SCOOTERSON, INC.

scooterson

This Form C-AR (including the cover page and all exhibits attached hereto, the "Form C-AR") is being furnished by Scooterson, Inc. a Delaware Corporation ("Scooterson", the "Company," "we," "us", or "our"), (the "Company," as well as references to "we," "us," or "our") for the sole purpose of providing certain information about the Company as required by the Securities and Exchange Commission ("SEC").

The U.S. Securities and Exchange Commission (the "SEC") does not pass upon the merits of any Securities offered or the terms of the Offering, nor does it pass upon the accuracy or completeness of any Offering document or literature.

These Securities are offered under an exemption from registration; however, the SEC has not made an independent determination that these Securities are exempt from registration.

This disclosure document contains forward-looking statements and information relating to, among other things, the Company, its business plan and strategy, and its industry. These forward-looking statements are based on the beliefs of, assumptions made by, and information currently available to the Company's management. When used in this disclosure document and the Company Offering materials, the words "estimate", "project", "believe", "anticipate", "intend", "expect", and similar expressions are intended to identify forward-looking statements. These statements reflect management's current views with respect to future events and are subject to risks and uncertainties that could cause the Company's action results to differ materially from those contained in the forward-looking statements. Investors are cautioned not to place undue reliance on these forward-looking statements to reflect events or circumstances after such state or to reflect the occurrence of unanticipated events.

About this Form C-AR

You should rely only on the information contained in this Form C-AR. We have not authorized anyone to provide you with information different from that contained in this Form C-AR. You should assume that the information contained in this Form C-AR is accurate only as of the date of this Form C-AR, regardless of the time of delivery of this Form C-AR or any sale of Securities. Our business, financial condition, results of operations, and prospects may have changed since that date.

Statements contained herein as to the content of any agreements or other document are summaries and, therefore, are necessarily selective and incomplete and are qualified in their entirety by the actual agreements or other documents.

The statements of the Company contained herein are based on information believed to be reliable. No warranty can be made as to the accuracy of such information or that circumstances have not changed since the date of this Form C-AR. The Company does not expect to update or otherwise revise this Form C-AR or other materials supplied herewith. The delivery of this Form C-AR at any time does not imply that the information contained herein is correct as of any time subsequent to the date of this Form C-AR.

SUMMARY

The Business

The following summary is qualified in its entirety by more detailed information that may appear elsewhere in this Form C-AR and the Exhibits hereto. Each prospective Purchaser is urged to read this Form C-AR and the Exhibits hereto in their entirety.

Scooterson, Inc. is a Delaware corporation, incorporated on August 12, 2016.

The Company is located at 548 Market St, #71050, San Francisco, CA 94104, United States.

The Company's website is <https://scooterson.com/>.

The Company conducts or intends to conduct business in all 50 states of the United States, European Union countries, South East Asia, Australia, and India.

RISK FACTORS

The SEC requires the Company to identify risks that are specific to its business and financial condition. The Company is still subject to all the same risks that all companies in its business, and all companies in the economy, are exposed to. These include risks relating to economic downturns, political and economic events, and technological developments (such as hacking and the ability to prevent hacking). Additionally, early-stage companies are inherently riskier than more developed companies. You should consider general risks as well as specific risks when deciding whether to invest.

Risks Related to the Company's Business and Industry

We have been, and may in the future be, adversely affected by the global COVID-19 pandemic, which may significantly harm our business, prospects, financial condition, and operating results.

During and following the first quarter of 2020, there has been a widespread worldwide impact from the COVID-19 pandemic. Numerous government regulations and public advisories, as well as shifting social behaviors, have temporarily limited or closed transportation, government functions, non-essential business activities, and person-to-person interactions. The timing and pacing of our manufacturing operations will depend largely on the status of various government regulations and the readiness of our suppliers, vendors, and production workforce to return to normal levels. To the extent that market conditions, unemployment rates, and/or government-mandated moratoriums result in significant shifts in demand for our products, our business could be adversely impacted. Additionally, if current global market conditions continue or worsen, or if we cannot or do not resume suspended operations at a rate commensurate with such conditions, our business, prospects, financial condition, and operating results could be materially harmed.

We may experience delays or other complications in the design, manufacture, and launch of our products, which could harm our brand, business, prospects, financial condition, and operating results.

Any significant delay or other complication in the manufacturing or development of our current products or the launch and production of our future products could materially damage our brand, business, prospects, and financial condition. A failure to remediate such complications could also result in negative publicity, which could have a material adverse effect on our operating results.

If our products contain significant defects, we could incur significant expenses to remediate such defects, our reputation could be damaged, and we could lose market share, which could harm our financial condition.

