On July 26, 2000, GPUN filed suit in the United States Court of Claims seeking to recover damages as a result of the DOE's failure to commence disposal of GPUN's spent nuclear fuel on January 31, 1998, as required by the terms of the Standard Contract between GPUN and DOE. The complaint seeks damages from the Government in an amount to be determined at trial. GPUN has alleged that it is entitled to damages attributable to operations at both TMI-1 and Oyster Creek. The Government has not yet answered the complaint. There can be no assurance as to the outcome of this matter.

GPU, Inc. and consolidated affiliates have approximately 14,100 employees worldwide, of whom 10,000 are employed in the US, 3,600 are in the United Kingdom (UK) and the remaining 500 are in South America and Australia. The majority of the US workforce is employed by the GPU Energy companies (4,880) and MYR (4,831), of which approximately 2,900 and 4,000, respectively, are represented by unions for collective bargaining purposes. In the UK, approximately 2,300 GPU Power UK employees are represented by unions, and the terms and conditions of various bargaining agreements are generally reviewed annually, on April 1. The JCP&L, Met-Ed and Penelec collective bargaining agreements with the International Brotherhood of Electrical Workers expire on October 31, 2002, May 1, 2003 and May 14, 2002, respectively. Penelec's collective bargaining agreement with the Utility Workers Union of America expires on June 30, 2001.

In January 2001, the GPU Energy companies announced that they were offering Voluntary Enhanced Retirement Programs (VERP) to certain bargaining unit employees in Pennsylvania. Approximately 240 employees (Met-Ed 130 employees; Penelec 110 employees) are eligible for the VERP. If all of the eligible employees accept the offer, a pre-tax charge of approximately $23 million (Met-Ed $12 million; Penelec $11 million) would be recorded in 2001 earnings for the cost of pension and other postretirement benefits, exclusive of any severance benefits that would be paid to those employees.

During the normal course of the operation of its businesses, in addition to the matters described above, GPU is from time to time involved in disputes, claims and, in some cases, as a defendant in litigation in which compensatory and punitive damages are sought by the public, customers, contractors, vendors and other suppliers of equipment and services and by employees alleging unlawful employment practices. While management does not expect that the outcome of these matters will have a material effect on GPU's financial position or results of operations, there can be no assurance that this will continue to be the case.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

5. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

MATERIALS & SERVICES: Expenditures for services and expenses of materials management, purchasing and stores personnel, exempt materials, small tools and work equipment. Charged to construction based on the related cost of materials charged to construction work orders.

CONSTRUCTION INDIRECTS: Costs which pertain to construction work but which are impractical for direct-charging to construction work orders. Construction Indirects include the GPU Service Company labor and benefit costs of designers, engineers, and project management personnel plus the construction portion of facility costs, telecommunications costs, and general liability insurance. This overhead is added by means of a percentage applied to a work order's direct labor and contractor costs.

ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION: Cost of money charged directly to construction. The AFUDC rate is applied to individual construction work orders totaling $1.00 or more which have been under construction for 30 days or more except for purchases of automotive and certain general plant equipment for which no AFUDC is charged. The accrual rate is applied to the cumulative monthly construction work order balances, including previously accrued AFUDC compounded semi-annually.

OUTSIDE PROFESSIONAL SERVICES: Expenditures for services and expenses of engineers, management and supervisory personnel. All expenses are directly charged to construction.

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)	Amount (b)	Capitalization Ratio(Percent) (c)	Cost Rate Percentage (d)
1	Average Short-Term Debt & Computation of Allowance text	S 68,354,688		
2	Short-term Interest			s 6.81
3	Long-Term Debt	D 646,914,205	56.33	d 7.48
4	Preferred Stock	P		p
5	Common Equity	C 501,444,282	43.67	c 11.25
6	Total Capitalization	1,148,358,487	100.00 100%	
7	Average Construction Work in Progress Balance	W 22,710,162		

2. Gross Rate for Borrowed Funds $s\left(\frac{S}{W}\right) + d\left(\frac{D}{D+P+C}\right)\left(1 - \frac{S}{W}\right)$ 6.81

3. Rate for Other Funds $\left[1 - \frac{S}{W}\right]\left[p\left(\frac{P}{D+P+C}\right) + c\left(\frac{C}{D+P+C}\right)\right]$ 0.00

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 6.81
   b. Rate for Other Funds - 0.00

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.

CAPITAL STOCKS (Account 201 and 204) (Continued)

3. Give particulars (details) concerning shares of any class and series of stock authorized to be issued by a regulatory commission which have not yet been issued.
4. The identification of each class of preferred stock should show the dividend rate and whether the dividends are cumulative or non-cumulative.
5. State in a footnote if any capital stock which has been nominally issued is nominally outstanding at end of year.
Give particulars (details) in column (a) of any nominally issued capital stock, reacquired stock, or stock in sinking and other funds which is pledged, stating name of pledgee and purposes of pledge.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

Basis of Allocation of Consolidated Tax:

For the taxable year 2000, the consolidated Federal Income Tax liability was allocated in accordance with an agreement approved by the Securities and Exchange Commission under the Public Utility Holding Company Act of 1935 (SEC Holding Company Release No. 21358). The agreement provides that there shall be allocated to each company in the consolidated group, except the holding company, the tax benefits of its own net operating losses. The tax benefits of the holding company's deductions will be allocated among the subsidiaries in proportion to the holding company's average common stock equity investment in each company during the year. The prior allocation of the holding company deductions under Rule 45 (b) (6) for years prior to 1979, however, will not be adjusted in connection with allocating operating loss carrybacks.

A company which does not have a net operating loss of its own and which would have an income tax liability (allowing for its own investment tax credits which it could utilize on a separate return basis), were the liability not offset by net operating losses of the other companies in the group, will pay the amount of such tax reduction to the companies, other than the holding company, whose net operating losses are used in the consolidated return. Such payments will be divided among the loss companies in proportion to the use of their net operating losses.

If there is a consolidated minimum tax arising from "preference" items as defined in the Internal Revenue Code, such minimum tax will be independently allocated among the companies in the ratio of their respective preference incomes.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

FOOTNOTE DATA

Schedule Page: 266 Line No.: 8 Column: i

AVERAGE PERIOD OF ALLOCATION TO INCOME

Investment Tax Credit - 4% and 10%

The Respondent is (1) charging to income an amount equivalent to the current investment tax credit, (2) offsetting such charge by a credit to a deferred credit and (3) amortizing the deferred credit so created by a ratable flow-through to income over the useful life of the property. On March 9, 1972, General Public Utilities Corporation filed with the District Director of Internal Revenue, Manhatten District, on behalf of its affiliated companies (the Respondent being one of the affiliated), an election under paragraph (2) of Section 46 (e) of the Internal Revenue Code of 1954, as amended, for allowance, with respect to public utility property, of the credit allowed by Section 38 of the Code. Such election provides (a) to reduce the cost of service for ratemaking purposes or in its regulated books of account by no more than ratable portion of the credit allowable by Section 38, and (b) not to reduce the base to which its rate of return is applied for ratemaking purposes by any portion of the credit allowable by Section 38.

ELECTRIC OPERATING REVENUES (Account 400)

1. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The average number of customers means the average of twelve figures at the close of each month.
3. If increases or decreases from previous year (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.

ELECTRIC OPERATING REVENUES (Account 400)

4. Commercial and industrial Sales, Account 442, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 1000 Kw of demand. (See Account 442 of the Uniform System of Accounts. Explain basis of classification in a footnote.)
5. See pages 108-109, Important Changes During Year, for important new territory added and important rate increase or decreases.
6. For Lines 2,4,5,and 6, see Page 304 for amounts relating to unbilled revenue by accounts.
7. Include unmetered sales. Provide details of such Sales in a footnote.

Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for long-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

	Subtotal RQ			0	0	0
	Subtotal non-RQ			0	0	0
	Total			0	0	0

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,line 24.
10. Footnote entries as required and provide explanations following all required data.

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for long-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

	Subtotal non-RQ			0	0	0
	Total			0	0	0

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,line 24.
10. Footnote entries as required and provide explanations following all required data.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	/ /
2. Total Regular Full-Time Employees	0
3. Total Part-Time and Temporary Employees	0
4. Total Employees	0

FOOTNOTE DATA

Schedule Page: 320 Line No.: 169 Column: b

As a result of an expanded service company approach for which Securities and Exchange Commission approval is being sought, substantially all of Met-Ed's personnel, including the union personnel, were transferred to GPU Service Inc., effective January 1, 1999. For this purpose, GPU Service Inc. has created an Operations Division, which includes substantially all of the employees who were transferred to GPU Service Inc.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW) Average Monthly NCP Demand (e)	Actual Demand (MW) Average Monthly CP Demand (f)
1	York Haven Power Company	RQ				
2	Pennsylvania Power & Light	OS				
3	PECO Energy	OS				
4	West Penn Power Company	OS				
5	AEP Power Marketing	OS				
6	Allegheny Power System	OS				
7	Amergen	OS				
8	Constellation Power Source	OS				
9	DTE Co-Energy	OS				
10	Detroit Edison Co	OS				
11	Enron Power Marketing	OS	1			
12	Edison Mission	OS				
13	Koch Power Service	OS				
14	Merrill Lynch Capital Service	OS				
	Total					

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows:
LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

FERC Rate Schedule of Tariff Number (e)	Point of Receipt (Substation or Other Designation) (f)	Point of Delivery (Substation or Other Designation) (g)	Billing Demand (MW) (h)	TRANSFER OF ENERGY		Line No.

(Including transactions reffered to as 'wheeling')

8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (11011) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. Provide total amounts in column (i) through (n) as the last Line. Enter "TOTAL" in column (a) as the Last Line. The total amounts in columns (i) and (j) must be reported as Transmission Received and Delivered on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

Net impact of Phase II electric restructuring order from the PA Public Utility Commission dated December 20, 2000.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available infonnation called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

REGULATORY COMMISSION EXPENSES (Continued)

3. Show in column (k) any expenses incurred in prior years which are being amortized. List in column (a) the period of amortization.
4. List in column (f), (g), and (h) expenses incurred during year which were charged currently to income, plant, or other accounts.
5. Minor items (less than $25,000) may be grouped.

FOOTNOTE DATA

Schedule Page: 350 Line No.: 5 Column: a

Amounts identified for individual cases do not include all costs incurred. Only incremental costs above a certain threshold are included.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

Line No.	Classification (a)	Direct Payroll Distribution (b)	Allocation of Payroll charged for Clearing Accounts (c)	Total (d)

FOOTNOTE DATA

Schedule Page: 354 Line No.: 96 Column: d

As a result of an expanded service company approach for which Securities and Exchange Commission approval is being sought, substantially all of Met-Ed's personnel, including the union personnel, were transferred to GPU Service Inc., effective January 1, 1999. For this purpose, GPU Service Inc. has created an Operations Division, which includes substantially all of the employees who were transferred to GPU Service Inc.

20	TOTAL (Enter Total of lines 9, 10, 14, 18 and 19)	10,065,736			

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirments Sales for Resale & Associated Losses (c)	MONTHLY PEAK		
				Megawatts (See Instr. 4) (d)	Day of Month (e)	Hour (f)
29	January	895,401	218,383	2,284	18	800

41	TOTAL	10,065,736	2,114,663			

FOOTNOTE DATA

Schedule Page: 401 Line No.: 16 Column: b

Does not include Network Integrated Transmission Services MWH, which will be reported for Metropolitan Edison Company by PJM Interconnection in FERC Form 582. Lines 16 and 17, column b.

Schedule Page: 401 Line No.: 25 Column: b

Energy Furnished without Charge:

Represents Mwh included in Line 22, Sales to Ultimate Customers, that were delivered and billed to Shopping Customers. The providers of this energy are external suppliers.

BLANK PAGE

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Line No.	DESIGNATION		VOLTAGE (KV) (Indicate where other than 60 cycle, 3 phase)		Type of Supporting	LENGTH (Pole miles) (In the case of underground lines report circuit miles)		Number Of Circuits

36					TOTAL	1,235.82	170.23	32

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Size of Conductor and Material (i)	COST OF LINE (Include in Column (j) Land, Land rights, and clearing right-of-way) Land (j)	Construction and Other Costs (k)	Total Cost (l)	EXPENSES, EXCEPT DEPRECIATION AND TAXES Operation Expenses (m)	Maintenance Expenses (n)	Rents (o)	Total Expenses (p)	Line No.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

SUBSTATIONS (Continued)

5. Show in columns (l), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.
6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Line No.	Item (a)	Number of Watt-hour Meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (in (MVa) (d)
1	Number at Beginning of Year	516,174	154,252	5,924
2	Additions During Year			
3	Purchases	20,930	6,034	317

FOOTNOTE DATA

Schedule Page: 429 Line No.: 3 Column: b

Represents watt-hour meters and line transformers installed during the year. Meters and transformers, at time of purchase, are included in the inventory account of GPU Service Company, an associated company. At time of installation, the equipment is transferred/sold to Met-Ed.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities					
2	Water Pollution Control Facilities				5,051,464	5,051,464
3	Solid Waste Disposal Costs				102,825	102,825
4	Noise Abatement Equipment	53,338			53,338	53,338
5	Esthetic Costs				36,211	36,211
6	Additional Plant Capacity					
7	Miscellaneous (Identify significant)					
8	TOTAL (Total of lines 1 thru 7)	53,338			5,243,838	5,243,838
9	Construction Work in Progress

Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	213,911	
2	Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs	77,721	
3	Fuel Related Costs		
4	Operation of Facilities		
5	Fly Ash and Sulfur Sludge Removal		
6	Difference in Cost of Environmentally Clean Fuels		
7	Replacement Power Costs		
8	Taxes and Fees		
9	Administrative and General		
10	Other (Identify significant)		
11	TOTAL	291,632	

FOOTNOTE DATA

Schedule Page: 431 Line No.: 11 Column: b

The estimates reported in column (b) are based on the following:

Line 1 is based on year-end environmental plant balances multiplied by applicable depreciation accrual rates.

Line 2 is based on ratio of environmental capital expenditures, as related to total capital expenditures multiplied by applicable FERC expense accounts.

REPORT OF INDEPENDENT ACCOUNTANTS

To the Board of Directors
Pennsylvania Electric Company
Reading, Pennsylvania

We have audited the balance sheets of Pennsylvania Electric Company as of December 31, 2000 and 1999, and the related statements of income for the years then ended, and the statements of retained earnings and of cash flows for the year ended December 31, 2000 included on pages 110 through 123.57 of the accompanying Federal Energy Regulatory Commission Form No. 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 1, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States of America.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Pennsylvania Electric Company as of December 31, 2000 and 1999, the results of its operations for the years then ended, and its changes in retained earnings and in cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is solely intended for the information and use of the board of directors and management of Pennsylvania Electric Company and the Federal Energy Regulatory Commission.

PricewaterhouseCoopers LLP

January 31, 2001

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)
(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;

(4) "Person" means an individual or a corporation;

(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;

(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."

(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:

(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

P. R. Chatman
Assistant Comptroller - Pennsylvania Electric Company
310 Madison Avenue
Morristown, NJ 07962-1957

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Commonwealth of Pennsylvania
June 11,1919

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric service in the Commonwealth of Pennsylvania and, as lessee of the Waverly Electric Light and Power Company, electric service in the Village of Waverly, New York and vicinity.

5. Have you engaged as the principal accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the repondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiearies for whom trust was maintained, and purpose of the trust.

GPU, Inc., parent company, owns 100% of the issued and outstanding common stock of the respondent.

CORPORATIONS CONTROLLED BY RESPONDENT

1. Report below the names of all corporations, business trusts, and similar organizations, controlled directly or indirectly by respondent at any time during the year. If control ceased prior to end of year, give particulars (details) in a footnote.
2. If control was by other means than a direct holding of voting rights, state in a footnote the manner in which control was held, naming any intermediaries involved.
3. If control was held jointly with one or more other interests, state the fact in a footnote and name the other interests.

Definitions
1. See the Uniform System of Accounts for a definition of control
2. Direct control is that which is exercised without interposition of an intermediary.
3. Indirect control is that which is exercised by the interposition of an intermediary which exercises direct control.
4. Joint control is that in which neither interest can effectively control or direct action without the consent of the other, as where the voting control is equally divided between two holders, or each party holds a veto power over the other. Joint control may exist by mutual agreement or understanding between two or more parties who together have control within the meaning of the definition of control in the Uniform System of Accounts, regardless of the relative voting rights of each party.

EXECUTIVE COMPENSATION

The following table sets forth remuneration paid to the Chief Executive Officer and the four other most highly compensated executive officers of JCP&L, Met-Ed and Penelec for the year ended December 31, 2000.

The managements of JCP&L, Met-Ed and Penelec were combined in a 1996 reorganization. Accordingly, the amounts shown below represent the aggregate remuneration paid to such executive officers by JCP&L, Met-Ed and Penelec during 1999, 1998 and 1997.

Remuneration of Executive Officers

SUMMARY COMPENSATION TABLE

		Annual Compensation			Long-Term Compensation Awards	Long-Term Compensation Payouts	
Name and Principal Position	Year	Salary($)	Bonus($)	Other Annual Compensation($)(1)	Securities Underlying Options Granted(#)	LTIP Payouts ($)(2)	All Other Compensation ($)
M. J. Chesser	2000	252,404	-	-	27,600	-	57,605(3)
President and Chief	1999	-	-	-	-	-	-
Executive Officer	1998	-	-	-	-	-	-
M. J. Connolly (4)	2000	185,385	25,000	-	6,500	-	15,319(5)
Vice President - Law	1999	168,846	105,000	-	1,400	-	9,398
	1998	150,000	35,000	-	-	-	6,782
R. S. Zechman	2000	184,615	-	-	6,300	33,432	29,172(6)
Vice President	1999	170,000	120,000	-	1,400	21,043	22,083
	1998	170,000	60,000	538	4,850	18,669	17,623
C. A. Mascari	2000	170,000	-	-	5,500	33,784	36,875(7)
Vice President -	1999	170,000	112,000	-	1,400	20,218	27,090
Technical Services	1998	170,000	50,000	-	4,850	21,002	20,762
C. Brooks	2000	170,000	-	-	5,200	33,960	22,943(8)
Vice President	1999	170,000	90,000	460	1,400	20,424	19,041
	1998	170,000	50,000	592	4,850	20,536	15,593

(1) Consists of earnings on "Long-Term Incentive Plan" ("LTIP") compensation paid in the year the award vests.

(2) Amounts reported in this column for the year 2000 represent each Named Executive Officer's 1995 performance-based restricted stock award that vested on June 4, 2000, at 90% of target, in accordance with the 1990 Stock Plan. The restricted units issued each year since 1995 under the 1990 Stock Plan have been performance based. Dividends are earned on the aggregate restricted units awarded under the 1990 Stock Plan and reinvested in additional units.

Amounts reported in this column for the years 1998 and 1999 consist of Performance Cash Incentive Awards paid on the 1993 and 1994 restricted unit awards, respectively, which vested under the 1990 Stock Plan. These amounts were designed to compensate recipients of restricted unit awards for the amount of federal and state income taxes that are payable upon vesting of such awards. There was no Performance Cash Incentive Award asscciated with the vesting of the restricted units awarded in 1995 that vested in 2000.

The aggregate number and value (based on the stock price per share at December 31, 2000) of unvested and deferred vested stock-equivalent restricted units (including reinvested dividend equivalents) at the end of 2000 were:

	Aggregate Units	Aggregate Value
M. J. Chesser	4,032	$148,428
M. J. Connolly	2,254	82,975
R. S. Zechman	8,125	299,102
C. A. Mascari	9,313	342,835
C. Brooks	7,572	278,744

(3) Consists of GPU's matching contributions under the non-qualified deferred compensation plan ($3,296), above-market interest accrued on the retirement portion of deferred compensation ($16), earnings on LTIP compensation not paid in the current year ($4,293), and signing bonus received upon employment ($50,000).

(4) Mr. Connolly was compensated by GPU Service, Inc. for his overall service on behalf of GPU and accordingly was not compensated directly by the other subsidiary companies for his services.

(5) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,785), above-market interest accrued on the retirement portion of deferred compensation ($83), and earnings on LTIP compensation not paid in the current year ($3,651).

(6) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($5,385), above-market interest accrued on the retirement portion of deferred compensation ($1,036), and earnings on LTIP compensation not paid in the current year ($15,951).

(7) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,480), above-market interest accrued on the retirement portion of deferred compensation ($7,045), and earnings on LTIP compensation not paid in the current year ($18,550).

(8) Consists of GPU's matching contributions under the Savings Plan ($6,800), above-market interest accrued on the retirement portion of deferred compensation ($1,136), and earnings on LTIP compensation not paid in the current year ($15,007).

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
Stock book not closed	Total: 5,290,596 By Proxy: 5,290,596	May 16, 2000 Morristown, NJ

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

6. Issued $50 million of Senior Notes on April 11,2000 as follows: variable rate Series E due April 11,2002 in the principal amount of $25 million at an initial rate of 6.42125% and variable rate Series E due October 11,2002 in the principal amount of $25 million at an initial rate of 6.47125%.

Issued $68 million of Senior Notes on August 4, 2000 as follows: 7.50% Series E due August 1,2005 in the principal amount of $33 million and 7.77% Series E due August 2,2010 in the principal amount of $35 million.

Penelec has authorization from the Pennsylvania Public Utility Commission (PaPUC) to issue and sell up to $157 million of Senior Notes. The Company has authorization to issue through December 31,2002.

7. None

8. Two labor agreements were negotiated during 1998 with the International Brotherhood of Electrical Workers (IBEW)Local 459 and with the Utility Workers Union of America (UWUA) Local 180.

-Penelec and IBEW Local 459 negotiated a four-year contract that became effective May 15, 1998. The contract provides for annual base wage increases and incentive compensation awards as follows:

May 15,1998: 2% wage increase with a 4% incentive compensation award (Prorated for the last six months of 1998)
May 15,1999: 2% wage increase with a 4% incentive compensation award
May 15,2000: 2% wage increase with a 4% incentive compensation award
May 15,2001: 2% wage increase with a 4% incentive compensation award

The incentive compensation payment of approximately $2.276 million was paid in March of 2000 for the successful attainment of goals for the plan year 1999.

-Penelec and UWUA Local 180 entered into a three-year contract that became effective July 1,1998. The contract provides for annual base wage increases and incentive compensation awards as follows:

July 1,1998: 2% wage increase with a 2% incentive compensation award (Prorated for the last six months of 1998)
July 1,1999: 2% wage increase with a 2% incentive compensation award
July 1,2000: 2% wage increase with a 2% incentive compensation award

The incentive compensation payment of approximately $.40 million was paid in March of 2000 for the successful attainment of goals for the plan year 1999.

Voluntary Enhanced Retirement Program: The Pennsylvania Electric Company d/b/a GPU Energy and IBEW Local 459 negotiated a Voluntary Enhanced Retirement Program (VERP) effective December 29,2000. The VERP will be offered to regular employees who are at least age fifty-five and have at least five years of creditable service as of March 31,2001. This program will be applied retroactively to employees who retired or terminated (not for

cause)on or after December 1,1999. The VERP will add five years to an employee's age and five years to an employee's creditable years of service for the purpose of calculating his or her pension benefit, in accordance with the existing provisions of the pension plan. To ensure continuity of operations and service, the company maintains the right to retain certain employees until March 31,2002.

9. For information with respect to material legal proceedings, reference is made to Note 12 (Commitments and Contingencies) of the Notes to Financial Statements beginning on page 122.

10. None

FOOTNOTE DATA

Schedule Page: 112 Line No.: 68 Column: d

The Notes to Financial Statements beginning on page 122 are an integral part of this Comparative Balance Sheet.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.

7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.

8. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.

9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.

10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

STATEMENT OF RETAINED EARNINGS FOR THE YEAR

1. Report all changes in appropriated retained earnings, unappropriated retained earnings, and unappropriated undistributed subsidiary earnings for the year.
2. Each credit and debit during the year should be identified as to the retained earnings account in which recorded (Accounts 433, 436 - 439 inclusive). Show the contra primary account affected in column (b).
3. State the purpose and amount of each reservation or appropriation of retained earnings.
4. List first account 439, Adjustments to Retained Earnings, reflecting adjustments to the opening balance of retained earnings. Follow by credit, then debit items in that order.
5. Show dividends for each class and series of capital stock.
6. Show separately the State and Federal income tax effect of items shown in account 439, Adjustments to Retained Earnings.
7. Explain in a footnote the basis for determining the amount reserved or appropriated. If such reservation or appropriation is to be recurrent, state the number and annual amounts to be reserved or appropriated as well as the totals eventually to be accumulated.
8. If any notes appearing in the report to stockholders are applicable to this statement, include them on pages 122-123.

STATEMENT OF CASH FLOWS

1. If the notes to the cash flow statement in the respondents annual stockholders report are applicable to this statement, such notes should be included in page 122-123. Information about non-cash investing and financing activities should be provided on Page 122-123. Provide also on pages 122-123 a reconciliation between "Cash and Cash Equivalents at End of Year" with related amounts on the balance sheet.
2. Under "Other" specify significant amounts and group others.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show on Page 122-123 the amount of interest paid (net of amounts capitalized) and income taxes paid.

Line No.	Description (See Instruction No. 5 for Explanation of Codes) (a)	Amounts (b)
1	Net Cash Flow from Operating Activities:

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

GPU, Inc. owns all the outstanding common stock of three domestic electric utilities -- Jersey Central Power & Light Company (JCP&L), Metropolitan Edison Company (Met-Ed) and Pennsylvania Electric Company (Penelec). These electric utilities are conducting business under the name GPU Energy and considered together are referred to as the "GPU Energy companies." GPU Capital, Inc. and GPU Electric, Inc. and their subsidiaries own, operate and fund the acquisition of electric distribution and gas transmission systems in foreign countries, and are referred to as "GPU Electric." GPU Electric's foreign utility companies include Midlands Electricity plc (conducting business as GPU Power UK); Empresa Distribuidora Electrica Regional S.A. (Emdersa); and GPU GasNet. GPU Power, Inc. and its subsidiaries (GPU Power) develop, own and operate generation facilities in foreign countries. Other subsidiaries of GPU, Inc. include GPU Advanced Resources, Inc. (GPU AR), which is involved in retail energy sales; GPU Telcom Services, Inc. (GPU Telcom), which is engaged in telecommunications-related businesses; MYR Group Inc. (MYR), which is a utility infrastructure construction services company; GPU Service, Inc. (GPUS), which provides legal, accounting, financial and other services to the GPU companies; GPU Diversified Holdings LLC; and GPU Nuclear, Inc. (GPUN). All of these companies considered together are referred to as "GPU."

In 2000, GPU, Inc. sold GPU PowerNet, its Australian electric transmission company, to Singapore Power International (SPI). In addition, GPU, Inc. sold GPU International, Inc. (GPUI) to Aquila Energy Corporation (Aquila). This sale included GPUI's interests in six domestic electric generating plants, and one development stage project. For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and revenues and expenses during the reporting period. Actual results could differ from those estimates.

SYSTEM OF ACCOUNTS

Certain reclassifications of prior years' data have been made to conform with the current presentation. The GPU Energy companies' accounting records are maintained in accordance with the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission (FERC) and adopted by the Pennsylvania Public Utility Commission (PaPUC) and the New Jersey Board of Public Utilities (NJBPU). GPU's accounting records also comply with the Securities and Exchange Commission's (SEC) rules and regulations.

CONSOLIDATION

The GPU consolidated financial statements include the accounts of its wholly-owned subsidiaries and any affiliates in which it has a controlling financial interest (generally evidenced by a greater than 50% ownership interest). All significant intercompany transactions and accounts are eliminated in consolidation. GPU also uses the equity method of accounting for investments in affiliates in which it has the ability to exercise significant influence.

GPU began accounting for GPU Power UK as a consolidated entity in the third quarter

of 1999, following its acq isition of the remaining 50% ownership interest from Cinergy Corp. (Cinergy).

REGULATORY ACCOUNTING

Statement of Financial Accounting Standards No. 71 (FAS 71), "Accounting for the Effects of Certain Types of Regulation," applies to regulated utilities that have the ability to recover their costs through rates established by regulators and charged to customers. The GPU Energy companies' transmission and distribution operations are currently accounted for under the provisions of FAS 71. In accordance with FAS 71, GPU has deferred certain costs pursuant to actions of the NJBPU and PaPUC and is recovering or expects to recover such costs in regulated rates charged to customers. Regulatory assets and liabilities are reflected net in the Deferred Debits and Other Assets section of the Consolidated Balance Sheets. For additional information about regulatory assets and liabilities, see Note 12, Commitments and Contingencies.

With the receipt of the NJBPU Summary Restructuring Order (Summary Order) in 1999 and the PaPUC Restructuring Orders (Restructuring Orders) in 1998, GPU determined that the GPU Energy companies' electric generation operations no longer met the criteria for the continued application of FAS 71, and therefore adopted, for that portion of its business, the provisions of Statement of Financial Accounting Standards No. 101 (FAS 101), "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71" and Emerging Issues Task Force Issue 97-4 (EITF)(Issue 97-4), Deregulation of the Pricing of Electricity - Issues Related to the Application of FASB Statement No. 71 "Accounting for the Effects of Certain Types of Regulation" and No. 101 "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71."

CURRENCY TRANSLATION

In accordance with Statement of Financial Accounting Standards No. 52 (FAS 52), "Foreign Currency Translation," balance sheet accounts of foreign operations are translated from foreign currencies into US dollars at year-end rates, while income statement accounts are translated at the average month-end exchange rates for the relevant period. The resulting translation adjustments are included in Accumulated other comprehensive income/(loss), net of deferred taxes, on the Consolidated Balance Sheets. Gains and losses resulting from foreign currency transactions are included in Net Income.

REVENUES

GPU recognizes operating revenues for services rendered to the end of the relevant accounting period. Therefore, the electric operating revenues of GPU Electric and the GPU Energy companies include an estimate for unbilled revenues.

MYR recognizes revenue on construction contracts using the percentage-of-completion accounting method determined in each case by the ratio of cost incurred to date on the contract (excluding uninstalled direct materials) to management's estimate of the contract's total cost. Contract cost includes all direct material, subcontract and labor costs and those indirect costs related to contract performance, such as supplies, tool repairs and depreciation. MYR charges selling, general and administrative costs, including indirect costs associated with maintaining district offices, to expense as incurred.

Provisions for estimated losses on uncompleted contracts are recorded in the period in which such losses are determined. Changes in estimated revenues and costs are recognized in the periods in which such estimates are revised. Significant claims are included in revenue in accordance with industry practice.

The asset, "Costs and estimated earnings in excess of billings on uncompleted contracts," represents revenues recognized in excess of amounts billed. The liability, "Billings in excess of costs and estimated earnings on uncompleted contracts," represents amounts billed in excess of revenues recognized.

CLASSIFICATION OF CURRENT ASSETS AND CURRENT LIABILITIES

The length of MYR's contracts vary, with some larger contracts exceeding one year. In accordance with industry practice, MYR includes in current assets and current liabilities amounts realizable and payable under contracts which may extend beyond one year.

DEFERRED COSTS

JCP&L recovers its prudently incurred generation-related costs, including nonutility generation (NUG) costs, through a Basic Generation Service (BGS) charge and a Market Transition Charge (MTC), and defers any differences between actual costs and amounts recovered from customers through rates. Met-Ed and Penelec use deferred accounting for the above-market portion of NUG costs which are collected through the Competitive Transition Charge (CTC).

On November 29, 2000, Met-Ed and Penelec filed a petition with the PaPUC seeking recovery of their power purchase costs in excess of established rate caps. Currently, Met-Ed and Penelec do not have authority to defer these costs for future recovery. The PaPUC consolidated this petition for consideration with the GPU/FirstEnergy Corp. (FirstEnergy) merger proceeding, which establishes a May 2001 date for a PaPUC order in both cases, based on the current merger procedural schedule.

UTILITY PLANT

Prior to the sale of the Oyster Creek Nuclear Generation Station (Oyster Creek) in 2000, the plant was written down to its sale price of $10 million. All other utility plant, including the GPU Energy companies' remaining generation plants, and additions are valued at cost. The assets of acquired companies are carried at their fair value as of the acquisition date, less accumulated depreciation.

DEPRECIATION

GPU generally provides for depreciation at annual rates determined and revised periodically, on the basis of studies, to be sufficient to depreciate the original cost of depreciable property over estimated remaining service lives, which are generally longer than those employed for tax purposes.

These rates, on an aggregate composite basis, resulted in annual rates as follows:

	GPU	JCP&L	Met-Ed	Penelec
2000	3.16%	3.30%	2.87%	2.72%
1999	2.96%	2.94%	3.01%	2.81%
1998	3.43%	3.65%	3.53%	3.25%

GPU GasNet uses the volumetric depreciation method to amortize the cost of its gas pipeline.

AMORTIZATION POLICIES

Accounting for TMI-2 and Forked River Investments:

At December 31, 2000, $55 million is included in Regulatory assets, net on the Consolidated Balance Sheets for JCP&L's investment in Three Mile Island Unit 2 (TMI-2). JCP&L is collecting annual revenues for the amortization of TMI-2 of $9.6 million. This level of revenue will be sufficient to recover the remaining investment by 2008. Met-Ed and Penelec have collected all of their TMI-2 investment attributable to retail customers. At December 31, 2000, $48 million is included in Regulatory assets, net on the Consolidated Balance Sheets for JCP&L's Forked River project. JCP&L is collecting annual revenues for the amortization of this project of $11.2 million, which will be sufficient to recover its remaining investment by 2006. Because JCP&L has not been provided revenues for a return on the unamortized balances of the damaged TMI-2 facility and the cancelled Forked River project, these investments are being carried at their discounted present values.

Nuclear Fuel:

Prior to the sale of Three Mile Island Unit 1 (TMI-1) in 1999 and Oyster Creek in 2000, the GPU Energy companies amortized nuclear fuel on a unit-of-production basis and rates were determined and periodically revised to amortize the cost of the fuel over its useful life.

At December 31, 2000 and 1999, the liability of the GPU Energy companies for future contributions to the Federal Decontamination and Decommissioning Fund for the cleanup of uranium enrichment plants operated by the Federal Government amounted to $22 million (JCP&L $14 million; Met-Ed $5 million; Penelec $3 million) and $25 million (JCP&L $15 million; Met-Ed $7 million; Penelec $3 million), respectively, and is primarily reflected in Deferred Credits and Other Liabilities - Other. Annual contributions, which began in 1993, are being made over a 15-year period. JCP&L is recovering these costs from customers through its BGS and MTC rates. Met-Ed and Penelec are not recovering these costs in rates.

Goodwill:

Goodwill, resulting from GPU's purchase of various businesses, is recorded on the Consolidated Balance Sheets and amortized to expense, on a straight-line basis, over its useful life not to exceed 40 years. Goodwill amortization expense amounted to $54.7 million, $51.6 million and $14 million for the years ended December 31, 2000, 1999 and 1998, respectively. GPU periodically reviews undiscounted projections of future cash flows from operations to assess whether any potential intangible impairment exists on its goodwill. For additional information of goodwill resulting from acquisitions, see Note 7, Acquisitions.

NUCLEAR FUEL DISPOSAL FEE

The GPU Energy companies are providing for estimated future disposal costs for spent nuclear fuel at Oyster Creek and TMI-1 in accordance with the Nuclear Waste Policy Act of 1982. The GPU Energy companies entered into contracts in 1983 with the US Department of Energy (DOE) for the disposal of spent nuclear fuel. For a discussion of the DOE's current inability to begin acceptance of spent nuclear fuel from the GPU Energy companies and other standard contract holders, see Note 12, Commitments and Contingencies.

The total liability under these contracts, including interest, at December 31, 2000, all of which relates to spent nuclear fuel from nuclear generation through April 1983, amounted to $210.1 million (JCP&L $157 million; Met-Ed $35.4 million; Penelec $17.7 million), and is reflected in Deferred Credits and Other Liabilities - Other. As the actual liability is substantially in excess of the amount recovered to date from ratepayers, the GPU Energy companies have reflected such excess in Regulatory assets, net.

The distribution rates presently charged to customers provide for the collection of these costs, plus interest, over a remaining period of seven years for JCP&L. For Met-Ed and Penelec, these costs are a component of their respective CTC. The GPU Energy companies' current rates provide for the recovery of costs for spent nuclear fuel disposal costs resulting from nuclear generation subsequent to April 1983.

INCOME TAXES

GPU files a consolidated federal income tax return. All participants are jointly and severally liable for the full amount of any tax, including penalties and interest, which may be assessed against the group.

Deferred income taxes, which result primarily from purchase accounting adjustments, liberalized depreciation methods, deferred costs, decommissioning funds and discounted Forked River and TMI-2 investments, reflect the impact of temporary differences between the amounts of assets and liabilities recognized for financial reporting purposes and the amounts recognized for tax purposes. Investment tax credits (ITC) are amortized over the estimated service lives of the related facilities.

CARRYING AMOUNTS OF FINANCIAL INSTRUMENTS

The carrying amounts of Temporary cash investments, Special deposits, Securities due within one year and Notes payable on the Consolidated Balance Sheets approximate fair value due to the short period to maturity. The carrying amounts of the Nuclear decommissioning trusts and Nuclear fuel disposal trust, whose assets are invested in cash equivalents and debt and equity securities, also approximate fair value.

DERIVATIVE INSTRUMENTS

GPU's use of derivative instruments is intended to manage the risk of price, interest rate and foreign currency fluctuations. GPU does not intend to hold or issue derivative instruments for trading purposes.

Commodity Derivatives:

The GPU Energy companies use New York Mercantile Exchange (NYMEX) futures and Over-the-Counter (OTC) forward contracts and options on forward contracts to manage the risk of fluctuations in the market price of electricity. The GPU Energy companies also manage the natural gas requirements of certain NUG facilities that generate and sell energy to JCP&L under long-term contracts. These commodity derivatives qualify for hedge accounting treatment under current accounting rules since price movements of the commodity derivatives are highly correlated with the underlying hedged commodities and the transactions are designated as hedges at inception. Accordingly, under the deferral method of accounting, gains and losses related to commodity derivatives are recognized in Power purchased and interchanged in the Consolidated Statements of Income when the hedged transaction closes or if the commodity derivative is no longer sufficiently correlated. Prior to income or loss recognition, deferred gains and losses relating to these transactions are recorded in Current Assets or Current Liabilities in the Consolidated Balance Sheets.

Interest Rate Swap Agreements:

Penelec and GPU Electric (through GPU GasNet and GPU Power UK) use interest rate swap agreements to manage the risk of increases in variable interest rates. As of December 31, 2000, these agreements covered approximately $528 million (Penelec $50 million; GPU Electric $478 million) of debt, and were scheduled to expire on various dates through June 2006. Differences between the amounts paid and received under interest rate

swaps are recorded as adjustments to the interest expense of the underlying debt since the swaps are related to specific assets, liabilities or anticipated transactions. All of the agreements effectively convert variable rate debt to fixed rate debt. For the year ended December 31, 2000, fixed rate interest expense exceeded variable rate interest by approximately $0.3 million (Penelec $0.1 million; GPU Electric $0.2 million).

Currency Swap Agreements:

GPU Electric uses currency swap agreements to manage currency risk caused by fluctuations in the US dollar exchange rate related to debt issued in the US by Avon Energy Partners Holdings (Avon). These swap agreements effectively convert principal and interest payments on this US dollar debt to fixed sterling principal and interest payments, and expire on the maturity dates of the bonds. Interest expense is recorded based on the fixed sterling interest rate. As of December 31, 2000, these currency swap agreements covered £517 million (US $850 million) of debt. Interest expense would have been £37.8 million (US $57.3 million) as compared to £38.6 million (US $58.4 million) for the year ended December 31, 2000 had these agreements not been in place.

ENVIRONMENTAL LIABILITIES

GPU may be subject to loss contingencies resulting from environmental laws and regulations, which include obligations to mitigate the effects on the environment of the disposal or release of certain hazardous wastes and substances at various sites. GPU records liabilities (on an undiscounted basis) for hazardous waste sites where it is probable that a loss has been incurred and the amount of the loss can be reasonably estimated and adjusts these liabilities as required to reflect changes in circumstances.

STATEMENTS OF CASH FLOWS

For the purpose of the consolidated statements of cash flows, temporary investments include all unrestricted liquid assets, such as cash deposits and debt securities, with maturities generally of three months or less. Cash flows are reported using the US dollar equivalent of the functional currencies in effect at the time of the cash transaction. The effect of exchange rate changes on cash balances held in foreign currencies are reported as a separate line item on the Consolidated Statements of Cash Flows.

Avon and GPU Power UK have a formal agreement with a United Kingdom bank, under which they maintain available cash balances in a number of subsidiary bank accounts and an overdraft in the main GPU Power UK operating account. The overdraft balance was $276.5 million as of December 31, 2000, while total cash at GPU Power UK was $314.3 million. Since GPU Power UK manages the overdraft balance in such a way that it does not exceed the available cash balances in the other associated accounts, no interest or fees are paid under this arrangement. In effect, GPU Power UK uses the overdraft facility to utilize the available cash in the other bank accounts. The overdraft position and the offsetting cash balances subject to this arrangement are shown on the Consolidated Balance Sheets in Bank overdraft and Cash and temporary cash investments, respectively.

2. SHORT-TERM BORROWING ARRANGEMENTS

At December 31, 2000 and 1999, short-term debt outstanding consisted of the following:

		2000		1999	
Company	Facility	Balance Outstanding (in millions)	Weighted Avg. Rate	Balance Outstanding (in millions)	Weighted Avg. Rate

GPU, Inc.	Bank Loans	$ 113	7.2%	$ 123	7.0%
JCP&L	Bank Loans	2	7.0	-	-
	Commercial Paper	27	7.4	-	-
Met-Ed	Commercial Paper	47	6.8	-	-
Penelec	Commercial Paper	56	6.7	54	6.9
MYR	Bank Loans	36	7.2	-	-
GPU Electric	Bank Loans	476	7.0	366	6.1
	Commercial Paper/ Medium Term Notes	724	8.0	1,218	6.5
	Total	$1,481		$1,761	

GPU's weighted average interest rate on the short-term borrowings was 7.5% and 6.5% at December 31, 2000 and 1999, respectively.

GPU has various credit facilities in place, the most significant of which are discussed below. These credit facilities generally provide GPU bank loans at negotiated market rates. In addition, commitment fees or facility fees are determined by market rates at the time the facility is put in place, and can change based on the borrower's current bond rating.

In recent months, certain aspects of California's restructuring plan have created instability and price volatility in the electricity market, negatively affecting the California electric utilities. These utilities have defaulted on various contractual and financial obligations and have experienced rapid deterioration of their credit quality. Reaction of the financial markets, which did not anticipate the rapid deterioration of the California utilities' financial condition, has included a careful review of overall credit exposure to the electric utility industry.

Furthermore, Met-Ed's and Penelec's energy cost exposure related to their provider of last resort (PLR) obligation in Pennsylvania has negatively affected Met-Ed's and Penelec's earnings. Consequently, the amount of new financing capacity available to GPU, Inc. or its subsidiaries may be less than it had previously been and renewal or refinancing of existing credit facilities will likely require GPU's acceptance of higher pricing and/or more restrictive terms and conditions. The credit facilities that expire in 2001 include: $465 million available to GPU, Inc. and the GPU Energy companies under a $250 million revolving credit agreement and various committed bank lines of credit; $1 billion under GPU Capital, Inc.'s (GPU Capital) senior revolving credit agreement; $180 million under GPU Australia Holdings, Inc.'s (GPU Australia Holdings) senior revolving credit agreement; and $366 million under EI UK Holdings, Inc.'s two year term loan agreement.

In addition, primarily as a result of these conditions (the companies' PLR exposure and the negative publicity surrounding the California utilities), in early 2001 Met-Ed and Penelec began experiencing difficulty in selling their commercial paper with maturities longer than overnight. Under normal circumstances, they issue commercial paper having maturities of up to 30 days or longer, if desired. As a result, Met-Ed and Penelec have temporarily withdrawn from the commercial paper market, and instead have resorted to borrowing against their various bank lines of credit.

GPU, Inc. and GPU Energy companies

GPU, Inc. and the GPU Energy companies have available $465 million of short-term borrowing facilities, which include a $250 million revolving credit agreement and various bank lines of credit. In addition, GPU, Inc., JCP&L, Met-Ed and Penelec can issue commercial paper in amounts of up to $100 million, $150 million, $75 million and $100 million, respectively. From these sources, GPU, Inc. has regulatory authority to have $250 million outstanding at any one time. JCP&L, Met-Ed and Penelec are limited by their

charters or SEC authorization to $266 million, $150 million and $150 million, respectively, of short-term debt outstanding at any one time. As of December 31, 2000, GPU, Inc. and the GPU Energy companies had $113 million and $132 million (JCP&L $29 million; Met-Ed $47 million; Penelec $56 million), respectively, of short-term debt outstanding.

GPU Electric

GPU Capital has a $1 billion 364-day senior revolving credit agreement due in November 2001 supporting the issuance of commercial paper for its $1 billion commercial paper program, which has been established to fund GPU, Inc. and GPU Electric acquisitions. GPU, Inc. has guaranteed GPU Capital's obligations under this program. At December 31, 2000 and 1999, $633 million and $768 million was outstanding under this commercial paper program, respectively, and included in Notes payable on the Consolidated Balance Sheets. In early 2001, GPU Capital refinanced the majority of this outstanding commercial paper through its standby revolving credit agreement.

GPU Electric has a $150 million credit facility due in May 2002 to accommodate short-term borrowing needs. The facility is guaranteed by GPU, Inc. and there were no outstanding borrowings as of December 31, 2000.

GPU Australia Holdings has $180 million available under its senior revolving credit facility, which expires in November 2001. This facility is guaranteed by GPU, Inc. In 2000, GPU Australia Holdings borrowed $176 million under this facility, which is included in Notes payable on the Consolidated Balance Sheet, to repay all outstanding obligations under its $180 million commercial paper program. There were no outstanding borrowings under this revolving credit facility as of December 31, 1999.

The above-mentioned GPU Australia Holdings commercial paper program is supported by GPU, Inc. credit facilities and GPU, Inc. has also guaranteed all obligations under this program. At December 31, 1999, $182 million was outstanding under this commercial paper program and included in Notes payable on the Consolidated Balance Sheet. No borrowings were outstanding at December 31, 2000.

