NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

These unaudited interim financial statements have been prepared pursuant to the rules and regulations of the Securities and Exchange Commission ("SEC"). Accordingly, certain information and footnote disclosures normally included in the financial statements prepared in accordance with accounting principles generally accepted in the United States of America ("GAAP") have been condensed or omitted. In management's opinion, the accompanying interim financial statements reflect all normal, recurring adjustments considered necessary for a fair presentation. Operating results for the interim periods presented herein may not be indicative of the results that may be expected for the year. The financial statements incorporated herein should be read in conjunction with the consolidated financial statements and accompanying notes included in the Company's annual report on Form 10-K for the year ended December 31, 2006.

Regulatory Accounting The Company's utility operations are regulated by the Vermont Public Service Board ("PSB"), the Connecticut Department of Public Utility and Control and the Federal Energy Regulatory Commission ("FERC"), with respect to rates charged for service, accounting, financing and other matters pertaining to regulated operations. As such, the Company prepares its financial statements in accordance with SFAS No. 71, *Accounting for the Effects of Certain Types of Regulation* ("SFAS No. 71"). The application of SFAS No. 71 results in differences in the timing of recognition of certain expenses from those of other businesses and industries. In the event the Company determines that it no longer meets the criteria for applying SFAS No. 71, the accounting impact would be an extraordinary non-cash charge to operations of an amount that would be material unless stranded cost recovery is allowed through a rate mechanism. Based on a current evaluation of the factors and conditions expected to impact future cost recovery, management believes future recovery of its regulatory assets is probable. Criteria that could give rise to the discontinuance of SFAS No. 71 include: 1) increasing competition that restricts a company's ability to establish prices to recover specific costs, and 2) a significant change in the manner in which rates are set by regulators from cost-based regulation to another form of regulation. See Note 4 - Retail Rates and Regulatory Accounting for additional information.

Income Taxes In accordance with SFAS No. 109, *Accounting for Income Taxes*, the Company recognizes deferred tax assets and liabilities for the cumulative effect of all temporary differences between financial statement carrying amounts and the tax basis of existing assets and liabilities using the tax rate expected to be in effect when the differences are expected to reverse. Investment tax credits associated with utility plant are deferred and amortized ratably to income over the lives of the related properties. The Company records a valuation allowance for deferred tax assets if management determines that it is more likely than not that such tax assets will not be realized.

In June 2006, the FASB issued Interpretation No. 48, *Accounting for Uncertainty in Income Taxes - an Interpretation of FASB Statement No. 109* ("FIN 48"). FIN 48 clarifies the methodology to be used in estimating and reporting amounts associated with uncertain tax positions, including interest and penalties. The Company adopted FIN 48 on January 1, 2007 as required. Upon adoption and in accordance with FIN 48, the Company recognized the cumulative effect of approximately \$0.1 million as an increase in beginning retained earnings related to a decrease in the liability for unrecognized income tax benefits. At the adoption date and at March 31, 2007, the Company had \$0.7 million of unrecognized tax benefits, all of which would affect our effective tax rate if recognized.

The Company recognizes interest related to unrecognized tax benefits as interest expense and penalties as other deductions. Accrued interest related to uncertain tax positions amounted to less than \$0.1 million as of March 31, 2007.

The tax years 2003 through 2006 remain open to examination by major taxing jurisdictions to which the Company is subject.

Derivative Financial Instruments The Company accounts for certain power contracts as derivatives under the provisions of SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended and interpreted and SFAS No. 149, *Amendment of Statement 133 Derivative Instruments and Hedging Activities*, (collectively "SFAS No. 133"). These statements require that derivatives be recorded on the balance sheet at fair value. At December 31, 2006, the Company's power contracts that are derivatives included: 1) one long-term purchased power contract that allows the seller to repurchase specified amounts of power with advance notice (Hydro-Quebec Sellback #3); 2) one long-term forward sale contract; and 3) one short-term forward purchase contract. During the first quarter of 2007, the Company entered into three additional short-term forward sale contracts that are derivatives.

The estimated fair values of power contract derivatives are based on over-the-counter quotations or broker quotes at the end of the reporting period, with the exception of Hydro-Quebec Sellback #3, which is valued using a binomial tree model and quoted market data when available, along with appropriate valuation methodologies. At March 31, 2007, the estimated fair value of five of the six power contract derivatives was an unrealized loss of \$9.4 million and one had an estimated fair value of an unrealized gain of \$0.1 million. At December 31, 2006, the estimated fair value of all power contract derivatives was an unrealized loss of \$8.0 million.

Based on a PSB-approved Accounting Order, the Company records the change in fair value of power contract derivatives as deferred charges or deferred credits on the balance sheet, depending on whether the fair value is an unrealized loss or gain. The corresponding offsets are recorded as current and long-term assets or liabilities depending on the duration.

Reclassifications Certain prior year amounts have been reclassified to conform to the current year presentation. The Company has reclassified Non-cash employee benefit plan costs of \$2.6 million from Other non-current assets and liabilities and other in Operating Activities on the 2006 Condensed Consolidated Statement of Cash Flows to separately report and conform to the 2007 presentation.

Recent Accounting Pronouncements

FIN 48: See Income Taxes above.

SFAS No. 157: In September 2006, the FASB issued Statement No. 157, *Fair Value Measurements* ("SFAS No. 157"), which addresses how companies should measure fair value when they are required to use a fair value measure for recognition or disclosure purposes under GAAP. As a result of SFAS No. 157, there is now a common definition of fair value to be used throughout GAAP. SFAS No. 157 is effective for fiscal years beginning after November 15, 2007 (beginning January 1, 2008 for the Company). The Company has not yet evaluated the impact that SFAS No. 157 will have on its financial position, results of operations and cash flows.

SFAS No. 158: The Company adopted the recognition and disclosure provisions of SFAS No. 158 *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106, and 132(R)* ("SFAS No. 158") as of December 31, 2006. SFAS No. 158 also requires companies to measure plan assets and benefit obligations as of the same date as their fiscal year-end balance sheet date. This provision of SFAS No. 158 is effective for the Company in 2008. The Company estimates that changing its annual benefit measurement date from September 30 to December 31 will result in a pre-tax charge to retained earnings of \$1.6 million. The Company is evaluating whether it will seek rate recovery of \$1.4 million related to its regulated operations. If rate recovery is permitted, a regulatory asset would be recorded for \$1.4 million. If rate recovery is not permitted, the total after-tax charge to retained earnings would be approximately \$1.0 million.

SFAS No. 159: In February 2007, the FASB issued SFAS No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities* ("SFAS No. 159"). SFAS No. 159 establishes a fair value option under which entities can elect to report certain financial assets and liabilities at fair value, with changes in fair value recognized in earnings. SFAS No. 159 is effective for fiscal years beginning after November 15, 2007 (beginning January 1, 2008 for the Company). The Company has not yet evaluated what impact, if any, the adoption of SFAS No. 159 will have on its financial position, results of operations and cash flows.

EITF 06-04: In September 2006, the FASB issued EITF Issue 06-04, *Accounting for Deferred Compensation and Postretirement Benefit Aspects of Endorsement Split Dollar Life Insurance Arrangements*, ("EITF 06-04"). EITF 06-04 requires employers to record a liability for future benefits for endorsement split-dollar life insurance arrangements that provide a postretirement benefit to an employee. This guidance becomes effective for fiscal periods beginning after December 15, 2007 (beginning January 1, 2008 for the Company). The Company is currently evaluating the impact, if any, EITF 06-04 will have on its financial position, results of operations and cash flows.

NOTE 2 - EARNINGS PER SHARE ("EPS")

The Condensed Consolidated Statements of Income include basic and diluted per share information. The following table provides a reconciliation of the numerator and denominator used in calculating basic and diluted EPS for the three months ended March 31 (in thousands, except share information):

	<u>2007</u>	<u>2006</u>
<u>Numerator for basic and diluted EPS:</u>		
Net income	\$5,706	\$4,097
Dividends declared on preferred stock	(92)	(92)
Net income available for common stock	<u>\$5,614</u>	<u>\$4,005</u>
<u>Denominators for basic and diluted EPS:</u>		
Weighted-average basic shares of common stock outstanding	10,135,481	12,297,528
Dilutive effect of stock options	102,920	63,673
Dilutive effect of performance shares	2,201	2,730
Weighted-average diluted shares of common stock outstanding	<u>10,240,602</u>	<u>12,363,931</u>

All outstanding stock options were included in the computation of diluted shares in 2007 because the exercise prices were lower than the average market price of the common shares. Outstanding stock options totaling 67,577 in 2006 were excluded from that year's computation of diluted shares because the exercise prices were above the average market price of the common shares.

