bluShift Aerospace tests their full-scale Modular Adaptable Rocket Engine for Vehicle Launch (MAREVL 2.0), a novel hybrid rocket engine that burns non-toxic, carbon-neutral, bio-derived solid fuel.

The purpose of this test is to achieve ignition and stable flow throughout the engine, and to achieve full power for five seconds. Future tests will feature full-power, full-duration burns of approximately 90 seconds.

Following a series of these static fire tests, MAREVL 2.0 will power the Starless Rogue launch vehicle in suborbital flight in 2023.
