THERAGENICS CORPORATION
NOTES TO FINANCIAL STATEMENTS
JUNE 30, 2001
(Unaudited)

NOTE A – BASIS OF PRESENTATION

The interim financial statements included herein have been prepared by the Company without audit. These statements reflect all adjustments which are, in the opinion of management, necessary to present fairly the financial position, results of operations, cash flows and changes in stockholders' equity for the periods presented. All such adjustments are of a normal recurring nature. Certain information and footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted. The Company believes that the financial statements and disclosures are adequate to make the information not misleading. It is suggested that these financial statements and notes be read in conjunction with the audited financial statements and notes for the year ended December 31, 2000, included in the Form 10-K filed by the Company.

NOTE B – DISTRIBUTION AGREEMENTS AND MAJOR CUSTOMERS

The Company sells its TheraSeed® product directly to health care providers and to third party distributors. Currently, the Company has non-exclusive distribution agreements in place with four companies. Sales to three of the four non-exclusive distributors represented 62% of product revenue for the quarter ended June 30, 2001, and 54% of product revenue for the six months ended June 30, 2001, with sales to each of the three non-exclusive distributors exceeding 10% of total revenue for each period. Accounts receivable from the four non-exclusive distributors represented 59% of accounts receivable at June 30, 2001, with each non-exclusive distributor exceeding 10% of total accounts receivable.

NOTE C - CONSTRUCTION IN PROGRESS AND PURCHASE COMMITMENTS

The U.S. Department of Energy (DOE) has granted Theragenics access to unique DOE technology for use in production of isotopes, including Pd-103. This technology venture represents part of a DOE initiative to redirect Cold War assets to peacetime use and cushion the economic impact of U.S. Defense Department cutbacks. The Company is constructing a facility in Oak Ridge, Tennessee to house the equipment, infrastructure and work force necessary to support the production of isotopes, including Pd-103, using this DOE technology. The Company expects to invest approximately \$25 million to \$30 million through 2001 to build this manufacturing and R&D facility. Construction costs of approximately \$21.4 million have been incurred on this project as of June 30, 2001, and are included in construction in progress.

THERAGENICS CORPORATION
NOTES TO FINANCIAL STATEMENTS - CONTINUED
JUNE 30, 2001
(Unaudited)

NOTE D - LITIGATION

In January 1999, the Company and certain of its officers and directors were named as defendants in certain securities actions alleging violations of the federal securities laws, including Sections 10(b), 20(a) and Rule 10b-5 of the Securities and Exchange Act of 1934, as amended. These actions have been consolidated into a single action pending in the U.S. District Court for the Northern District of Georgia. The complaint, as amended, purports to represent a class of investors who purchased or sold securities during the time period from January 29, 1998 to January 11, 1999. The amended complaint generally alleges that the defendants made certain misrepresentations and omissions in connection with the performance of the Company during the class period and seeks unspecified damages. On May 14, 1999 a stockholder of the Company filed a derivative complaint in the Delaware Court of Chancery purportedly on behalf of the Company, alleging that certain directors breached their fiduciary duties by engaging in the conduct that is alleged in the consolidated federal class action complaint. The derivative action has been stayed by the agreement of the parties. On July 19, 2000, the Court granted the Company's motion to dismiss the consolidated federal class action complaint for failure to state a claim against the Company, and granted the plaintiffs leave to amend their complaint. On August 21, 2000, the plaintiffs filed a second amended complaint. On March 30, 2001, the Court denied the defendants motion to dismiss the plaintiff's second amended complaint, and on May 16, 2001 denied the Company's motion for reconsideration. The case is now in the discovery phase. Management believes these charges are without merit and intends to vigorously oppose the litigation, however, given the nature and early stage of the proceedings, the ultimate outcome of the litigation cannot be determined at this time. Accordingly, no provision for any liability that might result from this litigation has been made. The Company maintains insurance for claims of this general nature.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Results of Operations

Revenues for the second quarter of 2001 were \$13.1 million, compared to \$11.5 million for the second quarter of 2000, an increase of \$1.6 million, or 13.9%. Revenues for the six months ended June 30, 2001 were \$26.7 million, compared to \$22.8 million for the same period in 2000, an increase of \$3.9 million, or 17.1%. During the first two quarters of 2001, approximately 37% and 24% of unit sales, respectively, were sold by Theragenics directly to customers, at higher prices than those sold to third-party distributors. As a result, the average selling price of TheraSeed® increased, accounting for the increases in revenue over the comparable periods of 2000. Unit sales during the first quarter and first six months of 2001 were essentially flat compared to the same periods in 2000.

