CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

Some of the written and oral statements and information in this presentation contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are often characterized by the use of words such as “outlook,” “believes,” “estimates,” “expects,” “projects,” “may,” “intends,” “plans,” “anticipates,” “foresees,” “future,” or by discussions of strategy, plans, or intentions. The statements in this presentation that are not historical statements, including, but not limited to, the slide titled “Business Outlook by geography and end use application”; statements regarding our expectations as to the continued impact of the coronavirus (“COVID-19”) pandemic (including governmental and regulatory actions relating thereto) on demand for our products, on the national and global economy and on our customers, suppliers, employees, business and results of operations; projections of annual run rate cost savings; expectations of our financial flexibility, balance sheet strength and liquidity; projections for debt reduction and the achievement of associated leverage ratios; the impacts of our sustainability initiatives and our ability to deliver sustainable value creation; our strategic focuses; our target growth markets; drivers for future demand for HSBC and USBC products; the strength of our geographic and end market diversification and ability to position our product portfolio; actions regarding our future capital deployment and capital spending; our expectations about the market outlook for our products and application including but not limited to tires, paving, automotive, oilfield, and lubricant additives; the impact of crude pricing decline and CST pricing on our business and results of operations; and our expectations regarding the future of the global market and economic strength, are forward-looking statements.

Forward-looking statements involve known and unknown risks, uncertainties, assumptions, and other important factors that could cause the actual results, performance or our achievements, or industry results, to differ materially from historical results, any future results, or performance or achievements expressed or implied by such forward-looking statements. There are a number of risks and uncertainties that could cause our actual results to differ materially from the forward-looking statements contained in this presentation. Important factors that could cause our actual results to differ materially from those expressed as forward-looking statements include, but are not limited to the factors set forth in this presentation, in our latest Annual Report on Form 10-K, including but not limited to “Part I, Item 1A. Risk Factors” and “Part II, Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” therein, and in our other filings with the Securities and Exchange Commission (the “SEC”). Many of these risks and uncertainties are currently amplified by and will continue to be amplified by, or in the future may be amplified by, the COVID-19 pandemic.

There may be other factors of which we are currently unaware or deem immaterial that may cause our actual results to differ materially from the forward-looking statements. In addition, to the extent any inconsistency or conflict exists between the information included in this presentation and the information included in our prior presentations and other filings with the SEC, the information contained in this presentation updates and supersedes such information. Forward-looking statements are based on current plans, estimates, assumptions and projections, and, therefore, you should not place undue reliance on them. Forward-looking statements speak only as of the date they are made, and we undertake no obligation to update them in light of new information or future events.

Disclaimers

GAAP Disclaimer

This presentation includes the use of non-GAAP financial measures, as defined below. Tables included in this presentation reconcile each of these non-GAAP financial measures with the most directly comparable GAAP financial measure. For additional information on the impact of the spread between the FIFO basis of accounting and estimated current replacement cost (ECRC), see our Annual Report on Form 10-K for the fiscal year ended December 31, 2019.

We consider these non-GAAP financial measures to be important supplemental measures in the evaluation of our absolute and relative performance. However, we caution that these non-GAAP financial measures have limitations as analytical tools and may vary substantially from other measures of our performance. You should not consider them in isolation, or as a substitute for analysis of our results under GAAP in the United States.

EBITDA, Adjusted EBITDA, and Adjusted EBITDA Margin: For our consolidated results, EBITDA represents net income (loss) before interest, taxes, depreciation and amortization. For each reporting segment, EBITDA represents operating income before depreciation and amortization, disposition and exit of business activities and earnings of unconsolidated joint ventures. Among other limitations, EBITDA does not: reflect the significant interest expense on our debt or reflect the significant depreciation and amortization expense associated with our long-lived assets; and EBITDA included herein should not be used for purposes of assessing compliance or non-compliance with financial covenants under our debt agreements since its calculation differs in such agreements. Other companies in our industry may calculate EBITDA differently than we do, limiting its usefulness as a comparative measure. As an analytical tool, Adjusted EBITDA is subject to all the limitations applicable to EBITDA. We prepare Adjusted EBITDA by eliminating from EBITDA the impact of a number of items we do not consider indicative of our on-going performance but you should be aware that in the future we may incur expenses similar to the adjustments in this presentation. Our presentation of Adjusted EBITDA should not be construed as an inference that our future results will be unaffected by unusual or non-recurring items. In addition, due to volatility in raw material prices, Adjusted EBITDA may, and often does, vary substantially from EBITDA and other performance measures, including net income calculated in accordance with U.S. GAAP. We define Adjusted EBITDA Margin as Adjusted EBITDA as a percentage of revenue (for each reporting segment or on a consolidated basis, as applicable).

