

2023 Annual Report

Included in the 2023 Annual Report:
Form 10-K filed with the U.S. Securities and Exchange Commission on
December 29, 2023 (excluding exhibits)

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

☒ ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Fiscal Year Ended September 30, 2023

☐ TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

Commission File Number 001-38174

Citius Pharmaceuticals, Inc.

(Exact name of Registrant as specified in its Charter)

Nevada

(State or other jurisdiction of
incorporation or organization)

27-3425913

(I.R.S. Employer
Identification No.)

11 Commerce Drive, First Floor, Cranford, NJ 07016

(Address of principal executive offices) (Zip Code)

(908) 967-6677

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Exchange Act:

Title of Each Class	Trading Symbol(s)	Name of Each Exchange on Which Registered
Common Stock, par value \$0.001 per share	CTXR	The NASDAQ Capital Market

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. ☐ Yes ☒ No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Act. ☐ Yes ☒ No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. ☒ Yes ☐ No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). ☒ Yes ☐ No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer	<input type="checkbox"/>	Accelerated filer	<input type="checkbox"/>
Non-accelerated filer	<input checked="" type="checkbox"/>	Smaller reporting company	<input checked="" type="checkbox"/>
		Emerging growth company	<input type="checkbox"/>

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act by the registered public accounting firm that prepared or issued its audit report. ☐

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrant included in the filing reflect the correction of an error to previously issued financial statements. ☐

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant's executive officers during the relevant recovery period pursuant to §240.10D-1(b). ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). ☐ Yes ☒ No

The aggregate market value of the voting and non-voting common equity held by non-affiliates computed by reference to the price at which the common equity was last sold, or the average bid and asked price of such common equity, as of the last business day of the registrant's most recently completed second fiscal quarter (March 31, 2023) was approximately \$156.9 million.

Affiliates for the purpose of this item refers to the issuer's executive officers and directors and/or any persons or firms (excluding those brokerage firms and/or clearing houses and/or depository companies holding issuer's securities as record holders only for their respective clients' beneficial interest) owning 10% or more of the issuer's common stock, both of record and beneficially.

Indicate the number of shares outstanding of each of the registrant's classes of common stock, as of the latest practicable date:

158,966,576 shares as of December 27, 2023, all of one class of common stock, \$0.001 par value.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Company's Proxy Statement for the Annual Meeting of Stockholders expected to be held in March 2024 are incorporated by reference in Part III of this Report.

NOTES

In this annual report on Form 10-K, and unless the context otherwise requires, the “Company,” “we,” “us” and “our” refer to Citius Pharmaceuticals, Inc. and its wholly-owned subsidiaries Citius Pharmaceuticals, LLC, Leonard-Meron Biosciences, Inc. and Citius Oncology, Inc. (formerly Citius Acquisition Corp.), and its majority-owned subsidiary, NoveCite, Inc., taken as a whole.

Mino-Lok® and LYMPHIR™ (denileukin diftitox) are our registered trademarks. All other trade names, trademarks and service marks appearing in this prospectus are the property of their respective owners. We have assumed that the reader understands that all such terms are source-indicating. Accordingly, such terms, when first mentioned in this report, appear with the trade name, trademark or service mark notice and then throughout the remainder of this report without trade name, trademark or service mark notices for convenience only and should not be construed as being used in a descriptive or generic sense.

FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K contains “forward-looking statements.” Forward-looking statements include, but are not limited to, statements that express our intentions, beliefs, expectations, plans, strategies, predictions, or any other statements relating to our future activities or other future events or conditions. These statements are based on current expectations, estimates and projections about our business based, in part, on assumptions made by management. These statements are not guarantees of future performance and involve risks, uncertainties and assumptions that are difficult to predict. Therefore, actual outcomes and results may, and are likely to, differ materially from what is expressed or forecasted in the forward-looking statements due to numerous factors discussed from time to time in this report, including the risks described under Item 1A - “Risk Factors,” and Item 7 - “Management’s Discussion and Analysis of Financial Condition and Results of Operations” in this report and in other documents which we file with the Securities and Exchange Commission (“SEC”). In addition, such statements could be affected by risks and uncertainties related to:

- the cost, timing, and results of our pre-clinical and clinical trials;
- our ability to raise funds for general corporate purposes and operations, including our pre-clinical and clinical trials;
- our ability to apply for, obtain and maintain required regulatory approvals for our product candidates;
- the commercial feasibility and success of our technology and our product candidates;
- our ability to recruit qualified management and technical personnel to carry out our operations;
- our ability to realize some or all of the benefits expected to result from the anticipated spinoff of Citius Oncology, Inc., or the delay of such benefits;
- our ongoing businesses may be adversely affected and subject to certain risks and consequences as a result of the anticipated spinoff transaction; and
- the other factors discussed in the “Risk Factors” section and elsewhere in this report.

Any forward-looking statements speak only as of the date on which they are made, and, except as may be required under applicable securities laws, we do not undertake any obligation to update any forward-looking statement to reflect events or circumstances after the filing date of this report.

SUMMARY OF RISK FACTORS

An investment in our securities involves a high degree of risk. You should carefully consider the risks summarized in Item 1A, “Risk Factors” included in this report. These risks include, but are not limited to, the following:

- We have a history of net losses and expect to incur losses for the foreseeable future. We may never generate revenues or, if we are able to generate revenues, achieve profitability.
- Our independent registered public accounting firm’s report includes an explanatory paragraph stating that there is substantial doubt about our ability to continue as a going concern.
- While we believe we have sufficient funds on hand to complete the regulatory development and commercially launch LYMPHIR, delays in our anticipated submission of the BLA for LYMPHIR, issues raised by the FDA after resubmission or other factors could increase the cost to develop and launch LYMPHIR, which we expect would require us to obtain additional capital to complete those efforts.
- We need to secure additional financing in the near future to complete the development of our other current product candidates and support our operations.
- We are primarily a late-stage development company with an unproven business strategy and may never achieve commercialization of our therapeutic product candidates or profitability.
- We have a limited operating history upon which to evaluate our ability to successfully commercialize our product candidates.
- We may choose not to continue developing any of our product candidates at any time during development, which would reduce or eliminate our potential return on investment for those product candidates.
- We face significant risks in our product candidate development efforts.
- We may be required to make milestone payments to the licensor and former licensee of the LYMPHIR intellectual property in connection with its development and commercialization of LYMPHIR, which could adversely affect the profitability of LYMPHIR, if approved.
- While our business strategy generally is to focus on the development of late-stage product candidates to lessen the development risk, there is still significant risk to successfully developing a product candidate.
- The results of pre-clinical studies and completed clinical trials are not necessarily predictive of future results, and our current product candidates may not have favorable results in later studies or trials.
- If we are unable to file for approval of Mino-Lok or Halo-Lido under Section 505(b)(2) of the Federal Food, Drug and Cosmetic Act, or if we are required to generate additional data related to safety and efficacy under Section 505(b)(2), we may be unable to meet our anticipated development and commercialization timelines.
- Because our NoveCite product candidate is based on novel mesenchymal stem cell technologies, it is difficult to predict the regulatory approval process and the time, the cost and our ability to successfully initiate, conduct and complete clinical development, and obtain the necessary regulatory and reimbursement approvals, required for commercialization of our NoveCite product candidate.
- NoveCite has assumed that the biological capabilities of iPSCs and adult-donor derived cells are likely to be comparable. If it is discovered that this assumption is incorrect, the NoveCite product candidate research and development activities could be harmed.
- Even if we receive regulatory approval to commercialize a product candidate, that product may not gain market acceptance among physicians, patients, healthcare payers or the medical community and may not generate significant revenue.
- Even if approved for marketing by applicable regulatory bodies, we will not be able to create a market for any of our product candidates if we fail to establish marketing, sales, and distribution capabilities, either on our own or through arrangements with third parties.

- The markets in which we operate are highly competitive and we may be unable to compete successfully against new entrants or established companies.
- Our ability to generate product revenues will be diminished if any of our product candidates that may be approved sell for inadequate prices or patients are unable to obtain adequate levels of reimbursement.
- We are and will be dependent on third-party CROs to conduct all of our clinical trials.
- We rely exclusively on third parties to formulate and manufacture our product candidates.
- Any termination, or breach by, or conflict with our strategic partners could harm our business.
- We rely on the significant experience and specialized expertise of our executive management and other key personnel and the loss of any of our executive management or key personnel or our inability to successfully hire their successors could harm our business.
- We expect to need to increase the size of our organization to further develop our product candidates, and we may experience difficulties in managing growth.
- We plan to grow and develop our business through acquisitions of or investment in new or complementary businesses, products or technologies, and the failure to manage these acquisitions or investments, or the failure to integrate them with our existing business, could have a material adverse effect on us.
- We might not obtain the necessary U.S. or foreign regulatory approvals to commercialize any product candidates.
- Following any regulatory approval of any product candidate, we will be subject to ongoing regulatory obligations and restrictions, which may result in significant expense and limit our ability to commercialize our other product candidates.
- We could be forced to pay substantial damage awards if product liability claims that may be brought against us are successful.
- Our business depends on protecting our intellectual property.
- The anticipated spinoff of our LYMPHIR asset is dependent on market conditions, customary closing conditions, and other factors out of our control. Consequently, there can be no assurance regarding the ultimate timing of the proposed transaction or that the transaction will be completed at all.
- We may be unable to achieve some or all of the benefits that we expect to achieve from the spinoff.
- Even after the completion of the Business Combination, the Combined Company will require substantial additional funding, which may not be available on acceptable terms, or at all.
- We share some directors, officers, and research staff with NoveCite and Citius Oncology. The dual roles of our employees, officers and directors who also serve in similar roles with NoveCite and/or Citius Oncology could create a conflict of interest, which could expose us to claims by our investors and creditors and could harm our results of operations.
- A distribution in connection with or following the spinoff could result in substantial tax liability to us and our stockholders.
- Our failure to maintain compliance with Nasdaq's continued listing requirements could result in the delisting of our common stock.
- You may experience dilution of your ownership interests because of the future issuance of additional shares of our common stock or securities convertible into common stock.
- Under our Certificate of Incorporation, our Board of Directors has the authority to issue up to 10,000,000 shares of preferred stock and to fix and determine the relative rights and preferences of any such preferred stock without further stockholder approval. As a result, our Board of Directors could authorize the issuance of one or more series of preferred stock that would grant preferential rights over our common stock.
- We have not paid cash dividends in the past and we do not expect to pay cash dividends in the foreseeable future. Any return on investment may be limited to the capital appreciation, if any, of our common stock.
- Provisions in our Amended and Restated Articles of Incorporation, as amended, and under Nevada law could discourage a takeover that stockholders may consider favorable and may lead to entrenchment of management.

PART I

Item 1. Business

Overview

Citius Pharmaceuticals, Inc. (“Citius Pharma”, and together with its subsidiaries, the “Company” or “we”), headquartered in Cranford, New Jersey, is a late-stage pharmaceutical company dedicated to the development and commercialization of first-in-class critical care products with a focus on oncology, anti-infectives in adjunct cancer care, unique prescription products and stem cell therapy. Our goal generally is to achieve leading market positions by providing therapeutic products that address unmet medical needs yet have a lower development risk than usually is associated with new chemical entities. New formulations of previously approved drugs with substantial existing safety and efficacy data are a core focus. We seek to reduce development and clinical risks associated with drug development, yet still focus on innovative applications. Our strategy centers on products that have intellectual property and regulatory exclusivity protection, while providing competitive advantages over other existing therapeutic approaches.

The Company was founded as Citius Pharmaceuticals, LLC, a Massachusetts limited liability company, on January 23, 2007. On September 12, 2014, Citius Pharmaceuticals, LLC entered into a Share Exchange and Reorganization Agreement, with Citius Pharma (formerly Trail One, Inc.), a publicly traded company incorporated under the laws of the State of Nevada. Citius Pharmaceuticals, LLC became a wholly-owned subsidiary of Citius Pharma. On March 30, 2016, Citius Pharma acquired Leonard-Meron Biosciences, Inc. (“LMB”) as a wholly-owned subsidiary. LMB was a pharmaceutical company focused on the development and commercialization of critical care products with a concentration on anti-infectives. On September 11, 2020, we formed NoveCite, Inc. (“NoveCite”), a Delaware corporation, of which we own 75% of the issued and outstanding capital stock. NoveCite is focused on the development and commercialization of its proprietary mesenchymal stem cells for the treatment of acute respiratory disease syndrome (“ARDS”).

On August 23, 2021, we formed Citius Oncology, Inc. (formerly Citius Acquisition Corp.) (“Citius Oncology”) as a wholly-owned subsidiary in conjunction with the acquisition of LYMPHIRTM, but Citius Oncology did not begin operations until April 2022, when Citius Pharma transferred the assets related to LYMPHIR to Citius Oncology, including the related license agreement with Eisai Co., Ltd. (“Eisai”) and the related asset purchase agreement with Dr. Reddy’s Laboratories SA, a subsidiary of Dr. Reddy’s Laboratories, Ltd. (collectively, “Dr. Reddy’s”). Since its inception, Citius Pharma has funded Citius Oncology, and Citius Pharma and Citius Oncology are party to a shared services agreement, which governs certain management and scientific services that Citius Pharma provides Citius Oncology.

Since its inception, the Company has devoted substantially all of its efforts to business planning, acquiring our proprietary technology, research and development, recruiting management and technical staff, and raising capital. We are developing five proprietary products: LYMPHIR, in-licensed in September 2021 (now owned by Citius Oncology), an engineered IL-2 diphtheria toxin fusion protein, for the treatment of patients with persistent or recurrent cutaneous T-cell lymphoma (“CTCL”); Mino-Lok, an antibiotic lock solution used to treat patients with catheter-related bloodstream infections by salvaging the infected catheter; Halo-Lido, a corticosteroid-lidocaine topical formulation that is intended to provide anti-inflammatory and anesthetic relief to persons suffering from hemorrhoids; Mino-Wrap, a liquifying gel-based wrap for reduction of tissue expander infections following breast reconstructive surgeries; and NoveCite, a mesenchymal stem cell therapy for the treatment of ARDS. We believe these unique markets for our products are large, growing, and underserved by the current prescription products or procedures.

We are subject to a number of risks common to companies in the pharmaceutical industry including, but not limited to, risks related to the development by us or our competitors of research and development stage products, market acceptance of its products that receive regulatory approval, competition from larger companies, dependence on key personnel, dependence on key suppliers and strategic partners, the Company’s ability to obtain additional financing and the Company’s compliance with governmental and other regulations.

Recent Developments

As previously disclosed, on October 23, 2023, Citius Pharma and Citius Oncology entered into an agreement and plan of merger and reorganization (the “Merger Agreement”) with TenX Keane Acquisition, a Cayman Islands exempted company (“TenX”), and TenX Merger Sub Inc., a Delaware corporation and a wholly owned subsidiary of TenX (“Merger Sub”). The Merger Agreement provides, among other things, (i) on the terms and subject to the conditions set forth therein, that Merger Sub will merge with and into Citius Oncology, with Citius Oncology to be renamed and to survive as a wholly owned subsidiary of TenX (the “Merger”), and (ii) that prior to the effective time of the Merger (the “Effective Time”), TenX will migrate to and domesticate as a Delaware corporation in accordance with Section 388 of the General Corporation Law of the State of Delaware and the Cayman Islands Companies Act (As Revised) (the “Domestication”). The newly combined publicly traded company is to be named “Citius Oncology, Inc.” (the “Combined Company”). The Domestication, Merger and the other transactions contemplated by the Merger Agreement are referred to herein as the “Business Combination”.

In the Merger, all shares of Citius Oncology would be converted into the right to receive common stock of the Combined Company. As a result, upon closing, Citius Pharma would receive 67.5 million shares of common stock of the Combined Company which, at an implied value of \$10.00 per share, would be \$675 million in equity of the Combined Company, before fees and expenses. As part of the transaction, Citius Pharma will contribute \$10 million in cash to the Combined Company. An additional 12.6 million existing options will be assumed by the Combined Company. Citius Pharma and the Combined Company will also enter into an amended and restated shared services agreement, which, among other things, will govern certain management and scientific services that Citius Pharma will continue to provide to the Combined Company following the Effective Time.

The Merger Agreement, Business Combination and the transactions contemplated thereby were unanimously approved by the boards of directors of each of Citius Pharma, Citius Oncology and TenX. The transaction is expected to be completed in the first half of 2024, subject to approval by stockholders of TenX and other customary closing conditions, including final regulatory approvals and SEC filings. There can be no assurance regarding the ultimate timing of the proposed transaction or that the transaction will be completed at all.

LYMPHIR™ (denileukin diftitox-cdxi)

Overview

In September 2021, the Company announced that it had entered into an asset purchase agreement with Dr. Reddy’s to acquire its exclusive license of E7777 (denileukin diftitox), a late-stage oncology immunotherapy for the treatment of CTCL, a rare form of non-Hodgkin lymphoma. Dr. Reddy’s had previously licensed E777 to Eisai and as part of the transaction, Eisai entered into a license agreement whereby Eisai assigned all of its rights to E7777 to Citius Pharma. In April 2022, Citius Pharma transferred the assets related to E7777 to Citius Oncology, including the related license agreement with Eisai and the related asset purchase agreement with Dr. Reddy’s. Renamed LYMPHIR, E7777 is an improved formulation of ONTAK®, which was previously approved by the United States Food and Drug Administration (“FDA”) marketed for the treatment of patients with persistent or recurrent CTCL. At times in this annual report on Form 10-K, LYMPHIR may be referred as E7777.

LYMPHIR is recombinant DNA-derived fusion protein designed to direct the cytotoxic action of diphtheria toxin (DT) to cells which express the IL-2 receptor. After uptake into the cell, the DT fragment is cleaved and the free DT fragments inhibit protein synthesis, resulting in cell death. Consequently, LYMPHIR’s differentiated mechanism of action supports two therapeutic effects: (i) killing tumors by binding to IL-2 receptors to deliver diphtheria toxin directly to the tumor cells, and (ii) depleting immunosuppressive regulatory T lymphocytes (Tregs) to enhance antitumor activity.

Phase 3 Trial (E7777-G000-302) Design

In 2013, a global, multicenter, open label single arm pivotal clinical trial for the treatment of patients with persistent or recurrent CTCL was initiated. Inclusion criteria for the study were to evaluate patients in advanced stage CTCL (Mycosis Fungoides or Sézary Syndrome), who received at least one prior CTCL therapy.

The pivotal trial was divided into two phases, a lead-in phase with 21 subjects that evaluated dose finding, pharmacokinetics and immunogenicity, and assessed the Objective Response Rate (the “ORR”). An ORR is defined as a greater than 50% reduction in tumor burden. Patients received a daily intravenous infusion of denileukin diftitox from Day 1 through Day 5 of each 21-day cycle.

Based on safety, tolerability, and efficacy data of the lead-in phase, 9 mcg/kg/dose was selected for the main phase of the study. No new safety signals were identified compared to ONTAK. In addition, an ORR of 38.1% in the intent to treat population and 44.4% in the efficacy evaluable populations were observed. In the second and main phase of the pivotal trial, 70 patients were administered the 9 mcg/kg/dose rate for 5 consecutive days in 21-day cycles. The inclusion criteria were identical to the lead-in study and the primary objective was to evaluate the ORR.

Phase 3 Trial Efficacy & Safety Results

The efficacy population of the main study includes 69 patients with relapsed or refractory stage I to III CTCL. Of the 69 patients, the median age was 64 years (range: 28 to 87 years), 65% were male, 73% were White, 19% Black or African American, 1% Asian, and 14% Hispanic or Latino. The CTCL disease stage was IA in 7%, IB in 23%, IIA in 13%, IIB in 35%, IIIA in 12%, and IIIB in 10%. The median number of prior therapies was 4 (range: 1 to 18), including both skin-directed and systemic therapies. Prior therapies included photodynamic therapy (56%), total skin electron beam therapy (42%), systemic retinoids (49%), methotrexate/pralatrexate (49%), histone deacetylase inhibitor (35%), brentuximab vedotin (26%) and mogamulizumab (12%).

Efficacy was established based on ORR, according to ISCL/EORTC Global Response Score (GRS) per Independent Review Committee (Olsen 2011). Efficacy results are shown in the table below.

Efficacy Results of E7777-G000-302	LYMPHIR 9 mcg/kg/day (N = 69)
ORR (GRS)% ^a	36%
(95% CI) ^b	(25, 49)
Complete Response	9%
Partial Response	27%
Duration of Response	
Median (range), months	6.5 (3.0 +, 23.5 +)
Duration ≥ 6 months, n (%)	52%
Median Time to Response, months	1.4
(95% CI) ^b	(0.7, 5.6)

a) ORR, Objective Response Rate per Olsen, et al (2011) Global Response Score (GRS), by Independent Review Committee (IRC)

b) CI = confidence interval

Overall, LYMPHIR was well-tolerated with the use of pre-medications, close patient monitoring, and prompt initiation of supportive measures and drug management. There was no evidence of cumulative toxicity and most patients experienced low grade 1 or 2 treatment emergent adverse events.

Serious adverse reactions occurred in 38% of patients who received LYMPHIR. Serious adverse reactions in > 2% of patients included capillary leak syndrome (10%), infusion-related reaction (9%), sepsis (7%), skin infection (2.9%), pyrexia (2.9%), and rash (2.9%).

**Adverse Reactions (≥ 10%) in Patients with Relapsed or Refractory Stage I-III CTCL Who Received
LYMPHIR in E7777-G000-302**

Adverse Reaction	LYMPHIR N = 69

(a) Includes fatigue, asthenia, and lethargy.

(b) Includes edema, edema peripheral generalized edema, face edema, swelling face, peripheral swelling.

(c) Includes fever, pyrexia, tumor associated fever.

(d) Includes musculoskeletal pain, back pain, neck pain, pain in extremity, myalgia, bone pain, flank pain.

(e) Includes arthralgia, joint swelling, joint range of motion decreased, musculoskeletal stiffness.

(f) Includes headache, migraine.

(g) Includes mental status changes, amnesia, confusional state, delirium, altered state of consciousness, hallucinations (including auditory), memory impairment, disturbance in attention, somnolence, cognitive disorder.

(h) Includes rash, dermatitis, drug eruption, erythema, palmar erythema, toxic skin eruption, rash maculo-papular, rash opular, rash pustular, rash pruritic, dermatitis exfoliative generalized, acute generalized exanthematous pustulosis.

(i) Includes pruritis, itching.

(j) Includes vision blurred, photopsia, visual impairment.

(k) Includes skin infection, skin bacterial infection, staphylococcal skin infection, cellulitis, impetigo.

(l) Includes renal failure, nephropathy, acute kidney injury, blood creatinine increased, renal impairment.

Investigator Initiated Trials

We believe there is an opportunity in the field of immuno-oncology and have undertaken two investigator-initiated trials to evaluate the potential safety and efficacy of LYMPHIR for potential as an immuno-oncology combination therapy.

A Phase 1 trial was initiated in June 2021 at the University of Minnesota, Masonic Cancer Center. This study is a single-arm open-label trial which has an estimated enrollment of 20 participants who will be administered denileukin diftitox prior to Chimeric Antigen Receptor, (“CAR-T”) therapies. The Phase 1 study consists of two components: dose finding to establish a maximum tolerated dose (“MTD”) of denileukin diftitox in combination with CART-T therapies, and an extension component to provide an estimate of efficacy at that MTD. (Title: Phase I/II Trial Using E7777 to Enhance Regulatory T-Cell Depletion Prior to CAR-T Therapy for Relapsed/Refractory B-Cell Lymphoma (DLBCL). NCT04855253)

A second Phase 1 Study was initiated in September 2022 at the University of Pittsburgh Medical Center, Hillman Cancer Center. This study is an open-label, Phase 1/1b study to investigate the safety and efficacy of a combined regimen of pembrolizumab with T-regulatory cell depletion and denileukin diftitox in patients diagnosed with recurrent or metastatic solid tumors in the second line setting. (Title: The efficacy of T-regulatory cell depletion with E7777 combined with immune checkpoint inhibitor, pembrolizumab, in recurrent or metastatic solid tumors: Phase I/II Study. NCT05200559).

The study consists of two parts. Part I is a dose escalation study of four cohorts (3,6,9,12 mcg of LYMPHIR) and is expected to enroll 18-30 patients. Part II is a dose expansion study of approximately 40 patients to evaluate the safety and tolerability of the recommended combination dose of LYMPHIR and pembrolizumab (to include ovarian cancer and MSI-H cancer cohorts). The study will also investigate the alteration of the immune microenvironment within tumors and peripheral blood. Secondary endpoints include the objective response (complete response plus partial response), progression-free survival, and overall survival.

Regulatory Development

In the 1990’s, denileukin diftitox was developed at Boston University and the National Cancer Institute (“NCI”) in collaboration with Seragen, Inc.

In 1999, ONTAK® (denileukin diftitox) was granted accelerated approval by the FDA for the treatment of persistent or recurrent CTCL. Ligand Pharmaceuticals, Inc. (“Ligand”) acquired the marketing rights in that same year.

In 2006, Eisai acquired the commercial rights to ONTAK from Ligand.

In 2008, the FDA granted full approval to ONTAK for CTCL.

In 2011, a new formulation of denileukin diftitox was developed under the code name E7777 in response to a post-marketing condition established by the FDA upon approval. As the FDA considered this a new product, an Investigational New Drug Application (“IND”) was filed. As a part of ensuing discussions, the FDA agreed to a development plan that included a single arm, open label study to confirm the safety and efficacy of E7777 and a chemistry, manufacturing, and controls (“CMC”) development plan that demonstrates the new process results in a comparable drug product.

In 2011, the FDA Office of Orphan Products Development granted E7777 orphan drug designation status for the treatment of Peripheral T-Cell Lymphoma (“PTCL”). In 2013, the FDA Office of Orphan Products Development granted E7777 orphan drug designation status for the treatment of CTCL.

In 2013, the first patient was enrolled into the lead-in phase of the pivotal study for the E7777 United States (“U.S.”) CTCL clinical trial.

In 2014, commercial sales of ONTAK were discontinued when the product was voluntarily withdrawn from the market due to manufacturing issues at the contract manufacturer.

In 2015, the last patient enrolled exited the lead-in phase of the E7777 U.S. CTCL clinical trial.

In March 2016, Dr. Reddy’s acquired the global rights to E7777 from Eisai, other than far east countries, with Eisai retaining the rights in those countries.

In June 2016, the first patient was enrolled in the main phase of the Phase 3 U.S. CTCL clinical trial for E7777.

In March 2020, Eisai filed an NDA for E7777 in Japan for both CTCL and PTCL, and in March 2021 received approvals in both indications.

In September 2021, Citius Pharma acquired the marketing rights to E7777 in selected markets. Citius Pharma subsequently renamed E7777 as LYMPHIR.

In December 2021, patient enrollment for the Phase 3 Pivotal study of E7777 was completed.

In April 2022, we reported that topline results from the Phase 3 trial were consistent with the prior formulation. Moreover, no new safety signals were identified.

In December 2022, a biologics license application (“BLA”) for LYMPHIR was accepted for filing with the FDA and a PDUFA goal date was set for July 28, 2023.

In July 2023, the FDA issued a complete response letter requiring us to incorporate enhanced product testing and additional controls agreed to with the FDA during the market application review. There were no concerns relating to the safety and efficacy clinical data package submitted with the BLA, or the proposed prescribing information.

In September 2023, we announced that the FDA has agreed with the plans to address the requirements outlined in the complete response letter, which guidance has provided the Company with a path for completing the necessary activities to support the resubmission of the BLA for LYMPHIR.

Market Opportunity

CTCL’s are a heterogeneous subset of extranodal non-Hodgkin lymphomas (“NHL”) of mature, skin-homing T-cells that are mainly localized to the skin. The most common types of CTCL are mycosis fungoides (“MF”) and primary cutaneous CD30+ anaplastic large cell lymphoma (pcALCL), jointly representing an estimated 80 to 85% of all CTCL. Sézary Syndrome (“SS”), a very rare subtype (~2 to 5% of CTCL) characterized by diffuse inflammatory, often exfoliative, erythroderma and by leukemic and nodal involvement, displays a significant degree of clinical and biological overlap with MF and has long been considered a clinical variant of MF, although recent evidence suggests that it may be a separate entity. The rest is represented by extremely rare, generally more aggressive subtypes. In light of the overlap between MF and SS, and considering that many of the systemic therapy options for the two neoplasms are the same, some consider the treatment approach to MF and SS as if they were a single disease entity (MF/SS). However, some of the drugs currently in use, or in development, for MF/SS appear to be more effective in clearing different anatomical compartments (skin versus blood, for example) and therefore have differential efficacy in MF and SS.

Based on Surveillance Epidemiology and End Results (SEER) data from 2001 to 2007, the estimated incidence rate of MF/SS in the U.S. is 0.5/100,000 or about 2,500 to 3,000 new cases per year representing about 25% of all T-cell lymphomas.

In total, the Company estimates that there are approximately 30,000 to 40,000 patients living with CTCL in the U.S.

Based on internal estimates, the Company believes the addressable U.S. market for LYMPHIR exceeds \$400,000,000 and may further expand with the introduction of a new therapeutic.

Proposed Spinoff

In May 2022, we announced that we intend to split the Company's assets into two separate publicly traded entities (the "Spinoff"). Pursuant to that plan we formed a new company focused on developing and commercializing LYMPHIR. Our other pipeline assets, including Mino-Lok, remain at Citius Pharma. Following the Spinoff, Citius Pharma would continue to trade on the Nasdaq Capital Market exchange under its current ticker CTXR. The strategic action is intended to optimize organizational resources and investment capital to support the successful execution of each development program.

As discussed above, in October 2023, the Company announced that we entered into the Merger Agreement, dated October 23, 2023, for a proposed merger whereby TenX would acquire Citius Oncology. Following closing, the Combined Company would continue as a public company listed on the Nasdaq Global Market. The transaction is expected to be completed in the first half of 2024, subject to approval by stockholders of TenX and other customary closing conditions, including compliance with the Nasdaq initial listing requirements, final regulatory approvals, and SEC filings. There can be no assurance regarding the ultimate timing of the proposed transaction or that the transaction will be completed at all.

Mino-Lok®

Overview

Mino-Lok is a patented solution containing minocycline, disodium ethylenediaminetetraacetic acid (edetate), and ethyl alcohol, all of which act synergistically to treat and salvage infected central venous catheters ("CVCs") in patients with catheter related bloodstream infections ("CRBSIs"). Mino-Lok breaks down biofilm barriers formed by bacterial colonies, eradicates the bacteria, and provides anti-clotting properties to maintain patency in CVCs.

The administration of Mino-Lok consists of filling the lumen of the catheter with 0.8 ml to 2.0 ml of Mino-Lok solution. The catheter is then "locked", meaning that the solution remains in the catheter without flowing into the vein. The lock is maintained for a dwell-time of two hours while the catheter is not in use. If the catheter has multiple lumens, all lumens may be locked with the Mino-Lok solution either simultaneously or sequentially. If patients are receiving continuous infusion therapy, the catheters alternate between being locked with the Mino-Lok solution and delivering therapy. The Mino-Lok therapy is two hours per day for at least five days, usually with two additional locks in the subsequent two weeks. After locking the catheter for two hours, the Mino-Lok solution is aspirated, and the catheter is flushed with normal saline. At that time, either the infusion will be continued, or will be locked with the standard-of-care lock solution until further use of the catheter is required. In a clinical study conducted by MD Anderson Cancer Center ("MDACC"), there were no serum levels of either minocycline or edetate detected in the sera of several patients who underwent daily catheter lock solution with minocycline and edetate ("M-EDTA") at the concentration level proposed in Mino-Lok treatment. Thus, it has been demonstrated that the amount of either minocycline or edetate that leaks into the serum is very low or none at all.

Phase 2b Results

From April 2013 to July 2014, 30 patients with CVC-related bloodstream infection were enrolled at MDACC in a prospective Phase 2b study. Patients received Mino-Lok therapy for two hours once daily for a minimum of five days within the first week, followed by two additional locks within the next two weeks. Patients were followed for one month post-lock therapy. Demographic information, clinical characteristics, laboratory data, therapy, as well as adverse events and outcome were collected for each patient. Median age at diagnosis was 56 years (range: 21-73 years). In all patients, prior to the use of lock therapy, systemic treatment with a culture-directed, first-line intravenous antibiotic was started. Microbiological eradication was achieved at the end of therapy in all cases. None of the patients experienced any serious adverse event related to the lock therapy.

The active arm, which is the Mino-Lok treated group of patients, was then compared to 60 patients in a matched cohort that experienced removal and replacement of their CVCs within the same contemporaneous timeframe. The patients were matched for cancer type, infecting organism, and level of neutropenia. All patients were cancer patients and treated at MDACC. The efficacy of Mino-Lok therapy was 100% in salvaging CVCs, demonstrating equal effectiveness to removing the infected CVC and replacing it with a new catheter.

