DRILL TURNING AT LOGAN RESOURCES' HEIDI GOLD PROJECT, YUKON

Vancouver, Tuesday, May 8, 2007 - Logan Resources Ltd. (TSXV:LGR) today announced that the diamond drill program at its 100%-owned (subject to 2% NSR) Heidi gold project, located northeast of Dawson City, Yukon commenced over the weekend. The Company is testing several priority targets over an extensive coincident Induced Polarization, magnetic and gold soil geochemical anomaly. Mineralization has been traced along surface for 2 km and the first two diamond drill holes from the 2006 field season intersected gold mineralization (see news March 20 and April 26, 2007). The exploration and drill program at Heidi is expected to take between 4-6 weeks to complete. Drill results will be released as analytical data is received, validated and compiled.

"Logan has a very aggressive program outlined for its Yukon projects this summer. The 2007 field season will involve work at Heidi, Shell Creek, Cheyenne, May Creek and its newly staked uranium project, recently named Turn River," said Michael Hibbitts, P.Geol, Vice President Exploration. "We are off to a great start by mobilizing a few weeks early and look forward to reporting on our progress," he added.

Michael Hibbitts, P. Geol, Vice President Exploration is the Qualified Person for Logan's properties.

Logan Resources Ltd. is a mineral exploration company that specializes in acquiring, exploring and advancing Canadian mineral properties. For more information on the property portfolio and the Company, please visit www.loganresources.ca, www.sedar.com and www.sec.gov websites.

Wednesday May 23, 2007

**DIAMOND DRILL PROGRAM AT LOGAN'S HEIDI GOLD PROJECT GOING WELL – SEVENTH
DRILL HOLE COMPLETED**

Vancouver, Wednesday, May 23, 2007 - Logan Resources Ltd. (TSXV:LGR) today announced that its diamond drill program at the Heidi gold project in the Yukon is well ahead of schedule and is achieving excellent drill footage per shift. The Company has just completed its seventh diamond drill hole since the program began on May 5, 2007. The average depth of the drill holes is 100 meters (328 feet). Assays will be reported once they are received, validated and compiled.

“We are very pleased with the performance of Kluane Drilling to date. The early start up at Heidi has been smooth. We have made excellent progress so far and look forward to a very productive season,” said Mike Hibbitts, P.Geol, Vice President of Exploration.

The Company's diamond drill program at Heidi is testing several priority targets over an extensive coincident IP, magnetic and gold soil geochemical anomaly. Mineralization has been traced along surface for 2 km and the first two diamond drill holes from the 2006 field season intersected gold mineralization very close to surface (see news March 20 and April 26, 2007).