Adjusted Gross Profit and Adjusted Gross Profit Per Ton: We define Adjusted Gross Profit Per Ton as Adjusted Gross Profit divided by total sales volume (for each reporting segment or on a consolidated basis, as applicable). We define Adjusted Gross Profit as gross profit excluding certain charges and expenses. Adjusted Gross Profit is limited because it often varies substantially from gross profit calculated in accordance with U.S. GAAP due to volatility in raw material prices.

Adjusted Diluted Earnings Per Share: Adjusted Diluted Earnings Per Share is Diluted Earnings (Loss) Per Share excluding the impact of a number of non-recurring items we do not consider indicative of our on-going performance.

Consolidated Net Debt: We define consolidated net debt as total consolidated debt (including debt of KFPC) less consolidated cash and cash equivalents. Management uses consolidated net debt to determine our outstanding debt obligations that would not readily be satisfied by its cash and cash equivalents on hand. Management believes that using consolidated net debt is useful to investors in determining our leverage since we could choose to use cash and cash equivalents to retire debt. Consolidated Net Debt, as adjusted for foreign exchange impact accounts for the FX effect on our foreign currency denominated debt agreements.

Consolidated Net Debt Leverage Ratio: The consolidated net debt leverage ratio is defined as consolidated net debt as of the balance sheet date divided by Adjusted EBITDA for the twelve months then ended. Our use of this term may vary from the use of similarly-titled measures by others in our industry due to the potential inconsistencies in the method of calculation and differences due to items subject to interpretation.

Kraton at a Glance

KRATON

Kraton – A Part of Your Daily Life

Our innovations improve the quality of countless everyday items that enhance your way of life.

Baby Diapers

Our innovations provide the excellent recovery to withstand repeated pull up-and-down cycles along with stretch, fit and breathability so young ones can continue to be on the move.

Roads

Kraton innovations allow for the development of highly modified asphalt designed to withstand extreme hot or cold weather as well as high traffic.

A longer lasting road and shorter reconstruction time allow for a safer driving experience while reducing carbon footprint.

Fiber Optic Cables

In a constantly connected world, we rely on fiber optic cables to keep our cellphone data and internet lines running.

Kraton polymers protect the cable's fiber by reducing the likelihood of water penetration, allowing for fast and continuous contact with everyone around you.

Wood Coatings

A protective layer of alkyd-based coating or varnish will protect your wooden floors and stairs while keeping them looking new.

