivery to the buyer. The Fund is obligated to replace the security borrowed by purchasing it subsequently at the market price at the time of replacement. The price at such time may be more or less than the price at which the security was sold by the Fund, which would result in a loss or gain, respectively.

A Fund will not sell securities short if, after effect is given to any such short sale, the total market value of all securities sold short would exceed 25% of the value of the Fund's net assets. A Fund may not make a short sale that results in the Fund having sold short in the aggregate more than 5% of the outstanding securities of any class of an issuer.

A Fund also may make short sales "against the box," in which the Fund enters into a short sale of a security it owns or has the immediate and unconditional right to acquire at no additional cost at the time of the sale.

Until the Fund closes its short position or replaces the borrowed security, it will:
(a) segregate permissible liquid assets in an amount that, together with the amount provided as collateral, always equals the current value of the security sold short; or (b) otherwise cover its short position.

Lending Portfolio Securities. Each Fund may lend securities from its portfolio to brokers, dealers and other financial institutions needing to borrow securities to complete certain transactions. In connection with such loans, the Fund remains the owner of the loaned securities and continues to be entitled to payments in amounts equal to the interest, dividends or other distributions payable on the loaned securities. The Fund also has the right to terminate a loan at any time. The Fund may call the loan to vote proxies if a material issue affecting the Fund's investment is to be voted upon. Loans of portfolio securities may not exceed 33-1/3% of the value of the Fund's total assets (including the value of all assets received as collateral for the loan). The Fund will receive collateral consisting of cash, U.S. Government securities or irrevocable letters of credit which will be maintained at all times in an amount equal to at least 100% of the current market value of the loaned securities. If the collateral consists of a letter of credit or securities, the borrower will pay the Fund a loan premium fee. If the collateral consists of cash, the Fund will reinvest the cash and pay the borrower a pre-negotiated fee or "rebate" from any return earned on the investment. The Fund may participate in a securities lending program operated by Mellon Bank, N.A., as lending agent (the "Lending Agent"). The Lending Agent will receive a percentage of the total earnings of the Fund derived from lending its portfolio securities. Should the borrower of the securities fail financially, the Fund may experience delays in recovering the loaned securities or exercising its rights in the collateral. Loans are made only to borrowers that are deemed by the Manager to be of good financial standing. In a loan transaction, the Fund will also bear the risk of any decline in value of securities acquired with cash collateral. A Fund will minimize this risk by limiting the investment of cash collateral to money market funds advised by the Manager, repurchase agreements or other high quality instruments with short maturities.

Derivatives. Each Fund may invest in, or enter into, derivatives for a variety of reasons, including to hedge certain market or interest rate risks, to provide a substitute for purchasing or selling particular securities or to increase potential returns. Generally, derivatives are financial contracts whose value depends upon, or is derived from, the value of an underlying asset, reference rate or index, and may relate to stocks, bonds, interest rates, currencies or currency exchange rates, commodities and related indexes. Examples of derivative instruments a Fund may use include options contracts, futures contracts, options on futures contracts, and, for Dreyfus High Yield Shares, swaps and credit derivatives. Derivatives may provide a cheaper, quicker or more specifically focused way for the Funds to invest than traditional securities would. A Fund's portfolio manager may decide not to employ any of these strategies and there is no assurance that any derivatives strategy used by the Fund will succeed.

Derivatives can be volatile and involve various types and degrees of risk, depending upon the characteristics of the particular derivative and the portfolio as a whole. Derivatives permit a Fund to increase or decrease the level of risk, or change the character of the risk, to which its portfolio is exposed in much the same way as the Fund can increase or decrease the level of risk, or change the character of the risk, of its portfolio by making investments in specific securities. However, derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in derivatives could have a large potential impact on a Fund's performance.

If a Fund invests in derivatives at inopportune times or judges market conditions incorrectly, such investments may lower the Fund's return or result in a loss. A Fund also could experience losses if its derivatives were poorly correlated with its other investments, or if the Fund were unable to liquidate its position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid and unpredictable changes in the prices for derivatives.

Derivatives may be purchased on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. Exchange-traded derivatives generally are guaranteed by the clearing agency that is the issuer or counterparty to such derivatives. This guarantee usually is supported by a daily variation margin system operated by the clearing agency in order to reduce overall credit risk. As a result, unless the clearing agency defaults, there is relatively little counterparty credit risk associated with derivatives purchased on an exchange. By contrast, no clearing agency guarantees over-the-counter derivatives. Therefore, each party to an over-the-counter derivative bears the risk that the counterparty will default. Accordingly, the Manager will consider the creditworthiness of counterparties to over-the-counter derivatives in the same manner as it would review the credit quality of a security to be purchased by the Fund. Over-the-counter derivatives are less liquid than exchange-traded derivatives since the other party to the transaction may be the only investor with sufficient understanding of the derivative to be interested in bidding for it.

Some derivatives the Funds may use involve leverage (e.g., an instrument linked to the value of a securities index may return income calculated as a multiply of the price movement of the underlying index). This economic leverage will increase the volatility of these instruments as they may increase or decrease in value more quickly than the underlying security, index, futures contract, currency or other economic variable. Pursuant to regulations and/or published positions of the Securities and Exchange Commission, a Fund may be required to segregate permissible liquid assets to cover its obligations relating to its transactions in derivatives. For example, in the case of futures contracts or forward contracts that are not contractually required to cash settle,

a Fund must set aside liquid assets equal to such contracts' full notional value (generally, the total numerical value of the asset underlying a future or forward contract at the time of valuation) while the positions are open. With respect to futures contracts or forward contracts that are contractually required to cash settle, however, a Fund is permitted to set aside liquid assets in an amount equal to a Fund's daily marked-to-market net obligation (i.e., a Fund's daily net liability) under the contracts, if any, rather than such contracts' full notional value. By setting aside assets equal to only its net obligations under cash-settled futures and forwards contracts, a Fund may employ leverage to a greater extent than if the Fund were required to segregate assets equal to the full notional value of such contracts.

Neither the Company nor the Funds will be a commodity pool. The Company has filed notice with the Commodity Futures Trading Commission and National Futures Association of its eligibility, as a registered investment company, for an exclusion from the definition of commodity pool operator and, that neither the Company nor the Funds is subject to registration or regulation as a commodity pool operator under the Commodity Exchange Act.

Futures Transactions--In General. A futures contract is an agreement between two parties to buy and sell a security or commodity for a set price on a future date. These contracts are traded on exchanges, so that, in most cases, either party can close out its position on the exchange for cash, without delivering the security or commodity. An option on a futures contract gives the holder of the option the right to buy from or sell to the writer of the option a position in a futures contract at a specified price on or before a specified expiration date. To the extent described in its Prospectus and this Statement of Additional Information, a Fund may invest in futures contracts and options on futures contracts, including those with respect to interest rates, commodities, and security or commodity indexes. To the extent a Fund may invest in foreign currency-denominated securities, it also may invest in foreign currency futures contracts and options thereon.

Although some futures contracts call for making or taking delivery of the underlying securities or commodities, generally these obligations are closed out before delivery by offsetting purchases or sales of matching futures contracts (same exchange, underlying security or index, and delivery month). Closing out a futures contract sale is effected by purchasing a futures contract for the same aggregate amount of the specific type of financial instrument or commodity with the same delivery date. If an offsetting purchase price is less than the original sale price, the Fund realizes a capital gain, or if it is more, the Fund realizes a capital loss. Conversely, if an offsetting sale price is more than the original purchase price, the Fund realizes a capital gain or if it is less, the Fund realizes a capital loss. Transaction costs also are included in these calculations.

Each Fund may enter into futures contracts in U.S. domestic markets or, if applicable, on exchanges located outside the United States. Foreign markets may offer advantages such as trading opportunities or arbitrage possibilities not available in the United States. Foreign markets, however, may have greater risk potential than domestic markets. For example, some foreign exchanges are principal markets so that no common clearing facility exists and an investor may look only to the broker for performance of the contract. In addition, any profits that the Fund might realize in trading could be eliminated by adverse changes in the currency exchange rate, or the Fund could incur losses as a result of those changes. Transactions on foreign exchanges may include commodities that are traded on domestic exchanges or those which are not. Unlike trading on domestic commodity exchanges, trading on foreign commodity exchanges is not regulated by the Commodity Futures Trading Commission.

Engaging in these transactions involves risk of loss to the Fund that could adversely affect the value of the Fund's net assets. Although the Fund intends to purchase or sell futures contracts only if there is an active market for such contracts, no assurance can be given that a liquid market will exist for any particular contract at any particular time. Many futures exchanges and boards of trade limit the amount of fluctuation permitted in futures contract prices during a single trading day. Once the daily limit has been reached in a particular contract, no trades may be made that day at a price beyond that limit or trading may be suspended for specified periods during the trading day. Futures contract prices could move to the limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of futures positions and potentially subjecting the Fund to substantial losses.

Successful use of futures and options by a Fund also is subject to the Manager's ability to predict correctly movements in the direction of the relevant market and, to the extent the transaction is entered into for hedging purposes, to ascertain the appropriate correlation between the position being hedged and the price movements of the futures contract. For example, if the Fund uses futures to hedge against the possibility of a decline in the market value of securities held in its portfolio and the prices of such securities instead increase, the Fund will lose part or all of the benefit of the increased value of securities which it has hedged because it will have offsetting losses in its futures positions. Furthermore, if in such circumstances the Fund has insufficient cash, it may have to sell securities to meet daily variation margin requirements. The Fund may have to sell such securities at a time when it may be disadvantageous to do so.

Specific Futures Transactions. Each Fund may purchase and sell interest rate futures contracts. An interest rate future obligates the Fund to purchase or sell an amount of a specific debt security at a future date at a specific price.

Dreyfus High Yield Shares may purchase and sell currency futures. A foreign currency future obligates the Fund to purchase or sell an amount of a specific currency at a future date at a specific price.

Dreyfus High Yield Shares may purchase and sell index futures contracts. A securities index future obligates the Fund to pay or receive an amount of cash equal to a fixed dollar amount specified in the futures contract multiplied by the difference between the settlement price of the contract on the contract's last trading day and the value of the index based on the prices of the securities that comprise it at the opening of trading in such securities on the next business day.

Options--In General. Each Fund may purchase call and put options, and write (i.e., sell) covered call and put option contracts. A call option gives the purchaser of the option the right to buy, and obligates the writer to sell, the underlying security or securities at the exercise price at any time during the option period, or at a specific date. Conversely, a put option gives the purchaser of the option the right to sell, and obligates the writer to buy, the underlying security or securities at the exercise price at any time during the option period, or at a specific date.

A covered call option written by a Fund is a call option with respect to which the Fund owns the underlying security or otherwise covers the transaction, such as by segregating permissible liquid assets. A put option written by a Fund is covered when, among other things, the Fund segregates permissible liquid assets having a value equal to or greater than the exercise price of the option to fulfill the obligation undertaken or otherwise covers the transaction. The principal reason for writing covered call and put options is to realize, through the receipt of

premiums, a greater return than would be realized on the underlying securities alone. The Fund receives a premium from writing covered call or put options that it retains whether or not the option is exercised.

There is no assurance that sufficient trading interest to create a liquid secondary market on a securities exchange will exist for any particular option or at any particular time, and for some options no such secondary market may exist. A liquid secondary market in an option may cease to exist for a variety of reasons. In the past, for example, higher than anticipated trading activity or order flow, or other unforeseen events, at times have rendered certain of the clearing facilities inadequate and resulted in the institution of special procedures, such as trading rotations, restrictions on certain types of orders or trading halts or suspensions in one or more options. There can be no assurance that similar events, or events that may otherwise interfere with the timely execution of customers' orders, will not recur. In such event, it might not be possible to effect closing transactions in particular options. If, as a covered call option writer, the Fund is unable to effect a closing purchase transaction in a secondary market, it will not be able to sell the underlying security until the option expires or it delivers the underlying security upon exercise or it otherwise covers its position.

Specific Options Transactions. Each Fund may purchase and sell call and put options in respect of specific securities (or groups or "baskets" of specific securities) or, in the case of Dreyfus High Yield Shares, indices listed on national securities exchanges or traded in the over-the-counter market. An option on an index is similar to an option in respect of specific securities, except that settlement does not occur by delivery of the securities comprising the index. Instead, the option holder receives an amount of cash if the closing level of the securities index upon which the option is based is greater than in the case of a call, or less than in the case of a put, the exercise price of the option. Thus, the effectiveness of purchasing or writing securities index options will depend upon price movements in the level of the index rather than the price of a particular security.

Dreyfus High Yield Shares may purchase and sell call and put options on foreign currency. These options convey the right to buy or sell the underlying currency at a price that is expected to be lower or higher than the spot price of the currency at the time the option is exercised or expires.

Dreyfus High Yield Shares may purchase cash-settled options on swaps, as described below, in pursuit of its investment objective. A cash-settled option on a swap gives the purchaser the right, but not the obligation, in return for the premium paid, to receive an amount of cash equal to the value of the underlying swap as of the exercise date.

