4444 Westheimer Road, Suite G500, Houston, TX 77027, Tel. (713) 366-0500

Fourth Quarter 2023

Dear Partners,

The USCA All Terrain Fund (“**All Terrain**”) continued to demonstrate its ability to achieve differentiated, absolute returns in the fourth quarter. All Terrain was up 4.41% for the quarter, while stocks (as measured by the MSCI World Index) gained 11.53% and bonds (as measured by the Bloomberg Global Aggregate Bond Index) returned 8.10%. The 60/40 Blend was up 10.17% for the quarter. For the year, All Terrain returned 9.19%, while stocks and bonds gained 24.39% and 5.71%, respectively. The 60/40 Blend finished the year up 16.67%.

As if we needed another reminder, 2023 offered a renewed lesson to market participants that, sometimes regardless of whether an “unknown” is

known or unknown, the outcome that follows is truly unknowable. Putting this into light perspective, the year included:

- The largest ever bank failure in the US;
- Paltry growth out of China – the worst, in fact, absent a recession, in nearly 50 years;
- The Federal Reserve hiking interest rates 100bps when the expectation at the beginning of the year was only 25bps; and
- The beginning of a terrible, potentially contagious, conflict in the Middle East.

Knowing all-the-above, one would likely expect 2023 to be a dismal year for risk assets. It, of course, very much was not, and risk-managed, value-oriented strategies were left in the dust. As is illustrated in the table on the following page, All Terrain’s year was carried by its long equity exposure (either long only or long/short with a long bias); however, even those managers underperformed benchmarks. You have certainly heard enough about the “Magnificent 7” this year, so we will leave that topic alone other than to point out the following with respect to these seven stocks, the S&P 500, and value stocks (as measured by the Vanguard Value Index Fund):

For the year, the Magnificent 7 returned on average 111%, the SPDR State Street S&P 500 ETF Trust (SPY) had a total return of 26.14% and the Vanguard Value ETF (VTV) had a total return of just 9.26%.² The Magnificent 7 accounted for approximately 62% of the SPY’s return with value severely trailing the top-heavy SPY. Viewed against this backdrop, our more equity-sensitive managers fared quite well given their value bias, delivering more than twice as much as the VTV.

¹ As of December 31, 2023. Performance shown is net of All Terrain fees and expenses and reflects the reinvestment of dividends and other investment income. Past performance does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than original cost. Current performance may be higher or lower than the performance quoted. Please note that All Terrain commenced operations on July 1, 2015. Global Equities is measured by the MSCI World Index and Global Bonds is measured by the Bloomberg Global Aggregate Bond Index. Please see the strategy, index, and statistic definitions at the end of this report.

² Note: “Magnificent 7” consist of Apple, Microsoft, Alphabet, Amazon, Nvidia, Tesla and Meta Platforms. Average return is a simple average of all 7 securities. Source: Research Affiliates, LLC. based on data from Factset.

For the fourth quarter, all strategies contributed positively to All Terrain's results, with managed futures, the third quarter's biggest winner (on invested capital), the exception. Only global macro managers, the biggest winners of 2022, delivered negative returns on the year.

Portfolio Composition & Attribution³

	100.00%			4.74%	11.40%

Runaway markets aside, we continue to see the benefits of diversification in All Terrain's return stream, holding true to the "All Terrain" name. Over the last three years of ups and downs – or to be slightly more precise: ups, downs, and ups again – All Terrain has outperformed indices both on an absolute basis and, considerably so, on a risk-adjusted basis. Take a look at All Terrain's

place in the top left corner of the Trailing 3-Year Risk/Return chart to the left. In addition to the higher return and lower risk profile, over the same period, All Terrain's maximum drawdown was only 4.22%, while stocks and bonds each suffered drawdowns beyond 24%.

While past is never prologue, All Terrain's performance through the volatility and variety of market environments of the prevailing few years has demonstrated its compelling place in a portfolio: it has served as a delivery vehicle for absolute returns and, perhaps just as importantly, a portfolio diversifier.

A consolidated rip higher in stocks and bonds tends to present an environment where most hedged strategies struggle, certainly on an

relative basis. Given this, we never expect to catch all of the market's rise in such an environment; however, we endeavor, as at least could be seen in 2022, to catch even less of the market's decline. Ultimately, we're pleased with All Terrain's recent performance and five consecutive positive quarters.

³ Allocation as of December 1, 2023. "ROIC" or "Return Investment Capital" and "Gross Attribution" as of December 31, 2023. Performance is shown gross of All Terrain fees and expenses to illustrate the ROIC of and attribution associated with the strategies employed by All Terrain. Please note that All Terrain strategies and allocations are subject to change over time.

In keeping with the message from last quarter's letter, we continue to believe that All Terrain is well-positioned for what we expect to be a challenging environment for traditional portfolios of stocks and bonds. Should the meteoric rise persist, we believe we stand to trail, albeit with positive results. If not, we believe that All Terrain is poised to outperform on a relative basis.