The main purpose of the study was to show that Mino-Lok therapy was at least as effective as the removal and replacement of CVCs when CRBSIs are present, and that the safety was better, that is, the complications of removing an infected catheter and replacing with a new one could be avoided. In addition to having a 100% efficacy rate with all CVCs being salvaged, Mino-Lok therapy had no significant adverse events (“SAEs”), compared to an 18% SAE rate in the matched cohort where patients had the infected CVCs removed and replaced with a fresh catheter. There were no overall complication rates in the Mino-Lok arm group compared to 11 patients with events (18%) in the control group. These events included bacterial relapse (5%) at four weeks post-intervention, and a number of complications associated with mechanical manipulation in the removal or replacement procedure for the catheter (10%) or development of deep-seated infections such as septic thrombophlebitis and osteomyelitis (8%). As footnoted, six patients had more than one complication in the control arm group.

Parameter	Mino-Lok® Arm		Control Arm	
	N	(%)	N	(%)%
Patients	30	(100)%	60	(100)%
Cancer type				
- Hematologic	20	(67)	48	(80)
- Solid tumor	10	(33)	12	(20)
ICU Admission	4	(13)	4	(7)
Mech.Ventilator	3	(10)	0	(0)
Bacteremia				
- Gram+	17	(57)*	32	(53)
- Gram-	14	(47)*	28	(47)
Neutropenia (<500)	19	(63)	36	(60)
Microbiologic Eradication	30	(100)	60	(100)
- Relapse	0	(0)	3	(5)
Complications	0	(0)	8	(13)
SAEs related R&R	0	(0)	6	(10)
Overall Complication Rate	0	(0)%	11**	(18)%

* 1 Polymicrobial patient had a Gram+ and a Gram- organism cultured

** 6 Patients had > 1 complication

Phase 3 Trial

In November 2016, the Company initiated site recruitment for Phase 3 clinical trials. From initiation through the first quarter of 2017, the Company received input from several sites related to the control arm as being less than standard-of-care for some of the respective institutions. The Company worked closely with the FDA with respect to the design of the Phase 3 trial and received feedback on August 17, 2017. The FDA stated that they recognized that there is an unmet medical need in salvaging infected catheters and agreed that an open label, superiority design would address the Company’s concerns and would be acceptable to meet the requirements of a new drug application. The Company amended the Phase 3 study design to remove the saline and heparin placebo control arm and to use an active control arm that conforms with today’s current standard-of-care. Patient enrollment commenced in February 2018.

The Mino-Lok Phase 3 Trial was originally planned to enroll 700 patients in 50 participating institutions, all located in the U.S. There were interim analyses at both the 50% and 75% points of the trial as measured by the number of patients treated.

In September 2019, the Company announced that the FDA agreed to a new primary efficacy endpoint of “time to catheter failure” in comparing Mino-Lok to the antibiotic lock control arm. This change in the trial design reduced the required patient sample size of the trial from 700 subjects to approximately 144 available subjects to achieve the pre-specified 92 catheter failure events needed to conclude the trial. Additionally, the Company submitted a response to the FDA that it would implement this change in the primary endpoint and expected it to result in less than 150 subjects needed in its Phase 3 trial. The new primary endpoints require that the time to catheter failure be at least 38 days for Mino-Lok versus 21 days for the standard of care antibiotic locks.

In October 2019, the FDA agreed that the patient sample size of approximately 144 patients was acceptable.

In October 2019, the Company announced that the Phase 3 trial had reached the 40% completion triggering an interim futility analysis by the data monitoring committee (the “DMC”). The DMC is an independent panel of experts that review progress regarding the safety and efficacy of drugs in clinical trials, and to determine if the trial may be futile in achieving its endpoints or if the trial should be modified in any way.

In December 2019, the DMC convened and recommended that the trial continue with no changes because the analysis showed a positive outcome, as it met the prespecified interim futility analysis criteria.

In May 2020, we announced that we are providing free access to Mino-Lok for healthcare providers under an Expanded Access protocol to ease the burden associated with the COVID-19 pandemic. Through the Expanded Access protocol, an infected central venous catheter can now be treated with Mino-Lok, potentially avoiding the need for the removal and replacement procedure.

In June 2020, we announced that we had received positive feedback from the FDA on our proposed catheter compatibility studies for Mino-Lok. The studies, if and when successfully completed, should allow Mino-Lok to be labeled for use with all commercially available CVCs and peripherally inserted central catheters (PICCs) on the U.S. market. We further assume that these studies will meet European and world standards. The ability to be labeled without restrictions with respect to catheter type would allow Mino-Lok unrestricted access to the full U.S. and world markets for an effective antibiotic lock therapy for central line associated blood stream infections (“CLABSIs”).

In September 2020, we announced that another DMC meeting was held to review the data being generated and analyzed in the Mino-Lok Phase 3 trial based on progress to date, and to make recommendations to us as to any action that may be necessary regarding the study. After reviewing these data, the DMC members stated that they did not find any safety signals; and they also recommended continuing the trial without any modifications. The DMC further conducted an *ad hoc* meeting and agreed with the Company that a 75% interim analysis be conducted as planned in which superior efficacy is evaluated. The 75% interim analysis was subsequently changed to a 65% interim analysis by the Company.

In September 2020, the Company announced that the three registration batches for all components of Mino Lok were manufactured and that clinical sites were resupplied with registration product.

In November 2020, the Company announced that the three components of Mino-Lok, minocycline, disodium edetate (“EDTA”), and ethanol, were superior to EDTA and ethanol in their ability to eradicate resistant staphylococcal biofilms.

The 65% interim analysis was completed in June 2021. In July 2021, the Company announced that following an unblinded data review of safety and efficacy, the independent DMC for the trial recommended proceeding with the trial as planned. The DMC did not identify any safety concerns and no modifications were recommended to the protocol-defined sample size or power to achieve the primary endpoint.

In May 2022, the Company selected Biorasi, LLC (“Biorasi”), a global clinical research organization (“CRO”), to help expand the Company’s Phase 3 Mino-Lok trial by implementing additional sites outside the U.S. As of December 15, 2023, there are 12 active sites in the U.S. currently including such academic centers as Henry Ford Health Center, Georgetown University Medical Center, and others. There currently are 16 sites active in India, making a total of 28 participating Mino-Lok institutions globally.

In August 2023, the Company announced all 92 events required to complete the trial have been achieved. Several patients remain in active treatment, which may result in additional events.

In late December 2023, the Company determined that patient enrollment for the Mino-Lok trial was complete and that it would begin site shutdown activities. Topline results are anticipated in the first half of 2024.

Fast Track Designation

In October 2017, the Company received official notice from the FDA that the investigational program for Mino-Lok was granted “Fast Track” status. Fast Track is a designation that expedites FDA review to facilitate development of drugs which treat a serious or life-threatening condition and fill an unmet medical need. A drug that receives Fast Track designation is eligible for the following:

- More frequent meetings with the FDA to discuss the drug’s development plan and ensure collection of appropriate data needed to support drug approval;
- More frequent written correspondence from the FDA about the design of the clinical trials;
- Priority review to shorten the FDA review process for a new drug from ten months to six months; and
- Rolling review, which means we can submit completed sections of our New Drug Application (“NDA”) for review by the FDA, rather than waiting until every section of the application is completed before the entire application can be submitted for review.

Mino-Lok International Study

In October 2017, data from an international study on Mino-Lok was presented at the Infectious Disease Conference, (“ID Week”), in San Diego, California. The 44-patient study was conducted in Brazil, Lebanon and Japan and showed Mino-Lok therapy was an effective intervention to salvage long-term, infected CVCs in CRBSIs in patients who had cancer with limited vascular access. This study showed 95% effectiveness for Mino-Lok therapy in achieving microbiological eradication of the CVCs as compared to 83% for the control. The single failure in the Mino-Lok arm was due to a patient with *Burkholderia cepacia* that was resistant to all antibiotics tested.

Stability Patent Application for Mino-Lok

In October 2018, the U.S. Patent and Trademark Office (“USPTO”) issued U.S. Patent No. 10,086,114, entitled “Antimicrobial Solutions with Enhanced Stability.” On October 9, 2019, the European Patent Office (“EPO”) granted European Patent No. 3370794, entitled “Antimicrobial Solutions with Enhanced Stability.” The grant of this European patent strengthens the intellectual property protection for Mino-Lok through November of 2036. This invention overcomes limitations in mixing antimicrobial solutions in which components have precipitated because of physical and/or chemical factors, thus limiting the stability of the post-mix solutions. The scientists and technologists at MDACC have been able to improve the stability of the post-mixed solutions through adjustments of the post-mixed pH of the solution. This may allow for longer storage time of the ready-to-use solution. Citius Pharma holds the exclusive worldwide license which provides access to this patented technology for development and commercialization of Mino-Lok.

Market Opportunity

In spite of best clinical practice, catheters contribute to approximately 70% of blood stream infections that occur in the intensive care unit or are associated with hemodialysis or cancer patients (approximately 470,000 per year). Bacteria enter the catheter either from the skin or intraluminally through the catheter hub. Once in the catheter, bacteria tend to form a protective biofilm on the interior surface of the catheter that is resistant to most antimicrobial solutions. The most frequently used maintenance flush, heparin, actually stimulates biofilm formation. Heparin is widely used as a prophylactic lock solution, in spite of the evidence that it contributes to the promotion of biofilm formation. The formation of bacterial biofilm usually precedes CRBSIs.

The standard of care in the management of CRBSI patients consists of removing the infected CVC and replacing it with a new catheter at a different vascular access site. However, in cancer and hemodialysis patients with long-term surgically implantable silicone catheters, removal of the CVC and reinsertion of a new one at a different site might be difficult, or even impossible, because of the unavailability of other accessible vascular sites and the need to maintain infusion therapy. Furthermore, critically ill patients with short-term catheters often have underlying coagulopathy, which makes reinsertion of a new CVC at a different site, in the setting of CRBSIs, risky in terms of mechanical complications, such as pneumothorax, misplacement, or arterial puncture. Studies have also revealed that CRBSI patients may be associated with serious complications, including septic thrombosis, endocarditis and disseminated infection, particularly if caused by *Staphylococcus aureus* or *Candida* species. Furthermore, catheter retention in patients with CRBSIs is associated with a higher risk of relapse and poor response to antimicrobial therapy.

According to Maki et al., published in the *Mayo Clinic Proceedings* in 2006, there are approximately 250,000 CRBSIs annually in the U.S. Subsequent to this study, our estimates have ranged upwards to over 450,000 CLABSIs annually (see analysis in the table below). CRBSIs are associated with a 12% to 35% mortality rate and an attributable cost of \$35,000 to \$56,000 per episode.

We estimate that the potential market for Mino-Lok in the U.S. to be approximately \$500 million to \$1 billion as shown in the table below based on a target price of up to \$400 per dose of each salvage flush treatment.

	Short-Term CVC	Long-Term CVC	Total
No. of Catheters	3 million	4 million	7 million
Avg. Duration (Days)	12	100	N/A
Catheter Days	36 million	400 million	436 million
Infection Rate	2/1,000 days	1/1,000 days	N/A
Catheters Infected	72,000	400,000	472,000
Flushes/Catheter	5	7	6.7
Total Salvage Flushes	360,000	2,800,000	3,160,000

Sources: *Ann Intern Med* 2000; 132:391-402, *Clev Clin J Med* 2011; 78(1):10-17, *JAMA* 2007; 12(1):17-27, *J Inf Nurs* 2004;27(4):245-250, *Joint Commission website Monograph, CLABSI and Internal Estimates*.

Under various plausible pricing scenarios, we believe that Mino-Lok would be cost-saving to the healthcare system given that the removal of an infected CVC and replacement of a new catheter in a different venous access site is estimated by us to cost between \$8,000 and \$10,000. Furthermore, there are potential additional medical benefits, a reduction in patient discomfort and avoidance of serious adverse events with the Mino-Lok approach since the catheter remains in place and is not subject to manipulation. We believe there will be an economic argument to enhance the adoption of Mino-Lok by infection control committees at acute care institutions.

In January of 2017, we commissioned a primary market research study with MEDACore, a subsidiary of Leerink, a healthcare focused network with more than 35,000 healthcare professionals, including key opinion leaders, experienced practitioners and other healthcare professionals throughout North America, Europe, Asia and other locations around the world. This network includes approximately 55 clinical specialties, 21 basic sciences and 20 business specialties. As part of this market research project, we commissioned a third-party survey of 31 physicians to qualify the need for catheter salvage in patients with infected, indwelling central venous lines, especially when the catheter is a tunneled or an implanted port. There were 19 infectious disease experts and 12 intensivists surveyed who all agreed that salvage would be preferable to catheter exchange to avoid catheter misplacements, blood clots, or vessel punctures that can potentially occur during reinsertion. Most were also concerned that viable venous access may not be available in patients who were vitally dependent on a central line.

Halo-Lido

Overview

Halo-Lido is a topical formulation of halobetasol propionate, a corticosteroid, and lidocaine that is intended for the treatment of hemorrhoids. To our knowledge, there are currently no FDA-approved prescription drug products for the treatment of hemorrhoids. Some physicians are known to prescribe topical steroids for the treatment of hemorrhoids. In addition, there are various topical combination prescription products containing halobetasol propionate along with lidocaine or pramoxine, each a topical anesthetic, that are prescribed by physicians for the treatment of hemorrhoids. These products contain drugs that were in use prior to the start of the Drug Efficacy Study Implementation (“DESI”) program and are commonly referred to as DESI drugs. However, none of these single-agent or combination prescription products have been clinically evaluated for safety and efficacy and approved by the FDA for the treatment of hemorrhoids. Further, many hemorrhoid patients use over the counter (“OTC”) products as their first line therapy. OTC products contain any one of several active ingredients including glycerin, phenylephrine, pramoxine, white petrolatum, shark liver oil and/or witch hazel, for symptomatic relief.

Development of Hemorrhoids Drugs

Hemorrhoids are a common gastrointestinal disorder, characterized by anal itching, pain, swelling, tenderness, bleeding and difficulty defecating. In the U.S., hemorrhoids affect nearly 5% of the population, with approximately 10 million persons annually admitting to having symptoms of hemorrhoidal disease. Of these persons, approximately one third visit a physician for evaluation and treatment of their hemorrhoids. The data also indicate that for both sexes a peak of prevalence occurs from age 45 to 65 years with a subsequent decrease after age 65 years. Caucasian populations are affected significantly more frequently than African Americans, and increased prevalence rates are associated with higher socioeconomic status in men but not women. Development of hemorrhoids before age 20 is unusual. In addition, between 50% and 90% of the general U.S., Canadian and European population will experience hemorrhoidal disease at least once in life. Although hemorrhoids and other anorectal diseases are not life-threatening, individual patients can suffer from agonizing symptoms which can limit social activities and have a negative impact on the quality of life.

Hemorrhoids are defined as internal or external according to their position relative to the dentate line. Classification is important for selecting the optimal treatment for an individual patient. Accordingly, physicians use the following grading system referred to as the Goligher’s classification of internal hemorrhoids:

- Grade I Hemorrhoids not prolapsed but bleeding.
- Grade II Hemorrhoids prolapse and reduce spontaneously with or without bleeding.
- Grade III Prolapsed hemorrhoids that require reduction manually.
- Grade IV Prolapsed and cannot be reduced including both internal and external hemorrhoids that are confluent from skin tag to inner anal canal.

Development Activities to Date

In the fall of 2015, we completed dosing patients in a double-blind dose ranging placebo-controlled Phase 2a study where six different formulations containing hydrocortisone and lidocaine in various strengths were tested against the vehicle control. The objectives of this study were to: (1) demonstrate the safety and efficacy of the formulations when applied twice daily for two weeks in subjects with Grade I or II hemorrhoids, and (2) assess the potential contribution of lidocaine hydrochloride and hydrocortisone acetate, alone or in combination for the treatment of symptoms of Goligher’s Classification Grade I or II hemorrhoids.

Symptom improvement was observed based on a global score of disease severity (“GSDS”) and based on some of the individual signs and symptoms of hemorrhoids, specifically itching and overall pain and discomfort. Within the first few days of treatment, the combination products (containing both hydrocortisone and lidocaine) were directionally favorable versus the placebo and their respective individual active treatment groups (e.g., hydrocortisone or lidocaine alone) in achieving ‘almost symptom free’ or ‘symptom free’ status according to the GSDS scale. These differences suggested the possibility of a benefit for the combination product formulation. As a result of this study, we determined that the performance of the active arms of the study relative to the vehicle could be improved by re-formulating our topical preparation. Therefore, we initiated work on vehicle formulation and evaluation of higher potency steroids.

Overall, results from adverse event reporting support the safety profile of all test articles evaluated in this study and demonstrate similar safety profiles as compared to the vehicle. The safety findings were unremarkable. There was a low occurrence of adverse events and a similar rate of treatment related adverse events across all treatment groups. The majority of adverse events were mild and only one was severe. None of the adverse events were an SAE and the majority of adverse events were recovered/resolved at the end of the study. There were only two subjects who were discontinued from the study due to adverse events.

As part of this Phase 2 trial, information was obtained relating to the use of the GSDS as an assessment tool for measuring the effectiveness of the test articles. Individual signs and symptoms were also assessed but can vary from patient to patient. Therefore, the goal of the GSDS was to provide an assessment tool that could be used for all patients regardless of which signs and symptoms they are experiencing. The GSDS proved to be a more effective tool for assessing the severity of the disease and the effectiveness of the drug when compared to the assessment of the individual signs and symptoms.

We developed this assessment tool as well as other patient reported outcome endpoints for use in the recently begun Phase 2b trial and in subsequent trials. In June and July 2016, we engaged the Dominion Group, a leading provider of healthcare and pharmaceutical marketing research services. The primary market research was conducted to understand the symptoms that are most bothersome to patients better in order to develop meaningful endpoints for the clinical trials. We also learned about the factors that drive patients to seek medical attention for hemorrhoids in an effort to understand the disease impact on quality of life. The results of this survey, along with the information from the Phase 2b trial, allowed us to develop our patient reported outcome evaluation tool, ePro. This tool can be used in clinical trials to evaluate the patients’ conditions and to assess the performance of the test articles.

In March 2018, we announced that we had selected a higher potency corticosteroid in our steroid/anesthetic topical formulation program for the treatment of hemorrhoids. The original topical preparation, which we referred to as Hydro-Lido or CITI-001, which was used in the Phase 2a study, was a combination of hydrocortisone acetate and lidocaine hydrochloride. The new formulation, CITI-002, which we refer to as Halo-Lido, combine lidocaine with the higher potency corticosteroid halobetasol propionate for symptomatic relief of the pain and discomfort of hemorrhoids.

We held a Type C meeting with the FDA in December 2017 to discuss the results of the Phase 2a study and to obtain the FDA’s view on development plans to support the potential formulation change for the planned Phase 2b study. We also requested the FDA’s feedback on our Phase 2b study design, including target patient population, inclusion/exclusion criteria, and efficacy endpoints. The pre-clinical and clinical development programs for CITI-002 are planned to be similar to those conducted for the development of CITI-001 to support the design for a planned Phase 3 clinical trial.

CITI-002 Phase 2b Trial Overview

Approximately 300 adults with a clinical diagnosis of symptomatic hemorrhoids were enrolled in the Halo-Lido Phase 2b study (NCT05348200), a multi-center, randomized, dose-ranging, double-blind, parallel group comparison clinical trial, which was initiated in April 2022. The study assessed a high dose (CITI-002H) and low dose (CITI-002L) formulation of the combination drug products in comparison to the single active drug monads: high dose halobetasol, low dose halobetasol and lidocaine.

Recently, there has been a shift from the use of traditional clinical analysis and outcomes to patients' perspectives and patients' experiences in assessing treatment efficacy. Following the 21st Century Cures Act, higher emphasis is placed on using Patient Reported Outcome ("PRO") instruments in clinical trials. Currently, for hemorrhoidal disease, there are no validated clinical outcomes assessment ("COA") tools available in the US. The FDA directed Citius Pharma to develop a "fit for purpose" PRO instrument to assess the efficacy of treatments in this disease. Symptom intensity and impact data (Hemorrhoid Quality of Life Index or "HQLI") were recorded by patients utilizing a proprietary mobile-enabled PRO instrument developed by the Company for this study.

Data collected using the HQLI was analyzed to derive a meaningful change threshold ("MCT") to test for the change in hemorrhoidal symptoms considered relevant to the patient during and following treatment.

CITI-002 Phase 2b Trial Results

In June 2023, we announced positive results from the Phase 2b study of Halo-Lido for the treatment of hemorrhoids. Treatment effect on hemorrhoidal symptoms was analyzed using the MCT. At the end of the seven-day treatment period, 42% of the patients in the high dose CITI-002 (CITI-002H) group reached MCT compared to patients treated with high dose halobetasol alone (29%) or patients treated with lidocaine alone (21%). Moreover, proportionally more patients in the CITI-002H cohort reported meaningful and statistically significant improvement as compared to patients treated with lidocaine alone (*CMH test, p = 0.035*).

We additionally assessed clinical treatment efficacy outcomes during seven-day treatment and seven-day follow-up periods using an analysis of covariance, which analyzed changes from baseline. Substantial improvements were seen across all active treatment groups. Although no statistical significance was determined in the changes between the comparison groups, directionally the data signaled that the combination products provided faster relief compared to individual monads, and the relief persisted after completing treatment.

In addition, results from the study indicated that there were no material clinical safety concerns across the five active treatment groups during the seven-day treatment or follow-up periods. There were no serious adverse events reported.

Data from the Phase 2b trial confirmed that the HQLI is appropriate to measure patient-reported changes in hemorrhoidal symptoms. Consequently, Citius Pharma believes the instrument can be used in future Phase 3 trial development. Citius Pharma is actively pursuing intellectual property protections for its groundbreaking work in developing the fit for purpose PRO instrument and has filed patent applications on its CITI-002 formulations.

Based on the positive clinical results utilizing the Meaningful Change Threshold analysis, Citius Pharma plans to present this data at the end of Phase 2 meeting with the FDA.

Market Opportunity

The current market for OTC and topical prescription (“Rx”) products for the symptomatic treatment of hemorrhoids is highly fragmented and includes approximately 20 million units of OTC and over 4 million prescriptions. None of the Rx products have received FDA approval and are only available due to the DESI program, which started decades ago after enactment of the 1962 Kefauver-Harris Drug Amendments. These DESI products have no FDA reviewed evidence of efficacy or safety and may be subject to withdrawal if an approved product were to be introduced. Several topical combination prescription products for the treatment of hemorrhoids are available containing hydrocortisone in strengths ranging from 0.5% to 3.0%, combined with lidocaine in strengths ranging from 1.0% to 3.0%. The various topical formulations include creams, ointments, gels, lotions, enemas, pads, and suppositories. The most commonly prescribed topical combination gel is sold as a branded generic product and contains 2.5% hydrocortisone and 3.0% lidocaine.

We believe there are currently no FDA-approved prescription drug products for the treatment of hemorrhoids. Although there are numerous Rx and OTC products commonly used to treat hemorrhoids, none possess proven safety and efficacy data generated from rigorously conducted clinical trials. We believe that a novel topical formulation of halobetasol propionate and lidocaine designed to provide anti-inflammatory and anesthetic relief and which has an FDA-approved label specifically claiming the treatment of hemorrhoids will become an important treatment option for physicians who want to provide their patients with a therapy that has demonstrated safety and efficacy in treating this uncomfortable and often recurring disease. We believe that our Halo-Lido product represents an attractive, low-risk product opportunity with meaningful upside potential.

Market Exclusivity

We believe that we will be the first company to conduct rigorous clinical trials and receive FDA approval of a topical corticosteroid-lidocaine combination product for the treatment of hemorrhoids. If we receive FDA approval, we will qualify for three years of market exclusivity for our dosage strength and formulation. In addition, we will also be the only product on the market specifically proven to be safe and effective for the treatment of hemorrhoids. Generally, if a company conducts clinical trials and receives FDA approval of a product for which there are similar, but non FDA-approved, prescription products on the market, the manufacturers of the unapproved but marketed products are required to withdraw them from the market. However, the FDA has significant latitude in determining how to enforce its regulatory powers in these circumstances. We have not had any communication with the FDA regarding this matter and cannot predict what action, if any, the FDA will take with respect to the unapproved products.

We believe that should Halo-Lido demonstrate, proven safety and efficacy data and receive FDA approval, and if Halo-Lido obtains three years of market exclusivity based on our dosage strength and formulation, we are likely to have a meaningful advantage in our pursuit of achieving a significant position in the market for topical combination prescription products for the treatment of hemorrhoids.

Mino-Wrap

Overview

On January 2, 2019, we entered into a patent and technology license agreement with the Board of Regents of the University of Texas System on behalf of MDACC, whereby we in-licensed exclusive worldwide rights to the patented technology for any and all uses relating to breast implants, specifically the Mino-Wrap technology. This includes rights to U.S. Patent No. 9,849,217, which was issued on December 16, 2017. We intend to develop Mino-Wrap as a liquefying, gel-based wrap containing minocycline and rifampin for the reduction of infections associated with breast implants following breast reconstructive surgeries. We are required to use commercially reasonable efforts to commercialize Mino-Wrap under several regulatory scenarios and achieve milestones associated with these regulatory options leading to an approval from the FDA. Mino-Wrap will require pre-clinical development prior to any regulatory pathway. In July 2019, we announced that we intend to pursue the FDA’s IND regulatory pathway for the development of Mino-Wrap. On August 4, 2020, we announced that we had submitted a briefing package to the FDA for a pre-IND consultation on Mino-Wrap.

In December 2020, the Company announced the receipt of a written response and guidance from the FDA Division of Anti-Infective Products to the Company's Pre-IND consultation request for its Mino-Wrap briefing package. The briefing package contained information regarding pre-clinical data and a clinical development plan, along with questions for the FDA regarding safety and efficacy data that would be required to advance Mino-Wrap into clinical trials. The FDA granted a Written Response Only meeting regarding guidance and direction on our Mino-Wrap development plan. The FDA indicated that bio absorption simulation studies may provide information to support the development of Mino-Wrap and made suggestions on what should be provided relative to non-clinical support. The FDA provided guidance on the design of the drug elution studies and agreed that a large animal pharmacology study would be appropriate. They also agreed that a 28-day toxicology study appears appropriate and that microbiology support through existing data is acceptable.

On December 11, 2023, the Company terminated the Mino-Wrap license agreement with the Board of Regents of the University of Texas System on behalf of MDACC.

Market Opportunity

Breast cancer is the most frequent cancer in women worldwide, representing 25% of all cancer diagnoses with the exception of non-melanoma skin cancer. In the U.S., the overall rate of mastectomies, combining single and double mastectomies, increased 36% from 2005 to 2013. Additionally, the incidence of post-mastectomy breast reconstruction, following breast cancer treatment, has been increasing on an annual basis.

In 2017, the American Society of Plastic Surgeons reported that over 105,000 women in the U.S. underwent a post-mastectomy breast reconstructive procedure. Approximately 30% of these breast reconstructions occur simultaneously with mastectomy, with most reconstructions occurring weeks later.

The current standard of care in post-mastectomy breast reconstruction is the use of a Tissue Expander ("TE"), which is a temporary implant that is placed below the pectoralis muscle within the mastectomy space. Once a sufficiently large soft tissue envelope has been created, the TE is then replaced by a permanent breast implant. Approximately 80% of the time, a TE is used in breast reconstructions.

The rate of infection following a mastectomy with a TE is 2.4 to 24% with an estimated mean of 12-14%. Once the implant becomes infected, the patient is usually hospitalized requiring approximate two weeks of IV and/or oral antimicrobials. In addition, the TE is removed, leading to a delay of lifesaving chemo-radiation therapy, and a more complex reconstruction in the future.

Currently, preventive measures are used to decrease the rate of TE infections, which include a systemic perioperative antimicrobial agent with the perioperative immersion of the implant or irrigation of the surgical pocket with an antimicrobial solution prior to insertion of the device. This is also administered with immediate postoperative oral antimicrobials.

Based on the in vitro preclinical laboratory work, Mino-Wrap appears to have the characteristics necessary for advancement in the protection of human implants from subsequent infection.

NoveCite

Overview

In October 2020, we, through our subsidiary, NoveCite, signed an exclusive agreement with Novellus Therapeutics Limited ("Novellus") to license iPSC-derived mesenchymal stem cells (iMSCs). Under this worldwide exclusive license, we are focused on developing cellular therapies. Specifically, we are seeking to develop and commercialize the NoveCite mesenchymal stem cells ("NC-iMSCs") to treat acute respiratory conditions with a near term focus on ARDS.

NC-iMSCs are the next generation mesenchymal stem cell therapy. We believe them to be differentiated and superior to donor-derived MSCs. Human donor-derived MSCs are sourced from human bone marrow, adipose tissue, placenta, umbilical tissue, etc. and have significant challenges (e.g., variable donor and tissue sources, limited supply, low potency, inefficient and expensive manufacturing). NC-iMSCs overcome these challenges because they:

- Are more potent and secrete exponentially higher levels of immunomodulatory proteins;
- Have practically unlimited supply for high doses and repeat doses;
- Are from a single donor and clonal so they are economically produced at scale with consistent quality and potency, as well as being footprint free (compared to viral reprogramming methods); and
- Have a significantly higher expansion capability.

Several cell therapy companies using donor-derived MSC therapies in treating ARDS have demonstrated that MSCs reduce inflammation, enhance clearance of pathogens and stimulate tissue repair in the lungs. Almost all these positive results are from early clinical trials or under the FDA's emergency authorization program.

In December 2020, the Company announced interim data from a proof-of-concept ("POC") large animal study of its proprietary NC-iMSC therapy. The available results of NC-iMSC therapy in the study show improvement in critical parameters, such as improved oxygenation, less systemic shock, and reduced lung injury, compared to the control group. The study was conducted in a widely accepted large animal model.

In the third quarter of 2021, the Company completed the characterization and expansion of its NC-iMSC accession cell bank (ACB) at Waisman Biomanufacturing at the University of Wisconsin-Madison to create a cGMP master cell bank (MCB).

In July 2021, Novellus was acquired by Brooklyn ImmunoTherapeutics, Inc. ("Brooklyn"). Pursuant to this transaction, the NoveCite license was assumed by Brooklyn with all of the original terms and conditions in the exclusive license agreement.

In October 2022, Brooklyn changed its name to Eterna Therapeutics Inc.

Market Opportunity

Globally, there are 3 million cases of ARDS every year, out of which approximately 200,000 cases are in the U.S. The COVID-19 outbreak has added significantly to the number of ARDS cases. Once COVID-19 patients advance to ARDS, they are put on mechanical ventilators. Death rate among patients on ventilators can be as high as 50% depending on associated co-morbidities. There are no approved treatments for ARDS, and the current standard of care only attempts to provide symptomatic relief.

Sales and Marketing

We are primarily focused on identifying opportunities within the critical care and cancer care market segments. In our product acquisition criteria, we concentrate on markets that are highly influenced by key opinion leaders, commonly referred to as KOLs, and in which products are prescribed by a relatively small number of physicians, yet provide opportunities for growth and market share. This strategy allows for a manageable commercialization effort for our Company in terms of resources and capital. We also seek to provide cost-effective therapies that would be endorsed by payers, patients, and providers. We believe that we will be able to commercialize products within the scope of these criteria ourselves, and that we can create marketing synergies by having a common narrow audience for our marketing efforts ("several products in the bag for the same customer").

For our product candidates that fall out of the narrow scope criteria, we have identified pharmaceutical companies with large sales forces, experienced sales and marketing management teams, direct-to-consumer capabilities, significantly larger resources than ours, and non-competing product portfolios that we believe would make excellent sales and marketing partners. We intend to license our mass audience, non-specialty product candidates to such companies for sales and marketing.

LYMPHIR Sales and Marketing

Citius Oncology does not currently have its own commercial infrastructure and is in the early stages of developing its sales or marketing capability by contracting with a large third-party commercial sales and marketing organization with an existing commercial infrastructure and product launch experience to assist in its commercial efforts. Citius Oncology intends to utilize a dedicated field force combined with various marketing programs which will be tailored to both physicians and patients to launch LYMPHIR and grow its market share. We, through Citius Oncology, plan to focus our commercial efforts on a concentrated group of prescribing hematologists, oncologists and dermatologist-oncologists, along with key opinion leaders and advocacy groups who play an important role in the CTCL treatment regimen. Our strategy includes seeking inclusion in the National Comprehensive Cancer Network ("NCCN") guidelines and compendia as well as obtaining coverage and reimbursement from the Centers for Medicare and Medicaid Services.

Intellectual Property

We rely on a combination of patent, trade secret, copyright, and trademark laws, as well as confidentiality, licensing and other agreements, to establish and protect our proprietary rights. Our policy is to actively seek to obtain, where appropriate, the broadest intellectual property protection possible for our current product candidates and any future product candidates both in the U.S. and abroad. However, patent protection may not provide us with complete protection against competitors who seek to circumvent our patents. To help protect our proprietary know-how that is not patentable, and for inventions for which patents may be difficult to enforce, we currently rely and will in the future rely on trade secret protection and confidentiality agreements to protect our interests.

