FOR IMMEDIATE RELEASE

Jet Starts Naskeena Diamond Drill Program Adds to Texas Gas Holdings

May 2, 2007 - Mr. Robert Card, President of Jet Gold Corp. (TSX V.JAU) (the “Company”) is pleased to report that it has started the diamond drill program on its Naskeena coal project located north of Terrace, B.C. On Friday, April 27, 2007, Driftwood Diamond Drilling mobilized their D6 cat to the property to begin road clearing and drill pad construction. The work over the past weekend included plowing out the remaining 2-3 feet of snow from the main access road. By Sunday, the operator had cleared most of the brushed in logging roads requiring work and had constructed 9 drill pads. During the coming week, additional pads will be constructed and ready for the drill which is expected to arrive on the property on Friday, May 4, 2007. The Company is fortunate that the area is crisscrossed by all-weather logging roads thereby reducing the amount of new road building required.

The Naskeena project encompasses an area of approximately 17 square miles and is located 60 km from Terrace, B.C., adjacent to a paved road and about 180 km from the coal port at Prince Rupert, B.C. Two previous historical reports on the property have suggested a potential resource of up to 240 million tonnes of high-grade coal, however, these reports were only estimates and were not National Instrument 43-101 compliant, and thus would need to be confirmed by a modern exploration program. Nevertheless, a number of coal seams are now visible and management is very encouraged by the property evaluation so far.

The Company also reports that it has acquired a 4% interest in a natural gas well in Texas called the Harris #2 JV. The project involves re-opening a capped gas well and re-completing it and hooking it up to pipeline. The well produced previously during the early 1990's but was shut in due to low gas prices. The well was producing from Lower Wilcox Sands and has other formations carrying gas behind the pipe further uphole. The Company expects that work to open up the well will commence within the next two weeks and should take about 30 days.

NEWS

FOR IMMEDIATE RELEASE

JET GOLD NASKEENA DRILLING UPDATE

Vancouver, BC - May 22, 2007 - Jet Gold Corp. (TSX-V: JAU) (the “Company”) is pleased to announce that on May 4, 2007, the diamond drilling program commenced on the Naskeena Coal Property. The first phase is well under way with approximately half of the forecasted 3000 feet of drilling completed. The drilling program will be expanded to the next phase immediately and the extent of drilling required to fully delineate this large coal prospect is anticipated to keep the drill busy most of the summer.

In the current phase of drilling, the Company is proving out the Naskeena coal beds as described by Monckton and Brewer in 1914. The program will expand once drilling on these reported showings is completed and a review of the coal bed geometry can be undertaken. To date, the drilling has intersected these coal beds and found typically flatter bedding (dip) angles, 12 to 20 degrees versus the 25 to 27 degrees described. These flatter beds will be suitable for open pit mining. The Company is waiting for reports on additional holes as they are completed and it should be noted that detailed core logging is underway and that samples have not been sent for assay at this time.

The Naskeena Project encompasses an area of approximately 17 square miles and is located 27 miles from Terrace, BC adjacent to a paved highway and about 100 miles from the coal port at Prince Rupert, BC. Two previous historical reports on the property have suggested a potential resource of over 200 million tonnes of high grade coal, however, these reports were only estimates, not NI 43-101 compliant. A qualified person has not done sufficient work to classify the historical estimate as current mineral resources, the issuer is not treating the historical estimate as current mineral resources and the historical estimate should not be relied upon and thus needs to be confirmed by the ongoing exploration program.

The field work program is being coordinated by Doug McRae, RFT and supervised by project geologist Alex Burton, P.Eng., P.Geo., the NI 43-101 qualified person for the Naskeena Project.

MATERIAL CHANGE REPORT

ITEM 1 REPORTING ISSUER

Jet Gold Corp.
(the "Company")
1102 – 475 Howe Street
Vancouver, BC V6C 2B3

ITEM 2 DATE OF MATERIAL CHANGE

May 2, 2007

ITEM 3 PRESS RELEASES

Issued May 2, 2007 at Vancouver, BC

ITEM 4 SUMMARY OF MATERIAL CHANGE

1. The Company has started the diamond drill program on its Naskeena coal project, and
2. has acquired a 4% interest in a natural gas well in Texas.

ITEM 5 FULL DESCRIPTION OF MATERIAL CHANGE

Jet Gold Corp has started the diamond drill program on its Naskeena coal project located north of Terrace, B.C. On Friday, April 27, 2007, Driftwood Diamond Drilling mobilized their D6 cat to the property to begin road clearing and drill pad construction. The work over the past weekend included plowing out the remaining 2-3 feet of snow from the main access road. By Sunday, the operator had cleared most of the brushed in logging roads requiring work and had constructed 9 drill pads. During the coming week, additional pads will be constructed and ready for the drill which is expected to arrive on the property on Friday, May 4, 2007. The Company is fortunate that the area is crisscrossed by all-weather logging roads thereby reducing the amount of new road building required.

The Naskeena project encompasses an area of approximately 17 square miles and is located 60 km from Terrace, B.C., adjacent to a paved road and about 180 km from the coal port at Prince Rupert, B.C. Two previous historical reports on the property have suggested a potential resource of up to 240 million tonnes of high-grade coal, however, these reports were only estimates and were not National Instrument 43-101 compliant, and thus would need to be confirmed by a modern exploration program. Nevertheless, a number of coal seams are now visible and management is very encouraged by the property evaluation so far.

The Company also reports that it has acquired a 4% interest in a natural gas well in Texas called the Harris #2 JV. The project involves re-opening a capped gas well and re-completing it and hooking it up to pipeline. The well produced previously during the early 1990's but was shut in due to low gas prices. The well was producing from Lower Wilcox Sands and has other formations carrying gas behind the pipe further uphole. The Company expects that work to open up the well will commence within the next two weeks and should take about 30 days.
