Using Slack to track real-time activity on your app or webpage! I just implemented...

```

1 require('dotenv').config();
2 const request = require("request");
3 const SLACK_URL = process.env.SLACK_URL;
4
5 const slackSender = (webhook, payload) => {
6   const theRequest = {
7     url: SLACK_URL + webhook,
8     method: "POST",
9     json: payload
10  };
11
12  request(theRequest, (error, res) => {
13    if (!error && (res.statusCode === 200)) {
14      console.log("Slack Message Sent");
15    } else {
16      console.log("Slack Message Failed" + res);
17    }
18  });
19
20 module.exports = slackSender;
  
```