In August 2000, GPU GasNet entered into a A$750 million (US $417 million) commercial paper program to refinance maturing bank debt. In addition, GPU GasNet established a A$750 million (US $417 million) credit facility to serve as a backstop for this commercial paper program. At December 31, 2000, there was A$250 million (US $139 million) of commercial paper outstanding under this program and included in Long-term debt on the Consolidated Balance Sheet since it is management's intent to reissue this amount of commercial paper on a long-term basis.

GPU Power UK maintains a £150 million (approximately US $224 million) revolving credit facility with six banks for working capital purposes, which expires at various dates through June 2005. At December 31, 2000 and 1999, there was £60 million (US $90 million) and £87 million (US $140 million) outstanding under this facility, respectively, which is included in Notes payable on the Consolidated Balance Sheets.

In addition, GPU Power UK maintains an ongoing £75 million (US $112 million) bank facility for working capital purposes. Outstanding borrowings are collateralized by portions of trade accounts receivable. At December 31, 2000 and 1999, £75 million (US $112 million) and £75 million (US $121 million) was outstanding under this facility, respectively, which is included in Notes payable on the Consolidated Balance Sheets.

MYR

MYR maintains a $50 million revolving credit facility, which expires in November

2003, of which up to $10 million is available for the issuance of standby letters of credit. As of December 31, 2000, $36 million was outstanding under this facility and included in Notes payable on the Consolidated Balance Sheet.

3. LONG-TERM DEBT

At December 31, 2000 and 1999, long-term debt outstanding consisted of the following:

GPU, Inc. and Subsidiary Companies

2000	Maturities	Interest Rates	(in millions) Total Debt Outstanding	Due Within One Year
GPU Energy companies, GPUS & GPU, Inc.:				
First mortgage bonds	2001-2027	5.35-9.20%	**$1,695** (1)	**$ 40**
Senior notes	2002-2019	5.75-7.77%	**441** (2)	**-**
Other long-term debt	2001-2039	7.05-7.69%	**334**	**22**
GPU Electric:				
Bank loans	2001-2014	5.98-10.5%	**1,184**	**912**
Bonds	2002-2008	7.38-7.46%	**983**	**-**
Commercial paper/Medium term notes	2001-2003	5.98-10.5%	**222** (3)	**-**
GPU Power	2003-2022	4.5-9.5%	**39**	**7**
Total			**$4,898**	**$ 981**

(1) Amount is less unamortized net discount of $3.1 million.

(2) Amount is less unamortized net discount of $1.6 million.

(3) Amount includes $139 million of Australian commercial paper, which is included in Long-term debt on the Consolidated Balance Sheet since it is management's intent to reissue this amount on a long-term basis.

1999	Maturities	Interest Rates	(in millions) Total Debt Outstanding	Due Within One Year
GPU Energy companies & GPUS:				
First mortgage bonds(a)	2000-2027	5.35-9.48%	$1,785 (1)	$ 90

Total long-term debt	$517,813	$424,641

(a) Substantially all of the utility plant owned by the GPU Energy companies is subject to the liens of their respective mortgages.

For the years 2001, 2002, 2003, 2004 and 2005, GPU has long-term debt maturities as follows:

(in millions)

Company	2001	2002	2003	2004	2005
JCP&L	$ 40	$ 50	$150	$160	$50
Met-Ed	-	30	90	40	50
Penelec	-	50	-	125	8
GPU Electric	912	436	176	11	12
GPU Power	7	7	6	6	2
GPU, Inc.	-	-	-	-	300
GPUS	22	-	-	-	-
Total	$981	$573	$422	$342	$422

At December 31, 2000, EI UK Holdings, Inc. had long-term debt outstanding of £245 million (US $366 million) under its £245 million credit facility, a portion of which is guaranteed by GPU, Inc.

As discussed in Note 2, Short-Term Borrowing Arrangements, the amount of new financing capacity available to GPU, Inc. or its subsidiaries may be less than it had previously been and renewal or refinancing of existing credit facilities will likely require GPU's acceptance of higher pricing and/or more restrictive terms and conditions.

The fair value of long-term debt is estimated based on the quoted market prices for the same or similar issues or on the current rates offered to GPU for debt of the same remaining maturities and credit qualities. The estimated fair value of GPU's long-term debt, including amounts due within one year, as of December 31, 2000 and 1999 is as follows:

(in millions)

	2000		1999	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
JCP&L	$1,134	$1,125	$1,174	$1,139

GPU, Inc.	299	300	-	-
GPUS	22	22	22	22

Total	$4,898	$4,952	$5,832	$6,312

4. PREFERRED SECURITIES

Cumulative Preferred Stock: (a)

JCP&L

Cumulative preferred stock, without par value, 15,600,000 shares authorized, 748,334 and 965,000 shares issued and outstanding in 2000 and 1999, respectively.

	(in thousands) 2000	1999
Cumulative preferred stock - with mandatory redemption (b)(c)(d):		
8.65% Series J, 333,334 and 500,000 shares at 12/31/00 and 12/31/99, respectively	$33,333	$50,000
7.52% Series K, 290,000 and 340,000 shares at 12/31/00 and 12/31/99, respectively	29,000	34,000
Subtotal	62,333	84,000
Amounts due within one year (d)	(10,833)	(10,833)
Total cumulative preferred stock - with mandatory redemption	$51,500	$73,167
Cumulative preferred stock - without mandatory redemption (c)(e):		
4% Series, 125,000 shares, callable at $106.50 a share	$12,500	$12,500
Premium on cumulative preferred stock	149	149
Total cumulative preferred stock - without mandatory redemption	$12,649	$12,649

(a) In 1999, Met-Ed and Penelec redeemed all of their outstanding shares of cumulative preferred stock for $12.5 million and $17.4 million, respectively. At December 31, 2000 and 1999, the GPU Energy companies were authorized to issue 37,035,000 of cumulative preferred stock. If dividends on any of the cumulative preferred stock of JCP&L are in arrears for four quarters, the holders of cumulative preferred stock, voting as a class, are entitled to elect a majority of the Board of Directors until all dividends in arrears have been paid. If JCP&L has failed to pay dividends in full on any outstanding shares of cumulative preferred stock, thereafter and until dividends in full on all such shares of cumulative preferred stock have been paid, or declared and set apart for payment, for all past quarterly dividend periods, JCP&L shall not redeem any cumulative preferred stock unless all the shares of cumulative preferred stock outstanding are redeemed and shall not purchase or otherwise acquire for value any shares of cumulative preferred stock except in accordance with an offer (which may vary with respect to shares of different series) made to all holders of share of cumulative preferred stock.

(b) The 7.52% and 8.65% Series are callable at various prices above their stated values beginning in 2002 and 2000, respectively. Pursuant to mandatory sinking fund provisions, the 7.52% Series is to be redeemed ratably over the next fourteen years. The 8.65% Series is to be redeemed ratably over the next four years.

(c) During 2000, JCP&L redeemed $5 million stated value of its 7.52% cumulative preferred stock and $16.7 million stated value of its 8.65% cumulative preferred stock pursuant to mandatory and optional sinking fund provisions. During 1999, JCP&L redeemed all of its outstanding shares of 7.88% cumulative preferred stock with a stated value of $25 million and $5 million stated value of its 7.52% cumulative preferred stock pursuant to mandatory and optional sinking fund provisions. JCP&L's total redemption cost for 2000 and 1999 was $21.7 million and $30.9 million, respectively.

(d) The shares with mandatory redemption have redemption requirements of $10.8 million for each year of the next four years, and $2.5 million in year five. The fair value of the preferred stock with mandatory redemption, including amounts due within one year, based on market price quotations at December 31, 2000 and 1999, was $65.6 million and $86.5 million, respectively.

(e) The outstanding shares of preferred stock without mandatory redemption are callable at various prices above their stated values. At December 31, 2000, JCP&L could call the 4% Series for $13.3 million.

Subsidiary-Obligated Mandatorily Redeemable Preferred Securities:

JCP&L Capital, L.P., Met-Ed Capital, L.P. and Penelec Capital, L.P. are special-purpose partnerships in which a subsidiary of JCP&L, Met-Ed and Penelec, respectively, is the sole general partner. In 1995, JCP&L Capital, L.P. issued $125 million at 8.56% (5 million shares at $25 per share) of mandatorily redeemable preferred securities (MIPS) and in 1994, Met-Ed Capital, L.P. and Penelec Capital, L.P. issued $100 million at 9% (4 million shares at $25 per share) and $105 million at 8.75% (4.2 million shares at $25 per share), respectively, of MIPS. The proceeds were loaned to JCP&L, Met-Ed and Penelec, respectively, which, in turn, issued their deferrable interest subordinated debentures to the partnerships. In 1999, Met-Ed and Penelec redeemed all of their outstanding shares of MIPS for $100 million and $105 million, respectively. At December 31, 2000, JCP&L's outstanding shares of MIPS had a fair value of $122.2 million.

The MIPS of JCP&L Capital, L.P. mature in 2044 and are redeemable at the option of JCP&L beginning in May of 2000 at 100% of their principal amount. JCP&L has fully and unconditionally guaranteed payment of distributions, to the extent there is sufficient cash on hand to permit such payments and legally available funds, and payments on liquidation or redemption of its Preferred Securities. Distributions on the MIPS (and interest on the subordinated debentures) may be deferred for up to 60 months, but JCP&L may not pay dividends on, or redeem or acquire, any of its cumulative preferred or common stock until deferred payments on its subordinated debentures are paid in full.

Subsidiary-Obligated Trust Preferred Securities:

In 1999, Met-Ed Capital Trust, a wholly-owned subsidiary of Met-Ed, issued $100 million of trust preferred securities (Met-Ed Trust Preferred Securities) at 7.35%, due 2039. The sole assets of Met-Ed Capital Trust are the 7.35% Cumulative Preferred Securities of Met-Ed Capital II, L.P. (Met-Ed Partnership Preferred Securities) and its only revenues are the quarterly cash distributions it receives on the Met-Ed Partnership Preferred Securities. Each Met-Ed Trust Preferred Security represents a Met-Ed Partnership Preferred Security. Met-Ed Capital II, L.P. is a wholly-owned subsidiary of Met-Ed and the sponsor of Met-Ed Capital Trust. The sole assets of Met-Ed Capital II, L.P. are Met-Ed's 7.35% Subordinated Debentures, Series A, due 2039, which have an aggregate principal amount of $103.1 million. Met-Ed has fully and unconditionally guaranteed the Met-Ed Partnership Preferred Securities, and, therefore, the Met-Ed Trust Preferred Securities.

million of trust preferred securities (Penelec Trust Preferred Securities) at 7.34%, due 2039. The sole assets of Penelec Capital Trust are the 7.34% Cumulative Preferred Securities of Penelec Capital II, L.P. (Penelec Partnership Preferred Securities) and its only revenues are the quarterly cash distributions it receives on the Penelec Partnership Preferred Securities. Each Penelec Trust Preferred Security represents a Penelec Partnership Preferred Security. Penelec Capital II, L.P. is a wholly-owned subsidiary of Penelec and the sponsor of Penelec Capital Trust. The sole assets of Penelec Capital II, L.P. are Penelec's 7.34% Subordinated Debentures, Series A, due 2039, which have an aggregate principal amount of $103.1 million. Penelec has fully and unconditionally guaranteed the Penelec Partnership Preferred Securities, and, therefore, the Penelec Trust Preferred Securities.

The fair value of the Met-Ed and Penelec Trust Preferred Securities at December 31, 2000 was $96.5 million and $97 million, respectively.

5. STOCKHOLDERS' EQUITY

The following table presents information relating to the common stock ($2.50 par value) of GPU, Inc.:

	2000	1999	1998
Authorized shares	**350,000,000**	350,000,000	350,000,000
Issued shares	**132,783,338**	132,783,338	132,783,338
Reacquired shares	**13,343,387**	11,017,798	4,787,657
Outstanding shares	**119,439,951**	121,765,540	127,995,681
Outstanding restricted units	**312,520**	283,602	268,360
Outstanding stock options	**1,175,069**	389,250	335,950

In 2000, GPU, Inc. reacquired 2.8 million shares of common stock at a total cost of $71.9 million.

At December 31, 2000 and 1999, the following issues of common stock were outstanding:

	(in thousands) 2000	1999
GPU, Inc.		
Common stock, par value $2.50 per share	**$331,958**	$331,958
JCP&L		
Common stock, par value $10 per share, 16,000,000 shares authorized, 15,371,270 shares issued and outstanding	**$153,713**	$153,713
Met-Ed		
Common stock, no par value, 900,000 shares authorized, 859,500 shares issued and outstanding	**$ 66,273**	$ 66,273
Penelec		
Common stock, par value $20 per share,		

5,400,000 shares authorized, 5,290,596 shares issued and outstanding	$105,812	$105,812

Pursuant to the 1990 Employee Stock Plan (as restated to reflect amendments through June 1, 2000), awards may be granted in the form of incentive stock options, nonqualified stock options, restricted shares of common stock, performance units and stock appreciation rights, which may accompany options.

In 2000, GPU, Inc. granted stock options to officers and selected employees to purchase 722,700 shares at $29.25 per share. During the year, 17,100 of these options were forfeited leaving a total of 705,600 outstanding at December 31, 2000. Also in 2000, as part of the acquisition of MYR, options held by MYR employees to purchase MYR stock were converted to 97,524 options to purchase GPU, Inc. common stock. The average exercise price of the 97,524 options is $9.93 per share and 6,305 of these options were exercised at an average price of $4.90 during 2000. No additional options were exercised in 2000. In 1999, GPU, Inc. granted stock options to officers to purchase 90,600, 1,000 and 1,000 shares at $42.9375, $34.50 and $34.6875 per share, respectively. In 1998, GPU, Inc. granted stock options to officers to purchase 305,950 and 30,000 shares at $36.625 per share and $44.25 per share, respectively. In 2000, 7,300 and 3,700 options exercisable at $36.625 and $42.9375 per share, respectively, were forfeited. No options were exercised in 1999 and 1998.

At December 31, 2000 and 1999, there were 274,892 and 101,607 options exercisable at weighted average exercise prices of $32.66 and $37.38 per option, respectively. There were no options exercisable at December 31, 1998. All options, other than the MYR converted options have an exercise price equal to the fair market per share value of GPU, Inc. common stock on the grant date. All options vest in three equal annual installments, have a 10-year term and are exercisable in accordance with the terms set forth in the Stock Option Agreement. In the event of a change in control of GPU during the option term (which would include GPU, Inc.'s proposed merger with FirstEnergy), all options would immediately become exercisable. The weighted-average remaining contractual life of options outstanding as of December 31, 2000 was 8.7 years.

The weighted average fair value of options granted during 2000, 1999 and 1998 was $4.60, $6.60 and $4.41 per option, respectively. The options were valued using the Black-Scholes pricing model. For the years 2000, 1999 and 1998, the assumptions used in these valuations were as follows: a risk-free rate of return of 6.38%, 6.14% and 5.70%, respectively; a stock price volatility of 23.5%, 20.21% and 17.36%, respectively; an average dividend yield of 5.71%, 5.42% and 5.67%, respectively; and the exercise of all options on the final day of their 10-year terms.

Also pursuant to the 1990 Employee Stock Plan, in 2000, 1999 and 1998, GPU, Inc. issued performance units to officers and selected employees representing rights to receive shares of common stock, on a one-for-one basis, at the end of the restriction period. The number of shares eventually issued will depend upon the degree to which GPU's performance goals have been met for the performance period and could range from 0% to 200% of the originally awarded units plus additional units resulting from reinvested dividend equivalents. These performance units vest on a pro-rata basis over three or five years. In the event of a change in control of GPU during the performance period (which would include GPU, Inc.'s proposed merger with FirstEnergy), all performance units would immediately vest within the range of 100% to 200% of the original units awarded.

Since 1997, pursuant to the Deferred Stock Unit Plan for Outside Directors, restricted units were issued to outside directors representing rights to receive shares of GPU, Inc. common stock, on a one-for-one basis. All restricted units are considered common stock equivalents and, accordingly, are reflected in the computation of diluted

earnings per share shown on the Consolidated Statements of Income. The restricted units accrue dividend equivalents on a quarterly basis, which are reinvested in additional restricted units. The restricted units vest upon the outside director completing 54 months of service or immediately in the case of a change in control.

Through the above-mentioned plans, officers, selected employees and outside directors were awarded 72,327, 56,994 and 53,260 performance units or restricted units in 2000, 1999 and 1998, respectively. Also in 2000, as part of the acquisition of MYR, restricted units held by MYR employees were converted to GPU, Inc. common stock restricted shares. As of December 31, 2000, 208,136 of these shares were outstanding. In 2000, 1999 and 1998, through these plans, GPU, Inc. issued a total of 247,845, 20,215 and 20,611 shares of common stock, respectively, from previously reacquired shares. At December 31, 2000, there were 1,974,190 shares of common stock authorized for issuance as awards of restricted shares, units, options or rights, in the aggregate.

In 1996, GPU adopted the disclosure requirements of Statement of Financial Accounting Standards No. 123 (FAS 123), "Accounting for Stock-Based Compensation," which establishes a fair value-based method of accounting for employee stock-based compensation. As permitted by FAS 123, GPU continues to follow the intrinsic value method set forth in APB Opinion No. 25, "Accounting for Stock Issued to Employees." Had the fair value-based method of accounting been applied instead, the fair value of options would have been expensed, and net income for 2000, 1999 and 1998 would have been $231.4 million, $458.7 million and $359.3 million, respectively, and earnings per share for the same periods would have been $1.91, $3.66 and $2.83, respectively.

Accumulated Other Comprehensive Income/(Loss):

In 1997, GPU adopted Statement of Financial Accounting Standards No. 130, "Reporting Comprehensive Income." At December 31, 2000 and 1999, GPU had the following amounts in Accumulated other comprehensive income/(loss) on the Consolidated Balance Sheets:

GPU, Inc. and Subsidiary Companies	(in thousands) 2000	1999
Net unrealized gains on investments (1)	$ 13,404	$ 34,183
Foreign currency translation	(72,402)	(40,518)
Minimum pension liability	(3,626)	(6)
Accumulated other comprehensive income/(loss)	$(62,624)	$(6,341)

JCP&L	(in thousands) 2000	1999
Net unrealized gain on investments	$ 7	$ 7
Minimum pension liability	(15)	-
Accumulated other comprehensive income/(loss)	$ (8)	$ 7

Met-Ed	(in thousands) 2000	1999
Net unrealized gain on investments (1)	$ 74	$ 21,369
Minimum pension liability	(10)	(6)
Accumulated other comprehensive income	$ 64	$ 21,363

(in thousands)

Penelec	2000	1999
Net unrealized gain on investments (1)	$ 23	$ 10,619
Minimum pension liability	-	-
Accumulated other comprehensive income	$ 23	$ 10,619

(1) The change in the net unrealized gain on investments includes the reclassification of previously unrealized gains totaling $31.8 million (Met-Ed $21.2 million; Penelec $10.6 million), from Accumulated other comprehensive income to Regulatory assets, net on the Consolidated Balance Sheets. See Nuclear Plant Retirement Costs section of Note 12, Commitments and Contingencies.

The components of the change in accumulated other comprehensive income/(loss), and the related tax effects, for the years 2000, 1999 and 1998 are as follows:

GPU, Inc. and Subsidiary Companies	(in thousands) Amount Before Taxes	Income Tax (Expense) Benefit	Amount Net of Taxes
2000			
Net unrealized gains/(loss) on investments	**$(38,042)**	**$ 17,263**	**$(20,779)**

6. ACCOUNTING FOR EXTRAORDINARY AND NON-RECURRING ITEMS

GPU PowerNet Sale (2000):

In June 2000, GPU, Inc. sold GPU PowerNet, its Australian electric transmission company, to SPI for A$2.1 billion (approximately US $1.26 billion). As part of the sales price, SPI assumed liability for A$230 million (US $137.8 million) of medium term notes. A significant portion of the net proceeds from the sale were used to repay debt in 2000, and the remaining proceeds have been placed in a trust and will be used to further reduce debt. As a result of the sale, GPU recorded in Operating Income on the Consolidated Statement of Income, a pre-tax loss in the quarter ended June 30, 2000 of $372 million ($295 million after-tax, or $2.43 per share), including a $94 million foreign currency loss. During the fourth quarter 2000, there was a change in the estimated tax benefits, which reduced GPU's after-tax loss on the sale to $276.6 million, or $2.28 per share.

GPU International, Inc. (GPUI) Sale (2000):

In December 2000, GPU, Inc. sold GPUI to Aquila for $225 million. The sale included GPUI's interests in six domestic operating plants and one development stage project. The net proceeds from the sale were used primarily to reduce debt at GPU Capital.

As a result of the sale, GPU realized a pre-tax gain of $133 million ($89.2 million after-tax, or $0.73 per share).

Restructured Power Purchase Agreement (2000):

In June 1998, Onondaga Cogeneration L.P. (Onondaga), a GPUI independent power project, and Niagara Mohawk Power Corporation (NIMO) renegotiated their existing power purchase agreement and entered into a 10-year indexed swap agreement and power put.

In September 2000 (prior to the sale of GPUI), Onondaga terminated its rights under the power put thereby terminating all agreements Onondaga had with NIMO to sell energy and capacity under the restructured power purchase agreement. As a result, in 2000, a net pre-tax gain of $42.8 million ($27.8 million after-tax, or $0.23 per share) was recorded in Other Income and Deductions on the Consolidated Statement of Income, as follows: the deferred gain of $86.7 million pre-tax related to the restructured power purchase agreement with NIMO was recognized in income; and the indexed swap agreement was marked to market and the associated deferred revenue was taken to income resulting in a pre-tax gain of $90.8 million. In addition, as a result of terminating the power put with NIMO and based on information supplied by an outside independent expert, management determined that the Onondaga plant would not operate on an economically profitable basis in the merchant generation market, and that the equipment would be technologically obsolete. As the result of an impairment test performed under Statement of Financial Accounting Standards No. 121 (FAS 121), "Accounting for the Impairment of Long-Lived Assets and for Long-Lived

Assets to Be Disposed Of," using the undiscounted cash flows of the plant's operations, management determined that the plant was impaired, and the carrying value of the plant was written down by $69.1 million pre-tax. Also, as a result of the termination of Onondaga's rights under the power put, a review of firmly committed long-term executory gas transportation contracts was performed and the contracts were determined to be out of market, which resulted in a charge to income of $65.6 million. Management's analysis utilized gas and energy pricing supplied by an independent expert.

In addition, in 2000 a pre-tax charge of $2.5 million ($1.6 million after-tax, or $0.01 per share) was recorded in other operation and maintenance expense for settlement amounts paid in connection with the termination of Onondaga's steam supply agreement.

PaPUC Phase II Order (2000):

On December 20, 2000, the PaPUC issued a Phase II Order providing a final determination of Met-Ed's and Penelec's stranded cost recovery related to the divestiture of their generating assets. The net impact of the Phase II Order was a credit to income of $66.1 million pre-tax (Met-Ed $44.6 million; Penelec $21.5 million), or $40.8 million after-tax (Met-Ed $32 million; Penelec $8.8 million), or $0.34 per share, the major components of which are discussed below.

As a result of the sales of their generating facilities in 1999, Met-Ed and Penelec recognized a pension curtailment gain (per Statement of Financial Accounting Standards No. 88 (FAS 88), "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits," and Statement of Financial Accounting Standards No. 106 (FAS 106), "Employers' Accounting for Postretirement Benefits Other Than Pensions"), associated with employees who were terminated from the companies at the time of the sale. This gain, which amounted to $50.5 million pre-tax (Met-Ed $26.2 million; Penelec $24.3 million), was deferred pending the outcome of the Phase II proceedings. Upon receipt of the Phase II Order, the deferred gain was recognized in income.

In their Phase II filings, Met-Ed and Penelec requested recovery of an additional $303.8 million (Met-Ed $226.3 million; Penelec $77.5 million) of stranded costs. The Phase II Order disallows recovery of $27.9 million (Met-Ed $16 million; Penelec $11.9 million) of this amount. However, Met-Ed and Penelec anticipated a disallowance of a portion of their stranded costs, and established a reserve of $24.9 million (Met-Ed $18.7 million; Penelec $6.2 million) in 1999. Therefore, in 2000, the remaining disallowance of $3 million pre-tax (Met-Ed $(2.7) million; Penelec $5.7 million) was (credited)/charged to income.

Met-Ed requested recovery of stranded costs associated with its leasehold interest in the Merrill Creek Reservoir project. The Phase II Order granted Met-Ed full recovery of these costs. Met-Ed had previously recorded liabilities which were reversed upon review of the Phase II Order. In addition, during the proceedings, certain estimates and assumptions used in calculating the lease expense were revised. The reversal of related liabilities and the changes in estimates and assumptions resulted in a credit to income of $13.8 million pre-tax.

The Phase II Order deferred a decision on Met-Ed's requested rate increase in 2006 for future consideration. The Order also requires Met-Ed and Penelec to seek a ruling from the Internal Revenue Service (IRS) approving the credit to ratepayers of unamortized investment tax credits and excess deferred income tax benefits associated with their divested generating stations, which were recognized in operating income in 1999. If the IRS ruling ultimately supports returning these tax benefits to ratepayers, Met-Ed and Penelec would then reduce stranded costs by $40 million and record a correspondin charge to income.

Generation Asset Divestit ce (2000 and 1999):

GPU Energy companies

During 2000 and 1999, the GPU Energy companies completed the sales of substantially all their electric generating facilities. The PaPUC has made a final determination of Met-Ed's and Penelec's stranded cost recovery, as discussed above. The NJBPU, however, has deferred making a final determination of the net proceeds and stranded cost recovery related to JCP&L's generating asset divestitures until an IRS ruling regarding the treatment of associated federal income tax benefits is received.

In August 2000, JCP&L sold Oyster Creek to AmerGen Energy Company, LLC (AmerGen), a joint venture of PECO Energy and British Energy, for approximately $10 million. As a result of the sale, a non-recurring gain of $16.5 million, or $0.13 per share, was recognized in income for the reversal of certain deferred taxes and realization of an investment tax credit related to the sale. If JCP&L receives an IRS ruling that supports returning these tax benefits to ratepayers, JCP&L would then reduce its stranded costs by this amount and record a corresponding charge to income. As part of the sale, AmerGen has assumed full responsibility for decommissioning the plant and JCP&L has transferred $440 million of Oyster Creek decommissioning trust funds to AmerGen, of which approximately $114 million was paid into the trust by JCP&L at closing. JCP&L has agreed to fund the station's outage cost (up to a maximum of $88 million), including the fuel reload, for the refueling outage completed in November 2000. Outage costs of approximately $88 million were incurred, and are presently being reviewed by GPU. AmerGen will repay these outage costs to JCP&L in nine equal annual installments without interest, beginning August 2001. As discussed below, the Oyster Creek plant was written down to its fair market value in 1999.

In 1999, the GPU Energy companies sold TMI-1 to AmerGen for a total purchase price of approximately $100 million. The sale did not have a significant impact on 1999 earnings since TMI-1 had been written down to its fair market value in 1998, resulting in a loss of $523.3 million pre-tax (JCP&L $133.1 million; Met-Ed $270.7 million; Penelec $124.5 million), which was deferred as a regulatory asset.

Penelec sold its 50% interest in the Homer City Station to a subsidiary of Edison Mission Energy for approximately $900 million in 1999. As a result, Penelec recorded a pre-tax gain of $38.2 million ($22.6 million after-tax, or $0.18 per share) for the portion of the gain related to wholesale operations and deferred as a regulatory liability the remaining pre-tax gain of $590.7.

Penelec sold its 20% interest in the Seneca Pumped Storage Hydroelectric Generating Station to The Cleveland Electric Illuminating Company for $43 million in 1999. The sale resulted in a pre-tax gain of $2 million ($1.2 million after-tax, or $0.01 per share) for the portion of the gain related to wholesale operations and the deferral of the remaining pre-tax gain of $30.2 million as a regulatory liability.

In addition, during 1999 the GPU Energy companies completed the sales of their remaining fossil fuel and hydroelectric generating facilities to Sithe Energies (Sithe) for approximately $1.6 billion (JCP&L $416 million; Met-Ed $641 million; Penelec $558 million) (JCP&L's Forked River combustion turbines and 50% interest in Yards Creek, as well as Met-Ed's York Haven hydroelectric station, were not included in the sales). The sales resulted in a pre-tax gain of $22.9 million (Met-Ed $2.4 million; Penelec $20.5 million), or $13.4 million after-tax (Met-Ed $1.4 million; Penelec $12 million), or $0.11 per share, for the portion of the gain related to wholesale operations, and deferral of the remaining pre-tax gain of $706.5 million (Met-Ed $389.1 million; Penelec $317.4 million) as a regulatory liability.

GPU Power UK

Prior to GPU's purchase of the 50% of GPU Power UK it did not already own, GPU Power UK sold its electric supply business to National Power plc for approximately $300 million. As a result, in 1999 GPU recorded a pre-tax gain on the sale of $10.5 million ($6.8 million after-tax, or $0.05 per share).

JCP&L Restructuring Order (1999):

In 1999, the NJBPU issued a Summary Order regarding JCP&L's unbundling, stranded cost and restructuring filings. Accordingly, in 1999 JCP&L discontinued the application of FAS 71 and adopted the provisions of FAS 101 and EITF Issue 97-4 with respect to its electric generation operations. The transmission and distribution operations of JCP&L continue to be subject to the provisions of FAS 71.

In 1999, JCP&L recorded a reduction in operating revenues of $115 million ($68 million after-tax, or $0.54 per share) relating to the Summary Order. This reduction reflects JCP&L's obligation to refund to customers 5% from rates in effect as of April 30, 1997. The refund will be made to customers from August 1, 2002 through July 31, 2003.

Since JCP&L is no longer subject to FAS 71 for the generation portion of its business, GPU performed an impairment test on Oyster Creek in accordance with FAS 121. Management determined that JCP&L's net investment in Oyster Creek, including plant, nuclear fuel and materials and supplies inventories, was impaired. This investment was written down by a total of $678 million pre-tax in 1999 to reflect the plant's fair market value. This impairment, which was recorded as an extraordinary deduction, was reversed and re-established as a regulatory asset since the NJBPU Summary Order provides for rate recovery.

Pennsylvania Restructuring Orders (1998):

In 1998, Met-Ed and Penelec received PaPUC Restructuring Orders which, among other things, essentially removed from regulation the costs associated with providing electric generation service to Pennsylvania consumers, effective January 1, 1999. Accordingly, in 1998 Met-Ed and Penelec discontinued the application of FAS 71 and adopted the provisions of FAS 101 and EITF Issue 97-4 with respect to their electric generation operations. The transmission and distribution operations of Met-Ed and Penelec continue to be subject to the provisions of FAS 71.

As a result of the Restructuring Orders, Met-Ed and Penelec recorded a pre-tax extraordinary charge of $42.1 million (Met-Ed $11.5 million; Penelec $30.6 million), or $25.8 million after-tax (Met-Ed $6.8 million; Penelec $19 million), or $0.20 per share, and a pre-tax non-recurring charge of $68.5 million (Met-Ed $32.9 million; Penelec $35.6 million), or $40 million after-tax (Met-Ed $19.2 million; Penelec $20.8 million), or $0.32 per share, for customer refunds of 1998 revenues and for the establishment of a sustainable energy fund.

In accordance with FAS 121, impairment tests were performed and determined that the net investment in TMI-1 was impaired at December 31, 1998, resulting in a write-down of $518 million pre-tax (JCP&L $134 million; Met-Ed $257 million; Penelec $127 million) to reflect TMI-1's fair market value. Of the amount written down for TMI-1, $508 million (JCP&L $134 million; Met-Ed $255 million; Penelec $119 million) was deferred as a regulatory asset pending the outcome of the Phase II proceedings and $10 million (Met-Ed $2 million; Penelec $8 million) (the FERC jurisdictional portion) was charged to expense as an extraordinary item in 1998.

7. ACQUISITIONS

MYR Group Inc.

In April 2000, GPU, Inc. acquired MYR for approximately $217.5 million. The fair value of the assets acquired totaled approximately $154.6 million and the amount of liabilities assumed totaled approximately $99.7 million.

MYR, a suburban Chicago-based infrastructure construction services company, provides a complete range of power line and commercial/industrial electrical construction services for electric utilities, telecommunications providers, commercial and industrial facilities and government agencies across the US. MYR also builds cellular towers for the wireless communications market.

The acquisition was partially financed through the issuance of GPU, Inc. short-term debt and was accounted for under the purchase method of accounting. The total acquisition cost exceeded the estimated value of net assets acquired by approximately $162.9 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Empresa Distribuidora Electrica Regional, S.A.

In March 1999, GPU Electric acquired Empresa Distribuidora Electrica Regional, S.A. (Emdersa) for US $375 million. The fair value of the assets acquired totaled approximately $320 million and the amount of liabilities assumed totaled approximately $153 million, including debt of $76 million. Emdersa owns three electric distribution companies that serve three provinces in northwest Argentina.

The acquisition was financed through the issuance of commercial paper by GPU Capital, guaranteed by GPU, Inc., and a $50 million capital contribution from GPU, Inc.

The acquisition was accounted for under the purchase method of accounting. The total acquisition cost exceeded the estimated value of net assets by approximately $208 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Transmission Pipelines Australia

In June 1999, GPU Electric acquired Transmission Pipelines Australia (TPA), a natural gas transmission business, from the State of Victoria, Australia for A$1.025 billion (approximately US $675 million). TPA has been renamed GPU GasNet. The fair value of the assets acquired totaled approximately US $704 million and the amount of liabilities assumed totaled approximately US $116 million.

The acquisition was financed through: (1) an A$750 million (approximately US $495 million) senior credit facility, which is non-recourse to GPU, Inc.; and (2) an equity contribution from GPU Capital of A$275 million (approximately US $180 million) provided through the issuance of commercial paper guaranteed by GPU, Inc.

The acquisition was accounted for under the purchase method. The total acquisition cost exceeded the estimated value of net assets acquired by approximately $88 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Midlands Electricity plc (GPU Power UK)

In July 1999, GPU Electric acquired Cinergy's 50% ownership interest in Avon, which

owns GPU Power UK, for £452.5 million (approximately US $714 million). GPU and Cinergy had jointly formed Avon in 1996 to acquire GPU Power UK. The fair value of the assets acquired totaled approximately US $2.1 billion and the liabilities totaled approximately US $1.5 billion, including debt of US $1 billion.

GPU Electric financed the acquisition through a combination of equity and debt. The equity was funded from: (1) a US $250 million contribution from GPU, Inc., and (2) the issuance of US $50 million of commercial paper by GPU Capital, which is guaranteed by GPU, Inc. The debt has been provided through a two-year £245 million (approximately US $382 million) credit agreement entered into by EI UK Holdings, of which GPU, Inc. has guaranteed approximately US $100 million.

As a result of GPU's purchase of Cinergy's 50% ownership in GPU Power UK, effective in the third quarter of 1999, GPU began accounting for GPU Power UK as a consolidated entity, rather than under the equity method of accounting as was previously the practice. Consequently, Goodwill, net on the Consolidated Balance Sheet increased by approximately $1.8 billion in the third quarter of 1999. Of this amount, $1.7 billion relates to the previous 1996 acquisition of GPU Power UK by GPU and Cinergy and approximately $119 million represents goodwill resulting from GPU's purchase of Cinergy's 50% share of GPU Power UK. The goodwill is being amortized on a straight-line basis over 40 years.

Pro Forma Information (1999 Acquisitions)

The consolidated unaudited pro forma results of operations for 1999 and 1998 present information assuming Emdersa, GPU GasNet and the 50% of GPU Power UK (that GPU did not already own) were acquired January 1, 1998. The pro forma amounts include certain adjustments, primarily to recognize interest expense, amortization of goodwill and depreciation of assets having stepped-up bases, and are not necessarily indicative of the actual results that would have been realized had the acquisitions occurred on the assumed date of January 1, 1998, nor are they necessarily indicative of future results. The consolidated unaudited pro forma information is as follows for 1999 and 1998, respectively: operating revenues of $6 billion and $6.9 billion; income before extraordinary item of $493 million and $442 million; net income of $493 million and $416 million; basic and diluted earnings per share before extraordinary item of $3.94 and $3.47; and basic and diluted earnings per share of $3.94 and $3.27.

8. INCOME TAXES

As of December 31, 2000 and 1999, Regulatory assets, net on the Consolidated Balance Sheets reflected $301 million and $296 million, respectively, of Income taxes recoverable through future rates (primarily related to liberalized depreciation), and Income taxes refundable through future rates of $23 million and $28 million, respectively (related to unamortized ITC), substantially due to the recognition of amounts not previously recorded with the adoption of Statement of Financial Accounting Standards No. 109, "Accounting for Income Taxes," in 1993, as follows:

	(in millions) 2000	1999
Income Taxes Recoverable Through Future Rates:		
JCP&L	$ 18	$ 2
Met-Ed	124	124

For the years 2000, 1999 and 1998, JCP&L purchased $14 million, $22 million and $26 million, respectively, of energy from a cogeneration project in which an affiliate has a 50% partnership interest.

10. EMPLOYEE BENEFITS

Pension Plans and Other Postretirement Benefits:

GPU maintains defined benefit pension plans covering substantially all employees. GPU also provides certain retiree health care and life insurance benefits for substantially all US employees who reach retirement age while working for GPU. The following tables provide a reconciliation of the changes in the plans' benefit obligation and fair value of assets for the years ended December 31, 2000 and 1999, a statement of the funded status of the plans, the amounts recognized in the Consolidated Balance Sheets as of December 31, 2000 and 1999 and the weighted average assumptions used in the measurement of the benefit obligation. The pension benefit disclosure amounts for GPU, Inc. and Subsidiary Companies for the year 1999 reflect the acquisition of the remaining 50% of GPU Power UK by GPU in July of that year. Accordingly, the July 1999 benefit obligation and fair value of plan assets balances for GPU Power UK are shown next to the line items entitled "Acquisitions" and the post-acquisition amounts occurring in the second half of 1999 are included in the tables.

Net periodic pension cost	$ 0.1	$ 0.1	$ (1.1)

In 2000, the effects of lower than expected salary increases and the GPU PowerNet divestiture resulted in decreases in the benefit obligation as of December 31, 2000 of $30 million and $36 million, respectively. No significant portions of these amounts relate to JCP&L, Met-Ed or Penelec. In 1999, the effect of increasing the discount rate assumption for the US pension plans from 6.75% to 7.5% resulted in a $162 million (JCP&L $0.5 million; Met-Ed $1.0 million; Penelec $0.3 million; Other $160.2 million) decrease in the benefit obligation as of December 31, 1999.

The above net periodic pension cost amount for 2000 excludes pre-tax charges of $9 million related to JCP&L, which were deferred pending future rate recovery, resulting from employee terminations related to continuing generation asset divestiture. The above net periodic pension cost amount for 1999 excludes pre-tax credits of $31 million, of which $30 million was deferred for return to customers, resulting from employee terminations related to generation asset divestiture. No portion of these amounts relate to JCP&L, Met-Ed or Penelec. The above net periodic pension cost amount for 1998 excludes pre-tax charges of $30 million (JCP&L $8 million; Met-Ed $11 million; Penelec $9 million; Other $2 million), of which $22 million (JCP&L $6 million; Met-Ed $9 million; Penelec $7 million) was deferred pending future rate recovery, resulting from early retirement programs in 1998.

Other Postretirement Benefits:

GPU, Inc. and Subsidiary Companies	(in millions) 2000	1999	1998
Service cost	$ 11.4	$ 15.9	$ 16.4
Interest cost	53.9	52.2	54.4

	(in millions) 2000	1999	1998
Penelec			
Service cost	$ -	$ -	$ 2.0
Interest cost	-	-	15.1
Expected return on plan assets	-	-	(8.9)
Amortization of transition obligation	-	-	4.8
Other amortization	-	-	1.4
Net periodic postretirement benefit cost	$ -	$ -	$ 14.4

In 2000, lower than expected claims experience resulted in a $32 million decrease in the benefit obligation as of December 31, 2000. No significant portion of this amount relates to JCP&L, Met-Ed or Penelec. In 1999, the effect of increasing the assumption associated with medical inflation rates was partially offset by the effect of increasing the discount rate assumption from 6.75% to 7.5% and resulted in a $45 million increase in the benefit obligation as of December 31, 1999. No significant portion of this amount relates to JCP&L, Met-Ed or Penelec. The benefit obligation was determined by application of the terms of the medical and life insurance plans, including the effects of established maximums on covered costs, together with relevant actuarial assumptions and health-care cost trend rates of 9.5% for those not eligible for Medicare and 10.5% for those eligible for Medicare, then decreasing gradually to 6% in 2009 and thereafter. These costs also reflect the implementation of an annual cost-cap of 6% for individuals who retire after December 31, 1995 and reach age 65. The effect of a 1% change in these assumed cost trend rates would increase or decrease the benefit obligation by $36.9 million or $36.6 million, respectively. In addition, such a 1% change would increase or decrease the aggregate service and interest cost components of net periodic postretirement health-care cost by $3.4 million or $3.3 million, respectively. No significant portion of the effect of such a 1% change relates to JCP&L, Met-Ed or Penelec.

The above net periodic postretirement benefit cost amount for 2000 excludes pre-tax charges of $7 million, which were deferred pending future rate recovery, resulting from employee terminations related to continuing generation asset divestiture. No portion of this amount relates to JCP&L, Met-Ed or Penelec. The above net periodic postretirement benefit cost amount for 1999 excludes pre-tax charges of $3 million, which were deferred pending future rate recovery, resulting from employee terminations related to generation asset divestiture. No portion of this amount relates to JCP&L, Met-Ed or Penelec. The above net periodic postretirement benefit cost amount for 1998 excludes pre-tax charges of $20 million (JCP&L $6 million; Met-Ed $6 million; Penelec $7 million; Other $1 million), of which $12 million (JCP&L $3 million; Met-Ed $5 million; Penelec $4 million) was deferred pending future rate recovery, resulting from early retirement programs in 1998.

In JCP&L's 1993 base rate proceeding, the NJBPU allowed JCP&L to collect $3 million

annually for incremental postretirement benefit costs, charged to expense, and recognized as a result of FAS 106. Based on the final order, and in accordance with EITF Issue 92-12, "Accounting for OPEB Costs by Rate-Regulated Enterprises," JCP&L has deferred the amounts above that level. A 1997 Stipulation of Final Settlement (Final Settlement) allows JCP&L to recover and amortize the deferred balance at December 31, 1997 over a fifteen-year period. In addition, the Final Settlement allows JCP&L to recover current amounts accrued pursuant to FAS 106, including amortization of the transition obligation. Met-Ed has deferred the incremental postretirement benefit costs associated with the adoption of FAS 106 and in accordance with EITF Issue 92-12, as authorized by the PaPUC in its 1993 base rate order. In accordance with EITF Issue 92-12, effective January 1998, Met-Ed has ceased deferring these costs. The approximately one-third generation-related portion of the deferred balance at December 31, 1997 is to be recovered in rates over a twelve-year period pursuant to the PaPUC's Restructuring Orders. The remaining two-thirds for the transmission and distribution-related portion is to be amortized over a fourteen-year period beginning January 1999, pursuant to the Restructuring Orders. In 1994, Penelec determined that its FAS 106 costs, including costs deferred since January 1993, were not probable of recovery and charged those deferred costs to expense.

Certain employees of MYR are covered by union-sponsored collectively bargained defined benefit plans. Expenses for these plans amounted to approximately $26 million, $27 million and $26 million in 2000, 1999 and 1998, respectively, as determined in accordance with negotiated labor contracts.

Savings Plans:

GPU also maintains savings plans for substantially all US employees. These plans provide for employee contributions up to specified limits and various levels of employer matching contributions. The matching contributions for GPU were as follows:

	(in millions)		
Company	2000	1999	1998
JCP&L	$ 0.1	$ 0.1	$ 2.8
Met-Ed	0.1	0.1	3.4
Penelec	-	-	1.6
Other	10.8	13.8	5.8
Total	$11.0	$14.0	$13.6

11. LEASES

GPU Energy companies

Capital lease obligations at December 31, 2000 and 1999 totaled $2 million and $48 million (consisting primarily of Oyster Creek nuclear fuel, as discussed below), respectively.

Prior to the sales of TMI-1 and Oyster Creek to AmerGen in December 1999 and August 2000, respectively, the GPU Energy companies had nuclear fuel lease agreements with nonaffiliated fuel trusts for the plant. Upon the sales of TMI-1 and Oyster Creek, the related fuel leases were terminated and all outstanding amounts due under the related credit facilities were paid. Lease expense consists of an amount designed to amortize the cost of the nuclear fuel as consumed plus interest costs. For the years ended December 31, 2000, 1999 and 1998, these amounts were as follows:

	(in millions)		
Company	2000	1999	1998

JCP&L	$ 13	$ 34	$ 30
Met-Ed	-	13	16
Penelec	-	6	8
Total	$ 13	$ 53	$ 54

Met-Ed and JCP&L have sold and leased back a portion of their respective ownership interests in the Merrill Creek Reservoir project. The annual minimum lease payments under these operating leases, which have remaining terms of 32 years, range from approximately $3.6 million to $6.7 million (Met-Ed $1.6 million to $2.9 million; JCP&L $2 million to $3.8 million) over the next five years, net of reimbursements from sub-lessees. JCP&L is recovering its Merrill Creek lease payments, net of reimbursements, through distribution rates. Met-Ed's Merrill Creek lease payments were offset against the actual net divestiture proceeds received from the 1999 sales of its generation assets.

GPU, Inc.

A subsidiary of GPUI sold and leased back the Lake electric cogeneration facility for an initial term of eleven years, expiring in August 2004, for which GPU, Inc. has guaranteed payments of up to $8.1 million. Although GPU, Inc. sold GPUI (including Lake) in 2000, GPU, Inc. has remained on the guaranty, and has obtained an indemnity from Aquila's parent. In addition, a 20-year site lease was entered into for the Lake facility expiring in 2013. Prior to its sale to Aquila, GPUI accounted for these leases as operating leases and GPU's related rent expense for 2000 and 1999 totaled $11.3 million and $12.3 million, respectively.

12. COMMITMENTS AND CONTINGENCIES

PENDING MERGER OF FIRSTENERGY CORP. AND GPU

On August 8, 2000, GPU, Inc. entered into an agreement to merge with FirstEnergy, an Ohio corporation, headquartered in Akron, Ohio. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4.5 billion in cash and FirstEnergy common stock.