During the first half of 2000 the Company was a party to a Sales and Marketing Agreement with Indigo Medical, Inc. (Indigo) that granted Indigo exclusive worldwide marketing rights to TheraSeed® for the treatment of prostate cancer. This agreement was terminated effective January 5, 2001. Currently, the Company has non-exclusive distribution agreements with four companies for the distribution of TheraSeed®. Several customers that had been purchasing from Indigo now purchase directly from Theragenics, while many other former Indigo customers are purchasing TheraSeed® from Theragenics' non-exclusive distributors. Management expects these non-exclusive distributors to continue to aggressively market to the former Indigo customers, and expects the percentage of direct sales of TheraSeed® units by the Company, and accordingly, its average revenue per TheraSeed® unit, to decline. Direct sales to customers declined to 24% of unit sales in the second quarter of 2001 from 37% in the first quarter, and the Company expects that direct sales to customers could eventually decline to 10% of unit sales.

Based on the importance of third-party reimbursement to all providers of healthcare products and services, Theragenics, like many others, closely monitors reimbursement of healthcare costs. The U.S. Congress and the Health Care Financing Administration (HCFA) frequently consider reforms that provide for reductions in Medicare spending and prospective payment reform on healthcare purchasing levels and payment streams. Due to the significance of these actions on revenue streams, management expects that it, along with its non-exclusive distributors, will continue to monitor the activities of the U.S. Congress and HCFA as they relate to Medicare and prospective payments. Unfavorable changes in reimbursement for the Company's TheraSeed® implant would adversely affect prices of TheraSeed® and the Company's revenue stream.

At any point in time, management of Theragenics and/or its non-exclusive distributors may change their respective pricing policies for TheraSeed® in order to take advantage of market opportunities or respond to competitive situations. Responding to market opportunities and competitive situations could have an adverse effect on the prices of TheraSeed®, while failure to do so could adversely affect market share and volumes.

Cost of sales was \$3.7 million during the second quarter of 2001, resulting in a gross profit margin of 71.6%, compared with cost of sales of \$3.5 million and a gross profit margin of 69.8% during the second quarter of 2000. For the first half of 2001, cost of sales was \$7.6 million, resulting in a gross profit margin of 71.4%, compared with cost of sales of \$6.8 million and a gross profit margin of 70.3% during the first half of 2000. Fourteen cyclotrons were in

operation during the 2001 periods, while eleven cyclotrons were in operation during the first quarter of 2000, and thirteen cyclotrons were in operation during the second quarter of 2000. Cost of sales increased in the 2001 periods due to the increase in depreciation and operating costs related to the additional cyclotrons in operation during the 2001 periods. Maintenance expenses also increased during the six months ended June 30, 2001 compared to the same period in 2000.

Selling, general and administrative (“SG&A”) expenses were \$2.5 million, or 19.0% of revenue, during the second quarter of 2001, compared to \$1.6 million, or 14.2% of revenue, during the second quarter of 2000, an increase of \$900,000 or 56.3%. For the first half of 2001 SG&A expenses were \$5.1 million, or 19.0% of revenue, compared to \$3.5 million, or 15.2% of revenue, during the first half of 2000, an increase of \$1.6 million, or 45.7%. The increases in the 2001 periods were primarily due to an increase in advertising, marketing, customer service and cancer information expenses. These expenses were borne by Indigo under the terms of the Indigo Agreement during the 2000 periods. Additionally, bad debt expense increased, as the Company increased its allowance for doubtful accounts in recognition of both the move to direct sales and the lack of collection experience with the new non-exclusive distributors. Finally, compensation and benefits, and start up expenses associated with the Company’s PSP Project (see “*Liquidity and Capital Resources*” below), also increased during the 2001 periods.

