"Media3 Labs is bringing something unique to podcasting and broadening the reach of what is currently possible for analytics. Having spent a bulk of my web2 career in the data analytics space, I feel like this new medium is poised for disruption. Having known David personally for a long time and having respect for his first hand knowledge of the space, it was an easy decision for me to want to be involved. Creating a way for podcasters and listeners to tighten and expand their relationship is exciting to me. Looking forward to seeing how this grows."

Our Team

David Kermaani Founder/CEO

David led teams at HP and Samsung. He's an MBA whose professional experience includes product, business development, and sales. David is best known as the host of The Blockchain Experience, a top Web3 podcast.

Sanket Jayani Product Lead

Sanket has managed teams of 20+ IT professionals for over 10 years. Over the course of his career, he has lead the launch of over a dozen applications.

Yash Babariya Sr. iOS Engineer

Experienced Senior iOS Engineer guiding teams through challenging projects with finesse.

Ujash Patel Sr. Android Engineer

Sr. Android Engineer showcasing leadership, technical prowess, and ability to handle large-scale projects.

Scoop3 will disrupt the growing podcasting industry using next-generation Web3 technology, just the same way YouTube did with Web2 technology. 🎯

Scoop3 is poised to lead an \$11 billion market expected to grow over an average of 25% each year through 2032 by bringing listeners closer to their favorite podcasters and each other.

According to Podchaser, 70% of podcasters are unhappy with the quality of their analytics. Because of the nature of RSS feeds, the analytics the podcast hosting sites provide are estimates of how many subscribers they have, how many unique listens each episodes have, and their demographics such as gender and where they live. There are third-party sources that extrapolate data from multiple points, but they are not only estimates, they are also very expensive. This is an issue for the podcaster because PR agencies representing guests and brand sponsors are relying on third party signals which are not accurately indicative of listenership. This results in lower revenue for the podcast, significant barriers in securing top tier guests, and a frustrating experience for emerging podcasters.

Podchaser also cites 82% of podcast listeners want a closer connection to their favorite podcasters. This makes sense because Edison Research found the average podcast listener spends 6 hours and 39 minutes a week on podcasts. Compare that to how much time you spend each week with your friends. Indeed, listeners tend to think of their favorite podcasters as friends. Unless a listener relentlessly pursues the podcaster via social media (creepy much?), the podcaster may not even know the fan exists.

Scoop3 is the **fun** podcast player. 🌴
And podcasters will **love** us too. 😊

Meet Your New Podcast Player: Scoop3

A Web3 podcast player that automatically gives the listener loyalty badges for listening to supported podcast episodes.

We use blockchain technology backed by Coinbase, but do not confuse this with cryptocurrency. Just the same way email is only one part of the Internet, cryptocurrency is only one part of blockchain technology, and Scoop3 is not a cryptocurrency app.

Blockchain is powering Scoop3 for its superior data capabilities and interoperability.

Here's the kicker: all that blockchain stuff is happening under-the-hood. You don't have to be techno-savvy to use it!

How Do You Know the Blockchain Will Solve This Problem?

Because we've already done it ourselves, and it worked.

During 2023, The Blockchain Experience podcast dropped every episode as a collectible loyalty badge (in addition to being on Apple, Spotify, etc.) where the founder would recognize each listener he could identify with shoutouts at the end of the following episode. The response was overwhelming even though it was a friction-filled process where listeners had to be crypto-savvy, visit a third-party website, have an Ethereum wallet, a credit card on-file, and go through a minting process. Despite these hurdles, each episode would result in over an average of ~200+ episodes dispensed!

Just imagine these barriers did not exist, and the loyalty badges were dispensed natively through podcast player without the listener having

to be crypto-savvy. With it all happening all under-the-hood, just the same way you flip on a light switch without being an electrician.

By the way, the process of tokenizing media can be a real pain in the rear. We have a patent-pending design that makes it super simple!

We have a patent-pending technology for tokenizing media that sets us apart. 📄

The Opportunity

Competition

Scoop3 is NOT in direct competition with Apple, Spotify, or similar

podcast players. Nor are we in competition with Patreon.

✗ Apple: Podcasting is not part of Apple's core business. They can discontinue their podcast player today, and it would not have a material impact on their profitability.

✗ Spotify: Their focus is on signing exclusive content creators. The podcast playing experience has changed very little since its inception. Lastly, their podcast focus is diluted by their presence in the music business.

✗ Virtually all podcast players: Their aim is a one-way pipeline from creator to you, the listener.

Scoop3 is a four-way pipeline: we connect you back upstream to the podcaster, and to other listeners (two-way horizontal) to support true community formation by leveraging the power of the blockchain.

✗ Patreon: Patreon is perhaps our closest competitor, and one can argue they have a four-way pipeline as well. Here's the thing: there are about 15,800 podcast creators registered on Patreon. According to Amplifi, there are 720,000 active podcasts (10+ leaving a 97% void).