Under the agreement, GPU stockholders would receive $36.50 for each share of GPU common stock they own, payable in cash or the equivalent of $36.50 per share in FirstEnergy common stock, as long as FirstEnergy's common stock price is between $24.24 and $29.63. Each GPU stockholder would be able to elect the form of consideration, subject to proration so that the aggregate consideration to all GPU stockholders will be 50 percent cash and 50 percent FirstEnergy common stock. Each GPU stockholder's share converted into FirstEnergy common stock would be exchanged for not less than 1.2318 and not more than 1.5055 shares of FirstEnergy common stock, depending on the average closing price of FirstEnergy stock during the 20-day trading period ending on the sixth trading date prior to the merger closing.

The merger has been approved by the Boards of Directors and stockholders of GPU, Inc. and FirstEnergy and is expected to close promptly after all of the conditions to the consummation of the merger (including the receipt of all necessary regulatory approvals, provided that such approvals will not impose terms and conditions that would reasonably be expected to result in a "material adverse effect," as defined in the merger agreement, on the combined company, and there being no "material adverse effect" on either GPU or FirstEnergy since June 30, 2000 or March 31, 2000, respectively), are fulfilled or waived. Relevant factors would include the nature of any order issued by the regulatory authorities, the financial and business conditions of each company, and whether, and the extent by which, any developments relate to general economic conditions. In testimony

before the PaPUC, FirstEnergy stated that FirstEnergy will carefully review the PaPUC's action with respect to GPU's requested PLR relief on the financial condition of GPU to determine whether the consequences would have a "material adverse effect" on GPU or the combined company. The receipt of all necessary regulatory approvals is expected to take approximately nine to twelve months from the date of the merger agreement. There can be no assurance as to the outcome of these matters.

COMPETITION AND THE CHANGING REGULATORY ENVIRONMENT

Stranded Costs and Regulatory Restructuring Orders:

With the transition to a competitive marketplace for generation service in New Jersey and Pennsylvania, certain generation-related costs, which generally would be recoverable in a regulated environment, may no longer be recoverable. These costs are generally referred to as stranded costs.

In 1999, the NJBPU issued a Summary Order with respect to JCP&L's rate unbundling, stranded cost and restructuring filings. JCP&L is awaiting a final NJBPU order. The Summary Order provides for, among other things, full recovery of what otherwise would have become stranded costs, as well as customer choice of electric generation supplier beginning August 1, 1999 and rate reductions for all consumers. In addition, the NJBPU issued separate Orders approving the sales of JCP&L's generating assets; however, the NJBPU deferred making a final determination of the net proceeds and stranded costs related to the generating asset divestitures until an IRS ruling regarding the treatment of associated federal income tax benefits is received.

In 1998, the PaPUC issued amended Restructuring Orders approving Settlement Agreements entered into by Met-Ed and Penelec which, among other things, provide for customer choice of electric generation supplier beginning January 1, 1999 and a one-year (1999) reduction in retail distribution rates for all consumers. The Orders also provide for recovery of a substantial portion of what otherwise would have become stranded costs, subject to Phase II proceedings following the completion of Met-Ed's and Penelec's generating asset divestitures, to make a final determination of the extent of that stranded cost recovery. In 2000, Met-Ed and Penelec submitted Phase II Reports to the PaPUC supporting their actual net divestiture proceeds and providing a reconciliation of stranded costs pursuant to the 1998 Restructuring Orders.

On December 20, 2000, the PaPUC issued a Phase II Order which disallows $28 million (Met-Ed $16 million; Penelec $12 million) of the requested $304 million (Met-Ed $226 million; Penelec $78 million) of additional stranded costs above those amounts granted in the 1998 Orders. Met-Ed and Penelec had anticipated a disallowance of a portion of stranded costs, and established a $25 million pre-tax (Met-Ed $19 million; Penelec $6 million) reserve in 1999. In addition, as a result of the Phase II Order, Met-Ed and Penelec recognized pre-tax income of $66 million (Met-Ed $45 million; Penelec $21 million) due primarily to pension curtailment gains associated with employees terminated as a result of the sale of generating facilities in 1999, and the reversal of certain liabilities and changes in estimates and assumptions related to Met-Ed's leasehold interest in the Merrill Creek Reservoir project. The Phase II Order also deferred a decision on Met-Ed's requested increase in rates, beginning in 2006, for recovery of Met-Ed's generation-related stranded costs. In addition, the Order requires Met-Ed and Penelec to seek an IRS ruling regarding the return of certain unamortized investment tax credits and excess deferred income tax benefits to ratepayers. If the IRS ruling ultimately supports returning these tax benefits to ratepayers, Met-Ed and Penelec would then reduce stranded costs by $40 million and record a corresponding charge to income. For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

Supply of Electricity:

As a result of the NJBPU's and the PaPUC's Restructuring Orders, the GPU Energy companies are required to supply electricity to customers who do not choose an alternate supplier. Given that the GPU Energy companies have essentially exited the generation business and will have to supply electricity to non-shopping customers almost entirely from contracted and open market purchases, there will be increased risks associated with supplying that electricity. JCP&L is permitted to defer for future recovery the amount by which its reasonable and prudently incurred costs associated with providing basic generation service to non-shopping customers exceed amounts currently reflected in its rates for basic generation service. Met-Ed and Penelec, however, are unable to recover energy costs in excess of their established rate caps, which are in effect for varying periods.

During 2000, market prices at which Met-Ed and Penelec were required to purchase electricity for their retail supply customers at times substantially exceeded the amounts Met-Ed and Penelec were allowed to charge for that electricity under their capped generation rates. This situation has resulted in a substantial loss of earnings for Met-Ed and Penelec in 2000, especially during the peak Summer months, and this condition is expected to continue so long as wholesale energy prices remain high, and Met-Ed and Penelec are not granted regulatory relief.

Given this situation, on November 29, 2000, Met-Ed and Penelec filed a petition with the PaPUC seeking permission to defer for future recovery their energy costs in excess of established generation rate caps. Various parties to the proceeding filed motions to dismiss the petition. On January 19, 2001, Met-Ed and Penelec made a further request that they be permitted to implement their proposed deferral mechanism pending the PaPUC's final action on their petition. On January 24, 2001, the PaPUC denied, without prejudice, the motions to dismiss Met-Ed's and Penelec's petition and recommended that the companies provide support for a rate cap exception based on the criteria in the Customer Choice and Competition Act. In addition, the PaPUC consolidated the petition with the GPU/FirstEnergy merger proceeding for consideration and resolution in accord with the merger procedural schedule, which establishes a May 2001 date for a PaPUC order in both cases. In February 2001, Met-Ed and Penelec filed a supplement to their petition and supporting testimony which they believe establish that the PaPUC should grant them exceptions to their rate caps. In addition, Met-Ed and Penelec stated that as an alternative to the deferral mechanism they previously proposed, the circumstances would warrant an immediate increase in their present rate caps. There can be no assurance regarding the degree, if any, to which Met-Ed and Penelec may be able to recover their costs to supply electricity in excess of amounts currently reflected in their capped rates.

Generation Agreements:

The evolving competitive generation market has created uncertainty regarding the forecasting of the GPU Energy companies' energy supply needs, which has caused the GPU Energy companies to seek shorter-term agreements offering more flexibility. The GPU Energy companies' supply plan focuses on short- to intermediate-term commitments (one month to three years), with any residual needs then being purchased from the short-term market (one hour to one month).

The GPU Energy companies have entered into agreements with third party suppliers to purchase capacity and energy through 2004. Payments pursuant to these agreements, which include firm commitments as well as certain assumptions regarding, among other things, call-out arrangements, are estimated to be $1.2 billion in 2001, $265 million in 2002, $92 million in 2003 and $5 million in 2004.

Pursuant to the mandates of the federal Public Utility Regulatory Policies Act and state regulatory directives, the GPU Energy companies were required to enter into power purchase agreements with nonutility generators (NUGs) for the purchase of energy and capacity, which agreements have remaining terms of up to 20 years. The rates under virtually all of the GPU Energy companies' NUG agreements are substantially in excess of current and projected prices from alternative sources. The following table shows actual payments from 1998 through 2000, and estimated payments thereafter through 2005:

Payments Under NUG Agreements
(in millions)

	Total	JCP&L	Met-Ed	Penelec
1998	$788	$403	$174	$211
1999	774	388	167	219
2000	734	364	153	217
2001	775	438	145	192
2002	804	466	148	190
2003	813	465	153	195
2004	816	458	157	201
2005	798	443	160	195

The NJBPU Summary Order provides JCP&L assurance of full recovery of its NUG costs (including above-market NUG costs and certain buyout costs); and the PaPUC Restructuring Orders provide Met-Ed and Penelec assurance of full recovery of their above-market NUG costs and certain NUG buyout costs. At December 31, 2000, the GPU Energy companies have recorded, on a present value basis, a total estimated liability of $3.3 billion (JCP&L $1.7 billion; Met-Ed $0.7 billion; Penelec $0.9 billion) on the Consolidated Balance Sheet for above-market NUG costs which is offset by corresponding regulatory assets. The GPU Energy companies are continuing efforts to reduce the above-market costs of these agreements. There can be no assurance as to the extent to which these efforts will be successful.

In 1997, the NJBPU approved a Stipulation of Final Settlement which, among other things, provided for the recovery of costs associated with the buyout of the Freehold Cogeneration power purchase agreement (Freehold buyout). The NJBPU approved the cost recovery of up to $135 million, over a seven-year period, on an interim basis subject to refund. The NJBPU's Summary Order provides for the continued recovery of the Freehold buyout in the MTC, but has not altered the interim nature of such recovery, pending a final decision by the NJBPU. There can be no assurance as to the outcome of this matter.

ACCOUNTING MATTERS

JCP&L, in 1999, and Met-Ed and Penelec in 1998, discontinued the application of Statement of Financial Accounting Standards No. 71 (FAS 71), "Accounting for the Effects of Certain Types of Regulation," and adopted the provisions of Statement of Financial Accounting Standards No. 101 (FAS 101), "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71," and Emerging Issues Task Force (EITF) Issue 97-4, "Deregulation of the Pricing of Electricity - Issues Related to the Application of FAS 71 and FAS 101," with respect to their electric generation operations. The transmission and distribution portion of the GPU Energy companies' operations continues to be subject to the provisions of FAS 71. Regulatory assets, net as reflected in the December 31, 2000 and December 31, 1999 Consolidated Balance Sheets in accordance with the provisions of FAS 71 and EITF Issue 97-4 were as follows:

(in thousands)

GPU, Inc. and Subsidiaries	2000	1999
Market transition charge (MTC) / basic generation service	$2,732,926	$2,397,071

Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities," as amended by FAS 137, "Accounting for Derivative Instruments and Hedging Activities - Deferral of the Effective Date of FASB Statement No. 133" and FAS 138, "Accounting for Certain Derivative Instruments and Certain Hedging Activities - An Amendment of FASB Statement No. 133" (collectively, FAS 133), establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. In general, FAS 133 requires that companies recognize all derivatives as either assets or liabilities on the balance sheet and measure those instruments at fair value. FAS 133 (as amended) provides an exemption for certain contracts that qualify as normal purchases and

sales. To qualify for this exclusion, certain criteria must be me , including that it must be probable that the contract will result in physical delivery. GPU adopted FAS 133 on January 1, 2001.

GPU's use of derivative instruments is intended to manage the risk of fluctuations in commodity prices, interest rates and foreign currencies. GPU does not intend to hold or issue derivative instruments for trading purposes. GPU enters into fixed-price contracts for future purchases of electricity and natural gas with individual counterparties or through traded exchanges. The majority of these commodity contracts entered into by GPU are considered "normal purchases," as defined by FAS 133, and, therefore, are excluded from the statement's scope. Commodity contracts accounted for as derivatives under FAS 133 are designated as cash flow hedges of the underlying commodity purchases, to the extent they qualify for such treatment. FAS 133 requires that the effective portion of the gain or loss on a derivative instrument designated and qualifying as a cash flow hedge be reported as a component of Other Comprehensive Income, net of tax. GPU also enters into third party energy option contracts. These derivative instruments are accounted for as cash flow hedges of the underlying commodity purchases, to the extent they are effective hedges. Upon adoption of this statement at January 1, 2001, the impact of FAS 133 as it relates to forward, futures and option contracts was immaterial to GPU's earnings or financial position.

To hedge against high transmission rates along certain routes during periods of high congestion, GPU enters into fixed transmission rights (FTRs) agreements. Upon adoption of FAS 133 at January 1, 2001, the impact of this statement as it relates to FTRs was immaterial to GPU's earnings or financial position.

GPU uses various types of interest rate swaps to convert floating-rate loans to fixed rates. These instruments are accounted for as cash flow hedges, to the extent they are effective hedges. Upon adoption of this statement on January 1, 2001, derivative liabilities of approximately $7 million (Penelec $1 million; GPU Power $1.5 million; GPU Electric $4.5 million) were recognized on the Consolidated Balance Sheet, with an offset, net of tax, of $5 million (Penelec $1 million; GPU Power $1.5 million; GPU Electric $2.5 million) to Accumulated other comprehensive income and a $2 million (GPU Electric) charge to income.

GPU uses currency swap agreements to manage currency risk caused by fluctuations in the US dollar exchange rate related to debt issued in the US by Avon Energy Partners Holdings. These instruments will be accounted for as cash flow hedges, to the extent they are effective hedges. Upon adoption of FAS 133 on January 1, 2001, derivative assets of approximately $54 million (GPU Power UK) were recognized on the Consolidated Balance Sheet, with an offset, net of tax, to Accumulated other comprehensive income.

NUCLEAR FACILITIES

Investments:

In December 1999, the GPU Energy companies sold TMI-1 to AmerGen for approximately $100 million. In August 2000, JCP&L sold Oyster Creek to AmerGen for approximately $10 million. As part of the sales, AmerGen has assumed full responsibility for decommissioning the plants, and the GPU Energy companies have transferred $320 million and $430 million of TMI-1 and Oyster Creek decommissioning trust funds, respectively, to AmerGen. JCP&L, Met-Ed and Penelec jointly own TMI-2, which was damaged during a 1979 accident, in the percentages of 25%, 50% and 25%, respectively. JCP&L's net investment in TMI-2 as of December 31, 2000 and December 31, 1999 was $55 million and $61 million, respectively. JCP&L is collecting revenues for TMI-2 on a basis which provides for the recovery of its remaining investment in the plant by 2008. Met-Ed's and Penelec's

remaining investments in TMI-2 were written off in 1998 after receiving the PaPUC's Restructuring Orders.

TMI-2:

As a result of the 1979 TMI-2 accident, individual claims for alleged personal injury (including claims for punitive damages), which are material in amount, were asserted against GPU, Inc. and the GPU Energy companies. Approximately 2,100 of such claims were filed in the US District Court for the Middle District of Pennsylvania. Some of the claims also seek recovery for injuries from alleged emissions of radioactivity before and after the accident.

At the time of the TMI-2 accident, as provided for in the Price-Anderson Act, the GPU Energy companies had (a) primary financial protection in the form of insurance policies with groups of insurance companies providing an aggregate of $140 million of primary coverage, (b) secondary financial protection in the form of private liability insurance under an industry retrospective rating plan providing for up to an aggregate of $335 million in premium charges under such plan and (c) an indemnity agreement with the Nuclear Regulatory Commission (NRC) for up to $85 million, bringing their total financial protection up to an aggregate of $560 million. Under the secondary level, the GPU Energy companies are subject to a retrospective premium charge of up to $5 million per reactor, or a total of $15 million (JCP&L $7.5 million; Met-Ed $5 million; Penelec $2.5 million).

In 1995, the US Court of Appeals for the Third Circuit ruled that the Price-Anderson Act provides coverage under its primary and secondary levels for punitive as well as compensatory damages, but that punitive damages could not be recovered against the Federal Government under the third level of financial protection. In so doing, the Court of Appeals referred to the "finite fund" (the $560 million of financial protection under the Price-Anderson Act) to which plaintiffs must resort to get compensatory as well as punitive damages.

The Court of Appeals also ruled that the standard of care owed by the defendants to a plaintiff was determined by the specific level of radiation which was released into the environment, as measured at the site boundary, rather than as measured at the specific site where the plaintiff was located at the time of the accident (as the defendants proposed). The Court of Appeals also held that each plaintiff still must demonstrate exposure to radiation released during the TMI-2 accident and that such exposure had resulted in injuries. In 1996, the US Supreme Court denied petitions filed by GPU, Inc. and the GPU Energy companies to review the Court of Appeals' rulings.

In 1996, the District Court granted a motion for summary judgment filed by GPU, Inc. and the GPU Energy companies, and dismissed the ten initial "test cases" which had been selected for a test case trial, as well as all of the remaining 2,100 pending claims. The Court ruled that there was no evidence which created a genuine issue of material fact warranting submission of plaintiffs' claims to a jury. The plaintiffs appealed the District Court's ruling to the Court of Appeals for the Third Circuit. In November 1999, the Third Circuit affirmed the District Court's dismissal of the ten "test cases," but set aside the dismissal of the additional pending claims, remanding them to the District Court for further proceedings. In remanding these claims, the Third Circuit held that the District Court had erred in extending its summary judgment decision to the other plaintiffs and imposing on these plaintiffs the District Court's finding that radiation exposures below 10 rems were too speculative to establish a causal link to cancer. The Court of Appeals stated that the non-test case plaintiffs should be permitted to present their own individual evidence that exposure to radiation from the accident caused their cancers. In June 2000, the US Supreme Court denied petitions for review filed by GPU, Inc., the GPU Energy companies and the plairtiffs.

In September 2000, the defendants filed a Motion for Summary Judgment in the District Court. Meanwhile, the plaintiffs have taken an interlocutory appeal to the Third Circuit seeking review of the District Court's determination that the remaining plaintiffs should be allowed to advance causation theories based only on the admissible evidence of record at the close of discovery in the case.

Oral arguments on the plaintiffs' appeal were held in January, 2001. There can be no assurance as to the outcome of this litigation.

GPU, Inc. and the GPU Energy companies believe that any liability to which they might be subject by reason of the TMI-2 accident will not exceed their financial protection under the Price-Anderson Act.

NUCLEAR PLANT RETIREMENT COSTS

Retirement costs for nuclear plants include decommissioning the radiological portions of the plants and the cost of removal of nonradiological structures and materials. The disposal of spent nuclear fuel is covered separately by contracts with the DOE.

In 1995, a consultant performed a site-specific study of TMI-2 that considered various decommissioning methods and estimated the cost of decommissioning the radiological portion and the cost of removal of the nonradiological portion of the plant, using the prompt removal/dismantlement method. Management has reviewed the methodology and assumptions used in this study, is in agreement with them, and believes the results are reasonable. The TMI-2 funding completion date is 2014, consistent with TMI-2 remaining in long-term storage. The retirement cost estimate under the 1995 site-specific study, assuming decommissioning of TMI-2 in 2014, is $450 million for radiological decommissioning and $36 million for non-radiological removal costs (net of $12.6 million spent as of December 31, 2000)(in 2000 dollars).

Each of the GPU Energy companies is responsible for retirement costs in proportion to its respective ownership percentage. The ultimate cost of retiring TMI-2 may be different from the cost estimate contained in this site-specific study. Also, the cost estimate contained in this site-specific study is significantly greater than the decommissioning funding targets established by the NRC.

The estimated liability for future TMI-2 retirement costs (reflected as Three Mile Island Unit 2 future costs on the Consolidated Balance Sheets) as of December 31, 2000 and December 31, 1999 is $515 million (JCP&L $129 million; Met-Ed $257 million; Penelec $129 million) and $497 million (JCP&L $124 million; Met-Ed $249 million; Penelec $124 million), respectively. This liability is based upon the 1995 site-specific study estimate (in 2000 and 1999 dollars, respectively) discussed above and an estimate for remaining incremental monitored storage costs of $29 million (JCP&L $7 million; Met-Ed $15 million; Penelec $7 million) and $27 million (JCP&L $7 million; Met-Ed $13 million; Penelec $7 million) as of December 31, 2000 and December 31, 1999, respectively, as a result of TMI-2 entering long-term monitored storage in 1993.

Offsetting the $515 million liability as of December 31, 2000 is $127 million (JCP&L $15 million; Met-Ed $93 million; Penelec $19 million), which management believes is probable of recovery from customers and included in Regulatory assets, net on the Consolidated Balance Sheet, and $374 million (JCP&L $115 million; Met-Ed $161 million; Penelec $98 million) in trust funds for TMI-2 and included in Nuclear decommissioning trusts, at market on the Consolidated Balance Sheet.

The NJBPU has granted JCP&L revenues for TMI-2 retirement costs based on the 1995

site-specific study estimate. In addition, JCP&L is recovering a portion of its share of TMI-2 incremental monitored storage costs. The PaPUC Restructuring Orders granted Met-Ed and Penelec recovery of TMI-2 decommissioning costs as part of the CTC; however, Penelec has recovered these costs through the divestiture of its generating assets. The 1996 Customer Choice Act also allows Met-Ed and Penelec to defer as a regulatory asset those amounts that are above the level provided for in the CTC for future recovery.

As of December 31, 2000, the accident-related portion of TMI-2 radiological decommissioning costs is estimated to be $80 million (JCP&L $20 million; Met-Ed $40 million; Penelec $20 million), which is based on the 1995 site-specific study (in 2000 dollars). In connection with rate case resolutions, JCP&L, Met-Ed and Penelec made contributions to irrevocable external trusts for their respective shares of the accident-related portion of the decommissioning liability in amounts of $15 million, $40 million and $20 million, respectively. These contributions were not recoverable from customers and were expensed in 1990, in the case of JCP&L, and in 1991 for Met-Ed and Penelec.

The GPU Energy companies intend to seek recovery for any increases in TMI-2 retirement costs, but recognize that recovery cannot be assured.

Prior to September 2000, increases in the accident-related portion of Met-Ed's and Penelec's TMI-2 decommissioning liability were charged to expense, in amounts totaling $23.2 million (Met-Ed $15.4 million; Penelec $7.8 million) through August 2000. Likewise, through August 2000, earnings on Met-Ed's and Penelec's contributions to external trusts, in amounts totaling $34.9 million (Met-Ed $23.3 million; Penelec $11.6 million), were taken to income, and the related unrealized gains and losses were accrued to Accumulated other comprehensive income on the Consolidated Balance Sheet.

During the course of ongoing regulatory proceedings in Pennsylvania, Met-Ed and Penelec determined, in the third quarter 2000, that a portion of their regulatory assets for TMI-2 decommissioning previously regarded as probable of recovery in rates, are now no longer deemed probable of recovery. As a result, in the third quarter 2000, Met-Ed and Penelec charged to income $11.7 million (Met-Ed $7.9 million; Penelec $3.8 million) pre-tax for the write-down of their respective regulatory assets for TMI-2 decommissioning, representing the net realized gain they previously recorded on the accident-related portion of the TMI-2 decommissioning trust. Furthermore, the unrealized gains or losses associated with the accident-related portion of the TMI-2 decommissioning trust (previously recorded in Accumulated other comprehensive income) were transferred to Regulatory assets, net on the Consolidated Balance Sheet, and will no longer be recorded in Accumulated other comprehensive income.

The GPU Energy companies own all of the common stock of the Saxton Nuclear Experimental Corporation, which owns a small demonstration nuclear reactor. Decommissioning of the plant is expected to be completed in 2002. In December 2000, based on new estimates to complete the decommissioning of the plant, the decommissioning liability was increased by $13 million, to $52 million (JCP&L $23 million; Met-Ed $17 million; Penelec $12 million) as of December 31, 2000. The GPU Energy companies do not believe this increase is probable of recovery, and have charged the entire amount to expense.

INSURANCE

GPU has insurance (subject to retentions and deductibles) for its operations and facilities including coverage for property damage, liability to employees and third parties, and loss of use and occupancy. There is no assurance that GPU will maintain all existing insurance coverages. Losses or liabilities that are not completely insured,

unless allowed to be recovered through ratemaking, could have a material adverse effect on the financial position of GPU.

GPU has purchased property and decontamination insurance coverage for TMI-2 totaling $150 million.

The Price-Anderson Act limits an owner's liability to third parties resulting from a nuclear incident to approximately $9.5 billion. Coverage for the first $200 million of such liability is provided by private insurance. The remaining coverage, or secondary financial protection, is provided by retrospective premiums payable by all nuclear reactor owners. Although TMI-2 is exempt from retrospective premium assessments, the plant is still covered by the provisions of the Price-Anderson Act. In addition, the GPU Energy companies are subject to other retrospective premium assessments related to policies applicable to TMI-1 prior to its sale to AmerGen.

ENVIRONMENTAL MATTERS

As a result of existing and proposed legislation and regulations, and ongoing legal proceedings dealing with environmental matters, including but not limited to acid rain, water quality, ambient air quality, global warming, electromagnetic fields, and storage and disposal of hazardous and/or toxic wastes, GPU may be required to incur substantial additional costs to construct new equipment, modify or replace existing and proposed equipment, remediate, decommission or cleanup waste disposal and other sites currently or formerly used by it, including formerly owned manufactured gas plants (MGP), coal mine refuse piles and generation facilities.

GPU has been formally notified by the EPA and state environmental authorities that it is among the potentially responsible parties (PRPs) who may be jointly and severally liable to pay for the costs associated with the investigation and remediation at 11 hazardous and/or toxic waste sites (in some cases, more than one company is named for a given site).

JCP&L	MET-ED	PENELEC	GPUN	GPU, INC.	TOTAL
7	4	2	1	1	11

In addition, certain of the GPU companies have been requested to participate in the remediation or supply information to the EPA and state environmental authorities on several other sites for which they have not been formally named as PRPs, although the EPA and/or state authorities may nevertheless consider them as PRPs. Certain of the GPU companies have also been named in lawsuits requesting damages (which are material in amount) for hazardous and/or toxic substances allegedly released into the environment. As of December 31, 2000, a liability of approximately $6 million (JCP&L $2.2 million; Met-Ed $0.6 million; Penelec $0.2 million; other $3 million) was recorded for PRP sites where it is probable that a loss has been incurred and the amount could be reasonably estimated.

The ultimate cost of remediation of all these and other hazardous waste sites will depend upon changing circumstances as site investigations continue, including (a) the existing technology required for site cleanup, (b) the remedial action plan chosen and (c) the extent of site contamination and the portion attributed to the GPU companies involved.

In 1997, the EPA filed a complaint against GPU, Inc. in the US District Court for the District of Delaware for enforcement of its Unilateral Order (Order) issued against GPU, Inc. to clean up the former Dover Gas Light Company (Dover) manufactured gas production site (Site) in Dover, Delaware. Dover was part of the AGECO/AGECORP group of companies from 1929 until 1942; GPU, Inc. emerged from the AGECO/AGECORP reorganization

proceedings in 1946. All of Dover's common stock, which was sold in 1942 to an unaffiliated entity, was subsequently acquired by Chesapeake Utilities Corporation (Chesapeake), which merged with Dover in 1960. Chesapeake is currently performing the cleanup at the Site. According to the complaint, the EPA is seeking (1) enforcement of the Order against GPU; (2) recovery of its past response costs; (3) a declaratory judgment that GPU is liable for any remaining cleanup costs of the Site; and (4) statutory penalties for noncompliance with the Order. The EPA has stated that it has incurred approximately $1.1 million of past response costs as of December 31, 2000. Chesapeake claims to have spent approximately $10 million in connection with remediation of the site. The EPA has more recently estimated the cost of ground water remediation to be on the order of $6 million. Consultants to Chesapeake have estimated the remaining remediation ground water costs to be approximately $12 million to $19 million. In accordance with its penalty policy, and in discussions with GPU, the EPA has demanded penalties calculated at a daily rate of $8,800, rather than the statutory maximum of $27,500 per day. As of December 31, 2000, if the statutory maximum were applied, the total amount of penalties would be approximately $44 million. GPU believes that it has meritorious defenses to the imposition of penalties, or that if a penalty is assessed, it should be at a lower daily rate. Chesapeake has also sued GPU, Inc. for contribution to the cleanup of the Dover Site. The US District Court for the District of Delaware has consolidated the case filed by Chesapeake with the case filed by the EPA and discovery is proceeding. There can be no assurance as to the outcome of these proceedings.

In August 2000, Rochester Gas & Electric Corporation (RG&E) filed suit against GPU, Inc. in the US District Court for the Western District of New York for the reimbursement of $5.2 million of costs and damages it has allegedly incurred, and a declaratory judgement with respect to future costs and damages, in connection with two former MGP sites and a third property where wastes from one of those sites were allegedly deposited. All of the properties are located in Rochester, New York. According to the complaint, RG&E was an indirect subsidiary of AGECO from May 1929 until January 1946, and a subsidiary of GPU, Inc. from January 1946 until October 1949, when it was divested by order of the SEC under the Public Utility Holding Company Act. There can be no assurance as to the outcome of this matter.

In connection with the 1999 sale of its Seward Generation Station to Sithe, Penelec has assumed up to $6 million of remediation costs associated with certain coal mine refuse piles which are the subject of an earlier consent decree with the Pennsylvania Department of Environmental Protection. Penelec received recovery of these remediation costs through a reduction of its liability to ratepayers, per the December 20, 2000 PaPUC Phase II Order.

JCP&L has entered into agreements with the New Jersey Department of Environmental Protection for the investigation and remediation of 17 formerly owned MGP sites. JCP&L has also entered into various cost-sharing agreements with other utilities for most of the sites. As of December 31, 2000, JCP&L has spent approximately $44.5 million in connection with the cleanup of these sites. In addition, JCP&L has recorded an estimated environmental liability of $50.2 million relating to expected future costs of these sites (as well as two other properties). This estimated liability is based upon ongoing site investigations and remediation efforts, which generally involve capping the sites and pumping and treatment of ground water. The cost to clean up these sites could be materially in excess of the $50.2 million due to significant uncertainties, including changes in acceptable remediation methods and technologies.

In 1997, the NJBPU approved JCP&L's request to establish a Remediation Adjustment Clause for the recovery of MGP remediation costs. As a result of the NJBPU's Summary Order, effective August 1, 1999, the recovery of these costs was transferred to the Societal Benefits Charge. As of December 31, 2000, JCP&L had recorded on its Consolidated Balance Sheet a regulatory asset of $51.6 million. JCP&L is continuing to pursue

reimbursement from its insurance carriers for remediation costs already spent and for future estimated costs. In 1994, JCP&L filed a complaint with the Superior Court of New Jersey against several of its insurance carriers, relating to these MGP sites, and has settled with all but one of those carriers.

OTHER COMMITMENTS AND CONTINGENCIES

Class Action Litigation:

GPU Energy

In July 1999, the Mid-Atlantic states experienced a severe heat storm which resulted in power outages throughout the service territories of many electric utilities, including the territory of JCP&L. Following these outages, the NJBPU initiated an investigation into the causes of the outages and the reliability of the transmission and distribution systems of all four New Jersey electric utilities. This investigation was essentially completed in May 2000, with the issuance of Phase I and Phase II reports and orders from the NJBPU. Both the Phase I and Phase II reports and orders contain, among other things, directions for JCP&L to undertake certain actions and report back to the NJBPU on the results. Additionally, the NJBPU Phase II order concluded that there is not a prima facie case demonstrating that, overall, JCP&L provided unsafe, inadequate or improper service to its customers.

Two class action lawsuits were commenced in New Jersey Superior Court in July 1999. These suits were subsequently consolidated into a single proceeding, and they seek compensatory and punitive damages arising from the service interruptions of July 1999 in the JCP&L territory. The GPU defendants named in these suits (i.e., GPU, Inc., JCP&L, GPUS and GPU Generation, Inc.) moved to dismiss or stay the litigation pending the NJBPU's exercise of its primary jurisdiction to investigate the causes of the outages. The trial court denied that motion, and also certified a plaintiff class consisting of JCP&L customers and their "dependents, tenants, employees and other intended beneficiaries of customers who suffered damages as a result" of the service interruptions.

In January 2000, the New Jersey Appellate Division granted the GPU defendants' motion for leave to take an interlocutory appeal of the trial court's decision on the issue of primary jurisdiction. On June 14, 2000, the Appellate Division affirmed the trial court but determined that the NJBPU's findings in the exercise of its "exclusive jurisdiction" could be "probative...but not determinative" of at least some of the issues in the litigation, and leaving it to the trial court to "decide in the first instance just what weight and validity to give the [NJBPU's] findings and conclusions."

In response to the GPU defendants' demand for a statement of damages, the plaintiffs have stated that they are seeking $700 million, subject to the results of pretrial discovery. JCP&L has notified its insurance carriers of the plaintiffs' allegations. The primary insurance carrier has stated that, while the substance of the plaintiffs' allegations is covered under the policy, it is reserving its rights concerning coverage as circumstances develop. In September 2000, JCP&L received from its primary insurance carrier the initial indemnification payment for certain expenses incurred by JCP&L relative to this action.

Discovery continues in the class action, and no trial date has been set. The GPU defendants filed a motion with the trial court seeking decertification of the class, and oral argument on the decertification was held in February 2001. There can be no assurance as to the outcome of these matters.

GPU Electric

As a result of the September 1998 fire and explosion at the Longford natural gas plant in Victoria, Australia, Victorian gas users (plaintiffs) have brought a class action in the Australian Federal Court against Esso Australia Limited and its affiliate (Esso), the owner and operator of the plant, for losses suffered due to the lack of natural gas supply and related damages. The plaintiffs claim that Esso was, among other things, negligent in designing, maintaining and operating the Longford plant, and also assert claims under Australian fair trade practices law.

Esso has joined as third party defendants the State of Victoria (State) and various State-owned entities which operated the Victorian gas industry prior to its privatization, including Transmission Pipelines Australia (TPA) and its affiliate Transmission Pipelines (Assets) Australia (TPAA). GPU, Inc., through GPU GasNet, acquired the assets of TPA and the shares of TPAA from the State in June 1999. Esso asserts that the State and the gas industry were negligent in that, among other things, they failed to ensure that the gas system would provide a secure supply of gas to users, and also asserts claims under the Australian fair trade practices law. In addition, GPU GasNet and other private entities (Buyers) that purchased the Victorian gas assets from the State have joined Esso as third party defendants. Esso asserts that if the gas industry is liable as alleged, that liability has been transferred to the Buyers as part of the State's privatization process.

Under the acquisition agreement with the State, GPU GasNet has indemnified TPA and the State against third party claims arising out of, among other things, the operation of TPA's business. TPA and the State have commenced proceedings against GPU GasNet to enforce the indemnity in respect of any liability that may flow to TPA as a result of Esso's claim.

GPU GasNet and TPAA have filed answers denying liability to Esso, the State and TPA, which could be material. GPU GasNet and TPAA have notified their insurance carriers of this action. The insurers have notified GPU GasNet that they have formed the preliminary view that GPU GasNet is not entitled to coverage under the liability policy. GPU GasNet believes that it is entitled to coverage, and discussions with the insurers are continuing. There can be no assurance as to the outcome of this matter.

Investments and Guarantees:

GPU, Inc.

GPU, Inc. has made significant investments in foreign businesses and facilities through its subsidiaries, GPU Electric and GPU Power. As of December 31, 2000, GPU, Inc.'s investments in GPU Electric and GPU Power were $881 million and $139 million, respectively. As of that date, GPU, Inc. has also guaranteed an additional $899 million and $21 million of GPU Electric and GPU Power outstanding obligations, respectively. Although management attempts to mitigate the risks of investing in certain foreign countries by, among other things, securing political risk insurance, GPU faces additional risks inherent to operating in such locations, including foreign currency fluctuations.

GPU Electric

In June 2000, GPU sold GPU PowerNet, its Australian electric transmission company, for A$2.1 billion (US $1.26 billion). For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

GPU Power UK has a 40% equity interest in a 586 MW power project in Pakistan (the Uch Power Project), which was originally scheduled to begin commercial operation in late 1998. In June 1999, certain Project lenders for the Uch Power Project issued notices of default to the Project sponsors (including GPU Power UK) for, among other things, failure

to pay principal and interest under various lo n agreements. In November 1999, the Project sponsors and lenders reached an agreement under which repayment of the construction loan was extended, principal and interest payments deferred, and the sponsors agreed to fund the completion of the plant through the remaining equity contribution commitments. The plant commenced commercial operations in October 2000.

Uch has renegotiated several of the project agreements with the Government of Pakistan and its agencies, under which it agreed, among other things, to accept a reduction in the power purchase tariff averaging approximately 8% over the project term. The agreement includes options to extend the term of the project from 23 to 30 years.

GPU's investment in the Uch Power Project as of December 31, 2000 was approximately $37.9 million, plus a guaranty letter of credit of $3.6 million, and its share of the projected completion costs represents an additional $3.1 million commitment. Cinergy (the former owner of 50% of Midlands Electricity plc) agreed to fund up to an aggregate of $20 million of the required capital contributions, for a period of one year from July 15, 1999, and "cash losses," which could be incurred on the Uch Power Project, for a period of up to ten years from July 15, 1999. Cinergy has reimbursed GPU Electric for $4.9 million of capital contributions through December 31, 2000, leaving a remaining commitment of up to $15.1 million. There can be no assurance as to the outcome of this matter.

GPU Power UK also owns an 18.75% interest in Humber Power Limited (Humber). At December 31, 2000, GPU Power UK's equity in the project, which is located in England, was approximately $28 million. A number of investors in the project (not including GPU Power UK) also have purchase power agreements with Humber, which provide for the servicing of the project's debt and a return on equity. The purchasers are claiming that such contracts, which provide for prices of power in excess of current market prices, will become unenforceable under a proposed new UK regulatory scheme. Humber and the purchasers have agreed to submit the matter to arbitration as provided by the contracts. If the contracts cannot be satisfactorily reformed, the prices at which Humber can sell its energy may not be sufficient to provide an equity return to the investors or ultimately to service Humber's debt. There can be no assurance as to the outcome of this matter.

As part of the 1999 sale of the GPU Power UK supply business and the purchase of the 50% of GPU Power UK that GPU did not already own, certain long-term purchase obligations under natural gas supply contracts were retained. Most of these contracts, which extend to September 2005, were at fixed prices in excess of the market price of gas, and a liability had been established for the estimated loss under such contracts. However, as a result of increasing gas prices during the second quarter of 2000, GPU Power UK was able to enter into matching forward sale contracts for the majority of the gas purchases, resulting in a reduction in the estimated liability and a pre-tax credit to income of $15.9 million. Other open gas contracts, which extend to 2002, require GPU Power UK to purchase or to sell gas at fixed prices. The estimated out-of-market position of all contracts at December 31, 2000 was $22 million; however, the remaining open positions included both sales and purchases, thereby reducing the remaining exposure to future price changes.

In an English court decision involving two unaffiliated utilities (National Grid and National Power), the court held that utilities improperly used a pension plan surplus in the UK Electricity Supply Pension Scheme to eliminate scheduled payments in respect of early retirement costs and employer contributions. The court found that, in the case of National Grid and National Power, procedures had not been strictly followed, and as such, a liability may now exist. At a subsequent hearing, the court refused to consider the validity or effectiveness of retrospective amendments to the plan. National Grid and National Power have appealed the court's decision to the House of Lords. Pending the outcome of the Appeal, the requirement for any payments has been stayed. The appeal in the House of Lords is expected to be heard in the first quarter of 2001. If a similar

complaint were to be made against GPU Power UK, GPU Power UK's potential liability is estimated to be a maximum of £63 million (US $94 million), exclusive of any applicable interest charges or penalties. The GPU Power UK section of the Electricity Supply Pension Scheme remains in substantial surplus and any payment to the plan that might ultimately prove to be necessary would be accounted for as an increase in pension assets, and would not have an immediate impact on income. However, any related penalties or interest (which could be assessed, though none are currently proposed) may adversely affect income. There can be no assurance as to the outcome of this matter.

Emdersa's operating companies are subject to a number of government claims related to Value-added tax liabilities and to Social Security taxes collected in their electric rates, which aggregate approximately $21 million. The claims are generally related to transitional issues surrounding the privatization of Argentina's electricity industry. There can be no assurance as to the outcome of these matters.

GPU Power

On July 9, 1999, DIAN (the Colombian national tax authority) issued a "Special Requirement" on the Termobarranquilla S.A., Empresa de Servicios Publicos (TEBSA) 1996 income tax return, which challenges the exclusion from taxable income of an inflation adjustment related to the value of assets used for power generation (EI Barranquilla, a wholly owned subsidiary of GPU Power, ABB Barranquilla, Corporacion Electrica de la Costa Atlantica (CORELCA) and Distral Group have a 28.7%, 28.7%, 42.5% and 0.1% interest in TEBSA, respectively). The failure to give notice of this Special Requirement to the US Export Import Bank (EXIM Bank) is an event of default under the loan agreement. GPU Power also believes that other events of default exist under the loan agreements with project lenders including the Overseas Private Investments Corporation (OPIC), a commercial bank syndicate. As a result, certain required certifications have not been delivered to EXIM Bank, OPIC and the other project lenders, which failure is, itself, an event of default under the loan agreements. These issues are currently being discussed with EXIM Bank, the other project lenders, and the Government of Colombia, as well as the other partners in the TEBSA project. In addition, in January 2001 CORELCA advised GPU Power that it was conducting its own investigation of the matter. As of December 31, 2000, GPU Power has an investment of approximately $92 million in TEBSA and is committed to make additional standby equity contributions of $21.3 million, which GPU, Inc. has guaranteed. The total outstanding senior debt of the TEBSA project is $372 million at December 31, 2000, and, in addition, GPU, Inc. has guaranteed the obligations of the operators of the TEBSA project, up to a maximum of $5 million, under the project's operations and maintenance agreement. There can be no assurance as to the outcome of these matters.

With regard to the "Special Requirement" issued by DIAN, DIAN asserts that TEBSA should be liable for approximately $4.4 million consisting of $1.3 million in additional tax and $3.1 million in penalties and interest. TEBSA has filed both procedural and substantive objections to these assertions, the DIAN responded to these objections reiterating its previous position, and TEBSA, in turn, filed an appeal with the DIAN on June 2, 2000. A response is expected within one year.

In July 2000, the DIAN issued a "Special Requirement" on the 1997 income tax return of TEBSA challenging a tax exemption benefit under a Colombian income tax statute. The DIAN requested payment of approximately $1.2 million in additional tax, penalties and interest. On October 12, 2000, TEBSA filed a response with the DIAN stating arguments supporting its tax exemption benefit. There can be no assurance as to the outcome of these matters.

GPU Telcom

In March 2000, GPU, Inc. announced its participation in America's Fiber Network LLC

(AFN), of which GPU, Inc. anticipates owning 25%. AFN is a high-speed fiber optics company with a network of more than 7,000 route miles, or 140,000 fiber miles, connecting major markets in the eastern US to secondary markets with a growing need for broadband access. GPU, Inc. anticipates investing cash, as well as existing and new fiber routes and electronic equipment, in AFN through GPU Telcom. As of December 31, 2000, GPU Telcom had invested $5.3 million in AFN.

In April 2000, GPU, Inc. announced the formation of Telergy Mid-Atlantic (TMA), a joint venture between GPU Telcom and Telergy, Inc. TMA combines established telecommunications services and marketing expertise with utilities' existing fiber networks and natural positioning in serving retail markets. As of December 31, 2000 GPU Telcom had acquired $20 million of Telergy, Inc. convertible preferred securities.

Other:

JCP&L and Public Service Electric & Gas Company (PSE&G) each hold a 50% undivided ownership interest in Yards Creek Pumped Storage Facility (Yards Creek). In December 1998, JCP&L filed a petition with the NJBPU seeking a declaratory order that PSE&G's right of first refusal to purchase JCP&L's ownership interest at its current book value under a 1964 agreement between the companies is void and unenforceable. Management believes that the fair market value of JCP&L's ownership interest in Yards Creek is substantially in excess of its December 31, 2000 book value of $21 million. Negotiations to resolve this dispute are continuing; however, there can be no assurance as to the outcome of this matter.

In March 1999, Penelec and New York State Electric & Gas Corporation (NYSEG) each sold their 50% undivided ownership interests in the Homer City Station to a subsidiary of Edison Mission Energy (EME) for a total of $1.9 billion. In connection with the sale, Penelec and NYSEG indemnified the buyer with respect to certain contingent liabilities, including costs or expenses which the EPA might impose for failure to comply with New Source Performance Standards, Prevention of Significant Deterioration and New Source Review regulations under the Clean Air Act prior to the date of the sale. In 1998, the EPA had conducted inspections at Homer City with regard to the plant's compliance with these regulations. On October 30, 2000, EME notified Penelec and NYSEG that the EPA had concluded that these regulations applied to Homer City prior to the sale to EME and that Homer City was operating in violation of these Clean Air Act regulations. If it is ultimately determined that these regulations were applicable to Homer City, the EPA could assess substantial monetary penalties and require capital modifications to the plant, the costs of which would be material. To the extent Penelec and NYSEG are obligated to indemnify EME for any of these costs, they would each be severally liable for a 50% share. There can be no assurance as to the outcome of this matter.

Concurrent with GPU's July 1999 acquisition of the 50% of GPU Power UK which it did not already own, GPU began to evaluate existing restructuring plans and formulate additional plans to reduce operating expenses and achieve ongoing cost reductions. As of December 31, 1999, GPU had identified and approved a cost reduction plan. At the acquisition date, GPU Power UK had recorded a liability of $28.6 million related to previous cost reduction plans. GPU retained $25.7 million of this liability, related to contractual termination and other severance benefits for 276 employees identified in a 1999 business process reengineering project. GPU identified an additional 355 employees (234 in Engineering Services, 38 in Metering, 21 in Network Services and 62 from other specific functions) to be terminated as part of the plan and recorded an additional liability of $39.3 million. A net charge of $18.2 million for GPU's 50% share of these adjustments was included in expense in 1999 and the other 50% was recorded in Goodwill as a purchase accounting adjustment.

In 2000, a change in the investment return assumptions, due to better than expected

investment performance, resulted in a reduction of approximately $6.9 million, to $22.6 million, in the estimated liability for the remaining 459 employees. Consequently, goodwill was credited for $3.4 million (50% of the change in estimate) and $3.5 million was credited to income. During 2000, $16.9 million was paid to 399 employees. The remaining severance liability of $4.5 million at December 31, 2000 reflects the above transactions as well as currency translation adjustments and the impact of seven employees who were retained, and is included in Other current liabilities on the Consolidated Balance Sheet. Management expects the remaining employees to leave by June 30, 2001.

GPU AR has entered into contracts to supply electricity to retail customers through June 2001. In connection with meeting its supply obligations, GPU AR has entered into purchase commitments for energy and capacity with payment obligations totaling approximately $10.6 million as of December 31, 2000. GPU, Inc. has guaranteed these payments, as well as certain other obligations, up to a maximum of $19 million.