Successful use by a Fund of options will be subject to the ability of the Manager to predict correctly movements in the prices of individual securities, the financial markets generally, foreign currencies or interest rates. To the extent such predictions are incorrect, the Fund may incur losses.

Swap Transactions and Other Credit Derivatives. (Dreyfus High Yield Shares only) Dreyfus High Yield Shares may engage in swap transactions, including interest rate swaps, interest rate locks, caps, collars and floors, credit default swaps, and index swap agreements and other credit derivative products, to seek to mitigate risk, manage maturity and duration, reduce portfolio turnover, or obtain a particular desired return at a lower cost to the Fund than if the Fund had

invested directly in an instrument that yielded the desired return. The Fund also may enter into options on swaps, sometimes called "swaptions."

Swap agreements are two party contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year. In a standard "swap" transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The gross returns to be exchanged or "swapped" between the parties are generally calculated with respect to a "notional amount," i.e., the return on or increase in value of a particular dollar amount invested at a particular interest rate, or in a "basket" of credit default swaps or securities representing a particular index. The "notional amount" of the swap agreement is only used as a basis upon which to calculate the obligations that the parties to a swap agreement have agreed to exchange.

Most swap agreements entered into by the Fund are cash settled and calculate the obligations of the parties to the agreement on a "net basis." Thus, the Fund's current obligations (or rights) under a swap agreement generally will be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the "net amount"). The Fund's current obligations under a swap agreement will be accrued daily (offset against any amounts owed to the Fund) and any accrued but unpaid net amounts owed to a swap counterparty will be covered by the segregation of permissible liquid assets of the Fund.

A swap option is a contract that gives a counterparty the right (but not the obligation) in return for payment of a premium, to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. A cash-settled option on a swap gives the purchaser the right in return for the premium paid, to receive an amount of cash equal to the value of the underlying swap as of the exercise date. These options typically are purchased in privately negotiated transactions from financial institutions, including securities brokerage firms. Depending on the terms of the particular option agreement, the Fund generally will incur a greater degree of risk when it writes a swap option than it will incur when it purchases a swap option. When the Fund purchases a swap option, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised. However, when the Fund writes a swap option, upon exercise of the option the Fund will become obligated according to the terms of the underlying agreement.

Interest rate swaps are over-the-counter contracts in which each party agrees to make a periodic interest payment based on an index or the value of an asset in return for a periodic payment from the other party based on a different index or asset. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling such interest rate floor. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index rises above a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling such interest rate cap. Interest rate collars involve selling a cap and purchasing a floor or vice versa to protect the Fund against interest rate movements exceeding given minimum or maximum levels.

Dreyfus High Yield Shares may enter into credit default swap agreements and similar agreements, which may have as reference obligations securities that are or are not currently held by the Fund. The protection "buyer" in a credit default contract may be obligated to pay the protection "seller" an up front payment or a periodic stream of payments over the term of the

contract provided generally that no credit event on a reference obligation has occurred. If a credit event occurs, the seller generally must pay the buyer the "par value" (full notional value) of the swap in exchange for an equal face amount of deliverable obligations of the reference entity described in the swap, or the seller may be required to deliver the related net cash amount, if the swap is cash settled. The Fund may be either the buyer or seller in the transaction. If the Fund is a buyer and no credit event occurs, the Fund recovers nothing if the swap is held through its termination date. However, if a credit event occurs, the Fund may elect to receive the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity that may have little or no value. As a seller, the Fund generally receives an up front payment or a fixed rate of income throughout the term of the swap, which typically is between six months and three years, provided that there is no credit event. If a credit event occurs, generally the seller must pay the buyer the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity that may have little or no value. Credit default swaps and similar instruments involve greater risks than if the Fund had invested in the reference obligation directly, since, in addition to general market risks, they are subject to illiquidity risk, counterparty risk and credit risk.

Dreyfus High Yield Shares may invest in credit linked securities issued by a limited purpose trust or other vehicle that, in turn, invests in a derivative instrument or basket of derivative instruments, such as credit default swaps or interest rate swaps, to obtain exposure to certain fixed income markets or to remain fully invested when more traditional income producing securities are not available. Like an investment in a bond, an investment in these credit linked securities represents the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on the issuer's receipt of payments from, and the issuer's potential obligations to, the counterparties to certain derivative instruments entered into by the issuer of the credit linked security. For example, the issuer may sell one or more credit default swaps entitling the issuer to receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the issuer would be obligated to pay the counterparty the par (or other agreed upon value) of the referenced debt obligation.

The use of credit derivatives is a highly specialized activity which involves strategies and risks different from those associated with ordinary portfolio security transactions. If the Manager is incorrect in its forecasts of default risks, market spreads or other applicable factors, or a counterparty defaults, the investment performance of the Fund would diminish compared with what it would have been if these techniques were not used. In addition, it is possible that developments in the credit derivatives market, including potential government regulation, could adversely affect the Fund's ability to terminate existing swap or other credit derivative agreements or to realize amounts to be received under such agreements.

Dreyfus High Yield Shares will enter into swap and other credit derivatives transactions only when the Manager believes it would be in the best interests of the Fund to do so. In addition, the Fund will enter into swap and other credit derivative agreements only with counterparties that meet certain standards of creditworthiness (generally, such counterparties would have to be eligible counterparties under the terms of the Fund's repurchase agreement guidelines).

Future Developments. Each Fund may take advantage of opportunities in options and futures contracts and options on futures contracts and any other derivatives which are not presently contemplated for use by the Fund or which are not currently available but which may be developed, to the extent such opportunities are both consistent with the Fund's investment objective and legally permissible for the Fund. Before entering into such transactions or making any such investment, the Fund will provide appropriate disclosure in its Prospectus or Statement of Additional Information.

Forward Roll Transactions. (Dreyfus Mortgage Shares only) To enhance current income, Dreyfus Mortgage Shares may enter into forward roll transactions with respect to mortgage-related securities. In a forward roll transaction, the Fund sells a mortgage-related security to a financial institution, such as a bank or broker-dealer, and simultaneously agrees to purchase a similar security from the institution at a later date at an agreed upon price. The securities that are purchased will bear the same interest rate as those sold, but generally will be collateralized by different pools of mortgages with different pre-payment histories than those sold. During the period between the sale and purchase, the Fund will not be entitled to receive interest and principal payments on the securities sold. Proceeds of the sale typically will be invested in short-term instruments, particularly repurchase agreements, and the income from these investments, together with any additional fee income received on the sale will be expected to generate income for the Fund exceeding the yield on the securities sold. Forward roll transactions involve the risk that the market value of the securities sold by the Fund may decline below the purchase price of those securities. The Fund will segregate permissible liquid assets at least equal to the amount of the repurchase price (including accrued interest).

Forward Commitments. Each Fund may purchase or sell securities on a forward commitment, when-issued or delayed delivery basis, which means delivery and payment take place a number of days after the date of the commitment to purchase or sell the securities at a predetermined price and/or yield. Typically, no interest accrues to the purchaser until the security is delivered. When purchasing a security on a forward commitment basis, the Fund assumes the rights and risks of ownership of the security, including the risk of price and yield fluctuations, and takes such fluctuations into account when determining its net asset value. Because the Fund is not required to pay for these securities until the delivery date, these risks are in addition to the risks associated with the Fund's other investments. If the Fund is fully or almost fully invested when forward commitment purchases are outstanding, such purchases may result in a form of leverage. Each Fund intends to engage in forward commitments to increase its portfolio's financial exposure to the types of securities in which it invests. Leveraging the portfolio in this manner will increase the Fund's exposure to changes in interest rates and will increase the volatility of its returns. A Fund will segregate permissible liquid assets at least equal at all times to the amount of the Fund's purchase commitments.

Securities purchased on a forward commitment, when-issued or delayed-delivery basis are subject to changes in value (generally changing in the same way, i.e., appreciating when interest rates decline and depreciating when interest rates rise) based upon the public's perception of the creditworthiness of the issuer and changes, real or anticipated, in the level of interest rates. Securities purchased on a forward commitment, when-issued or delayed-delivery basis may expose the Fund to risks because they may experience such fluctuations prior to their actual delivery. Purchasing securities on a forward commitment, when-issued or delayed-delivery basis can involve the additional risk that the yield available in the market when the delivery takes place actually may be higher than that obtained in the transaction itself. Purchasing securities on

a forward commitment, when-issued or delayed delivery basis when a Fund is fully or almost fully invested may result in greater potential fluctuation in the value of the Fund's net assets and its net asset value per share.

Foreign Currency Transactions (Dreyfus High Yield Shares only). The Fund may enter into foreign currency transactions for a variety of purposes, including: to fix in U.S. dollars, between trade and settlement date, the value of a security the Fund has agreed to buy or sell; to hedge the U.S. dollar value of securities the Fund already owns, particularly if it expects a decrease in the value of the currency in which the foreign security is denominated; or to gain exposure to the foreign currency in an attempt to realize gains.

Foreign currency transactions may involve, for example, the Fund's purchase of foreign currencies for U.S. dollars or the maintenance of short positions in foreign currencies. A short position would involve the Fund agreeing to exchange an amount of a currency it did not currently own for another currency at a future date in anticipation of a decline in the value of the currency sold relative to the currency the Fund contracted to receive. The Fund's success in these transactions may depend on the ability of the Manager to predict accurately the future exchange rates between foreign currencies and the U.S. dollar.

Currency exchange rates may fluctuate significantly over short periods of time. They generally are determined by the forces of supply and demand in the foreign exchange markets and the relative merits of investments in different countries, actual or perceived changes in interest rates and other complex factors, as seen from an international perspective. Currency exchange rates also can be affected unpredictably by intervention by U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

Certain Investment Considerations and Risks

High Yield-Lower Rated Securities. Higher yielding (and, therefore, higher risk) securities may be subject to certain risks with respect to the issuing entity and to greater market fluctuations than certain lower yielding, higher rated securities. The retail secondary market for these securities may be less liquid than that of higher rated securities; adverse conditions could make it difficult at times for the Fund to sell certain securities or could result in lower prices than those used in calculating the Fund's net asset value.

Bond prices are inversely related to interest rate changes; however, bond price volatility also is inversely related to coupon. Accordingly, below investment grade securities may be relatively less sensitive to interest rate changes than higher quality securities of comparable maturity, because of their higher coupon. This higher coupon is what the investor receives in return for bearing greater credit risk. The higher credit risk associated with below investment grade securities potentially can have a greater effect on the value of such securities than may be the case with higher quality issues of comparable maturity, and will be a substantial factor in the Fund's relative share price volatility. Although ratings may be useful in evaluating the safety of interest and principal payments, they do not evaluate the market value risk of these securities. The Funds will rely on the Manager's judgment, analysis and experience in evaluating the creditworthiness of an issuer.

You should be aware that the market values of many of these securities tend to be more sensitive to economic conditions than are higher rated securities and will fluctuate over time.

These securities generally are considered by the Rating Agencies to be, on balance, predominantly speculative with respect to capacity to pay interest and repay principal in accordance with the terms of the obligation and generally will involve more credit risk than securities in the higher rating categories.

Companies that issue certain of these securities often are highly leveraged and may not have available to them more traditional methods of financing. Therefore, the risk associated with acquiring the securities of such issuers generally is greater than is the case with the higher rated securities. For example, during an economic downturn or a sustained period of rising interest rates, highly leveraged issuers of these securities may not have sufficient revenues to meet their interest payment obligations. The issuer's ability to service its debt obligations also may be affected adversely by specific corporate developments, forecasts, or the unavailability of additional financing. The risk of loss because of default by the issuer is significantly greater for the holders of these securities because such securities generally are unsecured and often are subordinated to other creditors of the issuer.

Because there is no established retail secondary market for many of these securities, the Fund anticipates that such securities could be sold only to a limited number of dealers or institutional investors. To the extent a secondary trading market for these securities does exist, it generally is not as liquid as the secondary market for higher rated securities. The lack of a liquid secondary market may have an adverse impact on market price and yield and the Fund's ability to dispose of particular issues when necessary to meet the Fund's liquidity needs or in response to a specific economic event such as a deterioration in the creditworthiness of the issuer. The lack of a liquid secondary market for certain securities also may make it more difficult for the Fund to obtain accurate market quotations for purposes of valuing the Fund's portfolio and calculating its net asset value. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the values and liquidity of these securities. In such cases, judgment may play a greater role in valuation because less reliable, objective data may be available.

These securities may be particularly susceptible to economic downturns. An economic recession could adversely affect the ability of the issuers of lower rated bonds to repay principal and pay interest thereon and increase the incidence of default for such securities. It is likely that an economic recession also could disrupt severely the market for such securities and have an adverse impact on their value.

A Fund may acquire these securities during an initial offering. Such securities may involve special risks because they are new issues. The Funds have no arrangement with any person concerning the acquisition of such securities, and the Manager will review carefully the credit and other characteristics pertinent to such new issues.

