Attn: Mr. William VanVliet
Chairman/CEO

Dear Sir,

Reference to our discussion I would like to confirm that the biodiesel plant we supplied can process different type of oils not only palm or fats as per the technical annex describe it.

In the past 40 years, Desmet Ballestra and its 15 affiliated companies have installed more than 400 oleochemical and biodiesel processes worldwide. We will stand behind our plant and its technology and provide RFC/PBC support, expertise and training to manage the startup and commissioning of the PBC plant in Kuantan Malaysia. We have expert manpower and skills available to assist you as needed. Rest assured that we will stay with the plant as long as RFC/PBC needs us onsite and will provide ongoing support and expertise as needed for as long as RFC/PBC require us to do so.

Be advised that when the plant starts up and during the commissioning process, we use some feedstocks to process and fine tune the plant. End product that does not meet the required specifications can simply be recycled and brought up to specifications required for export. Off specification end product biodiesel produced is still good and can be recycled so there is little to no risk of loss of feedstock in the startup or operations process.

Please feel free to contact me with instructions and questions when you are ready to proceed.

Yours sincerely
DESMET BALLESTRA (SEA) PTE LTD