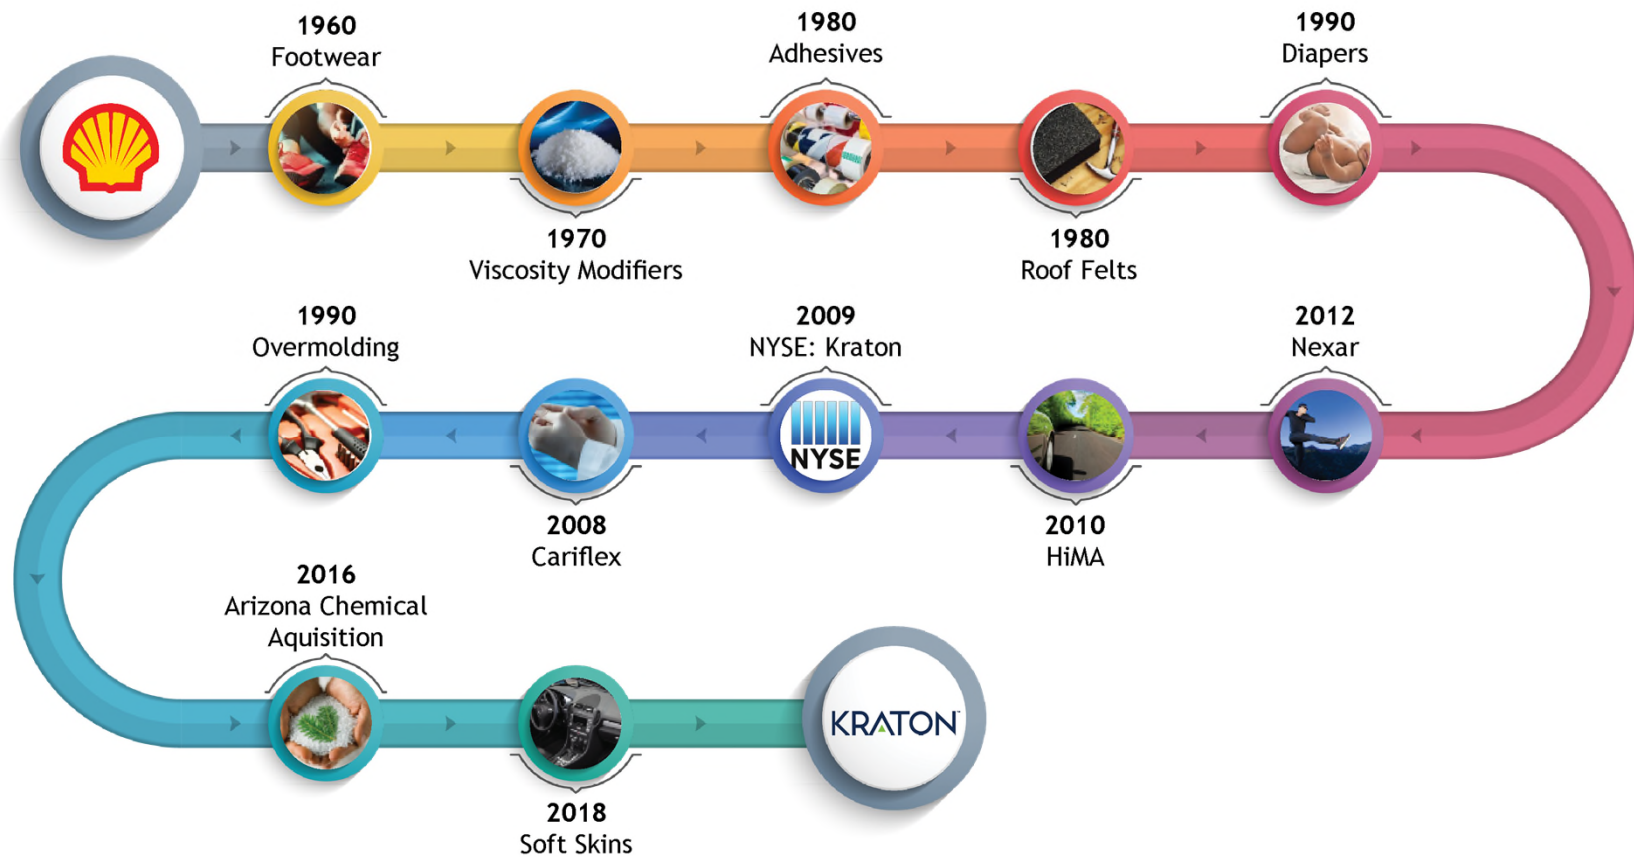

Our Products

Our SBC polymers are a class of thermoplastic elastomers, which is a plastic material that behaves like rubber, delivering both strength and elasticity.

Our biobased pine chemistry enables numerous industries to replace non-renewable resources with high-performance, sustainable alternatives.

Polymer Segment - Target Growth Markets

Protect and Promote Growth- Satisfy Unmet Needs

Oil Gels

IV Bags, Tubing

Protective Films

Oilfield Chemicals

Soft Skins

Adhesives

ADDRESSABLE MARKET

- Fiber Optic Cable
- Post-tensioning gel opportunity being validated in various regions
- Health & Beauty Gels: Global strategy in development for market penetration

- Defining NextGen polymer for IV films to manage competitive market

- Large market share in high peel segment
- Polymer solution delivers unmet market needs vs acrylics & other competitive HSBC polymers
- New polymer development for medium peel PF underway

- New synthetic suspension additives application

- GM-PATAC program on track for launch
- Additional IMSS programs
- 2nd Generation IMSS technology improvements