The credit risk factors pertaining to lower rated securities also apply to lower rated zero coupon bonds, pay-in-kind bonds and step-up bonds. In addition to the risks associated with the credit rating of the issuers, the market prices of these securities may be very volatile during the period no interest is paid.

Mortgage-Related Securities. (Dreyfus Mortgage Shares only) Mortgage-related securities are derivative instruments, subject to both credit and prepayment risk. Although they may provide opportunities for enhanced total return, you should be aware that the lower rated mortgage-related securities in which the Fund may invest are likely to be more volatile and less

liquid, and more difficult to price accurately, than more traditional debt securities. These securities may be particularly susceptible to economic downturns. It is likely that an economic recession could disrupt severely the market for such securities and may have an adverse impact on the value of such securities.

Mortgage-related securities generally are subject to credit risks associated with the performance of the underlying mortgage properties and to prepayment risk. In certain instances, the credit risk associated with mortgage-related securities can be reduced by third party guarantees or other forms of credit support. Improved credit risk does not reduce prepayment risk, which is unrelated to the rating assigned to the mortgage-related security. Prepayment risk can lead to fluctuations in value of the mortgage-related security, which may be pronounced. If a mortgage-related security is purchased at a premium, all or part of the premium may be lost if there is a decline in the market value of the security, whether resulting from changes in interest rates or prepayments on the underlying mortgage collateral. Certain mortgage-related securities that may be purchased by the Fund, such as inverse floating rate collateralized mortgage obligations, have coupons that move inversely to a multiple of a specific index, which may result in a form of leverage. As with other interest-bearing securities, the prices of certain mortgage-related securities are inversely affected by changes in interest rates. However, although the value of a mortgage-related security may decline when interest rates rise, the converse is not necessarily true, since in periods of declining interest rates the mortgages underlying the security are more likely to be prepaid. For this and other reasons, a mortgage-related security's stated maturity may be shortened by unscheduled prepayments on the underlying mortgages, and, therefore, it is not possible to predict accurately the security's return to the Fund. Moreover, with respect to certain stripped mortgage-backed securities, if the underlying mortgage securities experience greater than anticipated prepayments of principal, the Fund may fail to fully recoup its initial investment even if the securities are rated in the highest rating category by a nationally recognized statistical rating organization. During periods of rapidly rising interest rates, prepayments of mortgage-related securities may occur at slower than expected rates. Slower prepayments effectively may lengthen a mortgage-related security's expected maturity, which generally would cause the value of such security to fluctuate more widely in response to changes in interest rates. Were the prepayments on the Fund's mortgage-related securities to decrease broadly, the Fund's effective duration, and thus sensitivity to interest rate fluctuations, would increase. Commercial real property loans, however, often contain provisions that reduce the likelihood that such securities will be prepaid. The provisions generally impose significant prepayment penalties on loans and in some cases there may be prohibitions on principal prepayments for several years following origination.

Foreign Securities. (Dreyfus High Yield Shares only) Investing in the securities of foreign issuers, as well as instruments that provide investment exposure to foreign securities and markets, involves risks that are not typically associated with investing in U.S. dollar-denominated securities of domestic issuers. Investments in foreign issuers may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and in exchange control regulations (e.g., currency blockage). A decline in the exchange rate of the currency (i.e., weakening of the currency against the U.S. dollar) in which a fund security is quoted or denominated relative to the U.S. dollar would reduce the value of the fund security. A change in the value of such foreign currency against the U.S. dollar also will result in a change in the amount of income the Fund has available for distribution. Because a portion of the Fund's investment income may be received in foreign currencies, the Fund will be required to compute its income in U.S. dollars for distribution to shareholders, and therefore the Fund will absorb the

cost of currency fluctuations. After the Fund has distributed income, subsequent foreign currency losses may result in the Fund having distributed more income in a particular fiscal period than was available from investment income, which could result in a return of capital to shareholders. In addition, if the exchange rate for the currency in which the Fund receives interest payments declines against the U.S. dollar before such income is distributed as dividends to shareholders, the Fund may have to sell Fund securities to obtain sufficient cash to enable the Fund to pay such dividends. Commissions on transactions in foreign securities may be higher than those for similar transactions on domestic stock markets and foreign custodial costs are higher than domestic custodial costs. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have on occasion been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign securities markets generally are not as developed or efficient as those in the United States. Securities of some foreign issuers are less liquid and more volatile than securities of comparable U.S. issuers. Similarly, volume and liquidity in most foreign securities markets are less than in the United States and, at times, volatility of price can be greater than in the United States.

Because evidences of ownership of foreign securities usually are held outside the United States, by investing in such securities the Fund will be subject to additional risks which include possible adverse political and economic developments, seizure or nationalization of foreign deposits and adoption of governmental restrictions which might adversely affect or restrict the payment of principal and interest on the foreign securities to investors located outside the country of the issuer, whether from currency blockage or otherwise. Foreign securities held by the Fund may trade on days when the Fund does not calculate its net asset value and thus affect the Fund's net asset value on days when investors have no access to the Fund.

Developing countries have economic structures that are generally less diverse and mature, and political systems that are less stable, than those of developed countries. The markets of developing countries may be more volatile than the markets of more mature economies; however, such markets may provide higher rates of return to investors. Many developing countries providing investment opportunities for the Fund have experienced substantial, and in some periods extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates have had and may continue to have adverse effects on the economies and securities markets of certain of these countries.

Since foreign securities often are purchased with and payable in currencies of foreign countries, the value of these assets as measured in U.S. dollars may be affected favorably or unfavorably by changes in currency rates and exchange control regulations.

Investment Restrictions

Under normal circumstances, Dreyfus High Yield Shares invests at least 80% of its net assets, plus any borrowings for investment purposes, in high yield securities (or other instruments with similar economic characteristics) and Dreyfus Mortgage Shares invests at least 80% of its net assets, plus any borrowings for investment purposes, in mortgage-related securities (or other instruments with similar economic characteristics). Each Fund has adopted a policy to provide its shareholders with at least 60 days' prior notice of any change in its policy to so invest 80% of its assets.

In addition, each Fund has adopted investment restrictions numbered 1 through 7 as fundamental policies, which cannot be changed without approval by the holders of a majority (as defined in the 1940 Act) of the Fund's outstanding voting shares. Investment restrictions numbered 8 through 12 are not fundamental policies and may be changed by vote of a majority of the Company's Board members at any time. Neither Fund may:

1. Invest more than 25% of the value of its total assets in the securities of issuers in any single industry, provided that there shall be no limitation on the purchase of obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities.
2. Invest in commodities or commodities contracts, except that the Fund may purchase and sell options, forward contracts, futures contracts, including those related to indices, and options on futures contracts or indices and enter into swaps and other derivatives.
3. Purchase, hold or deal in real estate, or oil, gas or other mineral leases or exploration or development programs, but the Fund may purchase and sell securities that are secured by real estate or issued by companies that invest or deal in real estate or real estate investment trusts. In particular, Dreyfus Mortgage Shares may purchase mortgage-related securities.
4. Borrow money, except to the extent permitted under the 1940 Act (which currently limits borrowing to no more than 33-1/3% of the value of the Fund's total assets). For purposes of this Investment Restriction, the entry into options, forward contracts, futures contracts, including those relating to indices, and options on futures contracts or indices shall not constitute borrowing.
5. Lend any securities or make loans to others, if, as a result, more than 33-1/3% of its total assets would be lent to others, except that this limitation does not apply to the purchase of debt obligations and the entry into repurchase agreements. However, the Fund may lend its portfolio securities in an amount not to exceed 33-1/3% of the value of its total assets. Any loans of portfolio securities will be made according to guidelines established by the Securities and Exchange Commission and the Company's Board.
6. Act as an underwriter of securities of other issuers, except to the extent the Fund may be deemed an underwriter under the Securities Act of 1933, as amended, by virtue of disposing of portfolio securities.
7. Issue any senior security (as such term is defined in Section 18(f) of the 1940 Act), except insofar as the Fund may be deemed to have issued a senior security by reason of borrowing money in accordance with the Fund's borrowing policies. For purposes of this Investment Restriction, collateral, escrow, or margin or other deposits with respect to the making of short sales, the purchase or sale of futures contracts or options, purchase or sale of forward foreign currency contracts, and the writing of options on securities are not deemed to be an issuance of senior security.
8. Purchase securities on margin, except for use of short-term credit necessary for clearance of purchases and sales of portfolio securities, but the Fund may make margin deposits in connection with transactions in options, forward contracts, futures contracts, and options on futures contracts, and except that effecting short sales will be deemed not to constitute a margin purchase for purposes of this Investment Restriction.

9. Invest in the securities of a company for the purpose of exercising management or control, but the Fund will vote the securities it owns in its portfolio as a shareholder in accordance with its views.

10. Enter into repurchase agreements providing for settlement in more than seven days after notice or purchase securities that are illiquid, if, in the aggregate, more than 15% of the value of the Fund's net assets would be so invested.

11. Purchase securities of other investment companies, except to the extent permitted under the 1940 Act.

12. Pledge, mortgage or hypothecate its assets, except to the extent necessary to secure permitted borrowings and to the extent related to the purchase of securities on a when-issued, forward commitment or delayed-delivery basis and the deposit of assets in escrow in connection with writing covered put and call options and collateral and initial or variation margin arrangements with respect to permitted transactions.

If a percentage restriction is adhered to at the time of investment, a later change in percentage resulting from a change in values or assets will not constitute a violation of such restriction. With respect to Investment Restriction No. 4, however, if borrowings exceed 33-1/3% of the value of a Fund's total assets as a result of changes in values or assets, the Fund must take steps to reduce such borrowings at least to the extent of such excess.

MANAGEMENT OF THE COMPANY

The Company's Board is responsible for the management and supervision of each Fund, and approves all significant agreements with those companies that furnish services to the Fund. These companies are as follows:

The Dreyfus Corporation	Investment Adviser
Dreyfus Service Corporation.	Distributor
Dreyfus Transfer, Inc.	Transfer Agent
Mellon Bank, N.A.	Custodian

Board Members of the Company¹

Board members of the Company, together with information as to their positions with the Company, principal occupations and other board memberships and affiliations, are shown below.

Joseph S. DiMartino (63) Chairman of the Board (2002)	Corporate Director and Trustee	The Muscular Dystrophy Association, <i>Director</i> Century Business Services, Inc., a provider of outsourcing functions for small and medium size companies, <i>Director</i> The Newark Group, a provider of a national market of paper recovery facilities, paperboard mills and paperboard converting plants, <i>Director</i> Sunair Services Corporation, engaging in the design, manufacture and sale of high frequency systems for
--	--------------------------------	--

¹ None of the Board members are "interested persons" of the Company, as defined in the 1940 Act.

long-range voice and data communications, as well as providing certain outdoor-related services to homes and businesses, *Director*

Clifford L. Alexander, Jr. (73) Board Member (2002)	President of Alexander & Associates, Inc., a management consulting firm (January 1981 – present) Chairman of the Board of Moody's Corporation (October 2000 – October 2003)	Mutual of America Life Insurance Company, <i>Director</i>
Lucy Wilson Benson (79) Board Member (2002)	President of Benson and Associates, consultants to business and government (1980 - present)	The International Executive Services Corps., <i>Director Emeritus</i> Citizens Network for Foreign Affairs, <i>Vice Chairperson</i> Council on Foreign Relations, <i>Member</i> Lafayette College Board of Trustees, <i>Trustee Emeritus</i> Atlantic Council of the U.S., <i>Director</i>
David W. Burke (70) Board Member (2003)	Corporate Director and Trustee	John F. Kennedy Library Foundation, <i>Director</i> U.S.S. Constitution Museum, <i>Director</i>
Whitney I. Gerard (72) Board Member (2003)	Partner of Chadbourne & Parke LLP	None
George L. Perry (72) Board Member (2003)	Economist and Senior Fellow at Brookings Institution	None

Board members are elected to serve for an indefinite term. The Company has standing audit, nominating and compensation committees, each comprised of its Board members who are not "interested persons" of the Company, as defined in the 1940 Act. The function of the audit committee is (i) to oversee the Company's accounting and financial reporting processes and the audits of the Funds' financial statements and (ii) to assist in the Board's oversight of the integrity of the Funds' financial statements, the Funds' compliance with legal and regulatory requirements and the independent registered public accounting firm's qualifications, independence and performance. The Company's nominating committee is responsible for selecting and nominating persons as members of the Board for election or appointment by the Board and for election by shareholders. In evaluating potential nominees, including any nominees recommended by shareholders, the committee takes into consideration various factors listed in the Nominating Committee Charter, including character and integrity, business and professional experience, and whether the committee believes the person has the ability to apply sound and independent business judgment and would act in the interest of each Fund and its shareholders. The nominating committee will consider recommendations for nominees from shareholders submitted to the Secretary of the Company, c/o The Dreyfus Corporation Legal Department, 200 Park Avenue, 8th Floor East, New York, New York 10166, which includes information regarding the recommended nominee as specified in the Nominating Committee Charter. The function of the compensation committee is to establish the appropriate compensation for serving on the Board. The Company also has a standing pricing committee comprised of any one Board member. The function of the pricing committee is to assist in valuing the Fund's investments. The audit committee met four times and the nominating, pricing and compensation committees did not meet during the fiscal year ended October 31, 2006.