LYMPHIR Intellectual Property

On September 3, 2021, we acquired the exclusive license of E7777 (denileukin difitox), a late-stage oncology immunotherapy for the treatment of CTCL from Eisai, who acquired it previously from Dr. Reddy's. We refer to the agent as LYMPHIR. The exclusive license, which was amended as part of the transaction, is with Eisai and includes rights to develop and commercialize LYMPHIR in all markets except for Japan and certain parts of Asia. The license includes an option on the right to develop and market the product in India. In April 2022, Citius Pharma assigned the license agreement to Citius Oncology, at which time Citius Oncology began operations.

Under the license agreement, Eisai is to receive a \$6 million development milestone payment upon initial approval by the FDA of LYMPHIR for the CTCL indication (which increase to \$7 million in the event Citius Oncology exercises the option to add India to the licensed territory) and an aggregate of up to \$22 million related to the achievement of net product sales thresholds. Pursuant to the terms of the license agreement, Citius Pharma reimbursed Eisai for approximately \$2.65 million of Eisai's costs to complete the ongoing Phase 3 pivotal clinical trial for LYMPHIR for the CTCL indication and for all reasonable costs associated with the preparation of a BLA for LYMPHIR.

Pursuant to the terms of the license agreement, Eisai was responsible for completing the current CTCL clinical trial, and chemistry, manufacturing and controls development activities through the production of the BLA, which we filed with the FDA in September 2022, while we are responsible for the costs of correcting any major deficiencies in the BLA as well as the costs of any further studies and development costs associated with potential additional indications.

The term of the license agreement will continue until (i) March 30, 2026, if there has not been a commercial sale of a licensed product in the territory, or (ii) if there has been a first commercial sale of a licensed product in the territory by March 30, 2026, the 10-year anniversary of the first commercial sale on a country-by-country basis. The term of the license may be extended for additional 10-year periods for all countries in the territory by notifying Eisai and paying an extension fee equal to \$10 million. Either party may terminate the license agreement upon written notice if the other party is in material breach of the agreement, subject to cure within the designated time periods. Either party also may terminate the license agreement immediately upon written notice if the other party files for bankruptcy or takes related actions or is unable to pay its debts as they become due. Additionally, either party will have the right to terminate the agreement if the other party directly or indirectly challenges the patentability, enforceability, or validity of any licensed patent.

We, through our subsidiary, are responsible for preparing, filing, prosecuting, and maintaining all patent applications and patents included in the licensed patents that we intend to pursue within the territory.

Under the terms of the agreement with Dr. Reddy's, we, through our subsidiary, are obligated to pay up to an aggregate of \$40 million related to CTCL approvals in the U.S. and other markets, up to \$70 million in development milestones for additional indications, and up to \$300 million for commercial sales milestones. We, through our subsidiary, will also be obligated to pay on a fiscal quarter basis tiered royalties equal to low double-digit percentages of net product sales. The royalties will end on the earlier of (i) the 15-year anniversary of the first commercial sale of the latest indication that received regulatory approval in the applicable country and (ii) the date on which a biosimilar product results in the reduction of net sales in the applicable product by 50% in two consecutive quarters, as compared to the four quarters prior to the first commercial sale of the biosimilar product. We, through our subsidiary, will also pay to Dr. Reddy's an amount equal to a low-thirties percentage of any sublicense upfront consideration or milestone payments (or the like) received by Citius Oncology and the greater of (i) a low-thirties percentage of any sublicensee sales-based royalties or (ii) a mid-single digit percentage of such licensee's net sales.

Also under the agreement with Dr. Reddy's, we, through our subsidiary, are required to (i) use commercially reasonable efforts to make commercially available products in the CTCL indication, peripheral T-cell lymphoma indication and immuno-oncology indication, (ii) initiate two investigator initiated immuno-oncology trials, (iii) use commercially reasonable efforts to achieve each of the approval milestones, and (iv) complete each specified immuno-oncology investigator trial on or before the four-year anniversary of the effective date of the definitive agreement. Additionally, we are required to commercially launch a product in a territory within six months of receiving regulatory approval for such product in each such jurisdiction.

Patents

As part of the definitive agreement with Dr. Reddy's, the Citius Pharma acquired, and later transferred to Citius Oncology, method of use patents in which E7777 is administered in combination with the programmed cell death protein 1 ("PD-1") pathway inhibitor drug class. PD-1 plays a vital role in inhibiting immune responses and promoting self-tolerance through modulating the activity of T-cells, activating apoptosis of antigen-specific T cells and inhibiting apoptosis of regulatory T cells.

The following patents were acquired:

US Provisional Application No. 63/070,645, which was filed on August 26, 2020, and subsequently published as US 2022/0062390 A1 on March 3, 2022, entitled Methods of Treating Cancer.

International Patent Application Number: PCT/IB2021/0576733, which was filed with the World Intellectual Property Organization on August 23, 2021, and subsequently published as WO 2022/043863 A1 on March 3, 2022, entitled, Combination for Use in Methods of Treating Cancer.

Mino-Lok Intellectual Property

In May 2014, our subsidiary LMB entered into a patent and technology license agreement with Novel Anti-Infective Therapeutics, Inc. ("NAT"), who licensed the intellectual property from MDACC, to develop and commercialize Mino-Lok on an exclusive, worldwide (except for South America), sub-licensable basis. LMB incurred a one-time license fee in May 2014. On March 20, 2017, LMB entered into an amendment to the license agreement that expanded the licensed territory to include South America, providing LMB with worldwide rights. We are obligated to pay annual maintenance fees that increase annually until reaching a designated amount, which we must pay until the first sale of product. We also must pay up to an aggregate of approximately \$1.1 million in milestone payments, depending on the achievement of various regulatory and commercial milestones. Under the terms of the license agreement, we also must pay a royalty equal to mid-single digit percentages to low-double digit percentages of net sales, depending on the level of sales in that year, and subject to downward adjustment to lower- to mid-single digit percentages in the event there is no valid patent for the product in the country of sale at the time of sale. After the first sale of product, we will owe an annual minimum royalty payment that will increase annually until reaching a designated amount, which we must pay for the duration of the term. We will be responsible for all patent expenses for the term of the agreement although MDACC is responsible for filing, prosecution and maintenance of all patents.

Unless earlier terminated by NAT based on the failure to achieve certain development or commercial milestones, the license agreement remains in effect until the date that all patents licensed under the agreement have expired and all patent applications within the licensed patent rights have been cancelled, withdrawn or expressly abandoned. The license agreement will terminate in the event we breach any of our payment or reporting obligations or NAT breaches any of its obligations under the agreement. NAT will have the right to terminate the agreement if we bring or participate in an action to challenge NAT's ownership of any of the licensed patent rights. We may terminate the license agreement upon 180 days' notice. The license agreement may also be terminated upon our and NAT's mutual consent.

Mino-Lok is covered in relation to the composition by issued U.S. patent No. 7,601,731, entitled “Antimicrobial Flush Solutions,” which was issued on October 13, 2009. Mino-Lok is further covered in relation to its method of use by issued U.S. Patent No. 9,078,441, which was issued on July 14, 2015. The patents provide intellectual property protection until June 7, 2024. There are corresponding patents granted in Europe and Canada (European Patent No. EP 1644024, and Canadian Patent No. 2528522).

Stability Patent Application for Mino-Lok

In October 2018, the USPTO issued U.S. Patent No. 10,086,114 (the “114 patent”), entitled “Antimicrobial Solutions with Enhanced Stability.” On October 9, 2019, the European Patent Office (“EPO”) granted European Patent No. 3370794, which corresponds to the ’114 patent. The grant of these patents strengthens the intellectual property protection for Mino-Lok through November 2036. While the original patents for Mino-Lok (discussed above) cover the basic composition, this invention overcomes limitations in mixing antimicrobial solutions in which components have precipitated because of physical and/or chemical factors, thus limiting the stability of the post-mix solutions. The scientists and technologists at MDACC have been able to improve the stability of the post-mixed solutions through adjustments of the post-mixed pH of the solution. This may allow for longer storage time of the ready-to-use solution. As such, the patents claiming the enhanced stability may effectively extend patent protection for Mino-Lok beyond the 2024 expiration of the original patents since it is expected that the compositions providing enhanced stability would be preferred over any non-stabilized versions that a competitor may introduce after June 7, 2024. Citius Pharma holds the exclusive worldwide license which provides access to this patented technology for development and commercialization of Mino-Lok.

Mino-Lok has received a Qualified Infectious Disease Product (“QIDP”) designation. The QIDP designation provides New Drug Applications an additional five years of market exclusivity, which together with the potential three years of exclusivity for the new strength and formulation of Mino-Lok, would result in a combined total of eight years of market exclusivity regardless of patent protection.

Halo-Lido Intellectual Property

We are developing Halo-Lido to have a unique combination of excipients as well as unique concentrations of the active ingredients. The goal is to have a product that is optimized for stability and activity. Once the formulation development is completed and data is obtained, we intend to apply for a patent on this new topical formulation.

We seek to achieve approval for Halo-Lido by utilizing the FDA’s 505(b)(2) pathway. This pathway allows an applicant to file an NDA that contains full reports of investigations of safety and effectiveness, but where at least some of the information required for approval comes from prior studies not conducted by or for the applicant and for which the applicant has not obtained a right of reference to such prior third-party studies. This pathway would provide three years of market exclusivity.

Mino-Wrap Intellectual Property

In January 2019, we entered into a patent and technology license agreement with MDACC to develop and commercialize Mino-Wrap on an exclusive worldwide basis, with no rights to sub-license. We paid a one-time upfront licensing fee upon execution of the agreement. Under the agreement, we are required to use commercially reasonable efforts to commercialize Mino-Wrap under several regulatory scenarios and achieve milestones that are associated with these regulatory options leading to an approval from the FDA. We are obligated to pay annual maintenance fees that increase annually until reaching a designated amount, which we must pay until the first sale of product. We also must pay up to an aggregate of \$2.1 million in milestone payments, depending on the achievement of various regulatory and commercial milestones. Under the terms of the license agreement, we also must pay a royalty equal to mid- to upper-single digit percentages of net sales, depending on the level of sales in that year, and subject to downward adjustment to lower- to mid-single digit percentages in the event there is no valid patent for the product in the U.S. at the time of sale. After the first sale of product, we will owe an annual minimum royalty payment that will increase annually for the duration of the term. We will be responsible for all patent expenses incurred by MDACC for the term of the agreement although MDACC is responsible for filing, prosecution and maintenance of all patents.

The term of the license agreement will end on the later of the expiration of all licensed patents, or the fifteenth anniversary of the agreement. MDACC may terminate the license agreement at any time after four years in any country if we have not commercialized or are not actively attempting to commercialize a product in such country. The license agreement will terminate in the event we breach any of our payment or reporting obligations or MDACC breaches any of its obligations under the agreement. MDACC will have the right to terminate the agreement if we bring or participate in an action to challenge MDACC's ownership of any of the licensed patent rights. We may terminate the license agreement upon 180 days' notice. The license agreement may also be terminated upon our and MDACC's mutual consent.

In December 2017, the USPTO issued U.S. Patent No. 9,849,217, entitled "Antimicrobial Wraps for Medical Implants." This invention overcomes limitations in breast reconstruction utilizing tissue expanders and implants following mastectomies by providing, in certain aspects, biodegradable antimicrobial film that may be wrapped around a medical implant such as a breast implant prior to the insertion into a subject such as a human patient. The scientists and technologists at MDACC have developed a biodegradable covering for a medical implant comprising a highly plasticized gelatin and at least one drug to reduce infection.

On November 18, 2021, MDACC filed a provisional patent application entitled "Antimicrobial Wraps for Medical Implants" in which the manufacturing process of the wrap now incorporates a freeze-drying process to prevent degradation of the active drug.

Citius Pharma holds the exclusive worldwide license, which provides access to this patented technology for development and commercialization of Mino-Wrap.

NoveCite Intellectual Property

In October 2020, we, through our subsidiary NoveCite, Inc., entered into a license agreement with Novellus Therapeutics Limited ("Licensor"), whereby NoveCite acquired an exclusive, worldwide license, with the right to sublicense, to develop and commercialize a stem cell therapy based on the Licensor's patented technology for the treatment of acute pneumonitis of any etiology in which inflammation is a major agent in humans. The patented technology consists of mesenchymal stem cells ("MSCs") derived from an induced pluripotent stem cell line that is made by Licensor using the mRNA cell reprogramming methods in the patents covering the licensed technology.

Upon execution of the license agreement, NoveCite paid an upfront payment of \$5,000,000 and issued to Licensor shares of NoveCite's common stock representing 25% of NoveCite's currently outstanding equity. We own the other 75% of NoveCite's currently outstanding equity.

NoveCite is obligated to pay Licensor up to an aggregate of \$51,000,000 in milestone payments upon the achievement of various regulatory and developmental milestones. NoveCite also must pay on a fiscal quarter basis a royalty equal to low double-digit percentages of net sales, commencing upon the first commercial sale of a licensed product. This royalty is subject to downward adjustment on a product-by-product and country-by-country basis to an upper-single digit percentage of net sales in any country in the event of the expiration of the last valid patent claim or if no valid patent claim exists in that country. The royalty will end on the earlier of (i) the date on which a biosimilar product is first marketed, sold, or distributed by Licensor or any third party in the applicable country or (ii) the 10-year anniversary of the date of expiration of the last-to-expire valid patent claim in that country. In the case of a country where no licensed patent ever exists, the royalty will end on the later of (i) the date of expiry of such licensed product's regulatory exclusivity and (ii) the 10-year anniversary of the date of the first commercial sale of the licensed product in the applicable country. In addition, NoveCite will pay to Licensor an amount equal to a mid-twenties percentage of any sublicensee fees it receives.

During the term of the license agreement, NoveCite is required to use commercially reasonable efforts to make commercially available at least one product in at least two markets: the U.S. and either the United Kingdom, France, Germany, China or Japan. Additionally, NoveCite shall (i) on or before the five-year anniversary of the date of the license agreement, file an IND for a licensed product in the field of acute pneumonitis treatment and (ii) receive regulatory approval for a licensed product in the field of acute pneumonitis treatment in the U.S. or in a major market country on or before the ten-year anniversary of the date of the license agreement.

Pursuant to the terms of the license agreement, NoveCite has been granted a right of first negotiation to exclusively license the rights to any new products developed or acquired by Licensor which cannot include MSC's, that may be used within the field of acute pneumonitis treatment. After receiving notice from the Licensor of the new product opportunity, NoveCite has 30 days to notify Licensor of its desire to negotiate a license agreement for the new product. If such notice is given by NoveCite, the parties shall then have a period of 150 days from the date of Licensor's notice to NoveCite to negotiate, exclusively and in good faith, the terms and conditions for the new product license agreement.

The term of the license agreement will continue on a country-by-country and licensed product-by-licensed product basis until the expiration of the last-to-expire royalty term for any and all licensed products unless earlier terminated in accordance with its terms. Either party may terminate the license agreement upon written notice if the other party is in material default or breach of the agreement, subject to cure within the designated time periods. Either party also may terminate the license agreement if the other party files for bankruptcy or takes related actions or is unable to pay its debts as they become due, subject to cure within the designated time period. Additionally, Licensor will have the right to terminate the agreement if NoveCite directly or indirectly challenges the patentability, enforceability or validity of any licensed patent. NoveCite may terminate the license agreement at any time without cause upon 90 days prior written notice.

Licensor will be responsible for preparing, filing, prosecuting and maintaining all patent applications and patents included in the licensed patents in the territory. Provided however, that if Licensor decides that it is not interested in maintaining a particular licensed patent or in preparing, filing, or prosecuting a licensed patent, it will promptly advise NoveCite in writing and NoveCite will have the right, but not the obligation, to assume such responsibilities in the territory at NoveCite's sole cost and expense.

During the term of the license agreement, Licensor is prohibited from commercializing or exploiting (directly or indirectly) any product that includes mesenchymal stem cells for any purpose in acute pneumonitis treatment (subject to certain sponsored research exceptions), or exploiting (directly or indirectly) or enabling a third party to exploit, for any purpose in acute pneumonitis treatment or otherwise, the original licensed cell banks line or any GMP-grade cell banks of a cell line derived therefrom and that can be used as starting material for the manufacture of products derived from the licensed technology. During the term of the license agreement, each party is prohibited from soliciting any employee of the other party, subject to certain exceptions.

In July 2021, Novellus was acquired by Brooklyn. Pursuant to this transaction, the NoveCite license was assumed by Brooklyn with all of its original terms and conditions. In October 2021, Brooklyn changed its name to Eterna Therapeutics Inc.

Competition

We operate in a highly competitive and regulated industry which is subject to change. We face significant competition from organizations that are pursuing drugs that would compete with the drug candidates that we are developing and the same or similar products that target the same conditions we intend to treat. Due to our limited resources, we may not be able to compete successfully against these organizations, which include many large, well-financed and experienced pharmaceutical and biotechnology companies, as well as academic and research institutions and government agencies.

LYMPHIR Competition

There are currently several approved targeted therapeutics for patients with persistent or recurrent CTCL. However, there are limitations to these targeted therapies, which often are discontinued due to toxicity, adverse events, or a limited duration of response due to resistance over time. Consequently, we believe there continues to be an unmet medical need for patients with CTCL and an opportunity for LYMPHIR to be included among the treatment armamentarium for advanced-stage CTCL.

The following products are approved for the systemic treatment of advanced CTCL:

- Mogamulizumab, sold under the brand name Poteligeo, is a humanized, afucosylated monoclonal antibody targeting CC chemokine receptor 4. The FDA approved it for treatment of relapsed or refractory mycosis fungoides and Sézary disease.
- Brentuximab vedotin, sold under the brand name Adcetris, is an antibody-drug conjugate medication used to treat relapsed or refractory Hodgkin lymphoma and systemic anaplastic large cell lymphoma, a type of T-cell non-Hodgkin lymphoma. It selectively targets tumor cells expressing the CD30 antigen, a defining marker of Hodgkin lymphoma and ALC.
- Romidepsin sold under the brand name Istodax, is a histone deacetylase ("HDAC") inhibitor indicated for the treatment of CTCL in adult patients who have received at least one prior systemic therapy.
- Vorinostat sold under the brand name Zolinza, is a HDAC inhibitor indicated for the treatment of cutaneous manifestations in patients with CTCL who have progressive, persistent or recurrent disease on or following two systemic therapies.

Mino-Lok Competition

Currently, the only alternative to Mino-Lok in the treatment of infected CVCs in CRBSI/CLABSI patients of which we are aware, is the standard of care of removing the culprit CVC and replacing a new CVC at a different vascular site. The Company is not aware of any INDs for a salvage antibiotic lock solution and does not expect any to be forthcoming due to the difficulty of meeting the necessary criteria to be effective and practical.

At this time, there are no pharmacologic agents approved in the U.S. for the prevention or treatment of CRBSIs or CLABSI in central venous catheters. The Company is aware that there are several agents in development for prevention but none for salvage. The most prominent of these appear to be Defencath from CorMedix Inc. and B-Lock from Great Lakes Pharmaceuticals, Inc. (“GLP”). Neither of these lock solutions have been shown to be effective in salvaging catheters in bacteremic patients as Mino-Lok is intended to do, and Citius Pharma does not expect that either would be pursued for this indication.

DefencathTM (CorMedix Inc.)

Defencath is a formulation of Taurolidine 1.35%, Citrate 3.5%, and Heparin 1000 units/mL. Neutrolin is an anti-microbial catheter lock solution being developed by CorMedix to prevent CRBSIs and to prevent clotting. In January 2015, the FDA granted Fast Track and QIDP designations for Defencath. In December 2015, CorMedix initiated its Phase 3 clinical trial in hemodialysis patients in the U.S. On June 20, 2018, CorMedix announced that it had completed its review and source-verification of the data required for the interim analysis of the Phase 3 LOCK-IT-100 study for Neutrolin. The data was then locked and transferred to the independent biostatistician for un-blinding and analysis, who then provided the results to the Data and Safety Monitoring Board (“DSMB”) for its review.

On July 25, 2018, CorMedix announced that the DSMB had completed its review of the interim analysis of the data from the currently ongoing Phase 3 LOCK-IT-100 study for Neutrolin. Because the pre-specified level of statistical significance was reached and efficacy had been demonstrated, the DSMB recommended the study be terminated early. No safety concerns were reported by the DSMB based on the interim analysis.

CorMedix submitted its NDA for Defencath to the FDA, which accepted the NDA in August 2020. The FDA set a target review date of February 28, 2021. In March 2021, CorMedix reported that the FDA, in its Complete Response Letter (“CRL”), informed CorMedix that the FDA could not approve the NDA for DefenCath in its present form. The FDA noted concerns at the third-party manufacturing facility after a review of records requested by the FDA and provided by the contract manufacturer (“CMO”). Additionally, the FDA is requiring a manual extraction study to demonstrate that the labeled volume can be consistently withdrawn from the vials despite an existing in-process control to demonstrate fill volume within specifications. In April 2021, CorMedix and the CMO met with the FDA to discuss proposed resolutions for the deficiencies identified in the CRL and the Post-Application Action Letter (“PAAL”) received by the CMO from the FDA for the NDA for DefenCath. There was an agreed upon protocol for the manual extraction study identified in the CRL, which has been successfully completed. Addressing the FDA’s concerns regarding the qualification of the filling operation necessitated adjustments in the process and generation of additional data on operating parameters for the manufacture of DefenCath. CorMedix and the CMO determined that additional process qualification is needed with subsequent validation to address these issues. The FDA stated that the review timeline would be determined when the NDA resubmission is received and that it expected all corrections to facility deficiencies to be complete at the time of resubmission so that all corrective actions may be verified during an onsite evaluation of the manufacturing facility in the next review cycle, if the FDA determines it will do an onsite evaluation.

On February 28, 2022, CorMedix resubmitted the NDA for DefenCath to address the CRL issued by the FDA. In parallel, CorMedix's third-party manufacturer submitted responses to the deficiencies identified at the manufacturing facility in the PAAL issued by the FDA concurrently with the CRL. On March 28, 2022, CorMedix announced that the resubmission of the NDA for DefenCath had been accepted for filing by the FDA. The FDA considers the resubmission as a complete, Class 2 response with a six-month review cycle. The CMO has notified us that an onsite inspection by the FDA was conducted that resulted in FORM FDA 483 observations that are being addressed. The CMO submitted responses to the inspectional observations along with a corrective action plan and requested a meeting with the FDA to discuss. CorMedix also has been notified by its supplier of heparin, an active pharmaceutical ingredient ("API") for DefenCath, that an inspection by the FDA for an unrelated API has resulted in a Warning Letter due to deviations from good manufacturing practices for the unrelated API.

On August 8, 2022, CorMedix announced receipt of a second CRL from the FDA regarding our DefenCath NDA. The FDA stated that the DefenCath NDA cannot be approved until deficiencies conveyed to the CMO and the heparin API supplier are resolved to the satisfaction of the FDA. There were no other requirements identified by the FDA for CorMedix prior to resubmission of the NDA. As part of the NDA review process, the FDA also notified CorMedix that although the tradename DefenCath was conditionally approved, the FDA now has identified potential confusion with another pending product name that is also under review. The ultimate acceptability of the proposed tradename is dependent upon which application is approved first. As a precaution, CorMedix has submitted an alternative proprietary name to the FDA which will undergo review.

CorMedix also announced that it had finalized an agreement with Alcami Corporation ("Alcami"), a U.S. based contract manufacturer with proven capabilities for manufacturing commercial sterile parenteral drug products. Alcami will function as a manufacturing site for DefenCath for the U.S. market, and CorMedix expects to be able to submit a supplement to its NDA application around the end of the first quarter of 2023 to request approval from FDA for DefenCath manufacturing.

On November 15, 2023 CorMedix announced that the FDA has approved DefenCath to reduce the incidence of catheter-related bloodstream infections (CRBSIs) for the limited population of adult patients with kidney failure receiving chronic hemodialysis through a central venous catheter (CVC).

B-Lock™ (Great Lakes Pharmaceuticals, Inc.)

B-Lock is a triple combination of trimethoprim, EDTA and ethanol from Great Lakes Pharmaceuticals, Inc. ("GLP"). On July 24, 2012, GLP announced the initiation of a clinical study of B-Lock. We are unaware as to the progress or results of these studies. In addition, we are not aware of any IND being filed in the U.S. for B-Lock, nor are we aware of any clinical studies to support salvage of infected catheters in bacteremic patients.

There has been no further public information available on GLP. GLP's web site and phone number are no longer active and the Company believes that they have ceased operations.

Halo-Lido Competition

The primary competition in the hemorrhoid market is non-prescription OTC products. If approved by the FDA, Halo-Lido would be the only prescription product for the treatment of hemorrhoids.

Mino-Wrap Competition

The primary competition for Mino-Wrap would be the existing standard of care treatment, which includes a systemic perioperative antimicrobial agent with the perioperative immersion of the implant or irrigation of the surgical pocket with an antimicrobial solution prior to insertion of the tissue expander device. This is also administered with immediate postoperative oral antimicrobials.

NoveCite Competition

There are multiple participants in the cell therapy field both in the U.S. and abroad. We believe that the following companies most directly compete with NoveCite in our licensed field of acute pneumonitis treatment.

Cynata Therapeutics Limited develops and commercializes a proprietary mesenchymal stem cell technology under the Cymerus brand for human therapeutic use in Australia. The company's lead therapeutic product candidate is CYP-001, which has completed a Phase 1 clinical trial for the treatment of graft versus host disease. Cynata also develops products for the treatment of asthma, heart attack, diabetic wounds, coronary artery disease, acute respiratory distress syndrome, brain cancer, melanoma, sepsis, osteoarthritis, and critical limb ischemia, which are in a preclinical model.

Athersys, Inc. is a biotechnology company that focuses on the research and development activities in the field of regenerative medicine. Its clinical development programs are focused on treating neurological conditions, cardiovascular diseases, inflammatory and immune disorders, and pulmonary and other conditions. The company's lead platform product includes MultiStem cell therapy, an allogeneic stem cell product, which has an ongoing Phase 2/3 clinical trial for the treatment of ARDS and has an ongoing clinical trial in Japan for the treatment of RDS. The MultiStem therapy also is in a Phase 3 clinical study for the treatment of patients suffering from neurological damage from an ischemic stroke, as well as in a Phase 2 clinical study for the treatment of patients with acute myocardial infarction, and has completed a Phase 1 clinical study for the treatment of patients suffering from leukemia or various other blood-borne cancers. The company has license and collaboration agreements with Healios K.K. to develop and commercialize MultiStem cell therapy for ischemic stroke, acute respiratory distress syndrome, and ophthalmological indications, as well as for the treatment of liver, kidney, pancreas, and intestinal tissue diseases; and the University of Minnesota to develop MultiStem cell therapy platform.

Pluristem Therapeutics Inc. operates as a bio-therapeutics company in Israel. It focuses on the research, development, clinical trial, and manufacture of placental expanded (PLX) based cell therapeutic products and related technologies for the treatment of various ischemic, inflammatory, and hematologic conditions, as well as autoimmune disorders. A Phase 2 study of PLX cells as a treatment for severe COVID-19 cases complicated by acute respiratory distress syndrome has been initiated in the U.S. as well as in Europe and Israel.

Mesoblast Limited is a biopharmaceutical company that develops and commercializes allogeneic cellular medicines. The company offers products in the areas of cardiovascular, spine orthopedic disorder, oncology, hematology, and immune-mediated and inflammatory diseases. Its proprietary regenerative medicine technology platform is based on specialized cells known as mesenchymal lineage adult stem cells. In April 2020, Mesoblast initiated a Phase 3 trial using mesenchymal stromal cells for the treatment of moderate to severe COVID-19 acute respiratory distress syndrome. The trial was halted in December 2020 after the Data Safety Monitoring Board (DSMB) performed a third interim analysis on the trial's first 180 patients, noting that the trial was not likely to meet the 30-day mortality reduction endpoint at the planned 300 patient enrolment. The trial was powered to achieve a primary endpoint of 43% reduction in mortality at 30 days for treatment with remestemcelL on top of maximal care. The DSMB recommended that the trial complete with the enrolled 222 patients, and that all be followed-up as planned. At follow-up through day 60, remestemcel-L showed a positive but non-significant trend in overall mortality reduction across the entire population of treated patients (n=217). In the pre-specified population of patients under age 65 (n=123), remestemcel-L reduced mortality through day 60 by 46%, but not in patients 65 or older (n=94). In an exploratory analysis through day 60, remestemcelL reduced mortality by 75% and increased days alive off mechanical ventilation in patients under age 65 when combined with dexamethasone, in comparison with controls on dexamethasone.

Supply and Manufacturing

We do not currently have and we do not intend to set up our own manufacturing facilities. We expect to use approved contract manufacturers for manufacturing our product candidates in all stages of development after we file for FDA approval. Each of our domestic and foreign contract manufacturing establishments, including any contract manufacturers we may decide to use, must be listed in the NDA or the BLA, as applicable, and must be registered with the FDA. Also, the FDA imposes substantial annual fees on manufacturers of branded products.

In general, our suppliers purchase raw materials and supplies on the open market. Substantially all such materials are obtainable from a number of sources so that the loss of any one source of supply would not have a material adverse effect on us.

If we elect to conduct product development and manufacturing, we will be subject to regulation under various federal and state laws, including the Food, Drug and Cosmetic Act, Occupational Safety and Health Act, the Environmental Protection Act, the Toxic Substances Control Act, the Resource Conservation and Recovery Act, the Controlled Substances Act and other present and potential future federal, state or local regulations.

We have contracted with proven suppliers and manufacturers for active pharmaceutical ingredient, development and packaging. We are confident that all materials meet or will meet specifications discussed at the chemistry, manufacturing and controls meeting with the FDA.

Supply and Manufacturing of LYMPHIR

We have either contracted directly or contracted through Citius Oncology, to secure supply agreements with third-party cGMP facilities who are in compliance with current good manufacturing practices as generally accepted by the FDA. We are confident that all drug substance and drug product materials meet or will meet specifications as agreed with the FDA.

We believe our contract manufacturers have sufficient capacity to support demand for our products as our business grows. In addition to our supply agreements with third-party manufacturers, we, through Citius Oncology, have contracted with other proven suppliers for, testing, labeling, packaging, and distribution of LYMPHIR.

Regulation

United States Government Regulation

The research, development, testing, manufacture, labeling, promotion, advertising, distribution and marketing, among other things, of our product candidates are extensively regulated by governmental authorities in the U.S. and other countries. All of our current product candidates are considered drugs. Consequently, we plan to resubmit the BLA for LYMPHIR early in the first quarter of 2024 and, depending on the results of our preclinical and clinical trials, we intend to submit an NDA to the FDA for each of Mino-Lok, Halo-Lido, Mino-Wrap and a BLA to the FDA for NoveCite.

In the U.S., the FDA regulates drugs under the Federal Food, Drug, and Cosmetic Act and the agency's implementing regulations. If we fail to comply with the applicable U.S. requirements at any time during the product development process, including clinical testing, as well as at any time before and after the approval process, we may become subject to administrative or judicial sanctions. These sanctions could include the FDA's refusal to approve pending applications, license suspension or revocation, withdrawal of an approval, warning letters, adverse publicity, product recalls, product seizures, total or partial suspension of production or distribution, injunctions, fines, civil penalties or criminal prosecution. Any agency enforcement action could have a material adverse effect on our company and its operations.

Before any one of our drug product candidates may be marketed in the U.S., it must be approved by the FDA. The steps required before a drug may be approved for marketing in the U.S. generally include:

- preclinical laboratory and animal tests, and formulation studies;
- the submission to the FDA of an IND application for human clinical testing that must become effective before human clinical trials may begin;
- adequate and well-controlled human clinical trials to establish the safety and efficacy of the product candidate for each indication for which approval is sought;
- the submission to the FDA of an NDA or a BLA and the FDA's acceptance of the NDA or BLA for filing;
- satisfactory completion of an FDA inspection of the manufacturing facilities at which the product is to be produced to assess compliance with the FDA's current Good Manufacturing Practices ("cGMP"); and
- FDA review and approval of the NDA or BLA.

Foreign Regulation

We and any of our collaborative partners may be subject to widely varying foreign regulations, which may be different from those of the FDA, governing clinical trials, manufacture, product registration and approval and pharmaceutical sales. Whether or not FDA approval has been obtained, we or our collaboration partners must obtain a separate approval for a product by the comparable regulatory authorities of foreign countries prior to the commencement of product marketing in such countries. In certain countries, regulatory authorities also establish pricing and reimbursement criteria. The approval process varies from country to country, and the time may be longer or shorter than that required for FDA approval. In addition, under current U.S. law, there are restrictions on the export of products not approved by the FDA, depending on the country involved and the status of the product in that country.

Employees

As of September 30, 2023, we had 22 employees and various consultants providing support. Through our consulting and collaboration arrangements, and including our Scientific Advisory Board, we have access to more than 30 additional professionals, who possess significant expertise in business development, legal, accounting, regulatory affairs, clinical operations, and manufacturing. We also rely upon a network of consultants to support our clinical studies and manufacturing efforts.

