FORM SE

FORM FOR SUBMISSION OF PAPER FORMAT EXHIBITS BY ELECTRONIC FILERS

FirstEnergy Corp.
Exact name of registrant as specified in charter

0001031296
Registrant CIK Number

Form U-5B Registration Statement
Electronic report, schedule or registration statement of which the documents are a part (give period of report)

3039
SEC File Number, if available

PROCESSED
FEB 11 2002
THOMSON FINANCIAL

Name of Person Filing the Document
(If Other than the Registrant)

SIGNATURES

Filings Made By the Registrant:

The Registrant has duly caused this form to be signed on its behalf by the undersigned, thereunto duly authorized, in the City of Akron, State of Ohio, February 7, 2002.

FirstEnergy Corp.
(Registrant)

By: Mary Hockwalt Bell
Mary Hockwalt Bell, Attorney

[51124]

Filings Made by Person Other Than the Registrant:

After reasonable inquiry and to the best of my knowledge and belief, I certify on ....., 2002, that the information set forth in this statement is true and complete.

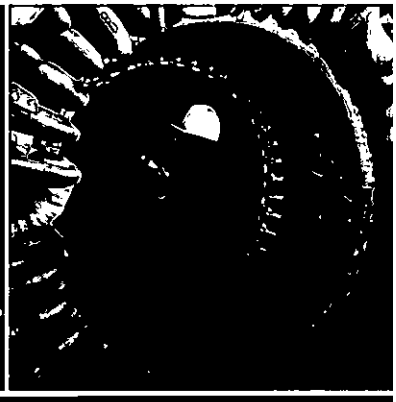
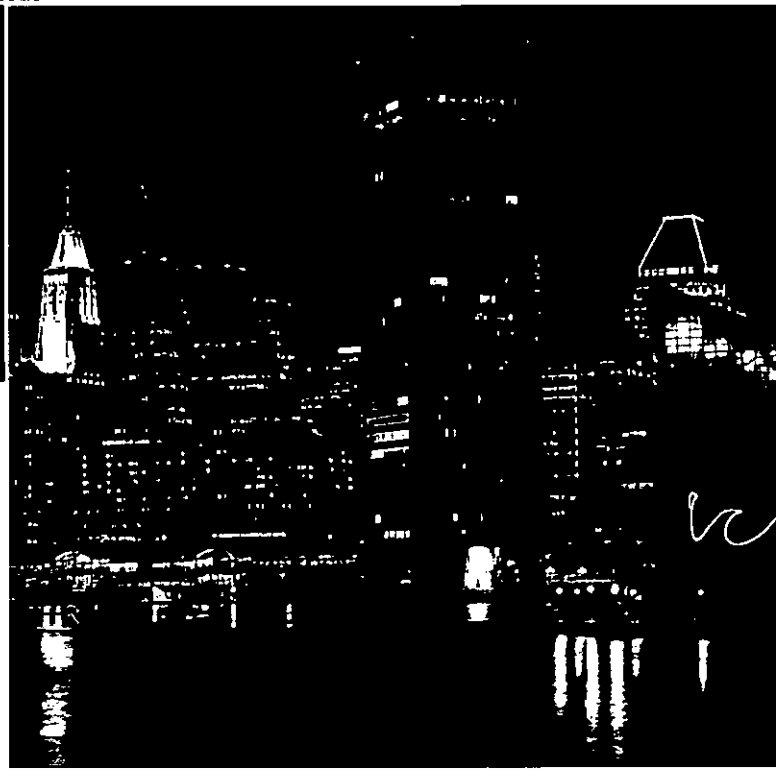
FirstEnergy®