In accordance with the Nuclear Waste Policy Act of 1982 (NWPA), the GPU Energy companies have entered into contracts with, and have been paying fees to, the DOE for the future disposal of spent nuclear fuel in a repository or interim storage facility. In 1996, the DOE notified the GPU Energy companies and other standard contract holders that it would be unable to begin acceptance of spent nuclear fuel for disposal by 1998, as mandated by the NWPA. The DOE requested recommendations from contract holders for handling the delay. In June 1997, a consortium of electric utilities, including GPUN, filed a license application with the NRC seeking permission to build an interim above-ground disposal facility for spent nuclear fuel in Utah.

At December 31, 2000, GPU has recorded a liability of $210 million owed to the Nuclear Waste Fund, related to spent nuclear fuel generated prior to the sales of TMI-1 and Oyster Creek to AmerGen. AmerGen has assumed all liability for disposal costs related to spent nuclear fuel generated following its purchase of the plants.

On July 26, 2000, GPUN filed suit in the United States Court of Claims seeking to recover damages as a result of the DOE's failure to commence disposal of GPUN's spent nuclear fuel on January 31, 1998, as required by the terms of the Standard Contract between GPUN and DOE. The complaint seeks damages from the Government in an amount to be determined at trial. GPUN has alleged that it is entitled to damages attributable to operations at both TMI-1 and Oyster Creek. The Government has not yet answered the complaint. There can be no assurance as to the outcome of this matter.

GPU, Inc. and consolidated affiliates have approximately 14,100 employees worldwide, of whom 10,000 are employed in the US, 3,600 are in the United Kingdom (UK) and the remaining 500 are in South America and Australia. The majority of the US workforce is employed by the GPU Energy companies (4,880) and MYR (4,831), of which approximately 2,900 and 4,000, respectively, are represented by unions for collective bargaining purposes. In the UK, approximately 2,300 GPU Power UK employees are represented by unions, and the terms and conditions of various bargaining agreements are generally reviewed annually, on April 1. The JCP&L, Met-Ed and Penelec collective bargaining agreements with the International Brotherhood of Electrical Workers expire on October 31, 2002, May 1, 2003 and May 14, 2002, respectively. Penelec's collective bargaining agreement with the Utility Workers Union of America expires on June 30, 2001.

In January 2001, the GPU Energy companies announced that they were offering Voluntary Enhanced Retirement Programs (VERP) to certain bargaining unit employees in Pennsylvania. Approximately 240 employees (Met-Ed 130 employees; Penelec 110 employees) are eligible for the VERP. If all of the eligible employees accept the offer, a pre-tax charge of approximately $23 million (Met-Ed $12 million; Penelec $11 million) would be recorded in 2001 earnings for the cost of pension and other postretirement benefits, exclusive of any severance benefits that would be paid to those employees.

During the normal course of the operation of its businesses, in addition to the matters described above, GPU is from time to time involved in disputes, claims and, in some cases, as a defendant in litigation in which compensatory and punitive damages are sought by the public, customers, contractors, vendors and other suppliers of equipment and services and by employees alleging unlawful employment practices. While management does not expect that the outcome of these matters will have a material effect on GPU's financial position or results of operations, there can be no assurance that this will continue to be the case.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

MATERIALS & SERVICES: Expenditures for services and expenses of materials management, purchasing and stores personnel, exempt materials, small tools and work equipment. Charged to construction based on the related cost of materials charged to construction work orders.

CONSTRUCTION INDIRECTS: Costs which pertain to construction work but which are impractical for direct-charging to construction work orders. Construction Indirects include the GPU Service Company labor and benefit costs of designers, engineers, and project management personnel plus the construction portion of facility, telecommunications, and general liability insurance. This overhead is added by means of a percentage applied to a work order's direct labor and contractor costs.

ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION: Cost of money charged directly to construction. The AFUDC rate is applied to individual construction work orders totaling $1.00 or more which have been under construction for 30 days or more except for purchases of automotive and certain general plant equipment for which no AFUDC is charged. The accrual rate is applied to the cumulative monthly construction work order balances, including previously accrued AFUDC compounded semi-annually.

OUTSIDE PROFESSIONAL SERVICES: Expenditures for services and expenses of engineers, management and supervisory personnel. All expenses are directly charged to construction.

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)		Amount (b)	Capitalization Ratio(Percent) (c)		Cost Rate Percentage (d)
1	Average Short-Term Debt & Computation of Allowance text	S	75,827,603			
2	Short-term Interest					s 6.76
3	Long-Term Debt	D	526,432,102	53.30		d 6.40
4	Preferred Stock	P				p
5	Common Equity	C	461,182,233	46.70		c 12.70
6	Total Capitalization		987,614,335	100.00	100%	
7	Average Construction Work in Progress Balance	W	33,017,091			

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ — 6.76

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ — 0.00

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 6.76
   b. Rate for Other Funds - 0.00

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.

CAPITAL STOCKS (Account 201 and 204) (Continued)

3. Give particulars (details) concerning shares of any class and series of stock authorized to be issued by a regulatory commission which have not yet been issued.
4. The identification of each class of preferred stock should show the dividend rate and whether the dividends are cumulative or non-cumulative.
5. State in a footnote if any capital stock which has been nominally issued is nominally outstanding at end of year.
Give particulars (details) in column (a) of any nominally issued capital stock, reacquired stock, or stock in sinking and other funds which is pledged, stating name of pledgee and purposes of pledge.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

Basis of Allocation of Consolidated Tax:

For the taxable year 2000, the consolidated Federal Income Tax liability was allocated in accordance with an agreement approved by the securities and Exchange Commission under the Public Utility Holding Company Act of 1935 (SEC Holding Company Release No. 21358). The agreement provides that there shall be allocated to each company in the consolidated group, except the holding company, the tax benefits of its own net operating losses. The tax benefits of the holding company's deductions will be allocated among the subsidiaries in proportion to the holding company's average common stock equity investment in each company during the year. The prior allocation of the holding company's

deductions under Rule 45(b)(6) for years prior to 1979, however, will not be adjusted in connection with allocating operating loss carrybacks.

A company which does not have a net operating loss of its own and which would have an income tax liability (allowing for its own investment tax credits which it could utilize on a seperate return basis, were the liability not offset by net operating losses of the other companies in the group, will pay the amount of such tax reduction to the companies, other than the holding company, whose net operating losses are used in the consolidated return. Such payments will be divided among the loss companies in proportion to the use of their net operating losses.

If there is a consolidated minimum tax arising from "preference" items as defined in the Internal Revenue Code, such minimum tax will be independently allocated among companies in the ratio of their respective preference incomes.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR (Continued)

5. If any tax (exclude Federal and State income taxes)- covers more then one year, show the required information separately for each tax year, identifying the year in column (a).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (i) through (l) how the taxes were distributed. Report in column (l) only the amounts charged to Accounts 408.1 and 409.1 pertaining to electric operations. Report in column (l) the amounts charged to Accounts 408.1 and 109.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (l) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

Schedule Page: 266 Line No.: 8 Column: i

AVERAGE PERIOD OF ALLOCATION TO INCOME

Investment Tax Credit - 4%

The respondent is (1) charging to income an amount equivalent to the current investment tax credit, (2) offsetting such charge by a credit to a deferred credit and (3) amortizing the deferred credit so created by a ratable flow-through to income over the useful life of the property. On March 9, 1972, General Public Utilities Corporation filed with the District Director of Internal Revenue, Manhatten District, on behalf of its affiliated companies (the Respondent being one of the affiliated), an election under paragraph (2) of section 46(f) of the Internal Revenue code of 1954, as amended, for allowance, with respect to public utility property, of the credit allowed by section 38 of the code. Such election provides (a) to reduce the cost of service for rate making purposes or in its regulated books of account by no more than the ratable portion of the credit allowable by Section 38, and (b) not to reduce the base to which its rate of return is applied for rate making purposes by any portion of the credit allowable by Section 38.

ELECTRIC OPERATING REVENUES (Account 400)

1. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The -average number of customers means the average of twelve figures at the close of each month.
3. If increases or decreases from previous year (columns (c), (e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.

ELECTRIC OPERATING REVENUES (Account 400)

4. Commercial and industrial Sales, Account 442, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 1000 Kw of demand. (See Account 442 of the Uniform System of Accounts. Explain basis of classification in a footnote.)
5. See pages 108-109, Important Changes During Year, for important new territory added and important rate increase or decreases.
6. For Lines 2,4,5,and 6, see Page 304 for amounts relating to unbilled revenue by accounts.
7. Include unmetered sales. Provide details of such Sales in a footnote.

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,line 24.
10. Footnote entries as required and provide explanations following all required data.

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,line 24.
10. Footnote entries as required and provide explanations following all required data.

Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for long-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	12/31/2000
2. Total Regular Full-Time Employees	0
3. Total Part-Time and Temporary Employees	0
4. Total Employees	0

Schedule Page: 320 Line No.: 1 Column: Prd End

As a result of an expanded service company approach for which Securities and Exchange Commission approval is being sought, all of Penelec's personnel, including the union personnel, were transferred to GPU Service Inc., effective January 1,1999. For this purpose, GPU Service Inc., has created an Operations Division, which includes substantially all of the employees who were transferred to GPU Service Inc.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW)

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW)	
					Average Monthly NCP Demand (e)	Average Monthly CP Demand (f)
1	Reliant Energy Service	OS				
2	Select Energy	OS				
3	Sithe	OS				
4	Sempra	OS				
5	Southern Energy Trading	OS				
6	William Energy Service	OS				
7	PECO Energy	OS		6	6	6
8	TXU Energy Trading	OS				
9	Virginia Power	OS				
10	Amergen	OS				
11	PJM Interconnection	OS				
12	GPU Energy companies	OS				
13	NUG Deferred Costs	OS				
14	Loss on Futures Contracts & Options	OS				
	Total					

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows: LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number. On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

(Including transactions reffered to as 'wheeling')

8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (11011) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. Provide total amounts in column (i) through (n) as the last Line. Enter "TOTAL" in column (a) as the Last Line. The total amounts in columns (i) and (j) must be reported as Transmission Received and Delivered on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

A. Summary of Depreciation and Amortization Charges

Line No.	Functional Classification (a)	Depreciation Expense (Account 403) (b)	Amortization of Limited Term Electric Plant (Acc 404) (c)	Amortization of Other Electric Plant (Acc 405) (d)	Total (e)

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

As a result of an expanded service company approach for which Securities and Exchange Commission approval is being sought, all of Penelec's personnel, including the union personnel, were transferred to GPU Service Inc., effective January 1, 1999. For this purpose, GPU Service Inc., has created an Operations Division, which includes substantially all of the employees who were transferred to GPU Service Inc.

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirments Sales for Resale & Associated Losses (c)	MONTHLY PEAK

Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

5. Show in columns (I), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.

6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Line No.	Item (a)	Number of Watt-hour Meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (in (MVa) (d)
1	Number at Beginning of Year	595,662	159,603	5,405
2	Additions During Year

10	Number at End of Year (Lines 1 + 5 - 9)	598,661	163,048	5,635
11	In Stock			
12	Locked Meters on Customers' Premises			
13	Inactive Transformers on System			
14	In Customers' Use	598,661	163,048	5,635
15	In Company's Use			
16	TOTAL End of Year (Total 11 to 15. This should equal line 10)	598,661	163,048	5,635

Schedule Page: 429 Line No.: 3 Column: b

Represents watt-hour meters and line transformers installed during the year. Meters and transformers, at time of purchase, are included in the inventory account of GPU Service Company, an associated company. At time of installation, the equipment is transferred/sold to Pennsylvania Electric Company.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Electric Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.

2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.

3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.

4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).

6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities					
2	Water Pollution Control Facilities	43,142			3,397,615	3,397,615

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	97,213	
2	*Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs*	44,619	
3	Fuel Related Costs

Pennsylvania Power Company	Dec. 31, 2000

ARTHURANDERSEN

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

To the Board of Directors and Management of Pennsylvania Power Company:

We have audited the balance sheets - regulatory basis of Pennsylvania Power Company as of December 31, 2000 and 1999, and the related statements of income - regulatory basis for the years then ended, and the statements of retained earnings - regulatory basis and cash flows - regulatory basis for the year ended December 31, 2000, included on pages 110 through 123.13 of the accompanying Federal Energy Regulatory Commission Form 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 18, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States.

In our opinion, the financial statements referred to above present fairly, in all material respects, the assets, liabilities and proprietary capital of Pennsylvania Power Company as of December 31, 2000 and 1999, and the results of its operations for the years then ended, and its cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is intended solely for the information and use of the board of directors and management of Pennsylvania Power Company and for filing with the Federal Energy Regulatory Commission and should not be used for any other purpose.

ARTHUR ANDERSEN LLP

Cleveland, Ohio,
February 16, 2001.

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)

(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;

(4) "Person" means an individual or a corporation;

(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;

(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."

(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:

(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

Name of Respondent Pennsylvania Power Company	This Report Is: (1) [X] An Original (2) [ ] A Resubmission	Date of Report *(Mo, Da, Yr)* / /	Year of Report Dec. 31, 2000

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Harvey L. Wagner, Controller
76 South Main Street
Akron, Ohio 44308

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Pennsylvania
May 31, 1930

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric Service - Pennsylvania

5. Have you engaged as the principle accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
The Company did not close the stock book in 2000.	Total: 6,290,000 By Proxy: 6,290,000	December 19, 2000 FirstEnergy Corp. 76 South Main Street Akron, OH 44308

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

PAGE 108 INTENTIONALLY LEFT BLANK
SEE PAGE 109 FOR REQUIRED INFORMATION.

1. None

2. On August 8, 2000, FirstEnergy Corp. (FirstEnergy), the parent of Ohio Edison Company (Edison), and GPU,Inc. (GPU), a Pennsylvania corporation, entered into an Agreement and Plan of Merger. Edison is the parent company of Pennsylvania Power Company (Company). Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4,500,000,000 in cash and FirstEnergy common stock. The transaction would be accounted for by the purchase method. The merger has been approved by the respective shareholders of FirstEnergy and GPU, the Federal Energy Regulatory Commission (FERC) on March 15, 2001 in Docket No. EC01-22-000, the Nuclear Regulatory Commission, the New York Public Service Commission and the Federal Communications Commission. Other regulatory approvals are pending before the Pennsylvania Public Utility Commission, the New Jersey Board of Public Utilities and the Securities and Exchange Commission.

3. None

4. None

5. On October 27, 1999, the FERC in Docket No. EC99-53-000 approved FirstEnergy's request for an intra-corporate transfer of ownership and operational control of jurisdictional transmission facilities of its electric utility operating companies (Company, Edison, The Cleveland Electric Illuminating Company and The Toledo Edison Company) and the assignment of rights under certain FERC-jurisdictional agreements to a newly formed affiliated company, American Transmission Systems, Inc. (ATSI). On September 1, 2000, the major high-voltage transmission facilities, which consist of approximately 7,100 circuit miles of transmission lines with nominal voltage of 345 Kv, 138 Kv and 69Kv were sold to ATSI. These facilities will be included in the FERC Form 1 filed by ATSI.

6. See Notes 5 and 6 of Notes to Balance Sheet on pages 123.1 and 123.2 and pages 256 and 257 of this report and footnotes thereof.

7. None

8. The Company granted wage increases to employees represented by unions which provided for adjustments in hourly rates in 2000. These increases plus changes in wages of supervisory, administrative and professional employees resulted in an annual wage increase of approximately $1,518,138.

9. In 1999 and 2000, the U.S. Environmental Protection Agency issued Notices of Violation (NOV) or a Compliance Order to nine utilities covering 44 power plants, including the W.H. Sammis Plant. In addition, the U.S. Department of Justice filed eight civil complaints against various investor-owned utilities, which included a complaint against the Company and Edison in the U.S. District Court for the Southern District of Ohio. The NOV and complaint allege violations of the Clean Air Act based on operation and maintenance of the Sammis Plant dating back to 1984. The complaint requests permanent injunctive relief to require the installation of "best available control technology" and civil penalties of up to $27,500 per day of violation. Although unable to predict the outcome of these proceedings, the Company believes the Sammis Plant is in full compliance with the Clean Air Act and the NOV and complaint are without merit. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while these proceedings are pending.

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating Income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.
7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.
B. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.
9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.
10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF CASH FLOWS

1. If the notes to the cash flow statement in the respondents annual stockholders report are applicable to this statement, such notes should be included in page 122-123. Information about non-cash investing and financing activities should be provided on Page 122-123. Provide also on pages 122-123 a reconciliation between "Cash and Cash Equivalents at End of Year" with related amounts on the balance sheet.
2. Under "Other" specify significant amounts and group others.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show on Page 122-123 the amount of interest paid (net of amounts capitalized) and income taxes paid.

STATEMENT OF CASH FLOWS

4. Investing Activities include at Other (line 31) net cash outflow to acquire other companies. Provide a reconciliation of assets acquired with liabilities assumed on pages 122-123. Do not include on this statement the dollar amount of Leases capitalized per US of A General Instruction 20; instead provide a reconciliation of the dollar amount of Leases capitalized with the plant cost on pages 122-123.
5. Codes used:
(a) Net proceeds or payments. (c) Include commercial paper.
(b) Bonds, debentures and other long-term debt. (d) Identify separately such items as investments, fixed assets, intangibles, etc.
6. Enter on pages 122-123 clarifications and explanations.

Line No.	Description (See Instruction No. 5 for Explanation of Codes) (a)	Amounts (b)
46	Loans Made or Purchased	-25,522,558
47	Collections on Loans

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

Notes to Balance Sheet

1 - UTILITY PLANT

Utility plant reflects the original cost of construction, including payroll and related costs such as taxes, employee benefits, administrative and general costs, and interest costs (see Note 15).

On September 1, 2000, Pennsylvania Power Company (Company) sold its transmission assets to an affiliate, American Transmission Systems, Inc. (ATSI). As a result, ATSI owns and operates the Company's and its affiliates' major high-voltage transmission facilities and has interconnections with other regional utilities.

2 - NUCLEAR FUEL

The Company leases all of its nuclear fuel requirements from OES Fuel, Incorporated (OES Fuel), a wholly owned subsidiary of Ohio Edison Company (Edison).

Minimum lease payments during the next five years are estimated to be as follows:

2001	$18,888,000
2002	12,787,000
2003	4,683,000
2004	1,720,000
2005	152,000

3 - ACCOUNTS RECEIVABLE

Receivables from customers include sales to residential, commercial and industrial customers located in the Company's service area and sales to wholesale customers. There was no material concentration of receivables at December 31, 2000 or 1999, with respect to any particular segment of the Company's customers.

4 - LEASES

The Company leases office space and other property and equipment under cancelable and noncancelable leases.

The future minimum lease payments as of December 31, 2000, are:

	Capital Leases	Operating Leases
2001	$142,000	$ 118,000
2002	148,000	118,000
2003	111,000	118,000
2004	--	118,000
2005	--	118,000
Years thereafter	--	749,000
Total minimum lease payments	401,000	$1,339,000
Executory costs	219,000	
Net minimum lease payments	182,000	
Interest portion	12,000	
Present value of net minimum lease payments	$170,000	

5 - CAPITALIZATION

Retained Earnings --

Under the Company's Charter, the Company's retained earnings unrestricted for payment of cash dividends on the Company's common stock were $18,348,000 as of December 31, 2000.

Preferred Stock --

The Company's 7.75% series of preferred stock has a restriction which prevents early redemption prior to July 2003. All other preferred stock may be redeemed by the Company in whole, or in part, with 30-60 days' notice.

The Company's 7.625% series has an annual sinking fund requirement for 7,500 shares beginning on October 1, 2002.

Long-Term Debt --

The first mortgage indenture and its supplements, which secure all of the Company's first mortgage bonds, serve as a direct first mortgage lien on substantially all property and franchises, other than specifically excepted property, owned by the Company.

Based on the amount of bonds authenticated by the Trustee through December 31, 2000, the Company's annual sinking and improvement fund requirements for all bonds issued under the mortgage amounts to $974,000. The Company expects to deposit funds in 2001 that will be withdrawn upon the surrender for cancellation of a like principal amount of bonds, which are specifically authenticated for such purposes against unfunded property additions or against previously retired bonds. This method can result in minor increases in the amount of the annual sinking fund requirement. Sinking fund requirements for first mortgage bonds and maturing long-term debt (excluding capital leases) during the next five years are $974,000 in 2001, $974,000 in 2002, $40,974,000 in 2003, $40,674,000 in 2004 and $974,000 in 2005.

The Company's obligations to repay certain pollution control revenue bonds are secured by a series of first mortgage bonds. The $10,300,000 pollution control revenue bond is entitled to the benefit of irrevocable bank letters of credit of $10,423,600. To the extent that drawings are made under the letters of credit to pay principal of, or interest on, the pollution control revenue bond, the Company is entitled to a credit against its obligation to repay this bond. The Company pays an annual fee of 1.25% of the amount of the letters of credit to the issuing bank and is obligated to

reimburse the bank for any drawings thereunder.

6 - SHORT-TERM BORROWINGS

The Company has a credit agreement with Edison whereby either company can borrow funds from the other by issuing unsecured notes at the prevailing prime or similar interest rate. Under the terms of this agreement, the maximum borrowing is limited only by the availability of funds; however, the Company's borrowing under this agreement is currently limited by the Pennsylvania Public Utility Commission (PPUC) to a total of $50,000,000. Either company can terminate the agreement with six months' notice.

7 - COMMITMENTS AND CONTINGENCIES

Capital Expenditures --

The Company's current forecast reflects expenditures of approximately $153,000,000 for property additions and improvements from 2001-2005, of which approximately $28,000,000 is applicable to 2001. Investments for additional nuclear fuel during the 2001-2005 period are estimated to be approximately $81,000,000, of which approximately $22,000,000 applies to 2001. During the same periods, the Company's nuclear fuel investments are expected to be reduced by approximately $91,000,000 and $18,000,000, respectively, as the nuclear fuel is consumed.

Nuclear Insurance --

The Price-Anderson Act limits the public liability relative to a single incident at a nuclear power plant to $9,500,000,000. The amount is covered by a combination of private insurance and an industry retrospective rating plan. Based on its ownership interests in the Beaver Valley Station and the Perry Plant, the Company's maximum potential assessment under the industry retrospective rating plan (assuming the other affiliate co-owners contribute their proportionate shares of any assessments under the retrospective rating plan) would be $74,000,000 per incident but not more than $8,400,000 in any one year for each incident.

The Company is also insured as to its interest in Beaver Valley and Perry under policies issued to the operating company for each plant. Under these policies, up to $2,750,000,000 is provided for property damage and decontamination and decommissioning costs. The Company has also obtained approximately $148,000,000 of insurance coverage for replacement power costs for its interests in Beaver Valley and Perry. Under these policies, the Company can be assessed a maximum of approximately $7,400,000 for incidents at any covered nuclear facility occurring during a policy year which are in excess of accumulated funds available to the insurer for paying losses.

The Company intends to maintain insurance against nuclear risks as described above as long as it is available. To the extent that replacement power, property damage, decontamination, decommissioning, repair and replacement costs and other such costs arising from a nuclear incident at any of the Company's plants exceed the policy limits of the insurance in effect with respect to that plant, to the extent a nuclear incident is determined not to be covered by the Company's insurance policies, or to the extent such insurance becomes unavailable in the future, the Company would remain at risk for such costs.

Environmental Matters --

Various federal, state and local authorities regulate the Company with regard to air and water quality and other environmental matters. Generation operations and any related additional capital expenditures for environmental compliance are the responsibility of the competitive services business unit of FirstEnergy Corp. (FirstEnergy), the parent company of Edison.

The Company is required to meet federally approved sulfur dioxide (SO2) regulations. Violations of such regulations can result in shutdown of the generating unit involved and/or civil or criminal penalties of up to $27,500 for each day the unit is in violation. The Environmental Protection Agency (EPA) has an interim enforcement policy for SO2 regulations in Ohio that allows for compliance based on a 30-day averaging period. The Company cannot predict what action the EPA may take in the future with respect to the interim enforcement policy.

The Company is in compliance with the current SO2 and nitrogen oxides (NOx) reduction requirements under the Clean Air Act Amendments of 1990. SO2 reductions are being achieved by burning lower-sulfur fuel, generating more electricity from lower-emitting plants, and/or using emission allowances. NOx reductions are being achieved through combustion controls and the generation of more electricity at lower-emitting plants. In September 1998, the EPA finalized regulations requiring additional NOx reductions from the Company's Pennsylvania facilities. The EPA's NOx Transport Rule imposes uniform reductions of NOx emissions (an approximate 85% reduction in utility plant NOx emissions from projected 2007 emissions) across a region of twenty-two states and the District of Columbia, including Ohio and Pennsylvania, based on a conclusion that such NOx emissions are contributing significantly to ozone pollution in the eastern United States. In March 2000, the U.S. Court of Appeals for the D.C. Circuit upheld EPA's NOx Transport Rule except as applied to the State of Wisconsin and portions of Georgia and Missouri. By October 2000, states were to submit revised State Implementation Plans (SIP) to comply by May 31, 2004 with individual state NOx budgets established by the EPA. Pennsylvania recently submitted a SIP that requires compliance with the NOx budgets at the Company's Pennsylvania facilities by May 1, 2003. A Federal Implementation Plan accompanied the NOx Transport Rule and may be implemented by the EPA in states which fail to revise their SIP. In another separate but related action, eight states filed petitions with the EPA under Section 126 of the Clean Air Act seeking reductions of NOx emissions which are alleged to contribute to ozone pollution in the eight petitioning states. The EPA position is that the Section 126 petitions will be adequately addressed by the NOx Transport Program, but a December 17, 1999 rulemaking established an alternative program which would require nearly identical 85% NOx reductions at 392 utility plants, including the Company's Ohio and Pennsylvania plants, by May 2003, in the event implementation of the NOx Transport Rule is not implemented by a state. Additional Section 126 petitions were filed by New Jersey, Maryland, Delaware and the District of Columbia in mid-1999 and are still under evaluation by the EPA. FirstEnergy continues to evaluate its compliance plans and other compliance options.

In July 1997, the EPA promulgated changes in the National Ambient Air Quality Standard (NAAQS) for ozone emissions and proposed a new NAAQS for previously unregulated ultra-fine particulate matter. In May 1999, the U.S. Court of Appeals found constitutional and other defects in the new NAAQS rules. In February 2001, the U.S. Supreme Court upheld the new NAAQS rules regulating ultra-fine particulates but found defects in the new NAAQS rules for ozone and decided that the EPA must revise those rules. The future cost of compliance with these regulations may be substantial and will depend on the manner in which they are ultimately implemented, if at all, by the states in which the Company operates affected facilities.

In 1999 and 2000, the EPA issued Notices of Violation (NOV) or a Compliance Order to nine utilities covering 44 power plants, including the W.H. Sammis Plant. In addition, the U.S. Department of Justice filed eight civil complaints against various investor-owned utilities, which included a complaint against the Company and Edison in the U.S. District Court for the Southern District of Ohio. The NOV and complaint allege violations of the Clean Air Act based on operation and maintenance of the Sammis Plant dating back to 1984. The complaint requests permanent injunctive relief to require the installation of "best available control technology" and civil penalties of up to $27,500 per day of violation. Although unable to predict the outcome of these proceedings, the Company and Edison believe the Sammis Plant is in full compliance with the Clean Air Act and the NOV and complaint are without merit. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while these proceedings are pending.

In December 2000, the EPA announced it would proceed with the development of regulations regarding hazardous air pollutants from electric power plants. The EPA identified mercury as the hazardous air pollutant of greatest concern. The EPA established a schedule to propose regulations by December 2003 and issue final regulations by December 2004. The future cost of compliance with these regulations may be substantial.

As a result of the Resource Conservation and Recovery Act of 1976, as amended, and the Toxic Substances Control Act of 1976, federal and state hazardous waste regulations have been promulgated. Certain fossil-fuel combustion waste products, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation. The EPA has issued its final regulatory determination that regulation of coal ash as a hazardous waste is unnecessary. On April 25, 2000, the EPA announced that it will develop national standards regulating disposal of coal ash under its authority to regulate nonhazardous waste.

8 - ANNUAL REPORT TO STOCKHOLDERS

Following are the reclassification entries which have been reflected in the Company's Balance Sheets as of December 31, 2000 and 1999 in the 2000 Annual Report to Stockholders.

	December 31, 2000		December 31, 1999	
	Dr.	Cr.	Dr.	Cr.
Accumulated Deferred Income Tax - Deferred Credits	$34,794,254		$32,584,922	
Accumulated Deferred Income Tax - Deferred Debits		$34,794,254		$32,584,922
To reclassify accumulated deferred income taxes.				
Accumulated Provision for - Injuries & Damages	913,590		932,579	
Pensions & Benefits	36,004,719		32,303,756	
DOE Decommissioning	6,203,899		7,408,761	
Deferred Credits - Other		43,122,208		40,645,096
To reclassify injuries and damages, pensions and benefits and United States Department of Energy (DOE) Decommissioning to deferred credits.				
Deferred Credits - Other	349,439		293,797	
Special Funds		349,439		293,797
To net postretirement benefit asset (Voluntary Employee Benefit Trust) with obligation.				
Long-Term Debt	974,000		29,174,000	
Currently Payable Long-Term Debt		974,000		29,174,000
To reclassify long-term debt due within one year.				

	December 31, 2000		December 31, 1999	
	Dr.	Cr.	Dr.	Cr.
Utility Plant In Service - Electric Plant	$ 2,971,149		$ 5,962,874	
Nuclear Fuel	26,771,187		16,682,031	
Accumulated Provision for Amortization		$29,742,336		$22,644,905
To reclassify the accumulated amortization of capital leases.				
Cash	--		3,079,502	
Accounts Payable		--		3,079,502
To reclassify negative cash balances.				
Regulatory Liabilities - Other	12,750,823		13,394,407	
Deferred Debits - Customer Receivables for Future Income Taxes		11,760,518		12,404,102
Other		990,305		990,305
To net regulatory liabilities with regulatory assets.				
Prepayments	--		272,801	
Miscellaneous Current and Accrued Liability		--		272,801
To reclassify miscellaneous current and accrued liability due to debit balance.				

	December 31, 2000 Dr.	2000 Cr.	1999 Dr.	1999 Cr.
Accumulated Provision for Depreciation	$ --		$ 2,185,025	
Other Regulatory Assets		$ --		$ 2,185,025
To reclassify the unamortized portion of a depreciation reserve adjustment ordered by the PPUC.				
Cash and Cash Equivalents	--		5,225,365	
Special Funds		--		5,225,365
To reclassify funds held in escrow, to be used to retire debt presently classified as current maturity.				
Materials and Supplies	1,106,834		821,674	
Deferred Debits - Other		1,106,834		821,674
To reclassify intangible asset relating to materials and supplies held under consignment.				
Accumulated Provision for Depreciation - Utility Plant	550,075,362		550,087,573	
Nonutility Property	46,228		46,228	
Utility Plant In Service - Electric Plant		550,075,362		550,087,573
Nonutility Property		46,228		46,228
To reclassify fair value adjustment for nuclear assets.				

Notes to Income Statement

9 - REVENUES

The Company's principal business is providing electric service to customers in western Pennsylvania. The Company's retail customers are metered on a cycle basis. Revenue is recognized for unbilled electric service through the end of the year.

10 - NUCLEAR FUEL

The Company amortizes the cost of nuclear fuel based on the rate of consumption.

11 - RENTAL PAYMENTS

Consistent with the regulatory treatment, the rentals for capital and operating leases are charged to operating expenses on the Statements of Income. Such costs for the two years ended December 31, 2000, are summarized as follows:

	2000	1999
Operating leases		
Interest element	$ 318,344	$ 635,750
Other	867,693	1,588,593
Capital leases		
Interest element	365,554	576,051
Other	288,610	519,534
Total rental payments	$1,840,201	$3,319,928

12 - ANNUAL REPORT TO STOCKHOLDERS

Income Statement reclassifications which have been reflected in the Company's 2000 Annual Report to Stockholders are as follows:

	December 31, 2000		December 31, 1999	
	Dr.	Cr.	Dr.	Cr.
Regulatory Credits	$ 643,584		$ 692,131	
Provision for Deferred Income Taxes - Operating Income	3,354,690		3,312,582	
Regulatory Debits		$3,998,274		$4,004,713
To reclassify deferred taxes related to the amortization of net regulatory assets.				
Depreciation Expense	2,185,025		233,255	
Regulatory Debits		2,185,025		233,255
To reclassify the amortization of a depreciation reserve adjustment ordered by the PPUC.				

13 - TRANSACTIONS WITH AFFILIATED COMPANIES

Operating revenues and operating expenses include transactions with Edison, The Cleveland Electric Illuminating Company, The Toledo Edison Company and ATSI. Operating revenue transactions with affiliates were primarily for electric sales of $57,616,465 and $12,635,538 in 2000 and 1999, respectively; Bruce Mansfield Plant administrative and general charges of $2,909,789 and $5,329,588 in 2000 and 1999, respectively; and ground lease revenues of $654,273 from ATSI which began in 2000.

Operating expense transactions with affiliates were primarily for nuclear fuel leased from OES Fuel of $20,266,126 and $8,758,952 in 2000 and 1999, respectively; purchased power of $7,111,364 and $12,884,679 in 2000 and 1999, respectively; transmission facilities rentals (including ATSI rents which began in 2000) of $5,703,240 and $1,320,310 in 2000 and 1999, respectively; and nuclear operations administrative and general charges of $14,993,203 and $2,134,526 in 2000 and 1999, respectively. The increase in 2000 nuclear administrative and general charges reflect the Company's increased nuclear assets ownership due to the exchange of certain generating assets with Duquesne Light Company (Duquesne) in 1999.

FirstEnergy provides support services at cost to the Company and other affiliated companies, for which the Company was billed $27,400,000 and $28,300,000 in 2000 and 1999, respectively.

Notes Common to Balance Sheet, Income Statement and Statement of Cash Flows

14 - SUPPLEMENTAL CASH FLOWS INFORMATION

Cash and Cash Equivalents at December 31, 2000:

Account	Account Title	
131	Cash	$3,454,809
135	Working Funds	20,523
		$3,475,332

Operating Activities:

Interest Paid (net of amounts capitalized)	$18,803,534
Income Taxes Paid	$39,703,593

Investing Activities:

Gross Additions to Utility Plant	$32,274,558
Capital Leases - Nuclear Fuel	$21,212,490
Gross Additions (Reductions) to Nonutility Plant	$(2,418,827)

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Balance Sheets. As of December 31, 1999, cash and cash equivalents included $5,225,365 used for the redemption of long-term debt in the first quarter of 2000. The Company reflects temporary cash investments at cost, which approximates their market value.

All borrowings with initial maturities of less than one year are defined as financial instruments under accounting principles generally accepted in the United States (GAAP) and are reported on the Balance Sheets at cost, which approximates their fair market value. The following sets forth the approximate fair value and related carrying amounts of all other long-term debt, preferred stock subject to mandatory redemption and investments other than cash and cash equivalents as of December 31:

	2000		1999	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Long-term debt	$253,468,470	$263,451,585	$282,642,470	$278,897,936
Preferred stock	$ 15,000,000	$ 14,587,500	$ 15,000,000	$ 14,100,000
Investments other than cash and cash equivalents	$154,541,392	$152,930,568	$107,991,345	$116,218,926

The fair values of long-term debt and preferred stock reflect the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective year. The yields assumed were based on securities with similar characteristics offered by a corporation with credit ratings similar to the Company's ratings.

The fair value of investments other than cash and cash equivalents represent cost (which approximates fair value) or the present value of the cash inflows based on the yield to maturity. The yields assumed were based on financial instruments with similar characteristics and terms. Investments other than cash and cash equivalents consist primarily of decommissioning trust investments. Unrealized gains and losses applicable to the decommissioning trusts have been recognized in the trust investment with a corresponding change to the decommissioning liability. The Company has no securities held for trading purposes.

15 - REGULATORY PLAN

In December 1996, Pennsylvania enacted "The Electricity Generation Customer Choice and Competition Act," which permitted customers, including the Company's customers, to choose their electric generation supplier, while transmission and distribution services would continue to be supplied by their current providers. The phase in of customer choice was completed on January 1, 2001.

In June 1998, the PPUC authorized the Company's rate restructuring plan, which essentially resulted in the deregulation of the Company's generation business as of June 30, 1998. The Company is entitled to recover $236,000,000 of stranded costs through the competitive transition charge that began in 1999 and ends in 2006. The Company's net assets included in utility plant relating to the operations for which the application of Statement of Financial Accounting Standards (SFAS) No. 71, "Accounting for the Effects of Certain Types of Regulation" (SFAS 71), was previously discontinued in 1998 were $91,605,236 as of December 31, 2000. All of the Company's regulatory assets continue to be recovered under provisions of the rate restructuring plan.

Under the rate restructuring plan, the Company continues to deliver power to homes and businesses through its distribution system, which remains regulated by the PPUC. The Company's rates have been restructured to establish separate charges for transmission and distribution; generation, which is subject to competition; and stranded cost recovery. In the event customers obtain power from an alternative source, the generation portion of the Company's rates is excluded from their bill and the customers receive a generation charge from the alternative supplier. The stranded cost recovery portion of rates provides for recovery of certain amounts not otherwise considered recoverable in a competitive generation market, including regulatory assets.

16 - DEPRECIATION

The Company provides for depreciation on a straight-line basis at various rates over the estimated lives of property included in plant in service. The annual composite rate for electric plant was approximately 2.6% in 2000 and 2.5% in 1999. The Company has recognized additional cumulative capital recovery of $143,000,000, as of December 31, 2000, as additional depreciation expense in accordance with its former regulatory plan.

Annual depreciation expense includes approximately $1,600,000 for future decommissioning costs applicable to the Company's ownership interest in three nuclear generating units. The Company's future decommissioning costs reflect the 1999 increase in its ownership interests related to the exchange of certain generating assets with Duquesne described in Note 13. The Company's share of the future obligation to decommission these units is approximately $314,540,000 in current dollars and (using a 4.0% escalation rate) approximately $695,214,000 in future dollars. The estimated obligation and the escalation rate were developed based on site specific studies. Payments for decommissioning are expected to begin in 2016, when actual decommissioning work begins. The Company has recovered approximately $14,000,000 for decommissioning through its electric rates from customers through December 31, 2000. The Company has also recognized an estimated liability of approximately $7,500,000 related to decontamination and decommissioning of nuclear enrichment facilities operated by the DOE, as required by the Energy Policy Act of 1992. DOE special assessment activities during 2000 and 1999, respectively, were: Account 518 expenses: $(322,471)

and $7,079,486; payments $1,095,750 and $1,146,602; and refunds $0 for both years.

The Financial Accounting Standards Board (FASB) issued a proposed accounting standard for nuclear decommissioning costs in 1996. If the standard is adopted as proposed: (1) annual provisions for decommissioning could change; (2) the net present value of estimated decommissioning costs could be recorded as a liability; and (3) income from the external decommissioning trusts could be reported as investment income. The FASB subsequently expanded the scope of the proposed standard to include other closure and removal obligations related to long-lived assets. A final pronouncement is expected in the second quarter of 2001 and is anticipated to be implemented on January 1, 2002.

17 - RETIREMENT BENEFITS

FirstEnergy's trusteed, noncontributory defined benefit pension plan covers almost all of the Company's full-time employees. Upon retirement, employees receive a monthly pension based on length of service and compensation. The Company uses the projected unit credit method for funding purposes and was not required to make pension contributions during the two years ended December 31, 2000. The assets of the FirstEnergy pension plan consist primarily of common stocks, United States government bonds and corporate bonds.

The Company provides a minimum amount of noncontributory life insurance to retired employees in addition to optional contributory insurance. Health care benefits, which include certain employee deductibles and copayments, are also available to retired employees, their dependents and, under certain circumstances, their survivors. The Company pays insurance premiums to cover a portion of these benefits in excess of set limits; all amounts up to the limits are paid by the Company. The Company recognizes the expected cost of providing other postretirement benefits to employees and their beneficiaries and covered dependents from the time employees are hired until they become eligible to receive those benefits.

The following sets forth the funded status of the plans and amounts recognized on FirstEnergy's Consolidated Balance Sheets as of December 31:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Change in benefit obligation:				
Benefit obligation as of January 1	$1,394,106,439	$1,500,134,952	$ 608,426,051	$ 601,269,566
Service cost	27,421,692	28,296,067	11,349,407	9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Plan amendments	41,347,358	--	--	--
Actuarial loss (gain)	17,264,015	(155,585,368)	121,680,323	(17,583,693)
Net increase from asset swap	--	14,800,000	--	12,524,600
Voluntary early retirement program expense	23,353,000	--	--	--
Benefits paid	(102,221,644)	(95,534,268)	(35,097,490)	(37,818,560)
Benefit obligation as of December 31	1,506,055,538	1,394,106,439	752,028,957	608,426,051
Change in plan assets:				
Fair value of plan assets as of January 1	1,807,458,798	1,682,987,392	4,917,191	3,906,528
Actual return on plan assets	768,878	220,005,674	(178,534)	621,633
Company contribution	--	--	18,344,187	402,444
Benefits paid	(102,221,644)	(95,534,268)	--	--
Administrative expenses	--	--	(42,480)	(13,414)
Fair value of plan assets as of December 31	1,706,006,032	1,807,458,798	23,040,364	4,917,191
Funded status of plan	199,950,494	413,352,359	(728,988,593)	(603,508,860)
Unrecognized actuarial loss (gain)	(90,915,998)	(303,535,599)	147,307,299	24,881,450
Unrecognized prior service cost	93,063,964	57,382,039	20,909,717	24,158,510
Unrecognized net transition obligation (asset)	(2,106,408)	(10,051,160)	110,841,109	120,077,867
Prepaid (accrued) benefit cost	$ 199,992,052	$ 157,147,639	$(449,930,468)	$(434,391,033)
Company's share of prepaid (accrued) benefit costs	$ 21,074,393	$ 13,837,630	$ (35,143,044)	$ (31,707,916)

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Assumptions used as of December 31:				
Discount rate	7.75%	7.75%	7.75%	7.75%
Expected long-term return on plan assets	10.25%	10.25%	10.25%	10.25%
Rate of compensation increase	4.00%	4.00%	4.00%	4.00%

FirstEnergy's net pension and other postretirement benefit costs for the two years ended December 31, 2000 were computed as follows:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Service cost	$ 27,421,692	$ 28,296,067	$11,349,407	$ 9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Expected return on plan assets	(180,918,929)	(168,056,403)	(524,512)	(400,419)
Amortization of transition obligation (asset)	(7,944,752)	(7,944,752)	9,236,758	9,236,758
Amortization of prior service cost	5,665,433	5,665,433	3,248,793	3,248,793
Recognized net actuarial gain	(9,095,535)	--	--	--
Voluntary early retirement program expense	17,243,000	--	--	--
Net benefit cost	$ (42,844,413)	$ (40,044,599)	$68,981,112	$62,119,270
Company's share of total plan costs	$ (3,576,763)	$ (4,805,352)	$ 7,496,867	$ 7,454,312

The FirstEnergy plan's health care trend rate assumption is 7.2% in 2001, 7.0% in 2002 and 6.5% in 2003, trending to 5.0%-5.5% in later years. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plan. An increase in the health care trend rate assumption by one percentage point would increase the total service and interest cost components by $7,493,646 and the postretirement benefit obligation by $94,415,205. A decrease in the same assumption by one percentage point would decrease the total service and interest cost components by $8,541,955 and the postretirement benefit obligation by $111,015,529.

18 - BASIS OF FINANCIAL STATEMENT PRESENTATION

The accompanying financial statements were prepared in accordance with the accounting requirements set forth in the Uniform System of Accounts and published accounting releases of the Federal Energy Regulatory Commission, which is a comprehensive basis of accounting other than GAAP. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses during the reporting period.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant Instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

For construction overhead, refer to attached footnote.

Allowance for Funds Used During Construction (AFUDC)

AFUDC represents financing costs capitalized for construction work in progress during the construction period. The Company capitalized AFUDC at a rate which is the lesser of the rate computed by applying the formula prescribed by FERC, which provides for both an equity and debt component of AFUDC, or the embedded cost of long-term debt outstanding at the beginning of the calendar year. Accordingly, the Company used the lower embedded cost of long-term debt rate during 2000.

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)	Amount (b)	Capitalization Ratio(Percent) (c)	Cost Rate Percentage (d)
1	Average Short-Term Debt & Computation of Allowance text	S		
2	Short-term Interest			s

Schedule Page: 218 Line No.: 1 Column: OH exp

Engineering and Supervision

(a) The actual time of employees devoted to the planning, design and supervision of construction projects, together with amounts paid for outside professional engineering services, is charged to such projects to the extent possible.

(b) Other actual time of employees devoted to the engineering of construction, together with amounts paid for outside professional engineering services, is accumulated in distributable construction work in progress (projects functionalized by transmission, distribution, etc.) by direct charges from payrolls, invoices, vouchers, etc. Each month such charges to the distributable projects are distributed to each construction project included in such functional group on the basis of a percentage of direct labor and material charges to each construction project, except that no distribution is made to projects which are direct purchases of equipment only.

(c) The portion of engineering and construction supervision salaries not specifically chargeable to projects covered in (a) and (b), together with clerical salaries and expenses which are applicable to construction, are accumulated in a construction work in progress project and distributed each month to all construction projects on the basis of a percentage of labor charges.

(d) The amount of engineering and supervision so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

General Administration

Administrative Expenses

(a) Based on a study with respect to work performed by general officers and other general employees who devote a portion of their time to construction, or matters pertaining thereto, a portion of their salaries and expenses and general office supplies and expenses considered to be applicable to construction is charged thereto.

(b) Each month the amount so determined is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Employee Pensions and Benefits

(a) A study is made to determine the percentage of the total salaries and wages for the year which is applicable to construction, and such percentage is applied to the total pension and benefit costs for the year to determine the amount thereof applicable to construction.

(b) Each month, (i) the applicable portion of the amount determined to be applicable to construction, exclusive of the amount related to the salaries transferred from Administrative Expenses, is distributed pro rata to construction projects on the basis of payroll charges thereto and (ii) the applicable portion of the amount related to the salaries of employees transferred from Administrative Expenses is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering and supervision except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Injuries and Damages

(a) The Company carries only excess insurance coverage for injuries and damages and makes direct settlement for all claims of employees and the public except for the amount of such claims coming under the excess policy. An amount is charged to construction based on actual experience, to reflect the entire costs with respect to claims in connection with construction. The amount so charged is adjusted as necessary, based on experience.

(b) Each month the amount so determined to be applicable to construction is distributed pro rata to construction projects, on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects, which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Taxes

Payroll Taxes

(a) Federal and state payroll taxes are charged to construction on the basis of total salaries and wages charged thereto.