As always, please don't hesitate to contact us if you have questions about All Terrain.

Sincerely,

Philip J. Pilibosian, JD/MBA and Bryan Prihoda, CAIA

Fund Description, Terms & Service Providers

The USCA All Terrain Fund ("All Terrain") seeks long-term risk-adjusted returns that are attractive as compared to those of traditional public equity and fixed income markets. All Terrain pursues its investment objective using a multi-manager, fund-of-funds approach by investing predominantly in non-affiliated collective investment vehicles, including privately-offered investment funds commonly known as "hedge funds", and publicly traded funds, including exchange-traded funds and mutual funds, which utilize one or more investment or trading strategies, including, without limitation, long-only equity and/or fixed income, relative value, event driven, long/short equity and/or fixed income, managed futures, and global macro strategies.

- **Minimum Investment:** \$100,000
- **Subscriptions:** Monthly
- **Redemptions/Tenders:** Quarterly, subject to sole discretion of Board
- **Operating Expenses (including management fees):** Capped at 1.75% per annum, subject to certain exceptions (please see prospectus for complete description of fees & expenses)
- **Eligibility:** Accredited Investors
- **Tax Reporting:** K-1 (note: Fund may generate UBTI)
- **Advisor:** USCA Asset Management LLC
- **Administrator:** U.S. Bancorp Fund Services
- **Custodian:** U.S. Bank National Association
- **Legal Counsel:** Thompson Hine LLP

Index & Statistics Definitions

MSCI World Index. The MSCI World Index is a broad global equity benchmark that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country. The index does not offer exposure to emerging markets. Investors cannot invest directly in an index.

Bloomberg Global Aggregate Bond Index. The Bloomberg Global Aggregate Bond Index is a flagship measure of global investment grade debt from twenty-four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers. There are four regional aggregate benchmarks that largely comprise the Global Aggregate Index: the US Aggregate (USD300mn), the Pan-European Aggregate, the Asian-Pacific Aggregate, and the Canadian Aggregate Indices. The Global Aggregate Index also includes Eurodollar, Euro-Yen, and 144A Index-eligible securities, and debt from five local currency markets not tracked by the regional aggregate benchmarks (CLP, MXN, ZAR, ILS and TRY). A component of the Multiverse Index, the Global Aggregate Index was created in 2000, with index history backfilled to January 1, 1990. Investors cannot invest directly in an index.

60/40 Blend. The 60/40 Blend represents the performance of a portfolio that consists 60% of the MSCI World Index and 40% of the Bloomberg Global Aggregate Bond Index rebalanced monthly. Investors cannot invest directly in an index.

S&P 500 Index. The S&P 500 Index is weighted by market value, and its performance is thought to be representative of the stock market as a whole. The S&P 500 Index was created in 1957, although it has been extrapolated backwards to several decades earlier for performance comparison purposes. This index provides a broad snapshot of the overall U.S. equity market; in fact, over 70% of all U.S. equity is tracked by the S&P 500 Index. The index selects its companies based upon their market size, liquidity, and sector. The S&P 500 Index is a market-weighted index. Investors cannot invest directly in an index.

Russell 2000 Index. The Russell 2000 Index is a small-cap stock market index that makes up the smallest 2,000 stocks in the Russell 3000 Index. It was started by the Frank Russell Company in 1984. The index is maintained by FTSE Russell, a subsidiary of the London Stock Exchange Group.

Rate of Return (ROR). The compound geometric average return that assumes the same rate of return every period to arrive at the equivalent compound growth rate reflected in the actual return data.

Strategy Definitions

Relative Value. Relative value strategies attempt to take advantage of relative pricing discrepancies between various instruments, including equities, fixed income, options and futures. Managers may use mathematical, fundamental or technical analysis to determine misvaluations. Securities may be mispriced relative to an underlying security, related securities, groups of securities, or the overall market. Relative value investments may be available only cyclically or not at all. Furthermore, if assumptions used in the research and analysis of relative value investments are incorrect or if the model used to evaluate such investments is flawed, relative value strategies may be unsuccessful.

Managed Futures. Managed futures strategies involve speculative trading in futures, forwards and options thereon. Managers may trade portfolios of instruments in U.S. and non-U.S. markets in an effort to capture passive risk premiums, and attempt to profit from anticipated trends in market prices. These managers generally rely on either technical or fundamental analysis or a combination

thereof in making trading decisions and attempting to identify price trends. They may attempt to structure a diversified portfolio of liquid futures contracts, including, but not limited to, stock index, interest rate, metals, energy and agricultural futures markets. Participation in a market that is either volatile or trendless could produce substantial losses for a fund. Failure to identify trends or to exit a market position after a trend matures could also produce substantial losses for a fund.

