Thursday October 12, 2006

LOGAN RESOURCES LTD. CONCLUDES DRILL PROGRAM AT THE HEIDI FOR THE SEASON

Vancouver – Thursday, October 12, 2006 - **Logan Resources Ltd. (TSXV:LGR)** today announced that due to the onset of winter weather conditions, the Company has concluded its diamond drill program at the Heidi gold project for the season. Two holes, totaling approximately 1400 feet (427 metres) were completed. Sulphide mineralization was intersected in both. All drill core samples have been shipped to Acme Analytical Labs in Vancouver. Results will be released when they are received.

The Company will return early next spring to continue evaluating its priority targets. Company geologists will now be processing the geological data obtained from the exploration program at Heidi and honing the targets for the continuation of the diamond drill program this spring.

"We have pushed the drilling as late into the season as possible. With each hole, the Company gains a significant amount of information that enables our team to refine our targets and further our understanding of the geological and economic potential of the project. Our geologists are encouraged by what they have been able to examine. We look forward to returning to Heidi as well as Shell Creek and Cheyenne to continue advancing these projects," stated Seamus Young, President & CEO.

Logan is testing the coincident Induced Polarization anomaly, magnetometer anomaly and gold soil geochemical anomaly outlined at Heidi that combined cover an area 1 km by 500 m. Mineralization has been traced along surface for 2 km. This is the first time the property has been drilled.

Michael Hibbitts, P. Geo, Vice President Exploration is the Qualified Person for Logan's properties.

The Company will be exhibiting at the Chicago Natural Resource Conference & Exhibition October 13 & 14, 2006 at the Holiday Inn Rolling Meadows Convention Centre, 3405 Algonquin Road, Rolling Meadows, IL.

Logan Resources Ltd. is a mineral exploration company that specializes in acquiring, exploring and advancing early-stage Canadian mineral properties. It has seven Canadian mineral projects in its portfolio with discovery potential.