If our products contain defects in design and manufacture that cause them not to perform as expected or

that require repair, our ability to develop, market, and sell our products and services could be harmed. Although we attempt to remedy any issues we observe in our products as effectively and rapidly as possible, such efforts may not be timely, may hamper production, or may not be to the satisfaction of our customers. While we have performed extensive internal testing on the products we manufacture, we currently have a limited frame of reference by which to evaluate detailed long-term quality, reliability, durability, and performance characteristics of our products. There can be no assurance that we will be able to detect and fix any defects in our products prior to their sale to customers. Any product defects, delays or legal restrictions on product features, or other failures of our products to perform as expected, could harm our reputation and result in potential product recalls, product liability claims, breach of warranty claims, and significant warranty and other expenses, and could have a material adverse impact on our business.

If we are unable to attract and/or retain key employees and hire qualified personnel, our ability to compete could be harmed.

The loss of the services of any of our key employees could disrupt our operations, delay the development and introduction of our vehicles and services, and negatively impact our business, prospects, and operating results. Accordingly, our future success depends largely upon our ability to attract and retain talent, especially to support our manufacture of vehicles, expansion plans, and technological innovation. Key talent may leave the Company due to various factors, such as a very competitive labor market for talented individuals with automotive or technology experience, or any negative publicity related to us. For example, in California, there is increasing competition for individuals with skill sets needed for our business, including specialized knowledge of electric vehicles, software engineering, manufacturing engineering, and other skills such as electrical and building construction expertise. This competition affects our ability to retain and hire key employees. Additionally, we compete with both mature companies that have far greater financial resources and start-ups that promise short-term growth opportunities. Difficulties in retaining or recruiting talent could have an adverse effect on our performance and results.

Our service providers are subject to laws and regulations that could impose substantial costs, legal prohibitions, or unfavorable changes upon our products, and any failure to comply with such laws and regulations could negatively impact our business and operating results.

We maintain a global footprint since our design service provider is located in California, our engineering service provider is located in Singapore, and our manufacturing service provider is located in the European Union. Accordingly, our service providers subject to complex environmental, manufacturing, health, and safety laws and regulations at numerous jurisdictional levels in the U.S., Europe, and Asia.

Failure to comply with a variety of U.S. and international privacy and consumer protection laws to which we are subject could harm the Company.

Any failure to comply with federal, state, or international privacy, data protection or security laws or regulations relating to the processing, collection, use, retention, security, and transfer of personally identifiable information could result in regulatory or litigation-related actions against us, legal liability, fines, damages, ongoing audit requirements, and other significant costs.

Substantial expenses and operational changes may be required in connection with maintaining compliance with such laws, and in particular certain emerging privacy laws are still subject to a high degree of uncertainty as to their interpretation and application. For example, in May 2018, the General Data Protection Regulation began to fully apply to the processing of personal information collected from individuals located in the European Union, and has created new compliance obligations and has significantly increased fines for noncompliance. Similarly, as of January 2020, the California Consumer Privacy Act imposes certain legal obligations on our use and processing of personal information related to California residents. Given our global footprint, and although we take steps to protect the security and integrity of our customers' personal information, we may be required to expend significant resources to

comply with data breach requirements if, for example, third parties improperly obtain and use the personal information of our customers or we otherwise experience a data loss with respect to customers' personal information. A major breach of our network security and systems could have negative consequences for our business and future prospects, including possible fines, penalties and damages, reduced customer demand for our vehicles, and harm to our reputation and brand.

The Company is subject to increasing regulatory scrutiny in both the U.S. and abroad, and any failure to comply with such regulations could negatively impact our operating results.

The manufacture, packaging, labeling, storage, distribution, advertising, and sale of our products are subject to extensive regulation in the United States, including by the Consumer Product Safety Commission, the EPA, and by the Federal Trade Commission with respect to advertising. A finding that we are in violation of, or not in compliance with, applicable regulations could subject us to material civil remedies, including fines, damages, injunctions or product recalls, or criminal sanctions. Even if a claim is unsuccessful, is not merited, or is not fully pursued, the negative publicity surrounding such assertions could jeopardize our reputation and brand image and have a material adverse effect on our businesses, as well as require resources to rebuild our reputation.

We may need to defend ourselves against intellectual property infringement claims, which may be time-consuming and could cause us to incur substantial costs.

