CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS

FOR THE SIX MONTHS ENDED DECEMBER 31, 2010

NOTICE OF AUDITOR'S REVIEW OF INTERIM CONSOLIDATED FINANCIAL STATEMENTS

Under National Instrument 51-102, Part 4, subsection 4.3 (3) (a), if an auditor has not performed a review of the interim financial statements, they must be accompanied by a notice indicating that an auditor has not reviewed the financial statements.

The accompanying unaudited financial statements of the Company have been prepared by and are the responsibility of the Company's management.

The Company's independent auditor has not performed a review of these financial statements in accordance with standards established by the Canadian Institute of Chartered Accountants for a review of interim financial statements by an entity's auditor.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

1. NATURE OF OPERATIONS

Rare Element Resources Ltd. ("Rare Element" or "the Company") was incorporated under the laws of the Province of British Columbia on June 3, 1999 and the principal business activity is the exploration and evaluation of mineral properties. The address of the Company's registered office is Suite 2610, 1066 West Hastings Street, Vancouver, BC V6E 3X1. The Company is in the process of exploring its mineral properties and has not yet determined whether these properties contain mineral reserves that are economically recoverable. The recoverability of amounts shown for mineral properties is dependent upon the establishment of a sufficient quantity of economically recoverable reserves, the ability of the Company to obtain necessary financing to complete the development and upon future profitable production or proceeds from the disposition of mineral properties.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Conversion to International Financial Reporting Standards

The Canadian Accounting Standards Board ("AcSB") confirmed in February 2008 that International Financial Reporting Standards ("IFRS") will replace Canadian generally accepted accounting principles ("Canadian GAAP") for publicly accountable enterprises for financial periods beginning on or after January 1, 2011, with the option available to early adopt IFRS from periods beginning on or after January 1, 2009 upon receipt of approval from the Canadian Securities regulatory authorities.

These condensed consolidated interim financial statements have been prepared in accordance with International Accounting Standard 34, Interim Financial Reporting ("IAS 34") using accounting policies consistent with IFRS as issued by the International Accounting Standards Board ("IASB") and interpretations of the International Financial Reporting Interpretations Committee ("IFRIC").

These are the Company's first IFRS condensed consolidated interim financial statements for the six-month period ended December 31, 2010 covered by the first IFRS consolidated annual financial statements to be presented in accordance with IFRS for the year ending June 30, 2010. Previously, the Company prepared its consolidated annual and consolidated interim financial statements in accordance with Canadian GAAP.

Basis of preparation

These condensed consolidated interim financial statements have been prepared on a historical cost basis except for financial instruments that have been measured at fair value. In addition, these condensed consolidated interim financial statements have been prepared using the accrual basis of accounting, except for cash flow information.

The preparation of interim financial statements in conformity with IAS 34 requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, income and expenses. Actual results may differ from these estimates. These condensed consolidated interim financial statements do not include all of the information required for full annual financial statements.

These condensed consolidated interim financial statements, including comparatives, have been prepared on the basis of IFRS standards that are published at the time of preparation and that are effective or available for early adoption on June 30, 2011, the Company's first annual reporting date.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

The standards that will be effective or available for voluntary early adoptions in the annual financial statements for the year ending June 30, 2011 are subject to change and may be affected by additional interpretation(s). Accordingly, the accounting policies for the annual period that are relevant to these condensed consolidated interim financial statements will be determined only when the first IFRS financial statements are prepared for the year ending June 30, 2011.

The preparation of these condensed consolidated interim financial statements resulted in changes to the accounting policies as compared with the most recent annual financial statements prepared under Canadian GAAP. The accounting policies set out below have been applied consistently to all periods presented in these condensed consolidated interim financial statements. They also have been applied in preparing an opening IFRS statement of financial position at July 1, 2009 for the purposes of the transition to IFRS, as required by IFRS 1, *First Time Adoption of International Financial Reporting Standards* (IFRS 1). The impact of the transition from Canadian GAAP to IFRS is explained in Note 17.

Basis of presentation and principles of consolidation

The condensed consolidated interim financial statements incorporate the financial statements of the Company and entities controlled by the Company (its “subsidiaries”). Control is achieved where the Company has the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.

The Company’s subsidiaries are:

	%of ownership	Jurisdiction	Principal activity
Paso Rico Resources Ltd. (“Paso Rico”)	100%	Canada	Holding company
Paso Rico (USA), Inc.	100%	USA	Exploration company

Inter-company balances and transactions, including unrealised income and expenses arising from inter-company transactions, are eliminated in preparing the condensed consolidated interim financial statements.

Foreign currency translation

Items included in the condensed consolidated interim financial statements are measured using the currency of the primary economic environment in which the entity operates (“the functional currency”). The condensed consolidated interim financial statements are presented in US dollars, which are the presentation currency and the functional currency of Paso Rico (USA), Inc. The functional currency of Rare Element and Paso Rico is the Canadian Dollar.

Transactions in currencies other than the functional currency are recorded at the rates of exchange prevailing on dates of transactions. At each financial position reporting date, monetary assets and liabilities that are denominated in foreign currencies are translated at the rates prevailing at the date when the fair value was determined. Non-monetary items that are measured in terms of historical cost in a foreign currency are not retranslated.

For the purpose of presenting consolidated financial statements, the assets and liabilities of the Company’s Canadian operations with a functional currency other than the US dollar are expressed in US dollars using closing rates at the date of financial position. Income and expense items are translated at the average exchange rates for the period. Exchange differences arising, if any, are recognized directly into equity and transferred to the foreign currency transactions reserve. Such exchange differences are recognized in profit or loss in the period in which the foreign operation is disposed of.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

Goodwill and fair value adjustments arising on the acquisition of a foreign operation are treated as assets and liabilities of the foreign operation and translated at the closing rate.

Exploration and evaluation

The Company is in the exploration stage with respect to its investment in mineral properties and accordingly follows the practice of capitalizing all costs relating to the acquisition of, exploration for and development of mineral claims and crediting all revenues received against the cost of the related claims. Such costs include, but not exclusive to, geological, geophysical studies, exploratory drilling and sampling. At such time as commercial production commences, these costs will be charged to operations on a unit-of-production method based on proven and probable reserves. The aggregate costs related to abandoned mineral claims are charged to operations at the time of any abandonment or when it has been determined that there is evidence of a permanent impairment.

The recoverability of amounts shown for exploration and evaluation assets is dependent upon the discovery of economically recoverable reserves, the ability of the Company to obtain financing to complete development of the properties, and on future production or proceeds of disposition.

The Company recognizes in income costs recovered on mineral properties when amounts received or receivable are in excess of the carrying amount.

Upon transfer of "Exploration and evaluation costs" into "Mine development", all subsequent expenditure on the construction, installation or completion of infrastructure facilities is capitalised within "Mine development". After production starts, all assets included in "Mine development" are transferred to "Producing mines".

All capitalized exploration and evaluation expenditure is monitored for indications of impairment. Where a potential impairment is indicated, assessments are performed for each area of interest. To the extent that exploration expenditure is not expected to be recovered, it is charged to the results of operations. Exploration areas where reserves have been discovered, but require major capital expenditure before production can begin, are continually evaluated to ensure that commercial quantities of reserves exist or to ensure that additional exploration work is underway as planned.

Property, plant and equipment

Property, plant and equipment ("PPE") are carried at cost and are depreciated annually on a declining-balance basis at the following rates: computer equipment at 55% and geological equipment at 30% (one-half of the rate is taken in the year of acquisition and disposition).

The cost of an item of PPE consists of the purchase price, any costs directly attributable to bringing the asset to the location and condition necessary for its intended use and an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located.

An item of PPE is derecognized upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on disposal of the asset, determined as the difference between the net disposal proceeds and the carrying amount of the asset, is recognized in profit or loss in the consolidated statement of comprehensive income or loss.

The Company compares the carrying value of PPE to estimated net recoverable amounts, based on estimated future cash flows, to determine whether there is any indication of impairment whenever events or circumstances warrant.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

Where an item of plant and equipment comprises major components with different useful lives, the components are accounted for as separate items of plant and equipment. Expenditures incurred to replace a component of an item of property, plant and equipment that is accounted for separately, including major inspection and overhaul expenditures, are capitalized.

Financial instruments

Financial assets

The Company classifies its financial assets into one of the following categories, depending on the purpose for which the asset was acquired. The Company's accounting policy for each category is as follows:

Fair value through profit or loss - This category comprises derivatives, or assets acquired or incurred principally for the purpose of selling or repurchasing it in the near term. They are carried in the statement of financial position at fair value with changes in fair value recognized in the statement of comprehensive loss.

Loans and receivables - These assets are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are carried at cost less any provision for impairment. Individually significant receivables are considered for impairment when they are past due or when other objective evidence is received that a specific counterparty will default.

Held-to-maturity investments - These assets are non-derivative financial assets with fixed or determinable payments and fixed maturities that the Company's management has the positive intention and ability to hold to maturity. These assets are measured at amortized cost using the effective interest method. If there is objective evidence that the investment is impaired, determined by reference to external credit ratings and other relevant indicators, the financial asset is measured at the present value of estimated future cash flows. Any changes to the carrying amount of the investment, including impairment losses, are recognized in the statement of comprehensive loss.

Available-for-sale - Non-derivative financial assets not included in the above categories are classified as available-for-sale. They are carried at fair value with changes in fair value recognized directly in equity. Where a decline in the fair value of an available-for-sale financial asset constitutes objective evidence of impairment, the amount of the loss is removed from equity and recognized in the statement of comprehensive loss.

All financial assets except for those at fair value through profit or loss are subject to review for impairment at least at each reporting date. Financial assets are impaired when there is any objective evidence that a financial asset or a group of financial assets is impaired. Different criteria to determine impairment are applied for each category of financial assets, which are described above.

Financial liabilities

The Company classifies its financial liabilities into one of two categories, depending on the purpose for which the asset was acquired. The Company's accounting policy for each category is as follows:

Fair value through profit or loss - This category comprises derivatives, or liabilities acquired or incurred principally for the purpose of selling or repurchasing it in the near term. They are carried in the statement of financial position at fair value with changes in fair value recognized in the statement of comprehensive loss.

Other financial liabilities: This category includes promissory notes, amounts due to related parties and accounts payables and accrued liabilities, all of which are recognized at amortized cost.

(Expressed in US Dollars)
(Unaudited)

Cash and cash equivalents

Cash and cash equivalents in the statement of financial position comprise cash at banks and on hand, and short term deposits with an original maturity of twelve months or less, which are readily convertible into a known amount of cash. Provided that the instruments are readily convertible at the statement of financial position date into cash without penalty at their carrying value, the Company considers its highly liquid term investments, typically with Canadian Chartered banks, to be cash equivalents.

Impairment

At each financial position reporting date, the carrying amounts of the Company's assets are reviewed to determine whether there is any indication that those assets are impaired. If any such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment, if any. The recoverable amount is the higher of fair value less costs to sell and value in use. Fair value is determined as the amount that would be obtained from the sale of the asset in an arm's length transaction between knowledgeable and willing parties. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. If the recoverable amount of an asset is estimated to be less than its carrying amount, the carrying amount of the asset is reduced to its recoverable amount and the impairment loss is recognized in the profit or loss for the period. For the purpose of impairment testing, exploration and evaluation assets are allocated to cash-generating units to which the exploration activity relates. For an asset that does not generate largely independent cash inflows, the recoverable amount is determined for the cash generating unit to which the asset belongs.

Where an impairment loss subsequently reverses, the carrying amount of the asset (or cash-generating unit) is increased to the revised estimate of its recoverable amount, but so that the increased carrying amount does not exceed the carrying amount that would have been determined had no impairment loss been recognized for the asset (or cash-generating unit) in prior years. A reversal of an impairment loss is recognized immediately in profit or loss.

Environmental provision

An obligation to incur restoration, rehabilitation and environmental costs arises when environmental disturbance is caused by the exploration, development or ongoing production of a mineral property interest. Such costs arising for the decommissioning of plant and other site preparation work, discounted to their net present value, are provided for and capitalized at the start of each project to the carrying value of the asset, as soon as the obligation to incur such costs arises. Discount rates using a pre-tax rate that reflect the time value of money are used to calculate the net present value. These costs are charged against profit or loss over the economic life of the related asset, through amortization using either the unit-of-production or the straight line method. The related liability is adjusted for each period for the unwinding of the discount rate and for changes to the current market-based discount rate, amount or timing of the underlying cash flows needed to settle the obligation. Costs for restoration of subsequent site damage which is created on an ongoing basis during production are provided for at their net present values and charged against profits as extraction progresses.

The Company has \$420,000 of reclamation deposits held with the State of Wyoming should any other asset retirement obligation arise from its obligations to undertake site reclamation and remediation in connection with its operating activities in Wyoming.

When the Company enters into an option agreement on its mineral properties, as part of the option agreement, responsibility for any reclamation and remediation becomes the responsibility of the optionee.

(Unaudited)

Share capital

Common shares are classified as equity. Transaction costs directly attributable to the issue of common shares and share options are recognized as a deduction from equity, net of any tax effects.

Share-based payments transaction

The share option plan allows the Company's employees and consultants to acquire shares of the Company. The fair value of options granted is recognized as a share-based payment expense with a corresponding increase in equity. An individual is classified as an employee when the individual is an employee for legal or tax purposes (direct employee) or provides services similar to those performed by a direct employee.

The fair value is measured at grant date and each tranche is recognized on a graded-vesting basis over the period during which the options vest. The fair value of the options granted is measured using the Black-Scholes option pricing model taking into account the terms and conditions upon which the options were granted. At each financial position reporting date, the amount recognized as an expense is adjusted to reflect the actual number of share options that are expected to vest.

Loss per share

The Company presents the basic and diluted loss per share data for its common shares, calculated by dividing the loss attributable to common shareholders of the Company by the weighted average number of common shares outstanding during the period. Diluted loss per share is determined by adjusting the loss attributable to common shareholders and the weighted average number of common shares outstanding for the effects of all dilutive potential common shares.

Revenue recognition

Revenue is recognized to the extent that it is probable that the economic benefits will flow to the Company and the revenue can be reliably measured. Revenue is measured at the fair value of the consideration received, excluding discounts, rebates and other sales tax or duty. The following specific recognition criteria must also be met before revenue is recognized:

Interest income

Revenue is recognized as interest accrues (using the effective interest rate that is the rate that exactly discounts estimated future cash receipts through the expected life of the financial instrument to the net carrying amount of the financial asset).

Income taxes

Income tax on the profit or loss for the periods presented comprises current and deferred tax. Income tax is recognized in profit or loss except to the extent that it relates to items recognized directly in equity, in which case it is recognized in equity.

Current tax expense is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted at period end, adjusted for amendments to tax payable with regards to previous years.

Deferred tax is recorded using the statement of financial position liability method, providing for temporary differences, between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The following temporary differences are not provided for: goodwill not deductible for tax purposes; the initial recognition of assets or liabilities that affect neither accounting nor taxable loss; and differences relating to investments in subsidiaries to the extent that they will probably not reverse in the foreseeable future. The amount of deferred tax provided

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

is based on the expected manner of realization or settlement of the carrying amount of assets and liabilities, using tax rates enacted or substantively enacted at the statement of financial position date.

A deferred tax asset is recognized only to the extent that it is probable that future taxable profits will be available against which the asset can be utilized. To the extent that the Company does not consider it probable that a future tax asset will be recovered, it provides a valuation allowance against that excess.

Additional income taxes that arise from the distribution of dividends are recognized at the same time as the liability to pay the related dividend.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Company intends to settle its current tax assets and liabilities on a net basis.

Significant accounting judgments and estimates

The preparation of these condensed consolidated interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of expenses during the reporting period. Actual outcomes could differ from these estimates. The condensed consolidated interim financial statements include estimates which, by their nature, are uncertain. The impacts of such estimates are pervasive throughout the consolidated interim financial statements, and may require accounting adjustments based on future occurrences.

Revisions to accounting estimates are recognized in the period in which the estimate is revised and the revision affects both current and future periods.

Significant assumptions about the future and other sources of estimation uncertainty that management has made at the statement of financial position date, that could result in a material adjustment to the carrying amounts of assets and liabilities, in the event that actual results differ from assumptions made, relate to, but are not limited to, the following:

- the recoverability of amounts receivable and prepayments which are included in the condensed consolidated interim statement of financial position;
- the carrying value of the investment and the recoverability of the carrying value which are included in the condensed consolidated interim statement of financial position;
- the estimated useful lives of property, plant and equipment which are included in the condensed consolidated interim statement of financial position and the related depreciation included in the consolidated statement of comprehensive loss;
- the inputs used in accounting for share purchase option expense in the condensed consolidated interim statement of comprehensive loss;
- the provision for income taxes which is included in the condensed consolidated interim statements of comprehensive loss and composition of deferred income tax assets and liabilities included in the condensed consolidated interim statement of financial position at December 31, 2010;
- the inputs used in determining the net present value of the liabilities for asset retirement obligations included in the condensed consolidated interim statement of financial position; and
- the inputs used in determining the various commitments and contingencies accrued in the condensed consolidated interim statement of financial position.

