KEY POINTS TO HIGHLIGHT

- I. Current fundamentals support at least modest 2.5% - 3.5% economic growth in the U.S. and globally over the next couple of years (Page 2).**
- II. We are positive on the equity market and think there could be continued appreciation in 2018 and 2019 (Page 23).**
- III. Market volatility will likely continue as investors try to determine if stronger growth can occur (Page 35).**
- IV. We are in a stock picker's market. Strong fundamentals and quality earnings are needed for stock price appreciation and for sustaining price appreciation (Page 41).**
- V. Our equity investment strategy is a diversified, "barbell" portfolio that focuses on potential beneficiaries from President Trump's themes and less cyclical, largely developed markets focused growth stocks. The "barbell" strategy is appropriate due to the likely "fits and starts" in response to both progress and delays in Washington and global macroeconomic conditions (Page 45).**

CURRENT FUNDAMENTALS

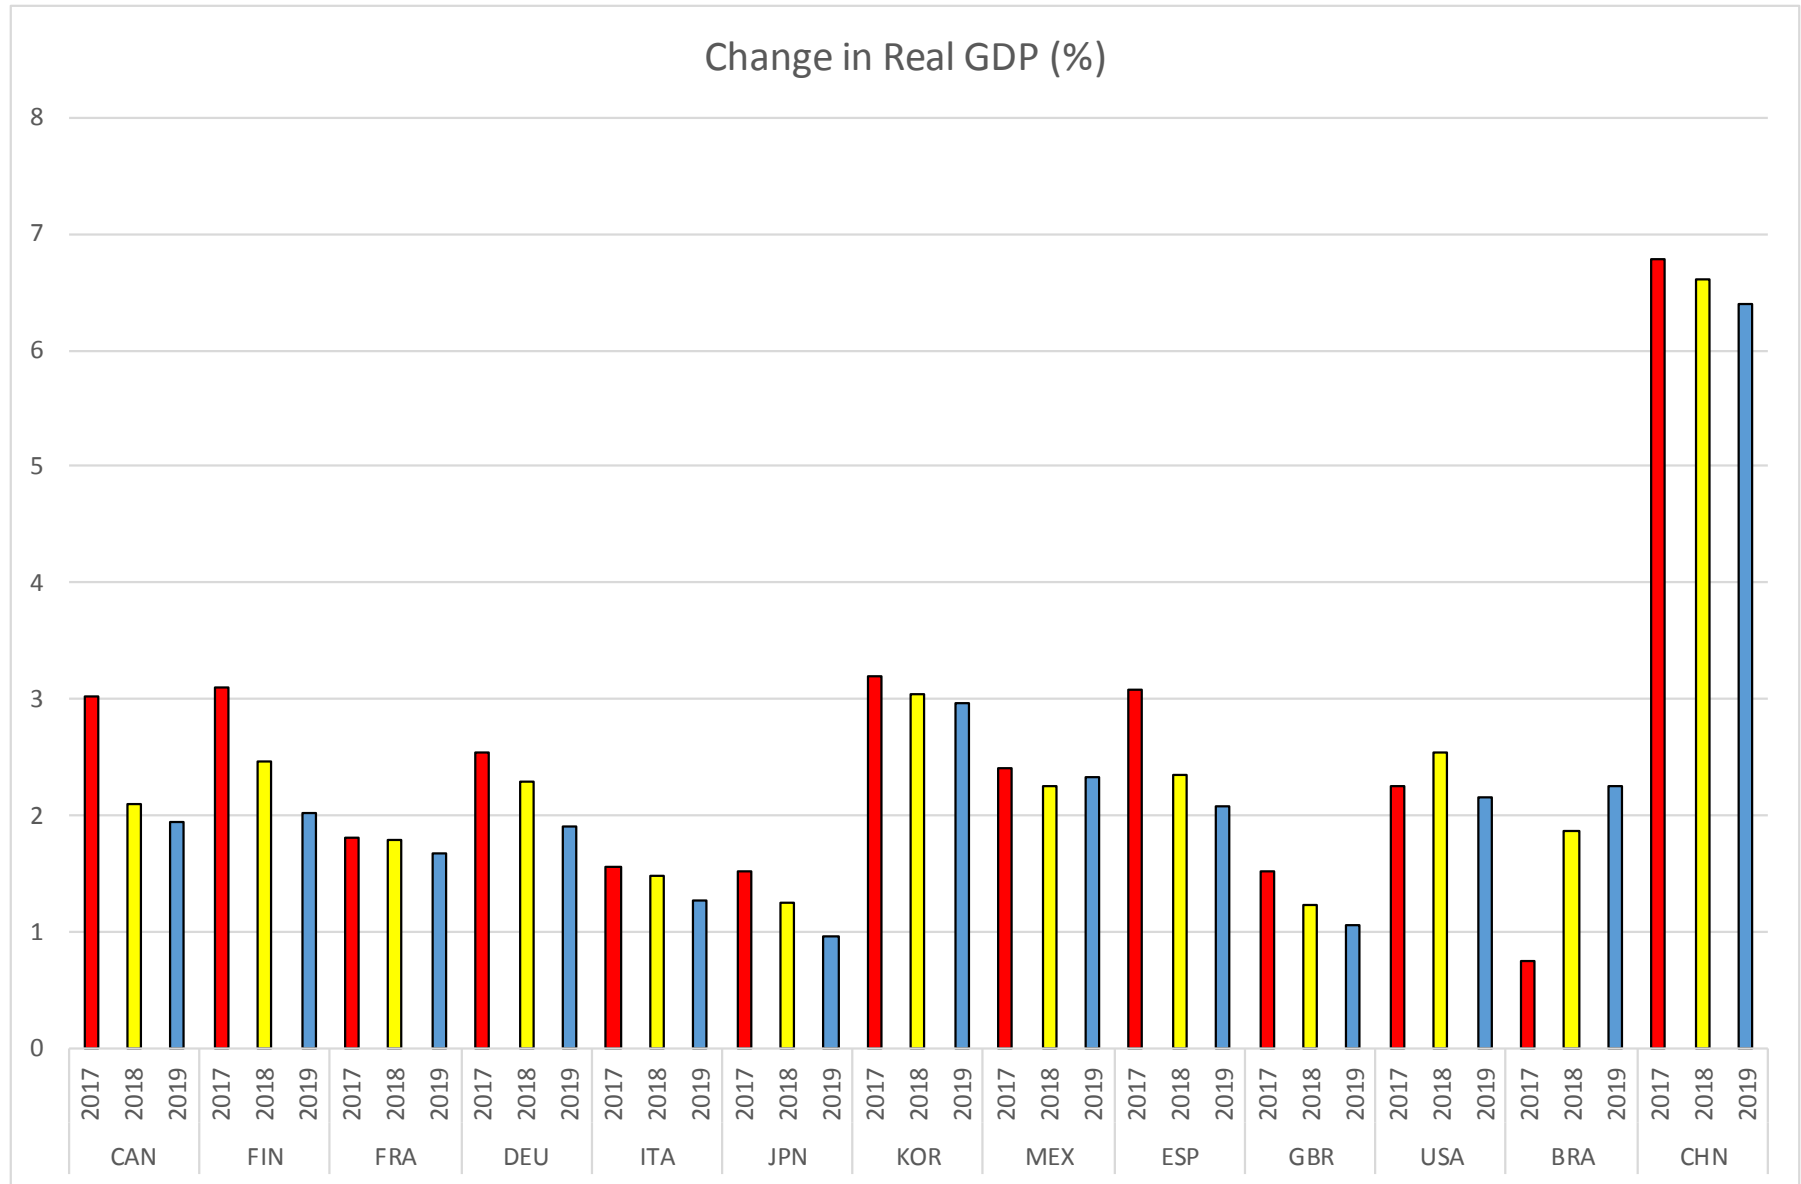

I. Current fundamentals support at least modest 2.5% - 3.5% economic growth in the U.S. and globally over the next couple of years.

- Worldwide synchronized economic expansion is occurring. Euroland growth (while modest) is experiencing material expansion in Germany, and the rest of the continent is starting to contribute. Japan is improving slightly, helped by the weak yen. China growth appears to have stabilized with much government assistance. U.K. growth has held up; however, is still uncertain due to Brexit.
- The U.S. has been growing in a modest and subdued manner of approximately 2.0%-2.5%. Tax reform and other pro-growth presidential actions—deregulation, repatriation of corporate cash, and infrastructure spending—have paved the way for stronger future growth. Policy headwinds include: potential trade wars, strengthening U.S. dollar, and immigration. The bi-partisan spending deal could help growth in the near term, but be a drag in the long run.
- Inflation fears could lead to anticipated or more aggressive interest rate increases and reduction of quantitative easing. This in-turn could lead to economic slowdown or even stagflation.
- We think monetary policies outside the U.S. will continue to be favorable. In the U.S., we believe the Federal Reserve will gradually become less accommodative.

