## WHAT IS UPLYFT?

UpLyft™ is the first FDA-compliant Self Transfer System (“STS”) from bed to wheelchair for people with limited mobility. In 1 minute, a person can self-transfer him/herself with UpLyft™ from a horizontal lying down position in bed into their wheelchair. UpLyft™ replaces slings, body boards, and other inferior “lift to stand” mechanisms that require nursing assistance and physical force to transfer individuals with mobility challenges.

**3** **MILLION**

people in the United States need assistance getting in and out of bed

UpLyft is here to help!