New accounting standards and interpretations

Certain new accounting standards and interpretations have been published that are not mandatory for the December 31, 2010 reporting period. The following standards are assessed not to have any impact on the Company's financial statements:

- IAS 24, *Related Party Disclosure*: effective for accounting periods commencing on or after January 1, 2011; and
- IFRS 9, *Financial Instruments*: effective for accounting periods commencing on or after January 1, 2013.

Comparative figures

Certain of the prior period's figures have been reclassified to conform with the current period's financial statement presentation.

3. GEOGRAPHICAL SEGMENTED INFORMATION

The Company is engaged in one business activity, being the exploration and evaluation of mineral properties. The two key geographical segments are Canada and United States. The Company has no discontinued operations.

Summarized financial information for the geographic segments the Company operates in are as follows:

	Canada	United States	Total
<u>As at December 31, 2010</u>			
Assets	\$ 68,762,191	\$ 10,891,040	\$ 79,653,231
<u>As at June 30, 2010 (Note 17)</u>			
Assets	\$ 13,234,796	\$ 4,579,838	\$ 17,814,634
	Canada	United States	Total
<u>For the period ended December 31, 2010</u>			
Losses for the period	\$ 1,478,744	\$ 3,470	\$ 1,482,214
Capital expenditures	\$ -	\$ 4,523,154	\$ 4,523,154
<u>For the period ended December 31, 2009 (Note 17)</u>			
Losses for the period	\$ 1,038,680	\$ 270	\$ 1,039,150
Capital expenditures	\$ -	\$ 1,569,491	\$ 1,569,491

4. CAPITAL AND RESERVES

a. Authorized

At December 31, 2010, the authorized share capital comprised an unlimited number of common shares. The common shares do not have a par value. All issued shares are fully paid.

b. Details of issuances of common shares

- i) On July 24, 2009, the Company completed a non-brokered private placement for \$1,800,000 CDN. The offering consisted of 1,200,000 units at \$1.50 CDN per unit. Each unit consists of one common share and one-half of a non-transferable share-purchase warrant. A whole warrant is exercisable into a common share of the Company at \$2.10 CDN until January 24, 2011. The

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS

(Expressed in US Dollars)
(Unaudited)

amount of \$401,088 was assigned to the warrants. A total of \$17,605 was included in share issue costs.

- ii) On September 21, 2009, the Company completed a non-brokered private placement for \$3,000,000 CDN. The offering consisted of 1,000,000 units at \$3.00 CDN per unit. Each unit consists of one common share and one non-transferable share-purchase warrant. Each warrant is exercisable into a common share of the Company at \$4.25 CDN until March 21, 2011. The fair value of \$1,052,009 was assigned to the warrants. A total of \$27,513 was included in share issue costs.
- iii) On April 13, 2010, the Company closed the short-form prospectus offering of \$8,860,253 CDN. The financing consisted of 2,531,501 units at a price of \$3.50 CDN per unit. Each unit consists of one common share and one-half of one transferable share-purchase warrant. Each warrant is exercisable into one common share until April 13, 2012, at a price of \$4.75 CDN. The fair value of \$1,948,985 was assigned to the warrants.

The Company paid \$531,615 CDN cash commission and issued 151,890 agents' options exercisable into one agent's unit at a price of \$3.50 CDN per unit until April 13, 2012. Each agent's unit consists of one common share and one-half of one transferable share-purchase warrant with the same terms as private placement warrants. The fair value of \$310,988 was assigned to the agents' options based upon the Black-Scholes option pricing model. A total of \$794,594 was included in share issue costs.

- iv) On November 11, 2009, the Company issued 300,000 shares at a fair value of \$944,298 on acquisition of Eden Lake property and 20,000 shares as finders' fees at a fair value of \$62,953 on that acquisition. On January 12, 2010, the Company issued 200,000 shares at a fair value of \$725,187 on acquisition of Nuiklavik property.
- v) On December 22, 2010, the Company closed the short-form prospectus offering of \$57,546,000 CDN. The financing consisted of 6,394,000 common shares at a price of \$9.00 CDN per share.

The Company paid \$3,452,760 CDN (\$3,417,304) cash commission and issued 383,640 broker's warrants. Each broker's warrant exercisable into a common share of the Company at an exercise price of \$9.00 CDN per share until December 22, 2012. The fair value of \$2,339,715 was assigned to the brokers warrants based upon the Black-Scholes option pricing model. A total of \$511,761 was included in share issue costs.

c. Warrants

The continuity of warrants for the period ended December 31, 2010 is as follows:

Expiry date	Exercise price (CDN\$)	June 30, 2010	Issued	Exercised	Expired/cancelled	December 31, 2010
November 27, 2010	1.00	860,000	-	(860,000)	-	-
January 24, 2011	2.10	595,500	-	(540,500)	-	55,000
March 21, 2011	4.25	1,000,000	-	(441,500)	-	558,500
April 13, 2012	4.75	1,265,751	75,945	(504,638)	-	837,058
		3,721,251	75,945	(2,346,638)	-	1,450,558
Weighted average exercise price (CDN\$)		\$ 3.32	\$ 4.75	\$ 2.67	\$ -	\$ 4.46

During the period, a total of 2,346,638 warrants at a price ranging from \$1.00 CDN to \$4.75 CDN were exercised for proceeds of \$6,105,295. A fair value of \$1,743,422 was recognized on these exercised warrants.

The fair value of \$290,328 was assigned to the November 27, 2010 warrants based upon the average of the pro-rata method and the Black-Scholes option pricing model. The assumptions used were a risk-free interest rate of 1.27%, an expected life of 1.5 year, annualized volatility of 108%, and a dividend rate of 0%.

The amount of \$401,088 was assigned to the January 24, 2011 warrants based upon a relative weighting of the fair values of the common share and warrant components of each unit, derived using the Black-Scholes option pricing model. The assumptions used were a risk-free interest rate of 1.33%, an expected life of 1.5 year, annualized volatility of 132%, and a dividend rate of 0%.

The fair value of \$1,052,009 was assigned to the March 21, 2011 warrants based upon the average of the pro-rata method and the Black-Scholes option pricing model. The assumptions used were a risk-free interest rate of 1.28%, an expected life of 1.5 year, annualized volatility of 137%, and a dividend rate of 0%.

The fair value of \$1,948,985 was assigned to the April 13, 2012 warrants based upon the average of the pro-rata method and the Black-Scholes option pricing model. The assumptions used were a risk-free interest rate of 1.90%, an expected life of 2 years, annualized volatility of 125%, and a dividend rate of 0%.

d. Share purchase option compensation plan

The Company established a 20% fixed stock option plan whereby the board of directors may from time to time grant options up to 5,779,347 common shares to individual eligible directors, officers, employees or consultants. The maximum term of any option is five years. The exercise price of an option is not less than the closing price on the last trading day preceding the grant date, less allowable discounts in accordance with the policies of the Exchange. The Board retains the discretion to impose vesting periods on any options granted. All options granted to date vest as follows: 20% vest 4 months after date of grant, 20% vest 8 months after the date of grant, 20% vest 12 months after the date of grant, 20% vest 15 months after the date of grant, and the remaining 20% vest 18 months after the date of grant.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

The continuity of stock options for the period ended December 31, 2010 is as follows:

Expiry date	Exercise price (CDN\$)	June 30, 2010	Granted	Exercised	Expired/ cancelled	December 31, 2010
April 28, 2011	0.55	100,000	-	(50,000)	-	50,000
January 10, 2012	0.55	200,000	-	(100,000)	-	100,000
September 1, 2012	1.00	350,000	-	-	-	350,000
October 12, 2012	1.00	350,000	-	-	-	350,000
October 15, 2012	1.00	25,000	-	(25,000)	-	-
February 19, 2013	1.15	65,000	-	(65,000)	-	-
January 27, 2014	0.58	1,226,000	-	(388,000)	-	838,000
July 20, 2014	2.09	200,000	-	-	-	200,000
October 2, 2014	4.49	30,000	-	(18,000)	-	12,000
April 19, 2015	3.28	190,000	-	-	-	190,000
May 28, 2015	2.71	500,000	-	(11,000)	-	489,000
Options outstanding and exercisable		3,236,000	-	(657,000)	-	2,579,000
Weighted average exercise price (CDN\$)		\$ 1.30	\$ -	\$ 0.79	\$ -	\$ 1.43

During the period, a total of 657,000 options at prices ranging from \$0.55 CDN to \$4.49 CDN were exercised for proceeds of \$504,811. A fair value of \$363,325 was recognized on these exercised options.

The weighted average assumptions used to estimate the fair value of options for the period ended December 31, 2010 and 2009 were:

	2010	2009
Risk-free interest rate	1.17 – 2.52%	1.28 – 2.52%
Annualized volatility	112-137%	116-132%
Expected dividend yield	Nil	Nil
Expected option life in years	0.8 – 4.4 years	1.5 – 5 years

Option pricing models require the input of highly subjective assumptions including the expected price volatility. Changes in the subjective input assumptions can materially affect the fair value estimate, and therefore the existing models do not necessarily provide a reliable measure of the fair value of the Company's share purchase options.

e. Agents' options and warrants

Agents' options and warrants outstanding and exercisable (Notes 4b (iii) and (v)):

Expiry date	Exercise price (CDN\$)	June 30, 2010	Issued	Exercised	Expired/ cancelled	December 31, 2010
April 13, 2012	3.50	151,890	-	(151,890)	-	-
December 22, 2012	9.00	-	383,640	-	-	383,640
		151,890	383,640	(151,890)	-	383,640
Weighted average exercise price (CDN\$)		\$ 3.50	\$ 9.00	\$ 3.50	\$ -	\$ 9.00

In conjunction with the April 13, 2010's short-form prospectus offering, a total of 151,890 agents' options were issued. Each agent's option consists of one common share and one-half of one transferable share-purchase warrant, with each full share-purchase warrant exercisable into one common share until April 13, 2012, at a price of \$4.75 CDN. The fair value of \$310,988 was assigned to the agents' options based upon the Black-Scholes option pricing model. The assumptions used were a risk-free interest rate of 1.90%, an expected life of 2 years, annualized volatility of 125%, and a dividend rate of 0%.

During the period ended December 31, 2010, all agents' options were exercised for proceeds of \$511,520. A fair value of \$310,988 was recognized on these exercised options.

In conjunction with the December 22, 2010's short-form prospectus offering, a total of 383,740 broker's warrants were issued. Each broker's warrant is exercisable into one common share until December 22, 2010 at a price of \$9.00 CDN. The fair value of \$2,339,715 was assigned to these broker's warrants based upon the Black-Scholes option pricing model. The assumptions used were a risk-free interest rate of 1.70%, an expected life of 2 years, annualized volatility of 112%, and a dividend rate of 0%.

5. LOSS PER SHARE

Basic and diluted loss per share

The calculation of basic and diluted loss per share for the six month ended December 31, 2010 was based on the loss attributable to common shareholders of \$1,482,214 (2009 – \$1,039,150) and a weighted average number of common shares outstanding of 33,870,078 (2009 – 28,250,823).

Diluted loss per share did not include the effect of 2,579,000 share purchase options (2009 – 2,596,000) and 1,834,198 warrants (2009 – 2,575,000) as they are anti-dilutive.

6. EXPLORATION AND EVALUATION ASSETS

The amounts shown represent costs incurred to date, and do not necessarily represent present or future values as these are entirely dependent upon the economic recovery of future ore reserves. A summary of current property interests is as follows:

Bear Lodge Property, Wyoming, USA

The Company, through its wholly-owned subsidiary, Paso Rico (USA), Inc., holds a 100% interest in a group of unpatented mineral claims and one leased state section, together known as the Bear Lodge

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

Property which has two exploration projects: the rare-earth elements project known as the “Bear Lodge REE Project” and the gold project known as the “Sundance Gold Project”. The property is situated in the Bear Lodge Mountains of Crook County, in northeast Wyoming. These claims were, in part, acquired from Freeport-McMoRan Copper & Gold (“Freeport”) by way of a “Mineral Lease and Option for Deed”. Certain claims and a portion of a defined area of influence surrounding the claims were subject to a production royalty of 2% of Net Smelter Returns (“NSR”) royalty payable to Freeport. On June 30, 2009, the Company re-purchased the NSR for \$50,000.

Sundance Gold Project

On June 1, 2006, Paso Rico (USA), Inc. and Newmont North America Exploration Limited (“Newmont”), a subsidiary of Newmont Mining Corporation, signed an agreement to establish a gold-exploration venture on the Company’s Bear Lodge, Wyoming property (“Venture”). Under the agreement, Newmont had the right to earn a 65% participating interest in the Bear Lodge property, excluding any rights to the rare-earth elements and uranium, but including rights to gold and other metals, by spending \$5 million on property exploration.

On May 12, 2010, Newmont terminated its option and the Company maintains its 100% interest in the mineral potential of the entire property. In addition, 327 contiguous claims wholly-owned by Newmont outside the venture were transferred to the Company. In consideration for transferring its claims, Newmont was granted a right-of-first-refusal on all claims sold or disposed, excluding those containing rare-earth elements, and a 0.5% NSR royalty, for precious and base metals only, on the claims transferred to the Company by Newmont. This agreement honors an arrangement between Newmont and Bronco Creek Exploration Company (“Bronco Creek”) on Newmont’s formerly wholly owned claims; Bronco Creek will continue to receive minor payments and retain a 0.05% NSR royalty, with a cap, on these claims.

The total property comprises 489 unpatented mineral claims located on land administered by the U.S. Forest Service and a 640-acre Wyoming state lease for a total of approximately 16 square miles. Upon Newmont's withdrawal from the Venture, it transferred 327 of the claims to the Company in May 2010. There is a sliding scale royalty on certain state lease land due to the State of Wyoming if ore is mined from the state section.

Eden Lake Property, Manitoba, Canada

On October 30, 2009, the Company acquired 100% of the Eden Lake rare earth elements project located in the province of Manitoba, Canada for a payment of 300,000 common shares (Note 4b(iv)). The underlying owner, Strider Resources Limited, retains a 3% NSR with the Company having the right to buy 50% of the NSR at anytime for \$1.5 million CDN.

Finders’ fees of 20,000 common shares were issued to two parties for this acquisition. The common shares issued on the acquisition are subject to trading restrictions over an 18-month period.

On February 23, 2010, the Company granted Medallion Resources Ltd. (“Medallion”) an option to acquire a 65% interest in a joint venture to explore and develop the property. The terms of the agreement require Medallion to pay a total of \$1,450,000 CDN in cash (\$50,000 CDN received), issue an aggregate of 1,800,000 shares (200,000 shares were received), and complete \$2,250,000 CDN in property exploration work commitment expenditures over a five-year period. Medallion may buy 50% of the 3% NSR at anytime for \$1.5 million CDN. On October 7, 2010, the Company and Medallion agreed to postpone the \$50,000 cash payment to no later than the first anniversary of the agreement. In addition, six new concessions staked by Medallion were also added to the Eden Lake property.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS

(Expressed in US Dollars)
(Unaudited)

Medallion is the operator of the exploration program during the option period.

Nuiklavik property, Labrador, Canada

On January 6, 2010, the Company acquired from Altius Minerals Corp. ("Altius") a 100% interest in 790 mineral claims located in central Labrador, Canada for a payment of 200,000 shares (Note 4b(iv)).

Altius will retain a total gross overriding royalty of 2% on the property, of which the Company may purchase 50% at any time for \$2,500,000 CDN.

The Company deposited \$203,659 with Newfoundland Exchequer as a security deposit on the fourth year exploration expenditures requirements for the same amount to be completed in 2011.

8. RECLAMATION BONDING

On July 23, 2004, \$10,000 was transferred to the Wyoming Department of Environmental Quality for the bond required to reclaim the ground disturbed during its exploration programs at the Bear Lodge Property. The Company must complete certain reclamation work for these funds to be released, but may leave the bond in place for future exploration programs, even if such work is completed.

In August 2009, an additional \$100,000 bond was set up for the benefit of the Company in respect to future reclamation work at the Bear Lodge Property.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

In August 2010, the Company increased its reclamation bonding to \$420,000 by depositing with Wyoming regulatory authorities an additional \$310,000 in the name of Paso Rico (USA), Inc.

As of December 31, 2010, interest of \$2,283 was received on these bonds.

9. MARKETABLE SECURITIES

Marketable securities consist of equity securities over which the Company does not have control or significant influence. Marketable securities are designated as available for sale and valued at fair value. \$60,431 of unrealized gains due to period end revaluation to fair value was recorded as other comprehensive income. During the six months ended December 31, 2010, the Company determined that \$Nil of the unrealized gain recorded in available-for-sale financial assets represented other than temporary gain.