Executive Officers of Citius Pharma

Leonard Mazur, Chief Executive Officer, Chairman and Secretary – Mr. Mazur, 78, was appointed Chief Executive Officer effective May 1, 2022, and has been a member of the Board since September 2014. Mr. Mazur previously served as Chief Executive Officer, President, and Chief Operating Officer from September 2014 until March 2016.

Myron Holubiak, Executive Vice Chairman and Director – Mr. Holubiak, 76, was appointed Executive Vice Chairman effective May 1, 2022, and has been a member of the Board since October 2015. He previously served as President and Chief Executive Officer from March 2016 through April 2022. He was also the founder and Chief Executive Officer and President of Leonard-Meron Biosciences, Inc., an acquired subsidiary of Citius Pharma, from March 2013 until March 2016.

Jaime Bartushak, Chief Business Officer, Chief Financial Officer and Principal Financial Officer – Mr. Bartushak, 56, was appointed as Chief Financial Officer in November 2017. Previously, he was one of the founders and Chief Financial Officer of Leonard-Meron Biosciences, Inc., an acquired subsidiary of Citius Pharma.

Myron Czuczman, Chief Medical Officer and Executive Vice President – Dr. Czuczman, 64, was appointed as Chief Medical Officer and Executive Vice President in July 2020. Dr. Czuczman previously served as Vice President, Global Clinical Research and Development, Therapeutic Head of Lymphoma/CLL at Celgene Corporation.

Other Information

We make available, free of charge through our website, our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and all amendments to those reports as soon as is reasonably practicable after such material is electronically filed with or furnished to the SEC pursuant to Section 13 (a) or 15(d) of the Securities Exchange Act of 1934, as amended (the “Exchange Act”). The SEC maintains an Internet site that contains these reports at www.sec.gov.

Our website address is <http://www.citiuspharma.com>. The information contained in, or that can be accessed through, our website is not part of this report.

Item 1A. Risk Factors

This report contains forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those discussed in this report. Factors that could cause or contribute to these differences include, but are not limited to, those discussed below and elsewhere in this report.

If any of the following risks, or other risks not presently known to us or that we currently believe to not be significant, develop into actual events, then our business, financial condition, results of operations or prospects could be materially adversely affected. If that happens, the market price of our securities could decline, and stockholders may lose all or part of their investment.

Risks Related to Our Business and our Industry

We have a history of net losses and expect to incur losses for the foreseeable future. We may never generate revenues or, if we are able to generate revenues, achieve profitability.

We were formed in 2007 and since our inception have incurred a net loss in each of our previous operating years. Our ability to become profitable depends upon our ability to obtain marketing approval for and generate revenues from sales of our product candidates. We have been focused on product development, have not received approval for any of our product candidates, and have not generated any revenues to date. We have incurred losses in each period of our operations, and we expect to continue to incur losses for the foreseeable future. These losses are likely to continue to adversely affect our working capital, total assets, and stockholders' equity. The process of developing our product candidates requires significant clinical development, laboratory testing and clinical trials. In addition, commercialization of our product candidates will require that we obtain necessary regulatory approvals and establish sales, marketing, and manufacturing capabilities, either through internal hiring or through contractual relationships with others. We expect to incur substantial losses for the foreseeable future as a result of anticipated increases in our research and development costs, including costs associated with conducting preclinical testing and clinical trials, and regulatory compliance activities. We incurred net losses of \$32,542,912 and \$33,640,646 for the years ended September 30, 2023 and 2022, respectively. At September 30, 2023, we had stockholders' equity of \$90,831,108 and an accumulated deficit of \$162,231,379. Our net cash used in operating activities was \$29,060,212 and \$28,361,256 for the years ended September 30, 2023 and 2022, respectively.

Our ability to generate revenues and achieve profitability will depend on numerous factors, including success in:

- developing and testing product candidates;
- receiving regulatory approvals for our product candidates;
- commercializing our product candidates that receive regulatory approval;
- manufacturing commercial quantities of our product candidates at acceptable cost levels;
- obtaining medical insurance coverage for any approved product candidate; and
- establishing a favorable competitive position for any approved product candidates.

Many of these factors will depend on circumstances beyond our control. We cannot assure you that any of our product candidates will be approved by the FDA or any foreign regulatory body or obtain medical insurance coverage, that we will successfully bring any approved product to market or, if so, that we will ever become profitable.

Our independent registered public accounting firm's report includes an explanatory paragraph stating that there is substantial doubt about our ability to continue as a going concern.

At September 30, 2023, we estimated that we have sufficient capital to continue our operations through August 2024. You should not rely on our consolidated balance sheet as an indication of the amount of proceeds that would be available to satisfy claims of creditors, and potentially be available for distribution to stockholders, in the event of liquidation.

The Company has generated no operating revenue to date and has principally raised capital through the issuance of debt and equity instruments to finance its operations. However, the Company's continued operations beyond August 2024, including its development plans for LYMPHIR (through Citius Oncology), Mino-Lok, Halo-Lido, Mino-Wrap and NoveCite, will depend on its ability to obtain regulatory approval to market LYMPHIR and/or Mino-Lok and generate substantial revenue from the sale of LYMPHIR and/or Mino-Lok and on its ability to raise additional capital through various potential sources, such as equity and/or debt financings, strategic relationships, or out-licensing of its product candidates. However, the Company can provide no assurances on the approval, commercialization, or future sales of LYMPHIR and/or Mino-Lok or that financing or strategic relationships will be available on acceptable terms, or at all. If the Company is unable to raise sufficient capital, find strategic partners or generate substantial revenue from the sale of LYMPHIR and/or Mino-Lok, there would be a material adverse effect on its business. Further, the Company expects in the future to incur additional expenses as it continues to develop its product candidates, including seeking regulatory approval, and protecting its intellectual property.

Delays in the resubmission and review of our BLA for LYMPHIR or other factors could increase the cost to develop and launch LYMPHIR.

While we believe we have sufficient funds on hand to complete the regulatory development and commercially launch LYMPHIR, delays in our anticipated submission of the BLA for LYMPHIR, issues raised by the FDA after resubmission or other factors could increase the cost to develop and launch LYMPHIR, which we expect would require us to obtain additional capital to complete those efforts. Financing might not be available on acceptable terms or at all.

We need to secure additional financing in the future to complete the development of our other current product candidates and support our operations.

We anticipate that we will incur operating losses for the foreseeable future as we continue developing our other product candidates besides LYMPHIR. The amount and timing of our future funding requirements will depend on many factors, including, but not limited to:

- the rate of progress and cost of our trials and other product development and commercialization programs for our current product candidates;
- the costs and timing of obtaining licenses for additional product candidates or acquiring other complementary technologies;
- the timing of any regulatory approvals of any of our product candidates;
- the costs of establishing or contracting for sales, marketing, and distribution capabilities for our product candidates; and
- the status, terms and timing of any collaborative, licensing, co-promotion, or other arrangements.

We will need to access the capital markets in the future for additional capital for research and development and for operations. As of the date of this report, we do not anticipate seeking additional capital until sometime in 2024. Traditionally, pharmaceutical companies have funded their research and development expenditures through raising capital in the equity markets. Declines and uncertainties in these markets over the past several years have severely restricted raising new capital and have affected companies' abilities to continue to expand or fund existing research and development efforts. If economic conditions continue to be uncertain or become worse, our future cost of equity or debt capital and access to the capital markets could be adversely affected. If we are not successful in securing additional financing, we may be required to significantly delay, reduce the scope of or eliminate one or more of our research or development programs, downsize our general and administrative infrastructure, or seek alternative measures to avoid insolvency, including arrangements with collaborative partners or others that may require us to relinquish rights to certain of our technologies or product candidates.

We are primarily a late-stage development company with an unproven business strategy and may never achieve commercialization of our therapeutic product candidates or profitability.

We have no approved products. All of our current product candidates are in the pre-clinical or clinical stage, although we have applied for approval for LYMPHIR. We rely on third parties to conduct the research and development activities for our product candidates and our product commercialization capabilities are unproven. We, through Citius Oncology, are in the early stages of developing our sales and marketing capabilities at this time for LYMPHIR and have contracted with Innovation Partners, a large third-party commercial sales and marketing organization with an existing commercial infrastructure and product launch experience to assist in our commercial efforts related to LYMPHIR. We have no sales or marketing capabilities with respect to our other product candidates. Our success will depend upon our ability to develop such capabilities on our own or to enter into and maintain collaboration agreements on favorable terms and to select an appropriate commercialization strategy for each product candidate that we choose to pursue and that receives approval, whether on our own or in collaboration. If we are not successful in implementing our strategy to commercialize our product candidates, we may never achieve, maintain, or increase profitability. Our ability to successfully commercialize any of our product candidates will depend, among other things, on our ability to:

- successfully complete pre-clinical and clinical trials for our product candidates;
- receive marketing approvals from the FDA and similar foreign regulatory authorities for our product candidates;
- establish commercial manufacturing arrangements with third-party manufacturers for our product candidates;
- produce, through a validated process, sufficiently large quantities of our drug compound(s) to permit successful commercialization of our product candidates;

- build and maintain strong sales, distribution, and marketing capabilities sufficient to launch commercial sales of any approved products or establish collaborations with third parties for such commercialization;
- secure acceptance of any approved products from physicians, health care payers, patients, and the medical community; and
- manage our spending as costs and expenses increase due to clinical trials, regulatory applications and development and commercialization activities.

There are no guarantees that we will be successful in completing these tasks. If we are unable to successfully complete these tasks, we may not be able to commercialize any of our product candidates in a timely manner, or at all, in which case we may be unable to generate sufficient revenues to sustain and grow our business. If we experience unanticipated delays or problems, our development costs could substantially increase and our business, financial condition and results of operations will be adversely affected.

We have a limited operating history upon which to evaluate our ability to successfully commercialize our product candidates.

We have two late-stage stage product candidates while our other product candidates are clinical stage. As a result, our success is dependent upon our ability to obtain regulatory approval for and commercialize our product candidates and we, as a company, have not demonstrated an ability to perform the functions necessary for the approval or successful commercialization of any product candidates. While various members of our executive management and key employees have significant prior experience in pharmaceutical development, as a company we have to date successfully completed only one late-stage clinical trial (much of which had been undertaken by Eisai prior to our in-licensing of the intellectual property of LYMPHIR) and are just beginning to undertake commercialization activities, in each case for LYMPHIR (through Citius Oncology). Despite our progress with LYMPHIR, our operations have been limited primarily to business planning, acquiring our proprietary technology, research and development, recruiting management and technical staff, and raising capital. These operations provide a limited basis for you to assess our ability to successfully commercialize our product candidates and the advisability of investing in our securities.

We may choose not to continue developing any of our product candidates at any time during development, which would reduce or eliminate our potential return on investment for those product candidates.

At any time, we may decide to discontinue the development of any of our product candidates for a variety of reasons, including inadequate financial resources, the appearance of new technologies that render our product candidates obsolete, competition from a competing product or changes in or failure to comply with applicable regulatory requirements. If we terminate a program in which we have invested significant resources, we will not receive any return on our investment and we will have missed the opportunity to allocate those resources to potentially more productive uses.

As an example, on July 1, 2016, we announced that we were discontinuing the development of Suprenza, which was our first commercial product candidate, for strategic reasons and not due to safety or regulatory concerns, in order to focus our management and cash resources on the Phase 3 development of Mino-Lok and the Phase 2b development of Halo-Lido. The resources expended on Suprenza therefore did not provide us any benefit.

We face significant risks in our product candidate development efforts.

Our business depends on the successful development and commercialization of our product candidates. We are not permitted to market any of our product candidates in the U.S. until we receive approval from the FDA, or in any foreign jurisdiction until we receive the requisite approvals from such jurisdiction. The process of developing new drugs and/or therapeutic products is inherently complex, unpredictable, time-consuming, expensive and uncertain. We must make long-term investments and commit significant resources before knowing whether our development programs will result in products that will receive regulatory approval and achieve market acceptance. Product candidates that appear to be promising at some or all stages of development may not receive approval or reach the market for a number of reasons that may not be predictable based on results and data of the clinical program. Product candidates may be found ineffective or may cause harmful side effects during clinical trials, may take longer to progress through clinical trials than had been anticipated, may not be able to achieve the pre-defined clinical endpoints due to statistical anomalies even though clinical benefit may have been achieved, may fail to receive necessary regulatory approvals, may prove impracticable to manufacture in commercial quantities at reasonable cost and with acceptable quality, or may fail to achieve market acceptance.

We cannot predict whether or when we will obtain regulatory approval to commercialize our product candidates that are under development and we cannot, therefore, predict the timing of any future revenues from these product candidates, if any. As an example, in response to the submission of our BLA for LYMPHIR, the FDA issued a complete response letter (“CRL”) on July 28, 2023. The FDA is requiring us to incorporate enhanced product testing and additional controls agreed to with the FDA during the market application review. There were no concerns relating to the safety and efficacy clinical data package submitted with the BLA, or the proposed prescribing information. In September 2023, we announced that the FDA has agreed with our plans to address the requirements outlined in the CRL, which guidance has provided us with a path for completing the necessary activities to support the resubmission of the BLA for LYMPHIR.

The FDA has substantial discretion in the drug approval process, including the ability to delay, limit or deny approval of a product candidate for many reasons. For example, the FDA:

- may not find the data from clinical trials, including from our Phase 3 trial for LYMPHIR, sufficient to support the submission of an NDA or BLA or to obtain marketing approval in the U.S., including any findings that the clinical and other benefits of our product candidates outweigh their safety risks;
- could determine that the information provided by us was inadequate, contained clinical deficiencies or otherwise failed to demonstrate the safety and effectiveness of any of our product candidates for any indication;
- may disagree with our trial design or our interpretation of data from preclinical studies or clinical trials, or may change the requirements for approval even after it has reviewed and commented on the design for our trials;
- could determine that we cannot rely on Section 505(b)(2) for Mino-Lok or Halo-Lido or any future product candidate whose composition includes components previously approved by the FDA;
- may determine that we have identified the wrong reference listed drug or drugs or that approval of a Section 505(b)(2) application for any of our product candidates is blocked by patent or non-patent exclusivity of the reference listed drug or drugs;
- may identify deficiencies in the manufacturing processes or facilities of third-party manufacturers with which we enter into agreements for the manufacture of our product candidates;
- may approve our product candidates for fewer or more limited indications than we request, or may grant approval contingent on the performance of costly post-approval clinical trials;
- may change its approval policies or adopt new regulations that could adversely impact our product candidate development programs; or
- may not approve the labeling claims that we believe are necessary or desirable for the successful commercialization of our product candidates, or may require labeling claims that impair the potential market acceptance of our product candidates.

These same risks are generally applicable to the regulatory process in foreign countries. Any failure to obtain regulatory approval of our product candidates would significantly limit our ability to generate revenues, and any failure to obtain such approval for all of the indications and labeling claims we deem desirable could reduce our potential revenues.

We, through Citius Oncology, may be required to make milestone payments to the licensor and former licensee of the LYMPHIR intellectual property in connection with its development and commercialization of LYMPHIR, which could adversely affect the profitability of LYMPHIR, if approved.

Under the terms of the License Agreement with Eisai, we, through Citius Oncology, are required to pay Eisai a \$6 million development milestone payment upon initial approval by the FDA of LYMPHIR for the CTCL indication (which increases to \$7 million in the event Citius Oncology exercises the option to add India to the licensed territory prior to FDA approval) and an aggregate of up to \$22 million related to the achievement of net product sales thresholds. Under the terms of the agreement with Dr. Reddy's, Citius Oncology is obligated to pay up to an aggregate of \$40 million related to CTCL approvals in the U.S. and other markets, up to \$70 million in development milestones for additional indications, and up to \$300 million for commercial sales milestones. Further, under the agreement with Dr. Reddy's, Citius Oncology is required to (i) use commercially reasonable efforts to make commercially available products in the CTCL indication, peripheral T-cell lymphoma indication and immuno-oncology indication, (ii) initiate two investigator initiated immuno-oncology trials, (iii) use commercially reasonable efforts to achieve each of the approval milestones, and (iv) complete each specified immuno-oncology investigator trial on or before September 1, 2025, the four-year anniversary of the effective date of the definitive agreement. Additionally, Citius Oncology is required to commercially launch a product in a territory within six months of receiving regulatory approval for such product in each such jurisdiction.

These development and milestone obligations could impose substantial additional costs on us, divert resources from other aspects of the business, and adversely affect the overall profitability of LYMPHIR, if approved. We, through Citius Oncology, may need to obtain additional financing to satisfy these milestone payments, and cannot be sure that any additional funding, if needed, will be available on favorable terms, or at all.

While our business strategy generally is to focus on the development of late-stage product candidates to lessen the development risk, there is still significant risk to successfully developing a product candidate.

Our goal in generally pursuing late-stage therapeutic product candidates with what we believe is a promising pre-clinical and early clinical stage track record is to avoid the risk of failure at the pre-clinical and early clinical stages. However, there is still significant risk to obtaining regulatory approval and successfully commercializing any late-stage product candidate that we pursue. All of the risks inherent in drug development of initial stage product candidates also apply to late-stage candidates. We cannot assure you that our business strategy will be successful.

The results of pre-clinical studies and completed clinical trials are not necessarily predictive of future results, and our current product candidates may not have favorable results in later studies or trials.

Pre-clinical studies and Phase 1 and Phase 2 clinical trials are not primarily designed to test the efficacy of a product candidate in the general population, but rather to test initial safety, to study pharmacokinetics and pharmacodynamics, to study limited efficacy in a small number of study patients in a selected disease population, and to identify and attempt to understand the product candidate's side effects at various doses and dosing schedules. Success in pre-clinical studies or completed clinical trials does not ensure that later studies or trials, including continuing pre-clinical studies and large-scale clinical trials, will be successful nor does it predict future results. Favorable results in early studies or trials may not be repeated in later studies or trials, and product candidates in later stage trials may fail to show acceptable safety and efficacy despite having progressed through earlier trials. In addition, the placebo rate in larger studies may be higher than expected.

We may be required to demonstrate through large, long-term outcome trials that our product candidates are safe and effective for use in a broad population prior to obtaining regulatory approval. This would increase the duration and cost of any such trial.

There is typically a high rate of attrition from the failure of product candidates proceeding through clinical trials. In addition, certain subjects in our clinical trials may respond positively to placebo treatment - these subjects are commonly known as "placebo responders" - making it more difficult to demonstrate efficacy of the trial drug compared to placebo. This effect is likely to be observed in the treatment of hemorrhoids, which could negatively impact the development program for Halo-Lido.

If any of our product candidates fail to demonstrate sufficient safety and efficacy in any clinical trial, we will experience potentially significant delays and cost increases in, or may decide to abandon development of, that product candidate. If we abandon or are delayed, or experience increased costs, in our development efforts related to any of our product candidates, we may not have sufficient resources to continue or complete development of that product candidate or any other product candidates. We may not be able to continue our operations and clinical studies, or generate any revenue or become profitable. Our reputation in the industry and in the investment community would likely be significantly damaged. Further, it might not be possible for us to raise funds in the public or private markets, and our stock price would likely decrease significantly.

If the planned Business Combination is not completed, our common stock could be adversely affected.

If the planned Business Combination is not completed for whatever reason, the price of our common stock could be adversely impacted if investors view the Business Combination as providing more value to both Citius Pharma and Citius Oncology on a standalone basis. Further, depending on the reason for an inability to complete the Business Combination, our business reputation could be impaired.

If we are unable to file for approval of Mino-Lok or Halo-Lido under Section 505(b)(2) of the Federal Food, Drug and Cosmetic Act, or if we are required to generate additional data related to safety and efficacy in order to obtain approval of Mino-Lok or Halo-Lido under Section 505(b)(2), we may be unable to meet our anticipated development and commercialization timelines.

Our current plans for filing NDAs or BLAs for our product candidates include efforts to minimize the data we will be required to generate in order to obtain marketing approval for certain of our product candidates and therefore possibly reduce the time and cost of development of a product candidate and obtain a shortened review period for the application. The timeline for filing and review of our planned NDA for each of Mino-Lok and Halo-Lido is based upon our plan to submit each such NDA under Section 505(b)(2) of the Federal Food, Drug and Cosmetic Act, wherein we will rely in part on data generated by third parties and that is in the public domain or elsewhere. Depending on the data that may be required by the FDA for approval, some of the data may be related to products already approved by the FDA. If the data relied upon is related to products already approved by the FDA and covered by third-party patents, we would be required to certify that we do not infringe the listed patents or that such patents are invalid or unenforceable. As a result of the certification, the third party would have 45 days from notification of our certification to initiate an action against us. In the event that an action is brought in response to such a certification, the approval of our NDA could be subject to a stay of up to 30 months or more while we defend against such a suit. Approval of any product candidate under Section 505(b)(2) may therefore be delayed until patent exclusivity expires or until we successfully challenge the applicability of those patents applicable to our product candidates. Alternatively, we may elect to generate sufficient additional clinical data so that we no longer rely on data which triggers a potential stay of the approval of any product candidate. Even if no exclusivity periods apply to an application under Section 505(b)(2), the FDA has broad discretion to require us to generate additional data on the safety and efficacy of our product candidates to supplement third-party data on which we may be permitted to rely. In either event, we could be required, before obtaining marketing approval for such product candidate, to conduct substantial new research and development activities beyond those in which we currently plan to engage in order to obtain approval of that product candidate. Such additional new research and development activities would be costly and time consuming.

We may not be able to obtain shortened review of our applications where available, and in any event the FDA may not agree that any of our product candidates qualify for marketing approval. If we are required to generate additional data to support approval, we may be unable to meet our anticipated development and commercialization timelines, may be unable to generate the additional data at a reasonable cost, or at all, and may be unable to obtain marketing approval of that product candidate. In addition, notwithstanding the approval of many products by the FDA pursuant to Section 505(b)(2), over the last few years, some pharmaceutical companies and others have objected to the FDA's interpretation of Section 505(b)(2). If the FDA changes its interpretation of Section 505(b)(2), or if the FDA's interpretation is successfully challenged in court, this could delay or even prevent the FDA from approving any Section 505(b)(2) application that we submit.

Two of our product candidates, Mino-Lok and Halo-Lido, are combination products consisting of components that have each been separately approved by the FDA for other indications and which are commercially available and marketed by other companies. Our approval under Section 505(b)(2), if received, would not preclude physicians, pharmacists, and patients from obtaining individual drug products and titrating the dosage of these drug products as close to our approved dose as possible.

Our Mino-Lok solution contains minocycline, disodium ethylenediaminetetraacetic acid (edetate), and ethyl alcohol, all of which have been separately approved by the FDA for other indications or are used as excipients in other parenteral products. Assuming FDA approval as a branded pharmaceutical product, we would need to obtain hospital formulary acceptance to generate sales of Mino-Lok. Additionally, we may encounter reluctance by the infectious disease physician community to vary from the existing standard of care to remove and replace an infected catheter. Currently, hospitals are reimbursed for the treatment of CRBSIs by the Center for Medicare and Medicare Services ("CMS") through a Diagnosis Related Group ("DRG") classification or code. Commercial insurance plans reimburse for CRBSIs in a similar manner. With Mino-Lok being priced as a branded FDA-approved pharmaceutical product, this could result in the participating hospital retaining a lower share of CMS or commercial reimbursement which may impact the acceptance and use of Mino-Lok by these institutions.

Our Halo-Lido product candidate for the treatment of hemorrhoids is a combination product consisting of two drugs, halobetasol propionate, a corticosteroid, and lidocaine, that have each been separately approved by the FDA for other indications and which are commercially available and marketed by other companies. Halobetasol propionate cream is available in a 0.05% strength, and lidocaine creams are also available in strengths up to 5%. From our market analysis and discussions with a limited number of physicians, we know that patients sometimes obtain two separate cream products and co-administer them as prescribed, giving them a combination treatment that could be very similar to what we intend to study and seek approval for. As a branded, FDA-approved product with safety and efficacy data, we intend to price our product substantially higher than the generically available individual creams. We will then have to convince third-party payers and pharmacy benefit managers of the advantages of our product and justify our premium pricing. We may encounter resistance from these entities and will then be dependent on patients' willingness to pay the premium and not seek alternatives. In addition, pharmacists often suggest lower cost prescription treatment alternatives to both physicians and patients. If approved, our Section 505(b)(2) approval and the market exclusivity we may receive will not guarantee that such alternatives will not exist, that substitution will not occur, or that there will be immediate or any acceptance to our pricing by payer formularies.

Any fast track designation or grant of priority review status by the FDA may not actually lead to a faster development or regulatory review or approval process, nor will it assure FDA approval of our product candidates. Additionally, our product candidates may treat indications that do not qualify for priority review vouchers.

We have received fast track designation for Mino-Lok to treat and salvage infected central venous catheters in patients with CRBSIs. We may seek fast track designation for some of our other product candidates or priority review of applications for approval of our product candidates for certain indications. If a drug is intended for the treatment of a serious or life-threatening condition and the drug demonstrates the potential to address unmet medical needs for this condition, the drug sponsor may apply for the FDA fast track designation. If a product candidate offers major advances in treatment, the FDA may designate it eligible for priority review. The FDA has broad discretion whether or not to grant these designations, so even if we believe a particular product candidate is eligible for these designations, we cannot assure you that the FDA would decide to grant them. Even with the fast track designation for Mino-Lok and if we do receive fast track designation or priority review for any other product candidate, we may not experience a faster development process, review or approval compared to conventional FDA procedures. The FDA may withdraw fast track designation from Mino-Lok or any other product candidate to be so designated if it believes that the designation is no longer supported by data from our clinical development program.

We do not own NoveCite, Inc. outright and will share any benefits from the development of its NoveCite product candidate with the other stockholder.

As of September 30, 2023, we owned 75% of the outstanding common stock of NoveCite. As a result, we will only be entitled to a portion of any benefits that flow from the development by NoveCite of its NoveCite product candidate or any other product candidates that it might develop. In the event that NoveCite issues additional equity securities in the future this would likely reduce our percentage ownership, which would further reduce the portion of any benefit that might be derived from the NoveCite drug candidate's successful development, unless we were to increase our investment.

Any FDA programs related to the development and approval of treatments for COVID-19 and its symptoms may not be available to us or actually lead to a faster development or regulatory review or approval process for NoveCite, our proposed treatment for ARDS, nor will it assure FDA approval of such a treatment.

In late April 2020, we made a pre-IND submission to the FDA for NoveCite as a treatment for ARDS. The submission was made under the FDA's Coronavirus Treatment Acceleration Program ("CTAP") and we requested the FDA's feedback to support the most expeditious pathway for clinical development of the therapy. The CTAP program is relatively new and the FDA has broad discretion in administering the CTAP program and therefore we cannot assure you what the FDA might decide and whether there would be a faster development process.

Because our NoveCite product candidate is based on novel technologies, it is difficult to predict the regulatory approval process and the time, the cost and our ability to successfully initiate, conduct and complete clinical development, and obtain the necessary regulatory and reimbursement approvals, required for commercialization of our NoveCite product candidate.

NoveCite's cell programming technology and platform for generating cell therapy products using allogenic mesenchymal stem cells derived from iPSCs represent novel therapeutic approaches, and to our knowledge there are currently no iPSC-derived cell products approved anywhere in the world for commercial sale. As such, it is difficult to accurately predict the type and scope of challenges that NoveCite may incur during development of its NoveCite product candidate, and it faces uncertainties associated with the preclinical and clinical development, manufacture and regulatory requirements for the initiation and conduct of clinical trials, regulatory approval, and reimbursement required for successful commercialization of its NoveCite product candidate. In addition, because NoveCite's iPSC-derived cell product candidate is in the pre-clinical stage, NoveCite is currently assessing safety in humans and has not yet been able to assess the long-term effects of treatment. Animal models and assays may not accurately predict the safety and efficacy of our product candidate in our target patient populations, and appropriate models and assays may not exist for demonstrating the safety and purity of the NoveCite product candidate, as required by the FDA and other regulatory authorities for ongoing clinical development and regulatory approval.

The pre-clinical and clinical development, manufacture, and regulatory requirements for approval of the NoveCite product candidate may be more expensive and take longer than for other more well-known or extensively studied pharmaceutical or biopharmaceutical product candidates due to a lack of prior experiences on the side of both developers and regulatory agencies. Additionally, due to the uncertainties associated with the pre-clinical and clinical development, manufacture, and regulatory requirements for approval of the NoveCite product candidate, NoveCite may be required to modify or change its pre-clinical and clinical development plans or its manufacturing activities and plans or be required to meet stricter regulatory requirements for approval. Any such modifications or changes could delay or prevent NoveCite's ability to develop, manufacture, obtain regulatory approval for or commercialize its NoveCite product candidate, which would adversely affect NoveCite's and our business, financial condition and results of operations.

Cellular immunotherapies, and stem cell therapies and iPSC-derived cell therapies in particular, represent relatively new therapeutic areas, and the FDA has cautioned consumers about potential safety risks associated with cell therapies. To date, there are relatively few approved cell therapies. As a result, the regulatory approval process for a product candidate such as NoveCite is uncertain and may be more expensive and take longer than the approval process for product candidates based on other, better known or more extensively studied technologies and therapeutic approaches. For example, there are currently no FDA approved products with a label designation that supports the use of a product to treat and reduce the severity of ARDS in patients with COVID-19, which makes it difficult to determine the clinical endpoints and data required to support an application or regulatory approval, and the time and cost required to obtain regulatory approval in the U.S. for our product candidate.

Regulatory requirements in the U.S. governing cell therapy products have changed frequently and the FDA or other regulatory bodies may change the requirements, or identify different regulatory pathways, for approval of the NoveCite product candidate. For example, within the FDA, the Center for Biologics Evaluation and Research ("CBER") restructured and created a new Office of Tissues and Advanced Therapies to better align its oversight activities with FDA Centers for Drugs and Medical Devices. It is possible that over time new or different divisions may be established or be granted the responsibility for regulating cell and/or gene therapy products, including iPSC-derived cell products, such as the NoveCite product candidate. As a result, NoveCite may be required to change its regulatory strategy or to modify its applications for regulatory approval, which could delay and impair its ability to complete the pre-clinical and clinical development and manufacture of, and obtain regulatory approval for, its NoveCite product candidate. Changes in regulatory authorities and advisory groups, or any new requirements or guidelines they promulgate, may lengthen the regulatory review process, require NoveCite to perform additional studies, increase its development and manufacturing costs, lead to changes in regulatory pathways, positions and interpretations, delay or prevent approval and commercialization of the NoveCite product candidate or lead to significant post-approval limitations or restrictions. As NoveCite advances its NoveCite product candidate, NoveCite will be required to consult with the FDA and other regulatory authorities, and its NoveCite product candidate will likely be reviewed by an FDA advisory committee. NoveCite also must comply with applicable requirements, and if it fails to do so, it may be required to delay or discontinue development of its NoveCite product candidate. Delays or unexpected costs in obtaining, or the failure to obtain, the regulatory approval necessary to bring the NoveCite product candidate to market could impair NoveCite's and our ability to generate sufficient product revenues to maintain our respective businesses.

NoveCite has assumed that the biological capabilities of iPSCs and adult-donor derived cells are likely to be comparable. If it is discovered that this assumption is incorrect, the NoveCite product candidate research and development activities could be harmed.

NoveCite anticipates that its research and development for its NoveCite product candidate will involve iPSCs, rather than adult-donor derived cells. With respect to iPSCs, NoveCite believes that scientists are still somewhat uncertain about the clinical utility, life span, and safety of such cells, and whether such cells differ in any clinically significant ways from adult-donor derived cells. If NoveCite discovers that iPSCs will not be useful for whatever reason for its NoveCite product candidate program, this would negatively affect NoveCite's ability to develop a marketable product and it and we may never become profitable, which would have an adverse effect on our respective businesses, prospects, financial condition and results of operations.

Even if we receive regulatory approval to commercialize a product candidate, that product may not gain market acceptance among physicians, patients, healthcare payers or the medical community and may not generate significant revenue.

Even if one of our product candidates obtains regulatory approval, that product may not gain market acceptance among physicians, patients, healthcare payers or the medical community. The indication may be limited to a subset of the population or we may implement a distribution system and patient access program that is limited. Coverage and reimbursement of our product candidates by third-party payers, including government payers, generally is also necessary for commercial success. We believe that the degree of market acceptance and our ability to generate revenues from any approved product candidate or acquired approved product will depend on a number of factors, including:

- prevalence and severity of any side effects;
- results of any post-approval studies of the product;
- potential or perceived advantages or disadvantages over alternative treatments;
- availability of coverage and reimbursement from government and other third-party payers;
- the willingness of patients to pay out of pocket in the absence of government or third-party coverage;
- the relative convenience and ease of administration and dosing schedule;
- product labeling or product insert requirements of the FDA or other regulatory authorities;
- strength of sales, marketing and distribution support;
- price of any future products, if approved, both in absolute terms and relative to alternative treatments;
- the effectiveness of our or any future collaborators' sales and marketing strategies;
- the effect of current and future healthcare laws on any approved products;
- patient access programs that require patients to provide certain information prior to receiving new and refill prescriptions; and
- requirements for prescribing physicians to complete certain educational programs for prescribing drugs.