NOTE 3 - INVESTMENTS IN AFFILIATES

Vermont Electric Power Company, Inc. ("VELCO") and Vermont Transco LLC ("Transco") In June 2006, VELCO's Board of Directors, the PSB and the FERC approved a plan to transfer substantially all of VELCO's business operations to Transco, a Vermont limited liability company. On June 30, 2006, VELCO's assets were transferred to Transco in exchange for 2.4 million Class A Membership Units, and Transco assumed all of VELCO's debt. VELCO and its employees manage Transco's operations under a Management Services Agreement between VELCO and Transco. Transco operates under an Operating Agreement among VELCO, Transco, the Company, Green Mountain Power and most of the other Vermont electric utilities. Transco also operates under the Amended and Restated Three Party Agreements, assigned to Transco from VELCO, among the Company, Green Mountain Power, VELCO and Transco. In 2006, the Company invested a total of \$23.3 in Transco, which is represented by Class A Membership Units in Transco that earn an allowed rate of return of 11.5 percent. At March 31, 2007, the Company's total direct and indirect interest in Transco was 44.34 percent.

Summarized financial information for Transco for the three months ended March 31 follows (in thousands). These amounts are also included in VELCO's consolidated financial information below.

	<u>2007</u>
Operating revenues	\$12,664
Operating income	\$5,540
Net income	\$3,507
Company's ownership interest	29.86%
Company's equity in net income	\$1,161

Summarized financial information for VELCO consolidated for the three months ended March 31 follows (in thousands):

	<u>2007</u>	<u>2006</u>
Operating revenues	\$12,787	\$8,987
Operating income	\$5,088	\$2,214
Net income before non-controlling interest	\$3,174	\$771
Less members non-controlling interest in net income	2,365	-
Net income	<u>\$809</u>	<u>\$771</u>
Company's common stock ownership interest	47.05%	47.05%
Company's equity in net income	\$397	\$391

Transco (previously VELCO) provided transmission services to the Company amounting to approximately \$1.5 million in 2007 and \$1.3 million in 2006. These amounts are included in Transmission - affiliates on the Condensed Consolidated Statements of Income.

Vermont Yankee Nuclear Power Corporation ("VYNPC") Summarized financial information for VYNPC for the three months ended March 31 follows (in thousands):

	<u>2007</u>	<u>2006</u>
Operating revenues	\$44,372	\$44,347
Operating income	\$827	\$776
Net income	\$225	\$173
Company's common stock ownership interest	58.85%	58.85%
Company's equity in net income	\$133	\$102

Purchased power - affiliates on the Company's Condensed Consolidated Statements of Income includes sales from VYNPC of approximately \$15.5 million in 2007 and \$15.4 million in 2006. Also see Note 6 - Commitments and Contingencies.

Maine Yankee, Connecticut Yankee and Yankee Atomic All three companies collect decommissioning and closure costs through FERC-approved wholesale rates charged under power agreements among several New England utilities, including the Company. Historically, the Company's share of these costs has been recovered from retail customers through PSB-approved rates. The Company believes its share of decommissioning and closure costs for each plant will continue to be recovered through the regulatory process. There is a risk that if FERC disallows future cost recovery for any of the three companies, the PSB would also disallow recovery of the Company's share in its retail rates.

The Company's share of Maine Yankee, Connecticut Yankee and Yankee Atomic estimated costs are reflected on the Condensed Consolidated Balance Sheets as regulatory assets and nuclear decommissioning liabilities (current and non-current). These amounts are adjusted when revised estimates are provided. At March 31, 2007, the Company had regulatory assets of \$3.1 million related to Maine Yankee, \$7.9 million related to Connecticut Yankee and \$3.3 million related to Yankee Atomic (including \$0.1 million for incremental decommissioning costs already paid by the Company). These estimated costs are being collected from customers through existing retail rate tariffs. Total billings from the three companies amounted to \$0.7 million in the first quarter of 2007 and \$1.4 million in the first quarter of 2006. These amounts are included in Purchased power - affiliates on the Company's Condensed Consolidated Statements of Income.

Maine Yankee: Plant decommissioning activities were completed in 2005 and the Nuclear Regulatory Commission ("NRC") amended Maine Yankee's operating license in October 2005 for operation of the Independent Spent Fuel Storage Installation. Maine Yankee's wholesale rates are currently based on a September 2004 FERC-approved settlement.

Connecticut Yankee: Final site-work is projected to be completed in 2007 followed by NRC approval to begin the Independent Spent Fuel Storage Installation-only operations. Connecticut Yankee's wholesale rates are currently based on a November 16, 2006 FERC-approved settlement.

Yankee Atomic: Final site-work is projected to be completed in 2007 followed by NRC approval to begin the Independent Spent Fuel Storage Installation-only operations. Yankee Atomic's wholesale rates are currently based on a July 31, 2006 FERC-approved settlement.

Department of Energy ("DOE") Litigation: All three companies have been seeking recovery of fuel storage-related costs stemming from the default of the DOE under the 1983 fuel disposal contracts that were mandated by the United States Congress under the Nuclear Waste Policy Act of 1982. Under the Act, the DOE was to begin removing spent nuclear fuel from the nuclear plants no later than January 31, 1998 in return for payments by each company into the nuclear waste fund. No fuel has been collected by the DOE, and spent nuclear fuel is being stored at each of the plants. Maine Yankee, Connecticut Yankee and Yankee Atomic collected the funds from wholesale utility customers, including the Company, under FERC-approved contract rates, and these payments were collected from the Company's retail customers.

On September 30, 2006, the United States Court of Federal Claims ("Court") issued judgment in the spent fuel litigation. Maine Yankee was awarded \$75.8 million in damages through 2002, Connecticut Yankee was awarded \$34.2 million through 2001 and Yankee Atomic was awarded \$32.9 million through 2001. The three companies had claimed actual damages through the same periods in the amounts of \$78.1 million for Maine Yankee, \$37.7 million for Connecticut Yankee and \$60.8 million for Yankee Atomic. On December 4, 2006, the DOE filed a notice of appeal in all three cases, and on December 14, 2006, all three companies filed notices of cross appeals.

On February 9, 2007, the Court issued an order consolidating the three cases. On March 15, 2007, the Court issued an order making another case a companion appeal to the case, which will result in both appeals being heard consecutively. The briefing schedule for both cases extends to early July 2007.

Due to the complexity of the issues and the appeals, the three companies cannot predict the amount of damages that will actually be received or the timing of the final determination of such damages. Each of the companies' respective FERC settlements require that damage payments, net of taxes and net of further spent fuel trust funding, be credited to ratepayers including the Company. The Company expects that its share of these payments, if any, would be credited to its ratepayers as well.

The Court's decision, if upheld, establishes the DOE's responsibility for reimbursing Maine Yankee for its actual costs through 2002 and Connecticut Yankee and Yankee Atomic for their actual costs through 2001 related to the incremental spent fuel storage, security, construction and other costs of the spent fuel storage installation. Although the decision leaves open the question regarding damages in subsequent years, the decision does support future claims for the remaining spent fuel storage installation construction costs. The Company cannot predict the ultimate outcome of this decision on appeal.

NOTE 4 - RETAIL RATES AND REGULATORY ACCOUNTING

Retail Rates On December 7, 2006, the PSB issued an Order ("2006 Rate Order") approving a 4.07 percent rate increase effective January 1, 2007. The 2006 Rate Order provided, among other things, an allowed rate of return on common equity of 10.75 percent capped until the Company's next rate proceeding.

On January 12, 2007, the PSB issued an Order denying the Company's Accounting Order request for recovery of \$1.5 million of incremental replacement power costs associated with a 2005 Vermont Yankee refueling outage. The 2006 Rate Order requires the Company to record a regulatory asset or liability for any difference between the replacement power cost amortization included in the 4.07 percent rate increase and the amount approved by the PSB. Therefore, the Company is deferring (beginning January 1, 2007) the \$1.5 million of revenue over two years and will continue such deferral until its next rate proceeding, at which time the total amount deferred will be returned to customers.