GLOBAL ECONOMIC ASSUMPTIONS

	GDP GROWTH				INFLATION			
	2016A	2017E	2018E	2016-2020 (5 Yr CAGR)	2016A	2017E	2018E	2016-2020 (5 Yr AVG)
Global Economy	2.6%	3.2%	3.1%	3.0%	1.9%	2.3%	2.5%	2.3%
United States	1.5	2.3	2.7	2.3	1.3	2.1	2.6	2.2

WORLD'S MAJOR ECONOMIES ARE GROWING

U.S. DATA SOLID

**3Q17 and 4Q17 figures for debt service and 4Q17 figure for net worth are J.P. Morgan Asset Management estimates.

EUROZONE INDICATORS IMPROVING MODESTLY

Eurozone unemployment

Persons unemployed as a percent of labor force, seasonally adjusted

Eurozone credit demand

Net % of banks reporting positive loan demand

U.K ECONOMY IMPACTED BY BREXIT

Negotiating phase

The main areas up for discussion:

- Terms of the transition
- Separation terms
- Future status of Northern Ireland
- Framework for future UK-EU relationship

Deadline Autumn 2018

Ratification phase

- Approval by 72 per cent of member states
- Consent vote by European Parliament
- UK parliament passes bill implementing withdrawal treaty
- Both sides notify that UK remains part of 750 EU international agreements

Deadline UK's exit from EU on March 29 2019

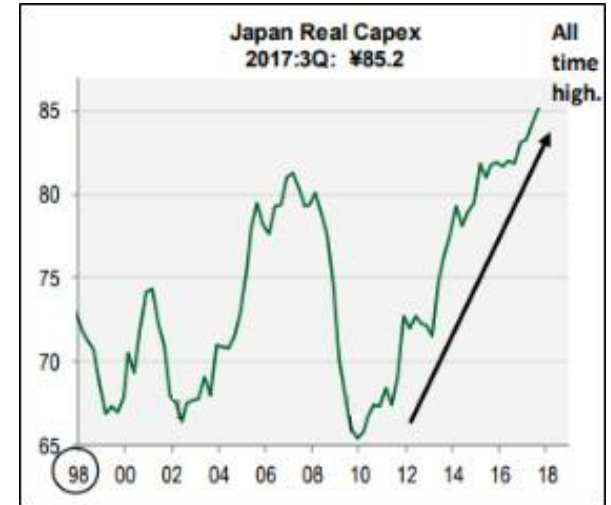

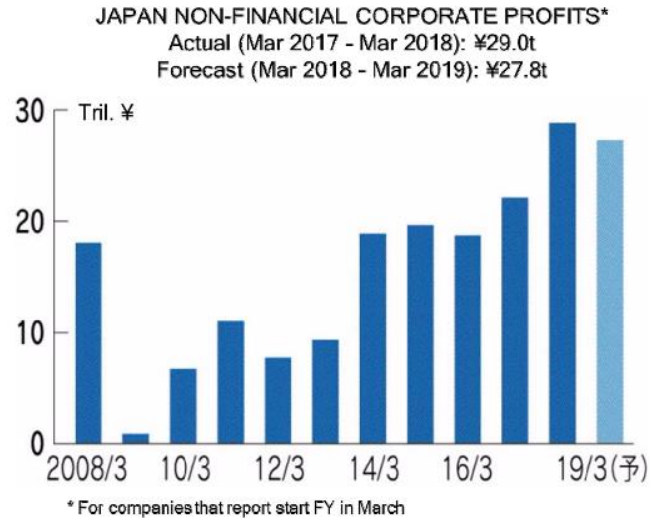

Transition phase

- Formal trade talks begin
 - UK seeks to replace 750 EU international deals
 - Both sides prepare new immigration/customs/regulatory systems
 - Political accord on partnership agreement and EU parliament approval
 - European elections in May 2019
- Deadline** End of transition period, Dec 31 2020

Beyond

- Provisional application of trade agreement
- Regulatory assessments for equivalence/mutual recognition
- Implementation of phase-in provisions in new partnership
- Ratification of agreement in up to 40 national parliaments
- UK elections by May 5 2022

THE WALL STREET JOURNAL

CORPORATE CASH: BRINGING IT ALL BACK HOME

Who Has Money Overseas? 311 companies in a Wall Street Journal analysis reported more than **\$2.5 trillion** in unremitted foreign profits at the end of their most recent fiscal years. The U.S. government expects \$339 billion in taxes from repatriated profits over a decade from all companies.