The table below indicates the dollar range of each Board member's ownership of Fund shares and shares of other funds in the Dreyfus Family of Funds for which he or she is a Board member, in each case as of December 31, 2006.

Name of Board Member	Dreyfus Mortgage Shares	Dreyfus High Yield Shares	Aggregate Holding of Funds in the Dreyfus Family of Funds
Joseph S. DiMartino	None	None	Over \$100,000
Clifford L. Alexander, Jr.	None	None	Over \$100,000
Lucy Wilson Benson	None	None	\$10,001 - \$50,000
David W. Burke	None	None	Over \$100,000
Whitney I. Gerard	None	None	Over \$100,000
George L. Perry	None	None	None

As of December 31, 2006, none of the Board members or their immediate family members owned securities of the Manager or the Distributor or any person (other than a registered investment company) directly or indirectly controlling, controlled by or under common control with the Manager or the Distributor.

The Company pays its Board members its allocated portion of an annual retainer of \$60,000 and a fee of \$7,500 per meeting (with a minimum of \$500 per meeting and per telephone meeting) attended for the Company and sixteen other funds (comprised of 33 portfolios) in the Dreyfus Family of Funds, and reimburses them for their expenses. The Chairman of the Board receives an additional 25% of such compensation. Emeritus Board members, if any, are entitled to receive an annual retainer and a per meeting attended fee of one-half the amount paid to them as Board members. The aggregate amount of compensation paid to each Board member for the fiscal year ended October 31, 2006 and by all funds in the Dreyfus Family of Funds for which such person is a Board member (the number of portfolios of such funds is set forth in parenthesis next to each Board member's total compensation) for the year ended December 31, 2006, pursuant to the compensation schedule then in effect, was as follows:

Name of Board Member	Aggregate Compensation From the Company*	Total Compensation From the Company and Fund Complex Paid to Board Member(**)
Joseph S. DiMartino	\$44	\$857,400 (193)
Clifford S. Alexander	\$35	\$199,500 (60)
Lucy Wilson Benson	\$35	\$116,000 (37)
David W. Burke	\$35	\$285,500 (81)
Whitney I. Gerard	\$35	\$98,000 (35)
Arthur A. Hartman***	\$32	\$56,750 (35)
George L. Perry	\$35	\$97,500 (35)

- * Amount does not include the cost of office space, secretarial services and health benefits for the Chairman and expenses reimbursed to Board members for attending Board meetings, which in the aggregate amounted to \$1,007.33. The aggregate compensation payable to each Board member was paid by the Distributor.
- ** Represents the number of separate portfolios comprising the investment companies in the Fund Complex, including the Funds, for which the Board members serve.
- *** Emeritus Board member as of March 12, 2006.

Officers of the Company

J. DAVID OFFICER, President since December 2006. Chief Operating Officer, Vice Chairman and a director of the Manager, and an officer of 90 investment companies (comprised of 190 portfolios) managed by the Manager. He is 58 years old and has been an employee of the Manager since April 1, 1998.

MARK N. JACOBS, Vice President since May 2002. Executive Vice President, Secretary and General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 60 years old and has been an employee of the Manager since June 1977.

JAMES WINDELS, Treasurer since November 2001. Director – Mutual Fund Accounting of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 48 years old and has been an employee of the Manager since April 1985.

MICHAEL A. ROSENBERG, Vice President and Secretary since August 2005. Associate General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 46 years old and has been an employee of the Manager since October 1991.

JAMES BITETTO, Vice President and Assistant Secretary since August 2005. Associate General Counsel and Assistant Secretary of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 40 years old and has been an employee of the Manager since December 1996.

JONI LACKS CHARATAN, Vice President and Assistant Secretary since August 2005. Associate General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. She is 51 years old and has been an employee of the Manager since October 1988.

JOSEPH M. CHIOFFI, Vice President and Assistant Secretary since August 2005. Associate General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 45 years old and has been an employee of the Manager since June 2000.

JANETTE E. FARRAGHER, Vice President and Assistant Secretary since August 2005. Associate General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. She is 44 years old and has been an employee of the Manager since February 1984.

JOHN B. HAMMALIAN, Vice President and Assistant Secretary since August 2005. Associate General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 43 years old and has been an employee of the Manager since February 1991.

ROBERT R. MULLERY, Vice President and Assistant Secretary since August 2005. Associate General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 55 years old and has been an employee of the Manager since May 1986.

JEFF PRUSNOFSKY, Vice President and Assistant Secretary since August 2005. Associate General Counsel of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 41 years old and has been an employee of the Manager since October 1990.

ERIK D. NAVILOFF, Assistant Treasurer since December 2003. Senior Accounting Manager – Taxable Fixed Income Funds of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 38 years old and has been an employee of the Manager since November 1992.

GAVIN C. REILLY, Assistant Treasurer since December 2005. Tax Manager of the Investment Accounting and Support Department of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 38 years old and has been an employee of the Manager since April 1991.

ROBERT S. ROBOL, Assistant Treasurer since August 2005. Senior Accounting Manager – Money Market and Municipal Bond Funds of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 42 years old and has been an employee of the Manager since October 1988.

ROBERT SVAGNA, Assistant Treasurer since December 2002. Senior Accounting Manager - Equity Funds of the Manager, and an officer of 91 investment companies (comprised of 206 portfolios) managed by the Manager. He is 39 years old and has been an employee of the Manager since November 1990.

WILLIAM GERMENIS, Anti-Money Laundering Compliance Officer since October 2003. Vice President and Anti-Money Laundering Compliance Officer of the Distributor, and the Anti-Money Laundering Compliance Officer of 87 investment companies (comprised of 202 portfolios) managed by the Manager. He is 36 years old and has been an employee of the Distributor since October 1998.

JOSEPH W. CONNOLLY, Chief Compliance Officer since October 2004. Chief Compliance Officer of the Manager and The Dreyfus Family of Funds (91 investment companies, comprised of 206 portfolios). From November 2001 through March 2001, Mr. Connolly was first Vice-President, Mutual Fund Servicing for Mellon Global Securities Services. In that capacity, Mr. Connolly was responsible for managing Mellon's Custody, Fund Accounting and Fund Administration services to third party mutual fund clients. He is 49 years old and has served in various capacities with the Manager since 1980, including manager of the firm's Fund Accounting Department through October 2001.

The address of each Board member and officer of the Company is 200 Park Avenue, New York, New York 10166.

The Company's Board members and officers, as a group, owned less than 1% of each Fund's shares outstanding on February 9, 2007.

The following persons were known by the Company to own of record 5% or more of the outstanding voting securities of the Funds indicated below as of February 9, 2007. A shareholder who beneficially owns, directly or indirectly, more than 25% of a Fund's voting securities may be deemed a "control person" (as defined in the 1940 Act) of the Fund:

(1) High Yield Shares:

MBC Investments Corporation	100%
c/o Mellon Financial Corp	
4001 Kennett Pike Ste 218	
Two Greenville Crossing	
Greenville, DE 10807-2029	

(2) Mortgage Shares:

MBC Investments Corporation	100%
c/o Mellon Financial Corp	
4001 Kennett Pike Ste 218	
Two Greenville Crossing	
Greenville, DE 10807-2029	

MANAGEMENT ARRANGEMENTS

Investment Adviser. The Manager is a wholly-owned subsidiary of Mellon Financial Corporation ("Mellon"). Mellon is a global financial holding company incorporated under Pennsylvania law in 1971 and registered under the Federal Bank Holding Company Act of 1956, as amended. Mellon provides a comprehensive range of financial products and services in domestic and selected international markets.

The Manager provides management services pursuant to the Management Agreement (the "Agreement") between the Company and the Manager. As to each Fund, the Agreement is subject to annual approval by (i) the Company's Board or (ii) vote of a majority (as defined in the 1940 Act) of the Fund's outstanding voting securities, provided that in either event the continuance also is approved by a majority of the Board members who are not "interested persons" (as defined in the 1940 Act) of the Company or the Manager, by vote cast in person at a meeting called for the purpose of voting on such approval. As to each Fund, the Agreement is terminable without penalty, on 60 days' notice, by the Company's Board or by vote of the holders of a majority of such Fund's shares, or, on not less than 90 days' notice, by the Manager. The Agreement will terminate automatically, as to the relevant Fund, in the event of its assignment (as defined in the 1940 Act).

The following persons are officers and/or directors of the Manager: Jonathan Little, Chair of the Board; Thomas F. Eggers, President, Chief Executive Officer and a director; Jonathan Baum, Vice Chair-Distribution and a director; J. Charles Cardona, Vice Chair and a director; Diane P. Durnin, Vice Chair and a director; Phillip N. Maisano, Chief Investment Officer, Vice Chair and a director; J. David Officer, Chief Operating Officer, Vice Chair and a director; Mark N. Jacobs, Executive Vice President, General Counsel and Secretary; Patrice M. Kozlowski, Senior Vice President-Corporate Communications; Jill Gill, Vice President – Human Resources; Anthony Mayo, Vice President – Information Systems; Theodore A. Schachar, Vice President-Tax; Alex G. Sciulli, Vice President; Wendy H. Strutt, Vice President; Gary Pierce, Controller; Joseph W. Connolly, Chief Compliance Officer; James Bitetto, Assistant Secretary; and, Steven G. Elliott, Robert P. Kelly, David F. Lamere and Ronald P. O’Hanley III, directors.

Mellon and its affiliates may have deposit, loan and commercial banking or other relationships with the issuers of securities purchased by a Fund. The Manager has informed the Company that in making its investment decisions it does not obtain or use material inside information that Mellon or its affiliates may possess with respect to such issuers.

The Company, the Manager and the Distributor each have adopted a Code of Ethics that permits its personnel, subject to such respective Code of Ethics, to invest in securities, including securities that may be purchased or held by a Fund. The Manager's Code of Ethics subjects its employees' personal securities transactions to various restrictions to ensure that such trading does not disadvantage any fund advised by the Manager. In that regard, portfolio managers and other investment personnel of the Manager must preclear and report their personal securities transactions and holdings, which are reviewed for compliance with the Code of Ethics and are also subject to the oversight of Mellon's Investment Ethics Committee. Portfolio managers and other investment personnel of the Manager who comply with the preclearance and disclosure procedures of the Code of Ethics and the requirements of the Committee may be permitted to purchase, sell or hold securities which also may be or are held in fund(s) they manage or for which they otherwise provide investment advice.

Portfolio Management. The Manager provides day-to-day management of each Fund's investments in accordance with the stated policies of such Fund, subject to the approval of the Company's Board. The Manager is responsible for investment decisions, and provides the Funds with portfolio managers who are authorized by the Board to execute purchases and sales of securities. The Funds' portfolio managers are: David Bowser and Robert Bayston, each of whom is employed by the Manager and Standish Mellon Asset Management, LLC (“SMAM”), a subsidiary of Mellon and an affiliate of the Manager. The Manager also maintains a research department with a professional staff of portfolio managers and securities analysts who provide research services for the Funds and for other funds advised by the Manager.

Portfolio Manager Compensation. The portfolio managers' cash compensation is comprised primarily of a market-based salary and an incentive compensation plan (annual and long term incentive). The Funds' portfolio managers are compensated by the Manager or its affiliates and not by the Fund. Funding for SMAM Annual Incentive Plan and Long Term Incentive Plan is through a pre-determined fixed percentage of overall company performance. Therefore, all bonus awards are based initially on Standish Mellon's performance. The investment professionals are eligible to receive annual cash bonus awards from the incentive compensation plan. Annual awards are granted in March, for the prior calendar year. Individual awards for portfolio managers are discretionary, based on product performance relative to both benchmarks and peer comparisons and goals established at the beginning of each calendar year.

Goals are to a substantial degree based on investment performance, including performance for one and three year periods. Also considered in determining individual awards are team participation and general contributions to SMAM.

All portfolio managers are also eligible to participate in the SMAM Long Term Incentive Plan. This plan provides for an annual award, payable in deferred cash that cliff vests after 3 years, with an interest rate equal to the average year over year earnings growth of Standish Mellon (capped at 20% per year). Management has discretion with respect to actual participation.

Portfolio managers whose compensation exceeds certain levels may elect to defer portions of their base salaries and/or incentive compensation pursuant to Mellon's Elective Deferred Compensation Plan.