Regulatory Accounting Under SFAS No. 71, the Company accounts for certain transactions in accordance with permitted regulatory treatment such that regulators may permit incurred costs, typically treated as expenses by unregulated entities, to be deferred and expensed in future periods when recovered in future revenues. In the event that the Company no longer meets the criteria under SFAS No. 71 and there is not a rate mechanism to recover these costs, the Company would be required to write off \$19.7 million of regulatory assets (total regulatory assets of \$50.8 million less pension and postretirement medical costs of \$31.1 million), \$13.0 million of other deferred charges - regulatory and \$12.1 million of other deferred credits - regulatory. This would result in a total extraordinary charge to operations of \$20.6 million pre-tax as of March 31, 2007. The Company would also be required to record pension and postretirement benefit costs of \$31.1 million on a pre-tax basis to Accumulated Other Comprehensive Loss as a reduction in stockholder's equity, and would be required to determine any potential impairment to the carrying costs of deregulated plant. The primary components of Regulatory assets, Other deferred charges - regulatory and Other deferred credits - regulatory are shown in the table that follows (in thousands).

	<u>March 31, 2007</u>	<u>December 31, 2006</u>
<u>Regulatory assets:*</u>		
Pension and postretirement medical costs - SFAS No. 158	\$31,050	\$31,705
Nuclear plant dismantling costs	14,316	15,033
Income taxes	3,836	3,810
Asset retirement obligations	535	501
Other	1,045	1,130
Total regulatory assets	<u>\$50,782</u>	<u>\$52,179</u>
<u>Other deferred charges - regulatory:</u>		
Vermont Yankee sale costs (tax)	\$3,130	\$3,130
Unrealized loss on power contract derivatives	9,418	7,997
Tree trimming, pole treating and other	457	1,000
Total other deferred charges - regulatory	<u>\$13,005</u>	<u>\$12,127</u>

Other deferred credits - regulatory:

Vermont utility overearnings 2001 - 2003	\$3,843	\$4,803
Asset retirement obligation - Millstone Unit #3	3,057	3,055
Environmental remediation	1,648	1,648
Vermont Yankee IRS settlement	998	1,088
Emission allowances and renewable energy credits	847	924
Other	<u>1,694</u>	<u>1,169</u>
Total other deferred credits - regulatory	<u>\$12,087</u>	<u>\$12,687</u>

*Regulatory assets are being recovered in retail rates, except for asset retirement obligations. The regulatory assets included in Other and small portions of nuclear plant dismantling costs are earning a return.

NOTE 5 - PENSION AND POSTRETIREMENT MEDICAL BENEFITS

Components of net periodic benefit costs for the three months ended March 31 follow (in thousands):

	Pension Benefits		Postretirement Benefits	
	<u>2007</u>	<u>2006</u>	<u>2007</u>	<u>2006</u>
Service cost	\$888	\$922	\$145	\$177
Interest cost	1,561	1,493	377	424
Expected return on plan assets	(1,680)	(1,436)	(233)	(179)
Amortization of net actuarial loss	146	196	263	398
Amortization of prior service cost	100	100	-	-
Amortization of transition obligation	-	-	64	64
Net periodic benefit cost	<u>1,015</u>	<u>1,275</u>	<u>616</u>	<u>884</u>
Less amounts capitalized	<u>171</u>	<u>204</u>	<u>104</u>	<u>142</u>
Net benefit costs expensed	<u>\$844</u>	<u>\$1,071</u>	<u>\$512</u>	<u>\$742</u>

The Medicare Part D subsidy included in Postretirement net periodic benefit cost was \$0.1 million in each of the first quarters of 2007 and 2006 and is expected to total \$0.6 million for the year 2007.

NOTE 6 - COMMITMENTS AND CONTINGENCIES

Nuclear Decommissioning Obligations The Company's obligations for decommissioning and other costs associated with Maine Yankee, Connecticut Yankee and Yankee Atomic are described in Note 3 - Investments in Affiliates. The Company also has a 1.73 joint-ownership percentage in Millstone Unit # 3. As a joint owner of the Millstone Unit #3 facility, in which Dominion Nuclear Corporation ("DNC") is the lead owner with about 93.47 percent of the plant joint-ownership, the Company is responsible for its share of nuclear decommissioning costs. The Company has external trust funds dedicated to funding its joint-ownership share of future decommissioning costs. The Company has suspended contributions to the trust funds based on DNC's determination that the minimum NRC funding requirements are being met or exceeded. If a need for additional decommissioning funding is necessary, the Company will be obligated to resume contributions.

In January 2004, DNC filed, on behalf of itself and the two minority owners, including the Company, a lawsuit against the DOE seeking recovery of costs related to storage of spent nuclear fuel arising from the failure of the DOE to comply with its obligations to commence accepting such fuel in 1998. A trial is expected to be held in August 2008. The Company continues to pay its share of the DOE Spent Fuel assessment expenses levied on actual generation and will share in recovery from the lawsuit, if any, in proportion to its ownership interest.

Vermont Yankee The Company purchases its entitlement share of plant output through a Power Purchase Agreement ("PPA") between Entergy Nuclear Vermont Yankee, LLC ("ENVY") and VYNPC. ENVY has no obligation to supply energy to VYNPC over the amount the plant is producing, so entitlement holders receive reduced amounts when the plant is operating at a reduced level, and no energy when the plant is not operating. The plant's next refueling outage is scheduled to begin in May 2007. The Company has a forward contract for the purchase of replacement power during the outage.

In 2006, the Company purchased forced outage insurance to cover additional costs, if any, of obtaining replacement power from other sources if the Vermont Yankee plant experiences unplanned outages between January 1 and December 31, 2007. The coverage applies to unplanned outages of up to 30 consecutive calendar days per outage event, and provides for payment to the Company of the difference between the spot market price and \$40/mWh. The total maximum coverage is \$10.0 million, with a \$1.0 million total deductible. There were no claims under this insurance contract in the first quarter of 2007.

The PSB has not yet approved a March 16, 2006 settlement proposal reached by the Company, Green Mountain Power, ENVY and the Vermont Department of Public Service ("DPS") that resolves issues that were raised in a petition before the PSB regarding the Rate Payer Protection Proposal (outage protection related to the plant uprate). The Company's share of the settlement is estimated to be \$1.6 million, but the settlement is not effective until the PSB issues a final order. Any amounts recovered by the Company will be returned to its customers. The Company cannot predict the timing or outcome of this matter at this time.

The Company is a party to a PSB Docket that was opened in June 2006 to investigate whether the reliability of the increased plant output will be adversely affected by the operation of the plant's steam dryer. On September 18, 2006, the PSB issued an order requiring ENVY to provide additional ratepayer protections that would protect Vermont utilities and ratepayers if the plant is forced to reduce output because of uprate-related steam dryer problems. The DPS and ENVY reached an agreement in a compliance filing with the PSB, which will provide protections in the event of a derate. The protections will apply to incremental replacement power costs and will remain in effect for at least two months after the refueling outage during which the plant operates successfully with no steam dryer-related outages or derates. ENVY requested reconsideration of the PSB ruling. Reconsideration was denied and ENVY has appealed to the Vermont Supreme Court.

The PPA between ENVY and VYNPC contains a formula for determining the entitlement to power following the uprate. VYNPC and ENVY are seeking to resolve certain differences in the interpretation of the formula. One issue is how much capacity VYNPC may bid into the ISO-New England market following the uprate; another issue is the percentage of plant output that would be delivered under the PPA in the event of a derate. The differing methods of calculation could have a material effect on the Company's power supply costs if the plant is derated in the future and the Company's entitlement share of plant output declines in proportion to such derating. The Company cannot predict the outcome of this matter at this time.

If the Vermont Yankee plant is shut down for any reason prior to the end of its operating license, the Company would have to acquire replacement power resources for approximately 40 percent of its estimated power supply needs. Based on the Company's projected market prices at March 31, 2007, the incremental cost of lost power, including capacity, is estimated to average \$52 million annually. Under this scenario, a retail rate increase of approximately 19 percent would be needed for full cost recovery. The Company is not able to predict whether there will be an early shutdown of the Vermont Yankee plant or whether the PSB will allow timely and full recovery of increased costs related to any such shutdown. However, an early shutdown could materially impact the Company's financial position and future results of operations if the costs are not recovered in retail rates in a timely fashion.