10. RELATED PARTY TRANSACTIONS

The aggregate value of transactions and outstanding balances relating to key management personnel and entities over which they have control or significant influence were as follows:

For the six months ended December 31, 2010

	Short-term employee benefit \$	Other long- term benefit	Termination benefits	Share-based payments \$(a)	Total \$

11. ENVIRONMENTAL PROVISIONS

An environmental provision of \$100,540 was recognised in the period ended December 31, 2010, in respect of the Company's current obligations to reclaim areas used for exploring the Bear Lodge Property.

12. COMMITMENTS AND CONTINGENCIES

Potential environmental contingency

The Company's mining and exploration activities are subject to various federal, provincial and state laws and regulations governing the protection of the environment. These laws and regulations are continually changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment, and believes its operations are in compliance with all applicable laws and regulations. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations. The ultimate amount of reclamation and other future site-restoration costs to be incurred is uncertain.

14. FINANCIAL INSTRUMENTS AND RELATED RISKS

The Company's operations consist of the acquisition, exploration and evaluation of mineral properties in United States and Canada. The Company examines the various financial risks to which it is exposed and assesses the impact and likelihood of occurrence. These risks may include credit risk, liquidity risk, currency risk, interest rate risk and other risks. Where material, these risks are reviewed and monitored by the Board of Directors.

a) Credit risk

Counterparty credit risk is the risk that the financial benefits of contracts with a specific counterparty will be lost if a counterparty defaults on its obligations under the contract. This includes any cash amounts owed to the Company by those counterparties, less any amounts owed to the counterparty by the Company where a legal right of set-off exists and also includes the fair values of contracts with individual counterparties which are recorded in the financial statements.

(i) Trade credit risk

The Company is in the exploration stage and has not yet commenced commercial production or sales. Therefore, the Company is not exposed to significant credit risk and overall the Company's credit risk has not changed significantly from the prior year.

(ii) Cash and cash equivalents

In order to manage credit and liquidity risk the Company invests only in highly rated investment grade instruments that have maturities of six months or less. Limits are also established based on the type of investment, the counterparty and the credit rating.

(iii) Derivative financial instruments

As at December 31, 2010, the Company has no derivative financial instruments. It may in the future enter into derivative financial instruments and in order to manage credit risk, it will only enter into derivative financial instruments with highly rated investment grade counterparties.

b) Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure.

Accounts payable and accrued liabilities are due within the current operating period.

c) Interest rate risk

The Company's interest revenue earned on cash and on short term investments is exposed to interest rate risk. The Company does not enter into derivative contracts to manage this risk, and the Company's exposure to interest rate is very low as the Company has limited short term investments.

The Company limits its exposure to interest rate risk as it invests only in short term investments at major Canadian financial institutions.

A one percent change in interest rates changes the results of operations by \$658,000.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

d) **Currency risk**

The Company's property interests in the United States subject it to foreign currency fluctuations which may adversely affect the Company's financial position, results of operations and cash flows. The Company is affected by changes in exchange rates between the Canadian dollar and US dollar.

A one cent change in the US/CDN dollar currency rate would affect the Company's estimated one-year exploration expenditures by \$165,200.

The Company does not invest in derivatives to mitigate these risks.

15. MANAGEMENT OF CAPITAL RISK

The Company manages its cash and cash equivalents, common shares, stock options and warrants as capital. The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to pursue the exploration of its mineral properties and to maintain a flexible capital structure which optimizes the costs of capital at an acceptable risk.

The Company manages the capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new shares and, acquire or dispose of assets.

In order to maximize ongoing exploration efforts, the Company does not pay out dividends. The Company's investment policy is to invest its short-term excess cash in highly liquid short-term interest-bearing investments with short term maturities, selected with regards to the expected timing of expenditures from continuing operations.

The Company expects its current capital resources will be sufficient to carry its exploration plans and operations through 2012.

IFRS 7 establishes a fair value hierarchy that prioritizes the input to valuation techniques used to measure fair value as follows:

Level 1 – quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2 – inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e., as prices) or indirectly (i.e., derived from prices); and

Level 3 – inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The following table sets forth the Company's financial assets measured at fair value by level within the fair value hierarchy.

		Level 1		Level 2		Level 3		Total
Assets:								
Cash and cash equivalents	\$	67,008,719	\$	-	\$	-	\$	67,008,719
Marketable securities		108,011		-		-		108,011
	\$	67,116,730	\$	-	\$	-	\$	67,116,730

16. SUBSEQUENT EVENTS

Subsequent to December 31, 2010,

- 357,000 stock options were exercised for total proceeds of \$289,320 CDN, 1,054,021 warrants were exercised for total proceeds of \$4,593,100 CDN, and 67,137 broker's warrants were exercised for total proceeds of \$604,233 CDN.
- 403,000 stock options were granted to a director and officer, and consultants of the Company at a price of \$15.16 CDN for a period of 5 years.

17. TRANSITION TO INTERNATIONAL FINANCIAL REPORTING STANDARDS

As stated in Note 2, these are the Company's first condensed consolidated interim financial statements for the six-month period ended December 31, 2010 covered by the first annual condensed consolidated interim financial statements prepared in accordance with IFRS.

The accounting policies in Note 2 have been applied as follows:

- in preparing the condensed consolidated interim financial statements for the period ended December 31, 2010;
- the comparative information for the period ended December 31, 2009;
- the statement of financial position as at June 30, 2010; and
- the preparation of an opening IFRS statement of financial position on the Transition Date, July 1, 2009.

In preparing the opening IFRS statement of financial position, comparative information for the period ended December 31, 2009 and the financial statements for the year ended June 30, 2010, the Company has adjusted amounts reported previously in financial statements prepared in accordance with Canadian GAAP ("Canadian GAAP").

An explanation of how the transition from Canadian GAAP to IFRS has affected the Company's financial position, financial performance and cash flows is set out in the following tables.

The guidance for the first time adoption of IFRS are set out in IFRS 1. IFRS 1 provides for certain mandatory exceptions and optional exemptions for first time adopters of IFRS. In preparing these financial statements, the Company has elected to apply the following transitional arrangements:

- (a) **IFRS 1 - Business combinations**
IFRS1 indicates that a first-time adopter may elect not to apply IFRS 3 *Business Combinations* retrospectively to business combinations that occurred before the date of transition to IFRS. The Company takes advantage of this election and applies IFRS 3 to business combinations that occurred on or after July 1, 2009. There is no adjustment required to the July 1, 2009's statement of financial position on the Transition Date.
- (b) **IFRS 2 – Share-based payment transactions**
IFRS 2 *Share-based Payment* has not been applied to equity instruments that were granted on or before November 7, 2002, nor has it been applied to equity instruments granted after November 7, 2002 that vested before July 1, 2009.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

IFRS 2, similar to Canadian GAAP, requires the Company to measure share-based compensation related to share purchase options granted to employees at the fair value of the options on the date of grant and to recognize such expense over the vesting period of the options. However, under IFRS 2, the recognition of such expense must be done with a “graded vesting” methodology as opposed to the straight-line vesting method allowed under Canadian GAAP. In addition, under IFRS, forfeitures estimates are recognized in the period they are estimated, and are revised for actual forfeitures in subsequent periods; while under Canadian GAAP, forfeitures of awards are recognized as they occur.

Under IFRS graded vesting methodology, during the three months ended December 31, 2009, the Company would have recorded \$116,115 as share-based payment versus \$81,684 stock-based compensation under Canadian GAAP. As a result, \$34,431 would be adjusted in the share-based payment expense in the statement of operations and the same amount would be adjusted in the equity settled employee benefit reserve in the statement of equity.

Under IFRS graded vesting methodology, during the six months ended December 31, 2009, the Company would have recorded \$429,681 as share-based payment versus \$194,354 stock-based compensation under Canadian GAAP. As a result, \$235,327 would be adjusted in the share-based payment expense in the statement of operations and the same amount would be adjusted in the equity settled employee benefit reserve in the statement of equity.

During the year ended June 30, 2010, the Company would have recorded \$1,076,452 as share-based payment versus \$524,497 stock-based compensation under Canadian GAAP. As a result, \$551,955 would be adjusted in the share-based payment expense in the statement of operations and the same amount would be adjusted in the equity settled employee benefit reserve in the statement of equity.

- (c) **IAS 27 – Consolidated and Separate Financial Statements**
In accordance with IFRS 1, if a company elects to apply IFRS 3 *Business Combinations* retrospectively, IAS 27 *Consolidated and Separate Financial Statements* must also be applied retrospectively. As the Company elected to apply IFRS 3 prospectively, the Company has also elected to apply IAS 27 prospectively.
- (d) **IAS 23 – Borrowing Costs**
The Company does not have any borrowing costs and thus, IAS 23 *Borrowing costs* has not been applied to borrowing costs relating to qualifying assets for which the commencement date for capitalization is on or after July 1, 2009.
- (e) **IAS 16 - Property, plant and equipment**
IAS 16 *Property, plant and equipment* allows for property, plant and equipment to continue carried at cost less depreciation, same as under Canadian GAAP.
- (f) **Reclassification within Equity Section**
IFRS requires an entity to present for each component of equity, a reconciliation between the carrying amount at the beginning and end of the period, separately disclosing each change. The Company examined its “contributed surplus” account and concluded that as at the Transition Date, the entire amount of \$876,046 relates to “Equity settled employee benefit reserve”. As a result, the Company believes that a reclassification would be necessary in the equity section between “Contributed surplus” and the “Equity settled employee benefit reserve” account.

RARE ELEMENT RESOURCES LTD.
NOTES TO CONDENSED CONSOLIDATED INTERIM FINANCIAL STATEMENTS
Six months ended December 31, 2010
(Expressed in US Dollars)
(Unaudited)

For comparatives, as at December 31, 2009, the entire \$866,603 “contributed surplus” account was reclassified into “Equity settled employee benefit reserve”. Furthermore, as at June 30, 2010, \$1,477,734 “contributed surplus” account was broken down into \$1,166,746 “Equity settled employee benefit reserve” and \$310,988 “Reserves for agents’ options”.

(g) Cumulative Translation differences

IFRS requires that the functional currency of each entity of the Company be determined separately and record the foreign exchange resulting from the consolidation in equity rather than in the statement of operations. IFRS 1 provides an exemption and allows for such adjustments to be made as of the Transition Date, resulting in no change to the July 1, 2009 financial statements on the Transition Date.

For the three months ended December 31, 2009, the foreign exchange resulting from the consolidation amounted to a gain of \$193,203 resulting in increasing the current period’s loss in the statement of operations and recording an “Exchange reserve” in the Statement of Equity.

For the six months ended December 31, 2009, the foreign exchange resulting from the consolidation amounted to a gain of \$312,022 resulting in increasing the current period’s loss in the statement of operations and recording an “Exchange reserve” in the Statement of Equity.

For the year ended June 30, 2010, the foreign exchange resulting from the consolidation amounted to a loss of \$27,546, resulting in decreasing the current year’s loss in the statement of operations and recording an “Exchange reserve” in the Statement of Equity.

Form 52-109F2
Certification of interim filings - full certificate

I, **Donald E. Ranta, Chief Executive Officer, Rare Element Resources Ltd.**, certify the following:

1. **Review:** I have reviewed the interim financial statements and interim MD&A (together, the “interim filings”) of **Rare Element Resources Ltd.** (the “issuer”) for the interim period ended **December 31, 2010**.
2. **No misrepresentations:** Based on my knowledge, having exercised reasonable diligence, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings.
3. **Fair presentation:** Based on my knowledge, having exercised reasonable diligence, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date of and for the periods presented in the interim filings.
4. **Responsibility:** The issuer’s other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (DC&P) and internal control over financial reporting (ICFR), as those terms are defined in National Instrument 52-109 *Certification of Disclosure in Issuers’ Annual and Interim Filings*, for the issuer.
5. **Design:** Subject to the limitations, if any, described in paragraphs 5.2 and 5.3, the issuer’s other certifying officer(s) and I have, as at the end of the period covered by the interim filings
 - (a) designed DC&P, or caused it to be designed under our supervision, to provide reasonable assurance that
 - (i) material information relating to the issuer is made known to us by others, particularly during the period in which the interim filings are being prepared; and
 - (ii) information required to be disclosed by the issuer in its annual filings, interim filings or other reports filed or submitted by it under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation; and
 - (b) designed ICFR, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer’s GAAP.
- 5.1 **Control framework:** The control framework the issuer’s other certifying officer(s) and I used to design the issuer’s ICFR is the integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).
- 5.2 **ICFR – material weakness relating to design:** N/A.
- 5.3 **Limitation on scope of design:** N/A.
6. **Reporting changes in ICFR:** The issuer has disclosed in its interim MD&A any change in the issuer’s ICFR that occurred during the period beginning on October 1, 2010 and ended on December 31, 2010 that has materially affected, or is reasonably likely to materially affect, the issuer’s ICFR.

Date: **February 11, 2011**

RARE ELEMENT RESOURCES LTD
MANAGEMENT'S DISCUSSION AND ANALYSIS
December 31, 2010

INTRODUCTION

This is Management's Discussion and Analysis ("MD&A") for Rare Element Resources Ltd. ("Rare Element Resources" or the "Company") and has been prepared based on information known to management as of February 11, 2011. This MD&A is intended to help the reader understand the condensed consolidated unaudited financial statements of Rare Element Resources.

In September 2010, the applicable provincial securities commissions granted the Company exemptive relief to adopt International Financial Reporting Standards ("IFRS") with an adoption date of July 1, 2010 and a transition date of July 1, 2009. This MD&A should be read in conjunction with the condensed consolidated interim financial statements for the six months ended December 31, 2010 and supporting notes. These condensed consolidated interim financial statements have been prepared using accounting policies consistent with IFRS and in accordance with International Accounting Standard 34 ("IAS 34") – Interim Financial Reporting. A reconciliation of the previously disclosed comparative periods' financial statements prepared in accordance with Canadian generally accepted accounting principles ("Cdn GAAP") to IFRS is set out in Note 17 to these condensed financial statements.

Management is responsible for the preparation and integrity of the consolidated financial statements, including the maintenance of appropriate information systems, procedures and internal controls. Management also ensures that information used internally or disclosed externally, including the consolidated financial statements and MD&A, is complete and reliable.

The Company's board of directors follows recommended corporate-governance guidelines for public companies to ensure transparency and accountability to shareholders. The board's audit committee meets with management regularly to review the consolidated financial statements, including the MD&A, and to discuss other financial, operating and internal-control matters.

All currency amounts are expressed in US dollars unless otherwise noted.

FORWARD LOOKING STATEMENTS

This document may contain "forward-looking information" within the meaning of Canadian securities legislation and "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 (collectively, "forward-looking statements"). These forward-looking statements are made as of the date of this document and the Company does not intend, and does not assume any obligation, to update these forward-looking statements.

Forward-looking statements relate to future events or future performance and reflect Company management's expectations or beliefs regarding future events and include, but are not limited to, statements with respect to the estimation of mineral reserves and mineral resources, the realization of

mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, success of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as “plans”, “expects” or “does not expect”, “is expected”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates” or “does not anticipate”, or “believes”, or variations of such words and phrases or statements that certain actions, events or results “may”, “could”, “would”, “might” or “will be taken”, “occur” or “be achieved” or the negative of these terms or comparable terminology. By their very nature forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors include, among others, risks related to actual results of current exploration activities; changes in project parameters as plans continue to be refined; future prices of mineral resources; possible variations in ore reserves, grade or recovery rates; accidents, labour disputes and other risks of the mining industry; delays in obtaining governmental approvals or financing or in the completion of development or construction activities. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

The following forward looking statements have been made in this MD&A:

- The progress, potential and uncertainties of the Company's 2010 rare-earth drill program, metallurgical testing and 2010 gold exploration drilling program at the Bear Lodge Property;
- The potential and expectations set out in the NI 43-101 Mineral Resource Report and the PEA on the Bear Lodge Property;
- The success of getting the necessary permits for the drill programs;
- Expectations regarding the ability to raise capital and to continue its exploration and development plans on its properties;
- Plans to complete an updated mineral resource estimate and the Preliminary Prefeasibility level analysis; and
- Plans outlined in the “Outlook” section.

ADDITIONAL INFORMATION

Financial statements, MD&A's and additional information relevant to the Company and the Company's activities can be found on SEDAR at www.SEDAR.com and/or on the Company's website at www.rareelementresources.com.

