If the ending level is less than the threshold level, you will have 1-to-1 downside exposure to the decrease in the level of the Index in excess of the buffer amount and will lose some, and possibly up to 85%, of the face amount of your securities at maturity.

The estimated initial value of the securities on the pricing date is expected to be between \$913.00 and \$963.00 per security, which will be less than the original offering price.