How Much Will They Pay?

The 311 companies could pay nearly **\$250 billion** in taxes.

By sector

Firms in sectors with most to repatriate

Companies with the biggest pile of cash

A handful of companies could end up paying a third of the tax.

Methodology/sources: Journal estimates of repatriation-tax obligations used securities disclosures, partly collected by financial-data firm Calcbench, with some conservative assumptions. For 311 S&P 500 companies that have recently disclosed unremitted foreign earnings, the Journal used 2017 figures where available, and 2016 otherwise. For Apple, the Journal used a separate figure reflecting cash held by foreign subsidiaries, which exceeded the company's unremitted foreign earnings; this can happen where a company has booked a U.S. tax obligation for financial-reporting purposes but hasn't yet brought the cash to the U.S. The Journal assumed foreign profits would be held in liquid and illiquid assets at about the same proportion as each company's total assets. That split was used to apply tax rates of 15.5% for liquid assets and 8% for other assets. Publicly disclosed figures for unremitted foreign profits can differ substantially from the generally undisclosed one used for tax purposes in any given year, but over many years, a large company's accumulated foreign profits for accounting purposes are likely to be close to profits as calculated for tax purposes, tax experts say. Companies will get some credit for foreign taxes paid on the amounts, and will be allowed to offset foreign profits with some foreign losses.

ISI Group

December 2006, SASAC, the State-owned Assets Supervision & Administration Commission, identified 13 key industries. Beijing wanted to create an oligopoly of globally dominant SOEs (listed here).

Beijing identified a top level "Absolute Control", and a second level "Heavyweights."

China's State Council in 2011 identified 7 "Emerging Strategic Industries."

China's 7 Emerging Strategic Industries

- | | |
|---|-------------------------------------|
| 1. Energy Conservation & Environmental Protection | 4. High-End Equipment Manufacturing |
| 2. New Information Technology | 5. Renewable & Alternative Energy |
| 3. Bio-industry | 6. New Materials |
| | 7. New Energy Vehicles |

"Made in China 2025" – Beijing's List (2015)

- New generation of information technology
- Advanced computer numerical control machine tools, robots
- Aviation and aerospace equipment
- Marine engineering equipment and high-tech ships
- Advanced rail transportation equipment
- Energy-saving and new energy vehicles
- Power equipment
- New materials
- Biomedicine and advanced medical devices
- Agricultural machinery and equipment

GLOBAL MARKETS

II. We are positive on the equity market and think there could be continued appreciation in 2018 and 2019. The global markets are anticipating “discounting” stronger economic growth, but there could be materially more upside.

- Monetary policies worldwide are still very accommodative. We do not expect interest rates to increase rapidly.
- Currently, there is a favorable global economic back drop.
- Future benefits from President Trump’s policy actions are still very hard to determine due to being in “unchartered” territory. As initiatives are implemented and benefits materialize, corporate earnings growth and shareholder returns could be considerably stronger.
- Valuations to remain attractive.

AVERAGE (ROUNDED)	+5%	+1%

MARKET VOLATILITY

III. Market volatility will likely continue as investors try to determine if stronger growth can occur.

- Monetary policies in the U.S. and internationally will continue to be unwound as growth continues, and to manage inflation. The aggressiveness of the unwinding, both in terms of interest rate increases and reduction in quantitative easing, will worry the markets due to its impact on economic growth.
- Will President Trump's pro-growth philosophy and actions really accelerate growth? Budget deficit and debt levels are increasing. Will the U.S./China trade war cause a global recession? The lack of a more solid, predictable economic foundation creates nervousness and concern, which will lead to increased volatility.
- Debt levels increasing in developed and developing economies impacting growth.
- Markets need economic clarity in order to assess interest rates, corporate revenues and earnings strength. We believe earnings strength is the catalyst to stock price appreciation.