HIGHLIGHTS

The management team at Rare Element Resources is encouraged by the recent results of Rare Element Resources' exploration efforts and the following are the highlights of those results from 2010 and to the date of this MD&A:

- A substantial increase (approximately 50%) in the rare-earth-element ("REE") mineral resource estimate (tonnage) which was completed in compliance with National Instrument 43-101 in May 2010, after completion of a drilling program in the second half of 2009. (See *Section 3(a) under "Mineral Resources"*.)
- Completion of the 2010 drilling program on the Bear Lodge REE project from June 2010 to November 2010, which included 61 drill holes and an additional 40 large diameter core holes to collect bulk samples for pilot-plant testing, assays from which included the highest grades of REE found to date.
- Advancing a preliminary REE recovery process in July 2010, with 80% estimated recoveries of rare-earth elements from the Bear Lodge deposit to produce a 42-45% rare-earth-oxide (REO) concentrates. (See *Section 3(a) under "Metallurgy"*.)
- The completion of a Preliminary Economic Assessment, in compliance with the National Instrument 43-101, which shows positive economics using 3-year trailing average prices for rare-earths concentrates. (See *Section 3(a) under "Preliminary Economic Assessment"*.)
- Collection of an 8.8 ton sample of REE mineralized material to be used in a pilot plant test in 2011.
- Completion of listing the Company's common shares for trading on the NYSE Amex Stock Exchange headquartered in New York, NY.
- Completion of two significant financings in April, 2010 and December, 2010, to raise aggregate gross proceeds of approximately C\$65 million. As of the date of this MD&A, the Company has 43,170,423 common shares outstanding and approximately \$69 million in cash on hand and no debt.
- Completion of a 34-hole drilling program in November 2010 on the Sundance gold project focusing on three main gold targets which contained the highest gold grades found to date.

OUTLOOK

Rare Element Resources has sufficient cash on hand to conduct its next three years of exploration and development plans. Rare Element Resources' plans to continue to advance the Bear Lodge rare-earth-element project and the Sundance gold project in Wyoming, USA, during 2011 include the following:

- Completion of the Company's first gold mineral resource estimate based primarily on the results of the gold exploration programs conducted from 2006 to 2010, by March, 2011.
- Assaying the final set of 14 REE drill holes and announcing those results.
- Incorporation of the 2010 REE drilling program results into an updated mineral resource estimate in the second quarter of 2011.
- Selection of a pilot plant facility to complete the 8.8 ton bulk sample processing tests for the REE samples previously collected.
- Further metallurgical testwork, including new sampling, for confirmation and optimization of the REE recovery process developed to date.
- Addition of certain key personnel to transition the team towards the project development stage.
- In June 2011, a drilling program is planned to commence to follow up on the additional target areas for REE at Bear Lodge, including expansion of Bull Hill NW, Bull Hill SW, and Whitetail Ridge mineral resource areas, and to focus on mineral resource expansion and further upgrading of the mineral resource to measured and indicated categories.
- Completion of a pre-feasibility study by the end of 2011 to further define potential mining plans and to assess the economics of the REE project, and which will include the potential economics of establishing a REE extraction and separation plant near the project site.
- Beginning in June 2011, the Company plans to begin another gold-targeted drilling program to expand existing resources, to search for higher grade mineralization, and to discover new deposits.
- Continuing with environmental reviews and the next stages of exploration and development permitting, including certain base-line studies.

1. Background

The Company was incorporated in the province of British Columbia on June 3, 1999 and acquired Paso Rico Resources Ltd. ("Paso Rico") in 2003. Paso Rico owns the Bear Lodge Property in Wyoming, USA, through its wholly owned subsidiary, Paso Rico (USA), Inc. The Bear Lodge Property has two exploration projects: the rare-earth-elements ("REE") project known as the "Bear Lodge REE Project" and the gold project known as the "Sundance Gold Project".

2. Overview

2(a) Company Mission and Focus

Rare Element Resources is focused on exploring and developing economic mineral projects which contain or have the potential to contain rare-earth elements with or without gold. The Company plans to explore advanced-staged exploration projects itself, and to acquire and option out earlier stage exploration projects, while keeping a retained interest.

The main focus of the Company is advancing the Bear Lodge REE project located in Wyoming, USA.

2(b) Qualified Person

Dr. Donald E. Ranta, PhD, PGeo, who is the Company's President and CEO, is the Qualified Person as defined under National Instrument 43-101 responsible for the technical disclosure in this document. Dr. Ranta has reviewed and approved the contents of this MD&A.

2(c) Description of Metal Markets

REE are used in hybrid-electric-vehicles (HEV), many of which contain REE-bearing nickel-metal-hydride (Ni-MH) batteries and REE "super" magnets within electrical motors and generators; REE are also used in computers, cellular telephones, TV screens, wind turbines, fuel cells, magnetic refrigeration technologies, compact fluorescent lights, petroleum-refining catalysts and numerous other modern specialty technologies.

The markets for REE are becoming greater in significance over the years as more of these new technologies are developed and these markets are dominated by production from China. China produces over 95% of the world's rare-earth elements and has recently put additional export restrictions and taxes on REE.

The prices of REE are quoted in different forms on www.metal-pages.com. Generally speaking, rare earths are sold as individual oxides after separation and are often sold in small sub-groups of similar elements. Prior to separation of the individual elements as metals or as oxides, there are quoted prices for rare-earth concentrates that contain approximately 42% to 45% rare-earth oxides.

According to Metal Pages, the prices of rare earths have generally increased approximately 500% in 2010 after a slight recovery in 2009 from depressed prices in 2008 due to worldwide economic turmoil. For example, according to Metal Pages, the prices of rare earth concentrates have increased from \$4,500 per ton in July 2010 to approximately \$38,000 per ton in December 2010.

Since REE are used for many new technologies, it is estimated that their demand for REE will increase at a rate of nearly 10% per year for the next 5 years and possibly longer [IMCOA, Roskill and Rare Earths Industry Stakeholders, 2011, Dudley J. Kingsnorth].

In the summer of 2010, China further reduced its exports of rare-earth elements by 40% on an annualized basis. This reduction is what prompted the drastic increase in prices in the third and fourth quarters of 2010.

2(d) Use of the terms “Mineral Resources” and “Mineral Reserves”

Any reference in this MD&A to Mineral Resources does not mean Mineral Reserves.

Under NI 43-101, a Mineral Reserve is the economically mineable part of a Measured or Indicated Mineral Resource demonstrated by at least a Preliminary Feasibility Study. This Study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified. A Mineral Reserve includes diluting materials and allowances for losses that may occur when the material is mined.

Mineral Resources are sub-divided, in order of increasing geologic confidence, into Inferred, Indicated and Measured categories. An Inferred Mineral Resource has a lower level of confidence than that applied to an Indicated Mineral Resource. An Indicated Mineral Resource has a higher level of confidence than an Inferred Mineral Resource but has a lower level of confidence than a Measured Mineral Resource.

The terms “Mineral Reserve,” “Proven Mineral Reserve” and “Probable Mineral Reserve” are Canadian mining terms as defined in accordance with NI 43-101 and the CIM Standards. These definitions differ from the definitions in SEC Industry Guide 7 under the U.S. Securities Act. Under SEC Industry Guide 7, a reserve is defined as part of a mineral deposit which could be economically and legally extracted or produced at the time the reserve determination is made. Under SEC Industry Guide 7 standards, a “final” or “bankable” feasibility study is required to report reserves, the three-year historical average price is used in any reserve or cash flow analysis to designate reserves and the primary environmental analysis or report must be filed with the appropriate governmental authority.

In addition, the terms “Mineral Resource,” “Measured Mineral Resource,” “Indicated Mineral Resource” and “Inferred Mineral Resource” are defined in and required to be disclosed by NI 43-101; however, these terms are not defined terms under SEC Industry Guide 7 and are normally not permitted to be used in reports and registration statements filed with the SEC. Investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be converted into reserves. “Indicated Mineral Resource” and “Inferred Mineral Resource” have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all, or any part, of an Indicate Mineral Resource or Inferred Mineral Resource will ever be upgraded to a higher category. Under Canadian rules, estimates of Inferred Mineral Resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. Investors are cautioned not to assume that all or any part of an Inferred Mineral Resource exists or is economically or legally mineable. Disclosure of “contained ounces” in a resource is permitted disclosure under Canadian regulations; however, the SEC normally only permits issuers to report mineralization that does not constitute “reserves” by SEC standards as in place tonnage and grade without reference to unit measures.

Accordingly, information contained in this MD&A filed herewith or incorporated by reference herein contain descriptions of our mineral deposits that may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under United States federal securities laws and the rules and regulations promulgated thereunder.

CAUTIONARY NOTE TO U.S. INVESTORS REGARDING MINERAL RESOURCE AND MINERAL RESERVE ESTIMATES

Cautionary Note – The United States Securities and Exchange Commission (“SEC”) permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. Rare Element Resources uses certain

terms such as “measured”, “indicated”, “inferred”, and “mineral resources,” which the SEC guidelines strictly prohibit U.S. registered companies from including in their filings with the SEC.

3. Mineral Properties

The following is a brief description of the Mineral Properties owned by the Company. Additional information can be obtained from the Rare Element Resources website (www.rareelementresources.com).

3(a) Bear Lodge Property (Wyoming, USA) – REE Project

Location and ownership

Paso Rico holds a 100% mineral rights interest in a group of unpatented mineral claims, the Bear Lodge Property which consists of the Bear Lodge REE Project and the Sundance Gold Project. The property is situated in the Bear Lodge Mountains of Crook County, northeastern Wyoming. These claims were, in part, acquired from Freeport-McMoRan Copper & Gold (“Freeport”) by way of a “Mineral Lease and Option for Deed”. Some of the claims and a portion of a defined area of influence surrounding the claims were previously subject to a production royalty of 2% of Net Smelter Returns (“NSR”) payable to Freeport. Paso Rico owns a portion of the claim group outright and those claims were not subject to the NSR. On March 31, 2009, the Company re-purchased the NSR for \$50,000.

The total property comprises 489 unpatented mineral claims located on land administered by the U.S. Forest Service and a 640-acre Wyoming state lease for a total of approximately 16 square miles. Upon Newmont's withdrawal from the Sundance Gold Project, it transferred 327 of the claims to the Company in May 2010. There is a sliding scale royalty on certain state lease land due to the State of Wyoming if ore is mined from the state section. All claims are located on federal lands and are subject to annual maintenance fees payable to the United States Bureau of Land Management.

The Bear Lodge REE Project contains predominantly the “light” REE (lanthanum, cerium, praseodymium, neodymium, and samarium) and small but significant quantities of the “heavy” REE (europium, dysprosium and terbium).

Mineral Resources

The Company's comprehensive NI 43-101-compliant Technical Report with an initial resource estimate of REE plus yttrium was dated April 14, 2009. The report incorporated descriptions of all the exploration work and metallurgical testing completed by the Company since the initial exploration NI 43-101-compliant report was issued in 2002. The report also included recommendations for additional exploration work to expand the REE mineral resource and the metallurgical testing program. The recommended work was completed.

On May 26, 2010, the Company reported an updated mineral resource estimate of REE plus yttrium contained in two deposits located in the Bull Hill area of the Bear Lodge project.

The updated resource estimate increased the total pounds of rare-earth oxides ("REO") contained in the Bull Hill deposits by more than 50% from 800 million pounds to 1,210 million pounds at a 1.5% REO cutoff grade (Table 2). The resource was estimated by an independent consultant—Ore Reserves Engineering (ORE).

The updated resource estimate was derived from a REE database that includes thirty-two core drill holes completed by the Company since 2004 for a total of 28,396.5 feet, plus sixteen drill holes, completed by other companies prior to 2004, for which REE data are available. Approximately 36% of the resource is within 100 feet of a drill hole and 75% of the resource is within 200 feet of a drill hole. For comparison, the initial NI 43-101-compliant inferred mineral resource of 9.8 million tons averaging 4.07% rare-earth oxides (REO) was estimated by ORE and reported in a Technical Report dated April 14, 2009. The updated resource estimate focused on the dike sets in both the Bull Hill Southwest and the Bull Hill Northwest target areas (Figure 1). In addition, there was significant potential for expansion of both deposits and for definition of resources in other areas.

The results of the total mineral resources estimate by ORE for both deposits are summarized for the different oxidation zones and at a range of cutoff grades for each of the oxide, transitional/mixed, and sulfide/unoxidized zones, as follows:

Table 1 Total Inferred Tons and Grade of the Various Oxidation Zones at a Range of Cut-Off Grades (% REO)

Cutoff Grade ^{1,3}	Oxide		Transitional		Sulfide		Total	
	Tons	Grade ¹	Tons	Grade ¹	Tons	Grade ¹	Tons	Grade ¹
1.0	13,700,000	2.63	4,300,000	2.52	9,600,000	2.70	27,600,000	2.64
1.5⁽³⁾	8,000,000	3.62	2,600,000	3.39	6,900,000	3.29	17,500,000	3.46
2.0	5,600,000	4.45	1,700,000	4.23	4,600,000	4.05	11,900,000	4.26
2.5	4,400,000	5.06	1,300,000	4.93	3,900,000	4.37	9,600,000	4.76
3.0	3,300,000	5.84	930,000	5.71	3,000,000	4.88	7,200,000	5.42
3.5	2,700,000	6.42	800,000	6.13	2,200,000	5.53	5,600,000	6.04
4.0	2,300,000	6.90	690,000	6.50	1,470,000	6.33	4,400,000	6.65
4.5	1,900,000	7.52	570,000	6.96	1,200,000	6.79	3,600,000	7.19
5.0	1,600,000	7.88	460,000	7.48	1,000,000	7.24	3,100,000	7.61

Table 2 Total Inferred Tons and Grade (% REO) with REO Content at 1.5% Cutoff Grade

Cutoff Grade ^{1,3}	Total		REO Content
	Tons	Grade ¹	Million lbs
1.0	27,600,000	2.64	1,454
1.5⁽³⁾	17,500,000	3.46	1,210
2.0	11,900,000	4.26	1,012
2.5	9,600,000	4.76	913
3.0	7,200,000	5.42	783
3.5	5,600,000	6.04	680
4.0	4,400,000	6.65	590
4.5	3,600,000	7.19	523
5.0	3,100,000	7.61	472

Table 3 Detailed REO percentages by Zone at 1.5% Cutoff Grade

Parameters & % REO		Total All Zones			
		Oxide	Mixed	Sulfide	Total
Cutoff (%REO)		1.5	1.5	1.5	1.5
Million Tons Resource		8.0	2.6	6.9	17.5
Tonnage Factor (ft ³ /ton)		13.7	13.0	11.4	12.7
%REO		3.62	3.39	3.29	3.46
Million lbs REO		582	174	454	1,210
%Cerium Oxide	Ce ₂ O ₃	1.66	1.62	1.61	1.63
%Lanthanum Oxide	La ₂ O ₃	1.06	1.08	1.11	1.08
%Neodymium Oxide	Nd ₂ O ₃	0.52	0.36	0.29	0.41
%Praseodymium Oxide	Pr ₂ O ₃	0.16	0.14	0.12	0.14

%Terbium Oxide	Tb ₂ O ₃	0.0075	0.0052	0.0043	0.0059
%Erbium Oxide	Er ₂ O ₃	0.0020	0.0018	0.0017	0.0019
%Ytterbium Oxide	Yb ₂ O ₃	0.0012	0.0011	0.0010	0.0011
%Lutetium Oxide	Lu ₂ O ₃	0.00016	0.00014	0.00013	0.00014
%Holmium Oxide	Ho ₂ O ₃	0.0010	0.0008	0.0008	0.0009
%Thulium Oxide	Tm ₂ O ₃	0.00015	0.00013	0.00012	0.00014

1. REO (rare-earth oxides) include Ce₂O₃, La₂O₃, Nd₂O₃, Pr₂O₃, Sm₂O₃, Gd₂O₃, Y₂O₃, Eu₂O₃, Dy₂O₃, and Tb₂O₃, listed in relative order of decreasing abundance in the deposits, plus minor quantities of other REO (Table 3).
2. The resource estimate is classified as Inferred Mineral Resources as defined by CIM and referenced in NI 43-101.
3. ORE considers a range of 1.0 to 2.5 per cent REO cut-off grade to be reasonable in preliminary estimation of potentially economic resources. A cutoff grade of 1.5% REO has been selected as the base case and it is highlighted; a cutoff grade of 4.0% REO is also highlighted to show the high-grade tons above the cutoff.

4. *A detailed program of core sampling and bulk density measurement is being instituted for the 2010 drilling, especially for oxide mineralization which is more difficult to determine.*

Resources were estimated using nearest-neighbor assignment. Drill holes were composited to nominal 10-foot intervals for estimation, and grades were not capped. Grades were assigned using a rectangular projection of 300 X 300 X 10 feet, where the longer distance is parallel to the carbonatite/ FMR dike orientation. The resource model blocks are 10 X 10 X 10-foot cubes. Based on current REO prices, the cutoff grade of 1.5% REO was selected near the mid-point of a range of likely cost scenarios. As additional data are gathered, work will continue to be done on the resources estimates with further evaluation and refinement.