Additional Information About Portfolio Managers. The following table lists the number and types of other accounts advised by each Funds' primary portfolio manager and assets under management in those accounts as of the end of the Funds fiscal year:

<u>Portfolio Manager</u>	<u>Registered Investment Company Accounts</u>	<u>Assets Managed</u>	<u>Pooled Accounts</u>	<u>Assets Managed</u>	<u>Other Accounts</u>	<u>Assets Managed</u>
David Bowser	5	861,935,652	0	0	19	2,822,382,922
Robert Bayston	7	1,225,942,952	0	0	11	639,378,572

None of the funds or accounts are subject to a performance-based advisory fee.

The dollar range of Fund shares beneficially owned by the Fund's primary portfolio manager is as of the end of the Fund's fiscal year:

<u>Portfolio Manager</u>	<u>Fund Name</u>	<u>Dollar Range of Fund Shares Beneficially Owned</u>
Robert Bayston	Dreyfus Mortgage Shares	0
David Bowser	Dreyfus High Yield Shares	0

Portfolio managers at Dreyfus may manage multiple accounts for a diverse client base, including mutual funds, separate accounts (assets managed on behalf of institutions such as pension funds, insurance companies and foundations), bank common trust accounts and wrap fee programs ("Other Accounts").

Potential conflicts of interest may arise because of Dreyfus' management of the Fund and Other Accounts. For example, conflicts of interest may arise with both the aggregation and allocation of securities transactions and allocation of limited investment opportunities, as Dreyfus may be perceived as causing accounts it manages to participate in an offering to increase Dreyfus' overall allocation of securities in that offering, or to increase Dreyfus' ability to participate in future offerings by the same underwriter or issuer. Allocations of bunched trades, particularly trade orders that were only partially filled due to limited availability, and allocation of investment opportunities generally, could raise a potential conflict of interest, as Dreyfus may have an incentive to allocate securities that are expected to increase in value to preferred

accounts. Initial public offerings, in particular, are frequently of very limited availability. Additionally, portfolio managers may be perceived to have a conflict of interest if there are a large number of Other Accounts, in addition to the Fund, that they are managing on behalf of Dreyfus. Dreyfus periodically reviews each portfolio manager's overall responsibilities to ensure that he or she is able to allocate the necessary time and resources to effectively manage the Fund. In addition, Dreyfus could be viewed as having a conflict of interest to the extent that Dreyfus or its affiliates and/or portfolios managers have a materially larger investment in Other Accounts than their investment in the Fund.

Other Accounts may have investment objectives, strategies and risks that differ from those of the Fund. For these or other reasons, the portfolio managers may purchase different securities for the Fund and the Other Accounts, and the performance of securities purchased for the Fund may vary from the performance of securities purchased for Other Accounts. The portfolio managers may place transactions on behalf of Other Accounts that are directly or indirectly contrary to investment decisions made for the Fund, which could have the potential to adversely impact the Fund, depending on market conditions.

A potential conflict of interest may be perceived to arise if transactions in one account closely follow related transactions in another account, such as when a purchase increases the value of securities previously purchased by the other account, or when a sale in one account lowers the sale price received in a sale by a second account.

Conflicts of interest similar to those described above arise when portfolio managers are employed by a sub-investment adviser or are dual employees of the Manager and an affiliated entity and such portfolio managers also manage Other Accounts.

Dreyfus' goal is to provide high quality investment services to all of its clients, while meeting its fiduciary obligation to treat all clients fairly. Dreyfus has adopted and implemented policies and procedures, including brokerage and trade allocation policies and procedures, that it believes address the conflicts associated with managing multiple accounts for multiple clients. In addition, Dreyfus monitors a variety of areas, including compliance with Fund guidelines, the allocation of IPOs, and compliance with the firm's Code of Ethics. Furthermore, senior investment and business personnel at Dreyfus periodically review the performance of portfolio managers for Dreyfus-managed funds.

Expenses. All expenses incurred in the operation of the Company are borne by the Distributor pursuant to an administration agreement with the Company. The Manager maintains office facilities on behalf of the Funds, and furnishes statistical and research data, clerical help, accounting, data processing, bookkeeping and internal auditing and certain other required services to the Company. The Manager may pay the Distributor for shareholder services from the Manager's own assets, including past profits. The Distributor may use part or all of such payments to pay others in respect of these services. The Manager also may make such advertising and promotional expenditures, using its own resources, as it from time to time deems appropriate.

Distributor. The Distributor, a wholly-owned subsidiary of the Manager, located at 200 Park Avenue, New York, New York 10166, serves as each Fund's distributor on a best efforts basis pursuant to an agreement with the Company which is renewable annually.

The Manager or the Distributor may provide cash payments out of its own resources to

financial intermediaries that sell shares of the Funds or provide other services. These additional payments may be made to certain financial institutions (which may include banks), securities dealers and other industry professionals (collectively, "Service Agents"), including affiliates, that provide shareholder servicing, sub-administration, recordkeeping and/or sub-transfer agency services, marketing support and/or access to sales meetings, sales representatives and from the manager's or the Distributor's own resources management representatives of the Service Agent. Cash compensation also may be paid to Service Agents for inclusion of the Funds on a sales list, including a preferred or select sales list or in other sales programs. These payments sometimes are referred to as "revenue sharing." From time to time, the Manager or the Distributor also may provide cash or non-cash compensation to Service Agents in the form of: occasional gifts; occasional meals, tickets, or other entertainment; support for due diligence trips; education conference sponsorship; support for recognition programs; and other forms of cash or non-cash compensation permissible under broker-dealer regulations, as periodically amended. In some cases, these payments may create an incentive for a Service Agent to recommend or sell shares of the Funds to you. Please contact your Service Agent for details about any payments they may receive in connection with the sale of Fund shares or the provision of services to the Funds.

Transfer and Dividend Disbursing Agent and Custodian. Dreyfus Transfer, Inc. (the "Transfer Agent"), a wholly-owned subsidiary of the Manager, 200 Park Avenue, New York, New York 10166, is the Company's transfer and dividend disbursing agent. Under a transfer agency agreement with the Company, the Transfer Agent arranges for the maintenance of shareholder account records for each Fund, the handling of certain communications between shareholders and the Fund and the payment of dividends and distributions payable by the Fund.

Mellon Bank, N.A. (the "Custodian"), an affiliate of the Manager, One Mellon Bank Center, Pittsburgh, Pennsylvania 15258, acts as custodian of the investments of each Fund. The Custodian has no part in determining the investment policies of the Fund or which securities are to be purchased or sold by the Fund. Under a custody agreement with the Company, the Custodian holds each Fund's securities and keeps all necessary accounts and records.

HOW TO BUY AND SELL SHARES

Shares of the Funds are offered exclusively to registered investment advisers and broker/dealers approved by Dreyfus Service Corporation. Shares of the Funds may be purchased only through "wrap fee" programs sponsored by investment advisers or broker/dealers ("financial representatives"), including those affiliated with the Funds or the Manager. Fund shares may not be purchased directly by individuals. Financial representatives purchasing shares for the benefit of their clients may impose policies, limitations and fees that are different from those described in this Statement of Additional Information. Financial representatives purchasing Fund shares have agreed to transmit copies of the Funds' Prospectus and all relevant Fund materials, including proxy materials, to each individual or entity for whose account the shares were purchased, to the extent required by law.

The Company reserves the right to reject any purchase order. Neither Fund will establish an account for a "foreign financial institution," as that term is defined in Department of the Treasury rules implementing section 312 of the USA PATRIOT Act of 2001. Foreign financial institutions include: foreign banks (including foreign branches of U.S. depository institutions); foreign offices of U.S. securities broker-dealers, futures commission merchants, and mutual funds; non-U.S. entities that, if they were located in the United States, would be securities broker-

dealers, futures commission merchants or mutual funds; and non-U.S. entities engaged in the business of a currency dealer or exchanger or a money transmitter.

As discussed under "Management Arrangements-Distributor," Service Agents may receive revenue sharing payments from the Manager or the Distributor. The receipt of such payments could create an incentive for a Service Agent to recommend or sell shares of the Funds instead of other mutual funds where such payments are not received. Please contact your Service Agent for details about any payments they may receive in connection with the sale of Fund shares or the provision of services to the Funds.

Shares are sold on a continuous basis at the net asset value per share next determined after an order in proper form and Federal Funds (monies of member banks in the Federal Reserve System which are held on deposit at a Federal Reserve Bank) are received by the Transfer Agent or other authorized entity. Net asset value per share is determined as of the close of trading on the floor of the New York Stock Exchange (usually 4:00 p.m., Eastern time), on each day the New York Stock Exchange is open for regular business. For purposes of determining net asset value per share, certain options and futures contracts may be valued 15 minutes after the close of trading on the floor of the New York Stock Exchange. Net asset value per share is computed by dividing the value of the Fund's net assets (i.e., the value of its assets less liabilities) by the total number of Fund shares outstanding. For information regarding the methods employed in valuing the Funds' investments, see "Determination of Net Asset Value."

For certain financial representatives that have entered into agreements with the Distributor, payment for the purchase of Fund shares may be transmitted, and must be received by the Transfer Agent, within three business days after the order is placed. If such payment is not received within three business days after the order is placed, the order may be canceled and the financial representative could be held liable for resulting fees and/or losses.

Fund shares may be purchased by financial representatives by wire, by telephone or through a compatible automated interface or trading system. All payments should be made in U.S. dollars and, to avoid fees and delays, should be drawn only on U.S. banks. To place an order by telephone or to determine whether their automated facilities are compatible with the Funds', investors should call Dreyfus Service Corporation. The Company reserves the right to reject any purchase order.

If an investor does not remit Federal Funds, its payment must be converted into Federal Funds. This usually occurs within one business day of receipt of a bank wire and within two business days of receipt of a check drawn on a member bank of the Federal Reserve System. Checks drawn on banks which are not members of the Federal Reserve System may take considerably longer to convert into Federal Funds. Prior to receipt of Federal Funds, the investor's money will not be invested. The Transfer Agent or the Fund may attempt to notify the investor upon receipt of checks drawn on banks that are not members of the Federal Reserve System as to the possible delay in conversion into Federal Funds, and may attempt to arrange for a better means of transmitting the money.

Financial representatives may sell (redeem) shares at any time by wire or telephone through Dreyfus Service Corporation. Fund shares will be sold at the next determined net asset value after the order is accepted by the Transfer Agent or other authorized entity.

Financial representatives desiring to redeem shares through compatible computer

facilities should call Dreyfus Service Corporation to determine whether their computer facilities are compatible and to receive instructions for redeeming shares in this manner.

The Company has committed each Fund to pay in cash all redemption requests by any shareholder of record, limited in amount during any 90-day period to the lesser of \$250,000 or 1% of the value of the Fund's net assets at the beginning of such period. Such commitment is irrevocable without the prior approval of the Securities and Exchange Commission. In the case of requests for redemption in excess of such amount, the Company's Board reserves the right to make payments in whole or in part in securities or other assets of the Fund in case of an emergency or any time a cash distribution would impair the liquidity of the Fund to the detriment of the existing shareholders. In such event, the securities would be valued in the same manner as the portfolio of the Fund is valued. If the recipient sells such securities, brokerage charges might be incurred.

The right of redemption may be suspended or the date of payment postponed (a) during any period when the New York Stock Exchange is closed (other than customary weekend and holiday closings), (b) when trading in the markets the Fund ordinarily utilizes is restricted, or when an emergency exists as determined by the Securities and Exchange Commission so that disposal of the Fund's investments or determination of its net asset value is not reasonably practicable or (c) for such other periods as the Securities and Exchange Commission by order may permit to protect the Fund's shareholders.

SHAREHOLDER SERVICES

Fund Exchanges. An investor may purchase, in exchange for shares of a Fund, shares of the other Fund. Shares will be exchanged at the net asset value next determined after receipt of an exchange request in proper form. By using the Telephone Exchange Privilege, an investor authorizes the Transfer Agent to act on exchange instructions from any person representing himself or herself to be an authorized representative of the investor and reasonably believed by the Transfer Agent to be genuine. Telephone exchanges may be subject to limitations as to the amount involved or the number of telephone exchanges permitted. No fees currently are charged investors directly in connection with exchanges, although the Company reserves the right, upon not less than 60 days' written notice, to charge investors a nominal administrative fee in accordance with rules promulgated by the Securities and Exchange Commission.

The Company reserves the right to reject any exchange request in whole or in part. Shares may be exchanged only between accounts having identical names and other identifying designations. The Fund Exchanges service may be modified or terminated at any time upon notice to shareholders.

During times of drastic economic or market conditions, the Fund may suspend Fund Exchanges temporarily without notice and treat exchange requests based on their separate components -- redemption orders with a simultaneous request to purchase the other fund's shares. In such a case, the redemption request would be processed at the Fund's next determined net asset value but the purchase order would be effective only at the net asset value next determined after the fund being purchased receives the proceeds of the redemption, which may result in the purchase being delayed.

