

USCA All Terrain Fund

July-16

Commentary

July was a good month for almost all asset classes as evidenced by the Fund's net return for the month of 1.6% and the returns on global equities and global bonds (as measured by the MSCI World Index and the Barcap - Global Aggregate Index, respectively) were 4.2% and 0.8%, respectively. Not surprisingly, the big winners were the Fund's equity managers, let by global and international equity and followed close behind by U.S. equity and long/short equity; the latter rising nicely despite a fairly defensive market exposure. Value stocks, which had lagged considerably for several months, have come back into favor for now. As the majority of our equity managers are value-oriented, reflecting our long-held philosophy, their short-term fortunes are likely to continue to rise and fall with the relative performance of value. The Fund's fixed income allocation was slightly positive (as was the overall bond market) in July, while the fund's long/short fixed income managers were up 2.2%. The lone decliner for the month was the Fund's global macro manager; the low volatility we saw in July is usually a negative for this strategy.

It's been an interesting year so far. Equities can be broadly divided into four groups: inexpensive stocks of companies with good growth prospects (the best to own, in our opinion), expensive stocks of companies with good growth prospects (what growth managers often like), inexpensive stocks of companies with lousy growth prospects (sometimes attractive to value managers depending upon other factors), and expensive stocks of companies with lousy growth prospects. We're not sure why anyone would want to own the last of these, but those who have chosen to do so have been well rewarded. According to a study of the Russell 1000 conducted by O'Shaughnessy Asset Management, the stocks of companies with the lowest sales and profit growth have outperformed those with the highest growth by more than 8% this year. This means that many of those managers who have avoided companies with lousy earnings will have likely paid a price in underperformance.

These strange circumstance aren't unprecedented. 1999, the last year of the technology bubble, saw the rise in the price of stocks of companies with declining earnings – or no earnings – far outpace those of companies with growing earnings. On the flipside, we observed in October of 2008, toward the end of the financial crisis bear market, that the stocks of companies whose earnings exceeded expectations did far worse than the stocks of those companies whose profits disappointed. We're not sure what is causing this current anomaly, but whatever the reason, we expect it to be temporary, and when it reverses we expect our equity managers to benefit.

In the meantime, we seem to be continuing our trend of dropping about half as much as the stock market (as measured by the MSCI World Index) during the worst months, as planned, but not participating as much as we'd like on the upside during the best months. We believe that when market conditions move toward favoring our managers' value and quality orientations (inexpensive stocks with good fundamentals), the Fund will be well positioned for better relative performance to the upside.

As always, please don't hesitate to contact us with any questions.

Performance Overview*

Fund Description, Terms & Service Providers

The USCA All Terrain Fund seeks long-term risk-adjusted returns that are attractive as compared to those of traditional public equity and fixed income markets. The fund pursues its investment objective using a multi-manager, fund-of-funds approach by investing predominantly in non-affiliated collective investment vehicles, including privately-offered investment funds commonly known as "hedge funds", and publicly traded funds, including exchange-traded funds and mutual funds, which utilize one or more investment or trading strategies, including, without limitation, long-only equity and/or fixed income, relative value, event driven, long/short equity and/or fixed income, managed futures, and global macro strategies.

Minimum Investment: \$100,000
Subscriptions: Monthly
Redemptions/Tenders: Quarterly after 1-year anniversary of fund's inception, subject to sole discretion of Board
Management & Subadvisory Fees: 0.80% (note subadvisory fees may vary)
Other Expenses: some capped at 1.0% per annum (please see the prospectus for a complete description of fees & expenses)

Eligibility: Accredited Investors
Tax Reporting: K-1 (note: fund may generate UBTI)
Advisor: USCA Asset Management, LLC
Auditor: KPMG LLP
Administrator: U.S. Bancorp Fund Services
Custodian: U.S. Bank National Association
Legal Counsel: Thompson Hine LLP

Risk Disclosure Statement

An offer can only be made by the prospectus and only in jurisdictions in which such an offer would be lawful. The prospectus contains important information concerning the investment objective, risk factors, expenses and other material aspects of the USCA All Terrain Fund to carefully consider, and must be read carefully before a decision to invest is made. Please contact USCA Asset Management at (713) 366-0500 to obtain a free copy of the prospectus.

Any person subscribing for an investment must be able to bear the risks involved and must meet the fund's suitability requirements. Some or all alternative investment programs may not be suitable for certain investors. No assurance can be given that the fund's investment objectives will be achieved. Among the risks we wish to call to the particular attention of prospective investors are the following:

- The fund is a closed-end, non-diversified management investment company.
- A fund investment is speculative and involves a substantial degree of risk.
- Past results are not necessarily indicative of future performance, and performance may be volatile.

- An investor could lose all or a substantial amount of his or her investment.
- The fund is highly illiquid. There is no secondary market for the investors' interest and none is expected to develop.
- No shareholder has the right to require the Fund to redeem its shares. Redemptions are available only through quarterly repurchase offers made at the discretion of the Board.
- Fees and expenses will offset the fund's trading profits.
- The fund will involve a complex tax structure, which an investor should review carefully with its tax advisor before investing.
- The fund is not required to provide periodic pricing or valuation information to investors with respect to its individual investments.
- Some of the underlying funds are not subject to the same regulatory requirements as mutual funds.
- A limited portion of the trades executed may take place on foreign markets.
- The fund is subject to conflicts of interest.

Please review the "Risk Factors" and "Conflicts of Interest" sections of the prospectus.