Geology & Mineralization

Rare-earth-element mineralization occurs in the north-central core of the Bear Lodge alkaline-igneous complex located in northeastern Wyoming. All of the significant REE occurrences in the Bear Lodge district are controlled by Rare Element's lode claims. Rare-earth mineralized bodies within the Bull Hill area of the district include well-defined, near-surface oxidized FMR (iron oxide-manganese oxide-REE) dikes and veins and deeper sulfide-bearing carbonatite (a high-carbonate igneous rock) dikes and veins, with a transitional or mixed zone (oxide + sulfide) in between. The Bull Hill Southwest target comprises an FMR-carbonatite dike swarm that strikes northwesterly and dips steeply. The dike swarm intrudes heterolithic intrusive breccia of the Bull Hill diatreme. FMR dikes and veins are interpreted to be intensely oxidized and leached equivalents of the carbonatite bodies that are strongly weathered from the surface to depths of about 300-500 feet and moderately weathered and oxidized for another 100 feet or so. Carbonatite dikes at depth are interpreted to transition toward the surface into FMR bodies and range in size from veinlets to large dikes exceeding 168 feet in width. The Bull Hill Southwest deposit consists of several dike sets in the swarm that spread across a zone several hundred feet in width. The dikes appear to pinch and swell in both strike and dip directions, and they can be traced in drill holes over 1,500 feet along strike and 1,000 feet down dip. Some of the dikes appear to be cut off to the west and at depth by a north-northwest-trending, east-dipping fault that is generally coincident with a valley floor. A number of widely dispersed gold occurrences are distributed peripherally to the Bull Hill REE mineralization.

The Bull Hill Northwest deposit has many of the same characteristics as Bull Hill Southwest, but oxidation is somewhat deeper. Current interpretation suggests that the dikes strike northerly and have nearly vertical dips. The dikes cut alkalic silicate rocks, predominantly trachytes and phonolites, and they appear to be part of an FMR/carbonatite dike system that is separate from the Bull Hill SW dike system. The deposit is open to the north and at depth. Additional drilling done during the 2010 program helped to define the orientation of the system and to expand the current resource.

The Company considers the May 2010 geologic modeling and resource estimation results encouraging for the following reasons:

- Significantly greater tonnage but with slightly lower REO grades compares favorably to the April 2009 NI 43-101-compliant resource estimate.
- The Bull Hill Southwest deposit shows good lateral and vertical continuity of grades within the dike sets.
- The REE mineralization that constitutes the Bull Hill SW resource is open for expansion at depth, to the northwest and southeast, and to the west of the West Bull Hill Fault. The Company believes that there is room for the mineral resource tonnage to significantly increase.
- The Bull Hill Northwest area hosts FMR/carbonatite dikes that appear distinct from those at Bull Hill Southwest, thus providing an additional resource area open to the north.
- Historical drilling identifies other Bull Hill area targets, such as Whitetail Ridge, a fault offset to the southwest, and a conceptual carbonatite plug. Drilling of two holes during 2010 in the Whitetail Ridge target and two more further to the northwest in the Carbon REE target have resulted in favorable REE intercepts.

The updated mineral resource estimate confirms that potentially economic resources are present in the Bull Hill area, and it justifies further technical work including drilling, metallurgical testing, and engineering studies. Considerable in-fill definition drilling is required to increase the confidence level and upgrade the inferred resources to the indicated category. Step-out drilling will likely expand the resource and define the boundaries of the mineralization.

Cutoff Grade & Metallurgy

The resource size is sensitive to an assumed cut-off grade, which is, in turn, very sensitive to metallurgical operating costs. The Company is steadily advancing its rare-earth metallurgical studies at Mountain States Research & Development International under the direction of Dr. Roshan Bhappu, P.E., with the objective of developing a cost-efficient and effective metallurgical flowsheet. Additional work is being conducted at NAGROM under the direction of Tony Wilkinson and at Hazen Research under the direction of Chris Schultz. The metallurgical testing program will continue through 2011 on an 8.8 ton surface sample collected in 2010 and the mineralized core samples collected during 2009.

Mineral Resources are not Reserves

Mineral resources that are not mineral reserves do not have demonstrated economic viability. Mineral resource estimates do not account for minability, selectivity, mining loss and dilution. These mineral resource estimates are in the inferred mineral resource category. Inferred mineral resources are normally considered too speculative geologically for the application of economic considerations that would enable them to be categorized as mineral reserves; however they are allowed to be included in a preliminary economic assessment. There is also no certainty that these inferred mineral resources will be converted to measured and indicated mineral resource categories through further drilling, or into mineral reserves once economic considerations are applied.

Quality Assurance

The mineral resource estimate was completed by Mr. Alan C. Noble, P.E., principal engineer of Ore Reserves Engineering, and is based on geological interpretations supplied by the Company to ORE and subsequently modified by ORE. Mr. Noble is an independent qualified person for the purposes of National Instrument 43-101 standards of disclosure for mineral projects of the Canadian Securities Administrators and has verified the data disclosed in this section titled "Mineral Resources".

The Rare Element Resources' field programs were carried out under the supervision of Dr. James G. Clark, LGeo, the Company's Vice President of Exploration, and by Dr. Ellen Leavitt, who are both qualified persons for the purposes of National Instrument 43-101 standards of disclosure for mineral projects of the Canadian Securities Administrators. Dr. Clark was also a senior geologist and, subsequently, exploration supervisor for Hecla Mining Company during that company's exploration of Bull Hill and the Bear Lodge district during the late 1980's and early 1990's. A detailed QA/QC program was implemented for the 2007 through 2009 drill programs. The 2009 and 2010 QA/QC programs were organized by Dr. Jeffrey Jaacks. Dr. Jaacks and Dr. Clark have verified the 2009 and 2010 sampling procedures and QA/QC data delivered to ORE. They share the opinion that the data are of good quality and suitable for use in the resource estimate.

A full table of significant drill results from the Company's 2004-2010 exploration programs and maps and sections detailing the drill-hole locations are available at: <http://www.rareelementresources.com>

Metallurgy

In August 2010, the Company announced progress toward defining a potentially commercial metallurgical process for REE-mineral concentration from oxide samples collected on the Bear Lodge REE Project.

The favorable metallurgical test results on a large sample of near-surface high-grade oxide mineralization with an average grade of 8.0% REO indicate the following: 1) With scrubbing/attritioning in water, a pre-concentrate is produced with a recovery of approximately 90% and a grade up to 20% REO; the REO resides in the finer fractions (-100 to -500 mesh); 2) Hydrochloric acid leaching of the pre-concentrates in an agitation leach system gives a recovery of about 80 to 85% of the total REO from the original mineralized material in the same general proportions as the original REO distribution; 3) Additional testing is being conducted to confirm and optimize the processing methods.

Metallurgical testwork is being conducted at Mountain States R&D International, Inc. (MSRDI) of Vail, Arizona. Additional confirmatory tests are being conducted at NAGROM, Perth, Australia, under the direction of Tony Wilkinson and at Hazen Research, Golden, Colorado, under the direction of Chris Schultz. Extraction and separation tests are underway at Intellimet LLC of Missoula, Montana. Plans for additional extraction and separation testing are being formulated for ANSTO of Sydney, Australia. Bulk sampling of oxide mineralization from large diameter drill core and from surface trenches is complete and approximately 12 tons of oxide mineralization was collected representing the first five years or so of operation. The bulk sample will be processed in a pilot-plant test in 2011 as part of a planned prefeasibility study.

The metallurgical testing is ongoing on oxide samples. Nearly all of this material is sufficiently close to the surface for potential mining by open pit methods. The current oxide resource (8.0 million tons averaging 3.62% REO) is part of a larger total inferred mineral resource (see section 3(a) under "Mineral Resources"). The oxide mineralization extends from surface to depths of 400 to 500 feet. Excellent exploration potential for expansion of the oxide mineralization was tested in 2010 by a program of step-out drilling, and in-fill drilling was directed at an upgrade of the mineral resource category.

The current testing program conducted on this oxide mineralization is designed to take advantage of the unique type of mineral occurrence of the REE mineralization. The mineralization is characterized by fine-grained REE minerals that variably adhere to the surfaces of the coarser gangue (non-REE-bearing) minerals. The REE minerals in oxide mineralization from the resource area are nearly all from the bastnasite group—listed in decreasing order of abundance: synchysite, parisite, and bastnasite, with generally minor monazite.

Preliminary Economic Assessment (PEA)

Highlights of the Preliminary Economic Assessment ("PEA" or the "Study") are summarized in the Table 4 below, with additional commentary following.

Table 4 Preliminary Economic Assessment – Bear Lodge Rare-Earths Project

	Case 1 (Base Case)	Case 2
	<i>3-year trailing average prices¹</i>	<i>Estimated long-term prices²</i>
Production Rate (tpd)	1,000	1,000
Mine Life (Years)	15	15
Initial Capital (US\$)	\$87 million	\$87 million
Operating Cost (US\$/ton)	\$213	\$213
Life of mine sustaining capital (US\$)	\$88 million	\$88 million
REO recoveries to concentrates	80%	80%
Annual REO contained in concentrates (tons)	11,400	11,400
Annual Payable Value of REO (US\$)	\$143 million	\$178 million
Annual Operating Cash Flow (US\$)	\$50 million	\$80 million
Internal rate of return (IRR)	40%	60%
After-tax Life-of-mine Cash Flow (US\$) (Undiscounted)	\$598 million	\$978 million
After-tax Net Present Value (US\$) (At 10% discount rate)	\$213 million	\$380 million
After-tax Net Present Value (US\$) (At 15% discount rate)	\$131 million	\$251 million
Payback (years)	3.1	2.4

1. Rare-earth bulk concentrate prices are used in the Study and are based on historic three-year average concentrate prices from Metal-Pages and assembled by the Industrial Minerals Company of Australia ("IMCOA").

2. Estimated long term prices of bulk concentrates represent a price increase of 25% over the historic three year average concentrate price.

The Study was prepared by independent consultant, John T. Boyd Company ("Boyd"), with the assistance of consultants Mountain States R&D International ("MSRDI") and Ore Reserves Engineering ("ORE"). New NI 43-101-compliant inferred mineral resource estimates for two of the four known mineralized zones at Bear Lodge (Bull Hill Southwest and Bull Hill Northwest deposits) were prepared by ORE (see section 3(a) under "Mineral Resources"). The Study provides an initial development model and a preliminary economic analysis of the project based on the resources estimated for the two deposits. The final NI 43-101-compliant technical report was filed on SEDAR on November 9, 2010.

The Study was commissioned by the Company in 2009 to evaluate the potential economic viability of recovering rare-earth elements ("REE") in concentrate, with a future goal to recover individual rare-earth oxides ("REO"), from the resources in the Bull Hill area of the Bear Lodge project. This was in response to growing demand for these elements in environmental and other applications where the REE are vital to the new technologies developed for fuel efficient ("hybrid") automobiles and plug-in electric vehicles. Many hybrid cars use rechargeable nickel-metal-hydride (Ni-M-H) batteries that contain lanthanum along with electric motors and generators that require high-strength permanent magnets containing neodymium, praseodymium, dysprosium, and terbium. Substantial quantities of all five of these rare-earth elements would be produced by a mine at Bear Lodge, and these five elements would represent nearly 65% of potential saleable products' value.

Rare Earths – Markets and Pricing

For an independent analysis of REE markets, including supply and demand forecasts, Boyd relied on a recent confidential report and supporting data produced by IMCOA, an independent industrial minerals research firm based in Perth, Australia and led by Dudley J. Kingsnorth. This report was requested by the Company and provided to Boyd as a basic reference. The IMCOA report forecasts growth in global demand for REE at a rate of nearly 10% per year until 2020, from approximately 125,000 tons in 2010 to 200,000 tons by 2015 to 280,000 tons by 2020, expressed as "TREO" (total rare-earth oxides or the sum of all 14 REE plus yttrium). During this period, primary supply sources located mainly in China are not expected to increase production significantly, creating a growing supply/demand gap. China has been reducing its exports of rare earths for several years and announced a major reduction in exports in early July 2010. These policies have already caused significant price increases for most REE and created opportunities for new primary suppliers to enter the market. Boyd concludes that the Bear Lodge REE resources, which require significant further work to bring to the feasibility level of analysis, represent an attractive potential mine development opportunity for the Company.

Bear Lodge – Low-cost Open Pit Mining

The development model utilized by Boyd and its associates for the Study contemplates conventional truck and shovel open-pit mine production from the near-surface oxide inferred resources in the Bull Hill SW and NW deposits, which would provide an initial mine life of 15 years. Recent drilling has successfully intersected REE outside the known resources and may support an eventual increase of mine life beyond that contemplated in the Study. All of the mineral resources at Bear Lodge are currently categorized as inferred mineral resources. Mineral Resources that are not mineral reserves do not have demonstrated economic viability. Mineral resource estimates do not account for mineability, selectivity, mining loss and dilution. These mineral resource estimates include inferred mineral resources that are normally considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as mineral reserves. There is also no certainty that these inferred mineral resources will be converted to measured and indicated categories through further drilling, or into mineral reserves, once economic considerations are applied. Also there is no certainty that this Preliminary Economic Assessment will be realized. An economic assessment will almost certainly change as new information is generated on the mineral resources, mine plan, and processing methodology.

Bear Lodge – REE Production

In the base case scenario, a conservative production rate beginning at 500 tons per day of mineralized material will progressively increase to 1,000 tons per day by year three. Once full production is achieved, the TREO produced each year would be approximately 11,400 tons (10,400 metric tons) in bulk rare-earth concentrates. Discounted cash flow analysis of this scenario, using 2008 through 2010 REE bulk mixed concentrate prices, and capital and operating costs, yields a 40% Internal Rate of Return (IRR) and a Net Present Value (NPV) of US\$213 million at a 10% discount rate or a US\$131 million NPV at a 15% discount rate on an after-tax basis over a mine life of 15 years. With this Study the Company is contemplating the sale of concentrates in North America to potential refiners/processors, some of which have contacted Rare Element already.

Hydrometallurgical tests for extraction and separation of individual rare-earth oxides are progressing, and the ultimate goal is the production and sale of high-purity oxides of cerium, lanthanum, neodymium, praseodymium, and possibly europium, dysprosium, terbium, and other REO. These products may be sold individually as oxides, or in various combinations such as "Didymium" (Neodymium and Praseodymium), "SEG" (Samarium, Europium and Gadolinium), or as mischmetal (a mix of the rare earth elements).

Bear Lodge – Rare Earth Prices

The prices used in this Study are based on historic three-year average concentrate prices. It is important to note the following:

1. REO concentrate prices are lower than refined REO prices.
2. Historic REO concentrate prices are significantly lower than the current REO concentrate prices as quoted in Metal Pages. For the Bear Lodge distribution of rare earths, current prices have recently increased approximately 360% from the three-year historic average due to the reduction in exports of REE products from China during the third quarter of 2010, however, it is unknown if the current higher prices are sustainable.
3. A 10% change in the price of REO concentrate would change the Base Case NPV of the project on an after-tax basis by approximately \$58 million at a 10% discount rate, and \$42 million at a 15% discount rate.
4. The sale of concentrates from Bear Lodge would likely be subject to a long-term supply contract for which a price would be set in the contract with one or more buyers. These long-term prices can differ substantially from quoted spot prices for metals with smaller markets such as rare-earth elements.

The price assumptions used by Boyd for the REO concentrates are based on compilations of the past three years that range from US\$4.59 (2008), to \$3.65 (2009), to \$7.54/kg (2010). These concentrates contain approximately 43.5% REO and were derived from deposits that have a similar, but slightly less valuable, REO distribution compared to the Bear Lodge deposits. The 2010 concentrate price is based on Metal-Pages' data through August 31, 2010.

A recent price quote for REE concentrates on an FOB China basis, as reported on September 2, 2010 by Metal-Pages.com, was US\$33.25/kg and on February 3, 2011, is US\$38/kg. The elements needed for high-strength permanent REE magnets include neodymium, praseodymium, dysprosium and terbium; prices were quoted by Metal-Pages (September 2, 2010) at US\$56.75, \$55.75, \$288 and \$595/kg, respectively for those elements (Table 2), and (February 3, 2011) at US\$104.50, \$103.50, \$365 and \$630/kg. Current REE producers seek to increase production of neodymium, praseodymium, dysprosium and terbium to meet the growing demand from magnet manufacturers. This underlines the need for new producers with mineral resources having an REE distribution that is more reflective of current market demand, such as that indicated for the bastnasite-group minerals at Bear Lodge.

The economic model suggested by IMCOA and tested by Boyd envisions a 5% market share capture (10,400 metric tonnes of a 200,000-tonne REO market) specifically for cerium, lanthanum, neodymium, praseodymium, plus significant quantities of other rare earths. This assumes that 2 other mines, one in the USA and one in Australia, plus possibly one or two others will go into production prior to Bear Lodge, and that IMCOA's projections of market growth will allow additional producers of the light and heavy rare earths to successfully market their products by 2015.

REO pricing over the past three years and the prices at September 2, 2010 are shown in Table 5. This information is shown only to indicate the recent increases in prices for individual rare-earth oxides and its potential effect if Bear Lodge progresses into individual REO production. There is no certainty the current prices will be maintained for the duration of the operating life of the Bear Lodge project.