Event Driven. Event-driven strategies are designed to profit from changes in the prices of securities of companies facing a major corporate event. The goal of an event-driven strategy is to identify securities, which may include common or preferred stock as well as many types of fixed income, with a favorable risk-reward ratio based on the probability that a particular event will occur. Such events include mergers and acquisitions as well as restructurings, spin-offs and significant litigation (e.g., tobacco or patent litigation).

Global Macro. Global macro strategies typically seek to generate income and/or capital appreciation through a portfolio of investments focused on macro-economic opportunities across numerous markets and instruments. These strategies rely on the use of, among other things, cash and derivative markets, each of which bear their own risks, as well as certain assumptions about global macro-economic trends. There can be no assurance that such macro-economic assumptions will prove to be correct. Global macro managers may employ relative value, event driven, long/short and other strategies or trading approaches. Trading positions are generally held both long and/or short in both U.S. and non-U.S. markets. Global macro strategies are generally categorized as either discretionary or systematic in nature and may assume aggressive investment postures with respect to position concentrations, use of leverage, portfolio turnover, and the various investment instruments used.

Long/Short Equity and Fixed Income. Long/short equity/fixed income strategies generally seek to produce returns from investments in the global equity and/or fixed income markets. These strategies are generally focused on absolute returns and the trades implemented in the strategy generally capitalize on the manager's views and outlooks for specific markets, regions, sectors, or securities. While these strategies involve both long and short positions in various equity and/or fixed income securities, the manager's positions will generally reflect a specific view about the direction of a market. Unlike traditional equity or fixed income funds, the directional view relates less to the absolute direction of the market and more toward the specific positions (longs versus shorts) held within a portfolio (nonetheless, a manager may take a directional position that relates to the absolute direction of the market). In addition to making shifts in markets, regions, sectors or securities, managers have the flexibility to shift from a net long to a net short position, but in general will maintain a net long exposure. An exception is for those managers that are classified as short sellers, who maintain a consistent net short exposure in their portfolio, meaning that significantly more capital supports short positions than is invested in long positions (if any is invested in long positions at all). Unlike long positions, which one expects to rise in value, short positions are taken in those securities the portfolio manager anticipates will decrease in value. Long/short equity/fixed income managers may be generalists or may specialize in various areas, including, but not limited to, market sectors, geographies, or a certain segment of the market. There can be no assurance that the valuation assumptions utilized in establishing a long and/or short position in a particular security will prove to be correct or that the strategy will be implemented correctly.

Long Equity and Fixed Income. Similar to long/short equity and/or fixed income described above, managers employing this strategy generally do not engage in short selling or hedging of the market risks associated with their investments, but rather inherent in these strategies is the risk associated with the equity and/or fixed income markets as a whole, in addition to the risks described in "Long/Short Equity and Fixed Income" described above. In certain instances, a manager may raise cash as a means of taking a negative view on the market in an attempt to mitigate a portion of the market risk associated with this strategy.

Multi-Strategy. Multi-strategy funds generally employ some or all of the strategies described above.

The descriptions above reflect the current expectations regarding the strategies that may be used by the funds in which All Terrain is invested. Managers have significant latitude when managing these funds and could make changes to these strategies, or the way they are implemented.

Risk Disclosure Statement

An offer can only be made by the prospectus and only in jurisdictions in which such an offer would be lawful. The prospectus contains important information concerning the investment objective, risk factors, expenses, and other material aspects of All Terrain to carefully consider and must be read carefully before a decision to invest is made. Please contact USCA Asset Management at (713) 366-0500 to obtain a free copy of the prospectus. Any person subscribing for an investment must be able to bear the risks involved and must meet All Terrain's suitability requirements. Some or all alternative investment programs may not be suitable for certain investors. No assurance can be given that All Terrain's investment objectives will be achieved. Among the risks we wish to call to the particular attention of prospective investors are the following:

- All Terrain is a closed-end, non-diversified management investment company.
- **A fund investment is speculative and involves a substantial degree of risk.**
- **Past results are not necessarily indicative of future performance, and performance may be volatile.**
- An investor could lose all or a substantial amount of his or her investment.
- All Terrain is highly illiquid. There is no secondary market for the investors' interest, and none is expected to develop.
- No shareholder has the right to require All Terrain to redeem its shares. Redemptions are available only through quarterly repurchase offers made at the discretion of the Board.
- Fees and expenses will offset All Terrain's trading profits.
- All Terrain will involve a complex tax structure, which an investor should review carefully with its tax advisor before investing.
- All Terrain is not required to provide periodic pricing or valuation information to investors with respect to its individual investments.
- Some of the underlying funds are not subject to the same regulatory requirements as mutual funds.
- A limited portion of the trades executed may take place on foreign markets.
- All Terrain is subject to conflicts of interest.

Please review the "Risk Factors" and "Conflicts of Interest" sections of the prospectus.