Companies in the autonomous vehicle industry, including some of our current and potential competitors, own large numbers of patents, copyrights, trademarks, and trade secrets. These companies frequently enter into litigation based on allegations of infringement or other violations of intellectual property rights. In addition, many of these companies have the capability to dedicate resources to enforce their intellectual property rights and to defend claims that may be brought against them. We may in the future receive notices that we have misappropriated, misused, or infringed other parties' intellectual property rights, and, to the extent we gain greater market visibility, we face a higher risk of being the subject of intellectual property infringement claims. These claims may be time-consuming and could cause us to incur substantial legal costs. Concurrently, if we fail to defend ourselves against intellectual property infringement claims, our business and operations could be disrupted or our intellectual property could be compromised, as a result of which our operating results and reputation could be harmed.

We have a limited operating history upon which you can evaluate our performance, and accordingly, our prospects must be considered in light of the risks that any new company encounters.

The Company is still in an early phase and is just beginning to implement its business plan. There can be no assurance that it will ever operate profitably. The likelihood of its success should be considered in light of the problems, expenses, difficulties, complications, and delays usually encountered by companies in their early stages of development. The Company may not be successful in attaining the objectives necessary for it to overcome these risks and uncertainties.

The Company is not profitable.

In order to achieve the Company's near and long-term goals, the Company may need to procure funds. There is no guarantee the Company will be able to raise such funds on acceptable terms or at all. If we are not able to raise sufficient capital in the future, we may not be able to execute our business plan, our continued operations will be in jeopardy and we may be forced to cease operations and sell or otherwise transfer all or substantially all of our remaining assets, which could cause a Purchaser to lose all or a portion of his or her investment.

Although dependent on certain key personnel, the Company does not have any key man life insurance policies on any such people.

The Company is dependent on certain key personnel in order to conduct its operations and execute its business plan, however, the Company has not purchased any insurance policies with respect to those individuals in the event of their death or disability. Therefore, if any of the personnel die or become

disabled, the Company will not receive any compensation to assist with such person's absence. Specifically, the Company is dependent on Mihnea Iustinian Chis and Deepansh Jain. The loss of any of them could negatively affect the Company and its operations. We have no way to guarantee key personnel will stay with the Company, as many states do not enforce non-competition agreements, and therefore acquiring key man insurance will not ameliorate all of the risks of relying on key personnel.

The Company is not subject to Sarbanes-Oxley regulations and may lack the financial controls and procedures of public companies.

The Company may not have the internal control infrastructure that would meet the standards of a public company, including the requirements of the Sarbanes Oxley Act of 2002. As a privately-held (non-public) company, the Company is currently not subject to the Sarbanes Oxley Act of 2002, and its financial and disclosure controls and procedures reflect its status as a development stage, non-public company. There can be no guarantee that there are no significant deficiencies or material weaknesses in the quality of the Company's financial and disclosure controls and procedures. If it were necessary to implement such financial and disclosure controls and procedures, the cost to the Company of such compliance could be substantial and could have a material adverse effect on the Company's results of operations.

We may implement new lines of business or offer new products and services within existing lines of business.

As an early-stage company, we may implement new lines of business at any time. There are substantial risks and uncertainties associated with these efforts, particularly in instances where the markets are not fully developed. In developing and marketing new lines of business and/or new products and services, we may invest significant time and resources. Initial timetables for the introduction and development of new lines of business and/or new products or services may not be achieved, and price and profitability targets may not prove feasible. We may not be successful in introducing new products and services in response to industry trends or developments in technology, or those new products may not achieve market acceptance. As a result, we could lose business, be forced to price products and services on less advantageous terms to retain or attract clients, or be subject to cost increases. As a result, our business, financial condition, or results of operations may be adversely affected.

Damage to our reputation could negatively impact our business, financial condition, and results of operations.

Our reputation and the quality of our brand are critical to our business and success in existing markets, and will be critical to our success as we enter new markets. Any incident that erodes consumer loyalty for our brand could significantly reduce its value and damage our business. We may be adversely affected by any negative publicity, regardless of its accuracy. Also, there has been a marked increase in the use of social media platforms and similar devices, including blogs, social media websites, and other forms of internet-based communications that provide individuals with access to a broad audience of consumers and other interested persons. The availability of information on social media platforms is virtually immediate as is its impact. The information posted may be adverse to our interests or may be inaccurate, each of which may harm our performance, prospects, or business. The harm may be immediate and may disseminate rapidly and broadly, without affording us an opportunity for redress or correction.

Our business could be negatively impacted by cybersecurity threats, attacks, and other disruptions.