Hydro-Quebec The Company purchases about 29 percent of its annual power supply energy (purchased and generated) from Hydro-Quebec under the Vermont Joint Owners ("VJO") Power Contract and related contracts negotiated between the Company and Hydro-Quebec. There are specific contractual provisions that provide that in the event any VJO participant fails to meet its obligation under the contract, the remaining VJO participants must "step-up" to the defaulting party's share on a pro rata basis. The VJO contract runs through 2020, but the Company's purchases related to the contract end in 2016.

In 1994, the Company negotiated a sellback arrangement whereby it received a reduction in capacity costs from 1995 to 1999. In exchange, Hydro-Quebec obtained two options. The first gives Hydro-Quebec the right upon four years' written notice, to reduce capacity deliveries by 50 MW, including the use of a like amount of the Company's Phase I/II transmission facility rights. The second gives Hydro-Quebec the right, upon one year's written notice, to curtail energy deliveries in a contract year (12 months beginning November 1) from an annual load factor of 75 to 50 percent due to adverse hydraulic conditions as measured at certain agreed upon metering stations on regulated and unregulated rivers in Quebec. This second option can be exercised five times through October 2015. Hydro-Quebec has not yet exercised these options.

Based on elections made by the VJO in 2005 and 2006, purchases under the VJO Power Contract have been at an 80 percent load factor for the contract years beginning November 1, 2005 and 2006. After the contract year ending October 31, 2007, the annual load factor will be at 75 percent for the remainder of the contract, unless all parties to the contract agree to change it or there is a reduction due to the adverse hydraulic conditions described above. Total purchases under the VJO Contract amounted to \$16.7 million in the first quarter of 2007 and \$16.2 million in the first quarter of 2006.

Performance Assurance At March 31, 2007, the Company had posted \$5.9 million of collateral under performance assurance requirements for certain of its power contracts as described below. In the first quarter of 2007, a \$4.5 million letter of credit was canceled.

The Company is subject to performance assurance requirements for power purchase and sale transactions through ISO-New England under the Financial Assurance Policy for NEPOOL members. The Company's credit limit with ISO-New England is zero and it is required to post collateral for all net purchase transactions. As of March 31, 2007, the Company had posted \$3.5 million of collateral, of which \$3.1 million is included in Restricted Cash on the Condensed Consolidated Balance Sheet and \$0.4 million is included in Cash and Cash Equivalents since it was above the required amount.

The Company is currently selling power in the wholesale market pursuant to contracts with third parties, and is required to post collateral under certain conditions defined in the contracts. As of March 31, 2007, the Company had posted \$2.3 million included in Special Deposits on the Condensed Consolidated Balance Sheet.

The Company is subject to performance assurance for power purchase and sale transactions through ISO-New York. Activity in this market has been limited. At March 31, 2007, the Company had posted \$0.1 million of collateral, which is included in Restricted Cash on the Condensed Consolidated Balance sheet.

The Company is also subject to performance assurance requirements under its Vermont Yankee power purchase contract (the 2001 Amendatory Agreement). If ENVY, the seller, has commercially reasonable grounds to question the Company's ability to pay for its monthly power purchases, ENVY may ask VYNPC and VYNPC may then ask the Company to provide adequate financial assurance of payment. The Company has not had to post collateral under this contract.

Environmental Over the years, more than 100 companies have merged into or been acquired by the Company. At least two of those companies used coal to produce gas for retail sale. This practice ended more than 50 years ago. Gas manufacturers, their predecessors and the Company used waste disposal methods that were legal and acceptable then, but may not meet modern environmental standards and could represent a liability. Some operations and activities are inspected and supervised by federal and state authorities, including the Environmental Protection Agency. The Company believes that it is in compliance with all laws and regulations and has implemented procedures and controls to assess and assure compliance. Corrective action is taken when necessary. Below is a brief summary of known material sites included in the Company's environmental reserve.

Cleveland Avenue Property: The Cleveland Avenue property in Rutland, Vermont, was used by a predecessor to make gas from coal. Later, the Company sited various operations there. Due to the existence of coal tar deposits, polychlorinated biphenyl contamination and the potential for off-site migration, the Company conducted studies in the late 1980s and early 1990s to quantify the potential costs to remediate the site. Investigation at the site has continued, including work with the State of Vermont to develop a mutually acceptable solution. In 2006, the Company updated its cost estimate of remediation for this site. The Company's liability for site remediation is expected to range from \$2.3 million to \$0.9 million. As of March 31, 2007, the Company has accrued \$1.5 million representing the most likely cost of the remediation effort.

Brattleboro Manufactured Gas Facility: In the 1940s, the Company owned and operated a manufactured gas facility in Brattleboro, Vermont. The Company ordered a site assessment in 1999 at the request of the State of New Hampshire. In 2001, New Hampshire indicated that no further action was required, though it reserved the right to require further investigation or remedial measures. In 2002, the Vermont Agency of Natural Resources notified the Company that its corrective action plan for the site was approved. That plan is now in place. In 2006, the Company updated the cost estimate of remediation for this site. The Company's liability for site remediation is expected to range from \$1.3 million to \$0.1 million. As of March 31, 2007, the Company has accrued \$0.6 million representing the most likely cost of the remediation effort.

Dover, New Hampshire, Manufactured Gas Facility: In 1999, Public Service Company of New Hampshire ("PSNH") contacted the Company about this site. PSNH alleged that the Company was partially liable for cleanup, since the site was previously operated by Twin State Gas and Electric, which merged into the Company on the same day that PSNH bought the facility. In 2002, the Company reached a settlement with PSNH in which certain liabilities it might have had were assigned to PSNH in return for a cash settlement paid by the Company based on completion of PSNH's cleanup effort. The Company's remaining obligation is less than \$0.1 million.

The reserve for environmental matters described above amounted to about \$2.1 million as of March 31, 2007 and December 31, 2006. The current and long-term portions are included as liabilities on the Condensed Consolidated Balance Sheets. The reserve represents management's best estimate of the cost to remedy issues at these sites based on available information as of the end of the reporting period. To the Company's knowledge, there is no pending or threatened litigation regarding other sites with the potential to cause material expense. No government agency has sought funds from the Company for any other study or remediation.

The revised cost estimates for the Cleveland Avenue and Brattleboro sites resulted in a \$3.2 million reduction in environmental reserves in the third quarter of 2006. At that time, the Company and DPS reached an agreement that a portion of the reduction in estimated remediation costs should be attributed to ratepayers, and that the Company should file an Accounting Order request with the PSB for approval of such treatment. The ratepayer portion, \$1.6 million, is included in Other Deferred Credits - Regulatory on the Condensed Consolidated Balance Sheets. The PSB approved the Company's Accounting Order request in April 2007.

Catamount Indemnifications Under the terms of the agreements with Catamount and Diamond Castle, the Company agreed to indemnify them, and certain of their respective affiliates, in respect of a breach of certain representations and warranties and covenants, most of which survive until June 30, 2007, except certain items that customarily survive indefinitely. Indemnification is subject to a \$1.5 million deductible and a \$15.0 million cap, excluding certain customary items. Environmental representations are subject to the deductible and the cap, and such environmental representations for only two of Catamount's underlying energy projects survive beyond June 30, 2007. The Company has not recorded any liability related to these indemnifications.

Legal Proceedings The Company is involved in legal and administrative proceedings in the normal course of business and does not believe that the ultimate outcome of these proceedings will have a material adverse effect on its financial position or results of operations.

NOTE 7 - SEGMENT REPORTING

The Company's primary operating segment is Central Vermont Public Service Corporation ("CV-VT"), which engages in the purchase, production, transmission, distribution and sale of electricity in Vermont. Unregulated Companies are below the quantitative thresholds individually and in the aggregate; therefore, prior year amounts in the table below have been revised to conform to current year presentation. Inter-segment revenues were nominal in both periods.