DETERMINATION OF NET ASSET VALUE

Valuation of Portfolio Securities. Each Fund's investments are valued each business day using available market quotations or at fair value. Substantially all of a Fund's fixed-income investments (excluding short-term investments) are valued by one or more independent pricing services (the "Service") approved by the Board. Securities valued by the Service for which quoted bid prices in the judgment of the Service are readily available and are representative of the bid side of the market are valued at the mean between the quoted bid prices (as obtained by the Service from dealers in such securities) and asked prices (as calculated by the Service based upon its evaluation of the market for such securities). The value of other investments is determined by the Service based on methods that include consideration of: yields or prices of securities of comparable quality, coupon, maturity and type; indications as to values from dealers; and general market conditions. Short-term investments are not valued by the Service and are valued at the mean price or yield equivalent for such securities or for securities of comparable maturity, quality and type as obtained from market makers. Other investments that are not valued by the Service are valued at the last sales price for securities traded primarily on an exchange or the national securities market or otherwise at the average of the most recent bid and asked prices. Bid-price is used when no asked price is available. Any assets or liabilities initially expressed in terms of foreign currency will be translated into U.S. dollars at the midpoint of the New York interbank market spot exchange rate as quoted on the day of such translation by the Federal Reserve Bank of New York or, if no such rate is quoted on such date, at the exchange rate previously quoted by the Federal Reserve Bank of New York or at such other quoted market exchange rate as may be determined to be appropriate by the Manager. Forward currency contracts will be valued at the current cost of offsetting the contract. Because of the need to obtain prices as of the close of trading on various exchanges throughout the world, the calculation of net asset value does not take place contemporaneously with the determination of prices of a majority of each Fund's portfolio securities. Short-term investments may be carried at amortized cost, which approximates value.

Restricted securities, as well as securities or other assets for which recent market quotations are not readily available, are not valued by the Service, or are determined by the Company not to reflect accurately fair value are valued at fair value as determined in good faith based on procedures approved by the Company's Board. Fair value of investments may be determined by the Company's Board, its pricing committee or its valuation committee in good faith using such information as it deems appropriate. The factors that may be considered when fair valuing a security include fundamental analytical data, the nature and duration of restrictions on disposition, an evaluation of the forces that influence the market in which the securities are purchased or sold, and public trading in similar securities of the issuer or comparable issuers. The valuation of a security based on fair value procedures may differ from the security's most recent closing price, and from the prices used by other mutual funds to calculate their net asset values. Foreign securities held by a Fund may trade on days that the Fund is not open for business, thus affecting the value of the Fund's assets on days when Fund investors have no access to the Fund. Restricted securities which are, or are convertible into, securities of the same class of securities for which a public market exists usually will be valued at market value less the same percentage discount at which purchased. This discount will be revised periodically by the Board if it believes that the discount no longer reflects the value of the restricted securities. Restricted securities not of the same class as securities for which a public market exists usually will be valued initially at cost. Any subsequent adjustment from cost will be based upon considerations deemed relevant by the Board.

New York Stock Exchange Closings. The holidays (as observed) on which the New York Stock Exchange is closed currently are: New Year's Day, Martin Luther King Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas.

DIVIDENDS, DISTRIBUTIONS AND TAXES

Management believes that each Fund qualified for treatment as a “regulated investment company” under the Code for the fiscal year ended October 31, 2006. Each Fund intends to continue to so qualify, if such qualification is in the best interests of its shareholders. As a regulated investment company, the Fund will pay no Federal income tax on net investment income and net realized securities gains to the extent that such income and gains are distributed to shareholders in accordance with applicable provisions of the Code. To qualify as a regulated investment company, the Fund must pay out at least 90% of its net income (consisting of net investment income and net short-term capital gain), and must meet certain asset diversification and other requirements. If a Fund does not qualify as a regulated investment company, it will be treated for tax purposes as an ordinary corporation subject to Federal income tax. The term “regulated investment company” does not imply the supervision of management or investment practices or policies by any government agency.

Each Fund ordinarily declares dividends from its net investment income on each day the New York Stock Exchange is open for business. Dividends usually are paid on the last calendar day of each month and are automatically reinvested in additional Fund shares at net asset value or, at your option, paid in cash. Each Fund’s earnings for Saturdays, Sundays and holidays are declared as dividends on the preceding business day. Fund shares begin earning income dividends on the day following the date of purchase. If you redeem all shares in your account at any time during the month, all dividends to which you are entitled will be paid to you along with the proceeds of the redemption, after deduction of any fees. If you are an omnibus accountholder and indicate in a partial redemption request that a portion of any accrued dividends to which such account is entitled belongs to an underlying accountholder who has redeemed all shares in his or her account, such portion of the accrued dividends will be paid to you along with the proceeds of the redemption, after the deduction of any fees. Distributions from net realized securities, if any, generally are declared and paid once a year, but each Fund may make distributions on a more frequent basis to comply with the distribution requirements of the Code, in all events in a manner consistent with the provisions of the 1940 Act.

If you elect to receive dividends and distributions in cash, and your dividend or distribution check is returned to the Fund as undeliverable or remains uncashed for six months, the Fund reserves the right to reinvest such dividends or distributions and all future dividends and distributions payable to you in additional Fund shares at net asset value. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Any dividend or distribution paid shortly after an investor’s purchase may have the effect of reducing the aggregate net asset value of the shares below the cost of the investment. Such a dividend or distribution would be a return of investment in an economic sense, as described herein. In addition, if a shareholder has not held the shares of a Fund for more than six months and has received a capital gain distribution with respect to such shares, any loss incurred on the sale of such shares will be treated as long-term capital loss to the extent of the capital gain distribution received.

A Fund may qualify for and may make an election under which shareholders may be eligible to claim a credit or deduction on their Federal income tax returns for, and will be required to treat as part of the amounts distributed to them, their pro rata portion of qualified taxes paid or incurred by the Fund to foreign countries. A Fund may make such election provided that more than 50% of the value of the Fund's total assets at the close of the taxable year consists of securities in foreign corporations, and the Fund satisfies the applicable distribution requirements. The foreign tax credit available to shareholders is subject to certain limitations.

Ordinarily, gains and losses realized from portfolio transactions will be treated as capital gains and losses. However, a portion of the gain or loss realized from the disposition of foreign currencies (including a foreign currency denominated bank deposits) and non-U.S. dollar denominated securities (including debt instruments and certain forward contracts and options) may be treated as ordinary income or loss. In addition, all or a portion of any gains realized from the sale or other disposition of certain market discount bonds will be treated as ordinary income. Finally, all or a portion of the gain realized from engaging in "conversion transactions" (generally including certain transactions designed to convert ordinary income into capital gain) may be treated as ordinary income.

Gain or loss, if any, realized by a Fund from certain forward contracts and options transactions ("Section 1256 contracts") will be treated as 60% long-term capital gain or loss and 40% short-term capital gain or loss. Gain or loss will arise upon exercise or lapse of Section 1256 contracts as well as from closing transactions. In addition, any Section 1256 contracts remaining unexercised at the end of a Fund's taxable year will be treated as sold for their then fair market value, resulting in additional gain or loss to such Fund.

Offsetting positions held by a Fund involving certain financial futures or forward contracts or options transactions may constitute "straddles". To the extent the straddle rules apply to positions established by the Fund, losses realized by the Fund may be deferred to the extent or unrealized gain in the offsetting position. In addition, short-term capital loss on straddle positions may be recharacterized as long-term capital loss, and long-term capital gains on straddle positions may be treated as short-term capital gains or ordinary income. Certain of the straddle positions held by the Fund may constitute "mixed straddles". The Fund may make one or more elections with respect to the treatment of "mixed straddles", resulting in different tax consequences. In certain circumstances, the provisions governing the tax treatment of straddles override or modify certain of the provisions discussed above.

If a Fund enters into certain derivatives (including forward contracts, long positions under notional principal contracts, and related puts and calls) with respect to equity interests in certain pass-thru entities (including other regulated investment companies, real estate investment trusts and foreign corporations), long-term capital gain with respect to the derivative may be recharacterized as ordinary income to the extent it exceeds the long-term capital gain that would have been realized had the interest in the pass-thru entity been held directly by the Fund during the term of the derivative contract. Any gain recharacterized as ordinary income will be treated as accruing at a constant rate over the term of the derivative contract and may be subject to an interest charge. The Treasury has authority to issue regulations expanding the application of these rules to derivatives with respect to debt instruments and/or stock in corporations that are not pass-thru entities.

If a Fund either (1) holds an appreciated financial position with respect to stock, certain debt

obligations, or partnership interests (“appreciated financial position”) and then enters into a short sale, futures, forward, or offsetting notional principal contract (collectively, a “Contract”) with respect to the same or substantially identical property or (2) holds an appreciated financial position that is a Contract and then acquires property that is the same as, or substantially identical to, the underlying property, the Fund generally will be taxed as if the appreciated financial position were sold at its fair market value on the date the Fund enters into the financial position or acquires the property, respectively.

If a Fund invests in an entity that is classified as a “passive foreign investment company” (“PFIC”) for Federal income tax purposes, the operation of certain provisions of the Code applying to PFICs could result in the imposition of certain Federal income tax on the Fund. In addition, gain realized from the sale or other disposition of PFIC securities held beyond the end of the Fund’s taxable year may be treated as ordinary income.

Investment by a Fund in securities issued or acquired at a discount, or providing for deferred interest or for payment of interest in the form of additional obligations could under special tax rules affect the amount, timing and character of distributions to shareholders by causing a Fund to recognize income prior to the receipt of cash payments. For example, a Fund could be required to accrue a portion of the discount (or deemed discount) at which the securities were issued each year and to distribute such income in order to maintain its qualification as a regulated investment company. In such case, a Fund may have to dispose of securities which it might otherwise have continued to hold in order to generate cash to satisfy these distribution requirements.

Federal regulations require that you provide a certified taxpayer identification number (“TIN”) upon opening or reopening an account. See the Account Application for further information concerning this requirement. Failure to furnish a certified TIN to the Company could subject you to a \$50 penalty imposed by the Internal Revenue Service.

PORTFOLIO TRANSACTIONS

General. The Manager assumes general supervision over the placement of securities purchase and sale orders on behalf of the funds it manages. Funds managed by dual employees of the Manager and an affiliated entity, and funds that employ a sub-investment adviser, execute portfolio transactions through the trading desk of the affiliated entity or sub-investment adviser, as applicable (the “Trading Desk”). Those funds use the research facilities, and are subject to the internal policies and procedures, of applicable affiliated entity or sub-investment adviser.

The Trading Desk generally has the authority to select brokers (for equity securities) or dealers (for fixed income securities) and the commission rates or spreads to be paid. Allocation of brokerage transactions is made in the best judgment of the Trading Desk and in a manner deemed fair and reasonable. In choosing brokers or dealers, the Trading Desk evaluates the ability of the broker or dealer to execute the transaction at the best combination of price and quality of execution.

In general, brokers or dealers involved in the execution of portfolio transactions on behalf of a fund are selected on the basis of their professional capability and the value and quality of their services. The Trading Desk attempts to obtain best execution for the funds by choosing

brokers or dealers to execute transactions based on a variety of factors, which may include, but are not limited to, the following: (i) price; (ii) liquidity; (iii) the nature and character of the relevant market for the security to be purchased or sold; (iv) the quality and efficiency of the broker's or dealer's execution; (v) the broker's or dealer's willingness to commit capital; (vi) the reliability of the broker or dealer in trade settlement and clearance; (vii) the level of counterparty risk (*i.e.*, the broker's or dealer's financial condition); (viii) the commission rate or the spread; (ix) the value of research provided; (x) the availability of electronic trade entry and reporting links; and (xi) the size and type of order (*e.g.*, foreign or domestic security, large block, illiquid security). In selecting brokers or dealers no factor is necessarily determinative; however, at various times and for various reasons, certain factors will be more important than others in determining which broker or dealer to use. Seeking to obtain best execution for all trades takes precedence over all other considerations.

Investment decisions for one fund or account are made independently from those for other funds or accounts managed by the portfolio managers. Under the Trading Desk's procedures, portfolio managers and their corresponding Trading Desks may seek to aggregate (or "bunch") orders that are placed or received concurrently for more than one fund or account. In some cases, this policy may adversely affect the price paid or received by a fund or an account, or the size of the position obtained or liquidated. As noted above, certain brokers or dealers may be selected because of their ability to handle special executions such as those involving large block trades or broad distributions, provided that the primary consideration of best execution is met. Generally, when trades are aggregated, each fund or account within the block will receive the same price and commission. However, random allocations of aggregate transactions may be made to minimize custodial transaction costs. In addition, at the close of the trading day, when reasonable and practicable, the completed securities of partially filled orders will generally be allocated to each participating fund and account in the proportion that each order bears to the total of all orders (subject to rounding to "round lot" amounts and other relevant factors).

Portfolio turnover may vary from year to year as well as within a year. In periods in which extraordinary market conditions prevail, the portfolio managers will not be deterred from changing a Fund's investment strategy as rapidly as needed, in which case higher turnover rates can be anticipated which would result in greater brokerage expenses. The overall reasonableness of brokerage commissions paid is evaluated by the Trading Desk based upon its knowledge of available information as to the general level of commissions paid by other institutional investors for comparable services. Higher portfolio turnover rates usually generate additional brokerage commissions and transaction costs, and any short-term gains realized from these transactions are taxable to shareholders as ordinary income.