(b) Each month the amount so charged is distributed pro rata to construction projects on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Sales and Excise Taxes

Sales and excise taxes charged to construction are recorded as part of the costs of materials and equipment.

Legal Expenses

Legal services and expenses applicable to specific construction projects are charged directly to such construction projects.

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. *In addition, include all costs included in retirement work in progress* at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.

CAPITAL STOCKS (Account 201 and 204) (Continued)

3. Give particulars (details) concerning shares of any class and series of stock authorized to be issued by a regulatory commission which have not yet been issued.
4. The identification of each class of preferred stock should show the dividend rate and whether the dividends are cumulative or non-cumulative.
5. State in a footnote if any capital stock which has been nominally issued is nominally outstanding at end of year.
Give particulars (details) in column (a) of any nominally issued capital stock, reacquired stock, or stock in sinking and other funds which is pledged, stating name of pledgee and purposes of pledge.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR (Continued)

5. If any tax (exclude Federal and State income taxes)- covers more then one year, show the required information separately for each tax year, identifying the year in column (a).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (i) through (l) how the taxes were distributed. Report in column (l) only the amounts charged to Accounts 408.1 and 409.1 *pertaining to electric operations.* Report in column (l) the amounts charged to Accounts 408.1 and 109.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (l) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

ELECTRIC OPERATING REVENUES (Account 400)

4. Commercial and industrial Sales, Account 442, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 1000 Kw of demand. (See Account 442 of the Uniform System of Accounts. Explain basis of classification in a footnote.)
5. See pages 108-109, Important Changes During Year, for important new territory added and important rate increase or decreases.
6. For Lines 2,4,5,and 6, see Page 304 for amounts relating to unbilled revenue by accounts.
7. Include unmetered sales. Provide details of such Sales in a footnote.

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,line 24.
10. Footnote entries as required and provide explanations following all required data.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	11/01/2000
2. Total Regular Full-Time Employees	779
3. Total Part-Time and Temporary Employees	13
4. Total Employees	792

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW) Average Monthly NCP Demand (e)	Actual Demand (MW) Average Monthly CP Demand (f)

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows:
LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

FERC Rate Schedule of Tariff Number (e)	Point of Receipt (Subsatation or Other Designation) (f)	Point of Delivery (Substation or Other Designation) (g)	Billing Demand (MW) (h)	TRANSFER OF ENERGY		Line No.

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

A. Summary of Depreciation and Amortization Charges

Line No.	Functional Classification (a)	Depreciation Expense (Account 403) (b)	Amortization of Limited Term Electric Plant (Acc 404) (c)	Amortization of Other Electric Plant (Acc 405) (d)	Total (e)

11	TOTAL	10,516,949	113,932		10,630,881

B. Basis for Amortization Charges

Column C represents amortization of the cost of the following:

Leasehold improvements over the life of the lease and AFUDC - debt gross-up pursuant to SFAS 109, amortized using the composite functional rates of the associated property.

No change in basis or method of amortization has been made from the preceding year.

FOOTNOTE DATA

Schedule Page: 336 Line No.: 3 Column: b

Includes nuclear plant decommissioning in the amount of $-984,988.

Schedule Page: 336 Line No.: 11 Column: b

Includes adjustment of $-2,185,025 for the amortization of the unrecovered portion of the 1989 FERC 1984 Book Depreciation Reserve Adjustment.

Includes $1,295,821 for the depreciation expense associated with the Balance Sheet Account 102.

Schedule Page: 336 Line No.: 11 Column: c

Includes $77,708 for the amortization of the gross-up to plant-in-service for the debt component of AFUDC recorded net-of-tax.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) *Other Interest Expense* (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show below costs incurred and accounts charged during the year for technological research, development, and demonstration (R, D & D) project initiated, continued or concluded during the year. Report also support given to others during the year for jointly-sponsored projects.(Identify recipient regardless of affiliation.) For any R, D & D work carried with others, show separately the respondent's cost for the year and cost chargeable to others (See definition of research, development, and demonstration in Uniform System of Accounts).
2. Indicate in column (a) the applicable classification, as shown below:

Classifications:

A. Electric R, D & D Performed Internally:
- (1) Generation
  - a. hydroelectric
    - i. Recreation fish and wildlife
    - ii Other hydroelectric
  - b. Fossil-fuel steam
  - c. Internal combustion or gas turbine
  - d. Nuclear
  - e. Unconventional generation
  - f. Siting and heat rejection
- (3) Transmission
  - a. Overhead
  - b. Underground
- (4) Distribution
- (5) Environment (other than equipment)
- (6) Other (Classify and include items in excess of $5,000.)
- (7) Total Cost Incurred

B. Electric, R, D & D Performed Externally:
- (1) Research Support to the electrical Research Council or the Electric Power Research Institute

Line No.	Classification (a)	Description (b)
1	A. Electric R, D & D Performed Internally	
2	(1) Generation	Mansfield #2 Selective Catalytic Reduction
3		
4

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES (Continued)

(2) Research Support to Edison Electric Institute
(3) Research Support to Nuclear Power Groups
(4) Research Support to Others (Classify)
(5) Total Cost Incurred

3. Include in column (c) all R, D & D items performed internally and in column (d) those items performed outside the company costing $5,000 or more, briefly describing the specific area of R, D & D (such as safety, corrosion control, pollution, automation, measurement, insulation, type of appliance, etc.). Group items under $5,000 by classifications and indicate the number of items grouped. Under Other, (A (6) and B (4)) classify items by type of R, D & D activity.
4. Show in column (e) the account number charged with expenses during the year or the account to which amounts were capitalized during the year, listing Account 107, Construction Work in Progress, first. Show in column (f) the amounts related to the account charged in column (e)
5. Show in column (g) the total unamortized accumulating of costs of projects. This total must equal the balance in Account 188, Research, Development, and Demonstration Expenditures, Outstanding at the end of the year.
6. If costs have not been segregated for R, D &D activities or projects, submit estimates for columns (c), (d), and (f) with such amounts identified by "Est."
7. Report separately research and related testing facilities operated by the respondent.

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants) *(Continued)*

9. Items under Cost of Plant are based on U. S. of A. Accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses. 10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 24 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 31, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants. 11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant. 12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

GENERATING PLANT STATISTICS (Small Plants)

1. Small generating plants are steam plants of, less than 25,000 Kw; internal combustion and gas turbine-plants, conventional hydro plants and pumped storage plants of less than 10,000 Kw installed capacity (name plate rating). 2. Designate any plant leased from others, operated under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, and give a concise statement of the facts in a footnote. If licensed project, give project number in footnote.

GENERATING PLANT STATISTICS (Small Plants) (Continued)

3. List plants appropriately under subheadings for steam, hydro, nuclear, internal combustion and gas turbine plants. For nuclear, see instruction 11, Page 403. 4. If net peak demand for 60 minutes is not available, give the which is available, specifying period. 5. If any plant is equipped with combinations of steam, hydro internal combustion or gas turbine equipment, report each as a separate plant. However, if the exhaust heat from the gas turbine is utilized in a steam turbine regenerative feed water cycle, or for preheated combustion air in a boiler, report as one plant.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or port on thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Size of Conductor and Material (i)	COST OF LINE (Include in Column (j) Land, Land rights, and clearing right-of-way)			EXPENSES, EXCEPT DEPRECIATION AND TAXES				Line No.
	Land (j)	Construction and Other Costs (k)	Total Cost (l)	Operation Expenses (m)	Maintenance Expenses (n)	Rents (o)	Total Expenses (p)

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Line No.	Item (a)	Number of Watt-hour Meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (in (MVa) (d)

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities	15,275			167,804,430	167,804,430

3	Solid Waste Disposal Costs				16,101,669	16,101,669
4	Noise Abatement Equipment				329,577	329,577
5	Esthetic Costs				125,427	125,427
6	Additional Plant Capacity				1,278,392	1,278,392
7	Miscellaneous (Identify significant)				522,217	522,217
8	TOTAL (Total of lines 1 thru 7)	15,275	-6,555		218,928,225	218,928,225
9	Construction Work in Progress	8,230,352			11,122,003	11,122,003

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under Item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	9,644,904	9,644,904

REPORT OF INDEPENDENT ACCOUNTANTS

To the Board of Directors
Jersey Central Power & Light Company
Reading, Pennsylvania

We have audited the balance sheets of Jersey Central Power & Light Company as of December 31, 2000 and 1999, and the related statements of income for the years then ended, and the statements of retained earnings and of cash flows for the year ended December 31, 2000 included on pages 110 through 123.57 of the accompanying Federal Energy Regulatory Commission Form No. 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 1, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States of America.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Jersey Central Power & Light Company as of December 31, 2000 and 1999, the results of its operations for the years then ended, and its changes in retained earnings and in cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is solely intended for the information and use of the board of directors and management of Jersey Central Power & Light Company and the Federal Energy Regulatory Commission.

PricewaterhouseCoopers LLP

January 31, 2001

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)

(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;
(4) "Person" means an individual or a corporation;
(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;
(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."
(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:
(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

P. R. Chatman
Assistant Comptroller - Jersey Central Power & Light Company
310 Madison Avenue
Morristown, NJ 07962 - 1957

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

New Jersey - March 27, 1925

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric Service in the State of New Jersey

5. Have you engaged as the principal accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

(1) Consists of earnings on "Long-Term Incentive Plan" ("LTIP") compensation paid in the year the award vests.

(2) Amounts reported in this column for the year 2000 represent each Named Executive Officer's 1995 performance-based restricted stock award that vested on June 4, 2000, at 90% of target, in accordance with the 1990 Stock Plan. The restricted units issued each year since 1995 under the 1990 Stock Plan have been performance based. Dividends are earned on the aggregate restricted units awarded under the 1990 Stock Plan and reinvested in additional units.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the repondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiearies for whom trust was maintained, and purpose of the trust.

GPU, Inc., parent company, owns 100% of the issued and outstanding common stock of the respondent.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CORPORATIONS CONTROLLED BY RESPONDENT

1. Report below the names of all corporations, business trusts, and similar organizations, controlled directly or indirectly by respondent at any time during the year. If control ceased prior to end of year, give particulars (details) in a footnote.
2. If control was by other means than a direct holding of voting rights, state in a footnote the manner in which control was held, naming any intermediaries involved.
3. If control was held jointly with one or more other interests, state the fact in a footnote and name the other interests.

Definitions
1. See the Uniform System of Accounts for a definition of control.
2. Direct control is that which is exercised without interposition of an intermediary.
3. Indirect control is that which is exercised by the interposition of an intermediary which exercises direct control.
4. Joint control is that in which neither interest can effectively control or direct action without the consent of the other, as where the voting control is equally divided between two holders, or each party holds a veto power over the other. Joint control may exist by mutual agreement or understanding between two or more parties who together have control within the meaning of the definition of control in the Uniform System of Accounts, regardless of the relative voting rights of each party.

Vice President -	1999	170,000	112,000	-	1,400	20,218	27,090
Technical Services	1998	170,000	50,000	-	4,850	21,002	20,762
C. Brooks	2000	170,000	-	-	5,200	33,960	22,943(8)
Vice President	1999	170,000	90,000	460	1,400	20,424	19,041
	1998	170,000	50,000	592	4,850	20,536	15,593

(1) Consists of earnings on "Long-Term Incentive Plan" ("LTIP") compensation paid in the year the award vests.

(2) Amounts reported in this column for the year 2000 represent each Named Executive Officer's 1995 performance-based restricted stock award that vested on June 4, 2000, at 90% of target, in accordance with the 1990 Stock Plan. The restricted units issued each year since 1995 under the 1990 Stock Plan have been performance based. Dividends are earned on the aggregate restricted units awarded under the 1990 Stock Plan and reinvested in additional units.

Amounts reported in this column for the years 1998 and 1999 consist of Performance Cash Incentive Awards paid on the 1993 and 1994 restricted unit awards, respectively, which vested under the 1990 Stock Plan. These amounts were designed to compensate recipients of restricted unit awards for the amount of federal and state income taxes that are payable upon vesting of such awards. There was no Performance Cash Incentive Award associated with the vesting of the restricted units awarded in 1995 that vested in 2000.

The aggregate number and value (based on the stock price per share at December 31, 2000) of unvested and deferred vested stock-equivalent restricted units (including reinvested dividend equivalents) at the end of 2000 were:

	Aggregate Units	Aggregate Value
M. J. Chesser	4,032	$148,428
M. J. Connolly	2,254	82,975
R. S. Zechman	8,125	299,102
C. A. Mascari	9,313	342,835
C. Brooks	7,572	278,744

(3) Consists of GPU's matching contributions under the non-qualified deferred compensation plan ($3,296), above-market interest accrued on the retirement portion of deferred compensation ($16), earnings on LTIP compensation not paid in the current year ($4,293), and signing bonus received upon employment ($50,000).

(4) Mr. Connolly was compensated by GPU Service, Inc. for his overall service on behalf of GPU and accordingly was not compensated directly by the other subsidiary companies for his services.

(5) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,785), above-market interest accrued on the retirement portion of deferred compensation ($83), and earnings on LTIP compensation not paid in the current year ($3,651).

(6) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($5,385), above-market interest accrued on the retirement portion of deferred compensation ($1,036), and earnings on LTIP compensation not paid in the current year ($15,951).

(7) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,480), above-market interest accrued on the retirement portion of deferred compensation ($7,045), and earnings on LTIP compensation not paid in the current year ($18,550).

(8) Consists of GPU's matching contributions under the Savings Plan ($6,800), above-market interest accrued on the retirement portion of deferred compensation ($1,136), and earnings on LTIP compensation not paid in the current year ($15,007).

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting

Cumulative Preferred Stock

Voting Rights:

Whenever four(4) quarterly dividends payable on any part of the cumulative preferred stock shall be in arrears in whole or in part, the holders of the cumulative preferred stock voting as a class shall have the exclusive right to elect a majority only of the Board of Directors. This right shall continue until all such dividends are no longer in default. Otherwise, the holders of the cumulative preferred stock have no voting rights except as required by law and except that under certain circumstances their consent given in writing or by vote at a meeting thereof may be required in connection with certain matters relating to (1) the creation or authorization of any class or kind of stock ranking prior to the cumulative preferred stock; (2) a change in any of the terms of the cumulative preferred stock in any manner prejudicial to the holders thereof; (3) the issuance of any shares of the cumulative preferred stock, in addition to the initial series of 125,000 shares thereof, unless (a)net earnings, computed according to a formula expressed in the charter, permit such issuance and (b) the aggregate of the capital applicable to the common stock and surplus of the respondent is not less than the amount payable upon involuntary dissolution to the holders of the cumulative preferred stock to be outstanding after the proposed issuance of such additional cumulative preferred stock provided that no portion of the surplus used to meet this latter requirement shall, after such issuance and until a like number of shares of cumulative preferred stock have been retired, be available for dividends or other distribution upon the common stock; (4) the issuance or assumption of securities representing unsecured indebtedness (except to refund or renew such indebtedness or redeem outstanding shares of the cumulative preferred stock) in excess of 20 percent of the aggregate amount of the secured indebtedness, capital and surplus of the respondent; or, as to unsecured securities having maturities of less than ten years, in excess of ten percent of such aggregate amount; (5) merger or consolidation with or into any other corportation except where the same has been approved or permitted by the Securities and Exchange Commission under the Public Utility Holding Company Act of 1935 and law does not require such consent. If required, consent by a two-thirds majority in number of shares is applicable with respect to items (1), (2) and (3) and under existing local law, if applicable, with respect to item (5). If required, consent by a simple majority in number of shares is applicable with respect to item (4) and, where applicable other than by requirement of local law, with respect to item (5).

Name of Respondent	This Report Is:	Date of Report	Year of Report

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

PAGE 108 INTENTIONALLY LEFT BLANK
SEE PAGE 109 FOR REQUIRED INFORMATION.

1. None

2. None

3. During 1999, the NJBPU approved the sale of JCP&L's non-nuclear generation assets and JCP&L's interest in the Three Mile Island Unit 1 Nuclear Generating Station (TMI-1). The sales of substantially all of the non-nuclear assets and of JCP&L's interest in TMI-1 were consummated during 1999. In August 2000, JCP&L sold Oyster Creek nuclear generating station. See footnote 6 beginning on page 123.19 for additional information.

4. None

5. None

6. JCP&L has NJBPU authorization to issue and sell up to $300 million of Senior Notes and up to $200 million of Trust Preferred Securities, which in the aggregate cannot exceed $300 million. The Company has authorization to issue through December 31, 2002.

7. None

8. On November 5, 1999 the respondent entered into an agreement with the six local unions of the International Brotherhood of Electrical Workers (IBEW) effective 11/1/99 and terminating 10/31/02. Under this new agreement, bargaining employees were placed into two distinct groups with respect to base wages and incentive compensation programs as follows:

- Meter Reading and Customer Services Representatives:
  November 1, 1999: No base increase with a 6% incentive compensation award plus $1,000 lump sum payment
  November 1, 2000: No base increase with a 7% incentive compensation award
  November 1, 2001: No base increase with an 8% incentive compensation award

  The incentive compensation award will be annualized and paid quarterly based upon the achievement of negotiated, job specific (line of sight) goals

- All other bargaining employees:
  November 1, 1999: 3% base increase with a 2% incentive compensation award plus $1,000 lump sum payment
  November 1, 2000: 2% base increase with a 4% incentive compensation award
  November 1, 2001: 2% base increase with a 5% incentive compensation award

  The incentive compensation payment is determined based on the acheivement of negotiated goals and is payable in March 2001, March 2002, and March 2003

JCP&L Nuclear Divestiture Agreement:
The respondent negotiated a specific agreement with the six local unions of the IBEW to provide for the transition of bargaining unit employees who work at the Oyster Creek Nuclear Generation Station which was sold during 2000. The agreement provides incentives for these employees to transfer to the new owner or to transition out of JCP&L without exercising their contractual rights. The new owner is assured of experienced employees to operate the nuclear generation facility and JCP&L continues operations with little impact of nuclear generation employees displacing less senior employees. This transition was successfully completed in 2000.

JCP&L Fossil Generation Divestiture:
Bargaining employees working at the fossil generation stations were successfully transitioned to the new owner per the provisions of the generation divestiture agreements

negotiated during 1998.

9. For information with respect to material legal proceedings, reference is made to Note 12 (Commitments and Contingencies) of the Notes to Financial Statements beginning on page 122.

10. None

FOOTNOTE DATA

Schedule Page: 112 Line No.: 68 Column: d

Note: The Notes to Financial Statements starting on page 122 are in integral part of the Balance Sheet.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.
7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.
B. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.
9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.
10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commmission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

GPU, Inc. owns all the outstanding common stock of three domestic electric utilities -- Jersey Central Power & Light Company (JCP&L), Metropolitan Edison Company (Met-Ed) and Pennsylvania Electric Company (Penelec). These electric utilities are conducting business under the name GPU Energy and considered together are referred to as the "GPU Energy companies." GPU Capital, Inc. and GPU Electric, Inc. and their subsidiaries own, operate and fund the acquisition of electric distribution and gas transmission systems in foreign countries, and are referred to as "GPU Electric." GPU Electric's foreign utility companies include Midlands Electricity plc (conducting business as GPU Power UK); Empresa Distribuidora Electrica Regional S.A. (Emdersa); and GPU GasNet. GPU Power, Inc. and its subsidiaries (GPU Power) develop, own and operate generation facilities in foreign countries. Other subsidiaries of GPU, Inc. include GPU Advanced Resources, Inc. (GPU AR), which is involved in retail energy sales; GPU Telcom Services, Inc. (GPU Telcom), which is engaged in telecommunications-related businesses; MYR Group Inc. (MYR), which is a utility infrastructure construction services company; GPU Service, Inc. (GPUS), which provides legal, accounting, financial and other services to the GPU companies; GPU Diversified Holdings LLC; and GPU Nuclear, Inc. (GPUN). All of these companies considered together are referred to as "GPU."

In 2000, GPU, Inc. sold GPU PowerNet, its Australian electric transmission company, to Singapore Power International (SPI). In addition, GPU, Inc. sold GPU International, Inc. (GPUI) to Aquila Energy Corporation (Aquila). This sale included GPUI's interests in six domestic electric generating plants, and one development stage project. For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and revenues and expenses during the reporting period. Actual results could differ from those estimates.

SYSTEM OF ACCOUNTS

Certain reclassifications of prior years' data have been made to conform with the current presentation. The GPU Energy companies' accounting records are maintained in accordance with the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission (FERC) and adopted by the Pennsylvania Public Utility Commission (PaPUC) and the New Jersey Board of Public Utilities (NJBPU). GPU's accounting records also comply with the Securities and Exchange Commission's (SEC) rules and regulations.

CONSOLIDATION

The GPU consolidated financial statements include the accounts of its wholly-owned subsidiaries and any affiliates in which it has a controlling financial interest (generally evidenced by a greater than 50% ownership interest). All significant intercompany transactions and accounts are eliminated in consolidation. GPU also uses the equity method of accounting for investments in affiliates in which it has the ability to exercise significant influence.

GPU began accounting for GPU Power UK as a consolidated entity in the third quarter

of 1999, following its acquisition of the remaining 50% ownership interest from Cinergy Corp. (Cinergy).

REGULATORY ACCOUNTING

Statement of Financial Accounting Standards No. 71 (FAS 71), "Accounting for the Effects of Certain Types of Regulation," applies to regulated utilities that have the ability to recover their costs through rates established by regulators and charged to customers. The GPU Energy companies' transmission and distribution operations are currently accounted for under the provisions of FAS 71. In accordance with FAS 71, GPU has deferred certain costs pursuant to actions of the NJBPU and PaPUC and is recovering or expects to recover such costs in regulated rates charged to customers. Regulatory assets and liabilities are reflected net in the Deferred Debits and Other Assets section of the Consolidated Balance Sheets. For additional information about regulatory assets and liabilities, see Note 12, Commitments and Contingencies.

With the receipt of the NJBPU Summary Restructuring Order (Summary Order) in 1999 and the PaPUC Restructuring Orders (Restructuring Orders) in 1998, GPU determined that the GPU Energy companies' electric generation operations no longer met the criteria for the continued application of FAS 71, and therefore adopted, for that portion of its business, the provisions of Statement of Financial Accounting Standards No. 101 (FAS 101), "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71" and Emerging Issues Task Force Issue 97-4 (EITF)(Issue 97-4), Deregulation of the Pricing of Electricity - Issues Related to the Application of FASB Statement No. 71 "Accounting for the Effects of Certain Types of Regulation" and No. 101 "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71."

CURRENCY TRANSLATION

In accordance with Statement of Financial Accounting Standards No. 52 (FAS 52), "Foreign Currency Translation," balance sheet accounts of foreign operations are translated from foreign currencies into US dollars at year-end rates, while income statement accounts are translated at the average month-end exchange rates for the relevant period. The resulting translation adjustments are included in Accumulated other comprehensive income/(loss), net of deferred taxes, on the Consolidated Balance Sheets. Gains and losses resulting from foreign currency transactions are included in Net Income.

REVENUES

GPU recognizes operating revenues for services rendered to the end of the relevant accounting period. Therefore, the electric operating revenues of GPU Electric and the GPU Energy companies include an estimate for unbilled revenues.

MYR recognizes revenue on construction contracts using the percentage-of-completion accounting method determined in each case by the ratio of cost incurred to date on the contract (excluding uninstalled direct materials) to management's estimate of the contract's total cost. Contract cost includes all direct material, subcontract and labor costs and those indirect costs related to contract performance, such as supplies, tool repairs and depreciation. MYR charges selling, general and administrative costs, including indirect costs associated with maintaining district offices, to expense as incurred.

Provisions for estimated losses on uncompleted contracts are recorded in the period in which such losses are determined. Changes in estimated revenues and costs are recognized in the periods in which such estimates are revised. Significant claims are included in revenue in accordance with industry practice.

The asset, "Costs and estimated earnings in excess of billings on uncompleted contracts," represents revenues recognized in excess of amounts billed. The liability, "Billings in excess of costs and estimated earnings on uncompleted contracts," represents amounts billed in excess of revenues recognized.

CLASSIFICATION OF CURRENT ASSETS AND CURRENT LIABILITIES

The length of MYR's contracts vary, with some larger contracts exceeding one year. In accordance with industry practice, MYR includes in current assets and current liabilities amounts realizable and payable under contracts which may extend beyond one year.

DEFERRED COSTS

JCP&L recovers its prudently incurred generation-related costs, including nonutility generation (NUG) costs, through a Basic Generation Service (BGS) charge and a Market Transition Charge (MTC), and defers any differences between actual costs and amounts recovered from customers through rates. Met-Ed and Penelec use deferred accounting for the above-market portion of NUG costs which are collected through the Competitive Transition Charge (CTC).

On November 29, 2000, Met-Ed and Penelec filed a petition with the PaPUC seeking recovery of their power purchase costs in excess of established rate caps. Currently, Met-Ed and Penelec do not have authority to defer these costs for future recovery. The PaPUC consolidated this petition for consideration with the GPU/FirstEnergy Corp. (FirstEnergy) merger proceeding, which establishes a May 2001 date for a PaPUC order in both cases, based on the current merger procedural schedule.

UTILITY PLANT

Prior to the sale of the Oyster Creek Nuclear Generation Station (Oyster Creek) in 2000, the plant was written down to its sale price of $10 million. All other utility plant, including the GPU Energy companies' remaining generation plants, and additions are valued at cost. The assets of acquired companies are carried at their fair value as of the acquisition date, less accumulated depreciation.

DEPRECIATION

GPU generally provides for depreciation at annual rates determined and revised periodically, on the basis of studies, to be sufficient to depreciate the original cost of depreciable property over estimated remaining service lives, which are generally longer than those employed for tax purposes.

These rates, on an aggregate composite basis, resulted in annual rates as follows:

	GPU	JCP&L	Met-Ed	Penelec
2000	3.16%	3.30%	2.87%	2.72%
1999	2.96%	2.94%	3.01%	2.81%
1998	3.43%	3.65%	3.53%	3.25%

GPU GasNet uses the volumetric depreciation method to amortize the cost of its gas pipeline.

AMORTIZATION POLICIES

Accounting for TMI-2 and Forked River Investments:

At December 31, 2000, $55 million is included in Regulatory assets, net on the Consolidated Balance Sheets for JCP&L's investment in Three Mile Island Unit 2 (TMI-2). JCP&L is collecting annual revenues for the amortization of TMI-2 of $9.6 million. This level of revenue will be sufficient to recover the remaining investment by 2008. Met-Ed and Penelec have collected all of their TMI-2 investment attributable to retail customers. At December 31, 2000, $48 million is included in Regulatory assets, net on the Consolidated Balance Sheets for JCP&L's Forked River project. JCP&L is collecting annual revenues for the amortization of this project of $11.2 million, which will be sufficient to recover its remaining investment by 2006. Because JCP&L has not been provided revenues for a return on the unamortized balances of the damaged TMI-2 facility and the cancelled Forked River project, these investments are being carried at their discounted present values.

Nuclear Fuel:

Prior to the sale of Three Mile Island Unit 1 (TMI-1) in 1999 and Oyster Creek in 2000, the GPU Energy companies amortized nuclear fuel on a unit-of-production basis and rates were determined and periodically revised to amortize the cost of the fuel over its useful life.

At December 31, 2000 and 1999, the liability of the GPU Energy companies for future contributions to the Federal Decontamination and Decommissioning Fund for the cleanup of uranium enrichment plants operated by the Federal Government amounted to $22 million (JCP&L $14 million; Met-Ed $5 million; Penelec $3 million) and $25 million (JCP&L $15 million; Met-Ed $7 million; Penelec $3 million), respectively, and is primarily reflected in Deferred Credits and Other Liabilities - Other. Annual contributions, which began in 1993, are being made over a 15-year period. JCP&L is recovering these costs from customers through its BGS and MTC rates. Met-Ed and Penelec are not recovering these costs in rates.

Goodwill:

Goodwill, resulting from GPU's purchase of various businesses, is recorded on the Consolidated Balance Sheets and amortized to expense, on a straight-line basis, over its useful life not to exceed 40 years. Goodwill amortization expense amounted to $54.7 million, $51.6 million and $14 million for the years ended December 31, 2000, 1999 and 1998, respectively. GPU periodically reviews undiscounted projections of future cash flows from operations to assess whether any potential intangible impairment exists on its goodwill. For additional information of goodwill resulting from acquisitions, see Note 7, Acquisitions.

NUCLEAR FUEL DISPOSAL FEE

The GPU Energy companies are providing for estimated future disposal costs for spent nuclear fuel at Oyster Creek and TMI-1 in accordance with the Nuclear Waste Policy Act of 1982. The GPU Energy companies entered into contracts in 1983 with the US Department of Energy (DOE) for the disposal of spent nuclear fuel. For a discussion of the DOE's current inability to begin acceptance of spent nuclear fuel from the GPU Energy companies and other standard contract holders, see Note 12, Commitments and Contingencies.

The total liability under these contracts, including interest, at December 31, 2000, all of which relates to spent nuclear fuel from nuclear generation through April 1983, amounted to $210.1 million (JCP&L $157 million; Met-Ed $35.4 million; Penelec $17.7 million), and is reflected in Deferred Credits and Other Liabilities - Other. As the actual liability is substantially in excess of the amount recovered to date from ratepayers, the GPU Energy companies have reflected such excess in Regulatory assets, net.

The distribution rates presently charged to customers provide for the collection of these costs, plus interest, over a remaining period of seven years for JCP&L. For Met-Ed and Penelec, these costs are a component of their respective CTC. The GPU Energy companies' current rates provide for the recovery of costs for spent nuclear fuel disposal costs resulting from nuclear generation subsequent to April 1983.

INCOME TAXES

GPU files a consolidated federal income tax return. All participants are jointly and severally liable for the full amount of any tax, including penalties and interest, which may be assessed against the group.

Deferred income taxes, which result primarily from purchase accounting adjustments, liberalized depreciation methods, deferred costs, decommissioning funds and discounted Forked River and TMI-2 investments, reflect the impact of temporary differences between the amounts of assets and liabilities recognized for financial reporting purposes and the amounts recognized for tax purposes. Investment tax credits (ITC) are amortized over the estimated service lives of the related facilities.

CARRYING AMOUNTS OF FINANCIAL INSTRUMENTS

The carrying amounts of Temporary cash investments, Special deposits, Securities due within one year and Notes payable on the Consolidated Balance Sheets approximate fair value due to the short period to maturity. The carrying amounts of the Nuclear decommissioning trusts and Nuclear fuel disposal trust, whose assets are invested in cash equivalents and debt and equity securities, also approximate fair value.

DERIVATIVE INSTRUMENTS

GPU's use of derivative instruments is intended to manage the risk of price, interest rate and foreign currency fluctuations. GPU does not intend to hold or issue derivative instruments for trading purposes.

Commodity Derivatives:

The GPU Energy companies use New York Mercantile Exchange (NYMEX) futures and Over-the-Counter (OTC) forward contracts and options on forward contracts to manage the risk of fluctuations in the market price of electricity. The GPU Energy companies also manage the natural gas requirements of certain NUG facilities that generate and sell energy to JCP&L under long-term contracts. These commodity derivatives qualify for hedge accounting treatment under current accounting rules since price movements of the commodity derivatives are highly correlated with the underlying hedged commodities and the transactions are designated as hedges at inception. Accordingly, under the deferral method of accounting, gains and losses related to commodity derivatives are recognized in Power purchased and interchanged in the Consolidated Statements of Income when the hedged transaction closes or if the commodity derivative is no longer sufficiently correlated. Prior to income or loss recognition, deferred gains and losses relating to these transactions are recorded in Current Assets or Current Liabilities in the Consolidated Balance Sheets.

Interest Rate Swap Agreements:

Penelec and GPU Electric (through GPU GasNet and GPU Power UK) use interest rate swap agreements to manage the risk of increases in variable interest rates. As of December 31, 2000, these agreements covered approximately $528 million (Penelec $50 million; GPU Electric $478 million) of debt, and were scheduled to expire on various dates through June 2006. Differences between the amounts paid and received under interest rate

swaps are recorded as adjustments to the interest expense of the underlying debt since the swaps are related to specific assets, liabilities or anticipated transactions. All of the agreements effectively convert variable rate debt to fixed rate debt. For the year ended December 31, 2000, fixed rate interest expense exceeded variable rate interest by approximately $0.3 million (Penelec $0.1 million; GPU Electric $0.2 million).

Currency Swap Agreements:

GPU Electric uses currency swap agreements to manage currency risk caused by fluctuations in the US dollar exchange rate related to debt issued in the US by Avon Energy Partners Holdings (Avon). These swap agreements effectively convert principal and interest payments on this US dollar debt to fixed sterling principal and interest payments, and expire on the maturity dates of the bonds. Interest expense is recorded based on the fixed sterling interest rate. As of December 31, 2000, these currency swap agreements covered £517 million (US $850 million) of debt. Interest expense would have been £37.8 million (US $57.3 million) as compared to £38.6 million (US $58.4 million) for the year ended December 31, 2000 had these agreements not been in place.

ENVIRONMENTAL LIABILITIES

GPU may be subject to loss contingencies resulting from environmental laws and regulations, which include obligations to mitigate the effects on the environment of the disposal or release of certain hazardous wastes and substances at various sites. GPU records liabilities (on an undiscounted basis) for hazardous waste sites where it is probable that a loss has been incurred and the amount of the loss can be reasonably estimated and adjusts these liabilities as required to reflect changes in circumstances.

STATEMENTS OF CASH FLOWS

For the purpose of the consolidated statements of cash flows, temporary investments include all unrestricted liquid assets, such as cash deposits and debt securities, with maturities generally of three months or less. Cash flows are reported using the US dollar equivalent of the functional currencies in effect at the time of the cash transaction. The effect of exchange rate changes on cash balances held in foreign currencies are reported as a separate line item on the Consolidated Statements of Cash Flows.

Avon and GPU Power UK have a formal agreement with a United Kingdom bank, under which they maintain available cash balances in a number of subsidiary bank accounts and an overdraft in the main GPU Power UK operating account. The overdraft balance was $276.5 million as of December 31, 2000, while total cash at GPU Power UK was $314.3 million. Since GPU Power UK manages the overdraft balance in such a way that it does not exceed the available cash balances in the other associated accounts, no interest or fees are paid under this arrangement. In effect, GPU Power UK uses the overdraft facility to utilize the available cash in the other bank accounts. The overdraft position and the offsetting cash balances subject to this arrangement are shown on the Consolidated Balance Sheets in Bank overdraft and Cash and temporary cash investments, respectively.

2. SHORT-TERM BORROWING ARRANGEMENTS

At December 31, 2000 and 1999, short-term debt outstanding consisted of the following:

		2000		1999	
Company	Facility	Balance Outstanding (in millions)	Weighted Avg. Rate	Balance Outstanding (in millions)	Weighted Avg. Rate

GPU, Inc.	Bank Loans	$ 113	7.2%	$ 123	7.0%
JCP&L	Bank Loans	2	7.0	-	-
	Commercial Paper	27	7.4	-	-
Met-Ed	Commercial Paper	47	6.8	-	-
Penelec	Commercial Paper	56	6.7	54	6.9
MYR	Bank Loans	36	7.2	-	-
GPU Electric	Bank Loans	476	7.0	366	6.1
	Commercial Paper/ Medium Term Notes	724	8.0	1,218	6.5
	Total	$1,481		$1,761	

GPU's weighted average interest rate on the short-term borrowings was 7.5% and 6.5% at December 31, 2000 and 1999, respectively.

GPU has various credit facilities in place, the most significant of which are discussed below. These credit facilities generally provide GPU bank loans at negotiated market rates. In addition, commitment fees or facility fees are determined by market rates at the time the facility is put in place, and can change based on the borrower's current bond rating.

In recent months, certain aspects of California's restructuring plan have created instability and price volatility in the electricity market, negatively affecting the California electric utilities. These utilities have defaulted on various contractual and financial obligations and have experienced rapid deterioration of their credit quality. Reaction of the financial markets, which did not anticipate the rapid deterioration of the California utilities' financial condition, has included a careful review of overall credit exposure to the electric utility industry.

Furthermore, Met-Ed's and Penelec's energy cost exposure related to their provider of last resort (PLR) obligation in Pennsylvania has negatively affected Met-Ed's and Penelec's earnings. Consequently, the amount of new financing capacity available to GPU, Inc. or its subsidiaries may be less than it had previously been and renewal or refinancing of existing credit facilities will likely require GPU's acceptance of higher pricing and/or more restrictive terms and conditions. The credit facilities that expire in 2001 include: $465 million available to GPU, Inc. and the GPU Energy companies under a $250 million revolving credit agreement and various committed bank lines of credit; $1 billion under GPU Capital, Inc.'s (GPU Capital) senior revolving credit agreement; $180 million under GPU Australia Holdings, Inc.'s (GPU Australia Holdings) senior revolving credit agreement; and $366 million under EI UK Holdings, Inc.'s two year term loan agreement.

In addition, primarily as a result of these conditions (the companies' PLR exposure and the negative publicity surrounding the California utilities), in early 2001 Met-Ed and Penelec began experiencing difficulty in selling their commercial paper with maturities longer than overnight. Under normal circumstances, they issue commercial paper having maturities of up to 30 days or longer, if desired. As a result, Met-Ed and Penelec have temporarily withdrawn from the commercial paper market, and instead have resorted to borrowing against their various bank lines of credit.

GPU, Inc. and GPU Energy companies

GPU, Inc. and the GPU Energy companies have available $465 million of short-term borrowing facilities, which include a $250 million revolving credit agreement and various bank lines of credit. In addition, GPU, Inc., JCP&L, Met-Ed and Penelec can issue commercial paper in amounts of up to $100 million, $150 million, $75 million and $100 million, respectively. From these sources, GPU, Inc. has regulatory authority to have $250 million outstanding at any one time. JCP&L, Met-Ed and Penelec are limited by their

charters or SEC authorization to $266 million, $150 million and $150 million, respectively, of short-term debt outstanding at any one time. As of December 31, 2000, GPU, Inc. and the GPU Energy companies had $113 million and $132 million (JCP&L $29 million; Met-Ed $47 million; Penelec $56 million), respectively, of short-term debt outstanding.

GPU Electric

GPU Capital has a $1 billion 364-day senior revolving credit agreement due in November 2001 supporting the issuance of commercial paper for its $1 billion commercial paper program, which has been established to fund GPU, Inc. and GPU Electric acquisitions. GPU, Inc. has guaranteed GPU Capital's obligations under this program. At December 31, 2000 and 1999, $633 million and $768 million was outstanding under this commercial paper program, respectively, and included in Notes payable on the Consolidated Balance Sheets. In early 2001, GPU Capital refinanced the majority of this outstanding commercial paper through its standby revolving credit agreement.

GPU Electric has a $150 million credit facility due in May 2002 to accommodate short-term borrowing needs. The facility is guaranteed by GPU, Inc. and there were no outstanding borrowings as of December 31, 2000.

GPU Australia Holdings has $180 million available under its senior revolving credit facility, which expires in November 2001. This facility is guaranteed by GPU, Inc. In 2000, GPU Australia Holdings borrowed $176 million under this facility, which is included in Notes payable on the Consolidated Balance Sheet, to repay all outstanding obligations under its $180 million commercial paper program. There were no outstanding borrowings under this revolving credit facility as of December 31, 1999.

The above-mentioned GPU Australia Holdings commercial paper program is supported by GPU, Inc. credit facilities and GPU, Inc. has also guaranteed all obligations under this program. At December 31, 1999, $182 million was outstanding under this commercial paper program and included in Notes payable on the Consolidated Balance Sheet. No borrowings were outstanding at December 31, 2000.

In August 2000, GPU GasNet entered into a A$750 million (US $417 million) commercial paper program to refinance maturing bank debt. In addition, GPU GasNet established a A$750 million (US $417 million) credit facility to serve as a backstop for this commercial paper program. At December 31, 2000, there was A$250 million (US $139 million) of commercial paper outstanding under this program and included in Long-term debt on the Consolidated Balance Sheet since it is management's intent to reissue this amount of commercial paper on a long-term basis.

GPU Power UK maintains a £150 million (approximately US $224 million) revolving credit facility with six banks for working capital purposes, which expires at various dates through June 2005. At December 31, 2000 and 1999, there was £60 million (US $90 million) and £87 million (US $140 million) outstanding under this facility, respectively, which is included in Notes payable on the Consolidated Balance Sheets.

In addition, GPU Power UK maintains an ongoing £75 million (US $112 million) bank facility for working capital purposes. Outstanding borrowings are collateralized by portions of trade accounts receivable. At December 31, 2000 and 1999, £75 million (US $112 million) and £75 million (US $121 million) was outstanding under this facility, respectively, which is included in Notes payable on the Consolidated Balance Sheets.

MYR

MYR maintains a $50 million revolving credit facility, which expires in November

2003, of which up to $10 million is available for the issuance of standby letters of credit. As of December 31, 2000, $36 million was outstanding under this facility and included in Notes payable on the Consolidated Balance Sheet.

3. LONG-TERM DEBT

At December 31, 2000 and 1999, long-term debt outstanding consisted of the following:

GPU, Inc. and Subsidiary Companies

2000	Maturities	Interest Rates	(in millions) Total Debt Outstanding	Due Within One Year
GPU Energy companies, GPUS & GPU, Inc.:				
First mortgage bonds	2001-2027	5.35-9.20%	$1,695 (1)	$ 40
Senior notes	2002-2019	5.75-7.77%	441 (2)	-
Other long-term debt	2001-2039	7.05-7.69%	334	22
GPU Electric:				
Bank loans	2001-2014	5.98-10.5%	1,184	912
Bonds	2002-2008	7.38-7.46%	983	-
Commercial paper/Medium term notes	2001-2003	5.98-10.5%	222 (3)	-
GPU Power	2003-2022	4.5-9.5%	39	7
Total			$4,898	$ 981

(1) Amount is less unamortized net discount of $3.1 million.

(2) Amount is less unamortized net discount of $1.6 million.

(3) Amount includes $139 million of Australian commercial paper, which is included in Long-term debt on the Consolidated Balance Sheet since it is management's intent to reissue this amount on a long-term basis.

1999	Maturities	Interest Rates	(in millions) Total Debt Outstanding	Due Within One Year
GPU Energy companies & GPUS:				
First mortgage bonds(a)	2000-2027	5.35-9.48%	$1,785 (1)	$ 90
Senior notes	2004-2019	5.75-6.63%	348 (2)	-
Other long-term debt	2000-2039	6.76-7.69%	34	-
GPU Electric:				
Bank loans	2000-2014	4.16-6.56%	2,264	475
Bonds	2002-2008	7.38-7.46%	1,092	-
Medium term notes	2001-2002	6.33%	263	-
GPUI Group	2000-2022	4.5 -7%	46	5

Total	$5,832	$ 570

(1) Amount is less unamortized net discount of $2.8 million.

(2) Amount is less unamortized net discount of $1.8 million.

(a) Substantially all of the utility plant owned by the GPU Energy companies is subject to the liens of their respective mortgages.

For the years 2001, 2002, 2003, 2004 and 2005, GPU has long-term debt maturities as follows:

(in millions)

Company	2001	2002	2003	2004	2005
JCP&L	$ 40	$ 50	$150	$160	$50
Met-Ed	-	30	90	40	50
Penelec	-	50	-	125	8
GPU Electric	912	436	176	11	12
GPU Power	7	7	6	6	2
GPU, Inc.	-	-	-	-	300
GPUS	22	-	-	-	-
Total	$981	$573	$422	$342	$422

At December 31, 2000, EI UK Holdings, Inc. had long-term debt outstanding of £245 million (US $366 million) under its £245 million credit facility, a portion of which is guaranteed by GPU, Inc.

As discussed in Note 2, Short-Term Borrowing Arrangements, the amount of new financing capacity available to GPU, Inc. or its subsidiaries may be less than it had previously been and renewal or refinancing of existing credit facilities will likely require GPU's acceptance of higher pricing and/or more restrictive terms and conditions.

The fair value of long-term debt is estimated based on the quoted market prices for the same or similar issues or on the current rates offered to GPU for debt of the same remaining maturities and credit qualities. The estimated fair value of GPU's long-term debt, including amounts due within one year, as of December 31, 2000 and 1999 is as follows:

(in millions)

	2000		1999	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
JCP&L	$1,134	$1,125	$1,174	$1,139

Total	$4,898	$4,952	$5,832	$6,312

4. PREFERRED SECURITIES

Cumulative Preferred Stock: (a)

JCP&L

Cumulative preferred stock, without par value, 15,600,000 shares authorized, 748,334 and 965,000 shares issued and outstanding in 2000 and 1999, respectively.

	(in thousands) 2000	1999
Cumulative preferred stock - with mandatory redemption (b)(c)(d):		
8.65% Series J, 333,334 and 500,000 shares at 12/31/00 and 12/31/99, respectively	$33,333	$50,000
7.52% Series K, 290,000 and 340,000 shares at 12/31/00 and 12/31/99, respectively	29,000	34,000
Subtotal	62,333	84,000
Amounts due within one year (d)	(10,833)	(10,833)
Total cumulative preferred stock - with mandatory redemption	$51,500	$73,167
Cumulative preferred stock - without mandatory redemption (c)(e):		
4% Series, 125,000 shares, callable at $106.50 a share	$12,500	$12,500
Premium on cumulative preferred stock	149	149
Total cumulative preferred stock - without mandatory redemption	$12,649	$12,649

(a) In 1999, Met-Ed and Penelec redeemed all of their outstanding shares of cumulative preferred stock for $12.5 million and $17.4 million, respectively. At December 31, 2000 and 1999, the GPU Energy companies were authorized to issue 37,035,000 of cumulative preferred stock. If dividends on any of the cumulative preferred stock of JCP&L are in arrears for four quarters, the holders of cumulative preferred stock, voting as a class, are entitled to elect a majority of the Board of Directors until all dividends in arrears have been paid. If JCP&L has failed to pay dividends in full on any outstanding shares of cumulative preferred stock, thereafter and until dividends in full on all such shares of cumulative preferred stock have been paid, or declared and set apart for payment, for all past quarterly dividend periods, JCP&L shall not redeem any cumulative preferred stock unless all the shares of cumulative preferred stock outstanding are redeemed and shall not purchase or otherwise acquire for value any shares of cumulative preferred stock except in accordance with an offer (which may vary with respect to shares of different series) made to all holders of share of cumulative preferred stock.

(b) The 7.52% and 8.65% Series are callable at various prices above their stated values beginning in 2002 and 2000, respectively. Pursuant to mandatory sinking fund provisions, the 7.52% Series is to be redeemed ratably over the next fourteen years. The 8.65% Series is to be redeemed ratably over the next four years.

