## LOGAN RESOURCES LTD. AND INTERNATIONAL KRL RESOURCES CORP. ACQUIRE EXTENSIVE URANIUM PROJECT IN THE CASSIAR PLATEAU, YUKON

Vancouver – Wednesday, March 7, 2007 - **International KRL Resources Corp. (TSX-V:IRK)** and **Logan Resources Ltd. (TSXV:LGR)** today jointly announce that they have acquired by staking a large land package with very prospective uranium potential in the Cassiar Plateau, Yukon Territory. The land package consists of 2,245 claims, covering 46,941 hectares and includes twelve distinct project areas. The property is located approximately 95 km northeast of Whitehorse and may be serviced from the Canol Road. Each company has a 50% interest in the property.

The highest known uranium silt geochemical values in the Yukon are found in the Cassiar Plateau region. The uranium silt geochemical values from the new property are consistently high, with significant values of up to 291 ppm, which is 21 times higher than the 95<sup>th</sup> percentile (13.6 ppm) for uranium silt geochemical samples in the Yukon and 8 times higher than the 95<sup>th</sup> percentile (34.7 ppm) in the Cassiar Plateau. While the area is relatively unexplored, there is an active uranium project with reported values in float of up to 0.264% U3O8.

The two companies plan to carry out an aggressive exploration program on this property for the 2007 field season, including airborne radiometric surveys, prospecting, mapping and geochemistry.

"In addition to their diversified property portfolios, both companies have tremendous technical teams with the ability to seek out and stake as well as investigate and evaluate prospective new mineral properties," said Seamus Young, President and CEO, International KRL Resources Corp. and Logan Resources Ltd.

Tuesday March 20, 2007

### DIAMOND DRILLING CONFIRMS GOLD MINERALIZATION AT LOGAN RESOURCES' HEIDI PROPERTY

Tuesday, March 20, 2007 – Vancouver – **Logan Resources Ltd. (TSXV:LGR)** today announced assays from a diamond drill program completed late in the 2006 season at its Heidi gold project. Two holes, totaling approximately 425 metres (1,394 feet) were completed. HDI-06-02 encountered a 26-metre mineralized zone which included an intersection of 1.13 g/t Au over 4 meters, from 15 metres to 19 metres. The intersection is significant to the local interpreted mineralized zone and confirms gold mineralization from historical surface trenching (1-metre chip samples returned values from 1 to 7 g/t Au) and coincident IP surveys. HDI-06-01 intersected a 30-metre mineralized zone with intersections of 0.26 g/t Au over 1 metre and 0.12 g/t Au over 1 metre. See table below.

The gold intersection in HDI-06-02 appears to be the upper edge of the mineralized gold zone from one of the priority target areas. The mineralization is located close to surface in a skarn environment comprised of stratabound gold sulphide replacement mineralization in limey sediments.

The Company has secured Kluane Drilling of Whitehorse to continue the diamond drill program at Heidi early in the 2007 field season and will proceed with additional diamond drill holes (1,400 meters) on this project as soon as weather permits. The base camp and infrastructure are already in place at Heidi.

"We are very early into our evaluation, however, the results from the two holes are very encouraging. We are pleased that the drilling to date has confirmed the geological model, supported by the trenching and geophysics," said Seamus Young, President and CEO.

"Numerous targets remain to be tested. The Heidi property hosts several skarn and porphyry gold targets confirmed by detailed IP surveys. This property was highly recommended by Homestake for its porphyry and skarn gold potential before the company was taken over by Barrick. Homestake recognized similarities in the geochemistry of the system with the replacement style mineralization of the Carlin Trend, said Mike Hibbitts, P.Geo, Vice President, Exploration.

HOLE_NO	AZIMUT H	DIP	FROM	TO	WIDTH	GOLD
(Depth, m)	(deg.)	(deg.)	(metre)	(metre)	(metre)	gm/t
HDI_06_01 (236.00 m)	320	-80	7	8	1	0.124
			20	21	1	0.264
HDI_06_02 (188.20 m)	315	-70 including	15	19	4	1.13
			15	17	2	1.318
			17	19	2	0.937