Index & Statistic Definitions

MSCI World Index. The MSCI World Index captures large and mid cap representation across 23 Developed Markets (DM) countries*. With 1,643 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

BarCap Global Aggregate Index. The Barclays Global Aggregate Index is a flagship measure of global investment grade debt from twenty-four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers. There are four regional aggregate benchmarks that largely comprise the Global Aggregate Index: the US Aggregate (USD300mn), the Pan-European Aggregate, the Asian-Pacific Aggregate, and the Canadian Aggregate Indices. The Global Aggregate Index also includes Eurodollar, Euro-Yen, and 144A Index-eligible securities, and debt from five local currency markets not tracked by the regional aggregate benchmarks (CLP, MXN, ZAR, ILS and TRY). A component of the Multiverse Index, the Global Aggregate Index was created in 2000, with index history backfilled to January 1, 1990.

60/40 Blend. The 60/40 Blend represents the performance of a portfolio that consists 60% of the MSCI World Index and 40% of the BarCap Global Aggregate Index rebalanced monthly.

Rate of Return (ROR). The compound geometric average return that assumes the same rate of return every period to arrive at the equivalent compound growth rate reflected in the actual return data.

Strategy Definitions

Relative Value. Relative value strategies attempt to take advantage of relative pricing discrepancies between various instruments, including equities, fixed income, options and futures. Managers may use mathematical, fundamental or technical analysis to determine misvaluations. Securities may be mispriced relative to an underlying security, related securities, groups of securities, or the overall market. Relative value investments may be available only cyclically or not at all. Furthermore, if assumptions used in the research and analysis of relative value investments are incorrect or if the model used to evaluate such investments is flawed, relative value strategies may be unsuccessful.

Managed Futures. Managed futures strategies involve speculative trading in futures, forwards and options thereon. Managers may trade portfolios of instruments in U.S. and non-U.S. markets in an effort to capture passive risk premiums, and attempt to profit from anticipated trends in market prices. These managers generally rely on either technical or fundamental analysis or a combination thereof in making trading decisions and attempting to identify price trends. They may attempt to structure a diversified portfolio of liquid futures contracts, including, but not limited to, stock index, interest rate, metals, energy and agricultural futures markets. Participation in a market that is either volatile or trendless could produce substantial losses for a fund. Failure to identify trends or to exit a market position after a trend matures could also produce substantial losses for a fund.

Event Driven. Event-driven strategies are designed to profit from changes in the prices of securities of companies facing a major corporate event. The goal of an event-driven strategy is to identify securities, which may include common or preferred stock as well as many types of fixed income, with a favorable risk-reward ratio based on the probability that a particular event will occur. Such events include mergers and acquisitions as well as restructurings, spin-offs and significant litigation (e.g., tobacco or patent litigation).

Global Macro. Global macro strategies typically seek to generate income and/or capital appreciation through a portfolio of investments focused on macro-economic opportunities across numerous markets and instruments. These strategies rely on the use of, among other things, cash and derivative markets, each of which bear their own risks, as well as certain assumptions about global macro-economic trends. There can be no assurance that such macro-economic assumptions will prove to be correct. Global macro managers may employ relative value, event driven, long/short and other strategies or trading approaches. Trading positions are generally held both long and/or short in both U.S. and non-U.S. markets. Global macro strategies are generally categorized as either discretionary or systematic in nature and may assume aggressive investment postures with respect to position concentrations, use of leverage, portfolio turnover, and the various investment instruments used.

The descriptions above reflect the current expectations regarding the strategies that may be used by the funds in which the Fund is invested. Managers have significant latitude when managing these funds and could make changes to these strategies, or the way they are implemented.

Long/Short Equity and Fixed Income. Long/short equity/fixed income strategies generally seek to produce returns from investments in the global equity and/or fixed income markets. These strategies are generally focused on absolute returns and the trades implemented in the strategy generally capitalize on the manager's views and outlooks for specific markets, regions, sectors, or securities. While these strategies involve both long and short positions in various equity and/or fixed income securities, the manager's positions will generally reflect a specific view about the direction of a market. Unlike traditional equity or fixed income funds, the directional view relates less to the absolute direction of the market and more toward the specific positions (longs versus shorts) held within a portfolio (nonetheless, a manager may take a directional position that relates to the absolute direction of the market). In addition to making shifts in markets, regions, sectors or securities, managers have the flexibility to shift from a net long to a net short position, but in general will maintain a net long exposure. An exception is for those managers that are classified as short sellers, who maintain a consistent net short exposure in their portfolio, meaning that significantly more capital supports short positions than is invested in long positions (if any is invested in long positions at all). Unlike long positions, which one expects to rise in value, short positions are taken in those securities the portfolio manager anticipates will decrease in value. Long/short equity/fixed income managers may be generalists or may specialize in various areas, including, but not limited to, market sectors, geographies, or a certain segment of the market. There can be no assurance that the valuation assumptions utilized in establishing a long and/or short position in a particular security will prove to be correct or that the strategy will be implemented correctly.

Long Equity and Fixed Income. Similar to long/short equity and/or fixed income described above, managers employing this strategy generally do not engage in short selling or hedging of the market risks associated with their investments, but rather inherent in these strategies is the risk associated with the equity and/or fixed income markets as a whole, in addition to the risks described in "Long/Short Equity and Fixed Income" described above. In certain instances, a manager may raise cash as a means of taking a negative view on the market in an attempt to mitigate a portion of the market risk associated with this strategy.

Multi-Strategy. Multi-strategy funds generally employ some or all of the strategies described above.