(c) During 2000, JCP&L redeemed $5 million stated value of its 7.52% cumulative preferred stock and $16.7 million stated value of its 8.65% cumulative preferred stock pursuant to mandatory and optional sinking fund provisions. During 1999, JCP&L redeemed all of its outstanding shares of 7.88% cumulative preferred stock with a stated value of $25 million and $5 million stated value of its 7.52% cumulative preferred stock pursuant to mandatory and optional sinking fund provisions. JCP&L's total redemption cost for 2000 and 1999 was $21.7 million and $30.9 million, respectively.

(d) The shares with mandatory redemption have redemption requirements of $10.8 million for each year of the next four years, and $2.5 million in year five. The fair value of the preferred stock with mandatory redemption, including amounts due within one year, based on market price quotations at December 31, 2000 and 1999, was $65.6 million and $86.5 million, respectively.

(e) The outstanding shares of preferred stock without mandatory redemption are callable at various prices above their stated values. At December 31, 2000, JCP&L could call the 4% Series for $13.3 million.

Subsidiary-Obligated Mandatorily Redeemable Preferred Securities:

JCP&L Capital, L.P., Met-Ed Capital, L.P. and Penelec Capital, L.P. are special-purpose partnerships in which a subsidiary of JCP&L, Met-Ed and Penelec, respectively, is the sole general partner. In 1995, JCP&L Capital, L.P. issued $125 million at 8.56% (5 million shares at $25 per share) of mandatorily redeemable preferred securities (MIPS) and in 1994, Met-Ed Capital, L.P. and Penelec Capital, L.P. issued $100 million at 9% (4 million shares at $25 per share) and $105 million at 8.75% (4.2 million shares at $25 per share), respectively, of MIPS. The proceeds were loaned to JCP&L, Met-Ed and Penelec, respectively, which, in turn, issued their deferrable interest subordinated debentures to the partnerships. In 1999, Met-Ed and Penelec redeemed all of their outstanding shares of MIPS for $100 million and $105 million, respectively. At December 31, 2000, JCP&L's outstanding shares of MIPS had a fair value of $122.2 million.

The MIPS of JCP&L Capital, L.P. mature in 2044 and are redeemable at the option of JCP&L beginning in May of 2000 at 100% of their principal amount. JCP&L has fully and unconditionally guaranteed payment of distributions, to the extent there is sufficient cash on hand to permit such payments and legally available funds, and payments on liquidation or redemption of its Preferred Securities. Distributions on the MIPS (and interest on the subordinated debentures) may be deferred for up to 60 months, but JCP&L may not pay dividends on, or redeem or acquire, any of its cumulative preferred or common stock until deferred payments on its subordinated debentures are paid in full.

Subsidiary-Obligated Trust Preferred Securities:

In 1999, Met-Ed Capital Trust, a wholly-owned subsidiary of Met-Ed, issued $100 million of trust preferred securities (Met-Ed Trust Preferred Securities) at 7.35%, due 2039. The sole assets of Met-Ed Capital Trust are the 7.35% Cumulative Preferred Securities of Met-Ed Capital II, L.P. (Met-Ed Partnership Preferred Securities) and its only revenues are the quarterly cash distributions it receives on the Met-Ed Partnership Preferred Securities. Each Met-Ed Trust Preferred Security represents a Met-Ed Partnership Preferred Security. Met-Ed Capital II, L.P. is a wholly-owned subsidiary of Met-Ed and the sponsor of Met-Ed Capital Trust. The sole assets of Met-Ed Capital II, L.P. are Met-Ed's 7.35% Subordinated Debentures, Series A, due 2039, which have an aggregate principal amount of $103.1 million. Met-Ed has fully and unconditionally guaranteed the Met-Ed Partnership Preferred Securities, and, therefore, the Met-Ed Trust Preferred Securities.

million of trust preferred securities (Penelec Trust Preferred Securities) at 7.34%, due 2039. The sole assets of Penelec Capital Trust are the 7.34% Cumulative Preferred Securities of Penelec Capital II, L.P. (Penelec Partnership Preferred Securities) and its only revenues are the quarterly cash distributions it receives on the Penelec Partnership Preferred Securities. Each Penelec Trust Preferred Security represents a Penelec Partnership Preferred Security. Penelec Capital II, L.P. is a wholly-owned subsidiary of Penelec and the sponsor of Penelec Capital Trust. The sole assets of Penelec Capital II, L.P. are Penelec's 7.34% Subordinated Debentures, Series A, due 2039, which have an aggregate principal amount of $103.1 million. Penelec has fully and unconditionally guaranteed the Penelec Partnership Preferred Securities, and, therefore, the Penelec Trust Preferred Securities.

The fair value of the Met-Ed and Penelec Trust Preferred Securities at December 31, 2000 was $96.5 million and $97 million, respectively.

5. STOCKHOLDERS' EQUITY

The following table presents information relating to the common stock ($2.50 par value) of GPU, Inc.:

	2000	1999	1998
Authorized shares	350,000,000	350,000,000.	350,000,000
Issued shares	132,783,338	132,783,338	132,783,338
Reacquired shares	13,343,387	11,017,798	4,787,657
Outstanding shares	119,439,951	121,765,540	127,995,681
Outstanding restricted units	312,520	283,602	268,360
Outstanding stock options	1,175,069	389,250	335,950

In 2000, GPU, Inc. reacquired 2.8 million shares of common stock at a total cost of $71.9 million.

At December 31, 2000 and 1999, the following issues of common stock were outstanding:

	(in thousands) 2000	1999
GPU, Inc.		
Common stock, par value $2.50 per share	$331,958	$331,958
JCP&L		
Common stock, par value $10 per share, 16,000,000 shares authorized, 15,371,270 shares issued and outstanding	$153,713	$153,713
Met-Ed		
Common stock, no par value, 900,000 shares authorized, 859,500 shares issued and outstanding	$ 66,273	$ 66,273
Penelec		
Common stock, par value $20 per share,		

5,400,000 shares authorized, 5,290,596 shares issued and outstanding	$105,812	$105,812

Pursuant to the 1990 Employee Stock Plan (as restated to reflect amendments through June 1, 2000), awards may be granted in the form of incentive stock options, nonqualified stock options, restricted shares of common stock, performance units and stock appreciation rights, which may accompany options.

In 2000, GPU, Inc. granted stock options to officers and selected employees to purchase 722,700 shares at $29.25 per share. During the year, 17,100 of these options were forfeited leaving a total of 705,600 outstanding at December 31, 2000. Also in 2000, as part of the acquisition of MYR, options held by MYR employees to purchase MYR stock were converted to 97,524 options to purchase GPU, Inc. common stock. The average exercise price of the 97,524 options is $9.93 per share and 6,305 of these options were exercised at an average price of $4.90 during 2000. No additional options were exercised in 2000. In 1999, GPU, Inc. granted stock options to officers to purchase 90,600, 1,000 and 1,000 shares at $42.9375, $34.50 and $34.6875 per share, respectively. In 1998, GPU, Inc. granted stock options to officers to purchase 305,950 and 30,000 shares at $36.625 per share and $44.25 per share, respectively. In 2000, 7,300 and 3,700 options exercisable at $36.625 and $42.9375 per share, respectively, were forfeited. No options were exercised in 1999 and 1998.

At December 31, 2000 and 1999, there were 274,892 and 101,607 options exercisable at weighted average exercise prices of $32.66 and $37.38 per option, respectively. There were no options exercisable at December 31, 1998. All options, other than the MYR converted options have an exercise price equal to the fair market per share value of GPU, Inc. common stock on the grant date. All options vest in three equal annual installments, have a 10-year term and are exercisable in accordance with the terms set forth in the Stock Option Agreement. In the event of a change in control of GPU during the option term (which would include GPU, Inc.'s proposed merger with FirstEnergy), all options would immediately become exercisable. The weighted-average remaining contractual life of options outstanding as of December 31, 2000 was 8.7 years.

The weighted average fair value of options granted during 2000, 1999 and 1998 was $4.60, $6.60 and $4.41 per option, respectively. The options were valued using the Black-Scholes pricing model. For the years 2000, 1999 and 1998, the assumptions used in these valuations were as follows: a risk-free rate of return of 6.38%, 6.14% and 5.70%, respectively; a stock price volatility of 23.5%, 20.21% and 17.36%, respectively; an average dividend yield of 5.71%, 5.42% and 5.67%, respectively; and the exercise of all options on the final day of their 10-year terms.

Also pursuant to the 1990 Employee Stock Plan, in 2000, 1999 and 1998, GPU, Inc. issued performance units to officers and selected employees representing rights to receive shares of common stock, on a one-for-one basis, at the end of the restriction period. The number of shares eventually issued will depend upon the degree to which GPU's performance goals have been met for the performance period and could range from 0% to 200% of the originally awarded units plus additional units resulting from reinvested dividend equivalents. These performance units vest on a pro-rata basis over three or five years. In the event of a change in control of GPU during the performance period (which would include GPU, Inc.'s proposed merger with FirstEnergy), all performance units would immediately vest within the range of 100% to 200% of the original units awarded.

Since 1997, pursuant to the Deferred Stock Unit Plan for Outside Directors, restricted units were issued to outside directors representing rights to receive shares of GPU, Inc. common stock, on a one-for-one basis. All restricted units are considered common stock equivalents and, accordingly, are reflected in the computation of diluted

earnings per share shown on the Consolidated Statements of Income. The restricted units accrue dividend equivalents on a quarterly basis, which are reinvested in additional restricted units. The restricted units vest upon the outside director completing 54 months of service or immediately in the case of a change in control.

Through the above-mentioned plans, officers, selected employees and outside directors were awarded 72,327, 56,994 and 53,260 performance units or restricted units in 2000, 1999 and 1998, respectively. Also in 2000, as part of the acquisition of MYR, restricted units held by MYR employees were converted to GPU, Inc. common stock restricted shares. As of December 31, 2000, 208,136 of these shares were outstanding. In 2000, 1999 and 1998, through these plans, GPU, Inc. issued a total of 247,845, 20,215 and 20,611 shares of common stock, respectively, from previously reacquired shares. At December 31, 2000, there were 1,974,190 shares of common stock authorized for issuance as awards of restricted shares, units, options or rights, in the aggregate.

In 1996, GPU adopted the disclosure requirements of Statement of Financial Accounting Standards No. 123 (FAS 123), "Accounting for Stock-Based Compensation," which establishes a fair value-based method of accounting for employee stock-based compensation. As permitted by FAS 123, GPU continues to follow the intrinsic value method set forth in APB Opinion No. 25, "Accounting for Stock Issued to Employees." Had the fair value-based method of accounting been applied instead, the fair value of options would have been expensed, and net income for 2000, 1999 and 1998 would have been $231.4 million, $458.7 million and $359.3 million, respectively, and earnings per share for the same periods would have been $1.91, $3.66 and $2.83, respectively.

Accumulated Other Comprehensive Income/(Loss):

In 1997, GPU adopted Statement of Financial Accounting Standards No. 130, "Reporting Comprehensive Income." At December 31, 2000 and 1999, GPU had the following amounts in Accumulated other comprehensive income/(loss) on the Consolidated Balance Sheets:

	(in thousands) 2000	1999
GPU, Inc. and Subsidiary Companies		
Net unrealized gains on investments (1)	$ 13,404	$ 34,183
Foreign currency translation	(72,402)	(40,518)
Minimum pension liability	(3,626)	(6)
Accumulated other comprehensive income/(loss)	$(62,624)	$(6,341)

	(in thousands) 2000	1999

6. ACCOUNTING FOR EXTRAORDINARY AND NON-RECURRING ITEMS

GPU PowerNet Sale (2000):

In June 2000, GPU, Inc. sold GPU PowerNet, its Australian electric transmission company, to SPI for A$2.1 billion (approximately US $1.26 billion). As part of the sales price, SPI assumed liability for A$230 million (US $137.8 million) of medium term notes. A significant portion of the net proceeds from the sale were used to repay debt in 2000, and the remaining proceeds have been placed in a trust and will be used to further reduce debt. As a result of the sale, GPU recorded in Operating Income on the Consolidated Statement of Income, a pre-tax loss in the quarter ended June 30, 2000 of $372 million ($295 million after-tax, or $2.43 per share), including a $94 million foreign currency loss. During the fourth quarter 2000, there was a change in the estimated tax benefits, which reduced GPU's after-tax loss on the sale to $276.6 million, or $2.28 per share.

GPU International, Inc. (GPUI) Sale (2000):

In December 2000, GPU, Inc. sold GPUI to Aquila for $225 million. The sale included GPUI's interests in six domestic operating plants and one development stage project. The net proceeds from the sale were used primarily to reduce debt at GPU Capital.

As a result of the sale, GPU realized a pre-tax gain of $133 million ($89.2 million after-tax, or $0.73 per share).

Restructured Power Purchase Agreement (2000):

In June 1998, Onondaga Cogeneration L.P. (Onondaga), a GPUI independent power project, and Niagara Mohawk Power Corporation (NIMO) renegotiated their existing power purchase agreement and entered into a 10-year indexed swap agreement and power put.

In September 2000 (prior to the sale of GPUI), Onondaga terminated its rights under the power put thereby terminating all agreements Onondaga had with NIMO to sell energy and capacity under the restructured power purchase agreement. As a result, in 2000, a net pre-tax gain of $42.8 million ($27.8 million after-tax, or $0.23 per share) was recorded in Other Income and Deductions on the Consolidated Statement of Income, as follows: the deferred gain of $86.7 million pre-tax related to the restructured power purchase agreement with NIMO was recognized in income; and the indexed swap agreement was marked to market and the associated deferred revenue was taken to income resulting in a pre-tax gain of $90.8 million. In addition, as a result of terminating the power put with NIMO and based on information supplied by an outside independent expert, management determined that the Onondaga plant would not operate on an economically profitable basis in the merchant generation market, and that the equipment would be technologically obsolete. As the result of an impairment test performed under Statement of Financial Accounting Standards No. 121 (FAS 121), "Accounting for the Impairment of Long-Lived Assets and for Long-Lived

Assets to Be Disposed Of," using the undiscounted cash flows of the plant's operations, management determined that the plant was impaired, and the carrying value of the plant was written down by $69.1 million pre-tax. Also, as a result of the termination of Onondaga's rights under the power put, a review of firmly committed long-term executory gas transportation contracts was performed and the contracts were determined to be out of market, which resulted in a charge to income of $65.6 million. Management's analysis utilized gas and energy pricing supplied by an independent expert.

In addition, in 2000 a pre-tax charge of $2.5 million ($1.6 million after-tax, or $0.01 per share) was recorded in other operation and maintenance expense for settlement amounts paid in connection with the termination of Onondaga's steam supply agreement.

PaPUC Phase II Order (2000):

On December 20, 2000, the PaPUC issued a Phase II Order providing a final determination of Met-Ed's and Penelec's stranded cost recovery related to the divestiture of their generating assets. The net impact of the Phase II Order was a credit to income of $66.1 million pre-tax (Met-Ed $44.6 million; Penelec $21.5 million), or $40.8 million after-tax (Met-Ed $32 million; Penelec $8.8 million), or $0.34 per share, the major components of which are discussed below.

As a result of the sales of their generating facilities in 1999, Met-Ed and Penelec recognized a pension curtailment gain (per Statement of Financial Accounting Standards No. 88 (FAS 88), "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits," and Statement of Financial Accounting Standards No. 106 (FAS 106), "Employers' Accounting for Postretirement Benefits Other Than Pensions"), associated with employees who were terminated from the companies at the time of the sale. This gain, which amounted to $50.5 million pre-tax (Met-Ed $26.2 million; Penelec $24.3 million), was deferred pending the outcome of the Phase II proceedings. Upon receipt of the Phase II Order, the deferred gain was recognized in income.

In their Phase II filings, Met-Ed and Penelec requested recovery of an additional $303.8 million (Met-Ed $226.3 million; Penelec $77.5 million) of stranded costs. The Phase II Order disallows recovery of $27.9 million (Met-Ed $16 million; Penelec $11.9 million) of this amount. However, Met-Ed and Penelec anticipated a disallowance of a portion of their stranded costs, and established a reserve of $24.9 million (Met-Ed $18.7 million; Penelec $6.2 million) in 1999. Therefore, in 2000, the remaining disallowance of $3 million pre-tax (Met-Ed $(2.7) million; Penelec $5.7 million) was (credited)/charged to income.

Met-Ed requested recovery of stranded costs associated with its leasehold interest in the Merrill Creek Reservoir project. The Phase II Order granted Met-Ed full recovery of these costs. Met-Ed had previously recorded liabilities which were reversed upon review of the Phase II Order. In addition, during the proceedings, certain estimates and assumptions used in calculating the lease expense were revised. The reversal of related liabilities and the changes in estimates and assumptions resulted in a credit to income of $13.8 million pre-tax.

The Phase II Order deferred a decision on Met-Ed's requested rate increase in 2006 for future consideration. The Order also requires Met-Ed and Penelec to seek a ruling from the Internal Revenue Service (IRS) approving the credit to ratepayers of unamortized investment tax credits and excess deferred income tax benefits associated with their divested generating stations, which were recognized in operating income in 1999. If the IRS ruling ultimately supports returning these tax benefits to ratepayers, Met-Ed and Penelec would then reduce stranded costs by $40 million and record a corresponding charge to income.

Generation Asset Divestiture (2000 and 1999):

GPU Energy companies

During 2000 and 1999, the GPU Energy companies completed the sales of substantially all their electric generating facilities. The PaPUC has made a final determination of Met-Ed's and Penelec's stranded cost recovery, as discussed above. The NJBPU, however, has deferred making a final determination of the net proceeds and stranded cost recovery related to JCP&L's generating asset divestitures until an IRS ruling regarding the treatment of associated federal income tax benefits is received.

In August 2000, JCP&L sold Oyster Creek to AmerGen Energy Company, LLC (AmerGen), a joint venture of PECO Energy and British Energy, for approximately $10 million. As a result of the sale, a non-recurring gain of $16.5 million, or $0.13 per share, was recognized in income for the reversal of certain deferred taxes and realization of an investment tax credit related to the sale. If JCP&L receives an IRS ruling that supports returning these tax benefits to ratepayers, JCP&L would then reduce its stranded costs by this amount and record a corresponding charge to income. As part of the sale, AmerGen has assumed full responsibility for decommissioning the plant and JCP&L has transferred $440 million of Oyster Creek decommissioning trust funds to AmerGen, of which approximately $114 million was paid into the trust by JCP&L at closing. JCP&L has agreed to fund the station's outage cost (up to a maximum of $88 million), including the fuel reload, for the refueling outage completed in November 2000. Outage costs of approximately $88 million were incurred, and are presently being reviewed by GPU. AmerGen will repay these outage costs to JCP&L in nine equal annual installments without interest, beginning August 2001. As discussed below, the Oyster Creek plant was written down to its fair market value in 1999.

In 1999, the GPU Energy companies sold TMI-1 to AmerGen for a total purchase price of approximately $100 million. The sale did not have a significant impact on 1999 earnings since TMI-1 had been written down to its fair market value in 1998, resulting in a loss of $528.3 million pre-tax (JCP&L $133.1 million; Met-Ed $270.7 million; Penelec $124.5 million), which was deferred as a regulatory asset.

Penelec sold its 50% interest in the Homer City Station to a subsidiary of Edison Mission Energy for approximately $900 million in 1999. As a result, Penelec recorded a pre-tax gain of $38.2 million ($22.6 million after-tax, or $0.18 per share) for the portion of the gain related to wholesale operations and deferred as a regulatory liability the remaining pre-tax gain of $590.7.

Penelec sold its 20% interest in the Seneca Pumped Storage Hydroelectric Generating Station to The Cleveland Electric Illuminating Company for $43 million in 1999. The sale resulted in a pre-tax gain of $2 million ($1.2 million after-tax, or $0.01 per share) for the portion of the gain related to wholesale operations and the deferral of the remaining pre-tax gain of $30.2 million as a regulatory liability.

In addition, during 1999 the GPU Energy companies completed the sales of their remaining fossil fuel and hydroelectric generating facilities to Sithe Energies (Sithe) for approximately $1.6 billion (JCP&L $416 million; Met-Ed $641 million; Penelec $558 million) (JCP&L's Forked River combustion turbines and 50% interest in Yards Creek, as well as Met-Ed's York Haven hydroelectric station, were not included in the sales). The sales resulted in a pre-tax gain of $22.9 million (Met-Ed $2.4 million; Penelec $20.5 million), or $13.4 million after-tax (Met-Ed $1.4 million; Penelec $12 million), or $0.11 per share, for the portion of the gain related to wholesale operations, and deferral of the remaining pre-tax gain of $706.5 million (Met-Ed $389.1 million; Penelec $317.4 million) as a regulatory liability.

GPU Power UK

Prior to GPU's purchase of the 50% of GPU Power UK it did not already own, GPU Power UK sold its electric supply business to National Power plc for approximately $300 million. As a result, in 1999 GPU recorded a pre-tax gain on the sale of $10.5 million ($6.8 million after-tax, or $0.05 per share).

JCP&L Restructuring Order (1999):

In 1999, the NJBPU issued a Summary Order regarding JCP&L's unbundling, stranded cost and restructuring filings. Accordingly, in 1999 JCP&L discontinued the application of FAS 71 and adopted the provisions of FAS 101 and EITF Issue 97-4 with respect to its electric generation operations. The transmission and distribution operations of JCP&L continue to be subject to the provisions of FAS 71.

In 1999, JCP&L recorded a reduction in operating revenues of $115 million ($68 million after-tax, or $0.54 per share) relating to the Summary Order. This reduction reflects JCP&L's obligation to refund to customers 5% from rates in effect as of April 30, 1997. The refund will be made to customers from August 1, 2002 through July 31, 2003.

Since JCP&L is no longer subject to FAS 71 for the generation portion of its business, GPU performed an impairment test on Oyster Creek in accordance with FAS 121. Management determined that JCP&L's net investment in Oyster Creek, including plant, nuclear fuel and materials and supplies inventories, was impaired. This investment was written down by a total of $678 million pre-tax in 1999 to reflect the plant's fair market value. This impairment, which was recorded as an extraordinary deduction, was reversed and re-established as a regulatory asset since the NJBPU Summary Order provides for rate recovery.

Pennsylvania Restructuring Orders (1998):

In 1998, Met-Ed and Penelec received PaPUC Restructuring Orders which, among other things, essentially removed from regulation the costs associated with providing electric generation service to Pennsylvania consumers, effective January 1, 1999. Accordingly, in 1998 Met-Ed and Penelec discontinued the application of FAS 71 and adopted the provisions of FAS 101 and EITF Issue 97-4 with respect to their electric generation operations. The transmission and distribution operations of Met-Ed and Penelec continue to be subject to the provisions of FAS 71.

As a result of the Restructuring Orders, Met-Ed and Penelec recorded a pre-tax extraordinary charge of $42.1 million (Met-Ed $11.5 million; Penelec $30.6 million), or $25.8 million after-tax (Met-Ed $6.8 million; Penelec $19 million), or $0.20 per share, and a pre-tax non-recurring charge of $68.5 million (Met-Ed $32.9 million; Penelec $35.6 million), or $40 million after-tax (Met-Ed $19.2 million; Penelec $20.8 million), or $0.32 per share, for customer refunds of 1998 revenues and for the establishment of a sustainable energy fund.

In accordance with FAS 121, impairment tests were performed and determined that the net investment in TMI-1 was impaired at December 31, 1998, resulting in a write-down of $518 million pre-tax (JCP&L $134 million; Met-Ed $257 million; Penelec $127 million) to reflect TMI-1's fair market value. Of the amount written down for TMI-1, $508 million (JCP&L $134 million; Met-Ed $255 million; Penelec $119 million) was deferred as a regulatory asset pending the outcome of the Phase II proceedings and $10 million (Met-Ed $2 million; Penelec $8 million) (the FERC jurisdictional portion) was charged to expense as an extraordinary item in 1998.

7. ACQUISITIONS

MYR Group Inc.

In April 2000, GPU, Inc. acquired MYR for approximately $217.5 million. The fair value of the assets acquired totaled approximately $154.6 million and the amount of liabilities assumed totaled approximately $99.7 million.

MYR, a suburban Chicago-based infrastructure construction services company, provides a complete range of power line and commercial/industrial electrical construction services for electric utilities, telecommunications providers, commercial and industrial facilities and government agencies across the US. MYR also builds cellular towers for the wireless communications market.

The acquisition was partially financed through the issuance of GPU, Inc. short-term debt and was accounted for under the purchase method of accounting. The total acquisition cost exceeded the estimated value of net assets acquired by approximately $162.9 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Empresa Distribuidora Electrica Regional, S.A.

In March 1999, GPU Electric acquired Empresa Distribuidora Electrica Regional, S.A. (Emdersa) for US $375 million. The fair value of the assets acquired totaled approximately $320 million and the amount of liabilities assumed totaled approximately $153 million, including debt of $76 million. Emdersa owns three electric distribution companies that serve three provinces in northwest Argentina.

The acquisition was financed through the issuance of commercial paper by GPU Capital, guaranteed by GPU, Inc., and a $50 million capital contribution from GPU, Inc.

The acquisition was accounted for under the purchase method of accounting. The total acquisition cost exceeded the estimated value of net assets by approximately $208 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Transmission Pipelines Australia

In June 1999, GPU Electric acquired Transmission Pipelines Australia (TPA), a natural gas transmission business, from the State of Victoria, Australia for A$1.025 billion (approximately US $675 million). TPA has been renamed GPU GasNet. The fair value of the assets acquired totaled approximately US $704 million and the amount of liabilities assumed totaled approximately US $116 million.

The acquisition was financed through: (1) an A$750 million (approximately US $495 million) senior credit facility, which is non-recourse to GPU, Inc.; and (2) an equity contribution from GPU Capital of A$275 million (approximately US $180 million) provided through the issuance of commercial paper guaranteed by GPU, Inc.

The acquisition was accounted for under the purchase method. The total acquisition cost exceeded the estimated value of net assets acquired by approximately $88 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Midlands Electricity plc (GPU Power UK)

In July 1999, GPU Electric acquired Cinergy's 50% ownership interest in Avon, which

owns GPU Power UK, for £452.5 million (approximately US $714 million). GPU and Cinergy had jointly formed Avon in 1996 to acquire GPU Power UK. The fair value of the assets acquired totaled approximately US $2.1 billion and the liabilities totaled approximately US $1.5 billion, including debt of US $1 billion.

GPU Electric financed the acquisition through a combination of equity and debt. The equity was funded from: (1) a US $250 million contribution from GPU, Inc., and (2) the issuance of US $50 million of commercial paper by GPU Capital, which is guaranteed by GPU, Inc. The debt has been provided through a two-year £245 million (approximately US $382 million) credit agreement entered into by EI UK Holdings, of which GPU, Inc. has guaranteed approximately US $100 million.

As a result of GPU's purchase of Cinergy's 50% ownership in GPU Power UK, effective in the third quarter of 1999, GPU began accounting for GPU Power UK as a consolidated entity, rather than under the equity method of accounting as was previously the practice. Consequently, Goodwill, net on the Consolidated Balance Sheet increased by approximately $1.8 billion in the third quarter of 1999. Of this amount, $1.7 billion relates to the previous 1996 acquisition of GPU Power UK by GPU and Cinergy and approximately $119 million represents goodwill resulting from GPU's purchase of Cinergy's 50% share of GPU Power UK. The goodwill is being amortized on a straight-line basis over 40 years.

Pro Forma Information (1999 Acquisitions)

The consolidated unaudited pro forma results of operations for 1999 and 1998 present information assuming Emdersa, GPU GasNet and the 50% of GPU Power UK (that GPU did not already own) were acquired January 1, 1998. The pro forma amounts include certain adjustments, primarily to recognize interest expense, amortization of goodwill and depreciation of assets having stepped-up bases, and are not necessarily indicative of the actual results that would have been realized had the acquisitions occurred on the assumed date of January 1, 1998, nor are they necessarily indicative of future results. The consolidated unaudited pro forma information is as follows for 1999 and 1998, respectively: operating revenues of $6 billion and $6.9 billion; income before extraordinary item of $493 million and $442 million; net income of $493 million and $416 million; basic and diluted earnings per share before extraordinary item of $3.94 and $3.47; and basic and diluted earnings per share of $3.94 and $3.27.

8. INCOME TAXES

As of December 31, 2000 and 1999, Regulatory assets, net on the Consolidated Balance Sheets reflected $301 million and $296 million, respectively, of Income taxes recoverable through future rates (primarily related to liberalized depreciation), and Income taxes refundable through future rates of $23 million and $28 million, respectively (related to unamortized ITC), substantially due to the recognition of amounts not previously recorded with the adoption of Statement of Financial Accounting Standards No. 109, "Accounting for Income Taxes," in 1993, as follows:

	(in millions) 2000	1999
Income Taxes Recoverable Through Future Rates:		
JCP&L	$ 18	$ 2
Met-Ed	124	124
Penelec	159	170
Total	$301	$296
Income Taxes Refundable Through Future Rates:

Income tax expense	$ 182	$ 294	$250

The foreign taxes in the above table for 2000, 1999 and 1998 include $5 million ($19 million Current; $(14) million Deferred), $53 million ($16 million Current; $37 million Deferred) and $27 million ($10 million Current; $17 million Deferred) in foreign tax expense which is netted in Equity in undistributed earnings/(loss) of affiliates in the Consolidated Statements of Income. Included in the ITC Amortization is the recognition of $10 million and $36 million for 2000 and 1999, respectively of ITC benefit resulting from

the sale of generation plants.

Amount Charged to Income	$109	$259	$170

For the years 2000, 1999 and 1998, JCP&L purchased $14 million, $22 million and $26 million, respectively, of energy from a cogeneration project in which an affiliate has a 50% partnership interest.

10. EMPLOYEE BENEFITS

Pension Plans and Other Postretirement Benefits:

GPU maintains defined benefit pension plans covering substantially all employees. GPU also provides certain retiree health care and life insurance benefits for substantially all US employees who reach retirement age while working for GPU. The following tables provide a reconciliation of the changes in the plans' benefit obligation and fair value of assets for the years ended December 31, 2000 and 1999, a statement of the funded status of the plans, the amounts recognized in the Consolidated Balance Sheets as of December 31, 2000 and 1999 and the weighted average assumptions used in the measurement of the benefit obligation. The pension benefit disclosure amounts for GPU, Inc. and Subsidiary Companies for the year 1999 reflect the acquisition of the remaining 50% of GPU Power UK by GPU in July of that year. Accordingly, the July 1999 benefit obligation and fair value of plan assets balances for GPU Power UK are shown next to the line items entitled "Acquisitions" and the post-acquisition amounts occurring in the second half of 1999 are included in the tables.

Other amortization	-	-	0.4
Net periodic pension cost	$ 0.1	$ 0.1	$ (1.1)

In 2000, the effects of lower than expected salary increases and the GPU PowerNet divestiture resulted in decreases in the benefit obligation as of December 31, 2000 of $30 million and $36 million, respectively. No significant portions of these amounts relate to JCP&L, Met-Ed or Penelec. In 1999, the effect of increasing the discount rate assumption for the US pension plans from 6.75% to 7.5% resulted in a $162 million (JCP&L $0.5 million; Met-Ed $1.0 million; Penelec $0.3 million; Other $160.2 million) decrease in the benefit obligation as of December 31, 1999.

The above net periodic pension cost amount for 2000 excludes pre-tax charges of $9 million related to JCP&L, which were deferred pending future rate recovery, resulting from employee terminations related to continuing generation asset divestiture. The above net periodic pension cost amount for 1999 excludes pre-tax credits of $31 million, of which $30 million was deferred for return to customers, resulting from employee terminations related to generation asset divestiture. No portion of these amounts relate to JCP&L, Met-Ed or Penelec. The above net periodic pension cost amount for 1998 excludes pre-tax charges of $30 million (JCP&L $8 million; Met-Ed $11 million; Penelec $9 million; Other $2 million), of which $22 million (JCP&L $6 million; Met-Ed $9 million; Penelec $7 million) was deferred pending future rate recovery, resulting from early retirement programs in 1998.

Other Postretirement Benefits:

GPU, Inc. and Subsidiary Companies	(in millions) 2000	1999	1998
Service cost	$ 11.4	$ 15.9	$ 16.4
Interest cost	53.9	52.2	54.4

Net periodic postretirement benefit cost	$ 0.2	$ 0.3	$ 15.0

	(in millions) 2000	1999	1998
Penelec			
Service cost	$ -	$ -	$ 2.0
Interest cost	-	-	15.1
Expected return on plan assets	-	-	(8.9)
Amortization of transition obligation	-	-	4.8
Other amortization	-	-	1.4
Net periodic postretirement benefit cost	$ -	$ -	$ 14.4

In 2000, lower than expected claims experience resulted in a $32 million decrease in the benefit obligation as of December 31, 2000. No significant portion of this amount relates to JCP&L, Met-Ed or Penelec. In 1999, the effect of increasing the assumption associated with medical inflation rates was partially offset by the effect of increasing the discount rate assumption from 6.75% to 7.5% and resulted in a $45 million increase in the benefit obligation as of December 31, 1999. No significant portion of this amount relates to JCP&L, Met-Ed or Penelec. The benefit obligation was determined by application of the terms of the medical and life insurance plans, including the effects of established maximums on covered costs, together with relevant actuarial assumptions and health-care cost trend rates of 9.5% for those not eligible for Medicare and 10.5% for those eligible for Medicare, then decreasing gradually to 6% in 2009 and thereafter. These costs also reflect the implementation of an annual cost-cap of 6% for individuals who retire after December 31, 1995 and reach age 65. The effect of a 1% change in these assumed cost trend rates would increase or decrease the benefit obligation by $36.9 million or $36.6 million, respectively. In addition, such a 1% change would increase or decrease the aggregate service and interest cost components of net periodic postretirement health-care cost by $3.4 million or $3.3 million, respectively. No significant portion of the effect of such a 1% change relates to JCP&L, Met-Ed or Penelec.

The above net periodic postretirement benefit cost amount for 2000 excludes pre-tax charges of $7 million, which were deferred pending future rate recovery, resulting from employee terminations related to continuing generation asset divestiture. No portion of this amount relates to JCP&L, Met-Ed or Penelec. The above net periodic postretirement benefit cost amount for 1999 excludes pre-tax charges of $3 million, which were deferred pending future rate recovery, resulting from employee terminations related to generation asset divestiture. No portion of this amount relates to JCP&L, Met-Ed or Penelec. The above net periodic postretirement benefit cost amount for 1998 excludes pre-tax charges of $20 million (JCP&L $6 million; Met-Ed $6 million; Penelec $7 million; Other $1 million), of which $12 million (JCP&L $3 million; Met-Ed $5 million; Penelec $4 million) was deferred pending future rate recovery, resulting from early retirement programs in 1998.

In JCP&L's 1993 base rate proceeding, the NJBPU allowed JCP&L to collect $3 million

annually for incremental postretirement benefit costs, charged to expense, and recognized as a result of FAS 106. Based on the final order, and in accordance with EITF Issue 92-12, "Accounting for OPEB Costs by Rate-Regulated Enterprises," JCP&L has deferred the amounts above that level. A 1997 Stipulation of Final Settlement (Final Settlement) allows JCP&L to recover and amortize the deferred balance at December 31, 1997 over a fifteen-year period. In addition, the Final Settlement allows JCP&L to recover current amounts accrued pursuant to FAS 106, including amortization of the transition obligation. Met-Ed has deferred the incremental postretirement benefit costs associated with the adoption of FAS 106 and in accordance with EITF Issue 92-12, as authorized by the PaPUC in its 1993 base rate order. In accordance with EITF Issue 92-12, effective January 1998, Met-Ed has ceased deferring these costs. The approximately one-third generation-related portion of the deferred balance at December 31, 1997 is to be recovered in rates over a twelve-year period pursuant to the PaPUC's Restructuring Orders. The remaining two-thirds for the transmission and distribution-related portion is to be amortized over a fourteen-year period beginning January 1999, pursuant to the Restructuring Orders. In 1994, Penelec determined that its FAS 106 costs, including costs deferred since January 1993, were not probable of recovery and charged those deferred costs to expense.

Certain employees of MYR are covered by union-sponsored collectively bargained defined benefit plans. Expenses for these plans amounted to approximately $26 million, $27 million and $26 million in 2000, 1999 and 1998, respectively, as determined in accordance with negotiated labor contracts.

Savings Plans:

GPU also maintains savings plans for substantially all US employees. These plans provide for employee contributions up to specified limits and various levels of employer matching contributions. The matching contributions for GPU were as follows:

	(in millions)		
Company	2000	1999	1998
JCP&L	$ 0.1	$ 0.1	$ 2.8
Met-Ed	0.1	0.1	3.4
Penelec	-	-	1.6
Other	10.8	13.8	5.8
Total	$11.0	$14.0	$13.6

11. LEASES

GPU Energy companies

Capital lease obligations at December 31, 2000 and 1999 totaled $2 million and $48 million (consisting primarily of Oyster Creek nuclear fuel, as discussed below), respectively.

Prior to the sales of TMI-1 and Oyster Creek to AmerGen in December 1999 and August 2000, respectively, the GPU Energy companies had nuclear fuel lease agreements with nonaffiliated fuel trusts for the plant. Upon the sales of TMI-1 and Oyster Creek, the related fuel leases were terminated and all outstanding amounts due under the related credit facilities were paid. Lease expense consists of an amount designed to amortize the cost of the nuclear fuel as consumed plus interest costs. For the years ended December 31, 2000, 1999 and 1998, these amounts were as follows:

	(in millions)		
Company	2000	1999	1998

JCP&L	$ 13	$ 34	$ 30
Met-Ed	-	13	16
Penelec	-	6	8
Total	$ 13	$ 53	$ 54

Met-Ed and JCP&L have sold and leased back a portion of their respective ownership interests in the Merrill Creek Reservoir project. The annual minimum lease payments under these operating leases, which have remaining terms of 32 years, range from approximately $3.6 million to $6.7 million (Met-Ed $1.6 million to $2.9 million; JCP&L $2 million to $3.8 million) over the next five years, net of reimbursements from sub-lessees. JCP&L is recovering its Merrill Creek lease payments, net of reimbursements, through distribution rates. Met-Ed's Merrill Creek lease payments were offset against the actual net divestiture proceeds received from the 1999 sales of its generation assets.

GPU, Inc.

A subsidiary of GPUI sold and leased back the Lake electric cogeneration facility for an initial term of eleven years, expiring in August 2004, for which GPU, Inc. has guaranteed payments of up to $8.1 million. Although GPU, Inc. sold GPUI (including Lake) in 2000, GPU, Inc. has remained on the guaranty, and has obtained an indemnity from Aquila's parent. In addition, a 20-year site lease was entered into for the Lake facility expiring in 2013. Prior to its sale to Aquila, GPUI accounted for these leases as operating leases and GPU's related rent expense for 2000 and 1999 totaled $11.3 million and $12.3 million, respectively.

12. COMMITMENTS AND CONTINGENCIES

PENDING MERGER OF FIRSTENERGY CORP. AND GPU

On August 8, 2000, GPU, Inc. entered into an agreement to merge with FirstEnergy, an Ohio corporation, headquartered in Akron, Ohio. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4.5 billion in cash and FirstEnergy common stock.

Under the agreement, GPU stockholders would receive $36.50 for each share of GPU common stock they own, payable in cash or the equivalent of $36.50 per share in FirstEnergy common stock, as long as FirstEnergy's common stock price is between $24.24 and $29.63. Each GPU stockholder would be able to elect the form of consideration, subject to proration so that the aggregate consideration to all GPU stockholders will be 50 percent cash and 50 percent FirstEnergy common stock. Each GPU stockholder's share converted into FirstEnergy common stock would be exchanged for not less than 1.2318 and not more than 1.5055 shares of FirstEnergy common stock, depending on the average closing price of FirstEnergy stock during the 20-day trading period ending on the sixth trading date prior to the merger closing.

The merger has been approved by the Boards of Directors and stockholders of GPU, Inc. and FirstEnergy and is expected to close promptly after all of the conditions to the consummation of the merger (including the receipt of all necessary regulatory approvals, provided that such approvals will not impose terms and conditions that would reasonably be expected to result in a "material adverse effect," as defined in the merger agreement, on the combined company, and there being no "material adverse effect" on either GPU or FirstEnergy since June 30, 2000 or March 31, 2000, respectively), are fulfilled or waived. Relevant factors would include the nature of any order issued by the regulatory authorities, the financial and business conditions of each company, and whether, and the extent by which, any developments relate to general economic conditions. In testimony

before the PaPUC, FirstEnergy stated that FirstEnergy will carefully review the PaPUC's action with respect to GPU's requested PLR relief on the financial condition of GPU to determine whether the consequences would have a "material adverse effect" on GPU or the combined company. The receipt of all necessary regulatory approvals is expected to take approximately nine to twelve months from the date of the merger agreement. There can be no assurance as to the outcome of these matters.

COMPETITION AND THE CHANGING REGULATORY ENVIRONMENT

Stranded Costs and Regulatory Restructuring Orders:

With the transition to a competitive marketplace for generation service in New Jersey and Pennsylvania, certain generation-related costs, which generally would be recoverable in a regulated environment, may no longer be recoverable. These costs are generally referred to as stranded costs.

In 1999, the NJBPU issued a Summary Order with respect to JCP&L's rate unbundling, stranded cost and restructuring filings. JCP&L is awaiting a final NJBPU order. The Summary Order provides for, among other things, full recovery of what otherwise would have become stranded costs, as well as customer choice of electric generation supplier beginning August 1, 1999 and rate reductions for all consumers. In addition, the NJBPU issued separate Orders approving the sales of JCP&L's generating assets; however, the NJBPU deferred making a final determination of the net proceeds and stranded costs related to the generating asset divestitures until an IRS ruling regarding the treatment of associated federal income tax benefits is received.

In 1998, the PaPUC issued amended Restructuring Orders approving Settlement Agreements entered into by Met-Ed and Penelec which, among other things, provide for customer choice of electric generation supplier beginning January 1, 1999 and a one-year (1999) reduction in retail distribution rates for all consumers. The Orders also provide for recovery of a substantial portion of what otherwise would have become stranded costs, subject to Phase II proceedings following the completion of Met-Ed's and Penelec's generating asset divestitures, to make a final determination of the extent of that stranded cost recovery. In 2000, Met-Ed and Penelec submitted Phase II Reports to the PaPUC supporting their actual net divestiture proceeds and providing a reconciliation of stranded costs pursuant to the 1998 Restructuring Orders.

On December 20, 2000, the PaPUC issued a Phase II Order which disallows $28 million (Met-Ed $16 million; Penelec $12 million) of the requested $304 million (Met-Ed $226 million; Penelec $78 million) of additional stranded costs above those amounts granted in the 1998 Orders. Met-Ed and Penelec had anticipated a disallowance of a portion of stranded costs, and established a $25 million pre-tax (Met-Ed $19 million; Penelec $6 million) reserve in 1999. In addition, as a result of the Phase II Order, Met-Ed and Penelec recognized pre-tax income of $66 million (Met-Ed $45 million; Penelec $21 million) due primarily to pension curtailment gains associated with employees terminated as a result of the sale of generating facilities in 1999, and the reversal of certain liabilities and changes in estimates and assumptions related to Met-Ed's leasehold interest in the Merrill Creek Reservoir project. The Phase II Order also deferred a decision on Met-Ed's requested increase in rates, beginning in 2006, for recovery of Met-Ed's generation-related stranded costs. In addition, the Order requires Met-Ed and Penelec to seek an IRS ruling regarding the return of certain unamortized investment tax credits and excess deferred income tax benefits to ratepayers. If the IRS ruling ultimately supports returning these tax benefits to ratepayers, Met-Ed and Penelec would then reduce stranded costs by $40 million and record a corresponding charge to income. For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

Supply of Electricity:

As a result of the NJBPU's and the PaPUC's Restructuring Orders, the GPU Energy companies are required to supply electricity to customers who do not choose an alternate supplier. Given that the GPU Energy companies have essentially exited the generation business and will have to supply electricity to non-shopping customers almost entirely from contracted and open market purchases, there will be increased risks associated with supplying that electricity. JCP&L is permitted to defer for future recovery the amount by which its reasonable and prudently incurred costs associated with providing basic generation service to non-shopping customers exceed amounts currently reflected in its rates for basic generation service. Met-Ed and Penelec, however, are unable to recover energy costs in excess of their established rate caps, which are in effect for varying periods.

During 2000, market prices at which Met-Ed and Penelec were required to purchase electricity for their retail supply customers at times substantially exceeded the amounts Met-Ed and Penelec were allowed to charge for that electricity under their capped generation rates. This situation has resulted in a substantial loss of earnings for Met-Ed and Penelec in 2000, especially during the peak Summer months, and this condition is expected to continue so long as wholesale energy prices remain high, and Met-Ed and Penelec are not granted regulatory relief.

Given this situation, on November 29, 2000, Met-Ed and Penelec filed a petition with the PaPUC seeking permission to defer for future recovery their energy costs in excess of established generation rate caps. Various parties to the proceeding filed motions to dismiss the petition. On January 19, 2001, Met-Ed and Penelec made a further request that they be permitted to implement their proposed deferral mechanism pending the PaPUC's final action on their petition. On January 24, 2001, the PaPUC denied, without prejudice, the motions to dismiss Met-Ed's and Penelec's petition and recommended that the companies provide support for a rate cap exception based on the criteria in the Customer Choice and Competition Act. In addition, the PaPUC consolidated the petition with the GPU/FirstEnergy merger proceeding for consideration and resolution in accord with the merger procedural schedule, which establishes a May 2001 date for a PaPUC order in both cases. In February 2001, Met-Ed and Penelec filed a supplement to their petition and supporting testimony which they believe establish that the PaPUC should grant them exceptions to their rate caps. In addition, Met-Ed and Penelec stated that as an alternative to the deferral mechanism they previously proposed, the circumstances would warrant an immediate increase in their present rate caps. There can be no assurance regarding the degree, if any, to which Met-Ed and Penelec may be able to recover their costs to supply electricity in excess of amounts currently reflected in their capped rates.

Generation Agreements:

The evolving competitive generation market has created uncertainty regarding the forecasting of the GPU Energy companies' energy supply needs, which has caused the GPU Energy companies to seek shorter-term agreements offering more flexibility. The GPU Energy companies' supply plan focuses on short- to intermediate-term commitments (one month to three years), with any residual needs then being purchased from the short-term market (one hour to one month).

