LEAD INVESTOR

Ariene Lanciani

inBalance's work is essential to a sustainable future. As a principle at a leading energy efficiency organization, I recognize that there has been a longstanding gap in the energy industry and it has taken the sort of innovation that these brilliant minds have taken on as their shared vision. Together they have already reduced Carbon emission and their solution will ensure the sustainability of the energy industry for future generations. I believe that in as few as 10 years from now they could manage more renewable assets than any other company on the planet.

Highlights

- 🔥 25% increase in revenue over traditional forecasting
- 📍 Pilots with 15% of New England's responsive electricity generation
- ⚡ Working with industry leaders from Uber, EnerNOC, McKinsey
- 📊 Aiming to reach \$100M ARR in 5 years by both working with utilities and directly with the market

Our Team

Thomas Marge Co-founder & CEO

Partial Mathematics PhD from the University of Cambridge

Inefficiency in the market leads to 2% or more excess emissions per year. Not only is this bad for the environment, but it makes for a valuable opportunity for a company like inBalance that is positioned to resolve it.

9

CHEAPER

With less out-of-the-market, power grids can fully utilize their zero-marginal cost resources. More renewables will enter the market, and with them comes increased opportunities for arbitrage, smoothing out costly system conditions.

Social Impact: A Better Power Grid

CLEANER

Power grids with high renewable and data resources when renewable generation is poorly integrated. With inBalance, the US power grid has seen annual reductions of nearly 1 million metric tons of carbon dioxide.

inBalance

SAFER

Intermittent renewables increase the risk of blackouts when their generation profile is poorly understood. Better price information provides system operators the ability to recognize and deal with potential system failures before they happen.