If approved, any product candidate may fail to achieve market acceptance or generate significant revenue to achieve or sustain profitability, which would harm the Company's business. In addition, our efforts to educate the medical community and third-party payers on the benefits of any product candidate may require significant resources and may never be successful.

Even if approved for marketing by applicable regulatory bodies, we will not be able to create a market for any of our product candidates if we fail to establish marketing, sales, and distribution capabilities, either on our own or through arrangements with third parties.

Our strategy with our product candidates is to outsource to third parties all or most aspects of the product development process, as well as much of our marketing, sales, and distribution activities. In order to generate sales of any product candidate that receives regulatory approval, we must either acquire or develop an internal marketing and sales force with technical expertise and with supporting distribution capabilities or make arrangements with third parties to perform these services for us. Currently, we, through Citius Oncology, are in the early stages of developing our sales, marketing and distribution capabilities for LYMPHIR and have contracted with Innovation Partners, a large third-party commercial sales and marketing organization with an existing commercial infrastructure and product launch experience, to assist in our commercial efforts. We do not have any sales, marketing or distribution capabilities with respect to our other product candidates. The acquisition or development of a sales and distribution infrastructure requires substantial resources, which may divert the attention of our management and key personnel and defer our product development efforts. To the extent that we enter into marketing and sales arrangements with other companies for any product candidates, our revenues will depend on the efforts of others. These efforts may not be successful. If we fail to develop sales, marketing, and distribution channels, or fail to enter into arrangements with third parties or the collaboration is terminated or is otherwise unsuccessful, we will experience delays in product launch and sales and incur increased costs.

The FDA and other regulatory agencies actively enforce the laws and regulations prohibiting the promotion of off-label uses.

If we are found to have improperly promoted any off-label use of LYMPHIR or any other product candidates, if approved, or if we are found to have improperly engaged in pre-approval promotion prior to the approval of such product candidates, Citius Pharma may become subject to significant liability. Such enforcement has become more common in the pharmaceutical industry. The FDA and other regulatory agencies strictly regulate the promotional claims that may be made about prescription products, such as LYMPHIR and any other product candidates that might be approved. In particular, a product may not be promoted for uses that are not approved by the FDA or such other regulatory agencies as reflected in the product's approved labeling. If the Company receives marketing approval for its product candidates for its proposed indications, physicians may nevertheless use its product for their patients in a manner that is inconsistent with the approved label, if the physicians believe in their professional medical judgment it could be used in such manner. However, if the Company is found to have promoted its product for any off-label uses, the federal government could levy civil, criminal and/or administrative penalties, and seek fines against us. The FDA, Department of Justice or other regulatory authorities could also request that we enter into a consent decree or a corporate integrity agreement, or seek a permanent injunction against us under which specified promotional conduct is monitored, changed or curtailed. If we cannot successfully manage the promotion of LYMPHIR or any other product candidates that receive approval, we could become subject to significant liability, which would materially adversely affect our business, financial condition and results of operations.

The markets in which we operate are highly competitive and we might be unable to compete successfully against new entrants or established companies.

Competition in the pharmaceutical and medical products industries is intense and is characterized by costly sales and marketing infrastructures, as well as extensive research efforts and rapid technological progress. We are aware of several pharmaceutical companies also actively engaged in the development of therapies or products for at least some of the same conditions we are targeting. Many of these companies have substantially greater research and development capabilities as well as substantially greater marketing, financial and human resources than we do. In addition, many of these companies have significantly greater experience than us in undertaking pre-clinical testing, clinical trials and other regulatory approval procedures. Our competitors may develop technologies and products that are more effective than those we are researching and developing. Such developments could render our product candidates, if approved, less competitive or possibly obsolete. We are also competing with respect to marketing capabilities and manufacturing efficiency, areas in which we have no current capabilities and in which we have no experience as a company, although our executive officers do have pharmaceutical commercialization and launch experience. We, through Citius Oncology, have contracted with Innovation Partners, a large third-party commercial sales and marketing organization with an existing commercial infrastructure and product launch experience to assist in our commercial efforts for LYMPHIR. However, our prior experience and our third party arrangements might not translate into the successful development and launch of any of our product candidates. Mergers, acquisitions, joint ventures and similar events may also significantly increase the competition we face. In addition, new developments, including the development of other drug technologies and methods of preventing the incidence of disease, occur in the pharmaceutical and medical technology industries at a rapid pace. These developments may render our product candidates obsolete or noncompetitive. Compared to us, many of our potential competitors have substantially greater as well as access to strategic partners and capital resources.

As a result of these factors, our competitors may obtain regulatory approval of their products more rapidly than we can or may obtain patent protection or other intellectual property rights that limit our ability to develop or commercialize our product candidates. Our competitors might also develop products that are more effective, more useful and less costly than ours and might also be more successful in manufacturing and marketing their products. In addition, our competitors might be more effective than us in commercializing their products and as a result, our business and prospects might be materially harmed.

Physicians and patients might not accept and use any of our product candidates for which regulatory approval is obtained.

Even if the FDA approves one of our product candidates, physicians and patients might not accept and use it. Acceptance and use of our approved product candidates will depend upon a number of factors, including:

- perceptions by members of the health care community, including physicians, about the safety and effectiveness of any of our product candidates;
- perceptions by members of the health care community, including physicians, about the use of our product candidates versus the then respective standards of care for the disease or problem that we seek to address with our product candidates;
- cost-effectiveness of our product candidates relative to competing products or therapies;
- availability of reimbursement for our product candidates from government or other healthcare payers; and
- effective marketing and distribution efforts by us and/or our licensees and distributors, if any.

If any of our current product candidates are approved, we expect their sales to generate substantially all of our revenues for the foreseeable future, and as a result, the failure of any of these product candidates to find market acceptance would harm our business and would require us to seek additional financing.

Our ability to generate product revenues will be diminished if any of our product candidates that may be approved sell for inadequate prices or patients are unable to obtain adequate levels of reimbursement.

Our ability to commercialize our product candidates, alone or with collaborators, will depend in part on the extent to which reimbursement will be available from:

- government and health administration authorities;
- private health maintenance organizations and health insurers; and
- other healthcare payers.

Significant uncertainty exists as to the reimbursement status of newly approved healthcare products. Healthcare payers, including Medicare, are challenging the prices charged for medical products and services. Government and other healthcare payers increasingly attempt to contain healthcare costs by limiting both coverage and the level of reimbursement for drugs. Even if our product candidates are approved by the FDA, insurance coverage might not be available, and reimbursement levels might be inadequate, to cover our products. If government and other healthcare payers do not provide adequate coverage and reimbursement levels for our products, once approved, market acceptance of such products could be reduced. We cannot predict whether federal or state legislation will be passed that may impact reimbursement policies nor what the impact of any such legislation would be on the healthcare industry in general or on our business specifically.

We are actively engaged with CMS in order to obtain the necessary coverage to facilitate reimbursement for LYMPHIR. However, we can offer no assurance as to any reimbursement coverage.

Health administration authorities in countries other than the U.S. may not provide reimbursement for our products at rates sufficient for us to achieve profitability, or at all. Like the U.S., these countries have considered health care reform proposals and could materially alter their government-sponsored health care programs by reducing reimbursement rates. Any reduction in reimbursement rates under Medicare or foreign health care programs could negatively affect the pricing of our approved product candidates. If we are not able to charge a sufficient amount for our approved product candidates, then our margins and our profitability will be adversely affected.

Healthcare reform measures could hinder or prevent our product candidates' commercial success.

There have been, and the Company expects there will continue to be, a number of legislative and regulatory changes to health care systems in the U.S. and abroad that could impact its ability to sell its products profitably. The U.S. government and other governments have shown significant interest in pursuing healthcare reform. For example, in 2010, the Patient Protection and Affordable Care Act ("ACA") was enacted, which substantially changed the way healthcare is financed by both governmental and private insurers in the U.S. Healthcare reform measures like the ACA may adversely impact the pricing of healthcare products and services in the U.S. or internationally and the amount of reimbursement available from governmental agencies or other third-party payors.

Since its enactment, there have been ongoing efforts to modify the ACA and its implementing regulations. The Company cannot predict what healthcare reform measures may be enacted by the U.S. Congress or implemented by any administration or how such efforts would impact its business. Litigation and legislation over the ACA and other healthcare reform measures are likely to continue, with unpredictable and uncertain results. Further, additional legislative changes to and regulatory changes under or related to the ACA remain possible.

In addition, other legislative changes have been proposed and adopted in the U.S. since the ACA was enacted that impact government health programs. Moreover, payment methodologies may be subject to changes in healthcare legislation and regulatory initiatives. For example, CMS may develop new payment and delivery models, such as bundled payment models. In addition, recently there has been heightened governmental scrutiny over the manner in which manufacturers set prices for their marketed products, which has resulted in several U.S. Congressional inquiries and proposed and enacted federal and state legislation designed to, among other things, bring more transparency to drug pricing, reduce the cost of prescription drugs under government payor programs, and review the relationship between pricing and manufacturer patient programs. While any proposed measures may require authorization through additional legislation to become effective, the U.S. Congress and the Biden administration have each indicated that it will continue to seek new legislative and/or administrative measures to control drug costs. The Company expects that additional U.S. federal healthcare reform measures will be adopted in the future, any of which could limit the amounts that federal health care programs and commercial payers will pay for healthcare products and services, which could result in reduced demand for our product candidates, if approved, or additional pricing pressures.

Individual states in the U.S. have also increasingly passed legislation and implemented regulations designed to control pharmaceutical and biological product pricing, including price or patient reimbursement constraints, discounts, restrictions on certain product access and marketing cost disclosure and transparency measures, and, in some cases, designed to encourage importation from other countries and bulk purchasing. Legally mandated price controls on payment amounts by third party payors or other restrictions could harm its business, financial condition and results of operations. In addition, regional healthcare authorities and individual hospitals are increasingly using bidding procedures to determine what pharmaceutical products and which suppliers will be included in their prescription drug and other healthcare programs. Furthermore, there has been increased interest by third party payors and governmental authorities in reference pricing systems and publication of discounts and list prices. These or other reforms could reduce the ultimate demand for our product candidates, if approved, or put pressure on its product pricing.

The Company cannot predict the likelihood, nature or extent of government regulation that may arise from future legislation or administrative action in the U.S. If the Company or any third parties it may engage are slow or unable to adapt to changes in existing requirements or the adoption of new requirements or policies, or if the Company or such third parties are not able to maintain regulatory compliance, any approved product candidates may lose any regulatory approval that may have been obtained and we may not achieve or sustain profitability.

We are and will be dependent on third-party contract research organizations to conduct all of our clinical trials.

We are and will be dependent on third-party research organizations to conduct all of our clinical trials with respect to our product candidates, including any candidates that we may develop in the future. If we are unable to obtain any necessary testing services on acceptable terms, we may not complete our product development efforts in a timely or cost-effective manner or at all. If we rely on third parties for human trials, we may lose some control over these activities and become too dependent upon these parties. These third parties may not complete testing activities on schedule or when we so request. We may not be able to secure and maintain suitable research organizations to conduct our human trials. We are responsible for confirming that each of our clinical trials is conducted in accordance with the trial's general plan and protocol. Moreover, the FDA and foreign regulatory agencies require us to comply with regulations and standards, commonly referred to as good clinical practices, for conducting, recording, and reporting the results of clinical trials to assure that data and reported results are credible and accurate and that the trial participants are adequately protected. Our reliance on third parties does not relieve us of these responsibilities and requirements. If these third parties do not successfully carry out their contractual duties or regulatory obligations or meet expected deadlines, if the third parties need to be replaced or if the quality or accuracy of the data they obtain is compromised due to the failure to adhere to our clinical protocols or regulatory requirements or for other reasons, our preclinical development activities or clinical trials may be extended, delayed, suspended or terminated, and we may not be able to obtain regulatory approval for any of our product candidates.

We rely exclusively on third parties to formulate and manufacture our product candidates.

We do not have and do not intend to establish our own manufacturing facilities. Consequently, we lack the physical plant to formulate and manufacture our product candidates, which are currently being manufactured entirely by commercial third-party manufacturers. We, through Citius Oncology, have secured supply agreements for LYMPHIR with the two third-party facilities who are in compliance with current good manufacturing practices (“cGMP”) as generally accepted by the FDA. If LYMPHIR, or any other product candidate we develop or might acquire in the future receives FDA approval, we will rely on one or more third-party contractors to manufacture our products. If, for any reason, we become unable to rely on our current source or any future source or sources to manufacture our product candidates, either for pre-clinical or clinical trials or for commercial quantities, then we would need to identify and contract with additional or replacement third-party manufacturers to manufacture compounds for preclinical, clinical, and commercial purposes. We might not be successful in identifying additional or replacement third-party manufacturers, or in negotiating acceptable terms with any that we do identify. If we are unable to secure and maintain third-party manufacturing capacity, the development and sales of our product candidates and our financial performance might be materially and adversely affected.

In addition, before any of our collaborators can begin to commercially manufacture our product candidates, each must obtain regulatory approval of the manufacturing facility and process. Manufacturing of drugs for clinical and commercial purposes must comply with the FDA’s cGMP and applicable non-U.S. regulatory requirements. The cGMP requirements govern quality control and documentation policies and procedures. Complying with cGMP and non-U.S. regulatory requirements will require that we expend time, money, and effort in production, recordkeeping, and quality control to assure that the product meets applicable specifications and other requirements. Our contracted manufacturing facilities must also pass a pre-approval inspection prior to FDA approval. Failure to pass a pre-approval inspection might significantly delay FDA approval of our product candidates. If any of our collaborators fails to comply with these requirements, we would be subject to possible regulatory action which could limit the jurisdictions in which we are permitted to sell our product candidates. As a result, our business, financial condition, and results of operations might be materially harmed.

Our reliance on a limited number of third-party manufacturers exposes us to the following risks:

- We might be unable to identify manufacturers for commercial supply on acceptable terms or at all because the number of potential manufacturers is limited and the FDA must approve any replacement contractor. This approval would generally require compliance inspections. In addition, a new manufacturer would have to be educated in, or develop substantially equivalent processes for, production of our product candidates after receipt of FDA approval, if any;
- Our third-party manufacturers might be unable to formulate and manufacture our product candidates in the volume and of the quality required to meet our clinical and commercial needs, if any;
- Our contract manufacturers might not perform as agreed or might not remain in the contract manufacturing business for the time required to supply our clinical trials or to successfully produce, store and distribute our product candidates for commercialization;
- Currently, the contract manufacturer for our clinical supplies is foreign, which increases the risk of shipping delays, adds the risk of import restrictions, and adds the risk of political and environmental uncertainties that might affect those countries;
- Drug manufacturers are subject to ongoing periodic unannounced inspection by the FDA and corresponding state agencies to ensure strict compliance with cGMP and other government regulations and corresponding foreign standards. We do not have control over third-party manufacturers’ compliance with these regulations and standards;

- If any third-party manufacturer makes improvements in the manufacturing process for our product candidates, we might not own, or might have to share, the intellectual property rights to the innovation with our licensors;
- Operations of our third-party manufacturers or suppliers could be disrupted by conditions unrelated to our business or operations, including a bankruptcy of the manufacturer or supplier or a natural disaster or a pandemic such as COVID-19; and
- We might compete with other companies for access to these manufacturers' facilities and might be subject to manufacturing delays if the manufacturers give other clients higher priority than us.

Each of these risks could delay our clinical trials or the approval, if any, of our product candidates by the FDA or any foreign regulatory agency or the commercialization of our product candidates and could result in higher costs or deprive us of potential product revenues. As a result, our business, financial condition, and results of operations might be materially harmed.

If we materially breach or default under any of our license agreements, the licensor party to such agreement will have the right to terminate the license agreement, which termination may materially harm our business.

Our commercial success will depend in part on the maintenance of our current and any future license agreements. Our license agreements impose, and we expect that future license agreements will impose, various diligence, milestone payment, royalty and other obligations on us. For example, under our current license agreements, we are required to use commercially reasonable diligence to develop and commercialize a product and to satisfy specified payment obligations for various developmental and regulatory milestones. If we fail to comply with our obligations under our current license agreements or any future license agreements with any party, or we are subject to a bankruptcy, the licensor may have the right to terminate the license, in which event we would not be able to market products covered by the license. Each of our license agreements provides the licensor with a right to terminate the license agreement for our material breach or default under the agreement, including the failure to make any required milestone or other payments. Should the licensor under any of our license agreements exercise such a termination right, we would lose our right to the intellectual property under the respective license agreement, which loss may materially harm our business.

Any termination, or breach by, or conflict with our strategic partners could harm our business.

If we or any of our current or future collaborators fail to renew or terminate any of our collaboration or license agreements or if either party fails to satisfy its obligations under any of our collaboration or license agreements or complete them in a timely manner, we could have difficulty completing the development of any of our product candidates and potentially lose significant sources of revenue, which could result in an adverse impact on our operations and financial condition as well as volatility in any future revenue. In addition, our agreements with our collaborators may have provisions that give rise to disputes regarding the rights and obligations of the parties. These and other possible disagreements could lead to termination of the agreement or delays in collaborative research, development, supply, or commercialization of our product candidates, or could require or result in litigation or arbitration. Any such conflicts with our collaborators could reduce our ability to obtain future collaboration agreements and could have a negative impact on our relationship with existing collaborators, adversely affecting our business and revenues. Finally, any of our collaborations may prove to be unsuccessful.

We rely on the significant experience and specialized expertise of our executive management and other key personnel and the loss of any of our executive management or key personnel or our inability to successfully hire their successors could harm our business.

Our performance is substantially dependent on the continued services and on the performance of our executive management and other key personnel, who have extensive experience and specialized expertise in our business. Our Chief Executive Officer, Leonard Mazur, our Vice Chairman, Myron Holubiak, and our Chief Medical Officer and Executive Vice President, Myron Czuczman, in particular have significant experience in the running of pharmaceutical companies and/or drug development itself. This depth of experience is of significant benefit to us, especially given the small size of our management team and our company, including our subsidiaries. The loss of the services of any of Mr. Mazur, Mr. Holubiak and Dr. Czuczman as well as any other member of our executive management or any key employees, including those at NoveCite or Citius Oncology, could harm our ability to attract capital and develop and commercialize our product candidates. Neither we nor NoveCite and Citius Oncology has key man life insurance policies.

If we are unable to retain or hire additional qualified personnel, our ability to grow our business might be harmed.

We utilize the services of a clinical management team on a part-time basis to assist us in managing our ongoing Phase 2 and Phase 3 trials and intend to do so for future preclinical and clinical trials. Pursuant to the shared services agreement with Citius Pharma, Citius Oncology utilizes the services of Citius Pharma's management team to assist it in managing the clinical and pre-clinical trials. Following the Business Combination, pursuant to an amended and restated shared services agreement, Citius Oncology will continue to utilize the services of Citius Pharma employees with expertise in product manufacturing and commercialization for the planned launch of LYMPHIR. While we believe this will provide us with sufficient staffing for our current and future development efforts, we will need to hire or contract with additional qualified personnel with expertise in preclinical testing, clinical research and testing, government regulation, formulation and manufacturing and sales and marketing in connection with the continued development, regulatory approval and commercialization of our product candidates. We compete for qualified individuals with numerous pharmaceutical and biopharmaceutical companies, universities, and other research institutions.

The Combined Company's board members are anticipated to also be directors of Citius Pharma, and the executive officers are also employees of Citius Pharma pursuant to the shared services agreement. Citius Oncology expects to rely on these individuals and the other expertise and personnel made available under the shared services agreement for the foreseeable future.

Competition for qualified directors, officers and employees is intense, and we cannot be certain that our retention of these individuals or any search for additional such personnel will be successful. Attracting and retaining qualified personnel will be critical to our success. In addition, we may be unable to attract and retain those qualified officers, directors and members of board committees required to provide for effective management. If we are unable to attract and retain qualified employees, officers and directors, the management and operation of our business could be adversely affected.

We expect to need to increase the size of our organization to further develop our product candidates, and we may experience difficulties in managing growth.

We will need to manage our anticipated growth and increased operational activity, including as a result of the continuing development of LYMPHIR and our other product candidates. Our personnel, systems, and facilities currently in place may not be adequate to support this future growth. Our need to effectively execute our growth strategy will require that we:

- manage our research and development activities and our regulatory trials effectively;
- attract and motivate sufficient numbers of talented employees or consultants;
- manage our internal development efforts effectively while complying with our contractual obligations to licensors, licensees, contractors, collaborators and other third parties;
- develop internal sales and marketing capabilities or establish collaborations with third parties with such capabilities;
- commercialize our product candidates; and
- improve our operational, financial and management controls, reporting systems and procedures.

This planned future growth could place a strain on our administrative and operational infrastructure and may require our management to divert a disproportionate amount of its attention away from our day-to-day activities. We may not be able to effectively manage the expansion of our operations or recruit and train additional qualified personnel, which may result in weaknesses in our infrastructure, and give rise to operational mistakes, loss of business opportunities, loss of employees and consultants and reduced productivity among remaining employees and consultants. We may not be able to make improvements to our management information and control systems in an efficient or timely manner and may discover deficiencies in existing systems and controls. If our management is unable to effectively manage our expected growth, our expenses may increase more than expected, our ability to generate or increase our revenues could be reduced and we may not be able to implement our business strategy. Our future financial performance and our ability to compete effectively will depend, in part, on our ability to effectively manage any future growth.

We plan to grow and develop our business through acquisitions of or investment in new or complementary businesses, products or technologies, and the failure to manage these acquisitions or investments, or the failure to integrate them with our existing business, could have a material adverse effect on us.

Our business strategy is based on the acquisition of additional product candidates. This is evidenced by our in-licensing of NoveCite in October 2020 and LYMPHIR in September 2021. We might consider opportunities to acquire or invest in other technologies, products and businesses that might enhance our capabilities or complement our current product candidates. Potential and completed acquisitions and strategic investments involve numerous risks, including potential problems or issues associated with the following:

- assimilating the acquired technologies, products, or business operations;
- maintaining uniform standards, procedures, controls, and policies;
- unanticipated costs associated with the acquisition or investment;
- diversion of our management's attention from our preexisting business;
- maintaining or obtaining the necessary regulatory approvals or complying with regulatory standards; and
- adverse effects on existing business operations.

We have no current commitments with respect to any acquisition or investment in other technologies or businesses. We do not know if we will identify other suitable acquisitions, whether we will be able to successfully complete any acquisitions, or whether we will be able to successfully integrate any acquired product, technology or business into our business operations or retain key personnel, suppliers, or collaborators.

Our ability to successfully develop our business through acquisitions including the in-licensing of LYMPHIR, will depend on our ability to identify, negotiate, complete, and integrate suitable target businesses or technologies and obtain any necessary financing. These efforts could be expensive and time consuming and might disrupt our ongoing operations. If we are unable to efficiently integrate any acquired business, technology or product into our business operations, our business and financial condition might be adversely affected.

Conflicts of interest may arise from our relationship with NoveCite.

As of September 30, 2023, we beneficially owned 75% of the voting power of NoveCite's outstanding common stock; Novellus owns the other 25%. As a result of our partial ownership, our relationship with NoveCite could give rise to certain conflicts of interest that could have an impact on our and NoveCite's respective research and development programs, business opportunities, and operations generally.

- Even though we utilize different technologies than NoveCite, we could find ourselves in competition with it for research scientists, financing and other resources, licensing, manufacturing, and distribution arrangements.
- NoveCite will engage for its own business in research and product development programs, investments, and business ventures, and we will not be entitled to participate or to receive an interest in those programs, investments, or business ventures other than to the extent as a stockholder in NoveCite. NoveCite will not be obligated to present any particular research and development, investment, or business opportunity to us, even if the opportunity would be within the scope of our research and development plans or programs, business objectives, or investment policies. These opportunities may include, for example, opportunities to acquire businesses or assets, including but not limited to patents and other intellectual property that could be used by us or by NoveCite.
- Each conflict of interest will be resolved by our respective boards of directors in keeping with their fiduciary duties and such policies as they may implement from time to time.
- There is overlap among our board of directors, senior management and research staffs and that of NoveCite. Two of our directors, Myron Holubiak and Leonard Mazur, also serve as directors of NoveCite. In addition, Myron Holubiak serves as Chief Executive Officer and Jaime Bartushak serves as Chief Financial Officer of both Citius Pharma and NoveCite. These overlapping positions could interfere with the duties owed by such individuals to Citius Pharma.

Risks Related to Our Regulatory and Legal Environment

We might not obtain the necessary U.S. or foreign regulatory approvals to commercialize any product candidates.

We cannot assure you that we will receive the approvals necessary to commercialize for sale any product candidates we are currently developing or that we may acquire or seek to develop in the future. We will need FDA approval to commercialize our product candidates in the U.S. In order to obtain FDA approval of any product candidate, we must submit to the FDA an NDA or a BLA demonstrating that the product candidate is safe for humans and effective for its intended use. This demonstration requires significant research, pre-clinical studies, and clinical trials. Satisfaction of the FDA's regulatory requirements typically takes many years, depends upon the type, complexity and novelty of the product candidate and requires substantial resources for research, development and testing. We cannot predict whether our research and clinical approaches will result in products that the FDA considers safe for humans and effective for their indicated uses. The FDA has substantial discretion in the product approval process and might require us to conduct additional pre-clinical and clinical testing, perform post-marketing studies or otherwise limit or impose conditions on any additional approvals we obtain. The approval process might also be delayed by changes in government regulation, future legislation or administrative action or changes in FDA policy that occur prior to or during our product candidate's regulatory review. Delays in obtaining regulatory approvals might:

- delay commercialization of, and our ability to derive product revenues from, our product candidates;
- impose costly procedures on us; and
- diminish any competitive advantages that we might otherwise enjoy.

Even if we comply with all FDA requests, the FDA might ultimately reject one or more of our NDAs or BLAs. Even if we are able to obtain regulatory approval for a particular product candidate, the approval might limit the indicated medical uses for the product, limit our ability to promote, sell, and distribute the product, require that we conduct costly post-marketing surveillance, and/or require that we conduct ongoing post-marketing studies. We cannot be sure that we will ever obtain regulatory clearance for any of our product candidates. Failure to obtain FDA approval of one or more of our product candidates could severely undermine our business by leaving us without saleable products, and therefore without any potential sources of revenues, until another product candidate could be developed or obtained and successfully developed, approved and commercialized. Foreign jurisdictions impose similar regulatory approval processes and we will face the same risks if we seek foreign approval for any of our product candidates. There is no guarantee that we will ever be able to successfully develop or acquire any product candidate.

Following any regulatory approval of any product candidate, we will be subject to ongoing regulatory obligations and restrictions, which may result in significant expense and limit our ability to commercialize our other product candidates.

If one of our product candidates is approved by the FDA or by a foreign regulatory authority, we will be required to comply with extensive regulations for product manufacturing, labeling, packaging, adverse event reporting, storage, distribution, advertising, promotion and record keeping. Regulatory approvals may also be subject to significant limitations on the indicated uses or marketing of the products or to whom and how we may distribute an approved product. Even if U.S. regulatory approval is obtained, the FDA may still impose significant restrictions on a product's indicated uses or marketing or impose ongoing requirements for potentially costly post-approval studies. For example, the label ultimately approved for any of our product candidates, if any, may include restrictions on use. If so, we may be subject to ongoing regulatory obligations and restrictions, which may result in significant expense and limit our ability to commercialize that product candidate. The FDA could also require a registry to track the patients utilizing the product or implement a Risk Evaluation and Mitigation Strategy ("REMS") that could restrict access to the product, which would reduce our revenues and/or increase our costs. Potentially costly post-marketing clinical studies may be required as a condition of approval to further substantiate safety or efficacy, or to investigate specific issues of interest to the regulatory authority. Similar risks apply in foreign jurisdictions.

Manufacturers of pharmaceutical products and their facilities are subject to continual review and periodic inspections by the FDA and other regulatory authorities for compliance with cGMP regulations, which include requirements relating to quality control and quality assurance as well as the corresponding maintenance of records and documentation. Similar regulatory programs exist in foreign jurisdictions. Further, regulatory agencies must approve these manufacturing facilities before they can be used to manufacture our future approved products, if any, and these facilities are subject to ongoing regulatory inspections. In addition, regulatory agencies subject a pharmaceutical product, its manufacturer and the manufacturer's facilities to continual review and inspections. The subsequent discovery of previously unknown problems with a product, including adverse events of unanticipated severity or frequency, or problems with the facility where the product is manufactured, may result in restrictions on the marketing of that product, up to and including, withdrawal of the product from the market. If the manufacturing facilities of our suppliers fail to comply with applicable regulatory requirements, it could result in regulatory action and additional costs to us. Failure to comply with applicable FDA and other regulatory requirements may, either before or after product approval, if any, subject our company to administrative or judicially imposed sanctions.

In addition, the law or regulatory policies governing pharmaceutical products may change. New statutory requirements may be enacted or additional regulations may be enacted that could prevent or delay regulatory approval of our product candidates. CMOs and their vendors or suppliers may also face changes in regulatory requirements from governmental agencies in the U.S. and other countries. We cannot predict the likelihood, nature, extent or effects of government regulation that may arise from future legislation or administrative action, either in the U.S. or elsewhere. If we are not able to maintain regulatory compliance, we might not be permitted to market any future approved products and our business could suffer.

We could be forced to pay substantial damage awards if product liability claims that may be brought against us are successful.

The use of any of our product candidates in pre-clinical and clinical trials, and the sale of any approved products, may expose us to liability claims and financial losses resulting from the use or sale of our product candidates. We have obtained limited product liability insurance coverage for our pre-clinical and clinical trials of \$5.0 million per occurrence and in the aggregate, subject to a deductible of \$25,000 per bodily injury and property damage occurrence, and a medical expense per person limit of \$25,000. There can be no assurance that our existing insurance coverage will extend to any other product candidates in the future. Any product liability insurance coverage may not be sufficient to satisfy all liabilities resulting from product liability claims. A successful claim may prevent us from obtaining adequate product liability insurance in the future on commercially desirable terms, if at all. Even if a claim is not successful, defending such a claim would be time consuming and expensive, may damage that product's and our reputations in the marketplace, and would likely divert management's attention, any of which could have a material adverse effect on our Company.

Risks Related to Our Intellectual Property

Our business depends on protecting our intellectual property.

Without the intellectual property rights we have already obtained, as well as the further rights we are also pursuing, our competitors would have opportunity to take advantage of our research and development efforts to develop competing products. Our success, competitive position, and future revenues, if any, depend in part on our ability and the abilities of our licensors to obtain and maintain patent protection for our product candidates, methods, processes and other technologies, to preserve our trade secrets, to prevent third parties from infringing on our proprietary rights and to operate without infringing the proprietary rights of third parties. We anticipate filing additional patent applications both in the U.S. and in other countries, as appropriate. However, the patent process is subject to numerous risks and uncertainties, and there can be no assurance that we will be successful in protecting our product candidates by obtaining and defending patents. These risks and uncertainties include the following:

- Our patent rights might be challenged, invalidated, or circumvented, or otherwise might not provide any competitive advantage;
- Our competitors, many of which have substantially greater resources than we do and many of which might make significant investments in competing technologies, might seek, or might already have obtained, patents that will limit, interfere with, or eliminate our ability to make, use, and sell our product candidates either in the U.S. or in international markets;
- Countries other than the U.S. might have less restrictive patent laws than those upheld by U.S. courts, allowing foreign competitors the ability to exploit these laws to create, develop, and market competing products; and
- As a matter of public policy regarding worldwide health concerns, there might be significant pressure on the U.S. government and other international governmental bodies to limit the scope of patent protection both inside and outside the U.S. for product candidates that prove successful.

In addition, the USPTO and patent offices in other jurisdictions have often required that patent applications concerning pharmaceutical and/or biotechnology-related inventions be limited or narrowed substantially to cover only the specific innovations exemplified in the patent application, thereby limiting the scope of protection against competitive challenges. Thus, even if we or our licensors are able to obtain patents, the patents might be substantially narrower than anticipated.

Because the time period from filing a patent application to the issuance, if ever, of the patent is often more than three years and because any regulatory approval and marketing for a pharmaceutical product often occurs several years after the related patent application is filed, the resulting market exclusivity afforded by any patent on our drug candidates and technologies will likely be substantially less than 20 years. For example, the U.S. patent on the original Mino-Lok composition expires in June 2024, and the U.S. patent on the stabilized Mino-Lok composition expires in November 2036. Since we anticipate significant additional time before FDA approval could be obtained, the maximum market exclusivity afforded by the statutory term of the currently issued patents would be less than 17 years. In the U.S., the European Union and some other jurisdictions, patent term extensions are available for certain delays in either patent office proceedings or marketing and regulatory approval processes. However, due to the specific requirements for obtaining these extensions, there is no assurance that our patents will be granted extensions even if we encounter significant delays in patent office proceedings or marketing and regulatory approval.

