Highlights

- 1 **PATENT-PENDING:** Innovative circular recycling model to disrupt the plastic toy industry
- 2 **FEMALE FOUNDED:** MSE in Design Engineering, 10+ years experience (including Happiest Baby)
- 3 **DEMAND:** 76% of parents will pay more for sustainable products

- 4 **WHY INVEST:** Targeting 3% share in the U.S. sustainable toy market (est. \$817Mn) by 2030
- 5 **IMPACT:** That's 900 tons of plastic diverted from landfills...or 500 real hippos depending on your math
- 6 **PROTOTYPE READY:** With plant-based plastics and compostable electronics – on minimal bootstrap funds
- 7 **FEATURES:** Designed to be US-made and manufactured, and Cradle to Cradle® Certified

"I'm delighted to invest in Little Squiggle! This opportunity is so great at bringing together fun for baby with better sustainability. The toy is so engaging! It creates a super fun learning experience that parents can feel great about, while its uniqueness in the toy marketplace is its revolutionary circular recycling model. I believe this combination really meets the needs of millennial moms and dads who seek great experiences for their kids and also regard sustainability as a priority when making purchase decisions. Teresa is an awesome, strong founder and leader. She has foundational know-how from her years in large engineering organizations as well as highly relevant startup experience that she can directly apply to this market opportunity. I have great confidence that she will make Little Squiggle a success!"

Our Team

Teresa Giovannoli Founder, CEO

MSE in Product Development Engineering, and BSE in Mechanical Engineering. Experience includes working with innovative startups such as Happiest Baby, Kernel, and Flo Technologies, and large-scale operations such as Northrop Grumman and ExxonMobil.

Amber Carter Fractional CMO

MBA in marketing and BS in Supply Chain. 10+ yrs experience in Marketing & Product Development with companies such as Henkel Corporation. Successfully launched a \$1.4Mn product into Walmart & Target.

Meet Harra! The future of sustainable play:
powered by our patent-pending circular
recycling process 🐘

**Little Squiggle's patent-pending
process to** disrupt the 25 billion
dollar children's toy market.

Imagine a toy that never truly reaches the end of its life—a toy that can be returned, recycled, and reborn. Fueled by our patent-pending recycling process, we are creating a world where playrooms are less cluttered, children's toys are carefully crafted from safe plant-based materials, and parents can feel good about the toys they bring home, knowing they'll be given new life after playtime ends.

Problem

**Today's toys are causing big
problems:** 90% of toys are made
from plastic, and 80% end up in
landfills or the ocean.

Climate change, global warming, consumerism, waste....we're feeling the impacts of these environmental issues at alarming rates. The toy industry is direct contributor:

- **Environmental Pollution:** 90% of toys are made from plastic, and 80% end up in landfills or the ocean.
- **Emissions:** Overseas manufacturing methods are contributing to recent catastrophic weather events occurring more and more frequently.
- **Persistence of plastics:** Plastic toys are quickly discarded but remain in the environment for centuries. We're even seeing microplastics showing up in mothers' breast milk.
- **Toxic Chemicals:** Plastic toys often contain harmful chemicals that pose health risks, especially when mouthed by children.
- **Non-Renewable Resources:** Plastic toys are made from fossil fuels, which are non-renewable and harm the environment.
- **Difficult to Recycle:** Most plastic toys can't be recycled due to mixed materials and electronics.

There's a swell of fear amongst us. The scariest part is that much of the burden is felt by consumers, when in reality, it's up to businesses to pave the way.

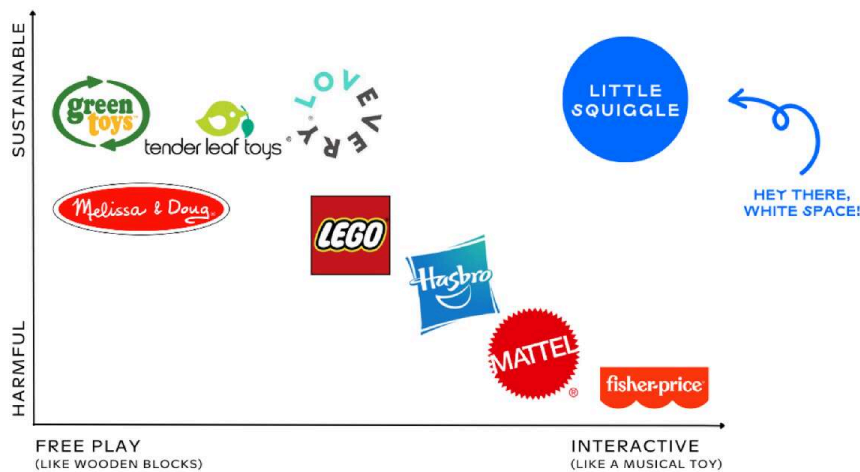

Parents demand change: growing safety concerns over harmful chemicals & micro-plastics in today's toys.

