0:05
my wife had cancer
0:07
so we decided to get cannabis from the
0:09
street
0:10
and we never knew what was in it well i
0:13
have a chemistry background some
0:14
chemical engineering background having
0:16
to also be a medical doctor and
0:19
neurosurgeon what don't we see about
0:22
getting it starting a testing laboratory
0:24
for cannabis and that kind of got things
0:27
going we decided to call it hummingbird
0:29
labs because we had a lot of
0:30
hummingbirds in our backyard lab testing
0:33
in the marijuana industry is mandatory
0:36
in the state of michigan and we thought
0:38
that a lab would be
0:40
the most sustainable model
0:43
versus the
0:44
secure transport and also versus the
0:47
processors we like to emphasize

0:50
how
0:51
important it is to keep the marijuana
0:55
that they're consuming
0:56
free of contaminants
0:59
free of heavy metals
1:01
free of pesticides
1:04
and the only way to assure the public
1:07
is to
1:08
have a testing facility that does that
1:12
our customers are the other people who
1:15
grow the marijuana who
1:17
process the marijuana and those also the
1:20
ones who
1:21
process it in terms of edibles and
1:23
things of that nature and i think that
1:25
if we give a good quality product we're
1:28
accountable we're honest and we have a
1:30
good turnaround time we would
1:32
be successful we'd generate enough money
1:35
and we we'd pay our investors back isn't
1:38
it awesome that this is a new day

1:41
that we're testing marijuana products
1:44
and
1:45
trying to keep the consumer as safe as
1:48
possible wouldn't you want to invest in
1:50
something like that i'm from grand
1:52
rapids i grew up here i live presently
1:55
in atlanta georgia we cannot do this in
1:58
atlanta georgia because it's not legal
2:01
it is legal in michigan it's legal in
2:04
grand rapids we need funds to renovate
2:07
this building to make it inviting
2:10
to make it educational
2:12
and to make it innovative
2:14
we would like to help
2:17
revitalize this area provide jobs
2:21
provide mentorship for younger people
2:24
provide
2:25
technical skills
2:27
a place where
2:28
people will
2:30
learn that marijuana is not really

2:34

the bad guy help us build this help us

2:37

show the country what it means to

2:40

embrace cannabis responsibly thank you

2:43

very much for your interest in

2:45

hummingbird labs