Additionally, patent law is subject to change and varies among the U.S. and foreign countries. Depending on decisions by the U.S. Congress, the U.S. federal courts, the USPTO or similar authorities in foreign jurisdictions, the laws and regulations governing patents could change in unpredictable ways that may weaken our and our licensors' abilities to obtain new patents or to enforce existing patents that we and our licensors or partners may obtain in the future.

Patent and other intellectual property protection is crucial to the success of our business and prospects, and there is a substantial risk that such protections will prove inadequate. Our business and prospects will be harmed if these protections prove insufficient.

We rely on trade secret protections through confidentiality agreements with our employees and other parties, and the breach of these agreements could adversely affect our business and prospects.

We rely on trade secrets, which we seek to protect, in part, through confidentiality and non-disclosure agreements with our employees, collaborators, suppliers, and other parties. There can be no assurance that these agreements will not be breached, that we would have adequate remedies for any such breach or that our trade secrets will not otherwise become known to or independently developed by our competitors. We might be involved from time to time in litigation to determine the enforceability, scope and validity of our proprietary rights. Any such litigation could result in substantial cost and divert management's attention from our operations.

If we infringe the rights of third parties we might have to forego developing and/or selling any approved products, pay damages, or defend against litigation.

If our product candidates, methods, processes, and other technologies infringe the proprietary rights of other parties, we could incur substantial costs and we might have to:

- obtain licenses, which might not be available on commercially reasonable terms, if at all;
- abandon an infringing product candidate;
- redesign our product candidates or processes to avoid infringement;
- stop using the subject matter claimed in the patents held by others;
- pay damages; and/or
- defend litigation or administrative proceedings which might be costly whether we win or lose, and which could result in a substantial diversion of our financial and management resources.

Any of these events could substantially harm our earnings, financial condition, and operations.

The U.S. government could have "march-in rights" to certain of our intellectual property.

If at any time federal monies are used in support of the research and development activities at MDACC that resulted or in the future result in certain of our issued pending U.S. patent applications, the federal government retains what are referred to as "march-in rights" to patents that are granted on these applications. Our license agreements for Mino-Lok and Mino-Wrap each provide that in the event of such governmental funding, our rights are subject to the government's prior rights, if any. In addition, the license agreements provide that we will comply with the requirements of any agreement between MDACC and the governmental funding entity. If applicable, this could require us to grant the U.S. government either a nonexclusive, partially exclusive, or exclusive license to the patented invention in any field of use, upon terms that are reasonable for a particular situation. Circumstances that could trigger march-in rights generally would be set out in the agreement between MDACC and the funding governmental entity and could include, for example, failure to take, within a reasonable time, effective steps to achieve practical application of the invention in a field of use, failure to satisfy the health and safety needs of the public and failure to meet requirements of public use specified by federal regulations. A funding governmental entity could elect to exercise these march-in rights on their own initiative or at the request of a third party; however, the exercise of such march-in rights has been historically rare when the patent holder (or its licensee) is practicing the patent invention although there can be no assurance that such rights would not be exercised. This same risk would apply to any other license into which we enter if the licensor receives government funding for the product candidate that is the subject of the license.

If our trademarks and trade names are not adequately protected, then we may not be able to build name recognition and our business, financial condition and results of operations may be adversely affected.

We have registered a trademark with the USPTO for the marks "LYMPHIR" and "Mino-Lok". These and any other trademarks or trade names we may obtain may be challenged, infringed, diluted, tarnished, circumvented or declared generic or determined to be infringing on other marks. The Company may not be able to protect our rights to these trademarks and trade names, which we need to build name recognition among potential partners or customers in the markets of interest. At times, competitors or other third parties may adopt similar trade names or trademarks, thereby impeding our ability to build brand identity and possibly leading to market confusion. In addition, there could be potential trade name or trademark infringement, dilution or tarnishment claims brought by owners of other registered trademarks or trademarks that incorporate variations of our registered or unregistered trademarks or trade names. Over the long term, if we are unable to establish name recognition based on our trademarks and trade names, then we may not be able to compete effectively and our business, financial condition and results of operations may be adversely affected. The Company's efforts to enforce or protect our proprietary rights related to trademarks, trade secrets, domain names, copyrights or other intellectual property may be ineffective and could result in substantial costs and diversion of resources.

Risks Related to Our Planned Spinoff of Citius Oncology

The Business Combination is subject to the satisfaction or waiver of certain conditions, which may not be satisfied or waived on a timely basis, if at all, and we may be unable to complete the Spinoff of Citius Oncology as a separate public company.

The consummation of the Business Combination is subject to customary closing conditions for transactions involving special purpose acquisition companies, including, among others:

- the expiration or termination of the waiting period under the Hart Scott Rodino Act;
- receipt of required consents and approvals from certain governmental authorities;
- no agreement with any governmental authority pursuant to which Citius Pharma or TenX has agreed not to consummate the Business Combination;
- no governmental authority of competent jurisdiction shall have enacted, issued or granted any law that has the effect of restraining, enjoining or prohibiting the consummation of the transaction;
- TenX has at least \$5,000,001 of net tangible assets as of the Closing;
- no outstanding or uncured written notice has been received by TenX from Nasdaq stating that it has failed, or would reasonably be expected to fail to meet the Nasdaq initial listing requirements or Nasdaq continued listing requirements as of the Effective Date for any reason;
- the parties have performed and complied in all material respects with the obligations, covenants and agreements required by the Merger Agreement;
- customary bring down conditions related to the accuracy of the parties' respective representations, warranties and pre-Closing covenants in the Merger Agreement, including the absence of any "Material Adverse Effect" (as defined in the Merger Agreement);
- TenX's registration statement that has been filed with the SEC has become effective; and
- the requisite TenX's shareholders' approvals have been received.

Additionally, as previously announced, Citius Pharma is in the process of formulating a plan of distribution to its stockholders of a portion of the shares of the Combined Company that Citius Pharma is to receive in the Business Combination (the "Distribution"). The criteria to determine the timing, size and other factors related to such Distribution will be determined and announced by us at a later date.

We cannot assure you that we will be able to complete the Business Combination or Spinoff or a Distribution due to many factors outside of our control. The completion of the anticipated Spinoff of Citius Oncology and any Distribution will also require significant amounts of our management's time and effort, which may divert management's attention from operating and growing our business.

We may be unable to achieve some or all of the benefits that we expect to achieve from the Spinoff.

The Company believes that separating LYMPHIR into a standalone entity would create two focused standalone public companies that are better positioned to pursue their strategic priorities, invest in growth opportunities, and attract new investors. The Company also believes that the Business Combination and Spinoff will result in significant benefits to our Company and our stockholders as a result of unlocking the value we believe that Citius Oncology would have as a standalone publicly traded company. However, by separating from Citius Pharma, Citius Oncology might be more susceptible to market fluctuations and we may be unable to achieve some or all of the benefits that we expect Citius Oncology to achieve as an independent company in the time we expect, if at all. Further, if the Business Combination's benefits do not meet the expectations of financial analysts, or due to the other factors discussed in this "Risk Factors" section and elsewhere in this report, the market price of the Combined Company's common stock might decline or increase in volatility.

Citius Oncology currently has only one product candidate that is in late stage development and it is heavily dependent on the approval, launch and commercial success of LYMPHIR.

In April 2022, Citius Pharma transferred the assets related to LYMPHIR to Citius Oncology. LYMPHIR is Citius Oncology's only late-stage product candidate, and it has not been approved for commercial sale, while the other product candidates are in the pre-clinical stage. Upon completion of the anticipated Business Combination, Citius Pharma will become a majority stockholder of the Combined Company, and as a result, we will only be entitled to a portion of the benefits, if any, that flow from the development by Citius Oncology of its LYMPHIR product candidate or any other product candidates that it might develop.

Citius Oncology is entirely dependent upon the successful commercial launch of LYMPHIR to generate revenue for the foreseeable future. Even if Citius Oncology receives approval for LYMPHIR for the treatment of CTCL, the commercial launch in the U.S. is not expected to occur until the second half of 2024. As a result, it is difficult to evaluate Citius Oncology's current business and predict its future prospects due to the other factors discussed in this "Risk Factors" section and elsewhere in this report. We cannot assure you that LYMPHIR will gain market acceptance among physicians, health care payors, patients and the medical community, which is critical to its commercial success.

Even after the completion of the Business Combination, the Combined Company will require substantial additional funding, which may not be available on acceptable terms, or at all.

Citius Oncology's operations have consumed substantial amounts of cash since inception and Citius Oncology expects to significantly increase its spending to continue its commercialization efforts for LYMPHIR, advance development of LYMPHIR for other indications and launch and commercialize any product candidates for such indications for which it receives regulatory approval. Furthermore, following the Business Combination, the Combined Company will have additional costs associated with operating as a public company. The Combined Company will require additional capital to fund its other operating expenses and capital expenditures.

Following consummation of the Business Combination, until the Combined Company is able to generate significant revenue, if ever, we expect it to finance its operations through a combination of equity offerings, debt financings, collaborations or other strategic transactions. We cannot be sure that any additional funding, if needed, will be available on terms favorable to it, or at all. Any additional fundraising efforts may divert its management from their day-to-day activities, which may adversely affect its ability to develop and commercialize its product candidates.

If Citius Oncology or the Combined Company raises additional funds through collaborations or strategic alliances with third parties, it may have to relinquish valuable rights to its product candidates, future revenue streams, research programs or technologies, or grant licenses on terms that may not be favorable to it. If Citius Oncology or the Combined Company is unsuccessful in its efforts to raise additional financing on acceptable terms, it may be required to significantly reduce or cease its operations.

The amount and timing of its future funding requirements will depend on many factors, some of which are outside of our control, including but not limited to:

- the costs and expenses associated with its ongoing commercialization efforts for LYMPHIR;
- the degree of success it experiences in commercializing LYMPHIR;
- the revenue generated by sales of LYMPHIR and other products that may be approved, if any;

- the scope, progress, results and costs of conducting studies and clinical trials for its other product candidates, if any, resulting from its ongoing research with LYMPHIR for other possible indications;
- the timing of, and the costs involved in, obtaining regulatory approvals for LYMPHIR and its other product candidates;
- the costs of manufacturing LYMPHIR and any other potential product candidates it develops;
- the timing and amount of any milestone, royalty or other payments it is required to make pursuant to any current or future license agreements;
- the extent to which LYMPHIR or any of its other potential product candidates, if approved for commercialization, is adopted by the physician community;
- the effect of competing products and product candidates and other market developments;
- the number and types of future product candidates it might develop and commercialize;
- any product liability or other lawsuits related to its products candidates and any approve products;
- the expenses needed to attract, hire and retain skilled personnel;
- the costs associated with being a public company after the closing of the Business Combination;
- its need to implement additional internal systems and infrastructure, including financial and reporting systems;
- the costs of preparing, filing and prosecuting patent applications and maintaining, enforcing and defending intellectual property-related claims; and
- the extent and scope of its general and administrative expenses.

Future sales or issuances of a substantial number of shares of the Combined Company's common stock may cause the price of its common stock to decline.

Citius Oncology is, and after the Business Combination, the Combined Company is expected to be, authorized to issue an aggregate of 100,000,000 shares of common stock and 10,000,000 shares of preferred stock. Any additional equity or equity-related financing may be dilutive to its stockholders, and debt or equity financing, if available, might subject Citius Oncology or the Combined Company to restrictive covenants and significant interest costs. Citius Oncology, and after the Business Combination, the Combined Company, might also issue additional shares of common stock or other securities that are convertible into or exercisable for common stock in connection with hiring or retaining employees, or for other business purposes.

Pursuant to the amended and restated registration rights agreement to be entered into in connection with the Business Combination, certain stockholders TenX, the TenX sponsor and certain equity holders of Citius Pharma can demand that the Combined Company can register their registrable securities under certain circumstances and will each also have piggyback registration rights for these securities. The registration of these securities will permit the public sale of such securities, subject to certain contractual restrictions imposed by the amended and restated registration rights agreement and the Merger Agreement.

The future sales or issuances of any such shares of the Combined Company's common stock or common stock equivalents may create downward pressure on the trading price of the Combined Company or our common stock.

The announcement of the proposed Business Combination could disrupt Citius Pharma's or Citius Oncology's relationships with their respective customers, suppliers, business partners and others, as well as their respective operating results and business generally.

Risks relating to the impact of the announcement of the Business Combination on our business include the following:

- our employees may experience uncertainty about their future roles, which might adversely affect our ability to retain and hire key personnel and other employees;
- customers, suppliers, business partners and other parties with which we maintain business relationships may experience uncertainty about its future and seek alternative relationships with third parties, seek to alter their business relationships with us or fail to extend an existing relationship with us; and
- we have expended and will continue to expend significant costs, fees and expenses for professional services and transaction costs in connection with the proposed Business Combination.

If any of the aforementioned risks were to materialize, they could lead to significant costs which may impact the Combined Company's results of operations and cash available to fund its business.

Conflicts of interest may arise from the Combined Company's relationship with Citius Pharma.

Immediately after the Business Combination, all of the Combined Company's directors, executive officers and employees will also be directors and employees of Citius Pharma; the employees will all be available pursuant to the amended and restated shared services agreement. As a result of this arrangement, the Combined Company's relationship with Citius Pharma could give rise to certain conflicts of interest that could have an impact on its research and development programs, business opportunities, and operations generally.

Even though the Combined Company is developing different technologies in different fields than Citius Pharma, the Combined Company could find itself in competition with Citius Pharma for research scientists, financing and other resources, licensing, manufacturing, and distribution arrangements. The Combined Company will engage for its own business in research and product development programs, investments, and business ventures, and Citius Pharma will not be entitled to participate or to receive an interest in those programs, investments, or business ventures. The Combined Company will not be obligated to present any particular research and development, investment, or business opportunity to us, even if the opportunity would be within the scope of our research and development plans or programs, business objectives, or investment policies. These opportunities may include, for example, opportunities to acquire businesses or assets, including but not limited to patents and other intellectual property that could be used by the Combined Company or by Citius Pharma.

Potential conflicts of interest could also arise in connection with the resolution of any dispute that may arise between Citius Pharma and the Combined Company regarding the terms of the amended and restated shared services agreement governing the services provided by Citius Pharma to the Combined Company and the relationship between the companies. Potential conflicts of interest may also arise if the Combined Company enters into additional commercial arrangements with Citius Pharma in the future. As a result of these actual or apparent conflicts, the Combined Company or Citius Pharma, might be precluded from pursuing certain growth initiatives.

Each conflict of interest will be resolved by the respective boards of directors in keeping with their fiduciary duties and such policies as they may implement from time to time. As noted above, there will be overlap among the Combined Company's board of directors, senior management and research staffs and that of Citius Pharma. These overlapping positions could interfere with the duties owed by such individuals to Citius Pharma.

A Distribution in connection with or following the Spinoff of Combined Company shares to our stockholders could result in significant tax liability to Citius Pharma and our stockholders.

A Distribution of Combined Company shares to our stockholders would not qualify for non-recognition of gain and loss, and therefore, our stockholders could be subject to tax. Each U.S. holder who receives Combined Company stock in a Distribution would generally be treated as receiving a Distribution in an amount equal to the fair market value of the Combined Company common stock received, which would generally result in (i) a taxable dividend to the stockholder to the extent that stockholder's pro rata share of Citius Pharma's current or accumulated earnings and profits; (ii) a reduction in the stockholder's basis (but not below zero) in Citius Pharma's common stock to the extent the amount received exceeds the stockholder's share of Citius Pharma's earnings and profits; and (iii) a taxable gain from the exchange of Citius Pharma's stock to the extent the amount received exceeds the sum of the stockholder's share of Citius Pharma's earnings and profits and the stockholder's basis in its Citius Pharma stock.

Citius Pharma will also recognize a taxable gain in an amount up to the fair market value of any distributed Combined Company stock in excess of the taxable basis in such distributed shares.

Any legal proceedings in connection with the Business Combination, the outcomes of which are uncertain, could delay or prevent the completion of the Business Combination.

In connection with business combination transactions similar to the proposed Business Combination, it is not uncommon for lawsuits to be filed against the parties and/or their respective directors and officers alleging, among other things, that the proxy statement/prospectus provided to stockholders contains false and misleading statements and/or omits material information concerning the transaction. Although no such lawsuits have yet been filed in connection with the Business Combination, it is possible that such actions may arise and, if such actions do arise, they generally would seek, among other things, injunctive relief and an award of attorneys' fees and expenses. Defending such lawsuits could require the parties to incur significant costs and draw the attention of the parties' management teams away from the consummation of the Business Combination. Further, the defense or settlement of any lawsuit or claim that remains unresolved at the time the Business Combination is consummated may adversely affect the Combined Company's business, financial condition, results of operations and cash flows. Such legal proceedings could delay or prevent the Business Combination from being consummated within the expected timeframe.

Risks Related to Our Securities

Our failure to maintain compliance with Nasdaq's continued listing requirements could result in the delisting of our common stock.

Citius Pharma common stock is currently listed on The Nasdaq Capital Market and following the Business Combination, the Combined Company intends to separately list its common stock on The Nasdaq Global Market. In order to maintain these listings, each entity must satisfy minimum financial and other requirements.

On September 12, 2023, Citius Pharma received a notification letter from the Nasdaq Stock Market LLC (“Nasdaq”) indicating that we were not in compliance with Nasdaq Listing Rule 5550(a)(2) because the minimum bid price of our common stock on the Nasdaq Capital Market closed below \$1.00 per share for 30 consecutive business days. In accordance with Nasdaq Listing Rule 5810(c)(3)(A), the Company has a compliance period of 180 calendar days, or until March 11, 2024, to regain compliance with the Bid Price Rule. If at any time before March 11, 2024, the bid price of the Company's common stock closes at \$1.00 per share or more for a minimum of ten consecutive business days, Nasdaq will provide the Company with a written confirmation of compliance with the Bid Price Rule. While Citius Pharma intends to engage in efforts to regain compliance, and thus maintain our listing, there can be no assurance that we will be successful or continue to meet all applicable Nasdaq Capital Market requirements in the future.

If Citius Pharma’s (or following the Business Combination, the Combined Company’s) common stock were to be removed from listing with Nasdaq, it may be subject to the so-called “penny stock” rules. The SEC has adopted regulations that define a “penny stock” to be any equity security that has a market price per share of less than \$5.00, subject to certain exceptions, such as any securities listed on a national securities exchange, which is the exception on which we currently rely. For any transaction involving a “penny stock,” unless exempt, the rules impose additional sales practice requirements on broker-dealers, subject to certain exceptions. If our common stock were delisted and determined to be a “penny stock,” a broker-dealer may find it more difficult to trade our common stock and an investor may find it more difficult to acquire or dispose of our common stock on the secondary market.

If Citius Pharma’s (or following the Business Combination, the Combined Company’s) common stock is delisted and there is no longer an active trading market for our shares, it may, among other things:

- cause stockholders difficulty in selling Citius Pharma’s or the Combined Company’s shares without depressing the market price for the shares or selling the shares at all;
- substantially impair the ability to raise additional funds;
- result in a loss of institutional investor interest and fewer financing opportunities; and/or
- result in potential breaches of representations or covenants of agreements pursuant to which Citius Pharma or the Combined Company made representations or covenants relating to compliance with applicable listing requirements. Claims related to any such breaches, with or without merit, could result in costly litigation, significant liabilities and diversion of management’s time and attention and could have a material adverse effect on the financial condition, business and results of operations.

A delisting would also reduce the value of Citius Pharma’s or the Combined Company’s equity compensation plans, which could negatively impact the ability to retain employees.

You may experience dilution of your ownership interests because of the future issuance of additional shares of our common stock or securities convertible into common stock.

For the foreseeable future, to finance our operations, including possible acquisitions or strategic transactions, we expect to issue equity securities, resulting in the dilution of the ownership interests of our present stockholders. We are currently authorized to issue an aggregate of 400,000,000 shares of common stock and 10,000,000 shares of preferred stock. As of September 30, 2023, there were 158,857,798 shares of common stock outstanding, 50,923,819 shares underlying warrants with a weighted average exercise price of \$1.50 per share and 13,305,171 shares underlying options with a weighted average exercise price of \$1.79 per share. We may also issue additional shares of our common stock or other securities that are convertible into or exercisable for common stock in connection with hiring or retaining employees, or for other business purposes. The future issuance of any such additional shares of common stock or common stock equivalents may create downward pressure on the trading price of our common stock or publicly traded warrants.

Our Certificate of Incorporation allows for our Board of Directors to create new series of preferred stock without further approval by our stockholders, which could adversely affect the rights of the holders of the common stock.

Our Board of Directors has the authority to issue up to 10,000,000 shares of preferred stock and to fix and determine the relative rights and preferences of any such preferred stock without further stockholder approval. As a result, our Board of Directors could authorize the issuance of one or more series of preferred stock that would grant preferential rights to our assets upon liquidation, the right to receive dividend payments before dividends are distributed to the holders of common stock and the right to the redemption of the preferred shares, together with a premium, prior to the redemption of the common stock. In addition, our Board of Directors could authorize the issuance of a series of preferred stock that has greater voting power than the common stock or that is convertible into our common stock, which could decrease the relative voting power of the common stock or result in dilution to our existing stockholders.

We have not paid cash dividends in the past and we do not expect to pay cash dividends in the foreseeable future. Any return on investment may be limited to the capital appreciation, if any, of our common stock.

We have not paid cash dividends on our common stock and we (and following the Business Combination, the Combined Company) do not anticipate paying cash dividends on its capital in the foreseeable future. The payment of dividends on the capital stock will depend on the respective earnings, financial condition and other business and economic factors affecting them at such time as the board of directors may consider relevant. In addition, the ability to pay dividends may be limited by covenants in any future outstanding indebtedness that either entity may incur. Since the Combined Company does not intend to pay dividends, a stockholder's ability to receive a return on such stockholder's investment will depend on any future appreciation in the market value of the Combined Company's common stock. There is no guarantee that either entity's common stock will appreciate or even maintain the price at which its stockholders have purchased it.

Provisions in our Amended and Restated Articles of Incorporation, as amended, and under Nevada law could discourage a takeover that stockholders may consider favorable and may lead to entrenchment of management.

Provisions of our articles of incorporation and bylaws may delay or discourage transactions involving an actual or potential change of control or change in our management, including transactions in which stockholders might otherwise receive a premium for their shares, or transactions that our stockholders might otherwise deem to be in their best interests. Therefore, these provisions could adversely affect the price of our common stock. Among other things, these provisions include:

- the authorization of 10,000,000 shares of "blank check" preferred stock, the rights, preferences and privileges of which may be established and shares of which may be issued by our Board of Directors at its discretion from time to time and without stockholder approval;

- limiting the removal of directors by the stockholders;
- allowing for the creation of a staggered Board of Directors;
- eliminating the ability of stockholders to call a special meeting of stockholders; and
- establishing advance notice requirements for nominations for election to the Board of Directors or for proposing matters that can be acted upon at stockholder meetings.

Additionally, Nevada's "combinations with interested stockholders" statutes prohibit certain business "combinations" between certain Nevada corporations and any person deemed to be an "interested stockholder" for two years after such person first becomes an "interested stockholder" unless (i) the corporation's Board of Directors approves the combination (or the transaction by which such person becomes an "interested stockholder") in advance, or (ii) the combination is approved by the Board of Directors and 60% of the corporation's voting power not beneficially owned by the interested stockholder, its affiliates and associates. Furthermore, in the absence of prior approval, certain restrictions may apply even after such two-year period. For purposes of these statutes, an "interested stockholder" is any person who is (x) the beneficial owner, directly or indirectly, of 10% or more of the voting power of the outstanding voting shares of the corporation, or (y) an affiliate or associate of the corporation and at any time within the two previous years was the beneficial owner, directly or indirectly, of 10% or more of the voting power of the then outstanding shares of the corporation. The definition of the term "combination" is sufficiently broad to cover most significant transactions between the corporation and an "interested stockholder". Subject to certain timing requirements set forth in the statutes, a corporation may elect not to be governed by these statutes. We have not included any such provision in our articles of incorporation.

We are not currently subject to Nevada's "acquisition of controlling interest" statutes that contain provisions governing the acquisition of a controlling interest in certain Nevada corporations. If these laws were to apply to us, they might further discourage companies or persons interested in acquiring a significant interest in or control of the Company, regardless of whether such acquisition may be in the interest of our stockholders.

The effect of these statutes may be to potentially discourage parties interested in taking control of the Company from doing so if it cannot obtain the approval of our Board of Directors.

Item 1B. Unresolved Staff Comments

Not applicable.

Item 1C. Cybersecurity

Not applicable.

Item 2. Properties

We lease our offices at 11 Commerce Drive, First Floor, Cranford, New Jersey 07016. The lease runs until October 31, 2025.

Item 3. Legal Proceedings

We are not involved in any litigation that we believe could have a material adverse effect on our financial position or results of operations. There is no action, suit, proceeding, inquiry, or investigation before or by any court, public board, government agency, self-regulatory organization or body pending or, to the knowledge of our executive officers, threatened against or affecting our company or our officers or directors in their capacities as such.

In the future, we might from time to time become involved in litigation relating to claims arising from our ordinary course of business.

Item 4. Mine Safety Disclosures

Not applicable.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

The information regarding our equity compensation plans required by this Item is found in Item 12 of this report.

Market Information

Our common stock trades on The Nasdaq Capital Market under the symbol "CTXR."

Holders of Common Stock

As December 27, 2023, we had approximately 92 stockholders of record of our common stock.

Dividends

We have never paid dividends on our common stock. We intend to follow a policy of retaining earnings, if any, to finance the growth of our business and do not anticipate paying any cash dividends in the foreseeable future. The declaration and payment of future dividends on the common stock will be at sole discretion of our Board of Directors and will depend on our profitability and financial condition, capital requirements, statutory and contractual restrictions, future prospects and other factors deemed relevant by the Board.

Recent Sales of Unregistered Securities

In August 2023, we extended the term by one year to August 14, 2024 for an aggregate of 3,921,569 warrants with an exercise price of \$1.15 per share of common stock. The warrants are held by Leonard Mazur, the Company's Chief Executive Officer and Chairman of the Board of Directors, and Myron Holubiak, the Company's Executive Vice President and a member of the Board of Directors, and were originally issued in August 2018 in a private placement conducted simultaneously with a registered direct offering of shares of common stock (the "2018 Offering") managed by H. C. Wainwright & Co., LLC ("Wainwright"). Mr. Mazur and Mr. Holubiak participated in the private placement on the same basis as all other investors. Additionally, 189,412 placement agent warrants with an exercise price of \$1.5938 per share issued in connection with the 2018 Offering were extended by one year to August 8, 2024. Such placement agent warrants are held by certain representatives of Wainwright. There are no other warrants remaining outstanding from the 2018 Offering and if such warrants are fully exercised, the Company would receive \$4,811,680 in cash proceeds.

Issuer Purchases of Equity Securities

We did not make any purchases of our common stock during the three months ended September 30, 2023, which is the fourth quarter of our fiscal year.

Item 6. [Reserved]

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of operations should be read together with our financial statements and related notes included elsewhere in this annual report on Form 10-K. Management's discussion and analysis contains forward-looking statements, such as statements of our plans, objectives, expectations, and intentions. Any statements that are not statements of historical fact are forward-looking statements. When used, the words "believe," "plan," "intend," "anticipate," "target," "estimate," "expect" and the like, and/or future tense or conditional constructions ("will," "may," "could," "should," etc.), or similar expressions, identify these forward-looking statements. These forward-looking statements are subject to risks and uncertainties including those under "Risk Factors" in Item 1A in this Form 10-K that could cause actual results or events to differ materially from those expressed or implied by the forward-looking statements. Our actual results and the timing of events could differ materially from those anticipated in these forward-looking statements as a result of several factors. We do not undertake any obligation to update forward-looking statements to reflect events or circumstances occurring after the filing date of this report.

Historical Background

We are a late-stage biopharmaceutical company dedicated to the development and commercialization of first-in-class critical care products with a focus on oncology, anti-infectives in adjunct cancer care, unique prescription products and stem cell therapies. On September 12, 2014, we acquired Citius Pharmaceuticals, LLC as a wholly-owned subsidiary.

On March 30, 2016, we acquired all of the outstanding stock of Leonard-Meron Biosciences, Inc. (“LMB”) by issuing shares of our common stock. We acquired identifiable intangible assets of \$19,400,000 related to in-process research and development and recorded goodwill of \$9,346,796 for the excess of the purchase consideration over the net assets acquired.

On September 11, 2020, we formed NoveCite, Inc. (“NoveCite”), a Delaware corporation, of which we own 75% of the issued and outstanding capital stock.

On August 23, 2021, we formed Citius Oncology, Inc. (formerly Citius Acquisition Corp.) as a wholly-owned subsidiary in conjunction with the acquisition of LYMPHIR, but Citius Oncology did not begin operations until April 2022, when Citius Pharma transferred the assets related to LYMPHIR to Citius Oncology, including the related license agreement with Eisai and the related asset purchase agreement with Dr. Reddy’s Laboratories SA, a subsidiary of Dr. Reddy’s.

In-process research and development of \$19,400,000 represents the value of LMB’s leading drug candidate (Mino-Lok), which is an antibiotic solution used to treat catheter-related bloodstream infections and is expected to be amortized on a straight-line basis over a period of eight years commencing upon revenue generation. Goodwill of \$9,346,796 represents the value of LMB’s industry relationships and its assembled workforce. Goodwill will not be amortized but will be tested at least annually for impairment. In-process research and development of \$40,000,000 represents the value of our September 2021 acquisition of an exclusive license for LYMPHIR (denileukin diftitox), a late-stage oncology immunotherapy for the treatment of CTCL, a rare form of non-Hodgkin lymphoma and is expected to be amortized on a straight-line basis over a period of twelve years commencing upon revenue generation.

Through September 30, 2023, we have devoted substantially all our efforts to product development, raising capital, building infrastructure through strategic alliances and coordinating activities relating to our proprietary products. We have not yet realized any revenues from our operations.

Recent Developments

On October 23, 2023, Citius Pharma and Citius Oncology entered into the Merger Agreement with TenX and Merger Sub. The Merger Agreement provides, among other things, (i) on the terms and subject to the conditions set forth therein, that Merger Sub will merge with and into Citius Oncology, with Citius Oncology surviving as a wholly owned subsidiary of TenX, and (ii) that prior to the Effective Time, TenX will migrate to and domesticate as a Delaware corporation. The publicly traded Combined Company is to be named “Citius Oncology, Inc.”

Patent and Technology License Agreements

Mino-Lok® – LMB has a patent and technology license agreement with Novel Anti-Infective Therapeutics, Inc. (“NAT”) to develop and commercialize Mino-Lok on an exclusive, worldwide sub-licensable basis, as amended. Since May 2014, LMB has paid an annual maintenance fee, which began at \$30,000 and has increased over five years to \$90,000, where it will remain until the commencement of commercial sales of a product subject to the license. LMB will also pay annual royalties on net sales of licensed products, with royalties ranging from the mid-single digits to the low double digits. In limited circumstances in which the licensed product is not subject to a valid patent claim and a competitor is selling a competing product, the royalty rate is in the low single digits. After a commercial sale is obtained, LMB must pay minimum aggregate annual royalties that increase in subsequent years. LMB must also pay NAT up to \$1,100,000 upon achieving specified regulatory and sales milestones. Finally, LMB must pay NAT a specified percentage of payments received from any sub licensees.

Mino-Wrap – On January 2, 2019, we entered into a patent and technology license agreement with the Board of Regents of the University of Texas System on behalf of the University of Texas M. D. Anderson Cancer Center (“Licensor”), whereby we in-licensed exclusive worldwide rights to the patented technology for any and all uses relating to breast implants. We intend to develop a liquefying gel-based wrap containing minocycline and rifampin for the reduction of infections associated with breast implants following breast reconstructive surgeries. We are required to use commercially reasonable efforts to commercialize Mino-Wrap under several regulatory scenarios and achieve milestones associated with these regulatory options leading to an approval from the FDA.

Under the license agreement, we paid a nonrefundable upfront payment of \$125,000. We are obligated to pay an annual maintenance fee of \$30,000, commencing in January 2020 that increases annually by \$15,000 per year up to a maximum of \$90,000. Annual maintenance fees cease on the first sale of product. We also must pay up to an aggregate of \$2.1 million in milestone payments, contingent on the achievement of various regulatory and commercial milestones. Under the terms of the license agreement, we also must pay a royalty of mid- to upper-single digit percentages of net sales, depending on the amount of annual sales, and subject to downward adjustment to lower- to mid-single digit percentages in the event there is no valid patent for the product in the U.S. at the time of sale. After the first sale of product, we will owe an annual minimum royalty payment of \$100,000 that will increase annually by \$25,000 for the duration of the term. We will be responsible for all patent expenses incurred by Licensor for the term of the agreement although Licensor is responsible for filing, prosecution, and maintenance of all patents.