- Innovation in stable/ light color rosin esters to meet future market requirements: Best in Class Biobased Rosin Ester
- Biobased certification provides transparency and credibility to our customers
- Kraton DX0222 for Reactive, Higher Temperature Resistance Adhesives Applications

Chemical Segment - Target Growth Markets

Pushing the limits of where our established Chemical Products can be taken

Adhesives

- Kraton with leading position for renewable bio-based Tackifiers
- Established and continuously growing market
- Kraton most recently introduced next generation of Rosin Esters
- These products combine proven advantages of Rosin Esters with superior color

Roadmarking

- Market with attractive growth rates
- Major drivers: Safety, self-driving vehicles, longevity of Roadmarking
- Kraton pre-launched a unique Roadmarking product combining our Polymer and Chemical technologies

Tires

ADDRESSABLE MARKET

- Focus on Tread Enhancement Additives (TEA)
- Kraton with leading position in TEA market with attractive growth rates
- Kraton most recently launched our new SYLVATRAXX 8000 series

Dispersions

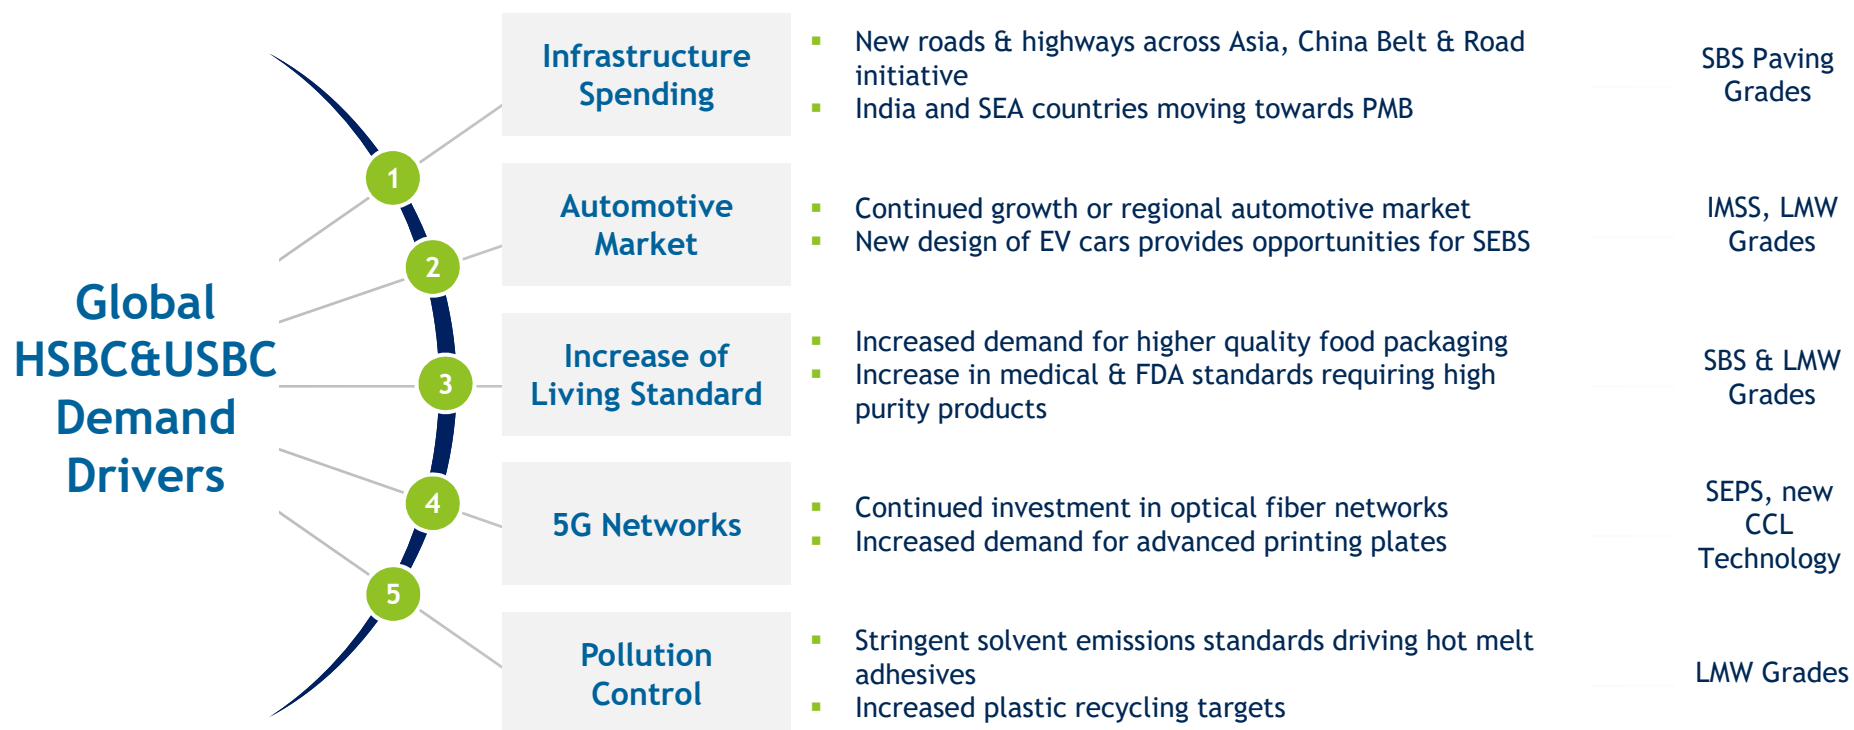

- Market for water-borne tackifier dispersions continues to grow
- Asia Pacific market with highest growth rates
- Kraton in final phase to launch our first Dispersions manufacturing facility in Asia

Coatings

- Coatings markets with increasing demand for sustainable products
- Our Pine based Fatty Acids combine excellent performance attributes & superior sustainability features
- New TOFA grades with superior colour in customer tests

Structural Trends in Asia Driving Future Demand for HSBC and USBC

Polymer Segment

KRATON

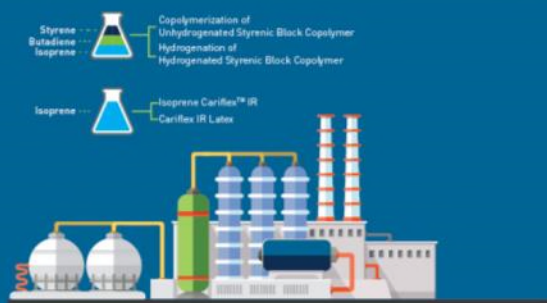

Polymer Manufacturing - Overview

#1 Monomer Preparation & Polymerization