There is a notable trend toward more eco-conscious and technologically toys, as parents seek products that support cognitive development and sustainability.

- **Toy Market:** In 2023, the U.S. toy market is valued at \$25 billion, with a projected growth rate of 4.5% annually, reaching an estimated \$38 billion by 2033.
- **Sustainable Toys:** The U.S. toddler and kids (ages 1-10) toy market is estimated at \$817Mn in 2024 and projected to achieve a 12.5% CAGR.
- **Industry Threats:** Environmental concerns and a reliance on overseas manufacturing.
- **Demand for change:** 76% of parents are willing to pay more for sustainable products.
- **Evidence:** Melissa and Doug, a leading company in the sustainable toy space has captured 5% of the North American toddler and kid toy market (ages 1-10).

The combination of interactive and sustainable is an area where we haven't seen others play in yet. Yet as we see above, parents want the ability to entertain and engage children through electronic, interactive toys, while still practicing sustainability.

The Solution

Saving the day the Little Squiggle way: circular ecosystem of electronic toys for every developmental stage.

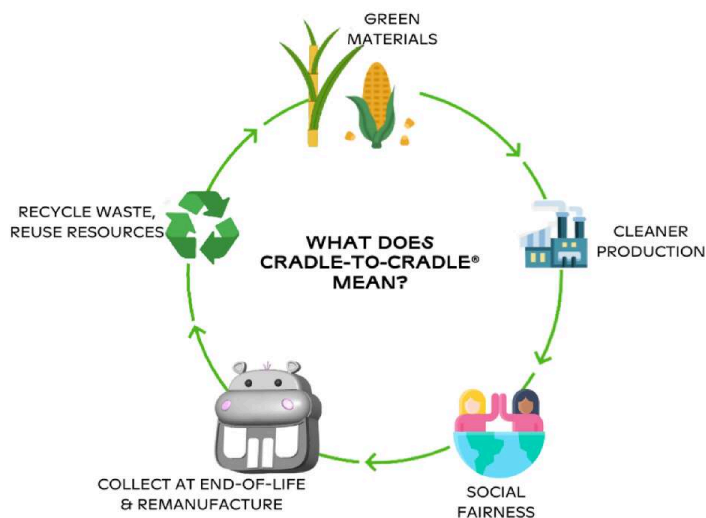

Little Squiggle is revolutionizing the children's toy industry with holistic, sustainable practices inspired by Cradle to Cradle® principles. Our mission is to create a circular economy by designing high-end, interactive toys that are eco-friendly, energy-efficient, and built to be reused and recycled.

We're pretty excited about some of our differentiators:

- **Cradle to Cradle® Design Principles:** Using the global standard for circularity, we're considering sustainability at every stage of our product's journey. It's built into our DNA.
- **Notable Efficiency Gains:** With these practices, all of our actions add up to significant bottom-line savings and efficiencies.
- **Reverse Logistics:** We're building a seamless return and recycling process, making it easy for consumers to send back toys for repurposing.
- **Community Building:** We use transparent marketing to engage and inform a community of eco-conscious consumers.
- **High Quality & Joyful Products:** Every toy is designed to deliver both joy and quality, ensuring long-lasting, beloved products for children.

Product Details

Meet Harra: made with plant-based materials & designed to be

based materials & designed to be returned, reused & recycled.