NoveCite – On October 6, 2020, our subsidiary NoveCite entered into a license agreement with Novellus Therapeutics Limited (“Licensor”), whereby NoveCite acquired an exclusive, worldwide license, with the right to sublicense, to develop and commercialize a stem cell therapy based on the Licensor’s patented technology for the treatment of acute pneumonitis of any etiology in which inflammation is a major agent in humans. Upon execution of the license agreement, NoveCite paid an upfront payment of \$5,000,000 to Licensor and issued to Licensor shares of NoveCite’s common stock representing 25% of NoveCite’s currently outstanding equity. We own the other 75% of NoveCite’s currently outstanding equity.

In July 2021, Novellus was acquired by Brooklyn ImmunoTherapeutics (“Brooklyn”). Pursuant to this transaction, the NoveCite license was assumed by Brooklyn with all original terms and conditions. In October 2021, Brooklyn changed its name to Eterna Therapeutics Inc. (“Eterna”).

As part of the Novellus and Brooklyn merger transaction, the 25% non-dilutive position per the subscription agreement between Novellus and NoveCite was removed.

Under the license agreement, NoveCite is obligated to pay Licensor up to an aggregate of \$51,000,000 in regulatory and developmental milestone payments. NoveCite also must pay a royalty equal to low double-digit percentages of net sales, commencing upon the first commercial sale of a licensed product. This royalty is subject to downward adjustment on a product-by-product and country-by-country basis to an upper-single digit percentage of net sales in any country in the event of the expiration of the last valid patent claim or if no valid patent claim exists in that country. The royalty will end on the earlier of (i) date on which a biosimilar product is first marketed, sold, or distributed by Licensor or any third party in the applicable country or (ii) the 10-year anniversary of the date of expiration of the last-to-expire valid patent claim in that country. In the case of a country where no licensed patent ever exists, the royalty will end on the later of (i) the date of expiry of such licensed product’s regulatory exclusivity and (ii) the 10-year anniversary of the date of the first commercial sale of the licensed product in the applicable country. In addition, NoveCite will pay to Licensor an amount equal to a mid-twenties percentage of any sublicensee fees it receives.

Under the terms of the license agreement, in the event that Licensor receives any revenue involving the original cell line included in the licensed technology, then Licensor shall remit to NoveCite 50% of such revenue.

LYMPHIR - In September 2021, the Company announced that it had entered into a definitive agreement with Dr. Reddy's to acquire its exclusive license of E7777 (denileukin diftitox), a late-stage oncology immunotherapy for the treatment of CTCL, a rare form of non-Hodgkin lymphoma. Citius Pharma subsequently renamed E7777 as LYMPHIR.

Under the terms of this agreement, Citius Pharma acquired Dr. Reddy's exclusive license of LYMPHIR from Eisai and other related assets owned by Dr. Reddy's (now owned by Citius Oncology). Our exclusive license rights, through our subsidiary, include rights to develop and commercialize LYMPHIR in all markets except for Japan and certain parts of Asia. Additionally, we, through our subsidiary, have an option on the right to develop and market the product in India. Eisai retains exclusive development and marketing rights for the agent in Japan and Asia. Dr. Reddy's received a \$40 million upfront payment and is entitled to up to \$40 million in development milestone payments related to CTCL approvals in the U.S. and other markets, up to \$70 million in development milestones for additional indications, as well as commercial milestone payments and low double-digit tiered royalties on net product sales. Eisai is to receive a \$6 million development milestone payment upon initial approval and additional commercial milestone payments related to the achievement of net product sales thresholds. Eisai was responsible for completing the CTCL clinical trial, and CMC activities through the filing of a Biologics License Application ("BLA") for LYMPHIR with the FDA. The BLA was filed in September 2022. We, through Citius Oncology, will be responsible for development costs associated with potential additional indications.

On July 29, 2023, we received a Complete Response Letter, ("CRL") from the FDA regarding the BLA seeking approval for LYMPHIR. The FDA has required that we incorporate enhanced product testing, and additional controls agreed to with the FDA during the market application review. The FDA raised no concerns relating to the safety and efficacy clinical data package.

On September 8, 2023, we announced that the FDA agreed with our plans to address the requirements outlined in the CRL. The guidance from the FDA provides a path for completing the necessary activities to support the resubmission of the BLA. No additional clinical efficacy or safety trials have been requested by the FDA for the resubmission. Based on the feedback from the FDA, we plan to complete the CRL remediation activities by the end of the year and file the resubmission in early 2024.

Results of Operations for Year Ended September 30, 2023 compared to Year Ended September 30, 2022

	Year Ended September 30, 2023	Year Ended September 30, 2022
Revenues	\$ —	\$ —
Operating expenses:		
Research and development	14,819,729	17,655,482
General and administrative	15,295,584	11,754,609
Stock-based compensation – general and administrative	6,616,705	3,905,954
Total operating expenses	36,732,018	33,316,045
Operating loss	(36,732,018)	(33,316,045)
Interest income	1,179,417	251,399
Gain on sale of New Jersey net operating losses	3,585,689	—
Loss before income taxes	(31,966,912)	(33,064,646)
Income tax expense	576,000	576,000
Net loss	\$ (32,542,912)	\$ (33,640,646)

Revenues

We did not generate any revenues for the years ended September 30, 2023 and 2022.

Research and Development Expenses

For the year ended September 30, 2023, research and development expenses were \$14,819,729 as compared to \$17,655,482 for the year ended September 30, 2022, a decrease of \$2,835,753.

Research and development costs for Mino-Lok® decreased by \$33,894 to \$4,216,761 for the year ended September 30, 2023 as compared to \$4,250,655 for the year ended September 30, 2022, driven primarily by decreased start-up costs associated with the global clinical research organization, Biorasi, LLC, that assisted in the opening of international sites, primarily in India, for the Phase 3 Mino-Lok trial.

Research and development costs for our Halo-Lido product candidate increased by \$1,378,662 to \$4,076,010 for the year ended September 30, 2023 as compared to \$2,697,348 for the year ended September 30, 2022 due to higher costs associated with the initiation of the Phase 2 study for the year ended September 30, 2023. On June 20, 2023, we announced that the high dose formulation of CITI-002, a lidocaine and halobetasol propionate combination formulation, provided a meaningful reduction in symptom severity, as reported by patients, when compared to individual components alone. Moreover, there were no reported significant adverse events and CITI-002 was well tolerated by patients in the study. Citius intends to schedule an end of Phase 2 meeting with the FDA to begin planning the next steps in the regulatory and clinical development program for CITI-002.

During the year ended September 30, 2023, research and development costs for our proposed novel cellular therapy for acute respiratory distress syndrome (ARDS) were \$193,898 as compared to \$1,777,288 for the year ended September 30, 2022. The decrease of \$1,583,390 was primarily related to lower preclinical and manufacturing costs in the year ended September 30, 2023.

During the year ended September 30, 2023, research and development expenses for our LYMPHIR product candidate were \$6,081,385 as compared to \$8,693,775 during the year ended September 30, 2022. The decrease of \$2,612,390 was primarily due to reduced costs associated with the completion of the Phase 3 clinical trial, as well as the completion and submission of the Biologics License Application to the FDA, which we filed in September 2022.

We expect that research and development expenses will continue to stabilize in fiscal 2024 as we continue to focus on the commercialization of LYMPHIR, and complete our Phase 3 trial for Mino-Lok and our Phase 2b trial for Halo-Lido.

General and Administrative Expenses

For the year ended September 30, 2023, general and administrative expenses were \$15,295,584 as compared to \$11,754,609 for the year ended September 30, 2022, an increase of \$3,540,975. The primary reason for the increase was costs associated with pre-launch and market research activities associated with LYMPHIR. General and administrative expenses consist primarily of compensation costs, professional fees for legal, regulatory, accounting and corporate development services, and investor relations expenses.

Stock-based Compensation Expense

For the year ended September 30, 2023, stock-based compensation expense was \$6,616,705 as compared to \$3,905,954 for the year ended September 30, 2022. Stock-based compensation expense includes options granted to directors, employees, and consultants. The primary reason for the \$2,710,751 increase in stock-based compensation expense was the grant of options under the Citius Oncology stock plan. Option expense under the Citius Oncology stock plan was \$1,965,500 during the year ended September 30, 2023. For the years ended September 30, 2023 and 2022, stock-based compensation expense also includes \$130,382 and \$133,332, respectively, for the NoveCite stock option plan. In fiscal year 2023, we granted options to our new employees and additional options to other employees, our directors, and consultants. At September 30, 2023, unrecognized total compensation cost related to unvested options for Citius Pharma common stock of \$4,840,874 is expected to be recognized over a weighted average period of 1.5 years, unrecognized total compensation cost related to unvested options for Citius Oncology common stock of \$18,882,500 is expected to be recognized over a weighted average period of 2.6 years, and unrecognized total compensation cost related to unvested options for NoveCite common stock of \$47,575 is expected to be recognized over a weighted average period of 0.7 years.

Other Income

During the year ended September 30, 2023, the Company earned \$1,179,417 of interest income compared to \$251,399 of interest income during the year ended September 30, 2022. The increase of \$928,018 was due to higher interest rates earned on the investment of the remaining proceeds from our equity offerings and common stock warrant exercises in money market accounts.

Other income for the year ended September 30, 2023 also includes the \$3,585,689 gain recognized in connection with the sale of certain New Jersey income tax net operating losses to a third party under the New Jersey Technology Business Tax Certificate Transfer Program.

Income Taxes

The Company recorded deferred income tax expense of \$576,000 for in each of the years ended September 30, 2023 and 2022 related to the amortization for taxable purposes of its in-process research and development asset.

Net Loss

For the year ended September 30, 2023, we incurred a net loss of \$32,542,912 compared to a net loss of \$33,640,646 for the year ended September 30, 2022. The \$1,097,734 decrease in the net loss was primarily due to the increase in other income of \$4,513,707 offsetting the increase in our operating expenses of \$3,415,973.

LIQUIDITY AND CAPITAL RESOURCES

Liquidity and Working Capital

Citius Pharma has incurred operating losses since inception and incurred net losses of \$32,542,912 and \$33,640,646 for the years ended September 30, 2023 and 2022, respectively. At September 30, 2023, Citius Pharma had an accumulated deficit of \$162,231,379. Citius Pharma's net cash used in operations during the years ended September 30, 2023 and 2022 was \$29,060,212 and \$28,361,256, respectively.

As a result of our common stock offerings and common stock warrant exercises in fiscal year 2021 and the May 2023 registered direct offering, the Company had working capital of approximately \$29,000,000 at September 30, 2023. We expect that we will have sufficient funds to continue our operations through August 2024. At September 30, 2023, Citius Pharma had cash and cash equivalents of \$26,480,928 available to fund its operations. The Company's only source of cash flow since inception has been from financing activities. During the year ended September 30, 2023, the Company received net proceeds of \$13,829,450, from the issuance of equity. Our primary uses of operating cash were for in-licensing of intellectual property, product development and commercialization activities, employee compensation, consulting fees, legal and accounting fees, insurance, and investor relations expenses.

Financing Activities

In November 2022, the Company was selected to participate in New Jersey's Technology Business Tax Certificate Transfer (NOL) Program and received \$3,585,689 million in non-dilutive capital through the New Jersey Economic Development Authority on December 29, 2022.

On May 8, 2023, the Company closed a registered direct offering with certain institutional investors for 12,500,001 common shares and warrants to purchase 12,500,001 common shares, at a purchase price of \$1.20 per share of common stock and accompanying warrant, for gross proceeds of \$15,000,001. The warrants have an exercise price of \$1.50 per share, are exercisable six months from the date of issuance, and expire five years from the date of issuance. The Company also issued 875,000 warrants to the placement agent as part of the transaction. Net proceeds of the offering totaled approximately \$13,798,183.

During the year ended September 30, 2023, we received \$31,267 in proceeds from the exercise of common stock options.

Based on our cash and cash equivalents at September 30, 2023, we expect that we will have sufficient funds to continue our operations through August 2024. We expect to raise additional capital in the future to support our operations beyond August 2024. There is no assurance, however, that we will be successful in raising the needed capital or that the proceeds will be received in an amount or in a timely manner to support our operations.

Inflation

Our management believes that inflation has not had a material effect on our results of operations.

Off Balance Sheet Arrangements

We do not have any off-balance sheet arrangements.

CRITICAL ACCOUNTING POLICIES

Our discussion and analysis of our financial condition and results of operations is based on our financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities and expenses and related disclosure of contingent assets and liabilities. We review our estimates on an ongoing basis. We base our estimates on historical experience and on various other factors that we believe to be reasonable under the circumstances. Actual results may differ from these estimates. We believe the judgments and estimates required by the following accounting policies to be critical in the preparation of our financial statements.

Research and Development

Research and development costs, including upfront fees and milestones paid to collaborators who are performing research and development activities under contractual agreement with us, are expensed as incurred. We defer and capitalize our nonrefundable advance payments that are for research and development activities until the related goods are delivered or the related services are performed. When we are reimbursed by a collaboration partner for work we perform, we record the costs incurred as research and development expenses and the related reimbursement as a reduction to research and development expenses in our statement of operations. Research and development expenses primarily consist of clinical and non-clinical studies, materials and supplies, third-party costs for contracted services, and payments related to external collaborations and other research and development related costs.

In-process Research and Development and Goodwill

In-process research and development of \$19,400,000 represents the value of LMB's drug candidate, Mino-Lok, an antibiotic lock solution in Phase 3 clinical development, which if approved, would be used to treat catheter-related bloodstream infections, and is expected to be amortized on a straight-line basis over a period of eight years commencing upon revenue generation. In-process research and development of \$40,000,000 represents the value of our September 2021 acquisition of an exclusive license for LYMPHIR (denileukin diftitox), a late-stage oncology immunotherapy for the treatment of CTCL, a rare form of non-Hodgkin lymphoma and is expected to be amortized on a straight-line basis over a period of twelve years commencing upon revenue generation.

Goodwill represents the value of LMB's industry relationships and its assembled workforce. Goodwill will not be amortized and will be tested at least annually for impairment.

The Company reviews intangible assets annually to determine if any adverse conditions exist or a change in circumstances has occurred that would indicate impairment or a change in the remaining useful life of any intangible asset. If the carrying value of an asset exceeds its undiscounted cash flows, the Company writes down the carrying value of the intangible asset to its fair value for the period identified. No impairments have occurred since the acquisitions of our intangible assets through September 30, 2023.

The Company evaluates the recoverability of goodwill annually or more frequently if events or changes in circumstances indicate that the carrying value of an asset might be impaired, in accordance with Accounting Standard Update (“ASU”) 2017-04, *Intangibles – Goodwill and Other (Topic 350): Simplifying the Accounting for Goodwill Impairment*. Goodwill is first qualitatively assessed to determine whether further impairment testing is necessary. Factors that management considers in this assessment include macroeconomic conditions, industry and market considerations, overall financial performance (both current and projected), changes in management and strategy and changes in the composition or carrying amount of net assets. If this qualitative assessment indicates that it is more likely than not that the fair value of a reporting unit is less than its carrying amount, a one-step test is then performed in accordance with ASU 2017-04. Under the simplified model, a goodwill impairment is calculated as the difference between the carrying amount of the reporting unit and its fair value.

The Company performed a qualitative assessment for its 2023 analysis of goodwill. Based on this assessment, management does not believe that it is more likely than not that the carrying value of the reporting unit exceeds its fair value. Accordingly, no further testing was performed as management believes that there are no impairment issues with respect to goodwill as of September 30, 2023.

Income Taxes

We follow accounting guidance regarding the recognition, measurement, presentation, and disclosure of uncertain tax positions in the financial statements. Tax positions taken or expected to be taken in the course of preparing our tax returns are required to be evaluated to determine whether the tax positions are “more-likely-than-not” of being sustained by the applicable tax authorities. Tax positions not deemed to meet a more-likely-than-not threshold would be recorded in the financial statements.

We recognize deferred tax assets and liabilities based on differences between the financial reporting and tax basis of assets and liabilities using the enacted tax rates and laws that are expected to be in effect when the differences are expected to reverse. We provide a valuation allowance for deferred tax assets for which we do not consider realization of such assets to be more likely than not.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Not required.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Stockholders and Board of Directors of Citius Pharmaceuticals, Inc.:

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of Citius Pharmaceuticals, Inc. (the “Company”) as of September 30, 2023 and 2022, and the related consolidated statements of operations, changes in stockholders’ equity and cash flows for the years then ended, and the related notes to the consolidated financial statements (collectively, the “financial statements”). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company as of September 30, 2023 and 2022, and the results of its operations and its cash flows for the years then ended, in conformity with accounting principles generally accepted in the United States of America.

Emphasis of a Matter Regarding Going Concern

The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note 2 to the financial statements, the Company has suffered recurring losses and negative cash flows from operations and has a significant accumulated deficit. These conditions raise substantial doubt about the Company’s ability to continue as a going concern. Management’s plans in regard to these matters are described in Note 2. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

Basis for Opinion

These financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on the Company’s financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (“PCAOB”) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits, we are required to obtain an understanding of internal control over financial reporting, but not for the purpose of expressing an opinion on the effectiveness of the Company’s internal control over financial reporting. Accordingly, we express no such opinion.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters

Critical audit matters are matters arising from the current period audit of the consolidated financial statements that were communicated or required to be communicated to the board of directors and that: (1) relate to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. We determined that there are no critical audit matters.

/s/ Wolf & Company, P.C.

We have served as the Company’s auditor since 2014.

CITIUS PHARMACEUTICALS, INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED SEPTEMBER 30, 2023 AND 2022

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

Business

Citius Pharmaceuticals, Inc. (“Citius Pharma,” the “Company” or “we”) is a late-stage biopharmaceutical company dedicated to the development and commercialization of critical care products with a focus on oncology, anti-infectives in adjunct cancer care, unique prescription products and stem cell therapies.

On March 30, 2016, we acquired Leonard-Meron Biosciences, Inc. (“LMB”) as a wholly-owned subsidiary. We acquired all the outstanding stock of LMB by issuing shares of our common stock. The net assets acquired included identifiable intangible assets of \$19,400,000 related to in-process research and development. We recorded goodwill of \$9,346,796 for the excess of the purchase price over the net assets acquired.

On September 11, 2020, we formed NoveCite, Inc. (“NoveCite”), a Delaware corporation, of which we own 75% of the issued and outstanding capital stock.

On August 23, 2021, we formed Citius Oncology, Inc. (formerly named Citius Acquisition Corp.) (“Citius Oncology”), as a wholly-owned subsidiary in conjunction with the acquisition of LYMPHIR, which began operations in April 2022. On October 23, 2023, Citius Pharma and Citius Oncology entered into an agreement and plan of merger and reorganization with TenX Keane Acquisition, and its wholly owned subsidiary, TenX Merger Sub Inc., whereby TenX Merger Sub Inc. will merge with and into Citius Oncology, with Citius Oncology surviving as a wholly owned subsidiary of TenX Keane Acquisition. The newly combined publicly traded company is to be named “Citius Oncology, Inc.” (see Note 11).

In-process research and development (“IPR&D”) consists of i) the \$19,400,000 acquisition value of LMB’s drug candidate (Mino-Lok), which is an antibiotic solution used to treat catheter-related bloodstream infections and is expected to be amortized on a straight-line basis over a period of eight years commencing upon revenue generation, and ii) the \$40,000,000 acquisition value of the exclusive license for LYMPHIR (denileukin diftiox), a late-stage oncology immunotherapy for the treatment of cutaneous T-cell lymphoma (“CTCL”), a rare form of non-Hodgkin lymphoma and is expected to be amortized on a straight-line basis over a period of twelve years commencing upon revenue generation.

Goodwill of \$9,346,796 represents the value of LMB’s industry relationships and its assembled workforce. Goodwill will not be amortized but will be tested at least annually for impairment.

Since its inception, we have devoted substantially all our efforts to business planning, research and development, recruiting management and technical staff, and raising capital. We are subject to a number of risks common to companies in the pharmaceutical industry including, but not limited to, risks related to the development by the Company or its competitors of research and development stage products, regulatory approval and market acceptance of its products, competition from larger companies, dependence on key personnel, dependence on key suppliers and strategic partners, the Company’s ability to obtain additional financing and the Company’s compliance with governmental and other regulations.

Basis of Presentation

The accompanying consolidated financial statements include the operations of Citius Pharmaceuticals, Inc., and its wholly-owned subsidiaries, Citius Pharmaceuticals, LLC, LMB and Citius Oncology, and its majority-owned subsidiary NoveCite. NoveCite, was inactive until October 2020. Citius Oncology began operations in April 2022. All significant inter-company balances and transactions have been eliminated in consolidation.

2. GOING CONCERN UNCERTAINTY AND MANAGEMENT'S PLAN

The accompanying consolidated financial statements have been prepared on a going concern basis, which contemplates the realization of assets and the satisfaction of liabilities in the normal course of business. The Company experienced negative cash flows from operations of \$29,060,212 and \$28,361,256, for the years ended September 30, 2023 and 2022, respectively. The Company had working capital of approximately \$28.6 million at September 30, 2023. The Company estimates that its available cash resources will be sufficient to fund its operations through August 2024 which raises substantial doubt about the Company's ability to continue as a going concern within one year after the date that the accompanying consolidated financial statements are issued.

The Company has generated no operating revenue to date and has principally raised capital through the issuance of debt and equity instruments to finance its operations. However, the Company's continued operations beyond August 2024, including its development plans for LYMPHIR, Mino-Lok, Mino-Wrap, Halo-Lido and NoveCite, will depend on its ability to obtain regulatory approval to market LYMPHIR and/or Mino-Lok and generate substantial revenue from the sale of LYMPHIR and/or Mino-Lok and on its ability to raise additional capital through various potential sources, such as equity and/or debt financings, strategic relationships, or out-licensing of its product candidates. However, the Company can provide no assurances on regulatory approval, commercialization, or future sales of LYMPHIR and/or Mino-Lok or that financing or strategic relationships will be available on acceptable terms, or at all. If the Company is unable to raise sufficient capital, find strategic partners or generate substantial revenue from the sale of LYMPHIR and/or Mino-Lok, there would be a material adverse effect on its business. Further, the Company expects in the future to incur additional expenses as it continues to develop its product candidates, including seeking regulatory approval, and protecting its intellectual property.

3. PATENT AND TECHNOLOGY LICENSE AGREEMENTS

Patent and Technology License Agreement – Mino-Lok

LMB has a patent and technology license agreement with Novel Anti-Infective Therapeutics, Inc. ("NAT") to develop and commercialize Mino-Lok® on an exclusive, worldwide sub licensable basis, as amended. LMB pays an annual maintenance fee each June until commercial sales of a product subject to the license commence. The Company recorded an annual maintenance fee expense of \$90,000 in 2023 and 2022.

LMB will also pay annual royalties on net sales of licensed products, with royalties ranging from the mid-single digits to the low double digits. In limited circumstances in which the licensed product is not subject to a valid patent claim and a competitor is selling a competing product, the royalty rate is in the low- to mid-single digits. After a commercial sale is obtained, LMB must pay minimum aggregate annual royalties of \$100,000 in the first commercial year which is prorated for a less than 12-month period, increasing \$25,000 per year to a maximum of \$150,000 annually. LMB must also pay NAT up to \$1,100,000 upon achieving specified regulatory and sales milestones. Finally, LMB must pay NAT a specified percentage of payments received from any sub-licensees.

Unless earlier terminated by NAT, based on the failure to achieve certain development and commercial milestones, the license agreement remains in effect until the date that all patents licensed under the agreement have expired and all patent applications within the licensed patent rights have been cancelled, withdrawn, or expressly abandoned.

Patent and Technology License Agreement – Mino-Wrap

On January 2, 2019, we entered into a patent and technology license agreement with the Board of Regents of the University of Texas System on behalf of the University of Texas M. D. Anderson Cancer Center ("Licensor"), whereby we in-licensed exclusive worldwide rights to the patented technology for any and all uses relating to breast implants. We intend to develop a liquefying gel-based wrap containing minocycline and rifampin for the reduction of infections associated with breast implants following breast reconstructive surgeries ("Mino-Wrap"). We are required to use commercially reasonable efforts to commercialize Mino-Wrap under several regulatory scenarios and achieve milestones associated with these regulatory options leading to an approval from the U.S. Food and Drug Administration (the "FDA").

Under the license agreement, we paid an annual maintenance fee of \$75,000 and \$60,000 in January 2023 and 2022, respectively. The annual maintenance fee increases by \$15,000 per year up to a maximum of \$90,000 and ceases on the first sale of product. We also must pay up to an aggregate of \$2.1 million in milestone payments, contingent on the achievement of various regulatory and commercial milestones. Under the terms of the license agreement, we also must pay a royalty of mid- to upper-single digit percentages of net sales, depending on the amount of annual sales, and subject to downward adjustment to lower- to mid-single digit percentages in the event there is no valid patent for the product in the United States at the time of sale. After the first sale of product, we will owe an annual minimum royalty payment of \$100,000 that will increase annually by \$25,000 for the duration of the term. We will be responsible for all patent expenses incurred by Licensor for the term of the agreement although Licensor is responsible for filing, prosecution, and maintenance of all patents. The agreement expires on the later of the expiration of the patents or January 2, 2034.

License Agreement with Eterna

On October 6, 2020, our subsidiary, NoveCite, signed an exclusive license agreement for a novel cellular therapy for acute respiratory distress syndrome (ARDS) with a subsidiary of Novellus, Inc. (“Novellus”). Upon execution of the agreement, we paid \$5,000,000 to Novellus, which was charged to research and development expense during the year ended September 30, 2021, and issued Novellus shares of NoveCite’s common stock representing 25% of the outstanding equity. We own the other 75% of NoveCite’s outstanding equity. Pursuant to the terms of the original stock subscription agreement, if NoveCite issued additional equity, subject to certain exceptions, NoveCite had to maintain Novellus’s ownership at 25% by issuing additional shares to Novellus.

In July 2021, Novellus was acquired by Brooklyn ImmunoTherapeutics, Inc. (“Brooklyn”). In connection with that transaction, the stock subscription agreement was amended to assign to Brooklyn all of Novellus’s right, title, and interest in the stock subscription agreement and delete the anti-dilution protection and replace it with a right of first refusal whereby Brooklyn will have the right to purchase all or a portion of the securities that NoveCite intends to sell or in the alternative, at the option of NoveCite, Brooklyn may purchase that amount of the securities proposed to be sold by NoveCite to allow Brooklyn to maintain its then percentage ownership. In October 2022, Brooklyn changed its name to Eterna Therapeutics Inc. (“Eterna”).

Citius is responsible for the operational activities of NoveCite and bears all costs necessary to operate NoveCite. Citius’s officers are also the officers of NoveCite and oversee the business strategy and operations of NoveCite. As such, NoveCite is accounted for as a consolidated subsidiary with a noncontrolling interest.

Eterna has no contractual rights in the profits or obligations to share in the losses of NoveCite, and the Company has not allocated any losses to the noncontrolling interest.

NoveCite is obligated to pay Eterna up to \$51,000,000 upon the achievement of various regulatory and developmental milestones. NoveCite also must pay a royalty equal to low double-digit percentages of net sales, commencing upon the sale of a licensed product. This royalty is subject to downward adjustment to an upper-single digit percentage of net sales in any country in the event of the expiration of the last valid patent claim or if no valid patent claim exists in that country. The royalty will end on the earlier of (i) date on which a biosimilar product is first marketed, sold, or distributed in the applicable country or (ii) the 10-year anniversary of the date of expiration of the last-to-expire valid patent claim in that country. In the case of a country where no licensed patent ever exists, the royalty will end on the later of (i) the date of expiry of such licensed product’s regulatory exclusivity and (ii) the 10-year anniversary of the date of the first commercial sale of the licensed product in the applicable country. In addition, NoveCite will pay to Eterna an amount equal to a mid-twenties percentage of any sublicensee fees it receives.

Under the terms of the license agreement, if Eterna receives any revenue involving the original cell line included in the licensed technology, then Eterna shall remit to NoveCite 50% of such revenue.

The term of the license agreement continue on a country-by-country and licensed product-by-licensed product basis until the expiration of the last-to-expire royalty term. Either party may terminate the license agreement upon written notice if the other party is in material default. NoveCite may terminate the license agreement at any time without cause upon 90 days prior written notice.

Eterna will be responsible for preparing, filing, prosecuting, and maintaining all patent applications and patents included in the licensed patents in the territory, provided however, that if Eterna decides that it is not interested in maintaining a particular licensed patent or in preparing, filing, or prosecuting a licensed patent, NoveCite will have the right, but not the obligation, to assume such responsibilities in the territory at NoveCite's sole cost and expense.

License Agreement with Eisai

In September 2021, the Company entered into an asset purchase agreement with Dr. Reddy's Laboratories SA, a subsidiary of Dr. Reddy's Laboratories, Ltd. (collectively, "Dr. Reddy's") and a license agreement with Eisai Co., Ltd. ("Eisai") to acquire an exclusive license of E7777 (denileukin diftotox), a late-stage oncology immunotherapy for the treatment of CTCL, a rare form of non-Hodgkin lymphoma. We have obtained the trade name of LYMPHIR for E7777.

Under the terms of these agreements, we acquired Dr. Reddy's exclusive license for E7777 from Eisai and other related assets owned by Dr. Reddy's. The exclusive license includes rights to develop and commercialize E7777 in all markets except for Japan and certain parts of Asia. Additionally, we retained an option on the right to develop and market the product in India. Eisai retains exclusive development and marketing rights for the agent in Japan and Asia. Citius Pharma paid \$40 million upfront payment which represents the acquisition date fair value of the in-process research and development acquired from Dr. Reddy's. Dr. Reddy's is entitled to up to \$40 million in development milestone payments related to CTCL approvals in the U.S. and other markets, up to \$70 million in development milestones for additional indications, as well as commercial milestone payments and low double-digit tiered royalties on net product sales, and up to \$300 million for commercial sales milestones. We also must pay on a fiscal quarter basis tiered royalties equal to low double-digit percentages of net product sales. The royalties will end on the earlier of (i) the 15-year anniversary of the first commercial sale of the latest indication that received regulatory approval in the applicable country and (ii) the date on which a biosimilar product results in the reduction of net sales in the applicable product by 50% in two consecutive quarters, as compared to the four quarters prior to the first commercial sale of the biosimilar product. We will also pay to Dr. Reddy's an amount equal to a low-thirties percentage of any sublicense upfront consideration or milestone payments (or the like) received by us and the greater of (i) a low-thirties percentage of any sublicense sales-based royalties or (ii) a mid-single digit percentage of such licensee's net sales.

Under the license agreement, Eisai is to receive a \$6.0 million development milestone payment upon initial approval and additional commercial milestone payments related to the achievement of net product sales thresholds (which increases to \$7 million in the event we have exercised our option to add India to the licensed territory prior to FDA approval) and an aggregate of up to \$22 million related to the achievement of net product sales thresholds. We also were required to reimburse Eisai for up to \$2.65 million of its costs to complete the ongoing Phase 3 pivotal clinical trial for LYMPHIR for the CTCL indication and reimburse Eisai for all reasonable costs associated with the preparation of a Biologics License Application ("BLA") for LYMPHIR. Eisai was responsible for completing the CTCL clinical trial, and chemistry, manufacturing, and controls (CMC) activities through the filing of a BLA for LYMPHIR with the FDA. The BLA was filed with the FDA on September 27, 2022. We will also be responsible for development costs associated with potential additional indications.

The term of the license agreement will continue until (i) March 30, 2026, if there has not been a commercial sale of a licensed product in the territory, or (ii) if there has been a first commercial sale of a licensed product in the territory by March 30, 2026, the 10-year anniversary of the first commercial sale on a country-by-country basis. The term of the license may be extended for additional 10-year periods for all countries in the territory by notifying Eisai and paying an extension fee equal to \$10 million. Either party may terminate the license agreement upon written notice if the other party is in material breach of the agreement, subject to cure within the designated time periods. Either party also may terminate the license agreement immediately upon written notice if the other party files for bankruptcy or takes related actions or is unable to pay its debts as they become due. Additionally, either party will have the right to terminate the agreement if the other party directly or indirectly challenges the patentability, enforceability or validity of any licensed patent.

Also under the asset purchase agreement with Dr. Reddy's, we are required to (i) use commercially reasonable efforts to make commercially available products in the CTCL indication, peripheral T-cell lymphoma indication and immuno-oncology indication, (ii) initiate two investigator initiated immuno-oncology trials, (iii) use commercially reasonable efforts to achieve each of the approval milestones, and (iv) to complete each specified immuno-oncology investigator trial on or before the four-year anniversary of the effective date of the definitive agreement. Additionally, we are required to commercially launch a product in a territory within six months of receiving regulatory approval for such product in each such jurisdiction.

On July 29, 2023, we received a Complete Response Letter, (“CRL”) from the FDA regarding the BLA seeking approval for LYMPHIR. The FDA has required that we incorporate enhanced product testing, and additional controls agreed to with the FDA during the market application review. The FDA raised no concerns relating to the safety and efficacy clinical data package.

On September 8, 2023, we announced that the FDA agreed with our plans to address the requirements outlined in the CRL. The guidance from the FDA provides a path for completing the necessary activities to support the resubmission of the BLA. No additional clinical efficacy or safety trials have been requested by FDA for the resubmission. Based on the feedback from the FDA, we plan to complete the CRL remediation activities by the end of 2023 and file the resubmission in early 2024.

4. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

A summary of the significant accounting policies followed by the Company in the preparation of the consolidated financial statements is as follows:

Use of Estimates

The process of preparing financial statements in conformity with accounting principles generally accepted in the United States of America (“GAAP”) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of financial statements and the reported amounts of revenues and expenses during the reporting period. Estimates having relatively higher significance include the accounting for in-process research and development and goodwill impairment, stock-based compensation, valuation of warrants, and income taxes. Actual results could differ from those estimates and changes in estimates may occur.

Cash and Cash Equivalents

The Company considers all highly liquid instruments with maturities of less than three months at the time of purchase to be cash equivalents. From time to time, the Company may have cash balances in financial institutions in excess of insurance limits. The Company has never experienced any losses related to these balances.

Prepaid Expenses

Prepaid expenses at September 30, 2023 and 2022 consist of \$154,611 and \$162,398 of prepaid insurance, respectively, and \$7,734,895 and \$2,690,182 of advance payments made for the preparation of long-lead time drug substance and product costs, respectively, which will be utilized in research and development activities or in the manufacturing of LYMPHIR for sales upon approval.

Research and Development

Research and development costs, including upfront fees and milestones paid to collaborators who are performing research and development activities under contractual agreements with the Company, are expensed as incurred. The Company defers and capitalizes its nonrefundable advance payments that are for research and development activities until the related goods are delivered or the related services are performed. When the Company is reimbursed by a collaboration partner for work the Company performs, it records the costs incurred as research and development expenses and the related reimbursement as a reduction to research and development expenses in its consolidated statement of operations. Research and development expenses primarily consist of clinical and non-clinical studies, materials and supplies, third-party costs for contracted services, and payments related to external collaborations and other research and development related costs.

In-process Research and Development and Goodwill

In-process research and development of \$19,400,000 represents the value of LMB’s drug candidate (Mino-Lok), which is an antibiotic solution used to treat catheter-related bloodstream infections and is expected to be amortized on a straight-line basis over a period of eight years commencing upon revenue generation.

In-process research and development of \$40,000,000 represents the value of our September 2021 acquisition of an exclusive license for LYMPHIR (denileukin diftitox), a late-stage oncology immunotherapy for the treatment of CTCL, a rare form of non-Hodgkin lymphoma and is expected to be amortized on a straight-line basis over a period of twelve years commencing upon revenue generation. Included in the IPR&D is the historical know-how, formula protocols, designs, and procedures expected to be needed to complete Phase 3. In addition, the contracts acquired in connection with Dr. Reddy's transaction with the clinical research and manufacturing organization are at market rates and could be provided by multiple vendors in the marketplace. Therefore, there is no fair value associated with the contracts acquired.

Incremental costs incurred on IPR&D after the acquisition date are expensed as incurred, unless there is an alternative future use.

The Company reviews intangible assets annually to determine if any adverse conditions exist or a change in circumstances has occurred that would indicate impairment or a change in the remaining useful life of any intangible asset. If the carrying value of an asset exceeds its undiscounted cash flows, the Company writes down the carrying value of the intangible asset to its fair value in the period identified. No impairment has occurred since the acquisitions through September 30, 2023.

Goodwill represents the value of LMB's industry relationships and its assembled workforce. Goodwill is not amortized but it is tested at least annually for impairment.

The Company evaluates the recoverability of goodwill annually or more frequently if events or changes in circumstances indicate that the carrying value of an asset might be impaired, in accordance with Accounting Standard Update ("ASU") 2017-04, *Intangibles – Goodwill and Other (Topic 350): Simplifying the Accounting for Goodwill Impairment* issued by the Financial Accounting Standards Bureau ("FASB"). Goodwill is first qualitatively assessed to determine whether further impairment testing is necessary. Factors that management considers in this assessment include macroeconomic conditions, industry and market considerations, overall financial performance (both current and projected), changes in management and strategy and changes in the composition or carrying amount of net assets. If this qualitative assessment indicates that it is more likely than not that the fair value of a reporting unit is less than its carrying amount, a one-step test is then performed in accordance with ASU 2017-04. Under the simplified model, a goodwill impairment is calculated as the difference between the carrying amount of the reporting unit and its fair value.

The Company performed a qualitative assessment for its 2023 analysis of goodwill. Based on this assessment, management does not believe that it is more likely than not that the carrying value of the reporting unit exceeds its fair value. Accordingly, no further testing was performed as management believes that there are no impairment issues with respect to goodwill as of September 30, 2023.

Patents and Trademarks

Certain costs of outside legal counsel related to obtaining trademarks for the Company are capitalized. Patent costs are amortized over the legal life of the patents, generally twenty years, starting at the patent issuance date. There are no capitalized patents and trademarks as of September 30, 2023.

The costs of unsuccessful and abandoned applications are expensed when abandoned. The costs of maintaining existing patents are expensed as incurred.

Stock-Based Compensation

The Company recognizes compensation costs resulting from the issuance of stock-based awards to employees and directors as an expense in the consolidated statement of operations over the requisite service period based on the fair value for each stock award on the grant date. The fair value of each option grant is estimated as of the date of grant using the Black-Scholes option pricing model. The Company estimates volatility using the trading activity of its common stock. Because the Company's stock options have characteristics significantly different from those of traded options, and because changes in the input assumptions can materially affect the fair value estimate, the existing model may not necessarily provide a reliable single measure of fair value of the Company's stock options.

The Company recognizes compensation costs resulting from the issuance of stock-based awards to non-employees as an expense in the consolidated statement of operations over the service period based on the measurement of fair value for each stock award and records forfeitures as they occur.

Income Taxes

The Company follows accounting guidance regarding the recognition, measurement, presentation, and disclosure of uncertain tax positions in the consolidated financial statements. Tax positions taken or expected to be taken in the course of preparing the Company's tax returns are required to be evaluated to determine whether the tax positions are "more-likely-than-not" of being sustained by the applicable tax authorities. Tax positions not deemed to meet a more-likely-than-not threshold would be recorded in the consolidated financial statements. There are no uncertain tax positions that require accrual or disclosure as of September 30, 2023. Any interest or penalties are charged to expense. During the years ended September 30, 2023 and 2022, the Company did not recognize any interest and penalties. Tax years subsequent to September 30, 2019 are subject to examination by federal and state authorities.

The Company recognizes deferred tax assets and liabilities based on differences between the financial reporting and tax basis of assets and liabilities, and operating loss and tax credit carry forwards. Deferred tax assets and liabilities are measured using the enacted tax rates and laws that are expected to be in effect when the differences are expected to reverse. The Company provides a valuation allowance, if necessary, for deferred tax assets for which it does not consider realization of such assets to be "more-likely-than-not." The deferred tax benefit or expense for the period represents the change in the deferred tax asset or liability from the beginning to the end of the period.

Basic and Diluted Net Loss per Common Share

Basic and diluted net loss per common share applicable to common stockholders is computed by dividing net loss applicable to common stockholders in each period by the weighted average number of shares of common stock outstanding during such period. For the periods presented, common stock equivalents, consisting of options and warrants were not included in the calculation of the diluted loss per share because they were anti-dilutive.

Segment Reporting

The Company currently operates as a single segment.

Concentrations of Credit Risk

The Company has no significant off-balance-sheet concentration of credit risk such as foreign exchange contracts, option contracts or other hedging arrangements.

Recently Issued Accounting Standards

In October 2021, the FASB issued ASU No. 2021-08, *Business Combinations (Topic 805): Accounting for Acquired Contract Assets and Contract Liabilities*. Under the new guidance (ASC 805-20-30-28), the acquirer should determine what contract assets and/or contract liabilities it would have recorded under Accounting Standards Codification ("ASC") 606 (the revenue guidance) as of the acquisition date, as if the acquirer had entered into the original contract at the same date and on the same terms as the acquiree. The recognition and measurement of those contract assets and contract liabilities will likely be comparable to what the acquiree has recorded on its books under ASC 606 as of the acquisition date. ASU 2021-08 is effective for fiscal years beginning after December 15, 2022, including interim periods within those fiscal years. ASU 2021-08 is effective for the Company in the first quarter of fiscal year 2024. Early adoption is permitted, including in an interim period, for any period for which financial statements have not yet been issued. However, adoption in an interim period other than the first fiscal quarter requires an entity to apply the new guidance to all prior business combinations that have occurred since the beginning of the annual period in which the new guidance is adopted. The Company is currently evaluating the adoption date of ASU 2021-08 and the impact, if any, adoption will have on its financial position and results of operations.

5. COMMON STOCK, STOCK OPTIONS AND WARRANTS

Common Stock Issued for Services

On November 2, 2021, the Company issued 50,201 shares of common stock for investor relations services and expensed the \$95,884 fair value of the common stock issued.

On March 21, 2022, the Company issued 100,000 shares of common stock for media, public and investor relations services and expensed the \$178,000 fair value of the common stock issued.

On September 13, 2022, the Company issued 81,500 shares of common stock for media, public and investor relations services and expensed the \$104,320 fair value of the common stock issued.

On March 27, 2023, the Company issued 100,000 shares of common stock for media, public and investor relations services and expensed the \$102,000 fair value of the common stock issued.

Common Stock Offering

On May 8, 2023, the Company closed a registered direct offering of 12,500,001 common shares and warrants to purchase up to 12,500,001 common shares, at a purchase price of \$1.20 per share and accompanying warrant for gross proceeds of \$15,000,001. The warrants have an exercise price of \$1.50 per share, are exercisable six months from the date of issuance, and expire five years from the date of issuance. The estimated fair value of the warrants issued to the investors was approximately \$11,000,000.

Net proceeds were \$13,798,183 after deducting the placement agent fee of \$1,050,000, placement agent expenses of \$85,000, legal fees of \$50,868, and other offering expenses of \$15,950. The Company also issued 875,000 warrants to the placement agent at an exercise price of \$1.50 per share, that are exercisable six months from the date of issuance, and expire five years from the date of issuance. The estimated fair value of the warrants issued to the placement agent was approximately \$771,000.

Stock Option Plans

Pursuant to our 2014 Stock Incentive Plan, we reserved 866,667 shares of common stock. As of September 30, 2023, there were options to purchase 795,171 shares outstanding, options to purchase 4,829 shares were exercised, options to purchase 66,667 shares expired, and no shares were available for future grants.

Pursuant to our 2018 Omnibus Stock Incentive Plan, we reserved 2,000,000 shares of common stock. As of September 30, 2023, there were options to purchase 1,760,000 shares outstanding, options to purchase 116,667 shares were exercised, options to purchase 13,333 shares expired, and the remaining 110,000 shares were transferred to the 2020 Omnibus Stock Incentive Plan ("2020 Plan").

Pursuant to our 2020 Plan, we reserved 3,110,000 shares of common stock. As of September 30, 2023, there were options to purchase 1,820,000 shares outstanding, options to purchase 50,000 shares expired and the remaining 1,240,000 shares were transferred to the 2021 Omnibus Stock Incentive Plan ("2021 Stock Plan").

Pursuant to our 2021 Stock Plan, we reserved 8,740,000 shares of common stock. As of September 30, 2023, options to purchase 8,630,000 shares were outstanding, options to purchase 75,000 shares expired and the remaining 35,000 shares were transferred to the 2023 Omnibus Stock Incentive Plan ("2023 Stock Plan").

In November 2022, our Board approved the 2023 Stock Plan, subject to stockholder approval, which was received on February 7, 2023. The 2023 Stock Plan has reserved for issuance 12,035,000 shares of common stock. As of September 30, 2023, options to purchase 300,000 shares were outstanding and 11,735,000 shares remain available for future grants.

The fair value of each stock option award is estimated on the date of grant using the Black-Scholes option pricing model. Volatility is estimated using the trading activity of our common stock. The risk-free interest rate is based on the U.S. Treasury yield curve in effect at the time of grant commensurate with the expected term assumption. The expected term of stock options granted to employees and directors, all of which qualify as “plain vanilla,” is based on the average of the contractual term (generally 10 years) and the vesting period. For non-employee options, the expected term is the contractual term.

The following assumptions were used in determining the fair value of stock option grants for the years ended September 30, 2023 and 2022:

	2023	2022
Risk-free interest rate	3.52 – 4.14%	1.05 – 2.94%
Expected dividend yield	0.00%	0.00%
Expected term	5.50 – 10 years	6.50 – 10 years
Expected volatility	89 – 90%	94 – 110%

A summary of option activity under the Citius Pharma plans (excluding the NoveCite and Citius Oncology Stock Plans) is presented below:

	Option Shares	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term	Aggregate Intrinsic Value
Outstanding at September 30, 2022	9,400,171	\$ 2.07	7.81 years	\$ 869,509
Granted	4,150,000	1.26		
Exercised	(46,667)	0.67		34,067
Forfeited or expired	(198,333)	3.91		
Outstanding at September 30, 2023	13,305,171	\$ 1.79	7.41 years	\$ 56,203
Exercisable at September 30, 2023	6,558,507	\$ 2.09	6.19 years	\$ 56,203

The weighted average grant date fair value of the options granted during the year ended September 30, 2022 was estimated at \$1.67 per share. All these options vest over terms of 12 to 36 months and have a term of 10 years.

The weighted average grant date fair value of the options granted during the year ended September 30, 2023 was estimated at \$0.98 per share. All these options vest over terms of 12 to 36 months and have a term of 10 years.

Stock-based compensation expense for the years ended September 30, 2023 and 2022 was \$6,616,705 (including \$130,382 for the NoveCite plan and \$1,965,500 for the Citius Oncology plan) and \$3,905,954 (including \$133,332 for the NoveCite plan), respectively.

At September 30, 2023, unrecognized total compensation cost related to unvested awards under the Citius stock plans of \$4,840,874 is expected to be recognized over a weighted average period of 1.53 years.

NoveCite Stock Plan – Under the NoveCite Stock Plan, we reserved 2,000,000 common shares of NoveCite. As of September 30, 2023, there were options outstanding to purchase 1,911,500 common shares of NoveCite and 88,500 common shares of NoveCite available for future grants.

During the year ended September 30, 2021, NoveCite granted options to purchase 2,000,000 common shares to employees at a weighted average exercise price of \$0.24 per share, of which options to purchase 88,500 common shares were forfeited, and options to purchase 1,673,625 common shares were exercisable as of September 30, 2023. These options vest over 36 months and have a term of 10 years. The weighted average remaining contractual term of options outstanding under the NoveCite Stock Plan is 7.39 years. No options were issued in fiscal years 2023 and 2022. At September 30, 2023, unrecognized total compensation cost related to unvested awards under the NoveCite Stock Plan of \$47,575 is expected to be recognized over a weighted average period of 0.67 years.

Citius Oncology Stock Plan - Under the Citius Oncology Stock Plan, adopted on April 29, 2023, we reserved 15,000,000 common shares of Citius Oncology. The Citius Oncology Stock Plan provides incentives to employees, directors, and consultants through grants of options, SARs, dividend equivalent rights, restricted stock, restricted stock units, or other rights.

During the year ended September 30, 2023, Citius Oncology granted options to purchase 12,750,000 common shares at a weighted average price of \$2.15 per share, of which options to purchase 150,000 common shares were forfeited and options to purchase 655,556 common shares were exercisable at September 30, 2023. The weighted average grant date fair value of the options granted during the year ended September 30, 2023 was estimated at \$1.65 per share. These options vest over periods from 12 to 36 months and have a term of 10 years. The weighted average remaining contractual term of options outstanding under the Citius Oncology Stock Plan is 9.77 years. At September 30, 2023, unrecognized total compensation cost related to unvested awards under the Citius Oncology Stock Plan of \$18,882,500 is expected to be recognized over a weighted average period of 2.64 years.

Warrants

The Company has reserved 50,923,819 shares of common stock for the exercise of outstanding warrants. The following table summarizes the warrants outstanding at September 30, 2023:

	Exercise price	Number	Expiration Dates
March 2018 Registered Direct/Private Placement Investors	\$ 2.86	218,972	October 2, 2023
August 2018 Offering Investors	1.15	3,921,569	August 14, 2024
August 2018 Offering Agent	1.59	189,412	August 8, 2024
April 2019 Registered Direct/Private Placement Investors	1.42	1,294,498	April 5, 2024
April 2019 Registered Direct/Private Placement Agent	1.93	240,130	April 5, 2024
September 2019 Offering Investors	0.77	2,793,297	September 27, 2024
September 2019 Offering Underwriter	1.12	194,358	September 27, 2024
February 2020 Exercise Agreement Placement Agent	1.28	138,886	August 19, 2025
May 2020 Registered Direct Offering Investors	1.00	1,670,588	November 18, 2025
May 2020 Registered Direct Offering Placement Agent	1.33	155,647	May 14, 2025
August 2020 Underwriter	1.31	201,967	August 10, 2025
January 2021 Registered Direct Offering Investors	1.23	3,091,192	July 27, 2026
January 2021 Registered Direct Offering Agent	1.62	351,623	July 27, 2026
February 2021 Offering Investors	1.70	20,580,283	February 19, 2026
February 2021 Offering Agent	1.88	2,506,396	February 19, 2026
May 2023 Registered Direct Offering Investors	1.50	12,500,001	May 8, 2028
May 2023 Registered Direct Offering Agent	1.50	875,000	May 3, 2028
		<u>50,923,819</u>	

On August 8, 2023, we extended the term by one year to August 14, 2024 for 3,921,569 warrants for common stock with an exercise price of \$1.15 per share and extended the term by one year to August 8, 2024 for 189,412 warrants with an exercise price of \$1.59 per share. We recorded a deemed dividend of \$1,151,208 based on the excess of the fair value of the modified warrants over the fair value of the warrants before the modification, the effect of which was an increase in the net loss attributable to common shareholders in the statement of operations for the year ended September 30, 2023.

At September 30, 2023, the weighted average remaining life of the outstanding warrants is 2.72 years, all warrants are exercisable, and there was no aggregate intrinsic value for the warrants outstanding.

Common Stock Reserved

A summary of common stock reserved for future issuances as of September 30, 2023 is as follows:

Stock plan options outstanding	13,305,171
Stock plan shares available for future grants	11,735,000
Warrants outstanding	50,923,819
Total	<u>75,963,990</u>

6. RELATED PARTY TRANSACTIONS

On August 8, 2023, we extended the term by one year for 3,921,569 warrants held by our Chairman and by our Executive Vice Chairman (see Note 5).

7. EMPLOYMENT AGREEMENTS

Employment Agreements

On October 19, 2017, the Company and its Chairman of the Board, Leonard Mazur, entered into an employment agreement with a three-year term. Upon expiration, the agreement automatically renews for successive periods of one-year unless terminated pursuant to its terms. Under the terms of the agreement, the Company is required to pay base compensation plus incentives over the employment term plus severance benefits upon the occurrence of certain events as described in the agreement.

On November 27, 2017, the Company entered into an employment agreement with Jaime Bartushak to serve as the Chief Financial Officer and Principal Financial Officer of the Company. The agreement requires the Company to pay base compensation plus incentives over the employment term plus severance benefits upon the occurrence of certain events as described in the agreement.

On April 12, 2022, we entered into an 18-month employment agreement with Myron Holubiak to serve as Executive Vice Chairman. Upon expiration, the agreement automatically renews for successive periods of one-year unless terminated pursuant to its terms. The agreement requires the Company to pay base compensation plus incentives over the employment term plus severance benefits upon the occurrence of certain events as described in the agreement.

On July 13, 2020, we entered into an employment agreement with Myron Czuczman, M.D. to serve as Executive Vice President, Chief Medical Officer. The agreement requires the Company to pay base compensation plus incentives over the employment term plus severance benefits upon the occurrence of certain events as described in the agreement.

The Company has employment agreements with certain other employees that require the Company to pay base compensation plus incentives over the employment term plus severance benefits upon the occurrence of certain events as described in the agreement.

8. COMMITMENTS AND CONTINGENCIES

Operating Lease

Effective July 1, 2019, we entered into a 76-month lease for office space in Cranford, NJ. We pay our proportionate share of real estate taxes and operating expenses in excess of the base year expenses. These costs are variable lease payments and are not included in the determination of the lease's right-of-use asset or lease liability.

We identified and assessed the following significant assumptions in recognizing its right-of-use assets and corresponding lease liabilities:

- As the Cranford lease does not provide an implicit rate, the Company estimated the incremental borrowing rate in calculating the present value of the lease payments. The Company has estimated its incremental borrowing rate based on the remaining lease term as of the adoption date.

- Since the Company elected to account for each lease component and its associated non-lease components as a single combined component, all contract consideration was allocated to the combined lease component.
- The expected lease terms include noncancelable lease periods.

The elements of lease expense are as follows:

	Year Ended September 30, 2023	Year Ended September 30, 2022
Lease cost		
Operating lease cost	\$ 238,824	\$ 238,822
Variable lease cost	4,771	772
Total lease cost	\$ 243,595	\$ 239,594
Other information		
Weighted-average remaining lease term - operating leases	2.1 Years	3.1 Years
Weighted-average discount rate - operating leases	8.0%	8.0%

Maturities of lease liabilities due under the Company's non-cancellable leases are as follows:

Year Ending September 30,	
2024	\$ 249,024
2025	253,883
2026	21,460
Total lease payments	524,367
Less: interest	(43,122)
Present value of lease liabilities	\$ 481,245

Leases	Classification	September 30, 2023	September 30, 2022
Assets			
Lease asset	Operating	\$ 454,426	\$ 646,074
Total lease assets		\$ 454,426	\$ 646,074
Liabilities			
Current	Operating	\$ 218,380	\$ 196,989
Non-current	Operating	262,865	481,245
Total lease liabilities		\$ 481,245	\$ 678,234

Interest expense on the lease liability was \$47,176 and \$62,068 for the years ended September 30, 2023 and 2022, respectively.

Legal Proceedings

The Company is not involved in any litigation that it believes could have a material adverse effect on its financial position or results of operations. There is no action, suit, proceeding, inquiry, or investigation before or by any court, public board, government agency, self-regulatory organization or body pending or, to the knowledge of the Company's executive officers, threatened against or affecting the Company or its officers or directors in their capacities as such.

9. GAIN ON SALE OF NEW JERSEY NET OPERATING LOSSES

The Company recognized a gain of \$3,585,689 for the year ended September 30, 2023 in connection with the sale of certain New Jersey income tax net operating losses to a third party under the New Jersey Technology Business Tax Certificate Transfer Program.

10. INCOME TAXES

The Company recorded deferred income tax expense of \$576,000 for the both the years ended September 30, 2023 and 2022 related to the amortization for taxable purposes of its in-process research and development asset.

The income tax expense (benefit) differs from the amount of income tax determined by applying the U.S. federal income tax rate to pretax income for the years ended September 30, 2023 and 2022 due to the following:

	2023	2022
Computed “expected” tax benefit	(21.0)%	(21.0)%
Increase (decrease) in income taxes resulting from:		
State taxes, net of federal benefit	(6.3)	(6.3)
Permanent differences	3.7	1.8
Increase in the valuation reserve	25.4	27.2
	1.8%	1.7%

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. Significant components of the Company’s deferred tax assets and liabilities are as follows:

	September 30, 2023	September 30, 2022
Deferred tax assets:		
Net operating loss carryforward	\$ 34,980,000	\$ 34,673,000
Stock-based compensation	2,191,000	1,569,000
Capitalized research and development	3,644,000	
Other	4,100,000	3,689,000
Valuation allowance on deferred tax assets	(44,915,000)	(39,931,000)
Total deferred tax assets	—	—
Deferred tax liabilities:		
In-process research and development	(6,137,800)	(5,561,800)
Total deferred tax liability	(6,137,800)	(5,561,800)
Net deferred tax liability	\$ (6,137,800)	\$ (5,561,800)

The Company has recorded a valuation allowance against deferred tax assets as the utilization of the net operating loss carryforward and other deferred tax assets is uncertain. During the years ended September 30, 2023 and 2022, the valuation allowance increased by \$4,984,000 and \$10,754,000, respectively. The increase in the valuation allowance during the years ended September 30, 2023 and 2022 was primarily due to the Company’s net operating loss. At September 30, 2023, the Company has a federal net operating loss carryforward of approximately \$133,000,000. Federal net operating loss carryforwards of approximately \$35,000,000 begin expiring in 2034 and carryforwards of approximately \$98,000,000 generated in tax years beginning after 2017 may be carried forward indefinitely.

As of September 30, 2023, the Company also has estimated federal research and development credits of \$3,511,000 to offset future income taxes. The tax credit carryforwards will begin to expire in 2036.

The Company accounts for uncertain tax positions in accordance with the guidance provided in ASC 740, “Accounting for Income Taxes.” This guidance describes a recognition threshold and measurement attribute for the financial statement disclosure of tax positions taken or expected to be taken in a tax return and requires recognition of tax benefits that satisfy a more-likely-than-not threshold. ASC 740 also provides guidance on de-recognition, classification, interest and penalties, accounting in interim periods and disclosure. There have been no reserves for uncertain tax positions recorded by the Company to date.

11. NASDAQ LISTING

On September 12, 2023, we received a notification letter from the Nasdaq Stock Market LLC (“Nasdaq”) indicating that we were not in compliance with Nasdaq Listing Rule 5550(a)(2) because the minimum bid price of our common stock on the Nasdaq Capital Market closed below \$1.00 per share for 30 consecutive business days. In accordance with Nasdaq Listing Rule 5810(c)(3)(A), the Company has a compliance period of 180 calendar days, or until March 11, 2024, to regain compliance with the Bid Price Rule. If at any time before March 11, 2024, the bid price of the Company’s common stock closes at \$1.00 per share or more for a minimum of ten consecutive business days, Nasdaq will provide the Company with a written confirmation of compliance with the Bid Price Rule. If the Company does not regain compliance with the Bid Price Rule by March 11, 2024, the Company may be eligible for an additional 180-day compliance period. To qualify, the Company would be required to meet the continued listing requirement for market value of publicly held shares and all other initial listing standards for the Nasdaq Capital Market, with the exception of the Bid Price Rule, and would need to provide written notice of its intention to cure the bid price deficiency during the second compliance period by effecting a reverse stock split, if necessary.

12. SUBSEQUENT EVENTS

Merger Agreement - On October 23, 2023, Citius Pharma and Citius Oncology entered into an agreement and plan of merger and reorganization (the “Merger Agreement”) with TenX Keane Acquisition, a Cayman Islands exempted company (“TenX”), and TenX Merger Sub Inc., a Delaware corporation, and a wholly owned subsidiary of TenX (“Merger Sub”). The Merger Agreement provides, among other things, (i) on the terms and subject to the conditions set forth therein, that Merger Sub will merge with and into Citius Oncology, with Citius Oncology surviving as a wholly owned subsidiary of TenX (the “Merger”), and (ii) that prior to the effective time of the Merger (the “Effective Time”), TenX will migrate to and domesticate as a Delaware corporation in accordance with Section 388 of the General Corporation Law of the State of Delaware and the Cayman Islands Companies Act (As Revised) (the “Domestication”). The newly combined publicly traded company is to be named “Citius Oncology, Inc.” (the “Combined Company”). The Domestication, Merger and the other transactions contemplated by the Merger Agreement are referred to as the “Business Combination.”

In the Merger, all shares of Citius Oncology would be converted into the right to receive common stock of the Combined Company. As a result, upon closing, Citius Pharma would receive 67.5 million shares of common stock of the Combined Company. As part of the transaction, Citius Pharma will contribute \$10 million in cash to the Combined Company. The 12.6 million existing Citius Oncology common stock options will be assumed by the Combined Company. Citius Pharma and the Combined Company will also enter into an amended and restated shared services agreement, which, among other things, will govern certain management and scientific services that Citius Pharma will continue to provide to the Combined Company following the Effective Time.

The Merger Agreement, Business Combination and the transactions contemplated thereby were unanimously approved by the boards of directors of each of Citius Pharma, Citius Oncology and TenX. The transaction is expected to be completed in the first half of 2024, subject to approval by stockholders of TenX and other customary closing conditions, including final regulatory approvals and SEC filings. There can be no assurance regarding the ultimate timing of the proposed transaction or that the transaction will be completed at all.

On December 11, 2023, the Company terminated the Mino-Wrap license agreement with the Board of Regents of the University of Texas System on behalf of MDACC.

In late December 2023, the Company determined that patient enrollment for the Mino-Lok trial was complete and that it would begin site shutdown activities.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures**Disclosure Controls and Procedures**

We maintain disclosure controls and procedures designed to provide reasonable assurance that information required to be disclosed in reports filed under the Securities Exchange Act of 1934, as amended (the “Exchange Act”), is recorded, processed, summarized, and reported within the specified time periods and accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding disclosure.

Our Chief Executive Officer (who is our principal executive officer) and Chief Financial Officer (who is our principal financial officer and principal accounting officer), evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) promulgated under the Exchange Act) as of September 30, 2023, the end of our fiscal year. In designing and evaluating disclosure controls and procedures, we recognize that any disclosure controls and procedures, no matter how well designed and operated, can only provide reasonable assurance of achieving the desired control objective. As of September 30, 2023, based on the evaluation of these disclosure controls and procedures, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective in ensuring that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the SEC’s rules and forms.

Management’s Annual Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining effective internal control over financial reporting as defined in Rule 13a-15(f) under the Exchange Act. Because of its inherent limitations, internal control over financial reporting is not intended to provide absolute assurance that a misstatement of our financial statements would be prevented or detected. Under the supervision of our Chief Executive Officer and Chief Financial Officer, the Company conducted an evaluation of the effectiveness of our internal control over financial reporting as of September 30, 2023 using the criteria established in Internal Control—*Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (“COSO”) (2013 Framework).

Based on this evaluation, management has concluded that our internal controls were effective and that we maintained effective controls over our financial reporting as of September 30, 2023.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risks that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Changes in Internal Controls over Financial Reporting

There were no changes in our internal controls over financial reporting during the fourth quarter of fiscal 2023 that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. Other Information.

None.

Item 9C. Disclosure Regarding Foreign Jurisdictions that Prevent Inspections.

Not applicable.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

We have adopted a written Code of Ethics and Business Conduct that applies to our directors, officers, and all employees. We intend to disclose any amendments to, or waivers from, our code of ethics and business conduct that are required to be publicly disclosed pursuant to rules of the SEC by filing such amendment or waiver with the SEC. This code of ethics and business conduct can be found in the “Investors - Corporate Governance” section of our website, www.citiuspharma.com.

The other information required by this Item concerning our directors and executive officers is incorporated by reference to the section captioned “Proposal No. 1—Election of Directors” and “Corporate Governance” to be contained in our proxy statement related to the 2024 Annual Meeting of Stockholders (the “Proxy Statement”), which information is expected to be filed with the SEC within 120 days of the end of our fiscal year pursuant to General Instruction G(3) of Form 10-K. The information required by this Item concerning compliance with Section 16(a) of the Exchange Act by our directors, executive officers and persons who own more than 10% of our outstanding common stock is incorporated by reference from the section captioned “Section 16(a) Beneficial Ownership Reporting Compliance” to be contained in the Proxy Statement.

Item 11. Executive Compensation

The information required by this Item concerning directors and executive compensation is incorporated by reference from the sections captioned “Director Compensation” and “Executive Compensation”, respectively, to be contained in the Proxy Statement.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

The following table sets forth the indicated information as of September 30, 2023 with respect to our equity compensation plans:

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted-average price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans
Equity compensation plans approved by security holders			
2014 Stock Incentive Plan	795,171	\$ 6.38	—
2018 Omnibus Stock Incentive Plan	1,760,000	1.09	—
2020 Omnibus Stock Incentive Plan	1,820,000	1.13	—
2021 Omnibus Stock Incentive Plan	8,630,000	1.67	—
2023 Omnibus Stock Incentive Plan	300,000	1.43	11,735,000
Total	13,305,171	\$ 1.79	11,735,000

Our equity compensation plans consist of the Citius Pharmaceuticals, Inc. 2023 Omnibus Stock Incentive Plan, 2021 Omnibus Stock Incentive Plan, 2020 Omnibus Stock Incentive Plan, 2018 Omnibus Stock Incentive Plan and 2014 Stock Incentive Plan, which were all approved by our stockholders. We do not have any equity compensation plans or arrangements that have not been approved by our stockholders.

We no longer may grant awards under the 2014 Stock Incentive Plan, the 2018 Omnibus Stock Incentive Plan, the 2020 Omnibus Stock Incentive Plan or the 2021 Omnibus Stock Incentive Plan.

The other information required by this Item is incorporated by reference to the information under the section captioned “Security Ownership of Certain Beneficial Owners and Management” to be contained in the Proxy Statement.

Item 13. Certain Relationships and Related Transactions, and Director Independence

The information required by this Item is incorporated by reference to the information under the section captioned “Certain Relationships and Related Transactions” and “Proposal No. 1—Election of Directors” to be contained in the Proxy Statement.

Item 14. Principal Accountant Fees and Services

The information required by this Item is incorporated by reference to the information under the section captioned “Auditor and Audit Committee Matters” to be contained in the Proxy Statement.