Styrene, Butadiene and Isoprene are monomers used in the Polymers segment. These raw materials need to be purified before going to the reactor to start the polymerization process. Polymerization is the process of creating a long chain of monomers which stay in a solvent phase initially. A unique feature of Kraton polymers is their block structure. There is a special category of Kraton polymer that is hydrogenated (Kraton G) and functionalized (Kraton FG) - enabling enhanced characteristics in the final product.

#2 Polymer Recovery from Solvent

The solvent in which the polymer is dissolved is removed subsequently. By identifying and mitigating loss spots, solvent recovery is optimized. This recovered solvent is purified and then recovered back to the polymerization reactor. Process optimizations that reduce the amount of energy required in the process reduces natural gas or oil consumption.

#3 Drying & Final Packaging

New technologies can help prevent product losses over the manufacturing process. Polymers can have different shapes and sizes, depending on the grade. The final step of the process is the removal of water, after which packaging takes place and products are prepared for shipping.

Polymer Segment Overview

- Kraton invented Styrenic Block Copolymers (SBCs), which are highly-engineered polymers used to impart specific properties to a wide variety of end use products
- Kraton remains a leading global producer of SBCs, and within the Polymer segment, produces two primary product families
 - Unhydrogenated SBCs
 - Hydrogenated SBCs
- Strategically focused on enhancing portfolio profitability through application of R&D and portfolio shift to higher-value products and execution of cost-reset initiatives, to deliver \$70 million of cost reductions

Chemical Segment

KRATON

The Process from Pine to Product

#1 Tall Oil

Black liquor soap - a sidestream of the kraft pulp process - is converted to crude tall oil. We capture the valuable substances contained in tall oil and turn them into specialty chemicals in our biorefineries.