Table 5 REO Prices 2008 through 2010 and Current Prices (9-2-10)

Rare Earth Oxide	Bear Lodge Oxide Zone	2008 Price	2009 Price	2010 Price (8 months)	Recent Price (Sept. 2, 2010)
REO	REO%	\$/kg	\$/kg	\$/kg	\$/kg
Ce ₂ O ₃	1.66	4.35	4.20	8.14	36.00
La ₂ O ₃	1.06	7.75	5.90	9.65	37.00
Nd ₂ O ₃	0.52	27.00	14.85	32.32	56.75
Pr ₂ O ₃	0.16	27.00	14.75	31.69	55.75
Sm ₂ O ₃	0.088	4.50	4.50	8.00	33.25
Gd ₂ O ₃	0.045	9.75	6.50	11.45	40.00
Y ₂ O ₃	0.032	15.25	13.50	13.50	34.50
Eu ₂ O ₃	0.021	475.00	465.00	551.25	585.00
Dy ₂ O ₃	0.018	110.00	105.00	195.00	288.00
Tb ₂ O ₃	0.0075	650.00	350.00	494.37	595.00
Others	0.0085				
TOTAL	3.62%				

For the purposes of the PEA, the Company has also shown a case that uses a 25% increase from the three-year trailing average prices used in the Base Case scenario. The Company believes these may more realistically reflect long-term pricing for REO based on market outlook information available at this time. As with the recent pricing for REO, there is no certainty these prices will be maintained for the duration of the operating life of the Bear Lodge Project.

Bear Lodge – Capital Costs

Capital cost estimates for the Bear Lodge project are lower than many other rare-earth projects for two principal reasons: 1) infrastructure in the project vicinity is already well established with an excellent road and highway system, nearby railroads, nearby power lines, an available water source, and skilled labor within several local communities; and 2) the metallurgical pre-concentration of rare-earth minerals is a very simple and low-cost process that upgrades the mineralized material for further hydrometallurgical concentration.

The capital cost estimate for the base-case production is \$87 million in construction capital and \$88 million in sustaining capital. This scenario involves development of the Bull Hill deposit at a mining rate of 1000 tons per day (tpd) or 360,000 tons per year (tpy). Operating costs for the project are estimated at \$213 per ton of material milled, with the most significant single cost being reagent consumption in hydrometallurgical processing. The model assumes mining by open pit methods and processing of the mineralized material on site to produce mineral preconcentrates by crushing, attritioning with water, and size separation methods. REE recoveries of 90% are assumed for the mineral preconcentration based on preliminary bench-scale testwork, however these results have yet to be confirmed with pilot-scale tests. The model further assumes construction of a hydrometallurgical plant near the mine site where there is access to low-cost power (estimated at approximately 3 cents per kwh) for the processing of the REE mineral concentrates in order to produce a bulk mixed rare-earth concentrate. Metallurgical recovery to a concentrate is estimated at 90% from the preconcentrate, for overall recoveries of 90% times 90% or approximately 80% into the concentrate. All of these process stages are being tested currently for optimization and reduction of operating costs, and significant progress is being made with potential reduction of reagent costs.

Further testwork is ongoing to extract and separate individual rare-earth oxide products to 99+% purity levels. The Company's ultimate goal is the production and sale of individual high-purity rare-earth oxides (REO), which would require additional capital costs.

Bear Lodge – REO Distribution

The REE mineral resources at Bear Lodge are of potentially significant interest to the market because of their relatively high proportions of contained neodymium, praseodymium, europium, dysprosium and terbium. Demand is increasing for these elements in the magnet production and other industries, but they typically occur in lower concentrations in the majority of known REE deposits.

Table 6 REO Distribution in Oxide Zone of the Bear Lodge Deposits

Element	Ce	La	Nd	Pr	Sm	Gd	Y	Eu	Dy	Tb	Er	Yb	Lu	Ho	Tm
Assay REO %	1.66	1.06	0.52	0.16	0.088	0.045	0.032	0.021	0.018	0.0075	0.0020	0.0012	0.00016	0.00100	0.00015
Distribution Oxide %	45.86	29.28	14.36	4.42	2.43	1.24	0.88	0.58	0.50	0.21	0.055	0.033	0.004	0.027	0.004
Relative Value %	15.5	20.4	25.4	7.7	1.1	0.8	0.6	17.5	5.3	5.6	-	-	-	-	-

Total Assay REO% = 3.62% for oxide zone mineralization; Ce - cerium, La - lanthanum, Nd - neodymium, Pr - praseodymium, Sm - samarium, Gd - gadolinium, Y - yttrium, Eu - europium, Dy - dysprosium, Tb - terbium, Er - erbium, Yb - ytterbium, Lu - lutetium, Ho - holmium, Tm - thulium.

Bear Lodge – PEA Summary

The results of the PEA demonstrate that the Bear Lodge REE project can achieve acceptable after-tax returns on invested capital and therefore warrants further investment to advance the project to a prefeasibility level of analysis. Increased rates of return are potentially achievable through any combination of higher prices, increased product sales, higher resource/reserve grades, lower operating costs, or higher metal recoveries.

Boyd recommends that the Bear Lodge project proceed to a Preliminary Feasibility level analysis. The recommended work includes completion of bulk sampling, pilot plant testing, further drilling of the Bull Hill SW and NW deposits to upgrade more of the REE resources to Measured or Indicated categories of confidence, REO extraction and separation testwork on both the Bull Hill SW and NW deposits, environmental studies, mine permitting, and continuing community engagement.

The estimated cost of this work program is \$15 million with the work to be conducted in two phases. Phase 1 comprises of preparation of an updated mineral resources estimate that includes 2010 drilling results, continued metallurgical testing, and a pilot plant test, which is anticipated to start in the spring of 2011. Phase 1 would include work to be conducted on samples and analyses from the 2010 drilling program. Phase 2 will include another drilling program for further resource expansion, resource definition, and collection of metallurgical samples that will be used in a subsequent full feasibility study. The Phase 2 program will then proceed to more detailed metallurgical testwork and engineering studies, leading to final process design and commercial testing, market studies, environmental studies and mine permitting, community consultation, engineering design, and economic modeling. Phase 2 work is planned to commence in the late spring of 2011, subject to positive results from Phase 1.

Risks & Opportunities

The principal risks for the Bear Lodge project are identified as follows:

1. Permitting and regulatory timelines and outcomes;
2. Changes in metallurgical recoveries as testwork continues;

3. Future pricing of REO;
4. Changes to capital and operating costs as studies continue;

The principal opportunities for the project are identified as follows:

1. Drilling in 2010 has intersected significant grades of REO outside the limits of the mineral resources used in the PEA, which could result in increased mineral resources and potentially extend the mine life and/or support a higher production level.
2. Optimization work is advancing and has had some success in developing a more cost-effective and efficient metallurgical processing method than that included in this Scoping Study by Rare Element for the Bull Hill area mineralization, which information was not available in time for this Study.
3. Hydrometallurgical tests for extraction and separation of individual rare-earth oxides is progressing, and the ultimate goal is the production and sale of high-purity oxides of neodymium, praseodymium, dysprosium, terbium, europium, lanthanum, cerium, and other REO.
4. Drilling has encountered large areas of low-grade (1.0-1.5% REO) oxide mineralization adjacent to the higher grade dikes. These areas are not included in the resource estimates and will be the subject of some drilling and metallurgical testing to determine if the material can be upgraded with a simple inexpensive process of screening or screening and washing.

Qualified Persons

Michael P. Richardson, P.E. is the independent qualified person from John T. Boyd Company responsible for the Scoping Study (Preliminary Economic Assessment) as well as mine planning, capital and operating cost estimation, and developing the economic models. He also reviewed and approved this section titled "Preliminary Economic Assessment" as well as all sections of the PEA filed on www.sedar.com. Alan C. Noble, P.E. of Ore Reserves Engineering, is the independent qualified person responsible for resource estimation. Dr. Ron Roman, P.E. of Mountain State R&D International is the metallurgical engineer and an independent qualified person responsible for the metallurgy, process development, and estimation of the mill capital and operating costs. Dr. James G. Clark, L.Geo., who has direct experience with the project dating back to 1986, is responsible for the geologic, drilling, and sampling data on behalf of the Company. These data and descriptions were reviewed and approved by Mr. Richardson. The full PEA is accessible on SEDAR and the Executive Summary is available on the Company's website.

Recent Updates

The Company completed its 2010 rare-earth core drilling program and announced encouraging rare-earth element assay results from 45 holes of 61 drilled on September 15, 2010, November 9, 2010, January 10, 2011 and February 7, 2011.

The 2010 core drilling program included the Bull Hill SW resource area, the Bull Hill NW resource area and the Whitetail Ridge target area. The Whitetail Ridge results were marked by potentially significant gold mineralization in addition to the targeted REE mineralization. Select REE assay intervals were also reported from two reverse circulation (RC) drill holes completed during the Company's 2010 Sundance gold exploration program, indicating that REE mineralization is present in two of the gold targeted drill holes 360 meters from the Whitetail Ridge.

Assays are pending for the final fifteen core holes. The May 2010 updated NI 43-101-compliant mineral resource was estimated for the Bull Hill SW and Bull Hill NW resource areas. The objectives of the 2010 drilling program were to expand the Bull Hill SW oxide resource and upgrade the resource category, and to explore for additional REE resources at the Bull Hill NW and Whitetail Ridge target areas.

The Company has hired a government and community affairs specialist, Mr. George G. Byers as VP Government and Community Affairs, to advance project development activities on the Bear Lodge REE Project. With the guidance of Mr. Byers, the Company has initiated a program to educate federal, state,

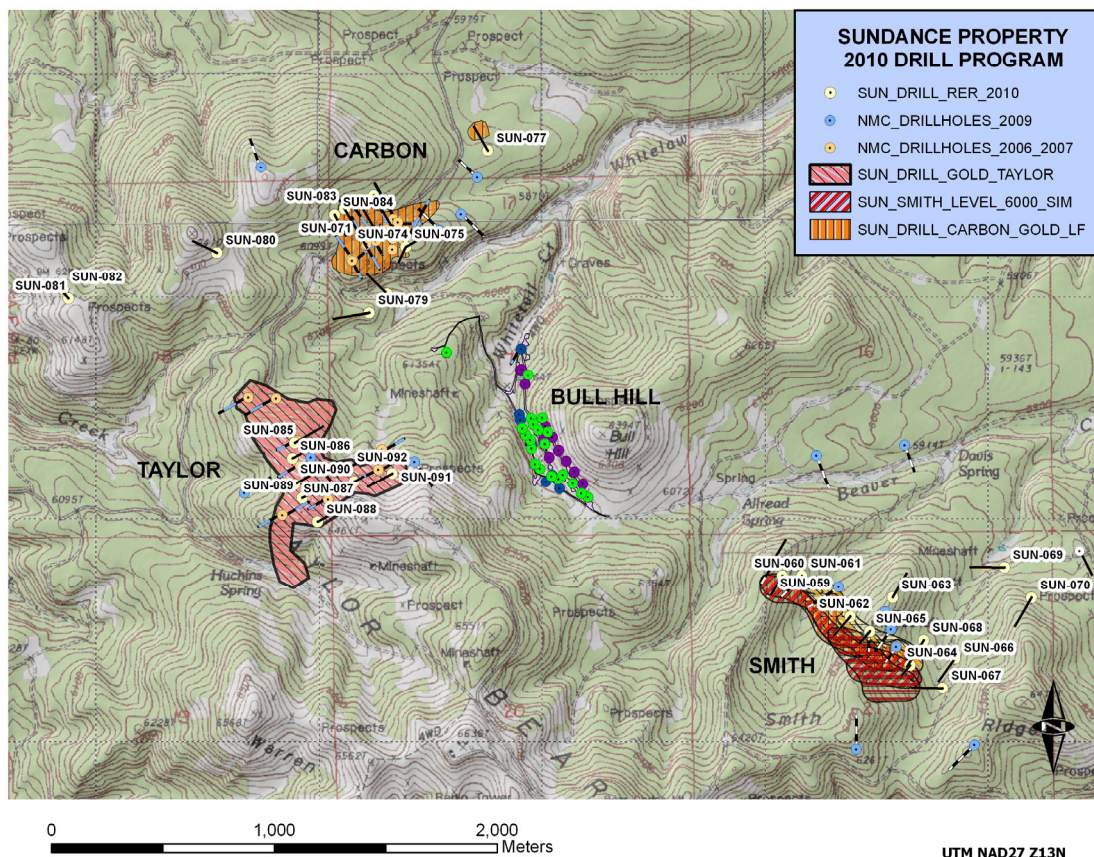

and local government officials and community leaders about the quality and quantity of the Bear Lodge rare-earth resources, and about its exceptional exploration and development potential.

Dr. James G. Clark, L.Geo, the Company's Vice President of Exploration, assisted by Dr. Ellen Leavitt, both qualified persons for the purposes of NI 43-101, lead the Bear Lodge REE Project exploration program.

During the six months ended December 31, 2010, the Company incurred \$4,684,275 in exploration expenditures on the Bear Lodge REE Project. As of at December 31, 2010, the Company had incurred a total of \$9,018,289 (June 30, 2010 - \$4,334,014) on exploration work at the Bear Lodge REE Project.

3(b) Bear Lodge Property (Wyoming, USA) – Sundance Project

The plan map above shows the location of the Smith, Carbon, and Taylor gold target areas within part of Rare Element Resources' Sundance Property. The gold targets surround the Bull Hill REE deposit area. The drill-hole collars from the 2010 program are shown in yellow and green. Drill-indicated gold-mineralized areas that contain greater than 300 ppb (>0.3 g/t) gold for each gold target area are shown as ruled polygons.

Location and ownership

The Sundance Project is located in the Bear Lodge Property. On June 1, 2006, the Company's wholly owned subsidiary, Paso Rico (USA), Inc. and Newmont signed an agreement to establish a gold exploration venture on the Company's Bear Lodge, Wyoming, property (the "Venture" or the "Sundance Gold Project"). Newmont had the right to earn a 65% participating interest in the Sundance Gold Project, excluding any rights to the REE and uranium.

On May 12, 2010, the Company announced that it signed an agreement with Newmont that Newmont would not exercise its option to acquire a 65% interest in the gold and base metals at the Sundance Gold Project so that the Company maintained its 100% interest in the claims holding the mineral potential within the entire property. All of Newmont's 327 wholly owned claims outside the Venture were transferred to the Company. In consideration for transferring its claims and terminating the Venture, Newmont was granted a right-of-first-refusal on all claims sold or disposed, excluding those containing rare-earth elements, and a 0.5% NSR royalty, for precious and base metals only, on the claims transferred to the Company by Newmont outside of the Venture. The withdrawal agreement honors an arrangement between Newmont and Bronco Creek Exploration Company ("Bronco Creek") on Newmont's

formerly wholly owned claims. Bronco Creek will continue to receive minor payments and a retained 0.05% NSR royalty, with a cap, on precious and base metals produced on the transferred claims that were wholly owned by Newmont outside the venture area.

Newmont expended approximately \$2.85 million from 2006 to 2010. Newmont's withdrawal from the Sundance Gold Project creates an opportunity for the Company to control its own actions on the property at a time when record demand for gold and rare-earth elements is occurring.

The Bear Lodge Property, with the additional claims, now consists of 489 claims and a leased Wyoming State section for a total of approximately 16 square miles. As a result of the withdrawal agreement with Newmont, the Company retains a totally unencumbered rare-earth project and now has 100% interest in all gold and other minerals in the Bear Lodge district. The core group of claims (Venture area) is free of royalties.

Recent Updates

From July 2010 to November 2010, the Company drilled gold targets on the Sundance Gold Project. Gold exploration activity during 2010 was focused on: 1) detailed definition of known gold-mineralized targets with in-fill drilling, 2) step-off drilling from known mineralization, and 3) discovery of gold mineralization in a new peripheral gold target. The vast majority of the drilling was conducted on near-surface targets with oxide zone mineralization, especially Smith, Taylor, and Carbon. Work was being conducted under a permit that allowed up to 200 acres of disturbance.

Two reverse circulation drill rigs were used to test the gold mineralization with 34 angle drill holes, ranging from 500 to 800 feet in depth. A few deeper holes have been drilled where geological conditions and target concepts warrant testing for high-grade gold mineralization.

On January 6, 2011, the Company announced the final 2010 assay results from seven rotary holes drilled on the Sundance Gold Project (drill holes SUN-086 to SUN-092). A total of thirty-four rotary drill holes containing 21,605 feet (6,585 m) was drilled during 2010 on near-surface targets within oxide zone mineralization at the Smith, Carbon, and, Taylor target areas. Initial drilling results were reported from the Smith target (see news release dated September 21, 2010), and the second news release (November 15, 2010) reported results primarily from the Carbon target. The third release dated January 6, 2011 covers the conclusion of the 2010 drill program with results from the Taylor target area. All of these sets of results were encouraging and the news releases can be viewed at www.rareelementresources.com.

