

Problem

Difficult for people to get acquainted in a new location.

Companies find it difficult to promote specials, happy hours, events/parties in their surrounding area.

Solution

Chad will send real-time alerts to users as they travel past local businesses. These alerts will be promoting specials, happy hours, events/parties and more.

Users open an alert and are sent to that businesses chatroom where they can learn more about the business, connect directly with the business and get directions to where that business is located.

Result

Users learn more about what's in their surrounding area. Businesses successfully spread awareness about what they're doing.

Solution Cont.

Scan the map to discover who & what's around you. Filter the map using tags (food, bar, cafe, etc) or search chatrooms/locations.

Users collect real-time alerts from local businesses they travel by throughout the day. They can access all of their alerts on the alerts page.

Join chatrooms located all over the world and connect with people in that specific location.