CURRENT MARKET CONDITIONS

IV. We are in a stock picker's market. Strong fundamentals and quality earnings are needed for stock price appreciation and for sustaining price appreciation.

- The equity markets are shifting from a monetary policy driven market to a company fundamentals driven market.
- Over the last nine years, the markets have increased as a result of multiple expansion in anticipation of an improving economy and corporate earnings. We cannot expect stock multiples to expand further.
- High sector and stock correlation, “rising tide lifts all boats,” not likely to continue.
- The second half of 2017 and year-to-date corporate earnings have been relatively solid, which has led to further market appreciation based on fundamentals.
- We are in a stock picker's market, therefore earnings must “materialize.” We must find the sectors and companies that can grow earnings and avoid those that cannot. Strong fundamentals and quality earnings are needed for stock price appreciation and for sustaining price appreciation.
- Equity Valuations are not expensive relative to history. Equity valuations are attractive relative to bonds.
- Active management versus passive management should do better. Passive investing has benefited from significant quantitative easing, low interest rates, and lack of market volatility worldwide. Active versus passive investing, historically, has been cyclical. Active management helps protect/limit exposure in more volatile/down markets. It's important to have a diversified portfolio of both styles.

EPS GROWTH DRIVING MARKET APPRECIATION LAST YEAR

Price/Earnings Ratio \times Earnings = Price

Therefore, for Price to Increase:

- Price/Earnings Ratio Has to Expand and/or
- Earnings Has to Increase

“BARBELL” STRATEGY

- V. Our equity investment strategy is a diversified "barbell" portfolio that focuses on potential beneficiaries from President Trump's themes and less cyclical, largely developed markets focused growth stocks. The “barbell” strategy is appropriate due to the likely “fits and starts” in response to both progress and delays in Washington and global macroeconomic conditions.**
- On the Trump side of the “barbell”, we focus on beneficiaries from the President’s growth-related themes of:
 - Tax Reform – Corporate & Personal
 - Deregulation
 - Repatriation of Foreign Corporate Cash
 - Infrastructure Spending
 - On the less cyclical, growth-stock side of the “barbell,” we focus on companies that have more visible potential revenues and earnings. Growth with material exposure in the U.S. and developed international markets. Sectors of focus include: telecom, technology, defense, consumer non-durables, and selective healthcare.
 - On both sides of the “barbell,” all our portfolio companies should possess high-quality characteristics. Quality growth stocks provide a favorable risk/reward profile. They participate in a rising market and retain their value better in a falling market. These quality growth stocks include the following characteristics:
 - Sales & Earnings Growth
 - Efficient Operations with Operating Margin Leverage
 - Free Cash Flow Generation
 - Dominant Market Share Positions
 - Proactive Management Teams
 - Attractive Valuations Relative to Growth Potentials

COMPONENTS OF SIT INVESTMENT ASSOCIATES' "BARBELL" STRATEGY

DISCLOSURE

Sit Mutual Funds

The Sit Mutual Funds are a family of 14 no-load mutual funds.

Performance figures are historical and do not guarantee future results. Investment returns and principal value will vary, and you may have a gain or loss when you sell shares. Current performance may be lower or higher than the performance data quoted. Contact the Fund for performance data current to the most recent month-end. Returns include changes in share price as well as reinvestment of all dividends and capital gains. Returns do not reflect the deduction of the 2% redemption fee imposed if shares are redeemed or exchanged within 30 calendar days from their date of purchase. If imposed, the fee would reduce the performance quoted. Returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption of Fund shares. Management fees and administrative expenses are included in the Fund's performance. Returns for periods greater than one year are compounded average annual rates of return.

Carefully consider the Fund's investment objectives, risks, charges and expenses before investing. The prospectus contains this and other important Fund information and may be obtained by calling Sit Mutual Funds at 1-800-332-5580 or at www.sitfunds.com. Read the prospectus carefully before investing. Investment return and principal value of an investment will fluctuate so that an investor's shares when redeemed may be worth more or less than their original cost.

This presentation is intended for use in meetings with certain qualified investors. The information in this presentation should not be considered a recommendation of any particular security or strategy, nor should it be considered a solicitation or offering to sell securities or an interest in any fund.
