MANAGER’S COMMENTARY

The pile-driver across the road is making concentric ripples in my cup of Oolong tea. Last week I watched the ground-breaking ceremony for what will be the world’s tallest building. One thousand multi-colored balloons were released and floated by existing, unoccupied towers.

Recently, Chinese stockmarkets have performed fairly well (your Fund is up 9.76% year-to-date) so such events merit caution, and we are selling the textile company which has decided to invest in the Mori building — see below. But we have yet to see any big shift of global portfolio assets to China. We do not see widespread signs of undue exuberance (the odd landmark building aside) and are still able to find growth companies at low prices and decent yields. So, with uncertainty in international politics and low growth in developed economies, investing in China remains attractive. One result of this uncertainty is that appreciation of the undervalued Chinese currency will probably be delayed. It is difficult for the U.S. to support actively Japanese calls for renminbi revaluation when it needs Chinese help with Iraq and North Korea.

We have a new theory regarding investment in China — the ‘hope curve’. It applies to industries and specific stocks. Enthusiasm for China’s automotive industry is at a high. Spurred by the effect of falling import tariffs and prices, year-over-year sales of sedans grew by a startling 120% in January. However every car maker we meet plans huge capacity increases, so overcapacity and disappointment seem likely in 2004. We have taken profits on assembler **Brilliance Auto** but kept leading tire maker **Cheng Shin**.

Last year cellular phones were in favour. In 2003, if the expansion plans of all local handset assemblers are combined, total capacity will increase to about 100 million sets, excluding imports. This compares to local demand of around 70 million sets. Other sectors popular in recent years have included telecom services, the power industry, roads and property. The problem is that many Chinese companies are quick to enter any ‘hot’ sector. Often these are state-owned companies unworried by Internal Return Rate calculations. With competing central and provincial power bases in China, even apparent monopolies can prove only temporary.

The high point of the ‘hope curve’ for individual Chinese companies often occurs at, or just after, IPO. Hope for the new industry runs high, brokerage coverage increases and the price-to-earnings ratio rises. Then comes hubris. Occasionally this is fraud (as with agri-business Euro-Asia) or an inappropriate investment (such as a maker of cell phone batteries buying a manufacturer of mini-cars). Sometimes it is ill-considered share placement (if you can borrow from a bank at 5% per year, why issue stock at five times earnings?). Or it could be government action (a new license is issued, a guarantee cancelled). Sometimes it is just that later market entrants catch up and force deep price cuts (in rural China, ‘cheap and nasty’ is still a sellable proposition). Many companies avert disaster by changing their management team or strategy, or by restructuring the balance sheet. Then the curve begins again.

MARKET STRATEGY

Your Fund is 94.4% invested with holdings in 59 companies. In February - following the ‘hope curve’ theory — your managers sold shares of **Brilliance Auto**, **Matsuoka** (textiles, security printing and the world’s tallest building), **Zhejiang Expressway** and **Chen Hsong** (injection mouldings). We added the newly listed **Sinotrans**, and bought electronics companies **TCL** and **BYD**, when pessimism as to their future prospects became overdone.

Source: Martin Currie Inc

In February your fund invested \$2.3 million for 20% of Tomoike Industrial. Tomoike has manufacturing operations in Shanghai, Suzhou and Dongguan. The company has expanded into manufacturing backlight units for mobile phones and other, larger LCDs. So the investment will be used to increase manufacturing facilities. The company has been supplying major Japanese brands with parts and accessories for office and consumer equipment for over a decade.

Lower unit costs, higher productivity and quality standards drive Tomoike’s competitive position in the marketplace. The company is experiencing strong growth as a result of robust demand for its products as its customers continue to move their manufacturing bases into China. The entry valuation multiple is approximately half that at which similar listed companies trade. Tomoike expects to go public in 2004.

OBJECTIVE

The investment objective of the Fund is to achieve long term capital appreciation through investment in companies and other entities with significant assets, investments, production activities, trading or other business interests in China or which derive a significant part of their revenue from China.

The Board of Directors of the Fund has adopted an operating policy of the Fund, effective June 30, 2001, that the Fund will invest at least 80% of its assets in China companies. For this purpose, “China companies” are (i) companies for which the principal securities trading market is in China; (ii) companies for which the principal securities trading market is outside of China or in companies organised outside of China, that in both cases derive at least 50% of their revenues from goods or services sold or produced, or have a least 50% of their assets in China; and (iii) companies organized in China. Under the policy, China will mean the People’s Republic of China, including Hong Kong, and Taiwan. The Fund will provide its stockholders with at least 60 days’ prior notice of any change to the policy described above.

The fundamental policy, which applies to not less than 65% of the Fund’s assets as set out in the Fund’s prospectus dated July 10, 1992, remains in place. The fundamental policy is the same as the operating policy set out above, except that China only includes the People’s Republic of China.