2000
Annual Report

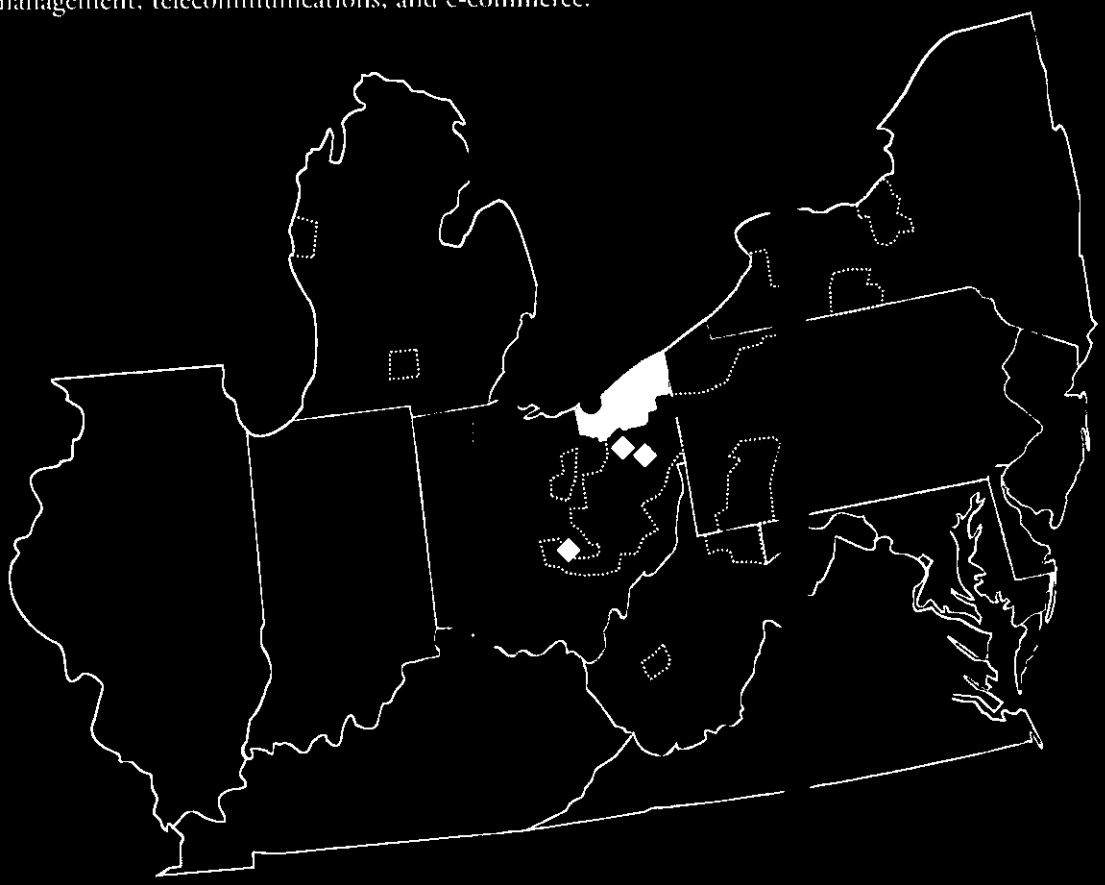




CORPORATE PROFILE

FirstEnergy Corp. is a diversified energy services holding company headquartered in Akron, Ohio. Its electric utility operating companies – Ohio Edison and its Pennsylvania Power subsidiary, The Illuminating Company and Toledo Edison – comprise the nation's tenth largest investor-owned electric system, serving 2.2 million customers within 13,200 square miles of northern and central Ohio and western Pennsylvania.

FirstEnergy subsidiaries and affiliates provide a wide range of energy and energy-related products and services, including the generation and sale of electricity; exploration and production of oil and natural gas; transmission and marketing of natural gas; mechanical and electrical contracting and construction; energy management; telecommunications; and e-commerce.