Like others in our industry, we continue to face advanced and persistent attacks on our information infrastructure where we manage and store various proprietary information and sensitive/confidential data relating to our operations. These attacks may include sophisticated malware (viruses, worms, and other malicious software programs) and phishing emails that attack our products or otherwise exploit any security vulnerabilities. These intrusions sometimes may be zero-day malware that is difficult to identify because they are not included in the signature set of commercially available antivirus scanning programs. Experienced computer programmers and hackers may be able to penetrate our network security and

misappropriate or compromise our confidential information or that of our customers or other third-parties, create system disruptions, or cause shutdowns. Additionally, sophisticated software and applications that we produce or procure from third-parties may contain defects in design or manufacture, including "bugs" and other problems that could unexpectedly interfere with the operation of the information infrastructure. A disruption, infiltration, or failure of our information infrastructure systems or any of our data centers as a result of software or hardware malfunctions, computer viruses, cyber-attacks, employee theft or misuse, power disruptions, natural disasters, or accidents could cause breaches of data security, loss of critical data and performance delays, which in turn could adversely affect our business.

Security breaches of confidential customer information, in connection with our electronic processing of credit and debit card transactions, or confidential employee information may adversely affect our business.

Our business requires the collection, transmission, and retention of large volumes of customer and employee data, including credit and debit card numbers and other personally identifiable information, in various information technology systems that we maintain and in those maintained by third parties with whom we contract to provide services. The integrity and protection of that customer and employee data are critical to us. The information, security, and privacy requirements imposed by governmental regulation are increasingly demanding. Our systems may not be able to satisfy these changing requirements and customer and employee expectations, or may require significant additional investments or time in order to do so. A breach in the security of our information technology systems or those of our service providers could lead to an interruption in the operation of our systems, resulting in operational inefficiencies and a loss of profits. Additionally, a significant theft, loss or misappropriation of, or access to, customers' or other proprietary data or other breaches of our information technology systems could result in fines, legal claims, or proceedings.

BUSINESS

Description of the Business

Scooterson is a design award-winning company, building premium electric smart scooters, engineered to offer the best customer experience possible, with no compromise in aesthetics and quality.

Business Plan

As a growth company, the Company expects to breakeven in the next 8 to 12 months and achieve profitability in the next 8 to 12 months. The Company intends to focus on increasing general sales and broader product penetration with the existing customer base.

The Company's Products and/or Services

Product / Service	Description	Current Market
ROLLEY	Smart Electric Scooter	Direct-to-consumer market
AIR	Smart Electric Scooter for B2B	Rental operations for tourists, Delivery operations, Golf Course rentals. Other corporate use.
ELF	Smart Electric Scooter	Direct-to-consumer market
RIDE	Monthly subscription bases scooter rental.	Direct-to-consumer market

SCOOTERSON TREE	Electric Scooter Charging Station	B2B
SCOOTPACK	Smart Backpack	Direct-to-consumer market

Competition

Our main competitors in the USA's electric scooter industry are Phat Scooters, Skooza, Boosted, and Unagi.

Supply Chain

The Company hires third-party service providers to manufacture scooters and sells them directly to consumers and businesses. For B2C sales, the Company currently uses its website and plans to open brick-and-mortar stores in the future for in-person sales to consumers. For B2B sales, the Company sells fleets of scooters to businesses and partner companies. Also, the Company has started developing a network of resellers that resell scooters from their websites or from their own brick-and-mortar stores.

Customer Base

The majority of our customers will be millennials (appx. 75%) as well as Gen X and other generations. The B2B target customers are delivery companies, corporate campuses, residential developments, golf courses, rental operators, hotels, and resorts, etc.

Intellectual Property

The Company the following registered and pending patents:

Application/ Registration #	Title	Description	File Date	Grant Date	Country
D803948	Electric scooter	The ornamental design for an electric scooter	April 9, 2016	November 28, 2017	United States

The Company does not have any debt in default.

Ownership

Below the beneficial owners of 20% percent or more of the Company's outstanding voting equity securities, calculated on the basis of voting power, are listed along with the amount they own.

Name	Number and type/class of security held	Percentage ownership
Mihnea Iustinian Chis	18,300,000 shares of common stock	38.41%*
Deepansh Jain	18,075,000 shares of common stock	37.94%*

*assuming the outstanding warrant is exercised and all outstanding convertible securities are converted.

FINANCIAL INFORMATION

Please see the financial information listed on the cover page of this Form C-AR and attached hereto in addition to the following information. Financial statements are attached hereto as Exhibit B.

Operations

Scooterson produces a range of semi-autonomous two-wheeled vehicles using machine learning to analyze riding patterns, which helps to inform how fast they move. This automated design is meant to enhance the rider's experience, maximize energy efficiency, optimize routes, and increase safety. The Company is headquartered in San Francisco, California, but maintains a Singapore office as well.