(in thousands)				
	CV-VT	Unregulated Companies	Reclassification & Consolidating Entries	Consolidated
March 31, 2007				
Revenues from external customers	\$86,696	\$435	\$(435)	\$86,696
Equity in earnings of affiliates	\$1,702	\$-	\$-	\$1,702
Net income	\$5,478	\$228	\$-	\$5,706
Total assets at March 31, 2007	\$504,644	\$2,613	\$(348)	\$506,909
March 31, 2006				
Revenues from external customers	\$82,255	\$450	\$(450)	\$82,255
Equity in earnings of affiliates	\$517	\$-	\$-	\$517
Net income	\$3,652	\$445	\$-	\$4,097
Total assets at December 31, 2006	\$499,125	\$2,314	\$(501)	\$500,938

NOTE 8 - SUBSEQUENT EVENT

The Millstone Unit #3 nuclear plant has been offline since April 7, 2007 for a planned refueling outage. On April 23, 2007, DNC announced that it had discovered indications of cracking in the first stage of the high-pressure turbine. DNC is currently evaluating options ranging from replacing the turbine to continued use in its current condition. The Company cannot predict the outcome of this matter at this time.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

In this section we discuss the general financial condition and results of operations for Central Vermont Public Service Corporation (the "Company" or "we" or "our" or "us") and its subsidiaries. Certain factors that may impact future operations are also discussed. Our discussion and analysis is based on, and should be read in conjunction with, the accompanying Condensed Consolidated Financial Statements.

Forward-looking statements Statements contained in this report that are not historical fact are forward-looking statements within the meaning of the 'safe-harbor' provisions of the Private Securities Litigation Reform Act of 1995. Whenever used in this report, the words "estimate," "expect," "believe," or similar expressions are intended to identify such forward-looking statements. Forward-looking statements involve estimates, assumptions, risks and uncertainties that could cause actual results or outcomes to differ materially from those expressed in the forward-looking statements. Actual results will depend upon, among other things:

- the actions of regulatory bodies;
- performance and continued operation of the Vermont Yankee nuclear power plant;
- effects of and changes in weather and economic conditions;
- volatility in wholesale power markets;
- ability to maintain or improve our current credit ratings; and
- other considerations such as the operations of ISO-New England, changes in the cost or availability of capital, authoritative accounting guidance and the effect of the volatility in the equity markets on pension benefit and other costs.

We cannot predict the outcome of any of these matters; accordingly, there can be no assurance as to actual results. We undertake no obligation to publicly update any forward-looking statements, whether as a result of new information, future events or otherwise.

EXECUTIVE SUMMARY

Our core business is the Vermont electric utility business. We typically generate most of our earnings through retail electricity sales. We also sell excess power, if any, to third parties in New England and to ISO-New England. The resale revenue generated from these sales helps to mitigate our power supply costs which comprise almost 60 percent of our annual operating expenses. The rates we charge for retail electricity sales are regulated by the Vermont Public Service Board ("PSB"). Fair regulatory treatment is fundamental to maintaining our financial stability. Rates must be set at levels to recover costs, including a market rate of return to equity and debt holders, in order to attract capital.

Our consolidated earnings for the first quarter of 2007 were \$5.7 million, or 55 cents per diluted share of common stock, compared to first quarter 2006 consolidated earnings of \$4.1 million, or 32 cents per diluted share of common stock. The primary drivers of the first quarter year-over-year earnings variance are described in Results of Operations below.

As part of our ongoing effort to restore our corporate credit rating to investment-grade status, we are continuing to focus on the following strategic financial initiatives:

- (a) Ensuring that our retail rates are set at levels to recover our costs of service. As such we are planning to request a rate increase in May 2007, and are continuing to assess opportunities for alternative regulation. See Retail Rates below.
- (b) Evaluating financing options so that we can continue to invest in Vermont Transco LLC ("Transco"), which was formed in June 2006 by Vermont Electric Power Company Inc. ("VELCO") and its owners, including us, for construction, maintenance and operation of transmission facilities in Vermont. See Liquidity and Capital Resources.
- (c) Planning for replacement power when our long-term power contracts with Vermont Yankee Nuclear Power Corporation ("VYNPC") and Hydro-Quebec expire. See Power Supply Matters below.

In April 2007, we experienced the worst storm in our 77-year history. At the peak, more than one-third of our customers lost power, and many customers remained without power for two or more days. Our current estimate of storm-related costs ranges from \$3.0 million to \$4.0 million however we are still analyzing those costs and cannot yet determine the impact it will have on our second quarter results of operations.

What follows is a discussion of our results of operations and certain business risks including cash flow risks, regulatory risks and power supply risks.

RETAIL RATES

On December 7, 2006, the PSB issued an Order ("2006 Rate Order") approving a 4.07 percent rate increase effective January 1, 2007. The 2006 Rate Order provided, among other things, an allowed rate of return on common equity of 10.75 percent capped until our next rate proceeding. The rate increase, net of amounts to be returned to customers as described below, will add revenue of approximately \$9.9 million annually.

On January 12, 2007, the PSB issued an Order denying our Accounting Order request for recovery of \$1.5 million of incremental replacement power costs associated with a 2005 Vermont Yankee refueling outage. The 2006 Rate Order requires us to record a regulatory asset or liability for any difference between the replacement power cost amortization included in the 4.07 percent rate increase and the amount approved by the PSB. Therefore, we are deferring (beginning January 1, 2007) the \$1.5 million of revenue over two years and will continue such deferral until our next rate proceeding, at which time the total amount deferred will be returned to customers. See discussion of Operating Revenues below.

During the first quarter of 2007, we began preparing an analysis of costs of service to determine if a rate increase request is warranted. In mid-May 2007, we expect to file with the PSB a request for a rate increase below 5 percent to take effect in 2008. We have also been analyzing alternative regulation plans that have been approved by the PSB for Green Mountain Power and Vermont Gas Systems. If we conclude that an acceptable alternative regulation plan is feasible, we may file a petition asking the PSB for approval of our plan. Such a filing could occur in the second quarter of 2007.

On April 25, 2007, the PSB approved the rate design agreement that we had previously reached with the DPS. The rate design will result in a modest reallocation of revenue by customer class with greater emphasis on energy charges in reaction to wholesale market energy costs. The rate design agreement includes a comprehensive study of the need for new service offerings and further rate redesign given certain fundamental changes in how costs are incurred to serve load based on availability of advanced metering and communications and structural changes in the New England wholesale power market. The study is due to the PSB in April 2008. Based on the PSB approval of the agreement, the rate design will become effective for bills rendered on or after July 1, 2007.

LIQUIDITY AND CAPITAL RESOURCES

Liquidity At March 31, 2007, we had cash and cash equivalents of \$8.8 million included in total working capital of \$13.9 million. At March 31, 2006, we had cash and cash equivalents of \$17.9 million included in total working capital of \$84.0 million. The primary components of cash flows from operating, investing and financing activities for both periods are discussed in more detail below.

Operating Activities: Operating activities provided \$13.2 million in the first quarter of 2007. Net income, when adjusted for depreciation, amortization, deferred income tax and other non-cash income and expense items, provided \$11.5 million. Special deposits and restricted cash used to meet performance assurance requirements for certain power contracts increased by \$1.9 million because a \$4.5 million letter of credit for purchased power performance assurance was replaced with cash collateral. Changes in working capital and other items provided \$3.6 million.

During the first quarter of 2006, operating activities provided \$6.2 million. Net income, when adjusted for depreciation, amortization, deferred income tax and other items provided \$10.3 million. Collateral requirements under power contracts decreased by \$11.9 million. This was partially offset by a \$12.2 million pension trust fund contribution, \$4.1 million in postretirement trust fund contributions, \$0.5 million in postretirement medical out-of-pocket payments net of contributions received from plan participants and \$0.8 million in working capital and other items.

Investing Activities: Investing activities used \$5.2 million in the first quarter of 2007, including \$5.0 million for construction and plant expenditures and \$0.2 million for other investments. During 2006, investing activities provided \$8.4 million, including \$13.4 million in proceeds from net sales and maturities of available-for-sale securities, partially offset by \$5.0 million of construction and plant expenditures.

Financing Activities: Financing activities used \$2.0 million in the first quarter of 2007, including \$2.4 million for dividends paid on common and preferred stock, \$1.0 million for preferred stock sinking fund payments, and \$0.2 million for capital lease payments. These items were partially offset by \$0.6 million from stock option exercises and a \$1.0 million reduction in restricted cash for preferred stock sinking fund payments.

During 2006, financing activities used \$3.3 million, including \$3.0 million for dividends paid on common and preferred stock, \$0.3 million for capital lease payments and \$0.3 million for costs related to a common stock buyback that concluded in April 2006, partially offset by \$0.2 million from stock option exercises and \$0.1 million of other items.

