TECHNIP-COFLEXIP

PRESS RELEASE

Paris-La Défense, February 1st, 2002

TECHNIP-COFLEXIP: SUCCESSFUL START-UP AND INAUGURATION OF THE COKE CALCINER PLANT OF ALBA IN BAHRAIN

TECHNIP-COFLEXIP (NYSE: Ticker TKP, Euronext: 13170)

Following successful test runs on performance and reliability carried out during 30 consecutive days of production, the Bahrain petroleum coke calcining plant project handled by TECHNIP-COFLEXIP was completed on January 20, 2002.

The official inauguration ceremony of the plant was held on January 30, 2002, in the presence of the Prime Minister of Bahrain, the Minister of Oil and Chairman of Aluminium Bahrain and Mr.Valot, Chairman of Technip-Coflexip's Management Board.

This lump sum turnkey project, worth about 220 million euros, was awarded in April 1999 by Aluminium Bahrain (ALBA) to Technip-Coflexip and was executed by its engineering center based in Düsseldorf, Germany.

Under the terms of the contract, Technip-Coflexip designed and built 2 grassroots petroleum calcining units of 450, 000 ton/year and 4 seawater desalination lines (41.000 m3/day) at Sitra, near Manama.

The major portion of calcinated coke will be used in making anodes in Alba's electrolysis plant and about 200,000 tons will be exported per year. The gas from furnaces will be burnt and the generated heat will feed boilers to produce steam which will be used by the seawater desalination lines. The facilities include a 20,000 m3 reservoir of drinking water for the Bahrain public distribution network.

ALBA is a major aluminium producer in the Middle East with a current production of 500,000 tons a year.