So why are so many podcasts, including The Blockchain Experience, not on Patreon? Patreon excels at direct monetization from listeners, but many podcasts do not want to directly solicit from their audience. They want to focus on making great content and monetize through sponsorships or adding leads to the top of a sales funnel where the podcaster is a subject matter expert selling a service. This is a massive target market that is underserved.

Here's another thing that sets Scoop3 apart: Web3 technology's decentralized nature. We have a great initial ecosystem Scoop3 works with, but in the spirit of Web3, we absolutely encourage anyone and everyone to come in and build something on top of it.

The **Internet** is everywhere **today**.
The **blockchain** will be everywhere **tomorrow**.
Welcome to the **future**. 🖐️

How Do We Make Money?

Our business model comprises of 2-sides where we serve both

podcasters and listeners. Our initial focus will be growth, but here's what we're thinking when it comes to monetization:

For the podcaster, the cost is free. The 1-2 punch of being free and our patent-pending technology ensuring the podcaster does not need to change their workflow means there is no downside or burdens placed on the podcaster for joining Scoop3.

For the podcast listener, there will be 3 tiers:

- Free to use as a Web2 podcast player (no loyalty badges)
- Gold: Small one-time fee (TBD) and ad-driven
- Platinum: Small one-time fee (same as Gold) and monthly fee to remove ads

How will the podcast listeners know about Scoop3 and why will they pay to have it? Because the podcasters will be evangelizing it on their podcasts and leveraging its loyalty badge system which brings benefits to both the podcasters and listeners. That's the secret sauce!

Shhh, don't tell anyone! 🤫

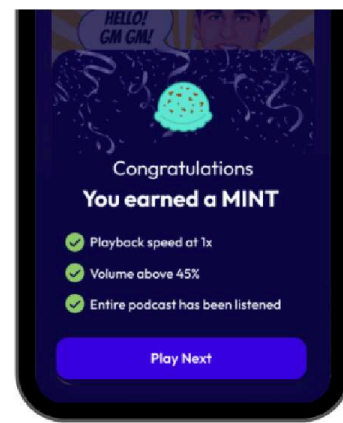

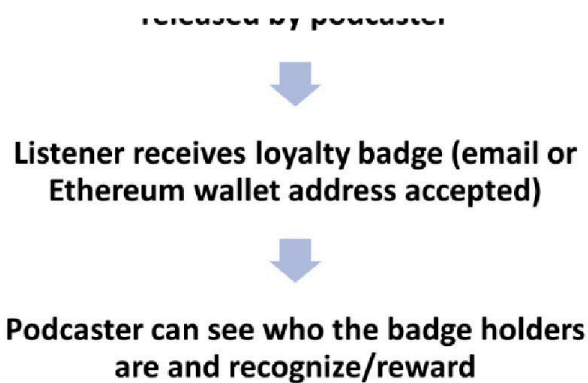

How it Works

Podcaster provides RSS feed for their podcast to be on Scoop3 (one-time)

Podcast fan listens to podcast episodes released by podcaster

Summary:

- Listener gets a gamified listening experience where they can collect badges and get perks such as shoutouts from the podcaster recognizing their loyalty, discounts/free merchandise, VIP access to in-person events, or anything else the podcaster opts to do. The possibilities are endless.
- Podcaster gets reliable and precise analytics on media consumption which is logged & immutable on the blockchain. Because it is more precise, it can be leveraged for more lucrative sponsorship deals and/or leads for a marketing funnel. Web3's decentralized nature also allows for a limitless number of integrations to be built.

We're launching an ecosystem with some amazing partners!

What Do Loyalty Badges Do?

unstoppable
domains

Collab.Land

Backed by Coinbase
and onboarding the
next billion users on
the blockchain.

A faster, safer
Web

Own your identity in the digital world.

A virtual studio making
recording & editing at the
highest quality possible,
accessible to anyone.

Original full-service
community management
tool curating membership
based on tokens.

One convenient interface tailored for you.

What can these partners offer?

- Dedicated Discord server or Telegram channel just for listeners
- Shopify integration so listeners can get discounted/free merchandise/goods/services
- Intimate virtual calls exclusively for listeners
- A one-stop gallery where you can scroll and look through the badges you have accumulated
- A Web3 identity (think of it as almost like your Web3 social media account but more)
- And more!

**We're raising to become the #1 Web3
podcast player in the world. And the
coolest. 👍 And the most fun. 🎉**

Your Investment

You are investing to help onboard the masses into Web3 in a meaningful & frictionless way and to fast forward the media industry.

- **Add integrations** to increase utility of loyalty badges
- **Add features** to improve user experience within the app
- **Scale** to onboard podcasters → bring more subscribers
- **Hire** for marketing & CX

Forward-looking projections cannot be guaranteed.