Transco: Based on current projections, Transco expects to need additional capital over the 2007 to 2010 timeframe, but its projections are subject to change based on a number of factors, including revised construction project estimates, timing of regulatory project approvals, and changes in its equity-to-debt ratio. While we have no obligation to invest in Transco's future projects, we will evaluate investment opportunities on a case-by-case basis and currently intend to make additional investments in the third quarter of 2007 subject to available capital and appropriate approvals.

Cash Flow Risks: We believe that cash on hand, cash flow from operations and our \$25.0 million credit facility will be sufficient to fund our business. Based on our current cash forecasts, we believe the borrowing capacity under the credit facility will provide sufficient liquidity through the end of 2008, and possibly longer. However, an extended Vermont Yankee plant outage or similar event could significantly impact our liquidity due to the potentially high cost of replacement power and performance assurance requirements arising from purchases through ISO-New England or third parties. In the event of an extended Vermont Yankee plant outage, we could seek emergency rate relief from our regulators. Other material risks to cash flow from operations include: loss of retail sales revenue from unusual weather; slower-than-anticipated load growth and unfavorable economic conditions; increases in net power costs largely due to lower-than-anticipated margins on sales revenue from excess power or an unexpected power source interruption; required prepayments for power purchases; and increases in performance assurance requirements.

Financing We have a three-year \$25.0 million unsecured revolving-credit facility with a lending institution pursuant to a Credit Agreement dated October 21, 2005. We expect to make periodic short-term borrowings under the revolving credit facility to manage our working capital requirements. At March 31, 2007, no amounts were outstanding under this facility. In February 2007, we cancelled a \$4.5 million letter of credit that had been issued under this facility to support certain power-related performance assurance requirements.

At March 31, 2007, we were in compliance with all financial and non-financial covenants related to our various debt agreements, articles of association, letters of credit and credit facility.

Performance Assurance At March 31, 2007, we had posted \$5.9 million of collateral under performance assurance requirements for certain of our power contracts. We are subject to performance assurance requirements for power purchase and sale transactions through ISO-New England under the Financial Assurance Policy for NEPOOL members. Our credit limit with ISO-New England is zero and we are required to post collateral for all net purchase transactions. We are subject to performance assurance requirements for power purchase and sale transactions through ISO-New York, but activity in this market has been limited. Additionally, we are currently selling power in the wholesale market pursuant to contracts with third parties, and are required to post collateral under certain conditions defined in the contracts.

We are also subject to performance assurance requirements under our Vermont Yankee power purchase contract (the 2001 Amendatory Agreement). If Entergy Nuclear Vermont Yankee, LLC ("ENVY"), the seller, has commercially reasonable grounds to question our ability to pay for monthly power purchases, ENVY may ask VYNPC and VYNPC may then ask us to provide adequate financial assurance of payment. We have not had to post collateral under this contract.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Our financial statements are prepared in accordance with generally accepted accounting principles in the United States ("GAAP"), requiring us to make estimates and judgments that affect reported amounts of assets and liabilities, revenues and expenses, and related disclosure of contingent assets and liabilities at the date of the Condensed Consolidated Financial Statements. Our critical accounting policies and estimates are described in Management's Discussion and Analysis of Financial Condition and Results of Operations in our 2006 Annual Report on Form 10-K. The following is an update.

Regulatory Accounting We prepare our financial statements in accordance with SFAS No. 71, *Accounting for the Effects of Certain Types of Regulation* ("SFAS No. 71") for our regulated business. The application of SFAS No. 71 results in differences in the timing and recognition of certain revenues and expenses from those of other businesses and industries. We continuously review regulatory assets and other deferred charges to assess ultimate recoverability through retail rates. Based on a current evaluation of the factors and conditions expected to impact future cost recovery, we believe future recovery of regulatory assets is probable. In the event that we determine our regulated operations no longer meet the criteria under SFAS No. 71 and there is not a rate mechanism to recover these costs, we would be required to write off, as an extraordinary charge to operations, net regulatory assets of \$20.6 million on a pre-tax basis as of March 31, 2007. We would also be required to record pension and postretirement medical benefit costs of \$31.1 million on a pre-tax basis to Accumulated Other

Comprehensive Loss as a reduction in stockholder's equity, and would be required to determine any potential impairment to the carrying costs of deregulated plant. Risks associated with recovery of regulatory assets relate to potentially adverse legislation, and judicial or regulatory actions in the future.

Derivative Financial Instruments During the first quarter of 2007, we entered into three additional short-term power sale contracts that are derivatives. At the end of 2006, we also had power contract derivatives including: 1) one long-term purchased power contract that allows the seller to repurchase specified amounts of power with advance notice (Hydro-Quebec Sellback #3); 2) one long-term forward sale contract; and 3) one short-term forward purchase contract. The estimated fair values of power contract derivatives are based on over-the-counter quotations or broker quotes at the end of the reporting period, except for Hydro-Quebec Sellback #3, which is valued using a binomial tree model and quoted market data when available, along with appropriate valuation methodologies.

At March 31, 2007, the estimated fair value of five of the six power contract derivatives was an unrealized loss of \$9.4 million and the estimated value of the remaining one contract was an unrealized gain of \$0.1 million. At December 31, 2006, the estimated fair value of power contract derivatives was an unrealized loss of \$8.0 million. Based on a PSB-approved Accounting Order, we record the change in fair value of power contract derivatives as deferred charges or deferred credits on the balance sheet, depending on whether the fair value is an unrealized loss or gain. The corresponding offsets are recorded as current and long-term assets or liabilities depending on the duration.

Income Taxes In June 2006, the FASB issued Interpretation No. 48, *Accounting for Uncertainty in Income Taxes - an Interpretation of FASB Statement No. 109* ("FIN 48"). FIN 48 clarifies the methodology to be used in estimating and reporting amounts associated with uncertain tax positions, including interest and penalties. We adopted FIN 48 on January 1, 2007 as required, and it did not have a material impact on our results of operations or statement of financial position. However, the application of income tax law is complex and we are required to make many subjective assumptions and judgments regarding our income tax exposures. Changes in our subjective assumptions and judgments can materially affect amounts recognized on the income statement and balance sheet.

RESULTS OF OPERATIONS

The following is a detailed discussion of the results of operations for the first quarter of 2007 and should be read in conjunction with the condensed consolidated financial statements and accompanying notes included in this report.

Our first quarter 2007 earnings increased by \$1.6 million, or 23 cents per diluted share of common stock, compared to the same period in 2006. The table below provides a reconciliation of the primary year-over-year variances in diluted earnings per share.

2006 Earnings per diluted share	\$.32
Year-over-Year Effects on Earnings:	
Higher retail revenues - volume	.18
Higher retail revenues - 4.07 percent rate increase Jan. 1, 2007	.14
Higher equity in earnings - Transco	.09
Higher operating and other costs	(.16)
Lower resale sales	(.09)
Lower Catamount Resources Corporation earnings	(.02)
Impact of 2006 stock buyback (a)	<u>.09</u>
2007 Earnings per diluted share	<u><u>\$.55</u></u>

(a) Reflects the impact of an April 2006 common stock buyback that decreased common shares outstanding by about 18 percent.

Operating Revenues Operating revenues and related mWh sales are summarized below.

	Revenue (in thousands)		mWh Sales	
	2007	2006	2007	2006
Residential	\$37,705	\$33,674	287,588	266,945
Commercial	27,148	25,003	224,672	216,659
Industrial	10,238	9,701	118,378	114,820
Other	450	436	1,537	1,510
Total retail sales	<u>75,541</u>	<u>68,814</u>	<u>632,175</u>	<u>599,934</u>
Resale sales	9,607	11,538	174,983	214,815
Provision for rate refund	(187)	-	-	-
Other operating revenues	1,735	1,903	-	-
Total operating revenues	<u>\$86,696</u>	<u>\$82,255</u>	<u>\$807,158</u>	<u>\$814,749</u>

The \$4.4 million increase in 2007 compared to 2006 resulted from the following:

- Retail sales increased \$6.7 million including \$3.7 million resulting from higher sales volume largely due to colder winter weather in 2007 and a 3.5 percent increase in retail and commercial customers compared to the same period in 2006, and \$3.0 million resulting from a 4.07 percent retail rate increase as of January 1, 2007. The increase in retail and commercial customers primarily resulted from small service territory acquisitions in the last half of 2006.
- Resale sales decreased \$1.9 million resulting from less excess power available for resale in 2007 compared to the same period in 2006. The decrease in power available for resale primarily resulted from the increased volume of retail sales and lower output from Independent Power Producers and our owned hydro facilities.
- The provision for rate refund decreased revenue by \$0.2 million in 2007. This is related to amounts included in the 4.07 percent rate increase to be refunded to customers because the PSB disallowed our request to recover \$1.5 million of Vermont Yankee 2005 incremental refueling costs.
- Other operating revenues decreased \$0.2 million resulting from decreased transmission revenue and third-party billings.