The GPU Energy companies have entered into agreements with third party suppliers to purchase capacity and energy through 2004. Payments pursuant to these agreements, which include firm commitments as well as certain assumptions regarding, among other things, call/put arrangements, are estimated to be $1.2 billion in 2001, $265 million in 2002, $92 million in 2003 and $5 million in 2004.

Pursuant to the mandates of the federal Public Utility Regulatory Policies Act and state regulatory directives, the GPU Energy companies were required to enter into power purchase agreements with nonutility generators (NUGs) for the purchase of energy and capacity, which agreements have remaining terms of up to 20 years. The rates under virtually all of the GPU Energy companies' NUG agreements are substantially in excess of current and projected prices from alternative sources. The following table shows actual payments from 1998 through 2000, and estimated payments thereafter through 2005:

Payments Under NUG Agreements
(in millions)

	Total	JCP&L	Met-Ed	Penelec
1998	$788	$403	$174	$211
1999	774	388	167	219
2000	734	364	153	217
2001	775	438	145	192
2002	804	466	148	190
2003	813	465	153	195
2004	816	458	157	201
2005	798	443	160	195

The NJBPU Summary Order provides JCP&L assurance of full recovery of its NUG costs (including above-market NUG costs and certain buyout costs); and the PaPUC Restructuring Orders provide Met-Ed and Penelec assurance of full recovery of their above-market NUG costs and certain NUG buyout costs. At December 31, 2000, the GPU Energy companies have recorded, on a present value basis, a total estimated liability of $3.3 billion (JCP&L $1.7 billion; Met-Ed $0.7 billion; Penelec $0.9 billion) on the Consolidated Balance Sheet for above-market NUG costs which is offset by corresponding regulatory assets. The GPU Energy companies are continuing efforts to reduce the above-market costs of these agreements. There can be no assurance as to the extent to which these efforts will be successful.

In 1997, the NJBPU approved a Stipulation of Final Settlement which, among other things, provided for the recovery of costs associated with the buyout of the Freehold Cogeneration power purchase agreement (Freehold buyout). The NJBPU approved the cost recovery of up to $135 million, over a seven-year period, on an interim basis subject to refund. The NJBPU's Summary Order provides for the continued recovery of the Freehold buyout in the MTC, but has not altered the interim nature of such recovery, pending a final decision by the NJBPU. There can be no assurance as to the outcome of this matter.

ACCOUNTING MATTERS

JCP&L, in 1999, and Met-Ed and Penelec in 1998, discontinued the application of Statement of Financial Accounting Standards No. 71 (FAS 71), "Accounting for the Effects of Certain Types of Regulation," and adopted the provisions of Statement of Financial Accounting Standards No. 101 (FAS 101), "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71," and Emerging Issues Task Force (EITF) Issue 97-4, "Deregulation of the Pricing of Electricity - Issues Related to the Application of FAS 71 and FAS 101," with respect to their electric generation operations. The transmission and distribution portion of the GPU Energy companies' operations continues to be subject to the provisions of FAS 71. Regulatory assets, net as reflected in the December 31, 2000 and December 31, 1999 Consolidated Balance Sheets in accordance with the provisions of FAS 71 and EITF Issue 97-4 were as follows:

(in thousands)

GPU, Inc. and Subsidiaries	2000	1999
Market transition charge (MTC) / basic generation service	$2,732,926	$2,397,071
Competitive transition charge (CTC)	1,680,484	1,709,258
Income taxes recoverable through future rates, net	263,942	280,268

Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities," as amended by FAS 137, "Accounting for Derivative Instruments and Hedging Activities - Deferral of the Effective Date of FASB Statement No. 133" and FAS 138, "Accounting for Certain Derivative Instruments and Certain Hedging Activities - An Amendment of FASB Statement No. 133" (collectively, FAS 133), establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. In general, FAS 133 requires that companies recognize all derivatives as either assets or liabilities on the balance sheet and measure those instruments at fair value. FAS 133 (as amended) provides an exemption for certain contracts that qualify as normal purchases and

sales. To qualify for this exclusion, certain criteria must be met, including that it must be probable that the contract will result in physical delivery. GPU adopted FAS 133 on January 1, 2001.

GPU's use of derivative instruments is intended to manage the risk of fluctuations in commodity prices, interest rates and foreign currencies. GPU does not intend to hold or issue derivative instruments for trading purposes. GPU enters into fixed-price contracts for future purchases of electricity and natural gas with individual counterparties or through traded exchanges. The majority of these commodity contracts entered into by GPU are considered "normal purchases," as defined by FAS 133, and, therefore, are excluded from the statement's scope. Commodity contracts accounted for as derivatives under FAS 133 are designated as cash flow hedges of the underlying commodity purchases, to the extent they qualify for such treatment. FAS 133 requires that the effective portion of the gain or loss on a derivative instrument designated and qualifying as a cash flow hedge be reported as a component of Other Comprehensive Income, net of tax. GPU also enters into third party energy option contracts. These derivative instruments are accounted for as cash flow hedges of the underlying commodity purchases, to the extent they are effective hedges. Upon adoption of this statement at January 1, 2001, the impact of FAS 133 as it relates to forward, futures and option contracts was immaterial to GPU's earnings or financial position.

To hedge against high transmission rates along certain routes during periods of high congestion, GPU enters into fixed transmission rights (FTRs) agreements. Upon adoption of FAS 133 at January 1, 2001, the impact of this statement as it relates to FTRs was immaterial to GPU's earnings or financial position.

GPU uses various types of interest rate swaps to convert floating-rate loans to fixed rates. These instruments are accounted for as cash flow hedges, to the extent they are effective hedges. Upon adoption of this statement on January 1, 2001, derivative liabilities of approximately $7 million (Penelec $1 million; GPU Power $1.5 million; GPU Electric $4.5 million) were recognized on the Consolidated Balance Sheet, with an offset, net of tax, of $5 million (Penelec $1 million; GPU Power $1.5 million; GPU Electric $2.5 million) to Accumulated other comprehensive income and a $2 million (GPU Electric) charge to income.

GPU uses currency swap agreements to manage currency risk caused by fluctuations in the US dollar exchange rate related to debt issued in the US by Avon Energy Partners Holdings. These instruments will be accounted for as cash flow hedges, to the extent they are effective hedges. Upon adoption of FAS 133 on January 1, 2001, derivative assets of approximately $54 million (GPU Power UK) were recognized on the Consolidated Balance Sheet, with an offset, net of tax, to Accumulated other comprehensive income.

NUCLEAR FACILITIES

Investments:

In December 1999, the GPU Energy companies sold TMI-1 to AmerGen for approximately $100 million. In August 2000, JCP&L sold Oyster Creek to AmerGen for approximately $10 million. As part of the sales, AmerGen has assumed full responsibility for decommissioning the plants, and the GPU Energy companies have transferred $320 million and $430 million of TMI-1 and Oyster Creek decommissioning trust funds, respectively, to AmerGen. JCP&L, Met-Ed and Penelec jointly own TMI-2, which was damaged during a 1979 accident, in the percentages of 25%, 50% and 25%, respectively. JCP&L's net investment in TMI-2 as of December 31, 2000 and December 31, 1999 was $55 million and $61 million, respectively. JCP&L is collecting revenues for TMI-2 on a basis which provides for the recovery of its remaining investment in the plant by 2008. Met-Ed's and Penelec's

remaining investments in TMI-2 were written off in 1998 after receiving the PaPUC's Restructuring Orders.

TMI-2:

As a result of the 1979 TMI-2 accident, individual claims for alleged personal injury (including claims for punitive damages), which are material in amount, were asserted against GPU, Inc. and the GPU Energy companies. Approximately 2,100 of such claims were filed in the US District Court for the Middle District of Pennsylvania. Some of the claims also seek recovery for injuries from alleged emissions of radioactivity before and after the accident.

At the time of the TMI-2 accident, as provided for in the Price-Anderson Act, the GPU Energy companies had (a) primary financial protection in the form of insurance policies with groups of insurance companies providing an aggregate of $140 million of primary coverage, (b) secondary financial protection in the form of private liability insurance under an industry retrospective rating plan providing for up to an aggregate of $335 million in premium charges under such plan and (c) an indemnity agreement with the Nuclear Regulatory Commission (NRC) for up to $85 million, bringing their total financial protection up to an aggregate of $560 million. Under the secondary level, the GPU Energy companies are subject to a retrospective premium charge of up to $5 million per reactor, or a total of $15 million (JCP&L $7.5 million; Met-Ed $5 million; Penelec $2.5 million).

In 1995, the US Court of Appeals for the Third Circuit ruled that the Price-Anderson Act provides coverage under its primary and secondary levels for punitive as well as compensatory damages, but that punitive damages could not be recovered against the Federal Government under the third level of financial protection. In so doing, the Court of Appeals referred to the "finite fund" (the $560 million of financial protection under the Price-Anderson Act) to which plaintiffs must resort to get compensatory as well as punitive damages.

The Court of Appeals also ruled that the standard of care owed by the defendants to a plaintiff was determined by the specific level of radiation which was released into the environment, as measured at the site boundary, rather than as measured at the specific site where the plaintiff was located at the time of the accident (as the defendants proposed). The Court of Appeals also held that each plaintiff still must demonstrate exposure to radiation released during the TMI-2 accident and that such exposure had resulted in injuries. In 1996, the US Supreme Court denied petitions filed by GPU, Inc. and the GPU Energy companies to review the Court of Appeals' rulings.

In 1996, the District Court granted a motion for summary judgment filed by GPU, Inc. and the GPU Energy companies, and dismissed the ten initial "test cases" which had been selected for a test case trial, as well as all of the remaining 2,100 pending claims. The Court ruled that there was no evidence which created a genuine issue of material fact warranting submission of plaintiffs' claims to a jury. The plaintiffs appealed the District Court's ruling to the Court of Appeals for the Third Circuit. In November 1999, the Third Circuit affirmed the District Court's dismissal of the ten "test cases," but set aside the dismissal of the additional pending claims, remanding them to the District Court for further proceedings. In remanding these claims, the Third Circuit held that the District Court had erred in extending its summary judgment decision to the other plaintiffs and imposing on these plaintiffs the District Court's finding that radiation exposures below 10 rems were too speculative to establish a causal link to cancer. The Court of Appeals stated that the non-test case plaintiffs should be permitted to present their own individual evidence that exposure to radiation from the accident caused their cancers. In June 2000, the US Supreme Court denied petitions for review filed by GPU, Inc., the GPU Energy companies and the plaintiffs.

In September 2000, the defendants filed a Motion for Summary Judgment in the District Court. Meanwhile, the plaintiffs have taken an interlocutory appeal to the Third Circuit seeking review of the District Court's determination that the remaining plaintiffs should be allowed to advance causation theories based only on the admissible evidence of record at the close of discovery in the case.

Oral arguments on the plaintiffs' appeal were held in January, 2001. There can be no assurance as to the outcome of this litigation.

GPU, Inc. and the GPU Energy companies believe that any liability to which they might be subject by reason of the TMI-2 accident will not exceed their financial protection under the Price-Anderson Act.

NUCLEAR PLANT RETIREMENT COSTS

Retirement costs for nuclear plants include decommissioning the radiological portions of the plants and the cost of removal of nonradiological structures and materials. The disposal of spent nuclear fuel is covered separately by contracts with the DOE.

In 1995, a consultant performed a site-specific study of TMI-2 that considered various decommissioning methods and estimated the cost of decommissioning the radiological portion and the cost of removal of the nonradiological portion of the plant, using the prompt removal/dismantlement method. Management has reviewed the methodology and assumptions used in this study, is in agreement with them, and believes the results are reasonable. The TMI-2 funding completion date is 2014, consistent with TMI-2 remaining in long-term storage. The retirement cost estimate under the 1995 site-specific study, assuming decommissioning of TMI-2 in 2014, is $450 million for radiological decommissioning and $36 million for non-radiological removal costs (net of $12.6 million spent as of December 31, 2000)(in 2000 dollars).

Each of the GPU Energy companies is responsible for retirement costs in proportion to its respective ownership percentage. The ultimate cost of retiring TMI-2 may be different from the cost estimate contained in this site-specific study. Also, the cost estimate contained in this site-specific study is significantly greater than the decommissioning funding targets established by the NRC.

The estimated liability for future TMI-2 retirement costs (reflected as Three Mile Island Unit 2 future costs on the Consolidated Balance Sheets) as of December 31, 2000 and December 31, 1999 is $515 million (JCP&L $129 million; Met-Ed $257 million; Penelec $129 million) and $497 million (JCP&L $124 million; Met-Ed $249 million; Penelec $124 million), respectively. This liability is based upon the 1995 site-specific study estimate (in 2000 and 1999 dollars, respectively) discussed above and an estimate for remaining incremental monitored storage costs of $29 million (JCP&L $7 million; Met-Ed $15 million; Penelec $7 million) and $27 million (JCP&L $7 million; Met-Ed $13 million; Penelec $7 million) as of December 31, 2000 and December 31, 1999, respectively, as a result of TMI-2 entering long-term monitored storage in 1993.

Offsetting the $515 million liability as of December 31, 2000 is $127 million (JCP&L $15 million; Met-Ed $93 million; Penelec $19 million), which management believes is probable of recovery from customers and included in Regulatory assets, net on the Consolidated Balance Sheet, and $374 million (JCP&L $115 million; Met-Ed $161 million; Penelec $98 million) in trust funds for TMI-2 and included in Nuclear decommissioning trusts, at market on the Consolidated Balance Sheet.

The NJBPU has granted JCP&L revenues for TMI-2 retirement costs based on the 1995

site-specific study estimate. In addition, JCP&L is recovering a portion of its share of TMI-2 incremental monitored storage costs. The PaPUC Restructuring Orders granted Met-Ed and Penelec recovery of TMI-2 decommissioning costs as part of the CTC; however, Penelec has recovered these costs through the divestiture of its generating assets. The 1996 Customer Choice Act also allows Met-Ed and Penelec to defer as a regulatory asset those amounts that are above the level provided for in the CTC for future recovery.

As of December 31, 2000, the accident-related portion of TMI-2 radiological decommissioning costs is estimated to be $80 million (JCP&L $20 million; Met-Ed $40 million; Penelec $20 million), which is based on the 1995 site-specific study (in 2000 dollars). In connection with rate case resolutions, JCP&L, Met-Ed and Penelec made contributions to irrevocable external trusts for their respective shares of the accident-related portion of the decommissioning liability in amounts of $15 million, $40 million and $20 million, respectively. These contributions were not recoverable from customers and were expensed in 1990, in the case of JCP&L, and in 1991 for Met-Ed and Penelec.

The GPU Energy companies intend to seek recovery for any increases in TMI-2 retirement costs, but recognize that recovery cannot be assured.

Prior to September 2000, increases in the accident-related portion of Met-Ed's and Penelec's TMI-2 decommissioning liability were charged to expense, in amounts totaling $23.2 million (Met-Ed $15.4 million; Penelec $7.8 million) through August 2000. Likewise, through August 2000, earnings on Met-Ed's and Penelec's contributions to external trusts, in amounts totaling $34.9 million (Met-Ed $23.3 million; Penelec $11.6 million), were taken to income, and the related unrealized gains and losses were accrued to Accumulated other comprehensive income on the Consolidated Balance Sheet.

During the course of ongoing regulatory proceedings in Pennsylvania, Met-Ed and Penelec determined, in the third quarter 2000, that a portion of their regulatory assets for TMI-2 decommissioning previously regarded as probable of recovery in rates, are now no longer deemed probable of recovery. As a result, in the third quarter 2000, Met-Ed and Penelec charged to income $11.7 million (Met-Ed $7.9 million; Penelec $3.8 million) pre-tax for the write-down of their respective regulatory assets for TMI-2 decommissioning, representing the net realized gain they previously recorded on the accident-related portion of the TMI-2 decommissioning trust. Furthermore, the unrealized gains or losses associated with the accident-related portion of the TMI-2 decommissioning trust (previously recorded in Accumulated other comprehensive income) were transferred to Regulatory assets, net on the Consolidated Balance Sheet, and will no longer be recorded in Accumulated other comprehensive income.

The GPU Energy companies own all of the common stock of the Saxton Nuclear Experimental Corporation, which owns a small demonstration nuclear reactor. Decommissioning of the plant is expected to be completed in 2002. In December 2000, based on new estimates to complete the decommissioning of the plant, the decommissioning liability was increased by $13 million, to $52 million (JCP&L $23 million; Met-Ed $17 million; Penelec $12 million) as of December 31, 2000. The GPU Energy companies do not believe this increase is probable of recovery, and have charged the entire amount to expense.

INSURANCE

GPU has insurance (subject to retentions and deductibles) for its operations and facilities including coverage for property damage, liability to employees and third parties, and loss of use and occupancy. There is no assurance that GPU will maintain all existing insurance coverages. Losses or liabilities that are not completely insured,

unless allowed to be recovered through ratemaking, could have a material adverse effect on the financial position of GPU.

GPU has purchased property and decontamination insurance coverage for TMI-2 totaling $150 million.

The Price-Anderson Act limits an owner's liability to third parties resulting from a nuclear incident to approximately $9.5 billion. Coverage for the first $200 million of such liability is provided by private insurance. The remaining coverage, or secondary financial protection, is provided by retrospective premiums payable by all nuclear reactor owners. Although TMI-2 is exempt from retrospective premium assessments, the plant is still covered by the provisions of the Price-Anderson Act. In addition, the GPU Energy companies are subject to other retrospective premium assessments related to policies applicable to TMI-1 prior to its sale to AmerGen.

ENVIRONMENTAL MATTERS

As a result of existing and proposed legislation and regulations, and ongoing legal proceedings dealing with environmental matters, including but not limited to acid rain, water quality, ambient air quality, global warming, electromagnetic fields, and storage and disposal of hazardous and/or toxic wastes, GPU may be required to incur substantial additional costs to construct new equipment, modify or replace existing and proposed equipment, remediate, decommission or cleanup waste disposal and other sites currently or formerly used by it, including formerly owned manufactured gas plants (MGP), coal mine refuse piles and generation facilities.

GPU has been formally notified by the EPA and state environmental authorities that it is among the potentially responsible parties (PRPs) who may be jointly and severally liable to pay for the costs associated with the investigation and remediation at 11 hazardous and/or toxic waste sites (in some cases, more than one company is named for a given site).

JCP&L	MET-ED	PENELEC	GPUN	GPU, INC.	TOTAL
7	4	2	1	1	11

In addition, certain of the GPU companies have been requested to participate in the remediation or supply information to the EPA and state environmental authorities on several other sites for which they have not been formally named as PRPs, although the EPA and/or state authorities may nevertheless consider them as PRPs. Certain of the GPU companies have also been named in lawsuits requesting damages (which are material in amount) for hazardous and/or toxic substances allegedly released into the environment. As of December 31, 2000, a liability of approximately $6 million (JCP&L $2.2 million; Met-Ed $0.6 million; Penelec $0.2 million; other $3 million) was recorded for PRP sites where it is probable that a loss has been incurred and the amount could be reasonably estimated.

The ultimate cost of remediation of all these and other hazardous waste sites will depend upon changing circumstances as site investigations continue, including (a) the existing technology required for site cleanup, (b) the remedial action plan chosen and (c) the extent of site contamination and the portion attributed to the GPU companies involved.

In 1997, the EPA filed a complaint against GPU, Inc. in the US District Court for the District of Delaware for enforcement of its Unilateral Order (Order) issued against GPU, Inc. to clean up the former Dover Gas Light Company (Dover) manufactured gas production site (Site) in Dover, Delaware. Dover was part of the AGECO/AGECORP group of companies from 1929 until 1942; GPU, Inc. emerged from the AGECO/AGECORP reorganization

proceedings in 1946. All of Dover's common stock, which was sold in 1942 to an unaffiliated entity, was subsequently acquired by Chesapeake Utilities Corporation (Chesapeake), which merged with Dover in 1960. Chesapeake is currently performing the cleanup at the Site. According to the complaint, the EPA is seeking (1) enforcement of the Order against GPU; (2) recovery of its past response costs; (3) a declaratory judgment that GPU is liable for any remaining cleanup costs of the Site; and (4) statutory penalties for noncompliance with the Order. The EPA has stated that it has incurred approximately $1.1 million of past response costs as of December 31, 2000. Chesapeake claims to have spent approximately $10 million in connection with remediation of the site. The EPA has more recently estimated the cost of ground water remediation to be on the order of $6 million. Consultants to Chesapeake have estimated the remaining remediation ground water costs to be approximately $12 million to $19 million. In accordance with its penalty policy, and in discussions with GPU, the EPA has demanded penalties calculated at a daily rate of $8,800, rather than the statutory maximum of $27,500 per day. As of December 31, 2000, if the statutory maximum were applied, the total amount of penalties would be approximately $44 million. GPU believes that it has meritorious defenses to the imposition of penalties, or that if a penalty is assessed, it should be at a lower daily rate. Chesapeake has also sued GPU, Inc. for contribution to the cleanup of the Dover Site. The US District Court for the District of Delaware has consolidated the case filed by Chesapeake with the case filed by the EPA and discovery is proceeding. There can be no assurance as to the outcome of these proceedings.

In August 2000, Rochester Gas & Electric Corporation (RG&E) filed suit against GPU, Inc. in the US District Court for the Western District of New York for the reimbursement of $5.2 million of costs and damages it has allegedly incurred, and a declaratory judgement with respect to future costs and damages, in connection with two former MGP sites and a third property where wastes from one of those sites were allegedly deposited. All of the properties are located in Rochester, New York. According to the complaint, RG&E was an indirect subsidiary of AGECO from May 1929 until January 1946, and a subsidiary of GPU, Inc. from January 1946 until October 1949, when it was divested by order of the SEC under the Public Utility Holding Company Act. There can be no assurance as to the outcome of this matter.

In connection with the 1999 sale of its Seward Generation Station to Sithe, Penelec has assumed up to $6 million of remediation costs associated with certain coal mine refuse piles which are the subject of an earlier consent decree with the Pennsylvania Department of Environmental Protection. Penelec received recovery of these remediation costs through a reduction of its liability to ratepayers, per the December 20, 2000 PaPUC Phase II Order.

JCP&L has entered into agreements with the New Jersey Department of Environmental Protection for the investigation and remediation of 17 formerly owned MGP sites. JCP&L has also entered into various cost-sharing agreements with other utilities for most of the sites. As of December 31, 2000, JCP&L has spent approximately $44.5 million in connection with the cleanup of these sites. In addition, JCP&L has recorded an estimated environmental liability of $50.2 million relating to expected future costs of these sites (as well as two other properties). This estimated liability is based upon ongoing site investigations and remediation efforts, which generally involve capping the sites and pumping and treatment of ground water. The cost to clean up these sites could be materially in excess of the $50.2 million due to significant uncertainties, including changes in acceptable remediation methods and technologies.

In 1997, the NJBPU approved JCP&L's request to establish a Remediation Adjustment Clause for the recovery of MGP remediation costs. As a result of the NJBPU's Summary Order, effective August 1, 1999, the recovery of these costs was transferred to the Societal Benefits Charge. As of December 31, 2000, JCP&L had recorded on its Consolidated Balance Sheet a regulatory asset of $51.6 million. JCP&L is continuing to pursue

reimbursement from its insurance carriers for remediation costs already spent and for future estimated costs. In 1994, JCP&L filed a complaint with the Superior Court of New Jersey against several of its insurance carriers, relating to these MGP sites, and has settled with all but one of those carriers.

OTHER COMMITMENTS AND CONTINGENCIES

Class Action Litigation:

GPU Energy

In July 1999, the Mid-Atlantic states experienced a severe heat storm which resulted in power outages throughout the service territories of many electric utilities, including the territory of JCP&L. Following these outages, the NJBPU initiated an investigation into the causes of the outages and the reliability of the transmission and distribution systems of all four New Jersey electric utilities. This investigation was essentially completed in May 2000, with the issuance of Phase I and Phase II reports and orders from the NJBPU. Both the Phase I and Phase II reports and orders contain, among other things, directions for JCP&L to undertake certain actions and report back to the NJBPU on the results. Additionally, the NJBPU Phase II order concluded that there is not a prima facie case demonstrating that, overall, JCP&L provided unsafe, inadequate or improper service to its customers.

Two class action lawsuits were commenced in New Jersey Superior Court in July 1999. These suits were subsequently consolidated into a single proceeding, and they seek compensatory and punitive damages arising from the service interruptions of July 1999 in the JCP&L territory. The GPU defendants named in these suits (i.e., GPU, Inc., JCP&L, GPUS and GPU Generation, Inc.) moved to dismiss or stay the litigation pending the NJBPU's exercise of its primary jurisdiction to investigate the causes of the outages. The trial court denied that motion, and also certified a plaintiff class consisting of JCP&L customers and their "dependents, tenants, employees and other intended beneficiaries of customers who suffered damages as a result" of the service interruptions.

In January 2000, the New Jersey Appellate Division granted the GPU defendants' motion for leave to take an interlocutory appeal of the trial court's decision on the issue of primary jurisdiction. On June 14, 2000, the Appellate Division affirmed the trial court but determined that the NJBPU's findings in the exercise of its "exclusive jurisdiction" could be "probative...but not determinative" of at least some of the issues in the litigation, and leaving it to the trial court to "decide in the first instance just what weight and validity to give the [NJBPU's] findings and conclusions."

In response to the GPU defendants' demand for a statement of damages, the plaintiffs have stated that they are seeking $700 million, subject to the results of pretrial discovery. JCP&L has notified its insurance carriers of the plaintiffs' allegations. The primary insurance carrier has stated that, while the substance of the plaintiffs' allegations is covered under the policy, it is reserving its rights concerning coverage as circumstances develop. In September 2000, JCP&L received from its primary insurance carrier the initial indemnification payment for certain expenses incurred by JCP&L relative to this action.

Discovery continues in the class action, and no trial date has been set. The GPU defendants filed a motion with the trial court seeking decertification of the class, and oral argument on the decertification was held in February 2001. There can be no assurance as to the outcome of these matters.

GPU Electric

As a result of the September 1998 fire and explosion at the Longford natural gas plant in Victoria, Australia, Victorian gas users (plaintiffs) have brought a class action in the Australian Federal Court against Esso Australia Limited and its affiliate (Esso), the owner and operator of the plant, for losses suffered due to the lack of natural gas supply and related damages. The plaintiffs claim that Esso was, among other things, negligent in designing, maintaining and operating the Longford plant, and also assert claims under Australian fair trade practices law.

Esso has joined as third party defendants the State of Victoria (State) and various State-owned entities which operated the Victorian gas industry prior to its privatization, including Transmission Pipelines Australia (TPA) and its affiliate Transmission Pipelines (Assets) Australia (TPAA). GPU, Inc., through GPU GasNet, acquired the assets of TPA and the shares of TPAA from the State in June 1999. Esso asserts that the State and the gas industry were negligent in that, among other things, they failed to ensure that the gas system would provide a secure supply of gas to users, and also asserts claims under the Australian fair trade practices law. In addition, GPU GasNet and other private entities (Buyers) that purchased the Victorian gas assets from the State have joined Esso as third party defendants. Esso asserts that if the gas industry is liable as alleged, that liability has been transferred to the Buyers as part of the State's privatization process.

Under the acquisition agreement with the State, GPU GasNet has indemnified TPA and the State against third party claims arising out of, among other things, the operation of TPA's business. TPA and the State have commenced proceedings against GPU GasNet to enforce the indemnity in respect of any liability that may flow to TPA as a result of Esso's claim.

GPU GasNet and TPAA have filed answers denying liability to Esso, the State and TPA, which could be material. GPU GasNet and TPAA have notified their insurance carriers of this action. The insurers have notified GPU GasNet that they have formed the preliminary view that GPU GasNet is not entitled to coverage under the liability policy. GPU GasNet believes that it is entitled to coverage, and discussions with the insurers are continuing. There can be no assurance as to the outcome of this matter.

Investments and Guarantees:

GPU, Inc.

GPU, Inc. has made significant investments in foreign businesses and facilities through its subsidiaries, GPU Electric and GPU Power. As of December 31, 2000, GPU, Inc.'s investments in GPU Electric and GPU Power were $881 million and $139 million, respectively. As of that date, GPU, Inc. has also guaranteed an additional $899 million and $21 million of GPU Electric and GPU Power outstanding obligations, respectively. Although management attempts to mitigate the risks of investing in certain foreign countries by, among other things, securing political risk insurance, GPU faces additional risks inherent to operating in such locations, including foreign currency fluctuations.

GPU Electric

In June 2000, GPU sold GPU PowerNet, its Australian electric transmission company, for A$2.1 billion (US $1.26 billion). For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

GPU Power UK has a 40% equity interest in a 586 MW power project in Pakistan (the Uch Power Project), which was originally scheduled to begin commercial operation in late 1998. In June 1999, certain Project lenders for the Uch Power Project issued notices of default to the Project sponsors (including GPU Power UK) for, among other things, failure

to pay principal and interest under various loan agreements. In November 1999, the Project sponsors and lenders reached an agreement under which repayment of the construction loan was extended, principal and interest payments deferred, and the sponsors agreed to fund the completion of the plant through the remaining equity contribution commitments. The plant commenced commercial operations in October 2000.

Uch has renegotiated several of the project agreements with the Government of Pakistan and its agencies, under which it agreed, among other things, to accept a reduction in the power purchase tariff averaging approximately 8% over the project term. The agreement includes options to extend the term of the project from 23 to 30 years.

GPU's investment in the Uch Power Project as of December 31, 2000 was approximately $37.9 million, plus a guaranty letter of credit of $3.6 million, and its share of the projected completion costs represents an additional $3.1 million commitment. Cinergy (the former owner of 50% of Midlands Electricity plc) agreed to fund up to an aggregate of $20 million of the required capital contributions, for a period of one year from July 15, 1999, and "cash losses," which could be incurred on the Uch Power Project, for a period of up to ten years from July 15, 1999. Cinergy has reimbursed GPU Electric for $4.9 million of capital contributions through December 31, 2000, leaving a remaining commitment of up to $15.1 million. There can be no assurance as to the outcome of this matter.

GPU Power UK also owns an 18.75% interest in Humber Power Limited (Humber). At December 31, 2000, GPU Power UK's equity in the project, which is located in England, was approximately $28 million. A number of investors in the project (not including GPU Power UK) also have purchase power agreements with Humber, which provide for the servicing of the project's debt and a return on equity. The purchasers are claiming that such contracts, which provide for prices of power in excess of current market prices, will become unenforceable under a proposed new UK regulatory scheme. Humber and the purchasers have agreed to submit the matter to arbitration as provided by the contracts. If the contracts cannot be satisfactorily reformed, the prices at which Humber can sell its energy may not be sufficient to provide an equity return to the investors or ultimately to service Humber's debt. There can be no assurance as to the outcome of this matter.

As part of the 1999 sale of the GPU Power UK supply business and the purchase of the 50% of GPU Power UK that GPU did not already own, certain long-term purchase obligations under natural gas supply contracts were retained. Most of these contracts, which extend to September 2005, were at fixed prices in excess of the market price of gas, and a liability had been established for the estimated loss under such contracts. However, as a result of increasing gas prices during the second quarter of 2000, GPU Power UK was able to enter into matching forward sale contracts for the majority of the gas purchases, resulting in a reduction in the estimated liability and a pre-tax credit to income of $15.9 million. Other open gas contracts, which extend to 2002, require GPU Power UK to purchase or to sell gas at fixed prices. The estimated out-of-market position of all contracts at December 31, 2000 was $22 million; however, the remaining open positions included both sales and purchases, thereby reducing the remaining exposure to future price changes.

In an English court decision involving two unaffiliated utilities (National Grid and National Power), the court held that utilities improperly used a pension plan surplus in the UK Electricity Supply Pension Scheme to eliminate scheduled payments in respect of early retirement costs and employer contributions. The court found that, in the case of National Grid and National Power, procedures had not been strictly followed, and as such, a liability may now exist. At a subsequent hearing, the court refused to consider the validity or effectiveness of retrospective amendments to the plan. National Grid and National Power have appealed the court's decision to the House of Lords. Pending the outcome of the Appeal, the requirement for any payments has been stayed. The appeal in the House of Lords is expected to be heard in the first quarter of 2001. If a similar

complaint were to be made against GPU Power UK, GPU Power UK's potential liability is estimated to be a maximum of £63 million (US $94 million), exclusive of any applicable interest charges or penalties. The GPU Power UK section of the Electricity Supply Pension Scheme remains in substantial surplus and any payment to the plan that might ultimately prove to be necessary would be accounted for as an increase in pension assets, and would not have an immediate impact on income. However, any related penalties or interest (which could be assessed, though none are currently proposed) may adversely affect income. There can be no assurance as to the outcome of this matter.

Emdersa's operating companies are subject to a number of government claims related to Value-added tax liabilities and to Social Security taxes collected in their electric rates, which aggregate approximately $21 million. The claims are generally related to transitional issues surrounding the privatization of Argentina's electricity industry. There can be no assurance as to the outcome of these matters.

GPU Power

On July 9, 1999, DIAN (the Colombian national tax authority) issued a "Special Requirement" on the Termobarranquilla S.A., Empresa de Servicios Publicos (TEBSA) 1996 income tax return, which challenges the exclusion from taxable income of an inflation adjustment related to the value of assets used for power generation (EI Barranquilla, a wholly owned subsidiary of GPU Power, ABB Barranquilla, Corporacion Electrica de la Costa Atlantica (CORELCA) and Distral Group have a 28.7%, 28.7%, 42.5% and 0.1% interest in TEBSA, respectively). The failure to give notice of this Special Requirement to the US Export Import Bank (EXIM Bank) is an event of default under the loan agreement. GPU Power also believes that other events of default exist under the loan agreements with project lenders including the Overseas Private Investments Corporation (OPIC), a commercial bank syndicate. As a result, certain required certifications have not been delivered to EXIM Bank, OPIC and the other project lenders, which failure is, itself, an event of default under the loan agreements. These issues are currently being discussed with EXIM Bank, the other project lenders, and the Government of Colombia, as well as the other partners in the TEBSA project. In addition, in January 2001 CORELCA advised GPU Power that it was conducting its own investigation of the matter. As of December 31, 2000, GPU Power has an investment of approximately $92 million in TEBSA and is committed to make additional standby equity contributions of $21.3 million, which GPU, Inc. has guaranteed. The total outstanding senior debt of the TEBSA project is $372 million at December 31, 2000, and, in addition, GPU, Inc. has guaranteed the obligations of the operators of the TEBSA project, up to a maximum of $5 million, under the project's operations and maintenance agreement. There can be no assurance as to the outcome of these matters.

With regard to the "Special Requirement" issued by DIAN, DIAN asserts that TEBSA should be liable for approximately $4.4 million consisting of $1.3 million in additional tax and $3.1 million in penalties and interest. TEBSA has filed both procedural and substantive objections to these assertions, the DIAN responded to these objections reiterating its previous position, and TEBSA, in turn, filed an appeal with the DIAN on June 2, 2000. A response is expected within one year.

In July 2000, the DIAN issued a "Special Requirement" on the 1997 income tax return of TEBSA challenging a tax exemption benefit under a Colombian income tax statute. The DIAN requested payment of approximately $1.2 million in additional tax, penalties and interest. On October 12, 2000, TEBSA filed a response with the DIAN stating arguments supporting its tax exemption benefit. There can be no assurance as to the outcome of these matters.

GPU Telcom

In March 2000, GPU, Inc. announced its participation in America's Fiber Network LLC

(AFN), of which GPU, Inc. anticipates owning 25%. AFN is a high-speed fiber optics company with a network of more than 7,000 route miles, or 140,000 fiber miles, connecting major markets in the eastern US to secondary markets with a growing need for broadband access. GPU, Inc. anticipates investing cash, as well as existing and new fiber routes and electronic equipment, in AFN through GPU Telcom. As of December 31, 2000, GPU Telcom had invested $5.3 million in AFN.

In April 2000, GPU, Inc. announced the formation of Telergy Mid-Atlantic (TMA), a joint venture between GPU Telcom and Telergy, Inc. TMA combines established telecommunications services and marketing expertise with utilities' existing fiber networks and natural positioning in serving retail markets. As of December 31, 2000 GPU Telcom had acquired $20 million of Telergy, Inc. convertible preferred securities.

Other:

JCP&L and Public Service Electric & Gas Company (PSE&G) each hold a 50% undivided ownership interest in Yards Creek Pumped Storage Facility (Yards Creek). In December 1998, JCP&L filed a petition with the NJBPU seeking a declaratory order that PSE&G's right of first refusal to purchase JCP&L's ownership interest at its current book value under a 1964 agreement between the companies is void and unenforceable. Management believes that the fair market value of JCP&L's ownership interest in Yards Creek is substantially in excess of its December 31, 2000 book value of $21 million. Negotiations to resolve this dispute are continuing; however, there can be no assurance as to the outcome of this matter.

In March 1999, Penelec and New York State Electric & Gas Corporation (NYSEG) each sold their 50% undivided ownership interests in the Homer City Station to a subsidiary of Edison Mission Energy (EME) for a total of $1.9 billion. In connection with the sale, Penelec and NYSEG indemnified the buyer with respect to certain contingent liabilities, including costs or expenses which the EPA might impose for failure to comply with New Source Performance Standards, Prevention of Significant Deterioration and New Source Review regulations under the Clean Air Act prior to the date of the sale. In 1998, the EPA had conducted inspections at Homer City with regard to the plant's compliance with these regulations. On October 30, 2000, EME notified Penelec and NYSEG that the EPA had concluded that these regulations applied to Homer City prior to the sale to EME and that Homer City was operating in violation of these Clean Air Act regulations. If it is ultimately determined that these regulations were applicable to Homer City, the EPA could assess substantial monetary penalties and require capital modifications to the plant, the costs of which would be material. To the extent Penelec and NYSEG are obligated to indemnify EME for any of these costs, they would each be severally liable for a 50% share. There can be no assurance as to the outcome of this matter.

Concurrent with GPU's July 1999 acquisition of the 50% of GPU Power UK which it did not already own, GPU began to evaluate existing restructuring plans and formulate additional plans to reduce operating expenses and achieve ongoing cost reductions. As of December 31, 1999, GPU had identified and approved a cost reduction plan. At the acquisition date, GPU Power UK had recorded a liability of $28.6 million related to previous cost reduction plans. GPU retained $25.7 million of this liability, related to contractual termination and other severance benefits for 276 employees identified in a 1999 business process reengineering project. GPU identified an additional 355 employees (234 in Engineering Services, 38 in Metering, 21 in Network Services and 62 from other specific functions) to be terminated as part of the plan and recorded an additional liability of $39.3 million. A net charge of $18.2 million for GPU's 50% share of these adjustments was included in expense in 1999 and the other 50% was recorded in Goodwill as a purchase accounting adjustment.

In 2000, a change in the investment return assumptions, due to better than expected

investment performance, resulted in a reduction of approximately $6.9 million, to $22.6 million, in the estimated liability for the remaining 459 employees. Consequently, goodwill was credited for $3.4 million (50% of the change in estimate) and $3.5 million was credited to income. During 2000, $16.9 million was paid to 399 employees. The remaining severance liability of $4.5 million at December 31, 2000 reflects the above transactions as well as currency translation adjustments and the impact of seven employees who were retained, and is included in Other current liabilities on the Consolidated Balance Sheet. Management expects the remaining employees to leave by June 30, 2001.

GPU AR has entered into contracts to supply electricity to retail customers through June 2001. In connection with meeting its supply obligations, GPU AR has entered into purchase commitments for energy and capacity with payment obligations totaling approximately $10.6 million as of December 31, 2000. GPU, Inc. has guaranteed these payments, as well as certain other obligations, up to a maximum of $19 million.

In accordance with the Nuclear Waste Policy Act of 1982 (NWPA), the GPU Energy companies have entered into contracts with, and have been paying fees to, the DOE for the future disposal of spent nuclear fuel in a repository or interim storage facility. In 1996, the DOE notified the GPU Energy companies and other standard contract holders that it would be unable to begin acceptance of spent nuclear fuel for disposal by 1998, as mandated by the NWPA. The DOE requested recommendations from contract holders for handling the delay. In June 1997, a consortium of electric utilities, including GPUN, filed a license application with the NRC seeking permission to build an interim above-ground disposal facility for spent nuclear fuel in Utah.

At December 31, 2000, GPU has recorded a liability of $210 million owed to the Nuclear Waste Fund, related to spent nuclear fuel generated prior to the sales of TMI-1 and Oyster Creek to AmerGen. AmerGen has assumed all liability for disposal costs related to spent nuclear fuel generated following its purchase of the plants.

On July 26, 2000, GPUN filed suit in the United States Court of Claims seeking to recover damages as a result of the DOE's failure to commence disposal of GPUN's spent nuclear fuel on January 31, 1998, as required by the terms of the Standard Contract between GPUN and DOE. The complaint seeks damages from the Government in an amount to be determined at trial. GPUN has alleged that it is entitled to damages attributable to operations at both TMI-1 and Oyster Creek. The Government has not yet answered the complaint. There can be no assurance as to the outcome of this matter.

GPU, Inc. and consolidated affiliates have approximately 14,100 employees worldwide, of whom 10,000 are employed in the US, 3,600 are in the United Kingdom (UK) and the remaining 500 are in South America and Australia. The majority of the US workforce is employed by the GPU Energy companies (4,880) and MYR (4,831), of which approximately 2,900 and 4,000, respectively, are represented by unions for collective bargaining purposes. In the UK, approximately 2,300 GPU Power UK employees are represented by unions, and the terms and conditions of various bargaining agreements are generally reviewed annually, on April 1. The JCP&L, Met-Ed and Penelec collective bargaining agreements with the International Brotherhood of Electrical Workers expire on October 31, 2002, May 1, 2003 and May 14, 2002, respectively. Penelec's collective bargaining agreement with the Utility Workers Union of America expires on June 30, 2001.

In January 2001, the GPU Energy companies announced that they were offering Voluntary Enhanced Retirement Programs (VERP) to certain bargaining unit employees in Pennsylvania. Approximately 240 employees (Met-Ed 130 employees; Penelec 110 employees) are eligible for the VERP. If all of the eligible employees accept the offer, a pre-tax charge of approximately $23 million (Met-Ed $12 million; Penelec $11 million) would be recorded in 2001 earnings for the cost of pension and other postretirement benefits, exclusive of any severance benefits that would be paid to those employees.

During the normal course of the operation of its businesses, in addition to the matters described above, GPU is from time to time involved in disputes, claims and, in some cases, as a defendant in litigation in which compensatory and punitive damages are sought by the public, customers, contractors, vendors and other suppliers of equipment and services and by employees alleging unlawful employment practices. While management does not expect that the outcome of these matters will have a material effect on GPU's financial position or results of operations, there can be no assurance that this will continue to be the case.

SUMMARY OF UTILITY PLANT AND ACCUMULATED PROVISIONS FOR DEPRECIATION, AMORTIZATION AND DEPLETION

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION WORK IN PROGRESS - - ELECTRIC (Account 107)

1. Report below descriptions and balances at end of year of projects in process of construction (107)
2. Show items relating to "research, development, and demonstration" projects last, under a caption Research, Development, and Demonstrating (see Account 107 of the Uniform System of Accounts)
3. Minor projects (5% of the Balance End of the Year for Account 107 or $100,000, whichever is less) may be grouped.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

MATERIALS & SERVICES: Expenditures for services and expenses of materials management, purchasing and stores personnel, exempt materials, small tools and work equipment. Charged to construction based on the related cost of materials charged to construction work orders.

CONSTRUCTION INDIRECTS: Costs which pertain to construction work but which are impractical for direct-charging to construction work orders. Construction Indirects include the GPU Service Company labor and benefit costs of designers, engineers, and project management personnel plus the construction portion of facility, telecommunications, and general liability insurance. This overhead is added by means of a percentage applied to a work order's direct labor and contractor costs.

ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION: Cost of money charged directly to construction. The AFUDC rate is applied to individual construction work orders totaling $1.00 or more which have been under construction for 30 days or more except for purchases of automotive and certain general plant equipment for which no AFUDC is charged. The accrual rate is applied to the cumulative monthly construction work order balances, including previously accrued AFUDC compounded semi-annually.

OUTSIDE PROFESSIONAL SERVICES: Expenditures for services and expenses of engineers, management and supervisory personnel. All expenses are directly charged to construction.

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)		Amount (b)	Capitalization Ratio(Percent) (c)		Cost Rate Percentage (d)	
1	Average Short-Term Debt & Computation of Allowance text	$	47,832,086				
2	Short-term Interest					s	7.04
3	Long-Term Debt	D	1,301,512,102	46.76		d	7.70
4	Preferred Stock	P	96,500,000	3.46		p	8.58
5	Common Equity	C	1,385,515,854	49.78		c	12.20
6	Total Capitalization		2,783,527,956	100.00	100%		
7	Average Construction Work in Progress Balance	W	94,306,061				

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ 5.35

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ 3.14

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 5.35
   b. Rate for Other Funds - 3.14

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

CAPITAL STOCKS (Account 201 and 204) (Continued)

3. Give particulars (details) concerning shares of any class and series of stock authorized to be issued by a regulatory commission which have not yet been issued.
4. The identification of each class of preferred stock should show the dividend rate and whether the dividends are cumulative or non-cumulative.
5. State in a footnote if any capital stock which has been nominally issued is nominally outstanding at end of year.
Give particulars (details) in column (a) of any nominally issued capital stock, reacquired stock, or stock in sinking and other funds which is pledged, stating name of pledgee and purposes of pledge.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

Total	$ (164,148,687)

Basis of Allocation of Consolidated Tax:

For the taxable year 2000, the consolidated Federal Income Tax liability was allocated in accordance with an agreement approved by the Securities and Exchange Commission under the Public Utility Holding Company Act of 1935 (SEC Holding Company Release No. 21358). The agreement provides that there shall be allocated to each company in the consolidated group, except the holding company, the tax benefits of its own net operating losses. The tax benefits of the holding company's deductions will be allocated among the subsidiaries in proportion to the holding company's average common stock equity investment in each company during the year. The prior allocation of the holding company deductions under Rule 45 (b) (6) for years prior to 1979, however, will not be adjusted in connection with allocating operating loss carrybacks.

A company which does not have a net operating loss of its own and which would have an income tax liability (allowing for its own investment tax credits which it could utilize on a separate return basis), were the liability not offset by net operating losses of the other companies in the group, will pay the amount of such tax reduction to the companies, other than the holding company, whose net operating losses are used in the consolidated return. Such payments will be divided among the loss companies in proportion to the use of their net operating losses.