ELECTRIC UTILITY OPERATING COMPANIES

- Ohio Edison Company, Akron, OH
- Pennsylvania Power Company, New Castle, PA
- The Illuminating Company, Cleveland, OH
- Toledo Edison Company, Toledo, OH

ASSETS AND OTHER OPERATIONS

- Drilling rights to nearly one million acres
- Natural gas and oil operations
- Facilities Services Group companies
- Deregulated states where we are selling electricity

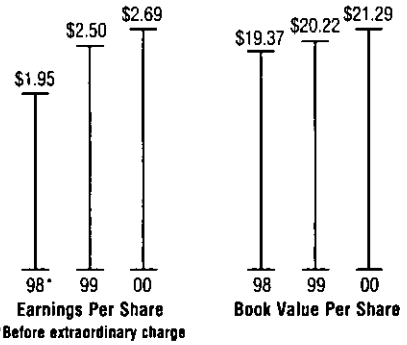
Management's Discussion and Analysis	18



Financial Highlights

(Dollars in thousands, except per share amounts)	2000	1999
Total revenues	**$7,028,961**	$6,319,647
Net income	**$598,970**	$568,299
Earnings per common share	**$2.69**	$2.50
Return on average common equity	**13.0%**	12.7%
Dividends per common share	**$1.50**	$1.50
Book value per common share	**$21.29**	$20.22
Common equity to total capitalization	**41.5%**	39.8%
Cash provided by operating activities	**$1,507,826**	$1,488,306

Strategic Vision

FirstEnergy will be the leading regional retail energy and related services supplier; the preferred choice for total customer solutions; shareholders' choice for long-term growth and investment value; and a Company that is driven by the skills, diversity, flexibility and character of its employees.

Mission Statement

FirstEnergy will provide competitively priced, high-quality products and value-added services in:

- Energy sales and services
- Energy delivery
- Power supply
- Regulated and unregulated supplemental services related to our core business

Strategy

To achieve our vision we will:

- Maximize the value of core operations
- Position the Company for profitable growth in related areas
- Maximize value retention during the transition to competition
- Increase financial flexibility and investor confidence

Message to Shareholders

Enhancing value through strategic growth. That best captures FirstEnergy's progress in 2000 as we continued to expand our presence and improve our competitiveness in the energy marketplace.

Most notably, shareholders overwhelmingly approved our pending merger with Morristown, New Jersey-based GPU, Inc., in November. Upon completion – which we hope will occur during the second quarter of this year – the merger will nearly double our annual revenues to more than $12 billion, and will move us closer to achieving our vision of becoming the leading retail energy and related services supplier in the northeast quadrant of the U.S., our targeted region for growth.

With the nation's sixth largest investor-owned electric utility system, based on 4.3 million customers served; contiguous transmission systems; and a 37,000-square-mile service area in Ohio, Pennsylvania and New Jersey, this combination will greatly expand our market for electricity, natural gas, telecommunications and other energy-related products and services.

The merger will help give us the size and scope we need to succeed in our changing business. It is expected to be accretive to earnings immediately upon completion, and to improve our earnings growth from what it otherwise would have been on a stand-alone basis.

Growth will be driven in part by strategic advantages, including anticipated annual cost savings of approximately $150 million through improved operating efficiencies and the elimination of duplicate activities.

To make sure we begin capturing the benefits as soon as the merger is completed, some 200 employees from both companies are reviewing operations and identifying strategies and best practices.

We're committed to making this a great success. Capturing the synergies offered by the merger will further enhance our financial and operational performance – areas where we made steady progress in 2000.

Delivering Stronger Earnings

We earned $599 million, or $2.69 per share of common stock, for the year, a 7.6 percent increase compared with earnings of $2.50 per share, or $568 million, in 1999. A $96-million reduction in fuel costs; the addition of 14,000 new electricity customers in our regulated service area; increased power sales to customers in unregulated energy markets; and a new generation output record by our power plants contributed to stronger earnings performance in 2000.

