In an incredible seafloor mapping mission in the Arctic Ocean, Marine Scientists have discovered deep sinkholes in the Arctic. One of the sinkholes identified in Canada's Beaufort Sea is larger than a city block of six-story buildings. This study of submerged permafrost indicates that ice-filled hills have formed extraordinarily rapidly in this remote part of the Arctic.

When something new is discovered, GMSO is able to ramp up quickly to support this exact type of study. If you'd like to learn more about how we can support your ocean research, contact us at [info@gmsoresearchvessels.com](mailto:info@gmsoresearchvessels.com).

We are thrilled to be gearing up for an upcoming crowdfunding opportunity with Wefunder!

David Kennedy has joined the board of directors bringing his 50+ years of leadership in science and development of legislation/national initiatives. He is a recognized national expert in the field of emergency pollution response; contingency planning; innovative technology development; matrix and collaborative program management; and a suite of coastal issues focused on development, climate change, energy, and coastal resiliency.

He previously served as NOAA's Deputy Under Secretary for Operations. As NOAA's Chief Operating Officer, Kennedy was responsible for the day to day management of NOAA's national and international operations for ocean and atmospheric services, research and coastal and marine stewardship.

We are honored to have him aboard.

We will be making an exciting announcement soon!