To the extent that a fund invests in foreign securities, certain of such fund's transactions in those securities may not benefit from the negotiated commission rates available to funds for transactions in securities of domestic issuers. For funds that permit foreign exchange transactions, such transactions are made with banks or institutions in the interbank market at prices reflecting a mark-up or mark-down and/or commission.

The portfolio managers may deem it appropriate for one fund or account they manage to sell a security while another fund or account they manage is purchasing the same security. Under such circumstances, the portfolio managers may arrange to have the purchase and sale transactions effected directly between the funds and/or accounts ("cross transactions"). Cross

transactions will be effected in accordance with procedures adopted pursuant to Rule 17a-7 under the 1940 Act.

Funds and accounts managed by the Manager, an affiliated entity or a sub-investment adviser may own significant positions in portfolio companies which, depending on market conditions, may affect adversely the ability to dispose of some or all of such positions.

For the fiscal years ended October 31, 2004 and 2005 no amounts were paid by either Fund for brokerage commissions. For the fiscal year ended October 31, 2006, a total of \$58 was paid by the High Yield Shares for brokerage commissions and no amounts were paid by the Mortgage Shares.

For the fiscal years ended October 31, 2003, 2004 and 2005, no amounts were paid in spreads or concessions paid on principal transactions.

The Fund contemplates that, consistent with the policy of seeking best price and execution, brokerage transactions may be conducted through affiliates of the Manager. The Board has adopted procedures in conformity with Rule 17e-1 under the 1940 Act to ensure that all brokerage commissions paid to affiliates of the Manager are reasonable and fair. There were no commissions paid to affiliates of the Manager for the fiscal year ended October 31, 2006.

Soft Dollars. The term “soft dollars” is commonly understood to refer to arrangements where an investment adviser uses client (or fund) brokerage commissions to pay for research and other services to be used by the investment adviser. Section 28(e) of the Securities Exchange Act of 1934 provides a “safe harbor” that permits investment advisers to enter into soft dollar arrangements if the investment adviser determines in good faith that the amount of the commission is reasonable in relation to the value of the brokerage and research services provided. Eligible products and services under Section 28(e) include those that provide lawful and appropriate assistance to the investment adviser in the performance of its investment decision-making responsibilities.

Subject to the policy of seeking best execution, Dreyfus-managed funds may execute transactions with brokerage firms that provide research services and products, as defined in Section 28(e). Any and all research products and services received in connection with brokerage commissions will be used to assist the applicable affiliated entity or sub-investment adviser in its investment decision-making responsibilities, as contemplated under Section 28(e). Under certain conditions, higher brokerage commissions may be paid in connection with certain transactions in return for research products and services.

The products and services provided under these arrangements permit the Trading Desk to supplement its own research and analysis activities, and provide it with information from individuals and research staffs of many securities firms. Such services and products may include, but are not limited to the following: fundamental research reports (which may discuss, among other things, the value of securities, or the advisability of investing in, purchasing or selling securities, or the availability of securities or the purchasers or sellers of securities, or issuers, industries, economic factors and trends, portfolio strategy and performance); current market data and news; technical and portfolio analyses; economic forecasting and interest rate projections; and historical information on securities and companies. The Trading Desk also may defray the costs of certain services and communication systems that facilitate trade execution (such as on-

line quotation systems, direct data feeds from stock exchanges and on-line trading systems with brokerage commissions generated by client transactions) or functions related thereto (such as clearance and settlement). Some of the research products or services received by the Trading Desk may have both a research function and a non-research administrative function (a “mixed use”). If the Trading Desk determines that any research product or service has a mixed use, the Trading Desk will allocate in good faith the cost of such service or product accordingly. The portion of the product or service that the Trading Desk determines will assist it in the investment decision-making process may be paid for in soft dollars. The non-research portion is paid for by the Trading Desk in hard dollars.

The Trading Desk generally considers the amount and nature of research, execution and other services provided by brokerage firms, as well as the extent to which such services are relied on, and attempts to allocate a portion of the brokerage business of its clients on the basis of that consideration. Neither the services nor the amount of brokerage given to a particular brokerage firm are made pursuant to any agreement or commitment with any of the selected firms that would bind the Trading Desk to compensate the selected brokerage firm for research provided. The Trading Desk endeavors, but is not legally obligated, to direct sufficient commissions to broker/dealers that have provided it with research and other services to ensure continued receipt of research the Trading Desk believes is useful. Actual commissions received by a brokerage firm may be more or less than the suggested allocations.

There may be no correlation between the amount of brokerage commissions generated by a particular fund or client and the indirect benefits received by that fund or client. The affiliated entity or sub-investment adviser may receive a benefit from the research services and products that is not passed on to a fund in the form of a direct monetary benefit. Further, research services and products may be useful to the affiliated entity or sub-investment adviser in providing investment advice to any of the funds or clients it advises. Likewise, information made available to the affiliated entity or sub-investment adviser from brokerage firms effecting securities transactions for a fund may be utilized on behalf of another fund or client. Information so received is in addition to, and not in lieu of, services required to be performed by the affiliated entity or sub-investment adviser and fees are not reduced as a consequence of the receipt of such supplemental information. Although the receipt of such research services does not reduce the normal independent research activities of the affiliated entity or sub-investment adviser, it enables them to avoid the additional expenses that might otherwise be incurred if it were to attempt to develop comparable information through its own staff.

There were no transactions conducted on an agency basis through a broker, for among other things, research services for the fiscal year ended October 31, 2006.

Disclosure of Portfolio Holdings. It is policy of each Fund to protect the confidentiality of its portfolio holdings and prevent the selective disclosure of non-public information about such holdings. Each Fund will publicly disclose its holding in accordance with regulatory requirements, such as periodic portfolio disclosure in filings with the Securities and Exchange Commission. Each Fund will publicly disclose its complete schedule of portfolio holdings, as reported on a month-end basis, on its website at www.dreyfus.com. The information will be posted with a one-month lag and will remain accessible until the Company files a report on Form N-Q or Form N-CSR for the period that includes the date as of which the information was current. In addition, fifteen days following the end of each calendar quarter, each Fund will publicly disclose on the website its complete schedule of portfolio holdings as of the end of such

quarter.

If portfolio holdings are released pursuant to an ongoing arrangement with any party, the Fund must have a legitimate business purpose for doing so, and neither Fund, nor Dreyfus or its affiliates, may receive any compensation in connection with an arrangement to make available information about the Fund's portfolio holdings. The Fund may distribute portfolio holdings to mutual fund evaluation services such as Standard & Poor's, Morningstar or Lipper Analytical Services; due diligence departments of a broker-dealers and wirehouses that regularly analyze the portfolio holdings of mutual funds before their public disclosure; and broker-dealers that may be used by the Fund, for the purpose of efficient trading and receipt of relevant research, provided that: (a) the recipient does not distribute the portfolio holdings to persons who are likely to use the information for purposes of purchasing or selling Fund shares or Fund portfolio holdings before the portfolio holdings become public information; and (b) the recipient signs a written confidentiality agreement.

Each Fund may also disclose any and all portfolio information to its service providers and others who generally need access to such information in the performance of their contractual duties and responsibilities and are subject to duties of confidentiality, including a duty not to trade on non-public information, imposed by law and/or contract. These service providers include the Company's custodian, auditors, investment advisers, administrator and each of their respective affiliates and advisers. Disclosure of the Funds' portfolio holdings may be authorized only by the Company's Chief Compliance Officer, and any exceptions to this policy are reported quarterly to the Company's Board.

SUMMARY OF THE PROXY VOTING POLICY, PROCEDURES AND GUIDELINES OF THE DREYFUS FAMILY OF FUNDS

The Board of each fund in the Dreyfus Family of Funds has delegated to Dreyfus the authority to vote proxies of companies held in the fund's portfolio. Dreyfus, through its participation on the Mellon Proxy Policy Committee (the "MPPC") applies Mellon's Proxy Voting Policy, related procedures, and voting guidelines when voting proxies on behalf of the funds.

Dreyfus recognizes that an investment adviser is a fiduciary that owes its clients, including funds it manages, a duty of utmost good faith and full and fair disclosure of all material facts. An investment's adviser's duty of loyalty requires an adviser to vote proxies in a manner consistent with the best interest of its clients and precludes the adviser from subrogating the clients' interests to its own. In addition, an investment adviser voting proxies on behalf of a fund must do so in a manner consistent with the best interests of the fund and its shareholders.

Dreyfus seeks to avoid material conflicts of interest by participating in the MPPC, which applies detailed, pre-determined written proxy voting guidelines (the "Voting Guidelines") in an objective and consistent manner across client accounts, based on internal and external research and recommendations provided by a third party vendor, and without consideration of any client relationship factors. Further, the MPPC engages a third party as an independent fiduciary to vote all proxies of funds managed by Mellon or its affiliates (including the Dreyfus Family of Funds), and may engage an independent fiduciary to vote proxies of other issuers at its discretion.

All proxies received by the funds are reviewed, categorized, analyzed and voted in accordance with the Voting Guidelines. The guidelines are reviewed periodically and updated

and necessary to reflect new issues and any changes in Mellon's or Dreyfus' policies on specific issues. Items that can be categorized under the Voting Guidelines are voted in accordance with any applicable guidelines or referred to the MPPC, if the applicable guidelines so require. Proposals that cannot be categorized under the Voting Guidelines are referred to the MPPC for discussion and vote. Additionally, the MPPC reviews proposals where it has identified a particular company, industry or issue for special scrutiny. With regard to voting proxies of foreign companies, the MPPC weighs the cost of voting and potential inability to sell the securities (which may occur during the voting process) against the benefit of voting proxies to determine whether or not to vote. With respect to securities lending transactions, the MPPC seeks to balance the economic benefits of continuing to participate in an open securities lending transaction against the inability to vote proxies.

When evaluating proposals, the MPPC recognizes that the management of a publicly held company may need protection from the market's frequent focus on short-term considerations, so as to be able to concentrate on such long-term goals as productivity and development of competitive products and services. In addition, the MPPC generally supports proposals designed to provide management with a short-term insulation from outside influences so as to enable them to bargain effectively with potential suitors to the extent such proposals are discrete and not bundled with other proposals. The MPPC believes that a shareholder's role in the governance of a publicly-held company is generally limited to monitoring the performance of the company and its management and voting on matters, which properly come to a shareholder vote. However, the MPPC generally opposes proposals designed to insulate an issuer's management unnecessarily from the wishes of a majority of shareholders. Accordingly, the MPPC generally votes in accordance with management on issues that the MPPC believes neither unduly limit the rights and privileges of shareholders nor adversely affect the value of the investment.

On questions of social responsibility where economic performance does not appear to be an issue, the MPPC attempts to ensure that management reasonably responds to the social issues. Responsiveness will be measured by management's efforts to address the particular social issues, including, where appropriate, assessment of the implications of the proposal to the ongoing operations of the company. The MPPC will pay particular attention to repeat issues where management has failed in its commitment in the intervening period to take actions on issues.

In evaluating proposals regarding incentive plans and restricted stock plans, the MPPC typically employs a shareholder value transfer model. This model seeks to assess the amount of shareholder equity flowing out of the company to executives as options are exercised. After determining the cost of the plan, the MPPC evaluates whether the cost is reasonable based on a number of factors, including industry classification and historical performance information. The MPPC generally voted against proposals that permit or are silent on the repricing or replacement of stock options without shareholder approval.

Information regarding how the Manager voted proxies for the Funds is available at <http://www.dreyfus.com> and on the Securities and Exchange Commission's website at <http://www.sec.gov> on the Company's Form N-PX filed with the Securities and Exchange Commission.

INFORMATION ABOUT THE COMPANY AND FUNDS

Each Fund share has one vote and, when issued and paid for in accordance with the terms of the offering, is fully paid and non-assessable. Fund shares are of one class and have equal

rights as to dividends and in liquidation. Shares have no preemptive or subscription rights and are freely transferable.

Under Massachusetts law, shareholders could, under certain circumstances, be held personally liable for the obligations of a Massachusetts business trust. However, the Company's Agreement and Declaration of Trust disclaims shareholder liability for acts or obligations of the Company and requires that notice of such disclaimer be given in each agreement, obligation or instrument entered into or executed by the Company or a Trustee. The Agreement and Declaration of Trust provides for indemnification from the Fund's property for all losses and expenses of any shareholder held personally liable for the obligations of the Fund. Thus, the risk of a shareholder incurring financial loss on account of shareholder liability is limited to circumstances in which the Fund itself would be unable to meet its obligations, a possibility which management believes is remote. Upon payment of any liability incurred by the Fund, the shareholder paying such liability will be entitled to reimbursement from the general assets of the Fund. The Company intends to conduct its operations in such a way so as to avoid, as far as possible, ultimate liability of the shareholders for liabilities of the Fund.