#2 Processing

The tall oil is pumped into our bio-refinery. Here it is distilled to extract valuable materials. We produce tall oil fatty acids, tall oil rosin, distilled tall oil and tall oil pitch. We call these fractions.

#3 Product Development

The fractions are refined and upgraded into a wide range of biobased specialty chemicals. These are sold to customers who seek superior product performance. By replacing fossil-based chemicals, customers also achieve their sustainability goals. Our biobased products enable customers to improve product performance, reduce GHG emissions and enable the reuse of materials.

Chemical Segment - Overview

Through its Chemical segment, Kraton refines and further upgrades two primary feedstocks, Crude Tall Oil (“CTO”) and Crude Sulfate Turpentine (“CST”), into specialty chemicals. CTO and CST are wood-pulping co-products and as such, the Chemical segment’s product offering is based upon renewable resources

- Kraton offers high value-added products in three target markets - Adhesives, Performance Chemicals and Tires - that offer strong potential for growth
- Kraton has an advantageous feedstock position via a long-term supply agreement with International Paper
- Kraton's chemical business has a stable and diverse customer base with long-standing relationships in a broad array of end markets

Financial Highlights

KRATON

First Quarter 2020 Financial Highlights

GAAP Results

- Consolidated net income of \$209.0 million
- Polymer segment operating income of \$17.9 million
- Chemical segment operating income of \$10.3 million

Consolidated Results

- Revenue of \$427.3 million, down \$29.1 million vs. Q1 2019
- Q1 2020 Adjusted EBITDA⁽¹⁾ of \$77.9 million, down 12.9% vs. Q1 2019
- Adjusted EBITDA margin⁽²⁾ of 18.2% vs. 19.6% in Q1 2019

Polymer Adjusted EBITDA⁽¹⁾

- Q1 2020 Adjusted EBITDA⁽¹⁾ of \$51.2 million, up 6.3% vs. Q1 2019
- Adjusted EBITDA margin⁽²⁾⁽³⁾ of 21.3% vs. 18.4% in Q1 2019
- Continued margin stability

Chemical Adjusted EBITDA⁽¹⁾

- Q1 2020 Adjusted EBITDA⁽¹⁾ of \$26.7 million, down 35.3% vs. Q1 2019
- Adjusted EBITDA margin⁽²⁾ of 14.3% vs. 21.1% in Q1 2019
- CST and TOR margins stabilizing vs. year-end 2019

Debt Reduction & Liquidity

- First quarter 2020 reduction in consolidated debt of \$378.8 million and reduction in Consolidated Net Debt of \$495.3 million, or \$484.6 million adjusted for FX⁽¹⁾
- Ample liquidity between cash on hand and approximately \$200 million of availability under \$250 million ABL Facility

(1) See non-GAAP reconciliations included in the accompanying financial tables for the reconciliation of each non-GAAP measure to its most directly comparable GAAP measure.

(2) Defined as Adjusted EBITDA as a percentage of revenue.

(3) For the three months ended March 31, 2020, Adjusted EBITDA margin adjusted for the IR Supply Agreement would be 20.5%.

Polymer Segment Results

	Three Months Ended March 31,

Spread between FIFO and ECRC	6,745	(2,466)	4,279	21,215	(3,364)	17,851
Adjusted EBITDA	\$ 51,169	\$ 26,710	\$ 77,879	\$ 48,153	\$ 41,279	\$ 89,432

- (a) Included in EBITDA is a \$11.1 million gain on insurance for the three months ended March 31, 2019, fully offsetting the lost margin in the first quarter of 2019, and reimbursement for a portion of the direct costs we have incurred to date related to Hurricane Michael. Also included in EBITDA are Isoprene Rubber sales to Daelim under the IRSA. Sales under the IRSA are transacted at cost. Included in Adjusted EBITDA is the amortization of non-cash deferred income of \$3.4 million, which represents revenue deferred until the products are sold under the IRSA.
- (a) Charges related to the evaluation of acquisition transactions, severance expenses, and other restructuring related charges.
- (b) Incremental costs related to Hurricane Michael, which are recorded in cost of goods sold.
- (c) Reimbursement of incremental costs related to Hurricane Michael, which is recorded in gain on insurance proceeds.

Reconciliation of Net Income to Operating Income to Non-GAAP Financial Measures TTM March 31, 2020