Purchased Power Purchased power expense and related mWh purchases are summarized below.

	Purchases (in thousands)		mWh Purchases	
	2007	2006	2007	2006
VYNPC (a)	\$15,955	\$15,908	386,996	392,485
Hydro-Quebec	16,733	16,232	267,542	255,515
Independent Power Producers ("IPPs")	<u>6,186</u>	<u>6,683</u>	<u>44,644</u>	<u>50,694</u>
Subtotal long-term contracts	38,874	38,823	699,182	698,694
Other purchases	2,769	2,473	31,717	25,375
SFAS No. 5 loss amortizations	(299)	(299)	-	-
Maine Yankee, Connecticut Yankee and Yankee Atomic	684	1,365	-	-
Other	232	126	-	-
Total purchased power	<u>\$42,260</u>	<u>\$42,488</u>	<u>730,899</u>	<u>724,069</u>

(a) For 2007 and 2006 includes \$0.5 million for our share of nuclear insurance settlements that we defer per a PSB Order.

The \$0.2 million decrease in 2007 compared to 2006 resulted from the following:

- Purchased power costs under long-term contracts increased \$0.1 million resulting from higher VYNPC rates and more scheduled deliveries from Hydro-Quebec at times of higher market prices, partially offset by lower output from IPPs, the majority of which are hydro facilities.
- Power costs associated with our ownership interests in Maine Yankee, Connecticut Yankee and Yankee Atomic decreased \$0.7 million resulting from lower rates under FERC-approved settlements.
- Other purchases and other power costs increased \$0.4 million primarily due to increased market prices for short-term purchases.

Operating Expenses Excluding purchased power expense described above, operating expenses increased \$3.2 million in 2007 compared to 2006. The variances in income statement line items that comprise operating expenses on the Condensed Consolidated Statements of Income are described below.

Production: Production operation costs increased \$0.3 million resulting from premium expense for Vermont Yankee outage insurance (\$1.5 million amortized over 12-months beginning January 1, 2007) and higher fuel costs due to increased output from one of our jointly owned units.

Transmission - affiliates: These expenses represent our share of the net cost of service of Transco (previously provided by VELCO) as well as some direct charges for facilities that we rent. Transco allocates its monthly cost of service through the Vermont Transmission Agreement ("VTA"), net of NEPOOL Open Access Transmission Tariff ("NOATT") reimbursements and certain direct charges. The NOATT is the mechanism through which the costs of New England's high-voltage (so-called PTF) transmission facilities are collected from load-serving entities using the system and redistributed to the owners of the facilities, including Transco. These expenses increased \$0.2 million due to higher charges under the VTA.

Transmission - other: The majority of these expenses are for purchases of regional transmission service under the NOATT and charges for the Phase I and II transmission facilities. These expenses increased \$0.7 million primarily from higher rates and overall transmission expansion in New England, partially offset by lower depreciation expense because the Phase I facility was fully depreciated in 2006.

Other operation: Other operation expenses increased \$1.2 million resulting from 1) higher bad debt expense related to a customer bankruptcy and, in 2006, recovery of a previous charge-off; 2) higher incentive compensation accruals and 3) higher other costs. These were partially offset by lower pension and postretirement medical costs primarily due to additional contributions to the funds in March 2006, and lower external audit fees.

Income tax expense (benefit): Federal and state income taxes fluctuate with the level of pre-tax earnings in relation to permanent differences, tax credits, tax settlements and changes in valuation allowances for the periods. The effective combined federal and state income tax rate was 37.08 percent for the first quarter of 2007 and 34.59 percent for 2006.

Other Income and Other Deductions These items are related to the non-operating activities of our utility business and the operating and non-operating activities of our non-regulated businesses through Catamount Energy Resources. Its earnings were \$0.2 million in the first quarter of 2007 compared to \$0.4 million in 2006. The variances in income statement line items that comprise other income and other deductions on the Condensed Consolidated Statements of Income are described below.

Equity in earnings: Equity in earnings increased \$1.2 million principally from our investment in Transco.

Other income: Other income decreased \$1.1 million primarily resulting from two favorable items in 2006 including interest earned on cash proceeds from CRC's December 2005 sale of Catamount Energy Corporation, and a gain on the sale of non-utility property. There were no comparable items in 2007.

Other Deductions: Other deductions decreased \$0.1 million but there were no significant individual variances.

Benefit (provision) for income taxes: Federal and state income taxes fluctuate with the level of pre-tax earnings in relation to permanent differences, tax credits, tax settlements and changes in valuation allowances for the periods.

POWER SUPPLY AND TRANSMISSION MATTERS

Power Supply Risks Our material power supply contracts are with Hydro-Quebec and VYNPC. These contracts comprise the majority of our total annual energy (mWh) purchases. The contract for power purchases from VYNPC ends in 2012, and deliveries under the contract with Hydro-Quebec end in 2016 with the level of deliveries decreasing starting in 2012. These contracts are described in Note 6 - Commitments and Contingencies.

In January 2006, ENVY submitted a renewal application with the NRC for a 20-year extension of the Vermont Yankee plant operating license. ENVY will also need approval by the PSB to continue to operate beyond 2012. At this time, ENVY has not received approvals for the license extension, but in April 2007 it initiated a 30-day exclusive negotiation period required by the original 2002 Vermont Yankee Memorandum of Understanding with the State of Vermont, for potential power purchases by the VYNPC sponsor companies, including us, in the plant's post-March 2012 life extension period. We are participating in this negotiation process and cannot determine the outcome at this time.

There may also be opportunities to negotiate with Hydro-Quebec for future power purchase contracts, and preliminary discussions have begun.

There is a risk that future sources available to replace these contracts may not be as reliable and may reflect different environmental impacts. Also, the price of such replacement power could be significantly higher than under the current contracts.

There is also a risk that the Vermont Yankee plant could be shut down earlier than expected if ENVY determines that it is not economical to continue operating the plant. Based on our projected market prices at March 31, 2007, the incremental cost of replacement power, including capacity, is estimated to average \$52 million annually. Under this scenario, a retail rate increase of approximately 19 percent would be needed for full cost recovery. We are not able to predict whether there will be an early shutdown of the Vermont Yankee plant or whether the PSB will allow timely and full recovery of increased costs related to any such shutdown. However, an early shutdown could materially impact our financial position and future results of operations if the costs are not recovered in retail rates in a timely fashion.

Power Supply Management In the first quarter of 2007, we entered into three separate forward sale contracts for deliveries totaling between 30 and 50 MW of energy from July through December 2007, due to excess energy forecasted during this period. These forward sale contracts are not contingent on the availability of our existing power supply resources, thus potentially exposing us to the risk of market price volatility if we are not able to source the contracts with existing resources. However, our main supply risk is with Vermont Yankee, and we have outage insurance through December 2007 that mitigates this market price risk.

The insurance coverage applies to unplanned Vermont Yankee plant outages of up to 30 consecutive calendar days per outage event, and provides for payment to us of the difference between the spot market price and \$40/mWh. The total maximum coverage is \$10.0 million, with a \$1.0 million total deductible. In 2006, we paid a \$1.3 million premium for this insurance coverage, which is being expensed in 2007 on a monthly basis. There were no claims under this insurance contract in the first quarter of 2007.

We have been delivering power under a forward sale contract that we entered into in December 2006 for deliveries between 30 and 50 MW from January 1 through June 30, 2007, except during the scheduled Vermont Yankee refueling outage. Delivery under this contract is contingent on Vermont Yankee plant output, eliminating the risks related to sourcing the sale if Vermont Yankee is not operating. In December 2006, we also entered into a contract for the purchase of 100 MW each hour from May 12 to June 6, 2007 for replacement energy during the Vermont Yankee refueling outage scheduled for that time period.

Some of the forward power contracts that we enter into are derivatives and therefore the fair value is recorded on the balance sheet. Based on PSB-approved regulatory accounting treatment, changes in the fair value are not included on our income statement. Also see Item 3 - Quantitative and Qualitative Disclosures about Market Risk.