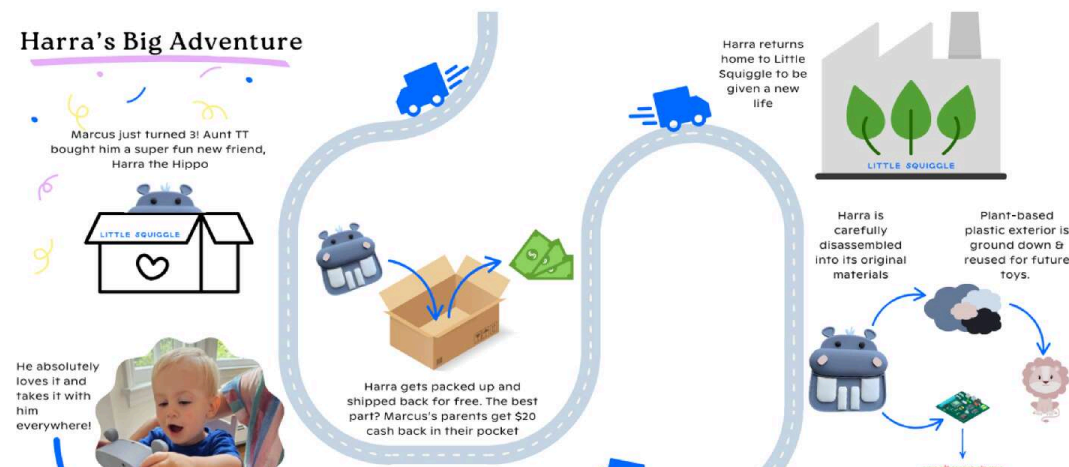

Our trailblazer, Harra the Hippo, is designed to be returned so her materials can be reused and recycled, reducing our waste impact.

Here's how Harra is unlike all other electronic toys on the market:

- Designed for simple disassembly to enable our patent-pending recycling process
- Made with clean, safe plant-based plastics that can be mechanically recycled into raw materials
- Electronically powered by organic-based Printed circuit board (PCB) that eliminates our electronic waste (E-waste)
- Fun for toddlers (ages 1-3) with interactive and tactile play
- Return for cash-back when parents participate in our circular model

We don't just say we're sustainable, we prove it.

Competitive Landscape

A better way to play: our first prototype is the only fully sustainable interactive learning electronic toy.

	Sustainable Brands				Traditional Brands		
	LITTLE SQUIGGLE	Melissa and Doug	Lovevery	Green Toys	Hasbro	Lego	Mattel
100% Eco Friendly Materials?	Blue	Blue	Red	Blue	Red	Red	Red
US-made?	Blue	Red	Red	Blue	Red	Red	Red
Takeback program	Blue	Red	Red	Red	Blue	Blue	Blue
Toys built to be returned?	Blue	Red	Red	Red	Red	Red	Red
Interactive Play?	Blue	Red	Red	Red	Blue	Red	Blue

Circular Business Model

Our circular business model incentivizes parents to return toys which are used as recovered resources that help our bottom line & the planet.

Harra the Hippo is a high-end toy sold at a premium. We offer return incentives to encourage our customers to close the loop, making our products cradle to cradle as opposed to cradle to grave. We're building our processes to boost margins on circular products (i.e. when material recovery can be reused to create new products).

Note: POC refers to Proof-of-Concept Phase, which these funds will directly support

Target Market

Green Guardians: 76% of parents are willing to pay more for sustainable products.

Our primary market consists of 2 segments:

The Millennial generation, the parents and guardians of our toddlers today, is actively seeking out ways to make an environmental impact and will continue

to do so for years to come.

75%

OF MILLENNIALS CONSIDER SUSTAINABILITY
WHEN MAKING A PURCHASE

76%

OF PARENTS ARE WILLING TO PAY MORE
FOR SUSTAINABLE PRODUCTS

Our secondary market is the next generation of parents, Generation Z, who will become the majority of first time parents by 2026. This generation demands sustainable solutions more than older generations.

Those willing to pay more for sustainable products and services, by generation:

77%

GEN Z

72%

MILLENNIALS

67%

GEN X

BABY BOOMERS

Testimonials

Parents love Harra: “it’s so fun watching my son enjoy the interactive features... and I love that it’s not another cheap plastic toy.” -Molly, 34

We are really excited about what we’ve accomplished to date with minimal bootstrapped funds. We’ve already tested prototypes of Harra the Hippo with multiple families! Here’s some of what we’ve been hearing:

“It is so fun to watch my son

exploring all the different buttons and ways to interact with this adorable toy! And I love that this isn't another cheap plastic toy with annoying sounds. There is just the right level of interaction to make it fun for both of us! At the end of the day, I love knowing it's designed with the environment in mind. A toy that's educational and sustainable!"

Eco-friendly mother to a curious little toddler (age 3)

"The second my daughter saw the toy, she was captivated. At her age, I would certainly prefer her playing with this over her face buried in her iPad"

Proud dad to a compassionate sweetheart (age 2)

In addition to these happy customers, we're shipping a handful of 3D printed toys out to beta testers to kick off field testing. We have materials sourced, suppliers selected, quotes obtained. We can't wait to get Harra in the hands of more children!

