iVALT

Regulation CF Offering

iVALT verifies five factors of identity, making it possible for one biometric ID to handle everything. By enabling iVALT’s One Biometric ID, a single user ID can be verified with just one click on your mobile phone, eliminating the need for passwords entirely. This means phone calls, online logins, physical access, content verification, and access to IoT devices will require only one click—something no one else in the \$30 billion identity-as-a-service market can currently offer.

With a minimum investment of **\$500**, this investment will push forwards the Future Of Identity.

Securities offered by
Mundial Financial Group