Mr. John Ray, B.S., M.S., P.Geo, is leading the Sundance Gold Project exploration program.

During the six months ended December 31, 2010, the Company incurred \$910,237 in exploration expenditures on the Sundance Gold Project. As of at December 31, 2010, the Company had incurred a total of \$1,006,950 (June 30, 2010 - \$96,713) in exploration work at Sundance Gold Project, in addition to Newmont's expenditures of \$2.85 million over four years.

Upcoming / Outlook

The Company sees an immediate opportunity to define a gold mineral resource estimate which is scheduled for completion early in 2011. The exploration goal for near-surface gold mineralization at the Taylor, Smith, and Carbon gold targets is to define and estimate the Company's first gold mineral resource. The Bear Lodge alkaline-igneous complex also has the potential for discovery of deeper, high-grade gold mineralization along structural zones.

3(c) Eden Lake Property (Manitoba, Canada)

Location and ownership

On October 30, 2009, the Company acquired 100% of the Eden Lake rare-earth-elements project located in the province of Manitoba, Canada for a payment of 300,000 common shares.

The underlying owner, Strider Resources Limited, retains a 3% NSR royalty with the Company having the right to buy 50% of the NSR at anytime for \$1.5 million CDN.

Finders' fees of 20,000 common shares were issued to two unrelated parties for this acquisition. The common shares issued on the acquisition are subject to trading restrictions over an 18-month period.

On February 23, 2010, the Company granted Medallion Resources Ltd. ("Medallion") an option to acquire a 65% interest in a joint venture to explore and develop the property. The terms of the agreement require Medallion to pay a total of \$1,450,000 CDN in cash (\$50,000 CDN received), issue an aggregate of 1,800,000 shares (200,000 shares were received) and complete \$2,250,000 CDN in the property exploration work commitment expenditures over a five-year period. On October 7, 2010, the Company and Medallion agreed to postpone \$50,000 CDN cash payment to no later than the first anniversary of the agreement. In addition, six new concessions staked by Medallion were also added to the Eden Lake property.

Medallion will be the operator of the exploration program during the option period.

Recent Updates

In December 2009, Medallion completed a helicopter-borne high-intensity electromagnetic geophysical survey flown over the Eden Lake rare-earth-element (REE) property and in February 2010 Medallion received the basic data and initial interpretation of it.

3(d) Nuiklavik Property (Labrador, Canada)

Location and ownership

On January 6, 2010, the Company acquired from Altius Minerals Corp. ("Altius") a 100% interest in 584 mineral claims with rare-earth-element potential located in central Labrador, Canada for a payment of 200,000 shares (issued on January 12, 2010).

Altius will retain a total gross overriding royalty of 2% on the property, of which the Company may purchase 50% at any time for \$2,500,000 CDN. The Company plans to find a partner to explore the Nuiklavik property.

Recent Updates

The Company deposited \$203,659 with Newfoundland Exchequer as a security deposit on the fourth year exploration expenditures requirements for the same amount to be completed in 2011.

4. Risks and Uncertainties

Below are some of the risks and uncertainties that the Company faces. For a full list of risk factors, please refer to the Company's Form 20-F filed on November 1, 2010 available on the Company's website at www.rareelementresources.com.

The Company's financial success will be dependent upon the extent to which it can discover mineralization or acquire mineral properties and the economic viability of its properties.

The Company competes with many companies possessing greater financial resources and technical facilities than itself. The market price of minerals and/or metals is volatile and cannot be controlled. There is no assurance that the Company's mineral-exploration activities will be successful. The

development of mineral resources involves many risks that even a combination of experience, knowledge and careful evaluation may not be able to overcome.

The exploration of mineral resources on federal lands in the United States is subject to a comprehensive review, approval and permitting process that involved various federal, state and local agencies. There can be no assurance given that the required approvals and permits for a mining project, if technically and economically warranted, on the Company's claims can be obtained in a timely or cost-effective manner. The US Congress may enact a law requiring royalties on minerals produced from federal lands, including unpatented claims.

All of the Company's short- to medium-term operating and exploration cash flow must be derived from external financing. Actual funding may vary from what is planned due to a number of factors including the progress of exploration on its current properties. Should changes in equity-market conditions prevent the Company from obtaining additional external financing, the Company will need to review its exploration-property holdings to prioritize project expenditures based on funding availability.

The Company competes with larger and better-financed companies for exploration personnel, contractors and equipment. Increased exploration activity has increased demand for equipment and services. There can be no assurance that the Company can obtain required equipment and services in a timely or cost-effective manner.

The Company's operations in the United States and financing activities in Canada make it subject to foreign-currency fluctuations and such fluctuations may materially affect its financial position and results.

5. Impairment of Long-lived Assets

The Company completed an impairment analysis as at December 31, 2010 which considered the indicators of impairment in accordance with IAS 36, "*Impairment of Assets*".

Management concluded that no impairment charge was required because:

- there have been no significant changes in the legal factors or climate that affects the value of the properties;
- all property rights remain in good standing;
- the recent increase in prices in the rare-earth elements and gold;
- exploration results continue to be positive for both the Bear Lodge REE Project and the Sundance Gold Project;
- the rare-earth elements resource was recently increased;
- the Company intends to continue its exploration and development plans on its Bear Lodge REE Project and the Sundance Gold Project; and
- Medallion is optioning in to the Eden Lake Property and the Company is actively looking for a partner for the Nuiklavik Property.

6. Material Financial and Operations Information

6(a) Selected Annual Financial Information

Selected Annual Information

	Year ended June 30, 2010	Year ended June 30, 2009	Year ended June 30, 2008

Cash dividends declared	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil

6(c) Review of Operations and Financial Results

Results of Operations for the three months ended December 31, 2010 compared to the three months ended December 31, 2009

The net loss for the second quarter of fiscal 2011 totaled \$806,474 compared to loss of \$493,957 in the same period of fiscal 2010, an increase of \$312,517. The basic and diluted losses per share were comparable and totaled \$0.02.

Interest income totaled \$46,060 (2009 - \$8,657) for the three months ended December 31, 2010 as a result of interest earned on the funds that the Company held in financial institutions.

The total general and administrative costs were \$852,534 for the three months ended December 31, 2010 and \$502,614 for the comparable period, an increase of \$349,920. The increase was mostly due to increases in: (a) non-cash stock-based compensation expenses of \$190,113 due to options vested in the period; (b) investor relations and shareholders' communication fees of \$32,763 as the Company was actively keeping the shareholders and potential investors informed about the Company's progress; (c) transfer and listing fees of \$109,814 and audit and legal fees of \$33,877 as a result of the Company listing

on the AMEX and filing Form 20F; (d) management fees increased by \$20,030 and consulting fees increased by \$7,136 due to bonuses paid to two officers of the Company.

During the three months ended December 31, 2010, the Company recognized a gain on foreign exchange differences on translation of foreign operations of \$1,362,688 (2009 – \$193,203) and \$30,302 (2009 – \$Nil) of unrealized gain on available-for-sale marketable securities due to its increased market value. As a result, \$586,516 comprehensive income was recognized in the second quarter of fiscal 2011 while \$300,754 comprehensive loss was recorded in the second quarter during fiscal 2010.

Results of Operations for the six months ended December 31, 2010 compared to the six months ended December 31, 2009

The net loss for the six months ended December 31, 2010, totaled \$1,482,214 compared to loss of \$1,039,150 for the same period in 2009. The basic and diluted losses per share were \$0.05 and \$0.04, respectively.

Interest income was \$71,180 for the six months ended December 31, 2010 and \$17,627 for the same period in 2009 as a result of interest earned on the funds that the Company held in financial institutions.

Excluding the non-cash stock-based compensation expenses of \$755,097 in 2010 and \$429,681 in 2009, depreciation expenses of \$6,209 in 2010 and \$2,017 in 2009, the foreign exchange gains due to operations of \$8,974 and a loss of \$38,281 in 2009, total general and administrative costs were \$801,062 for the six months ended December 31, 2010 and \$586,798 for the same period in 2009. The operating expenses increased by \$214,264 due to increased costs in audit, legal, investor relations and shareholders' communication and transfer agent and filing fees as the Company became listed on the NYSE-AMEX. The other administrative expenditures varied over the periods but the overall effect of the variance was not significant.

Due to an exchange gain on translation of foreign operations of \$1,583,122 (2009 – \$312,022) and an unrealized gain on available-for-sale marketable securities due to its increased market price as of December 31, 2010 of \$60,431 (2009 – \$Nil), the Company recognized \$161,339 of comprehensive income during the six months ended December 31, 2010 (2009 – \$727,128 comprehensive loss).

6(d) Liquidity and Capital Resources

The Company's working capital as at December 31, 2010 was \$65,861,698 (June 30, 2010 – \$11,126,921). As at December 31, 2010, cash totaled \$67,008,719, an increase of \$55,548,243 from \$11,460,476 as at June 30, 2010.

On December 22, 2010, the Company closed a short-form prospectus offering for gross proceeds of \$57,546,000 CDN. The financing consisted of 6,394,000 common shares at a price of \$9.00 CDN per share. The Company paid \$3,452,760 CDN (\$3,417,304) cash commission and issued 383,640 broker's warrants. Each broker's warrant excisable into one common share of the Company at an exercise price of \$9.00 CDN per share until December 22, 2012. A total of \$3,929,065 was incurred for share issue costs.

In addition, during the six-month period ending December 31, 2010, 2,346,638 warrants, 657,000 options, and 151,890 agent's options were exercised for gross proceeds of \$7,121,626.

The Company spent \$4,523,154 on exploration activities and \$311,750 on additional reclamation bond. The Company also spent \$870,785 on its operating activities.

\$1,493,653 was also recorded as an increase in cash and cash equivalents due to the exchange rate changes on cash held in Canadian dollars.

Management estimates that the current cash position and future cash flows from warrants and options and potential financing will be sufficient for the Company to carry out its anticipated exploration and operating plans through 2011.

There may be circumstances where, for sound business reasons, a reallocation of funds may be necessary in order for the Company to achieve its stated business objectives.

6(e) Disclosure of Outstanding Share Data

The authorized share capital of the Company consists of an unlimited number of common shares without par value.

	No. of Common Shares Issued & outstanding	Share Capital Amount
June 30, 2010	32,142,737	\$19,003,005
December 31, 2010	41,692,265	\$78,841,304
February 11, 2011	43,170,423	\$86,308,853

As at December 31, 2010, the Company had 2,579,000 stock options outstanding with exercise prices ranging from \$0.55 CDN to \$4.49 CDN expiring from April 28, 2011 to May 28, 2015. During the six months ended December 31, 2010, a total of 657,000 options were exercised at weighted average exercise price of \$0.79 CDN for gross proceeds of \$504,811. A fair value of \$363,325 was recognized on these exercised options. Subsequent to December 31, 2010, 357,000 options were exercised for gross proceeds of \$289,320 CDN, and 403,000 stock options were granted to a director and officer, and consultants of the Company at a price of \$15.16 CDN for a period of 5 years. If all the remaining outstanding options were exercised, the Company's available cash would increase by \$9,508,970 CDN.

During the six months ended December 31, 2010, 151,890 agent's options were exercised at \$3.50 CDN for proceeds of \$511,520. A fair value of \$310,988 was recognized on these exercised agent's options.

As at December 31, 2010, the Company had 1,450,558 warrants and 383,649 agent's warrants outstanding with exercise prices ranging from \$2.10 CDN to \$9.00 CDN expiring from January 24, 2011 to December 22, 2012. During the six months ended December 31, 2010, a total of 2,346,638 warrants (including 75,945 agent's warrants) were exercised at weighted average exercise price of \$2.67 CDN for gross proceeds of \$6,105,295. A fair value of \$1,743,422 was recognized on these exercised warrants. Subsequently, another 1,054,021 warrants and 67,137 agent's warrants were exercised for gross proceeds of \$5,197,333 CDN. If all the remaining outstanding warrants were exercised, the Company's available cash would increase by \$4,720,578 CDN.

As of date of this MD&A, there were 43,170,423 common shares issued and outstanding and 46,508,463 common shares outstanding on a diluted basis.

The deficit totaled \$9,077,820 as at December 31, 2010 (June 30, 2010 - \$7,595,606). The increase is the result of the net loss of \$1,482,214 for the six months ended December 31, 2010.

6(f) Environmental provisions

An environmental provision of \$100,540 was recognised in the period ended December 31, 2010, in respect of the Company's current obligations to reclaim areas used for exploring the Bear Lodge Property.

6(g) Potential environmental contingency

The Company's mining and exploration activities are subject to various federal, provincial and state laws and regulations governing the protection of the environment. These laws and regulations are continually

changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment and believes its operations are in compliance with all applicable laws and regulations. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations. The ultimate amount of reclamation and other future site restoration costs to be incurred is uncertain.

6(h) Off-Balance Sheet Arrangements

None.

6(i) Transactions with Related Parties

The aggregate value of transactions and outstanding balances relating to key management personnel and entities over which they have control or significant influence were as follows:

For the six months ended December 31, 2010

	Short-term employee benefit \$	Other long- term benefit	Termination benefits	Share-based payments \$(a)	Total \$
Donald E. Ranta, Chief Executive Officer (c)	149,590	n/a	(b)	Nil	149,590
1. Mark T. Brown Chief Financial Officer	Nil	n/a	n/a	Nil	Nil
Pacific Opportunity Capital Ltd. (d)	179,950	n/a	n/a	Nil	179,950

For the six months ended December 31, 2009

	Short-term employee benefit \$	Other long- term benefit	Termination benefits	Share-based payments \$(a)	Total \$
Donald E. Ranta, Chief Executive Officer (c)	111,863	n/a	(b)	Nil	111,863
Mark T. Brown Chief Financial Officer	Nil	n/a	n/a	Nil	Nil
Pacific Opportunity Capital Ltd. (d)	92,812	n/a	n/a	Nil	92,812

- (a) Comprised of options granted pursuant to the Company's stock option plan. The value of option-based awards is based on the fair value of the awards calculated using the Black-Scholes model at the grant date.
- (b) Under the terms of the management consulting agreement between the Company and Donald E. Ranta, Dr. Ranta is entitled to a payment equal to 3 months remuneration in the event Dr. Ranta is terminated by the Company without notice.
- (c) Dr. Ranta receives a monthly amount of \$12,500 and effectively October 1, 2010, a monthly amount of \$16,667 as management fees. \$50,000 bonus was paid in December 2010. Dr. Ranta also charged an additional \$20,000 for financing and marketing trips during the six months ended December 31, 2010.
- (d) Pacific Opportunity Capital Ltd., a company controlled by the Chief Financial Officer of the Company, charged rent, accounting and management fees for an accounting and administrative team of five people during fiscal 2010 and 2009 respectively. During the six months ended December 31, 2010, an additional \$71,759 was charged for financing and marketing costs.

6(j) Financial Instruments

The Company's operations consist of the acquisition and exploration of exploration and evaluation in United States. The Company examines the various financial risks to which it is exposed and assesses the impact and likelihood of occurrence. These risks may include credit risk, liquidity risk, currency risk, interest rate risk and other risks. Where material, these risks are reviewed and monitored by the Board of Directors.

a) Credit risk

Counterparty credit risk is the risk that the financial benefits of contracts with a specific counterparty will be lost if a counterparty defaults on its obligations under the contract. This includes any cash amounts owed to the Company by those counterparties, less any amounts owed to the counterparty by the Company where a legal right of set-off exists and also includes the fair values of contracts with individual counterparties which are recorded in the financial statements.

(i) Trade credit risk

The Company is in the exploration stage and has not yet commenced commercial production or sales. Therefore, the Company is not exposed to significant credit risk and overall the Company's credit risk has not changed significantly from the prior year.

(ii) Cash and cash equivalents

In order to manage credit and liquidity risk the Company invests only in highly rated investment grade instruments that have maturities of six months or less. Limits are also established based on the type of investment, the counterparty and the credit rating.

(iii) Derivative financial instruments

As at December 31, 2010, the Company has no derivative financial instruments. It may in the future enter into derivative financial instruments and in order to manage credit risk, it will only enter into derivative financial instruments with highly rated investment grade counterparties.

b) Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure.

Accounts payable and accrued liabilities are due within the current operating period.

c) Interest rate risk

The Company's interest revenue earned on cash and on short term investments is exposed to interest rate risk. The Company does not enter into derivative contracts to manage this risk, and the Company's exposure to interest rate is very low as the Company has limited short term investments.

The Company limits its exposure to interest rate risk as it invests only in short term investments at major Canadian financial institutions.

A one percent change in interest rates changes the results of operations by \$658,000.

d) Currency risk

The Company's property interests in the United States subject it to foreign currency fluctuations which may adversely affect the Company's financial position, results of operations and cash flows. The Company is affected by changes in exchange rates between the Canadian dollar and US dollar.

A one cent change in the US/CDN dollar currency rate would affect the Company's estimated one-year exploration expenditures by \$165,200.

