Westonaria, 1780**Tel** +27 11 278 9600**Fax** +27 11 278 9863**MEDIA RELEASE:****BEATRIX 4 SHAFT TO RESUME PRODUCTION**

Westonaria, 21 February 2013: Sibanye Gold Limited (Sibanye Gold) (JSE, NYSE: SGL) wishes to inform all stakeholders, that partial production will resume at Beatrix 4 Shaft (previously the Oryx Mine), on Monday 25 February 2013.

Operations at Beatrix 4 Shaft were suspended by Sibanye Gold management on Wednesday 20 February 2013, following a fire which affected a meaningful part of Beatrix 4 Shaft. Beatrix management has isolated and plugged the affected area and carbon monoxide and carbon dioxide levels are declining at a rate which suggests that operations in the unaffected areas may resume as early as Monday.

The fire, affecting 2 700m² of the Zone 5 production area, while isolated, has not yet been extinguished and the area will remain contained until the fire is dormant and the full extent of the damage will then be assessed. Management estimates that 32kg (1 029oz) of production will be lost during the four day suspension of operations and approximately 61kg (1 961oz) will be lost from the affected area every month that production does not take place.

Beatrix 4 Shaft produces approximately 218kg (7 011oz) of gold per month or 24% of the total produced by the entire Beatrix Operations (approximately 898kg or 28 869oz per month), the affected area, comprises some 24% of production at Beatrix 4 shaft. The Beatrix 4 Shaft Section generated an Operating Loss of R93 million (a R155 million loss after capex) in 2012.

Further updates will be released when possible.