The Company continues to expect that marketing expenses will increase on a year over year basis during 2001 as it supports its brand, and “seeding” versus other treatment options, in an attempt to increase demand for TheraSeed® implants. It is expected that this support will take the form of TheraSeed® brand advertising to consumers and physicians, clinical studies aimed at showing the superiority of TheraSeed® implants in the treatment of prostate cancer, technical field support to TheraSeed® customers and other customer service and patient information activities.

Research and development (R&D) expenses increased to \$723,000, or 5.5% of revenue, in the second quarter of 2001, from \$571,000, or 5.0% of revenue, in the second quarter of 2000. R&D expenses also increased during the first half of 2001, to \$1.5 million, or 5.8% of revenue in 2001 from \$900,000, or 4.0% of revenue, in 2000. The increase in R&D expenses was a result of the Company’s R&D initiatives, including restenosis studies carried out by the Atlanta Cardiovascular Research Institute (see below), and development efforts to improve the Company’s proprietary production processes. The Company’s research and development initiatives are intended to expand the application of Pd-103 to other oncological and non-oncological uses, and explore options for using the Company’s expertise and capabilities in other areas. Management plans to continue to increase efforts in research and development as its initiatives to diversify move forward and expects R&D expenditures to increase to as much as 7.5% of revenue in 2001. However, R&D spending is dependent on the complex scheduling of research and development activities in progress as well as the pursuit of other appropriate opportunities as they arise. Accordingly, R&D expenses may fluctuate significantly from period to period.

As part of its R&D initiatives, the Company has an agreement with the Atlanta Cardiovascular Research Institute (ACRI) to conduct pre-clinical animal studies addressing the use of Pd-103 for the prevention of restenosis. Restenosis is the reclosing of arteries that often occurs after coronary angioplasties. It is estimated that nearly one-third of the 650,000 coronary angioplasties performed in the United States each year fail or restenose within the first few months of the operation. In the first phase of the study, which began in April 2000, the Company delivered catheter-based Pd-103 devices to ACRI to demonstrate the effectiveness of Pd-103 in inhibiting restenosis-like changes in pig coronary arteries after balloon angioplasty. The

preliminary data from Phase I of the study, reported in August 2000, showed that the inhibitory effects of Pd-103 are similar to that of other emitters, both beta and gamma, with efficacy possibly achieved with a lower dose. At one month follow up, Phase I of the study suggested that use of the Company's proprietary Pd-103 source, TheraSource™, may allow for a more rapid healing of a treated vessel wall compared to other isotopes currently in use. Faster healing may lower the risk of late thrombosis or blood clotting. If further studies continue to demonstrate more rapid healing, it could be a significant advantage for TheraSource™, reducing the dangers of blood clots and the need for anticoagulant treatment. Based on the results of the studies thus far, the Company is continuing its pre-clinical animal studies, and expects longer-term data to be available later in 2001.

During the second quarter of 2001, the Company met with representatives of the U.S. Food and Drug Administration (FDA) to present the results of the pre-clinical animal studies, discuss further pre-clinical studies planned, and discuss the requirements and timing on proceeding with human clinical studies using TheraSource™. The Company is planning to enter human trials for coronary in-stent restenosis in late 2001 or early 2002. However, the commencement and completion of any human trials will be dependent upon receiving successful results from the ongoing additional pre-clinical animal studies, the submission and approval of an Investigational Device Exemption by the FDA, and evaluation of potential competing forms of treatment.

Other R&D efforts are also underway, including the use of Pd-103 in treating the wet form of age-related macular degeneration. This disease is a degeneration of eyesight that, in some cases, can lead to complete blindness. The Company has developed a prototype device for macular degeneration animal studies and expects to begin these studies during 2001.

Other income, comprised of interest income and non-operating expenses, was \$389,000 in the second quarter of 2001 compared to \$419,000 during the second quarter of 2000. For the first half of the year, other income was \$863,000 in 2001, compared to \$834,000 in 2000. The Company's investments consist primarily of short-term cash investments and high-credit quality municipal obligations, in accordance with the Company's investment policies. While additional funds were available for investment during the 2001 periods, the interest rate environment during 2001 has reduced the effective returns on a significant portion of the Company's investments. Funds available for investment have and will continue to be utilized for the Company's current and future expansion programs and research and development activities. As funds continue to be used for these programs and activities, and as interest rates continue to change, management expects other income to fluctuate accordingly.