The Company does not invest in derivatives to mitigate these risks.

6(k) Management of capital risk

The Company manages its cash and cash equivalents, common shares, stock options and warrants as capital. The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to pursue the exploration of its mineral properties and to maintain a flexible capital structure which optimizes the costs of capital at an acceptable risk.

The Company manages the capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new shares and, acquire or dispose of assets.

In order to maximize ongoing exploration efforts, the Company does not pay out dividends. The Company's investment policy is to invest its short-term excess cash in highly liquid short-term interest-bearing investments with short term maturities, selected with regards to the expected timing of expenditures from continuing operations.

The Company expects its current capital resources will be sufficient to carry its exploration plans and operations through 2012.

IFRS 7 establishes a fair value hierarchy that prioritizes the input to valuation techniques used to measure fair value as follows:

Level 1 – quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2 – inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e., as prices) or indirectly (i.e., derived from prices); and

Level 3 – inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The following table sets forth the Company's financial assets measured at fair value by level within the fair value hierarchy.

	Level 1	Level 2	Level 3	Total
Assets:				
Cash and cash equivalents	\$ 67,008,719	-	-	\$ 67,008,719
Marketable securities	108,011	-	-	108,011
	\$ 67,116,730	-	-	\$ 67,116,730

7. Subsequent Events

Subsequent to December 31, 2010,

- 357,000 stock options were exercised for total proceeds of \$289,320 CDN, 1,054,021 warrants were exercised for total proceeds of \$4,593,100 CDN, and 67,137 broker's warrants were exercised for total proceeds of \$604,233 CDN.
- 403,000 stock options were granted to a director and officer, and consultants of the Company at a price of \$15.16 CDN for a period of 5 years.

8. Significant accounting judgments and estimates

The preparation of the condensed consolidated interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of expenses during the reporting period. Actual outcomes could differ from these estimates. The condensed consolidated interim financial statements include estimates which, by their nature, are uncertain. The impacts of such estimates are pervasive throughout the consolidated interim financial statements, and may require accounting adjustments based on future occurrences.

Revisions to accounting estimates are recognized in the period in which the estimate is revised and the revision affects both current and future periods.

Significant assumptions about the future and other sources of estimation uncertainty that management has made at the statement of financial position date, that could result in a material adjustment to the carrying amounts of assets and liabilities, in the event that actual results differ from assumptions made, relate to, but are not limited to, the following:

- the recoverability of amounts receivable and prepayments which are included in the condensed consolidated interim statement of financial position;
- the carrying value of the investment and the recoverability of the carrying value which are included in the condensed consolidated interim statement of financial position;
- the estimated useful lives of property, plant and equipment which are included in the condensed consolidated interim statement of financial position and the related depreciation included in the consolidated statement of comprehensive loss;
- the inputs used in accounting for share purchase option expense in the condensed consolidated interim statement of comprehensive loss;
- the provision for income taxes which is included in the condensed consolidated interim statements of comprehensive loss and composition of deferred income tax assets and liabilities included in the condensed consolidated interim statement of financial position at December 31, 2010;
- the inputs used in determining the net present value of the liabilities for asset retirement obligations included in the condensed consolidated interim statement of financial position; and
- the inputs used in determining the various commitments and contingencies accrued in the condensed consolidated interim statement of financial position.

9. Changes in accounting policies including initial adoption

Conversion to International Financial Reporting Standards

The Canadian Accounting Standards Board (“AcSB”) confirmed in February 2008 that IFRS will replace Canadian generally accepted accounting principles (“Cdn GAAP”) for publicly accountable enterprises for financial periods beginning on or after January 1, 2011, with the option available to early adopt IFRS from periods beginning on or after January 1, 2009 upon receipt of approval from the Canadian Securities regulatory authorities.

These condensed consolidated interim financial statements have been prepared in accordance with International Accounting Standard 34, Interim Financial Reporting (“IAS 34”) using accounting policies consistent with International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards Board (“IASB”) and interpretations of the International Financial Reporting Interpretations Committee (“IFRIC”).

These are the Company’s first IFRS condensed consolidated interim financial statements for the six-month period ended December 31, 2010 covered by the first IFRS consolidated annual financial statements to be presented in accordance with IFRS for the year ending June 30, 2010. Previously, the Company prepared its consolidated annual and consolidated interim financial statements in accordance with Cdn GAAP.

As stated in Note 2 of the condensed consolidated financial statements, these are the Company’s first condensed consolidated interim financial statements for the six-month period ended December 31, 2010 covered by the first annual condensed consolidated interim financial statements prepared in accordance with IFRS.

The accounting policies in Note 2 of the condensed consolidated financial statements have been applied as follows:

- in preparing the condensed consolidated interim financial statements for the six months ended December 31, 2010;
- the comparative information for the six months ended December 31, 2009;
- the statement of financial position as at June 30, 2010; and
- the preparation of an opening IFRS statement of financial position on the Transition Date, July 1, 2009.

In preparing the opening IFRS statement of financial position, comparative information for the six months ended December 31, 2009 and the financial statements for the year ended June 30, 2010, the Company has adjusted amounts reported previously in financial statements prepared in accordance with Canadian GAAP (“Cdn GAAP”).

An explanation of how the transition from Cdn GAAP to IFRS has affected the Company’s financial position, financial performance and cash flows is set out in the following tables.

The guidance for the first time adoption of IFRS are set out in IFRS 1. IFRS 1 provides for certain mandatory exceptions and optional exemptions for first time adopters of IFRS. In preparing these financial statements, the Company has elected to apply the following transitional arrangements:

(a) IFRS 1 - Business combinations

IFRS1 indicates that a first-time adopter may elect not to apply IFRS 3 *Business Combinations* retrospectively to business combinations that occurred before the date of transition to IFRS. The Company takes advantage of this election and applies IFRS 3 to business combinations that occurred

on or after July 1, 2009. There is no adjustment required to the July 1, 2009's statement of financial position on the Transition Date.

(b) IFRS 2 – Share-based payment transactions

IFRS 2 *Share-based Payment* has not been applied to equity instruments that were granted on or before November 7, 2002, nor has it been applied to equity instruments granted after November 7, 2002 that vested before July 1, 2009.

IFRS 2, similar to Cdn GAAP, requires the Company to measure share-based compensation related to share purchase options granted to employees at the fair value of the options on the date of grant and to recognize such expense over the vesting period of the options. However, under IFRS 2, the recognition of such expense must be done with a “graded vesting” methodology as opposed to the straight-line vesting method allowed under Cdn GAAP. In addition, under IFRS, forfeitures estimates are recognized in the period they are estimated, and are revised for actual forfeitures in subsequent periods; while under Cdn GAAP, forfeitures of awards are recognized as they occur.

Under IFRS graded vesting methodology, during the three months ended December 31, 2009, the Company would have recorded \$116,115 as share-based payment versus \$81,684 stock-based compensation under CAGAAP. As a result, \$34,431 would be adjusted in the share-based payment expense in the statement of operations and the same amount would be adjusted in the equity settled employee benefit reserve in the statement of equity.

Under IFRS graded vesting methodology, during the six months ended December 31, 2009, the Company would have recorded \$429,681 as share-based payment versus \$194,354 stock-based compensation under CAGAAP. As a result, \$235,327 would be adjusted in the share-based payment expense in the statement of operations and the same amount would be adjusted in the equity settled employee benefit reserve in the statement of equity.

During the year ended June 30, 2010, the Company would have recorded \$1,076,452 as share-based payment versus \$524,497 stock-based compensation under CAGAAP. As a result, \$551,955 would be adjusted in the share-based payment expense in the statement of operations and the same amount would be adjusted in the equity settled employee benefit reserve in the statement of equity.

(c) IAS 27 – Consolidated and Separate Financial Statements

In accordance with IFRS 1, if a company elects to apply IFRS 3 *Business Combinations* retrospectively, IAS 27 *Consolidated and Separate Financial Statements* must also be applied retrospectively. As the Company elected to apply IFRS 3 prospectively, the Company has also elected to apply IAS 27 prospectively.

(d) IAS 23 – Borrowing Costs

IAS 23 *Borrowing costs* has not been applied to borrowing costs relating to qualifying assets for which the commencement date for capitalization is on or after July 1, 2009.

(e) IAS 16 - Property, plant and equipment

IAS 16 *Property, plant and equipment* allows for property, plant and equipment to continue carried at cost less depreciation, same as under Cdn GAAP.

(f) Reclassification within Equity Section

IFRS requires an entity to present for each component of equity, a reconciliation between the carrying amount at the beginning and end of the period, separately disclosing each change. The Company examined its “contributed surplus” account and concluded that as at the Transition Date, the entire amount of \$876,046 relates to “Equity settled employee benefit reserve”. As a result, the Company believes that a reclassification would be necessary in the equity section between “Contributed surplus” and the “Equity settled employee benefit reserve” account.

For comparatives, as at December 31, 2009, the entire \$866,603 “contributed surplus” account was reclassified into “Equity settled employee benefit reserve”. Furthermore, as at June 30, 2010, \$1,477,734 “contributed surplus” account was broken down into \$1,166,746 “Equity settled employee benefit reserve” and \$310,988 “Reserves for agents’ options”.

(g) Cumulative Translation differences

IFRS requires that the functional currency of each entity of the company be determined separately and record the foreign exchange resulting from the consolidation in equity rather than in the statement of operations. IFRS 1 provides an exemption and allows for such adjustments to be made as of the Transition Date, resulting in no change to the July 1, 2009 financial statements on the Transition Date.

For the three months ended December 31, 2009, the foreign exchange resulting from the consolidation amounted to a gain of \$193,203 resulting in increasing the current period's loss in the statement of operations and recording an “Exchange reserve” in the Statement of Equity.

For the six months ended December 31, 2009, the foreign exchange resulting from the consolidation amounted to a gain of \$312,022 resulting in increasing the current period's loss in the statement of operations and recording an “Exchange reserve” in the Statement of Equity.

For the year ended June 30, 2010, the foreign exchange resulting from the consolidation amounted to a loss of \$27,546, resulting in decreasing the current year's loss in the statement of operations and recording an “Exchange reserve” in the Statement of Equity.

10. Future Accounting Pronouncements

Certain new accounting standards and interpretations have been published that are not mandatory for the December 31, 2010 reporting period. The following standards are assessed not to have any impact on the Company's financial statements:

- IAS 24, *Related Party Disclosure*: effective for accounting periods commencing on or after January 1, 2011; and
- IFRS 9, *Financial Instruments*: effective for accounting periods commencing on or after January 1, 2013.

11. Disclosure Controls and Procedures

Evaluation of Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported to senior management, including the Company's Chief Executive Officer and Chief Financial Officer, on a timely basis so that appropriate decisions can be made regarding public disclosure. Management of the Company, with the participation of the Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the Company's disclosure controls and procedures as at December 31, 2010, as required by Canadian securities law. Based on that evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that, as of December 31, 2010, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in the Company's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 Certification of Disclosure in Issuer's Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws were recorded, processed, summarized and reported within the time period specified by those laws and that material information was accumulated and communicated to management of the Company, including the Chief Executive Officer and the Chief Financial Officer, as appropriate to allow for accurate disclosure to be made on a timely basis.

12. Internal Controls over financial reporting

Changes in Internal Control over Financial Reporting

Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. The Chief Executive Officer and Chief Financial Officer have concluded that there has been no change in the Company's internal control over financial reporting during the period ended December 31, 2010 that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting. As of December 31, 2010, the Company's internal control over financial reporting was effective.

13. Information on the Board of Directors and Management

Directors:

Donald E. Ranta, Ph.D., P.Geo

Mark T. Brown, B.Comm, C.A.

Stephen P. Quin, P.Geo

M. Norman Anderson, P. Eng

Norman W. Burmeister, P. Eng

Gregory E. McKelvey, M.S. Geol

Audit Committee members:

Gregory E. McKelvey, Stephen P. Quin and Norman W. Burmeister

Nominating, Corporate Governance and Compensation Committee members:

Gregory E. McKelvey, Stephen P. Quin, Norman W. Burmeister and M. Norman Anderson

Management:

Donald E. Ranta, B.S., M.S., Ph.D., P.Geo – Chief Executive Officer, President

Mark T. Brown, B.Comm, C.A. – Chief Financial Officer

James Clark, B.S., M.S., Ph.D., L.Geo. – Vice President of Exploration

George Byers, B.A., M.U.R.P. – Vice President of Government and Community Affairs

Ellen Leavitt, Ph.D., P. Geo – Chief Geologist – REE

John Ray, B.S., M.S., P.Geo – Chief Geologist – Gold

Winnie Wong, B.Comm (Honours), C.A. – Corporate Secretary

Rare Element Reports Second Quarter Financial Results

Vancouver B.C. - Rare Element Resources Ltd. (TSX-V: RES and NYSE-Amex: REE) (the "Company" or "Rare Element") announced that its unaudited condensed consolidated interim financial statements and Management's Discussion and Analysis for the six months ended December 31, 2010 have been filed on www.sedar.com. These financial statements were prepared using International Financial Reporting Standards which Rare Element early adopted as of July 1st, 2010. Note 17 in the financial statements reconciles the changes in the comparative periods from Canadian Generally Accepted Accounting Principles to International Financial Reporting Standards, which will be fully adopted in Canada in 2011.

All dollar amounts stated below are in United States dollars.

Six Months Ended December 31, 2010 Financial Highlights:

- Exploration expenses amounted to \$5,634,144 (2009 – \$2,653,690) during the six months ended December 31, 2010, of which \$4,684,275 (2009 – \$1,646,439) was spent on the Bear Lodge Rare-Earth Project and \$910,237 (2009 - \$nil) was spent on the Sundance Gold Project. Both projects are located on the same property position.
- Administrative expenditures, including the non-cash share-based payments amounted to \$1,553,394 (2009 - \$1,056,777) for the period, up 47% compared to the same period last year.
- Loss for the period was \$1,482,214 (2009 - \$1,039,150) or \$0.04 per share (2009 - \$0.04), up 43% from the same period in the prior year.
- Cash and cash equivalents at December 31, 2010 were \$67,008,719 (June 30, 2010 - \$11,460,476), reflecting the \$57.5 million financing completed in December, 2010.

Business Highlights:

- The geological team completed its 2010 rare-earth drilling and exploration program on the Bear Lodge property in November, 2010. The Company received positive assay results from the Bull Hill Southwest resource area and Whitetail Ridge target area. Assays are pending from another 14 drill holes. The goal for these drill-hole results is to upgrade a portion of the REE resources from the inferred category to measured and indicated and to expand the resource area.
- The gold geological team completed the 2010 gold drilling and exploration program on the Sundance Gold Project at Bear Lodge in November, 2010. All the assay results were encouraging and the Company's evaluation effort on the gold system is to culminate in an NI 43-101 compliant resource estimate that is scheduled for completion early in 2011.

- The Company completed the NI 43-101 compliant Preliminary Economic Analysis of the Bear Lodge REE deposit (the “Technical Report”) as announced on September 28, 2010 which shows that the project has an IRR of approximately 40% using historical REO concentrate prices, which have recently increased greatly. The Technical Report was prepared by independent consultant, John T. Boyd Company with the assistance of consultants Mountain States R&D International and Ore Reserves Engineering. This press release highlights some of the information contained in the Technical Report released on November 9, 2010 and for investors to fully understand the information in this press release, they should read the Technical Report in its entirety, including all qualifications, assumptions and exclusions that relate to the information set out in this press release.
- Rare Element listed its common shares on the NYSE-Amex Stock Exchange under the symbol “REE” in August, 2010.

Rare Element currently has 43,170,423 common shares outstanding, and 46,508,463 common shares outstanding on a fully diluted basis. Rare Element currently has approximately US\$69 million in cash and no debt.

The unaudited financial statements and management discussion and analysis are available through the Canadian securities regulatory authorities at www.sedar.com, and with the Securities and Exchange Commission at www.sec.gov. They are also available on the Company’s website at www.rareelementresources.com. Hard copies of the unaudited condensed consolidated interim financial statements and notes are available, free of charge, to shareholders upon written request.

Rare Element Resources Ltd (TSX-V: RES & NYSE-Amex: REE) is a publicly traded mineral resource company focused on exploration and development of rare-earth elements and gold on the Bear Lodge property.

Rare-earth elements are key components of the green energy technologies and other high-technology applications. Some of the major applications include hybrid automobiles, plug-in electric automobiles, advanced wind turbines, computer hard drives, compact fluorescent light bulbs, metal alloys, additives in ceramics and glass, petroleum cracking catalysts, and a number of critical military applications. China currently produces more than 95% of the 130,000 metric tonnes of rare-earths consumed annually worldwide, and China has been reducing its exports of rare earths each year. The rare-earth market is growing rapidly, and is projected to accelerate if the green technologies are implemented on a broad scale.

ON BEHALF OF THE BOARD

Donald E. Ranta, PhD, PGeo, President & CEO
