

# FORM 6-K

## SECURITIES AND EXCHANGE COMMISSION Washington, D.C. 20549

### Report of Foreign Private Issuer

### Pursuant to Rule 13a-16 or 15d-16 of the Securities Exchange Act of 1934

For the month of November, 2006

## Kimber Resources Inc.

---

(Translation of registrant's name into English)

Suite 215 - 800 West Pender St. Vancouver, British Columbia V6C 2V6 CANADA

---

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover Form 20-F or Form 40-F.

Form 20-F ☒      Form 40-F ☐

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes ☐      No ☒

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): 82- \_\_\_\_\_

### Exhibit Index

<u>Exhibit Number</u>	<u>Description</u>
99.1	News Release dated November 29, 2006 – KIMBER INTERCEPTS 26 METRES OF 18.16 G/T GOLD EQUIVALENT AT MONTERDE

### Signatures

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

## **KIMBER INTERCEPTS 26 METRES OF 18.16 g/t GOLD EQUIVALENT AT MONTERDE**

*November 29, 2006*

VANCOUVER, BRITISH COLUMBIA - Kimber Resources Inc. (AMEX:KBX, TSX:KBR)

Kimber is pleased to report further drill results from the Monterde Project.

These results are from reverse circulation ("RC") drilling at Monterde on Carotare (CTR), El Orito Norte (EOR), Veta Minitas (LMR), Carmen (MTR) as well as core drilling on Carmen (CTC).

### Highlights

LMR-47	26 metres of 18.16 g/t gold equivalent, including 4 metres of 101.85 g/t gold equivalent, and 10 metres of 12.47 g/t gold equivalent
LMR-48	26 metres of 3.26 g/t gold equivalent
CTR-54	8 metres of 5.16 g/t gold equivalent

The results from LMR-47 are some of the best encountered to date at Monterde. The Veta Minitas structure is located about 200 metres west of the Carmen footwall and already has a small resource defined. The high concentration of silver (5.7 kilograms over four metres) with 25.3 g/t gold is substantial and will require follow-up drilling. The attitude and true thickness of this mineralization are unknown, but this structure appears to be more steeply dipping than the majority identified thus far.

Results such as those from LMR-47 are consistent with some of the underground grades mined in the 1930's and 40's. Until recently, the Company's focus has been primarily on open-pittable resources, but work has now commenced on the possibilities of simultaneous underground and open-pit operations, similar to those at the Ocampo project (Gammon Lake Resources).

The CTR-54 intercept reported above was from surface at a showing of the main structure on Carotare East. It was targeted at the south structure which was not intercepted in this or adjacent holes.

The three holes reported from El Orito Norte (EOR) were drilled last month. They were exploratory in nature and were directed at intersecting any new structures that might be

present. EOR-10 intersected mineralization but did not locate any major structures. Road building continues at El Orito Norte and is being followed by detailed mapping and sampling to identify further drill targets in this area.

<u>Drill Hole</u>	<u>From</u> (m)	<u>To</u> (m)	<u>Interval</u> (m)	<u>Gold</u> (g/t)	<u>Silver</u> (g/t)	<u>Gold Equivalent</u> (g/t)*

\*Gold equivalent grade assumes equivalence of 75 grams of silver to one gram of gold.

True widths (with exception of LMR-47 which is unknown at this time) are expected to range between 65% and 85% of the intervals reported on the table above. All samples are prepared and analysed by ALS Chemex.

#### About Kimber

Kimber Resources Inc. holds a 100% interest in the Monterde property in the Sierra Madre of northern Mexico. On the Monterde property, The Company is advancing the Carmen gold-silver deposit towards production. The Carmen deposit, an underground mine in the 1930's, is a typical low sulphidation epithermal system, oxidized, and believed to be suitable for open pit mining. Two adjacent epithermal systems first identified in 2005, the Carotare deposit and El Orito Norte exploration target appear to be similar to the Carmen. The goal of the company is to demonstrate at least three million resource ounces from the two deposits and exploration target identified. For further information on the company visit SEDAR or the company website at [www.kimberresources.com](http://www.kimberresources.com).

*Mr. Antonio Aguilar, Project Manager, managed this program of drilling on the Monterde project. Mr. J.B. Richards, P.Eng., Vice President Engineering, and designated Qualified Person (Q.P.) for the project is responsible for quality control and has verified the data disclosed. He has determined that the laboratory reports matched the drill sample logs and that the quality control assays fall within reasonable limits. QA/QC procedures incorporate blanks and duplicates inserted at the drill site and standards inserted after sample preparation. Drilling is by reverse circulation. A one eighth split of each two-metre section of the drill hole, weighing approximately 6 kg is processed by ALS Chemex at its preparation laboratory in Chihuahua, Mexico. Pulps are analysed by ALS Chemex at its laboratory in North Vancouver, British Columbia, using 50 gram subsamples, fire assay with an AA finish for gold and four-acid digestion and ICP finish for silver from a 0.4 gram subsample. Highgrade gold or silver intervals are re-assayed by fire assay with gravimetric finish.*

Cautionary Statement

*Statements in this release may be viewed as forward-looking statements. Such statements involve risks and uncertainties that could cause actual results to differ materially from those projected. There are no assurances the Company can fulfill such forward-looking statements and the Company undertakes no obligation to update such statements. Such forward-looking statements are only predictions; actual events or results may differ materially as a result of risks facing the Company, some of which are beyond the Company's control.*