The Company's effective income tax rate was approximately 36% for the quarter and six months ended June 30, 2001, compared to approximately 35% for the 2000 periods. This increase is a result of a reduction in tax credits generated by the Company's investments in its expansion projects and research activities during 2001. The Company's income tax rate in each period is lower than the statutory rates primarily due to the recognition of tax credits generated by the Company's investments in its expansion projects and research activities, and tax-exempt interest income.

Liquidity and Capital Resources

The Company had cash, short-term investments and marketable securities of \$48.7 million at June 30, 2001, compared to \$45.2 million at December 31, 2000. Marketable securities

consist primarily of short-term cash investments and high-credit quality municipal obligations, in accordance with the Company's investment policies. The increase in cash, short-term investments and marketable securities was a result of cash generated by operations, partially offset by capital expenditures. Working capital was \$57.9 million at June 30, 2001, compared to \$49.9 million at December 31, 2000. The Company also has an Unsecured Credit Agreement with a financial institution that provides for maximum borrowings of \$40.0 million under two lines of credit, and an additional uncommitted \$10.0 million line of credit. No borrowings were outstanding under the Unsecured Credit Agreement as of June 30, 2001.

Cash generated by operations was \$7.7 million and \$13.5 million during the first half of 2001 and 2000, respectively. Cash generated from operations consists of net earnings plus non-cash expenses such as depreciation, amortization and deferred income tax expense. Depreciation and amortization increased to \$2.9 million in the first half of 2001 from \$2.5 million in the first half of 2000. The increase in depreciation and amortization was primarily a result of the increase in the number of cyclotrons that were operational during 2001. Additionally, \$1.3 million in cash was absorbed by an increase in accounts receivable during the first half of 2001, as the Company's accounts receivable base changed as a result of its direct to customer sales and non-exclusive distribution agreements. In the first half of 2000, a decrease in accounts receivable generated \$2.0 million as Indigo paid its 1999-year end revenue sharing balance. \$2.9 million was also utilized to pay income taxes in the first half of 2001, compared to \$361,000 in the first half of 2000.

The Company's primary use of cash in the first half of 2001 and 2000 related to capital spending to increase manufacturing capacity. Capital expenditures totaled \$4.3 million and \$6.8 million during the first half of 2001 and 2000, respectively. The Company expects that the significant portion of capital expenditures in 2001 will relate to its DOE Project (see below).

The U.S. Department of Energy (DOE) has granted Theragenics access to unique DOE technology, known as the Plasma Separation Process (PSP), for use in production of isotopes, including Pd-103 (the "PSP Project"). This technology venture represents part of a DOE initiative to redirect Cold War assets to peacetime use and cushion the economic impact of U.S. Defense Department cutbacks. The Company expects that the use of the PSP technology could significantly increase its Pd-103 capacity and allow for expanded use of Pd-103 and TheraSeed® beyond treatment of prostate cancer to new medical applications. The Company also believes that the PSP Project may allow it to explore options for applying this technology to other uses, including the production of isotopically engineered materials for use in medical and non-medical applications, though there are no assurances that this will be achieved. The Company is constructing a facility in the Oak Ridge, Tennessee area to house the equipment, infrastructure and work force necessary to support the production of isotopes, including Pd-103, using this DOE technology. Construction costs of approximately \$21.4 million have been incurred on the PSP Project through June 30, 2001, and the Company expects to additionally invest between \$3.6 million and \$8.6 million through 2001 to complete this manufacturing and R&D facility.

The PSP Project is expected to become operational in the second half of 2001, though no revenues are expected to be generated from the PSP Project in 2001. Accordingly, the PSP Project is expected to increase operating expenses by up to \$1.0 million in the second half of 2001. Additionally, costs to be incurred in the production of stable isotopes could require an investment in inventory of up to \$5.0 million. This inventory investment could be significantly less, depending upon the type of isotope produced.