Use of Funds

With your investment, we have a path to achieving our 3% market share goal by 2030 (\$25Mn)

Note: Forward-looking projections and goals can not be guaranteed.

We are focused on two key goals for this round of funding: achieving a sellable Proof of Concept (POC) production run and conducting a thorough market assessment.

Goals

CRADLE-TO-CRADLE®
PROOF-OF-CONCEPT (POC)

MARKET ASSESSMENT FOR FULL
PRODUCTION AND DISTRIBUTION

Milestones

POC COST AND PROCEDURES

REMAINING R&D ON HARRA THE HIPPO

PILOT PRODUCTION BATCH OF HARRA

SAFETY TESTING AND CERTIFICATION

INITIAL IP PROTECTION

Hitting our fundraising goal of \$124,000 gives Little Squiggle a path towards achieving these milestones. These funds head towards a few specific areas:

- **R&D (Product Development):** early field testing of Harra the Hippo, filing product patents, and stress-testing the circularity concept with our supplier network.
- **R&D (Manufacturing and Certification):** Soft tooling for injection-molded parts and completing U.S. safety and certification processes.
- **Marketing and Branding:** establishing our brand through website development and social media marketing targeting our local community and potential customers.
- **Contract Hiring:** marketing, graphic design, brand strategy, and electrical engineering to support both product and brand development.
- **Operational Expenses:** campaign costs (we have to thank our friends at Wefundr for access to this community and platform!), and other anticipated business expenses to ensure smooth operations.
- **Runway:** In 12-18 months following the campaign raise, we expect to have products circulating, valuable customer feedback, customer traction data, and be ready to take Little Squiggle to the next level!

- founder and CEO of Kaz & Effect Solutions LLC, an engineering leadership development company
- Independent director for Micro-Mechanics, a global industry leader in manufacturing ultra-high-precision parts and tooling

Seasoned Entrepreneur

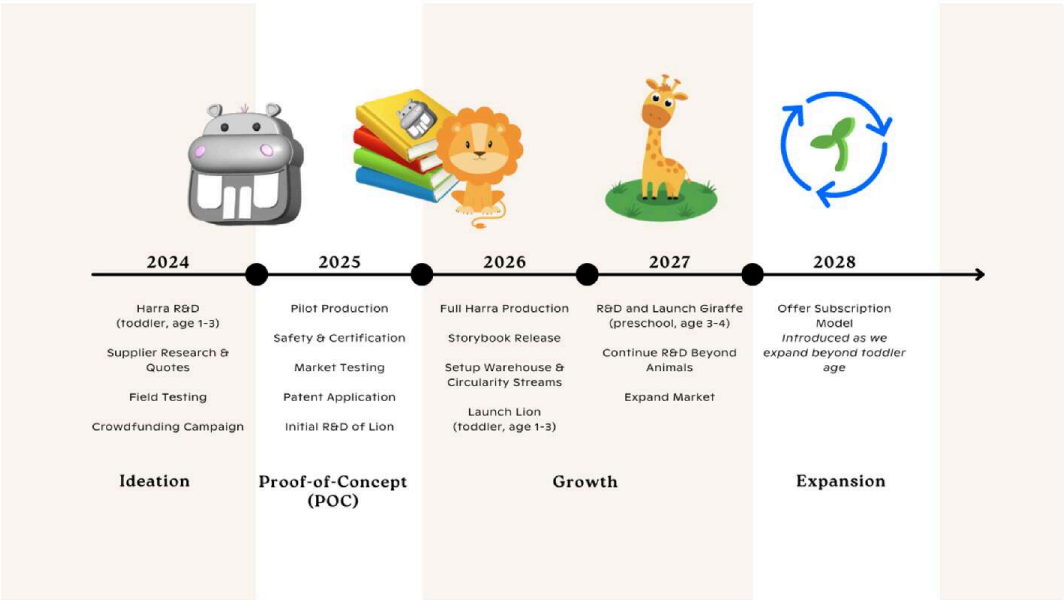

Future Plans

We're growing towards a subscription model to help our customers seamlessly close the

circular loop.

Once we're ready to exit this POC phase, we should have the data we need to charge forward into full production. During our Growth Phase, we plan to fully launch our E-commerce store, to be able to speak directly to our customers and better control margins. Our customers also get to start meeting Harra's new friends for children at different ages!

The beauty of a circular model is that as the company grows, so do the savings. Once we've developed toys for a variety of ages, there's a foundation for our circular ecosystem. At this point, Little Squiggle would like to introduce a subscription model. This further encourages circularity through ongoing purchases and seamless product returns for our customers.