Unless otherwise required by the 1940 Act, ordinarily it will not be necessary for a Fund to hold annual meetings of shareholders. As a result, shareholders may not consider each year the election of Board members or the appointment of auditors. However, the holders of at least 10% of the shares outstanding and entitled to vote may require the Company to hold a special meeting of shareholders for purposes of removing a Board member from office. Shareholders may remove a Board member by the affirmative vote of two-thirds of the Fund's outstanding voting shares. In addition, the Board will call a meeting of shareholders for the purpose of electing Board members if, at any time, less than a majority of the Board members then holding office have been elected by shareholders.

The Company is a "series fund," which is a mutual fund divided into separate portfolios, each of which is treated as a separate entity for certain matters under the 1940 Act and for other purposes. A shareholder of one portfolio is not deemed to be a shareholder of any other portfolio. For certain matters shareholders vote together as a group; as to others they vote separately by portfolio.

To date, the Board has authorized the creation of two series of shares. All consideration received by the Company for shares of one Fund and all assets in which such consideration is invested will belong to that Fund (subject only to the rights of creditors of the Company) and will be subject to the liabilities related thereto. The income attributable to, and the expenses of, one Fund are treated separately from those of the other Fund. The Company has the ability to create, from time to time, new series without shareholder approval.

Rule 18f-2 under the 1940 Act provides that any matter required to be submitted under the provisions of the 1940 Act or applicable state law or otherwise to the holders of the outstanding voting securities of an investment company, such as the Company, will not be deemed to have been effectively acted upon unless approved by the holders of a majority of the outstanding shares of each series affected by such matter. Rule 18f-2 further provides that a series shall be deemed to be affected by a matter unless it is clear that the interests of each series in the matter are identical or that the matter does not affect any interest of such series. However, the Rule exempts the selection of independent accountants and the election of Board members from the separate voting requirements of the Rule.

Each Fund is intended to be a long-term investment vehicle and is not designed to provide investors with a means of speculating on short-term market movements. A pattern of frequent purchases and exchanges can be disruptive to efficient portfolio management and, consequently, can be detrimental to the Fund's performance and its shareholders. If Fund management determines that an investor is following an abusive investment strategy, it may reject any purchase request, or terminate the investor's exchange privilege, with or without prior notice. Such investors also may be barred from purchasing other funds in the Dreyfus Family of Funds. Accounts under common ownership or control may be considered as one account for purposes of determining a pattern of excessive or abusive trading. In addition, each Fund may refuse or restrict purchase or exchange requests for Fund shares by any person or group if, in the judgment of the Fund's management, the Fund would be unable to invest the money effectively in accordance with its investment objective and policies or could otherwise be adversely affected or if the Fund receives or anticipates receiving simultaneous orders that may significantly affect the Fund. If an exchange request is refused, the Fund will take no other action with respect to the Fund shares until it receives further instructions from the investor. While the Company will take reasonable steps to prevent excessive short term trading deemed to be harmful to a Fund, it may not be able to identify excessive trading conducted through certain financial intermediaries or omnibus accounts.

Each Fund will send annual and semi-annual financial statements to all its shareholders.

COUNSEL AND INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Stroock & Stroock & Lavan LLP, 180 Maiden Lane, New York, New York 10038-4982, as counsel for the Company, has rendered its opinion as to certain legal matters regarding the due authorization and valid issuance of the shares being sold pursuant to the Funds' Prospectus.

Ernst & Young LLP, 5 Times Square, New York, New York 10036 an independent registered public accounting firm, has been selected as the independent registered public accounting firm for the Company.

APPENDIX

Rating Categories

Description of certain ratings assigned by Standard & Poor's Ratings Services ("S&P"), Moody's Investors Service ("Moody's"), and Fitch Ratings ("Fitch"):

S&P

Long-term

AAA

An obligation rated 'AAA' has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA

An obligation rated 'AA' differs from the highest rated obligations only in small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

A

An obligation rated 'A' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB

An obligation rated 'BBB' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

BB, B, CCC, CC, and C

Obligations rated 'BB', 'B', 'CCC', 'CC', and 'C' are regarded as having significant speculative characteristics. 'BB' indicates the least degree of speculation and 'C' the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

BB

An obligation rated 'BB' is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

B

An obligation rated 'B' is more vulnerable to nonpayment than obligations rated 'BB', but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

CCC

An obligation rated 'CCC' is currently vulnerable to nonpayment, and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic

conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

CC

An obligation rated 'CC' is currently highly vulnerable to nonpayment.

C

A subordinated debt or preferred stock obligation rated 'C' is currently highly vulnerable to nonpayment. The 'C' rating may be used to cover a situation where a bankruptcy petition has been filed or similar action taken, but payments on this obligation are being continued. A 'C' also will be assigned to a preferred stock issue in arrears on dividends or sinking fund payments, but that is currently paying.

D

An obligation rated 'D' is in payment default. The 'D' rating category is used when payments on an obligation are not made on the date due even if the applicable grace period has not expired, unless S&P believes that such payments will be made during such grace period. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

r

The symbol 'r' is attached to the ratings of instruments with significant noncredit risks. It highlights risks to principal or volatility of expected returns which are not addressed in the credit rating. Examples include: obligations linked or indexed to equities, currencies, or commodities; obligations exposed to severe prepayment risk-such as interest-only or principal-only mortgage securities; and obligations with unusually risky interest terms, such as inverse floaters.

N.R.

The designation 'N.R.' indicates that no rating has been requested, that there is insufficient information on which to base a rating, or that S&P does not rate a particular obligation as a matter of policy.

Note: The ratings from 'AA' to 'CCC' may be modified by the addition of a plus (+) or minus (-) sign designation to show relative standing within the major rating categories.

Short-term

A-1

A short-term obligation rated 'A-1' is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are given a plus sign (+) designation. This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A-2

A short-term obligation rated 'A-2' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A-3

A short-term obligation rated 'A-3' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

B

A short-term obligation rated 'B' is regarded as having significant speculative characteristics. The obligor currently has the capacity to meet its financial commitment on the obligation; however, it faces major ongoing uncertainties which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

C

A short-term obligation rated 'C' is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

D

A short-term obligation rated 'D' is in payment default. The 'D' rating category is used when payments on an obligation are not made on the date due even if the applicable grace period has not expired, unless S&P believes that such payments will be made during such grace period. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

Moody's

Long-term

Aaa

Bonds rated 'Aaa' are judged to be of the best quality. They carry the smallest degree of investment risk and are generally referred to as "gilt edged." Interest payments are protected by a large or by an exceptionally stable margin and principal is secure. While the various protective elements are likely to change, such changes as can be visualized are most unlikely to impair the fundamentally strong position of such issues.

Aa

Bonds rated 'Aa' are judged to be of high quality by all standards. Together with the 'Aaa' group they comprise what are generally known as high-grade bonds. They are rated lower than the best bonds because margins of protection may not be as large as in 'Aaa' securities or fluctuation of protective elements may be of greater amplitude or there may be other elements present which make the long-term risk appear somewhat larger than the 'Aaa' securities.

A

Bonds rated 'A' possess many favorable investment attributes and are to be considered as upper-medium-grade obligations. Factors giving security to principal and interest are considered adequate, but elements may be present which suggest a susceptibility to impairment some time in the future.

Baa

Bonds rated 'Baa' are considered as medium-grade obligations (i.e., they are neither highly protected nor poorly secured). Interest payments and principal security appear adequate for the present but certain protective elements may be lacking or may be characteristically unreliable

over any great length of time. Such bonds lack outstanding investment characteristics and in fact have speculative characteristics as well.

Ba

Bonds rated 'Ba' are judged to have speculative elements; their future cannot be considered as well-assured. Often the protection of interest and principal payments may be very moderate, and thereby not well safeguarded during both good and bad times over the future. Uncertainty of position characterizes bonds in this class.

B

Bonds rated 'B' generally lack characteristics of the desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.

Caa

Bonds rated 'Caa' are of poor standing. Such issues may be in default or there may be present elements of danger with respect to principal or interest.

Ca

Bonds rated 'Ca' represent obligations which are speculative in a high degree. Such issues are often in default or have other marked shortcomings.

C

Bonds rated 'C' are the lowest rated class of bonds, and issues so rated can be regarded as having extremely poor prospects of ever attaining any real investment standing.

Note: Moody's applies numerical modifiers 1, 2, and 3 in each generic rating classification from 'Aa' through 'Caa'. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

Prime rating system (short-term)

Issuers rated **Prime-1** (or supporting institutions) have a superior ability for repayment of senior short-term debt obligations. Prime-1 repayment ability will often be evidenced by many of the following characteristics:

Leading market positions in well-established industries.

High rates of return on funds employed.

Conservative capitalization structure with moderate reliance on debt and ample asset protection.

Broad margins in earnings coverage of fixed financial charges and high internal cash generation.

Well-established access to a range of financial markets and assured sources of alternate liquidity.

Issuers rated **Prime-2** (or supporting institutions) have a strong ability for repayment of senior short-term debt obligations. This will normally be evidenced by many of the characteristics cited above but to a lesser degree. Earnings trends and coverage ratios, while sound, may be more subject to variation. Capitalization characteristics, while still appropriate, may be more affected by external conditions. Ample alternate liquidity is maintained.

Issuers rated **Prime-3** (or supporting institutions) have an acceptable ability for repayment of senior short-term obligations. The effect of industry characteristics and market compositions may be more pronounced. Variability in earnings and profitability may result in changes in the level of debt protection measurements and may require relatively high financial leverage. Adequate alternate liquidity is maintained.

Issuers rated Not Prime do not fall within any of the Prime rating categories.

Fitch

Long-term investment grade

AAA

Highest credit quality. 'AAA' ratings denote the lowest expectation of credit risk. They are assigned only in case of exceptionally strong capacity for timely payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA

Very high credit quality. 'AA' ratings denote a very low expectation of credit risk. They indicate very strong capacity for timely payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A

High credit quality. 'A' ratings denote a low expectation of credit risk. The capacity for timely payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to changes in circumstances or in economic conditions than is the case for higher ratings.

BBB

Good credit quality. 'BBB' ratings indicate that there is currently a low expectation of credit risk. The capacity for timely payment of financial commitments is considered adequate, but adverse changes in circumstances and in economic conditions are more likely to impair this capacity. This is the lowest investment-grade category.

Long-term speculative grade

BB

Speculative. 'BB' ratings indicate that there is a possibility of credit risk developing, particularly as the result of adverse economic change over time; however, business or financial alternatives may be available to allow financial commitments to be met. Securities rated in this category are not investment grade.

B

Highly speculative. 'B' ratings indicate that significant credit risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is contingent upon a sustained, favorable business and economic environment.

CCC, CC, C

High default risk. Default is a real possibility. Capacity for meeting financial commitments is solely reliant upon sustained, favorable business or economic developments. 'CC' ratings indicate that default of some kind appears probable. 'C' ratings signal imminent default.

DDD, DD, D

Default. The ratings of obligations in this category are based on their prospects for achieving partial or full recovery in a reorganization or liquidation of the obligor. While expected recovery values are highly speculative and cannot be estimated with any precision, the following serve as general guidelines. 'DDD' obligations have the highest potential for recovery, around 90% - 100% of outstanding amounts and accrued interest. 'DD' ratings indicate potential recoveries in the range of 50% - 90% and 'D' the lowest recovery potential, i.e., below 50%.

Entities rated in this category have defaulted on some or all of their obligations. Entities rated 'DDD' have the highest prospect for resumption of performance or continued operation with or without a formal reorganization process. Entities rated 'DD' and 'D' are generally undergoing a formal reorganization or liquidation process; those rated 'DD' are likely to satisfy a higher portion of their outstanding obligations, while entities rated 'D' have a poor prospect of repaying all obligations.

Short-term

A short-term rating has a time horizon of less than 12 months for most obligations, or up to three years for U.S. public finance securities, and thus places greater emphasis on the liquidity necessary to meet financial commitments in a timely manner.

F1

Highest credit quality. Indicates the strongest capacity for timely payment of financial commitments; may have an added "+" to denote any exceptionally strong credit feature.

F2

Good credit quality. A satisfactory capacity for timely payment of financial commitments, but the margin of safety is not as great as in the case of the higher ratings.

F3

Fair credit quality. The capacity for timely payment of financial commitment is adequate; however, near-term adverse changes could result in a reduction non-investment grade.

B

Speculative. Minimal capacity for timely payment of financial commitments plus vulnerability to near-term adverse changes in financial and economic conditions.

C

High default risk. Default is a real possibility. Capacity for meeting financial commitments is solely reliant upon a sustained, favorable business and economic environment.

D

Default. Denotes actual or imminent payment default.

'**NR**' indicates that Fitch does not rate the issuer or issue in question.

Notes to long-term and short-term ratings: A plus (+) or minus (-) sign designation may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the 'AAA' long-term rating category, to categories below 'CCC', or to short-term ratings other than 'F1.'