As part of the PSP Project, the Company has leased land in the Oak Ridge, Tennessee area

and equipment previously used by the government to produce isotopes. As a result of the sensitive nature of the equipment, the specialized technology involved and the restrictions on access to unique DOE-operated facilities, the Company has contracted with the DOE's primary contractor for the Oak Ridge government installation to handle certain technical and operational services that are critical to the project, including moving, reassembling and recommissioning equipment currently in storage, designing and fabricating new parts and modifications to the equipment and DOE facilities; and operating and providing ongoing access to the DOE facilities. The success of the project is dependent on the continued cooperation of the DOE and its primary contractor, which could be adversely affected by future changes in governmental program priorities and funding. If the equipment cannot be moved and recommissioned successfully, if there are problems with the operation or modification of the DOE-operated facilities, or if unforeseen challenges arise, the project may not be successful or the costs or timeliness associated with the project could exceed current estimates. Additionally, as a result of the sensitive nature of the PSP equipment and the specialized technology involved, the DOE can terminate the Company's access in the event of national emergency or in the interest of national defense, or require the Company to perform work involving programmatic use of the technology for the DOE in connection with carrying out its governmental mission. The Company would be entitled to compensation in the event of termination in connection with national emergency or defense or for programmatic use of the technology for the DOE.

In addition to using cash to fund the PSP Project in 2001, the Company expects that R&D spending will continue to increase. Pre-clinical animal studies addressing the use of Pd-103 for the prevention of restenosis are underway, and the Company is working toward beginning human clinical trials in late 2001 or early 2002. Other R&D activities are also occurring (see "*Results of Operations*", above). The Company expects that R&D expense spending may total up to approximately 7.5% of revenue in 2001, but could vary depending on the scheduling and progress of R&D activities as well as the pursuit of currently unforeseen opportunities.

Cash provided by financing activities was \$129,000 and \$64,000 in the first half of 2001 and 2000, respectively, consisting of cash proceeds from the exercise of stock options and the Company's Employee Stock Purchase Plan.

The Company believes that current cash and investment balances, cash from future operations and credit facilities, will be sufficient to meet its currently anticipated working capital and capital expenditure requirements. In the event additional financing becomes necessary, management may choose to raise those funds through other means of financing as appropriate.

Forward Looking and Cautionary Statements

This document contains certain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 including, without limitation, statements regarding sales, marketing and distribution efforts, sales mix, effectiveness of non-exclusive distribution agreements, pricing for TheraSeed®, future cost of sales, R&D efforts and expenses, inventory investment, SG&A expenses, other income, timing and ultimate outcome of the Company's activities in restenosis, macular degeneration and other diversification efforts, potential new products and opportunities, the PSP Project, and the sufficiency of the Company's liquidity and capital resources. From time to time, the Company may also make other forward-looking statements relating to such matters as well as anticipated financial performance, business prospects, technological developments, research and development activities and similar matters.

These forward-looking statements are subject to certain risks, uncertainties and other factors which could cause actual results to differ materially from those anticipated, including risks associated with research and development activities, including animal studies and clinical trials related to new products, risks associated with new product development cycles, effectiveness and execution of marketing and sales programs of Theragenics and its non-exclusive distributors, potential costs and delays in capacity expansion and start-up, (especially as it relates to the PSP Project), the actual start-up for the PSP Project, potential changes in product pricing and competitive conditions, continued acceptance of TheraSeed® by the market, execution and effectiveness of competitors, management of growth, acceptance and efficacy of Pd-103 for other applications, adverse changes in governmental program priorities and budgetary funding by the relevant governmental authorities, potential costs and delays in the startup and refinement of technology and related equipment, potential equipment failure, potential inability to obtain, construct or install necessary parts or modifications to production equipment or facilities, government regulation of the therapeutic radiological pharmaceutical and device business, and potential changes in third-party reimbursement. All forward looking statements and cautionary statements included in this document are made as of the date hereby based on information available to the Company as of the date hereof, and the Company assumes no obligation to update any forward looking statement or cautionary statement.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

The Company's market risk exposure related to market risk sensitive financial instruments is not material. As of June 30, 2001, there were no outstanding borrowings under the Company's Unsecured Credit Agreement.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings.

See Note D to the Company's financial statements included in Item 1 of this report, which is incorporated by reference hereby.

Item 4. Submission of Matters to a Vote of Securities Holders