FOOTNOTE DATA

If there is a consolidated minimum tax arising from "preference" items as defined in the Internal Revenue Code, such minimum tax will be independently allocated among the companies in the ratio of their respective preference incomes.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

FOOTNOTE DATA

Schedule Page: 266 Line No.: 3 Column: g

Reclassed the beginning balance in the 10% division to the 4% division where all of the charges are being booked.

Schedule Page: 266 Line No.: 5 Column: g

Reclassed the beginning balance in the 10% division to the 4% division where all of the charges are being booked.

Schedule Page: 266 Line No.: 8 Column: i

AVERAGE PERIOD OF ALLOCATION TO INCOME

Investment Tax Credit - 4% and 10%

The Respondent is (1) charging to income an amount equivalent to the current investment tax credit, (2) offsetting such charge by a credit to a deferred credit and (3) amortizing the deferred credit so created by a ratable flow-through to income over the useful life of the property. On March 9, 1972, General Public Utilities Corporation filed with the District Director of Internal Revenue, Manhatten District, on behalf of its affiliated companies (the Respondent being one of the affiliated), an election under paragraph (2) of Section 46(e) of the Internal Revenue Code of 1954, as amended, for allowance, with respect to public utility property, of the credit allowed by Section 38 of the Code. Such an election provides (a) to reduce the cost of service for ratemaking purposes or in its regulated books of account by no more than ratable portion of the credit allowable by Section 38, and (b) not to reduce the base to which its rate of return is applied for ratemaking purposes by any portion of the credit allowable by Section 38.

Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

OTHER DEFFERED CREDITS (Account 253)

1. Report below the particulars (details) called for concerning other deferred credits.
2. For any deferred credit being amortized, show the period of amortization.
3. Minor items (5% of the Balance End of Year for Account 253 or amounts less than $10,000, whichever is greater) may be grouped by classes.

Line 12, column (d) includes 0 MWH relating to unbilled revenues

FOOTNOTE DATA

Schedule Page: 300 Line No.: 4 Column: b

Basis of classification for Commercial and Industrial Sales:
Each customer is coded commercial or industrial based on the type of business or industry activity.

Schedule Page: 300 Line No.: 10 Column: b

Unmetered sales consist of Outdoor Lighting (OL) and Public Street and Highway Lighting. See page 304 for details by account.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,line 24.
10. Footnote entries as required and provide explanations following all required data.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	/ /
2. Total Regular Full-Time Employees	0
3. Total Part-Time and Temporary Employees	0
4. Total Employees	0

FOOTNOTE DATA

Schedule Page: 320 Line No.: 1 Column: Tot Emp

As a result of an expandec service company approach for which NJBPU and Securities and Exchange Commission approval are being sought, substantially all of JCP&L's personnel, including the union personnel, were transferred to GPU Service, Inc. effective January 1,1999. For this purpose, GPU Service, Inc. has created an Operations Division, which includes substantially all of the employees who were transferred to GPU Service, Inc.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW)	
					Average Monthly NCP Demand (e)	Average Monthly CP Demand (f)

10	Delmarva	OS				
11	FPL Energy Power Marketing	OS				
12	Florida Power & Light	OS				
13	Morgan Stanley	OS				
14	PPL	OS				
	Total					

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows:
LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

DEPRECIAT ON AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) – For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) – Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

FOOTNOTE DATA

Schedule Page: 350 Line No.: 5 Column: a

Amounts identified for individual cases comprise the majority, but does not include all costs incurred. Only incremental costs above a certain threshold were included.

BLANK PAGE

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show costs of research, development, and demonstration (R, D & D) activities incurred and accounts charged during the year for technological research, development, and demonstration (R, D & D) activities of the respondent (See definition of research, development, and demonstration in Uniform System of Accounts). Report also support given to others during the year for jointly-sponsored projects.(Identify lead organization.) For any R, D & D work carried with others, show the respondent's cost for the year and cost chargeable to others.
2. Indicate in column (a) the applicable classification, as shown below:

Classifications:
A. Electric R, D & D Performed Internally:
(1) Generation
a. hydroelectric
i. Recreation fish and wildlife
ii Other hydroelectric
b. Fossil-fuel steam
c. Internal combustion or gas turbine
d. Nuclear
e. Unconventional generation
f. Siting and heat rejection
(3) Transmission
a. Overhead
b. Underground
(4) Distribution
(5) Environment (other than equipment)
(6) Other (Classify and include items in excess of $5,000.)
(7) Total Cost Incurred
B. Electric, R, D & D Performed Externally:
(1) Research Support to the electrical Research Council or the Electric Power Research Institute

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES (Continued)

(2) Research Support to Edison Electric Institute
(3) Research Support to Nuclear Power Groups
(4) Research Support to Others (Classify)
(5) Total Cost Incurred

3. Include in column (c) all R, D & D items performed internally and in column (d) those items performed outside the company costing $5,000 or more, briefly describing the specific area of R, D & D (such as safety, corrosion control, pollution, automation, measurement, insulation, type of appliance, etc.). Group items under $5,000 by classifications and indicate the number of items grouped. Under Other, (A (6) and B (4)) classify items by type of R, D & D activity.
4. Show in column (e) the account number charged with expenses during the year or the account to which amounts were capitalized during the year, listing Account 107, Construction Work in Progress, first. Show in column (f) the amounts related to the account charged in column (e)
5. Show in column (g) the total unamortized accumulating of costs of projects. This total must equal the balance in Account 188, Research, Development, and Demonstration Expenditures, Outstanding at the end of the year.
6. If costs have not been segregated for R, D &D activities or projects, submit estimates for columns (c), (d), and (f) with such amounts identified by "Est."
7. Report separately research and related testing facilities operated by the respondent.

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

FOOTNOTE DATA

Schedule Page: 354 Line No.: 96 Column: d

As a result of an expanded service company approach for which NJBPU and Securities and Exchange Commission approvals are being sought, substantially all of JCP&L's personnel, including the union personnel, were transferred to GPU Service, Inc., effective January 1, 1999. For this purpose, GPU Service, Inc. has created an Operations Division, which includes substantially all of the employees who were transferred to GPU Service, Inc.

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so tha: the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirments Sales for Resale & Associated Losses (c)	MONTHLY PEAK		
				Megawatts (See Instr. 4) (d)	Day of Month (e)	Hour (f)
29	January	1,790,685	25,430	3,619	17	1900
30	February	1,531,660	37,952	3,294	2	1900

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)*(Continued)*

9. Items under Cost of Plant are based on U. S of A. Accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses. 10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 24 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 31, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants. 11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant. 12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

Forked River - Gas Turbine (p. 402)

Designed for peak load service.

Schedule Page: 402 Line No.: -1 Column: d

Plant Name:

The following generating stations were sold in 1999:

Three Mile Island #1 - Nuclear
Sayreville - Steam
Keystone - Steam
Keystone - Internal Combustion
Gilbert #1-4 - Gas Turbine
Gilbert - Combined Cycle
Gilbert #9 - Gas Turbine
Werner - Gas Turbine
Sayreville - Gas Turbine
Glen Gardner - Gas Turbine

The following generating station was sold in 2000:

Oyster Creek - Nuclear

PUMPED STORAGE GENERATING PLANT STATISTICS (Large Plants) (Continued)

6. Pumping energy (Line 10) is that energy measured as input to the plant for pumping purposes.
7. Include on Line 35 the cost of energy used in pumping into the storage reservoir. When this item cannot be accurately computed leave Lines 35, 36 and 37 blank and describe at the bottom of the schedule the company's principal sources of pumping power, the estimated amounts of energy from each station or other source that individually provides more than 10 percent of the total energy used for pumping, and production expenses per net MWH as reported herein for each source described. Group together stations and other resources which individually provide less than 10 percent of total pumping energy. If contracts are made with others to purchase power for pumping, give the supplier contract number, and date of contract.

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Size of Conductor and Material (i)	COST OF LINE (Include in Column (j) Land, Land rights, and clearing right-of-way)			EXPENSES, EXCEPT DEPRECIATION AND TAXES				Line No.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Line No.	DESIGNATION		VOLTAGE (KV) (Indicate where other than 60 cycle, 3 phase)		Type of Supporting	LENGTH (Pole miles) (In the case of underground lines report circuit miles)		Number Of Circuits

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SUBSTATIONS (Continued)

5. Show in columns (l), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.
6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SUBSTATIONS (Continued)

5. Show in columns (l), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.

6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Line No.	Item (a)	Number of Watt-hour Meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (in (MVa) (d)
1	Number at Beginning of Year	1,034,514	201,188	9,945
2	Additions During Year			
3	Purchases	38,047	6,711	441
4	Associated with Utility Plant Acquired

10	Number at End of Year (Lines 1 + 5 - 9)	1,052,369	205,342	10,271
11	In Stock			
12	Locked Meters on Customers' Premises			
13	Inactive Transformers on System			
14	In Customers' Use	1,052,369	205,342	10,271
15	In Company's Use			
16	TOTAL End of Year (Total 11 to 15. This should equal line 10)	1,052,369	205,342	10,271

FOOTNOTE DATA

Schedule Page: 429 Line No.: 3 Column: b

Represents watt-hour meters and line transformers installed during the year. Meters and transformers, at time of purchase, are included in the inventory account of GPU Service Company, an associated company. At time of installation, the equipment is transferred/sold to Jersey Central Power & Light Company.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities		-59,481,475		1,336,161	1,336,161
2	Water Pollution Control Facilities	3,894	-71,705,679		9,662,525	9,662,525
3	Solid Waste Disposal Costs		-17,151,002		7,610	7,610
4	Noise Abatement Equipment		-424,027		5,770	5,770
5	Esthetic Costs		-904,466		1,980,862	1,980,862
6	Additional Plant Capacity					
7	Miscellaneous (Identify significant)		-6,749,966		190,422	190,422
8	TOTAL (Total of lines 1 thru 7)	3,894	-156,416,615		13,183,350	13,183,350
9	Construction Work in Progress

Jersey Central Power & Light Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	311,836	
2	Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs	9,556,145	
3	Fuel Related Costs		
4	*Operation of Facilities*		
5	Fly Ash and Sulfur Sludge Removal		
6	Difference in Cost of Environmentally Clean Fuels		
7	Replacement Power Costs		
8	Taxes and Fees		
9	Administrative and General		
10	Other (Identify significant)		
11	TOTAL	9,867,981	

Schedule Page: 431 Line No.: 11 Column: b

The estimates reported in column (b) are based on the following:

Line 1 is based on year-end environmental plant balances multiplied by applicable depreciation accrual rates.

Line 2 is based on ratio of environmental capital expenditures, as related to total capital expenditures multiplied by applicable FERC expense accounts.

REPORT OF INDEPENDENT ACCOUNTANTS

To the Board of Directors
York Haven Power Company
Reading, Pennsylvania

We have audited the balance sheets of York Haven Power Company as of December 31, 2000 and 1999, and the related statements of income for the years then ended, and the statements of retained earnings and of cash flows for the year ended December 31, 2000 included on pages 110 through 123.1 of the accompanying Federal Energy Regulatory Commission Form No. 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 1, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States of America.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of York Haven Power Company as of December 31, 2000 and 1999, the results of its operations for the years then ended, and its changes in retained earnings and in cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is solely intended for the information and use of the board of directors and management of York Haven Power Company and the Federal Energy Regulatory Commission.

PricewaterhouseCoopers LLP

January 31, 2001

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)
(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;
(4) "Person" means an individual or a corporation;
(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;
(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."
(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:
(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites;
... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

P. R. Chatman
Assistant Comptroller- Metropolitan Edison Company
310 Madison Avenue
Morristown, NJ 07962-1957

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Commonwealth of Pennsylvania - December 19, 1967

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Generation and Sale of Electricity - Commonwealth of Pennsylvania

5. Have you engaged as the principal accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

EXECUTIVE COMPENSATION

The following table sets forth remuneration paid to the Chief Executive Officer and the four other most highly compensated executive officers of JCP&L, Met-Ed and Penelec for the year ended December 31, 2000.

The managements of JCP&L, Met-Ed and Penelec were combined in a 1996 reorganization. Accordingly, the amounts shown below represent the aggregate remuneration paid to such executive officers by JCP&L, Met-Ed and Penelec during 1999, 1998 and 1997.

Remuneration of Executive Officers

SUMMARY COMPENSATION TABLE

Name and Principal Position	Year	Annual Compensation			Long-Term Compensation		All Other Compensation ($)
					Awards	Payouts	
		Salary($)	Bonus($)	Other Annual Compensation($)(1)	Securities Underlying Options Granted(#)	LTIP Payouts ($)(2)	
M. J. Chesser	2000	252,404	-	-	27,600	-	57,605(3)
President and Chief	1999	-	-	-	-	-	-
Executive Officer	1998	-	-	-	-	-	-
M. J. Connolly (4)	2000	185,385	25,000	-	6,500	-	15,319(5)
Vice President - Law	1999	168,846	105,000	-	1,400	-	9,398
	1998	150,000	35,000	-	-	-	6,782
R. S. Zechman	2000	184,615	-	-	6,300	33,432	29,172(6)
Vice President	1999	170,000	120,000	-	1,400	21,043	22,083
	1998	170,000	60,000	538	4,850	18,669	17,623
C. A. Mascari	2000	170,000	-	-	5,500	33,784	36,875(7)
Vice President -	1999	170,000	112,000	-	1,400	20,218	27,090
Technical Services	1998	170,000	50,000	-	4,850	21,002	20,762
C. Brooks	2000	170,000	-	-	5,200	33,960	22,943(8)
Vice President	1999	170,000	90,000	460	1,400	20,424	19,041
	1998	170,000	50,000	592	4,850	20,536	15,593

(1) Consists of earnings on "Long-Term Incentive Plan" ("LTIP") compensation paid in the year the award vests.

(2) Amounts reported in this column for the year 2000 represent each Named Executive Officer's 1995 performance-based restricted stock award that vested on June 4, 2000, at 90% of target, in accordance with the 1990 Stock Plan. The restricted units issued each year since 1995 under the 1990 Stock Plan have been performance based. Dividends are earned on the aggregate restricted units awarded under the 1990 Stock Plan and reinvested in additional units.

Amounts reported in this column for the years 1998 and 1999 consist of Performance Cash Incentive Awards paid on the 1993 and 1994 restricted unit awards, respectively, which vested under the 1990 Stock Plan. These amounts were designed to compensate recipients of restricted unit awards for the amount of federal and state income taxes that are payable upon vesting of such awards. There was no Performance Cash Incentive Award associated with the vesting of the restricted units awarded in 1995 that vested in 2000.

The aggregate number and value (based on the stock price per share at December 31, 2000) of unvested and deferred vested stock-equivalent restricted units (including reinvested dividend equivalents) at the end of 2000 were:

	Aggregate Units	Aggregate Value
M. J. Chesser	4,032	$148,428
M. J. Connolly	2,254	82,975
R. S. Zechman	8,125	299,102
C. A. Mascari	9,313	342,835
C. Brooks	7,572	278,744

(3) Consists of GPU's matching contributions under the non-qualified deferred compensation plan ($3,296), above-market interest accrued on the retirement portion of deferred compensation ($16), earnings on LTIP compensation not paid in the current year ($4,293), and signing bonus received upon employment ($50,000).

(4) Mr. Connolly was compensated by GPU Service, Inc. for his overall service on behalf of GPU and accordingly was not compensated directly by the other subsidiary companies for his services.

(5) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,785), above-market interest accrued on the retirement portion of deferred compensation ($83), and earnings on LTIP compensation not paid in the current year ($3,651).

(6) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($5,385), above-market interest accrued on the retirement portion of deferred compensation ($1,036), and earnings on LTIP compensation not paid in the current year ($15,951).

(7) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,480), above-market interest accrued on the retirement portion of deferred compensation ($7,045), and earnings on LTIP compensation not paid in the current year ($18,550).

(8) Consists of GPU's matching contributions under the Savings Plan ($6,800), above-market interest accrued on the retirement portion of deferred compensation ($1,136), and earnings on LTIP compensation not paid in the current year ($15,007).

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
STOCK BOOK NOT CLOSED	Total: 500 By Proxy: 500	May 8, 2000 Morristown, NJ

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

8. York Haven is covered by Met-Ed's collective bargaining agreement with the International Brotherhood of Electical Workers (IBEW) which was negotiated in 2000 (May) for a three year period which will end on April 30, 2003. The agreement provides for annual base increases and incentive compensation awards. They are as follows:

   May 1, 2000: 3.5% base wage increase with a 2% incentive compensation award (a payment of 2.3% was made in March 2001 since the plant achieved above 100% of its plant goals). A lump sum payment of $500 was made in July 2000.

   May 1, 2001: 2.5% base wage increase with a 4% incentive compensation award which will be payable in March 2002, subject to performance achievement.

   May 1, 2002: 2.0% base wage increase with a 6% incentive compensation award which will be payble in March 2003, subject to performance achievement.

9. For information with respect to material legal proceedings, reference is made to Metropolitan Edison Company's 2000 FERC Form 1, Note 12(Commitments and Contingencies) of the Notes to Financial Statements beginning on Page 122.

FOOTNOTE DATA

Schedule Page: 112 Line No.: 68 Column: d

The Notes to Financial Statements beginning on page 122 are an integral part of this Balance Sheet.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
York Haven Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.

7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.

B. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.

9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.

10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF CASH FLOWS

1. If the notes to the cash flow statement in the respondents annual stockholders report are applicable to this statement, such notes should be included in page 122-123. Information about non-cash investing and financing activities should be provided on Page 122-123. Provide also on pages 122-123 a reconciliation between "Cash and Cash Equivalents at End of Year" with related amounts on the balance sheet.
2. Under "Other" specify significant amounts and group others.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show on Page 122-123 the amount of interest paid (net of amounts capitalized) and income taxes paid.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and revenues and expenses during the reporting period. Actual results could differ from those estimates.

SYSTEM OF ACCOUNTS

The Company's accounting records are maintained in accordance with the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission (FERC) and adopted by the Pennsylvania Public Utility Commission (PaPUC). The Company's accounting records also comply with the Securities and Exchange Commission's rules and regulations.

REGULATORY ACCOUNTING

Statement of Financial Accounting Standards No. 71 (FAS 71), "Accounting for the Effects of Certain Types of Regulation," applies to regulated utilities that have the ability to recover their costs through rates established by regulators and charged to customers. In accordance with the provisions of FAS 71, the Company has deferred certain costs.

With the receipt of a PaPUC Restructuring Order in 1998 by the Company's parent, Metropolitan Edison Company, the Company determined that its electric generation operations no longer met the criteria for the continued application of FAS 71, and therefore adopted, for that portion of its business, the provisions of Statement of Financial Accounting Standards No. 101 (FAS 101), "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71" and Emerging Issues Task Force (EITF) Issue 97-4, Deregulation of the Pricing of Electricity - Issues Related to the Application of FASB Statement No. 71 "Accounting for the Effects of Certain Types of Regulation" and No. 101 "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71."

REVENUES

The Company recognizes electric operating revenues for services rendered to the end of the relevant accounting period.

UTILITY PLANT

It is the policy of the Company to record additions to utility plant (material, labor, overhead and allowance for funds used during construction) at cost. The cost of current repairs and minor replacements is charged to appropriate operating and maintenance expense and clearing accounts and the cost of renewals is capitalized. The original cost of utility plant retired or otherwise disposed of is charged to accumulated depreciation.

DEPRECIATION

The Company provides for depreciation at annual rates determined and revised periodically, on the basis of studies, to be sufficient to depreciate the original cost of depreciable property over estimated remaining service lives, which are generally longer than those employed for tax purposes. These rates, on an aggregate composite basis, resulted in annual rates of 4.87%, 3.95% and 3.92% for the years 2000, 1999 and 1998, respectively.

INCOME TAXES

Metropolitan Edison Company, the Company's parent, is a wholly-owned subsidiary of GPU, Inc. (GPU). .GPU files a consolidated federal income tax return. All participants are jointly and severally liable for the full amount of any tax, including penalties and interest, which may be assessed against the group.

Deferred income taxes, which result primarily from liberalized depreciation methods and deferred costs, reflect the impact of temporary differences between the amounts of assets and liabilities recognized for financial reporting purposes and the amounts recognized for tax purposes. Investment tax credits are amortized over the estimated service lives of the related facilities.

STATEMENT OF CASH FLOWS

For the purpose of the statement of cash flows, temporary investments include all unrestricted liquid assets, such as cash deposits and debt securities, with maturities generally of three months or less.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

MATERIALS & SERVICES: Expenditures for services and expenses of materials management, purchasing and stores personnel, exempt materials, small tools and work equipment. Charged to construction based on the related cost of materials charged to construction work orders.

CONSTRUCTION INDIRECTS: Costs which pertain to construction work but which are impractical for direct-charging to construction work orders. Construction Indirects include the GPU Service Company labor and benefit costs of designers, engineers, and project management personnel plus the construction portion of facility costs, telecommunications costs, and general liability insurance. This overhead is added by means of a percentage applied to a work order's direct labor and contractor costs.

ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION: Cost of money charged directly to construction. The AFUDC rate is applied to individual construction work orders totaling $1.00 or more which have been under construction for 30 days or more except for purchases of automotive and certain general plant equipment for which no AFUDC is charged. The accrual rate is applied to the cumulative monthly construction work order balances, including previously accrued AFUDC compounded semi-annually.

OUTSIDE PROFESSIONAL SERVICES: Expenditures for services and expenses of engineers, management and supervisory personnel. All expenses are directly charged to construction.
Respondent charges directly to construction work orders engineering, supervisory and administrative costs pertaining to those work orders. Construction Indirects charged to construction are included in the billings by Metropolitan Edison Company, parent company.

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)		Amount (b)	Capitalization Ratio(Percent) (c)		Cost Rate Percentage (d)	
1	Average Short-Term Debt & Computation of Allowance text	S	68,354,688				
2	Short-term Interest					s	6.81
3	Long-Term Debt	D	646,914,205	56.33		d	7.48
4	Preferred Stock	P				p	
5	Common Equity	C	501,444,282	43.67		c	11.25
6	Total Capitalization		1,148,358,487	100.00	100%		
7	Average Construction Work in Progress Balance	W	22,710,162				

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ 6.81

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ 0.00

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 6.81
   b. Rate for Other Funds - 0.00

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
York Haven Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

Basis of Allocation of Consolidated Tax:

For the taxable year 2000, the consolidated Federal Income Tax liability was allocated in accordance with an agreement approved by the Securities and Exchange Commission under the Public Utility Holding Company Act of 1935 (SEC Holding Company Release No. 21358). The agreement provides that there shall be allocated to each company in the consolidated group, except the holding company, the tax benefits of its own net operating losses. The tax benefits of the holding company's deductions will be allocated among the subsidiaries in proportion to the holding company's average common stock equity investment in each company during the year. The prior allocation of the holding company deductions under Rule 4 (b) (6) for years prior to 1979, however, will not be adjusted in connection with allocating operating loss carrybacks.

A company which does not have a net operating loss of its own and which would have an income tax liability (allowing for its own investment tax credits which it could utilize on a separate return basis), were the liability not offset by net operating losses of the other companies in the group, will pay the amount of such tax reduction to the companies, other than the holding company, whose net operating losses are used in the consolidated return. Such payments will be divided among the loss companies in proportion to the use of their net operating losses.

If there is a consolidated minimum tax arising from "preference" items as defined in the Internal Revenue Code, such minimum tax will be independently allocated among the companies in the ratio of their respective preference incomes.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3: Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR (Continued)

5. If any tax (exclude Federal and State income taxes)- covers more then one year, show the required information separately for each tax year, identifying the year in column (a).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (i) through (l) how the taxes were distributed. Report in column (l) only the amounts charged to Accounts 408.1 and 409.1 pertaining to electric operations. Report in column (l) the amounts charged to Accounts 408.1 and 109.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (l) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

ELECTRIC OPERATING REVENUES (Account 400)

1. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The -average number of customers means the average of twelve figures at the close of each month.
3. If increases or decreases from previous year (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.

York Haven Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ELECTRIC OPERATING REVENUES (Account 400)

4. Commercial and industrial Sales, Account 442, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 1000 Kw of demand. (See Account 442 of the Uniform System of Accounts. Explain basis of classification in a footnote.)
5. See pages 108-109, Important Changes During Year, for important new territory added and important rate increase or decreases.
6. For Lines 2,4,5,and 6, see Page 304 for amounts relating to unbilled revenue by accounts.
7. Include unmetered sales. Provide details of such Sales in a footnote.

Line 12, column (d) includes 0 MWH relating to unbilled revenues

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
York Haven Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW) Average Monthly NCP Demand (e)	Actual Demand (MW) Average Monthly CP Demand (f)

	Total			0	0	0

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,iine 24.
10. Footnote entries as required and provide explanations following all required data.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	12/31/2000
2. Total Regular Full-Time Employees	0
3. Total Part-Time and Temporary Employees	0
4. Total Employees	0

FOOTNOTE DATA

Schedule Page: 320 Line No.: 4 Column: b

As a result of an expanded service company approach for which Securities and Exchange Commision approval are being sought, substantially all of Met-Ed's personnel, including the union personnel, were transferred to GPU Service Inc., effective January 1, 1999. For this purpose, GPU Service Inc. has created an Operations Division, which includes substantially all of the employees who were transferred to GPU Service Inc.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
York Haven Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section 8 the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) – For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) – Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

REGULATORY COMMISSION EXPENSES

1. Report particulars (details) of regulatory commission expenses incurred during the current year (or incurred in previous years, if being amortized) relating to format cases before a regulatory body, or cases in which such a body was a party.
2. Report in columns (b) and (c), only the current year's expenses that are not deferred and the current year's amortization of amounts deferred in previous years.

Line No.	Description (Furnish name of regulatory commission or body the docket or case number and a description of the case) (a)	Assessed by Regulatory Commission (b)	Expenses of Utility (c)	Total Expense for Current Year (b) + (c) (d)	Deferred in Account 182.3 at Beginning of Year (e)

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirments Sales for Resale & Associated Losses (c)	MONTHLY PEAK

HYDROELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Large plants are hydro plants of 10,000 Kw or more of installed capacity (name plate ratings)
2. If any plant is leased, operated under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, indicate such facts in a footnote. If licensed project, give project number.
3. If net peak demand for 60 minutes is not available, give that which is available specifying period.
4. If a group of employees attends more than one generating plan, report on line 11 the approximate average number of employees assignable to each plant.

Line No.	Item (a)	FERC Licensed Project No. 1888 Plant Name: York-Haven (b)	FERC Licensed Project No. 0 Plant Name: (c)

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

SUBSTATIONS (Continued)

5. Show in columns (l), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.

6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	175,741	
2	Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs	260,581	
3	Fuel Related Costs		
4	Operation of Facilities

10	Other (Identify significant)		
11	TOTAL	436,322	

Schedule Page: 431 Line No.: 11 Column: b

The estimates reported in column (b) are based on the following:

Line 1 is based on year-end environmental plant balances multiplied by applicable depreciation accrual rates.

Line 2 is based on ratio of environmental capital expenditures, as related to total capital expenditures multiplied by applicable FERC expense accounts.

ANNUAL REPORT OF MAJOR ELECTRIC UTILITIES, LICENSEES AND OTHERS

This report is mandatory under the Federal Power Act, Sections 3, 4(a), 304 and 309, and 18 CFR 141.1. Failure to report may result in criminal fines, civil penalties and other sanctions as provided by law. The Federal Energy Regulatory Commission does not consider this report to be of a confidential nature.

American Transmission Systems, Incorporated	Dec. 31, 2000

ARTHUR ANDERSEN

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

To the Board of Directors and Management of American Transmission Systems, Incorporated:

We have audited the balance sheet - regulatory basis of American Transmission Systems, Incorporated as of December 31, 2000 and the related statements of income - regulatory basis, retained earnings - regulatory basis and cash flows - regulatory basis for the year then ended, included on pages 110 through 123.2 of the accompanying Federal Energy Regulatory Commission Form 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

As discussed in Note 10, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States.

In our opinion, the financial statements referred to above present fairly, in all material respects, the assets, liabilities and proprietary capital of American Transmission Systems, Incorporated as of December 31, 2000, and the results of its operations and its cash flows for the year then ended, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is intended solely for the information and use of the board of directors and management of American Transmission Systems, Incorporated and for filing with the Federal Energy Regulatory Commission and should not be used for any other purpose.

ARTHUR ANDERSEN LLP

Cleveland, Ohio,
February 16, 2001.

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)

(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on . which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or another Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;

(4) "Person" means an individual or a corporation;

(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;

(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."

(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:

(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

American Transmission Systems, Incorporated	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Harvey L. Wagner, Controller
76 South Main Street
Akron, Ohio 44308

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Ohio
October 8, 1998

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Transmission Service - Ohio & Pennsylvania

5. Have you engaged as the principle accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
The Company did not close the stock book in 2000.	Total: 1 By Proxy: 1	December 19, 2000 FirstEnergy Corp. 76 South Main Street Akron, Ohio 44308

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

PAGE 108 INTENTIONALLY LEFT BLANK
SEE PAGE 109 FOR REQUIRED INFORMATION.

1. None

2. On August 8, 2000, FirstEnergy Corp. (FirstEnergy), the parent of American Transmission Systems, Incorporated (ATSI), and GPU, Inc. (GPU), a Pennsylvania corporation, entered into an Agreement and Plan of Merger. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4,500,000,000 in cash and FirstEnergy common stock. The transaction would be accounted for by the purchase method. The merger has been approved by the respective shareholders of FirstEnergy and GPU, the Federal Energy Regulatory Commission (FERC) on March 15, 2001 in Docket No. EC01-22-000, the Nuclear Regulatory Commission, the New York Public Service Commission and the Federal Communications Commission. Other regulatory approvals are pending before the Pennsylvania Public Utility Commission, the New Jersey Board of Public Utilities and the Securities and Exchange Commission.

3. None

4. Effective September 1, 2000, ATSI as lessee became party to two material real property leases. The first ground lease is with lessors: Ohio Edison Company, The Cleveland Electric Illuminating Company and The Toledo Edison Company. This lease has a term length of 50 years ending December 31, 2049 with annual rent costs of $19,498,095 (paid quarterly in advance). The Finding and Order was entered February 17, 2000 in Case No. 98-1633-EL-UNC with the Public Utilities Commission of Ohio. The second ground lease is with the Pennsylvania Power Company as lessor. This lease has a term length of 50 years ending December 31, 2049 with annual rent costs of $1,303,674 (paid quarterly in advance). The Order was entered July 13, 2000 in Case No. A-110450F0016 with the Pennsylvania Public Utility Commission.

5. On October 27, 1999, the FERC in Docket No. EC99-53-000 approved FirstEnergy's request for an intra-corporate transfer of ownership and operational control of jurisdictional transmission facilities of its electric utility operating companies (Ohio Edison Company, Pennsylvania Power Company, The Cleveland Electric Illuminating Company and The Toledo Edison Company) and the assignment of rights under certain FERC-jurisdictional agreements to a newly formed affiliated company, ATSI. On September 1, 2000, the major high-voltage transmission facilities, which consist of approximately 7,100 circuit miles of transmission lines with nominal voltages of 345 Kv, 138 Kv and 69 Kv were sold to ATSI. These facilities will be included in the FERC Form 1 filed by ATSI.

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.
7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.
B. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.
9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.
10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF CASH FLOWS

1. If the notes to the cash flow statement in the respondents annual stockholders report are applicable to this statement, such notes should be included in page 122-123. Information about non-cash investing and financing activities should be provided on Page 122-123. Provide also on pages 122-123 a reconciliation between "Cash and Cash Equivalents at End of Year" with related amounts on the balance sheet.
2. Under "Other" specify significant amounts and group others.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show on Page 122-123 the amount of interest paid (net of amounts capitalized) and income taxes paid.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

Notes to Balance Sheet

1 - UTILITY PLANT

On September 1, 2000, FirstEnergy Corp. (FirstEnergy) transferred ownership and control of its electric utility operating companies' (Ohio Edison Company (OE), Pennsylvania Power Company (Penn), The Cleveland Electric Illuminating Company (CEI) and The Toledo Edison Company (TE)) transmission system assets to American Transmission Systems, Incorporated (ATSI), a wholly owned subsidiary of FirstEnergy. These major high-voltage transmission facilities consist of approximately 7,100 circuit miles of transmission lines with nominal voltages of 345 kV, 138 kV and 69 Kv. The facilities include lines, towers, poles, conductors, substations, transformers and other equipment. They were sold to ATSI at net book value as follows:

	OE	PP	CEI	TE
Utility Plant	$ 593,992,233	$ 125,400,955	$ 327,722,926	$ 149,214,955
Accum. Depreciation	(280,386,461)	(59,006,439)	(155,213,446)	(76,979,045)
CWIP	7,540,226	134,774	421,425	959,545
ITC	(8,429,930)	(2,462,140)	(3,424,557)	(1,746,234)
Net	$ 312,716,068	$ 64,067,150	$ 169,506,348	$ 71,449,221

2 - ACCOUNTS RECEIVABLE

Receivables from transmission customers include any electric utility (including the transmission provider and any power marketer), Federal power marketing agency, or any person generating electric energy for sale or resale. There are 37 interconnections with 6 neighboring control areas. This means that power may be moved across northern Ohio into markets to the north and east at a single transmission rate. ATSI's transmission system offers gateways into the east via high capacity ties with Pennsylvania-New Jersey-Maryland Interconnection LLC through Penelec, Duquesne Light Company and Allegheny Energy, Inc., to the north through multiple 345 kV high capacity ties with Michigan utilites, and to the south through ties with American Elecric Power (AEP) and Dayton Power & Light.

3 - Leases

OE, Penn, CEI and TE transferred all of their transmission structures, facilities and equipment to ATSI, but retained all the fee-owned land, easements, franchises and other land use rights. Land use is rented to ATSI under the terms and conditions of a ground lease approved by the Federal Energy Regulatory Commission (FERC). OE, Penn, CEI and TE reserve the right to use (and to permit authorized others to use) the land for any purpose that does not cause a violation of electrical safety code or applicable law or does not impair ATSI's ability to satisfy its service obligations. Additional uses of such land for ATSI facilities will require prior written approval from the applicable operating companies. ATSI will purchase directly any new property that may be acquired for transmission use.

4 - CAPITALIZATION

Long-term Debt --

Advances from Affiliated Companies --

FirstEnergy Corp. made an equity investment of $277,982,454 in ATSI that funded 45% of the purchase of the transmission facilities. The remaining $339,756,333 was financed with promissory notes payable to OE, CEI, TE and Penn as follows:

OE	$ 173,230,770
CEI	93,228,491
TE	39,297,072
Penn	34,000,000

Maturing long-term debt for the next five years are:

2001	$ 1,577,393
2002	1,702,010
2003	1,836,471
2004	1,981,556
2005	2,138,102

5 - COMMITMENTS AND CONTINGENCIES

Capital Expenditures --

The Company's current forecast reflects expenditures of approximately $112,000,000 for property additions and improvements from 2001-2005, of which approximately $21,000,000 is applicable to 2001.

Notes to Income Statement

6 - REVENUES

The Company's principal business is providing transmission services to electric energy providers or power marketers and receiving transmission related revenues from operation of the FirstEnergy transmission system.

7 - TRANSACTIONS WITH AFFILIATED COMPANIES

Revenues from OE, Penn, CEI and TE were $27,401,163, $5,125,758, $15,064,666 and $9,515,544, respectively, in 2000, and amounts paid to OE, Penn, CEI and TE primarily for the ground leases and interest expense were $12,634,148, $1,532,606, $6,766,747 and $2,900,424, respectively, in 2000.

FirstEnergy provides support services at cost to the Company. FirstEnergy billed the Company $4,246,315 in 2000.

8 - REGULATORY MATTERS

The Public Utilities Commission of Ohio (PUCO) approved the transfer of FirstEnergy's transmission facilities to ATSI in February 2000. Effective September 1, 2000, ATSI became the owner and operator of such facilities and assumed all responsibilities as transmission provider for the ATSI transmission system. ATSI plans, operates and maintains the transmission facilities of OE, Penn, CEI and TE (hereinafter "the ATSI transmission system"), in accordance with regional reliability council guidelines, industry standards, and applicable regulatory requirements to ensure that reliability of transmission service is maintained. ATSI provides transmission service under the rates, terms and conditions of its Open Access Tariff (FERC Electric Tariff, Second Revised Volume No. 1), and any service agreements executed thereunder. For purposes of its Open Access Tariff, all retail customers of OE, Penn, CEI and TE are considered native load customers of ATSI. ATSI fully succeeds to the native load obligations of OE, Penn, CEI and TE whose rates are unbundled under the Ohio transition plan and the Pennsylvania rate restructuring plan, who receive the same type, firmness and service priority of transmission service as they received as bundled retail customers.

ATSI represents a first step toward the goal of establishing or becoming part of a larger independent regional transmission organization (RTO). In working toward that goal, ATSI joined with nine other companies -- Ameren Corporation, AEP, ComEd, Consumers Energy Company, The Dayton Power and Light Company, The Detroit Edison Company, Illinois Power Company, Northern Indiana Public Service Co. and Virginia Electric and Power Company -- to form the Alliance RTO. On June 3, 1999, the Alliance submitted an application to the FERC to form an independent, for profit RTO. On December 15, 1999, the FERC issued an order conditionally approving the Alliance's application. On January 24, 2001, the Alliance received final FERC approval. ATSI is working with the Alliance to achieve operational status by the end of 2001.

9 - DEPRECIATION

The Company provides for depreciation on a straight-line basis over the estimated lives of property included in plant in service. The annual composite rate for the Company's transmission facilities was approximately 2.4% in 2000.

10 - BASIS OF FINANCIAL STATEMENT PRESENTATION

The accompanying financial statements were prepared in accordance with the accounting requirements set forth in the Uniform System of Accounts and published accounting releases of the FERC, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States (GAAP). The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses during the reporting period.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

For construction overhead, refer to attached footnote.

Allowance for Funds Used During Construction (AFUDC)

AFUDC represents financing costs capitalized to construction work in progress during the construction period. The Company capitalized AFUDC at a rate which is the lesser of the rate computed by applying the formula prescribed by FERC, which provides for both an equity and debt component of AFUDC, or the embedded cost of long-term debt outstanding at the beginning of the calendar year. Accordingly, the Company used the embedded cost of long-term debt rate during 2000.

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)	Amount (b)	Capitalization Ratio(Percent) (c)	Cost Rate Percentage (d)
1	Average Short-Term Debt & Computation of Allowance text	S		
2	Short-term Interest			s
3	Long-Term Debt	D 337,676,125	53.16	d 7.75
4	Preferred Stock	P		p
5	Common Equity	C 297,519,111	46.84	c 11.50
6	Total Capitalization	635,195,236	100%	
7	Average Construction Work in Progress Balance	W 1,476,709		

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ 4.12

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ 5.39

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 7.75
   b. Rate for Other Funds - 0.00

Schedule Page: 218 Line No.: 1 Column: OH exp

Engineering and Supervision

(a) Generally, planning, design/engineering and supervision costs of transmission construction projects, including outside professional engineering services, are directly charged to transmission construction projects. Otherwise, such costs are accumulated in distributable construction work in progress projects by billed charges from payrolls, invoices, vouchers, etc. Charges to the distributable projects are distributed to each transmission construction project on the basis of billed labor and material charges on a monthly basis. No distribution is made to projects which are direct purchases of equipment only.

(b) Engineering and supervision costs not specifically chargeable to projects covered in (a), together with clerical expenses which are applicable to construction, are accumulated in a construction work in progress project and distributed each month to all transmission construction projects on the basis of billed labor charges.

(c) Engineering and supervision charged or distributed to each transmission construction project is assigned pro rata to the classified plant accounts for such project at the time a project is cleared from construction work in progress on the basis of total billed labor and material charges.

General Administration

Administrative Expenses

(a) Based on a study with respect to work performed by general officers who devote a portion of their time to construction, or matters pertaining thereto, a portion of their salaries and expenses and general office supplies and expenses considered to be applicable to construction is charged thereto.

(b) Each month the amount so determined is distributed pro rata to all transmission construction projects on the basis of charges thereto for billed labor, material and engineering, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each transmission construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total billed labor and material charges.

Employee Pensions and Benefits

(a) A study is made to determine the percentage of the total salaries and wages for the year which is applicable to construction, and such percentage is applied to the total pension and benefit costs for the year to determine the amount thereof applicable to construction.

(b) Each month, (i) the applicable portion of the amount determined to be applicable to construction, exclusive of the amount related to the salaries transferred from Administrative Expenses, is distributed pro rata to transmission construction projects on the basis of billed payroll charges thereto and (ii) the applicable portion of the amount related to the salaries of employees transferred from Administrative Expenses is distributed pro rata to all transmission construction projects on the basis of charges thereto for billed labor, material and engineering and supervision except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each transmission construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total billed labor and material charges thereto.

Injuries and Damages

(a) The Company carries only excess insurance coverage for injuries and damages and makes direct settlement for all claims of employees and the public except for the amount of such claims coming under the excess policy. An amount is charged to construction based on actual experience, to reflect the entire costs with respect to claims in connection with construction. The amount so charged is adjusted as necessary, based on experience.

(b) Each month the amount so determined to be applicable to construction is distributed pro rata to transmission construction projects, on the basis of charges thereto for billed labor, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each transmission construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total billed labor and material charges thereto.

Taxes

Payroll Taxes

(a) Federal and state payroll taxes are charged to construction on the basis of total billed labor charged thereto.

(b) Each month the amount so charged is distributed pro rata to transmission construction projects on the basis of charges thereto for billed labor, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each transmission construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total billed labor and material charges thereto.

Sales and Excise Taxes

Sales and excise taxes charged to construction are recorded as part of the costs of materials and equipment.

Legal Expenses

Legal services and expenses applicable to specific transmission construction projects are charged directly to such transmission construction projects.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1: Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.)
Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR (Continued)

5. If any tax (exclude Federal and State income taxes)- covers more then one year, show the required information separately for each tax year, identifying the year in column (a).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (i) through (l) how the taxes were distributed. Report in column (i) only the amounts charged to Accounts 408.1 and 409.1 pertaining to electric operations. Report in column (l) the amounts charged to Accounts 408.1 and 109.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (l) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	11/01/2000
2. Total Regular Full-Time Employees	0
3. Total Part-Time and Temporary Employees	0
4. Total Employees	0

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows:
LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

Line No.	Payment By (Company of Public Authority) (Footnote Affiliation) (a)	Energy Received From (Company of Public Authority) (Footnote Affiliation) (b)	Energy Delivered To (Company of Public Authority) (Footnote Affiliation) (c)	Statistical Classification (d)

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
American Transmission Systems, Incorporated	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

FERC Rate Schedule of Tariff Number (e)	Point of Receipt (Subsatation or Other Designation) (f)	Point of Delivery (Substation or Other Designation) (g)	Billing Demand (MW) (h)	TRANSFER OF ENERGY		Line No.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456) (Continued)
(Including transactions reffered to as 'wheeling')

8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (11011) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. Provide total amounts in column (i) through (n) as the last Line. Enter "TOTAL" in column (a) as the Last Line. The total amounts in columns (i) and (j) must be reported as Transmission Received and Delivered on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456) (Continued)
(Including transactions reffered to as 'wheeling')

8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (11011) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. Provide total amounts in column (i) through (n) as the last Line. Enter "TOTAL" in column (a) as the Last Line. The total amounts in columns (i) and (j) must be reported as Transmission Received and Delivered on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Acccunts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

A. Summary of Depreciation and Amortization Charges

Line No.	Functional Classification (a)	Depreciation Expense (Account 403) (b)	Amortization of Limited Term Electric Plant (Acc 404) (c)	Amortization of Other Electric Plant (Acc 405) (d)	Total (e)

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show below costs incurred and accounts charged during the year for technological research, development, and demonstration (R, D & D) project initiated, continued or concluded during the year. Report also support given to others during the year for jointly-sponsored projects.(Identify recipient regardless of affiliation.) For any R, D & D work carried with others, show separately the respondent's cost for the year and cost chargeable to others (See definition of research, development, and demonstration in Uniform System of Accounts).
2. Indicate in column (a) the applicable classification, as shown below:

Classifications:

A. Electric R, D & D Performed Internally:
- (1) Generation
  - a. hydroelectric
    - i. Recreation fish and wildlife
    - ii Other hydroelectric
  - b. Fossil-fuel steam
  - c. Internal combustion or gas turbine
  - d. Nuclear
  - e. Unconventional generation
  - f. Siting and heat rejection
- (3) Transmission
  - a. Overhead
  - b. Underground
- (4) Distribution
- (5) Environment (other than equipment)
- (6) Other (Classify and include items in excess of $5,000.)
- (7) Total Cost Incurred

B. Electric, R, D & D Performed Externally:
- (1) Research Support to the electrical Research Council or the Electric Power Research Institute

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES (Continued)

(2) Research Support to Edison Electric Institute
(3) Research Support to Nuclear Power Groups
(4) Research Support to Others (Classify)
(5) Total Cost Incurred

3. Include in column (c) all R, D & D items performed internally and in column (d) those items performed outside the company costing $5,000 or more, briefly describing the specific area of R, D & D (such as safety, corrosion control, pollution, automation, measurement, insulation, type of appliance, etc.). Group items under $5,000 by classifications and indicate the number of items grouped. Under Other, (A (6) and B (4)) classify items by type of R, D & D activity.
4. Show in column (e) the account number charged with expenses during the year or the account to which amounts were capitalized during the year, listing Account 107, Construction Work in Progress, first. Show in column (f) the amounts related to the account charged in column (e)
5. Show in column (g) the total unamortized accumulating of costs of projects. This total must equal the balance in Account 188, Research, Development, and Demonstration Expenditures, Outstanding at the end of the year.
6. If costs have not been segregated for R, D &D activities or projects, submit estimates for columns (c), (d), and (f) with such amounts identified by "Est."
7. Report separately research and related testing facilities operated by the respondent.

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Line No.	DESIGNATION		VOLTAGE (KV) (Indicate where other than 60 cycle, 3 phase)		Type of Supporting	LENGTH (Pole miles) (In the case of underground lines report circuit miles)		Number Of Circuits

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
American Transmission Systems, Incorporated	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Size of Conductor and Material (i)	COST OF LINE (Include in Column (j) Land, Land rights, and clearing right-of-way)			EXPENSES, EXCEPT DEPRECIATION AND TAXES				Line No.

American Transmission Systems, Incorporated	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Line No.	DESIGNATION		VOLTAGE (KV) (Indicate where other than 60 cycle, 3 phase)		Type of Supporting	LENGTH (Pole miles) (In the case of underground lines report circuit miles)		Number Of Circuits