Millstone Unit #3 We have a 1.73 joint-ownership percentage in Millstone Unit # 3. Dominion Nuclear Corporation ("DNC") is the lead owner with about 93.47 percent of the plant joint-ownership. The plant has been offline since April 7, 2007 for a planned refueling outage. On April 23, 2007, DNC announced that it had discovered indications of cracking in the first stage of the high-pressure turbine. DNC is currently evaluating options ranging from replacing the turbine to continued use in its current condition. We cannot predict the outcome of this matter at this time.

In January 2004, DNC filed, on behalf of itself and the two minority owners, including us, a lawsuit against the Department of Energy ("DOE") seeking recovery of costs related to storage of spent nuclear fuel arising from the failure of the DOE to comply with its obligations to commence accepting such fuel in 1998. A trial is expected to be held in August 2008. We continue to pay our share of the DOE Spent Fuel assessment expenses levied on actual generation and will share in recovery from the lawsuit, if any, in proportion to our ownership interest.

Maine Yankee, Connecticut Yankee and Yankee Atomic We own, through equity investments, 2 percent of Maine Yankee, 2 percent of Connecticut Yankee and 3.5 percent of Yankee Atomic. All of these nuclear plants have been permanently shut down and have completed or are nearing completion of decommissioning. We are responsible for paying our equity ownership percentage of decommissioning costs and all other costs for these plants. As of March 31, 2007, based on the most recent estimates provided, our share of remaining costs is \$3.1 million for Maine Yankee, \$7.9 million for Connecticut Yankee and \$3.3 million for Yankee Atomic. These amounts are recorded as nuclear decommissioning liabilities (current and non-current) on the balance sheet with a corresponding regulatory asset. We adjust associated regulatory assets and nuclear decommissioning liabilities when revised estimates are provided.

All three companies are involved in litigation with the DOE regarding storage of spent nuclear fuel. On September 30, 2006, the United States Court of Federal Claims ("Court") issued a judgment in the spent fuel litigation and awarded damages to all three companies. On December 4, 2006, the DOE filed a notice of appeal in all three cases, and on December 14, 2006, all three companies filed notices of cross appeals. In the first quarter of 2007, the Court issued an order consolidating the three

cases, and issued an order making another case a companion appeal to the case, which will result in both appeals being heard consecutively. The briefing schedule for both cases extends to early July 2007.

Due to the complexity of the issues and the appeals, the three companies cannot predict the amount of damages that will actually be received or the timing of the final determination of such damages. Each of their respective FERC settlements require that damage payments, net of taxes and net of further spent fuel trust funding, be credited to ratepayers including us. We expect that our share of these payments, if any, would be credited to our ratepayers as well. Also see Note 3 - Investments in Affiliates for additional information regarding the DOE litigation.

New England Wholesale Energy Markets In December 2006, ISO-New England implemented a new market mechanism referred to as the Forward Capacity Market ("FCM") to compensate owners of new and existing generation capacity, including demand reduction. ISO-New England believes that higher capacity payments in constrained areas will encourage the development of new generation where needed. Capacity requirements for load serving entities, such as us, are based on each entity's proportionate share of ISO-New England's prior year coincident peak demand. Based on current projections, we expect the FCM rules will result in an annual capacity deficiency of about 30 MW. At this time, we cannot quantify the potential impact of these deficiencies.

We continue to monitor potential changes to the rules in the wholesale energy markets in New England. Such changes could have a material impact on power supply costs. For example, we receive capacity credits from ISO-New England for our share of Phase I/II transmission facility rights. These credits amount to about \$1.5 million annually and are reflected as a credit to power supply costs. There are risks that future changes in the market rules in ISO-New England could reduce or eliminate those credits.

Transmission As a load serving entity, we are required to share the costs related to the region's high voltage transmission system through payments made under NOATT. Our allocation of NOATT costs, based on our percentage of network load, is a small fraction of New England's obligation. While this regional cost-sharing approach reduces our costs related to qualifying Vermont transmission upgrades, we pay a share of the costs for new and existing NOATT-qualifying facilities located elsewhere in New England.

There are a number of major transmission projects in Vermont being undertaken by Transco, some of which are already in service. Many of these projects, including most of the so-called Northwest Reliability Project, have been approved by NEPOOL for NOATT cost sharing treatment. However, certain future Vermont transmission facilities may not qualify for such cost sharing, and those costs will be charged locally (within Vermont) rather than regionally. Our share of such costs will be determined by the classification of each project; some will be charged directly to specific utilities and some will be shared by all Vermont utilities.

In March 2007, we entered into an agreement for the sale of transmission capacity from April through December 2007 to a third party. Under the agreement, we are selling certain amounts of our share of Phase I/II transmission facility rights, but we have the ability to restrict the amount of capacity assigned to the purchaser based on certain conditions. We expect this sale to add about \$1.3 million to transmission revenue in 2007.

RECENT ENERGY POLICY INITIATIVES

The State of Vermont continues to examine changes to the provision of electric service absent introduction of retail choice. Several laws have been passed since 2005 that impact electric utilities in Vermont. These include: 1) Act 61 - Renewable Energy, Efficiency, Transmission, and Vermont's Energy Future; 2) Act 208 - Vermont Energy Security and Reliability Act; and 3) Act 123 - Regional Greenhouse Gas Initiative. While provisions of recently passed laws are now being implemented, the 2007 Legislature continues to deliberate new policies designed to reduce electricity consumption, promote renewable energy and reduce greenhouse gas emissions. The major provisions of the new laws that could affect our business are described in our 2006 Annual Report on Form 10-K. There were no significant changes during the first quarter of 2007, except as described in Retail Rates above.

RECENT ACCOUNTING PRONOUNCEMENTS

See Note 1 - Summary of Significant Accounting Policies in the accompanying Condensed Consolidated Financial Statements.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Fair and adequate rate relief through cost-based rate regulation can limit our exposure to market volatility. Except as discussed below, there were no material changes from the disclosures in our Annual Report on Form 10-K for the year ended December 31, 2006.

At March 31, 2007, we had five power contract derivatives with a total estimated fair value of an unrealized loss of \$9.4 million, and one with an estimated fair value of an unrealized gain of \$0.1 million. Based on PSB-approved regulatory accounting treatment, changes in the fair value of derivatives are recorded on the balance sheet and do not impact our income statement. Summary information related to the fair value of these derivatives is shown in the table below (in thousands):

	<u>Forward Sale</u> <u>Contracts</u>	<u>Forward Purchase</u> <u>Contract</u>	<u>Hydro-Quebec</u> <u>Sellback #3</u>
Fair value at December 31, 2006 - unrealized loss	\$(3,962)	\$(304)	\$(3,731)
Change in fair value, including amounts settled	(1,446)	454	
Fair value of new derivatives in the first quarter of 2007	(422)	-	144
Fair value at March 31, 2007 - unrealized (loss) gain	<u>\$(5,830)</u>	<u>\$150</u>	<u>\$(3,587)</u>
Source	Over-the-counter- quotations	Over-the-counter- quotations	Quoted market data & valuation methodologies
Estimated fair value for changes in projected market price:			
10 percent increase	\$(8,234)	\$567	\$(7,233)
10 percent decrease	\$(3,427)	\$(266)	\$(1,326)

Item 4. Controls and Procedures

Evaluation of Disclosure Controls and Procedures As of March 31, 2007, our management, with participation from the Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of our disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934). Based on that evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that our disclosure controls and procedures are effective.

Changes in Internal Control over Financial Reporting

There were no changes in our internal control over financial reporting during the first quarter of 2007 that have materially affected or are reasonably likely to materially affect our internal control over financial reporting.

PART II - OTHER INFORMATION

Item 1. Legal Proceedings.

The Company is involved in legal and administrative proceedings in the normal course of business and does not believe that the ultimate outcome of these proceedings will have a material adverse effect on its financial position or results of operations.

Item 1A. Risk Factors.

In addition to the other information set forth in this report, you should carefully consider the factors discussed in Part I "Item 1A. Risk Factors", in our Annual Report on Form 10-K for the year ended December 31, 2006, which could materially affect our business, financial condition or future results. The risks described in our Annual Report on Form 10-K are not the only risks facing our Company. Additional risks and uncertainties not currently known to us or that we currently deem to be immaterial also may materially adversely affect our business, financial condition and/or operating results.