During the year, FirstEnergy retired, refinanced or repriced long-term debt totaling $927.7 million, which will produce annual interest savings of $31.9 million. We also repurchased 6.5 million shares of common stock in 2000 – reaching a total of 12.5 million shares – under our program to buy back up to 15 million shares during a three-year period that runs through 2001.

Competing in Ohio

Stronger financial performance and approval of our transition plan by the Public Utilities Commission of Ohio are enhancing our competitive position in the state, which opened the electric generation business to competition on January 1, 2001.

Our transition plan – which established the framework for how we're operating in Ohio – gives us the opportunity through 2008 to recover $6.9 billion in transition costs – past expenses we incurred in the regulated environment. Our ability to recover these costs was a key reason why the investor services firms of Moody's and Fitch upgraded the debt ratings of our electric utility operating companies in 2000.

Ohio's competitive electric market poses new challenges for our Company, including meeting a target that calls for 20 percent of our electric customers to switch to new suppliers during the next five years. We're confident that we'll achieve that mark, in part because we've helped jump-start competition under an innovative plan through which we are selling – at established prices – 1,120 megawatts of power through 2005 to other suppliers and aggregators for sale to our customers.

In addition, customers who choose our unregulated FirstEnergy Services subsidiary as their new supplier count toward the switching target. By the end of the first quarter of this year, we expect that approximately 150,000 of our electric utility customers will switch to new suppliers – including some 100,000 to FirstEnergy Services, which is building on a successful track record in other unregulated electricity markets.

Expanding Markets

FirstEnergy Services also serves electricity customers in Pennsylvania, New Jersey, Delaware and Maryland. And, it's selling other products and services as well, including natural gas, adding nearly 140,000 customers in 2000. The merger with GPU will help further expand the market for our diverse mix of products and services.

While electricity remains our core business, growth in other areas is important because adding new sources of revenues will help replace revenues we'll lose in Ohio's competitive market. In fact, in 2000 we more than tripled our natural gas revenues to $582 million and increased our Facilities Services Group revenues by 12 percent to $563 million.

Learning from California

We're well positioned for success in Ohio's deregulated electricity market, which is governed by rules far different than those in California, where electricity shortages and price spikes are plaguing that state's deregulated market. Ohio also has an adequate supply of electricity in the near term, unlike California, which has added little capacity in recent years – despite significant increases in customer demand.

Since 1998, Ohio regulators have approved plans to add approximately 5,700 megawatts of new generating capacity, and are considering applications for the installation of an additional 8,500 megawatts of capacity. However, most of this proposed generation is comprised of natural-gas-fired peaking units, so it's unclear how much actually will be built because of price volatility in the gas market.

As a result, during Ohio's five-year transition to full competition, it's important that the government provide incentives, not disincentives, for adding new generation in the region to meet growing customer demand and eventually to replace existing base-load power plants. Also, the government needs to take a more consistent approach to environmental regulations. Our industry should not be subjected to ongoing changes in how the Clean Air Act is interpreted by the U.S. Environmental Protection Agency, affecting plants that provide much of our region's electricity supply.

Enhancing your Investment

We cannot predict the future impact of competition. However, we remain focused on running our Company as efficiently as possible, and we continue to explore new business opportunities that complement our market strategy.

We're proud of our progress. And, with your ongoing support and the hard work of our dedicated employees, we'll continue increasing the competitiveness of your Company and enhancing the value of your investment.

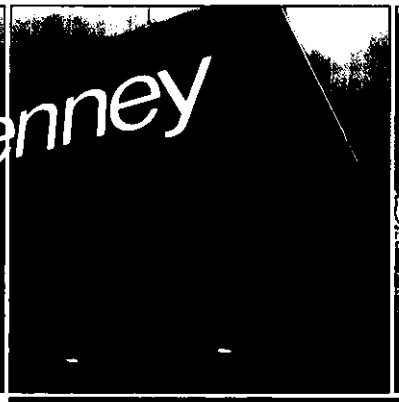
Sincerely,

H. Peter Burg

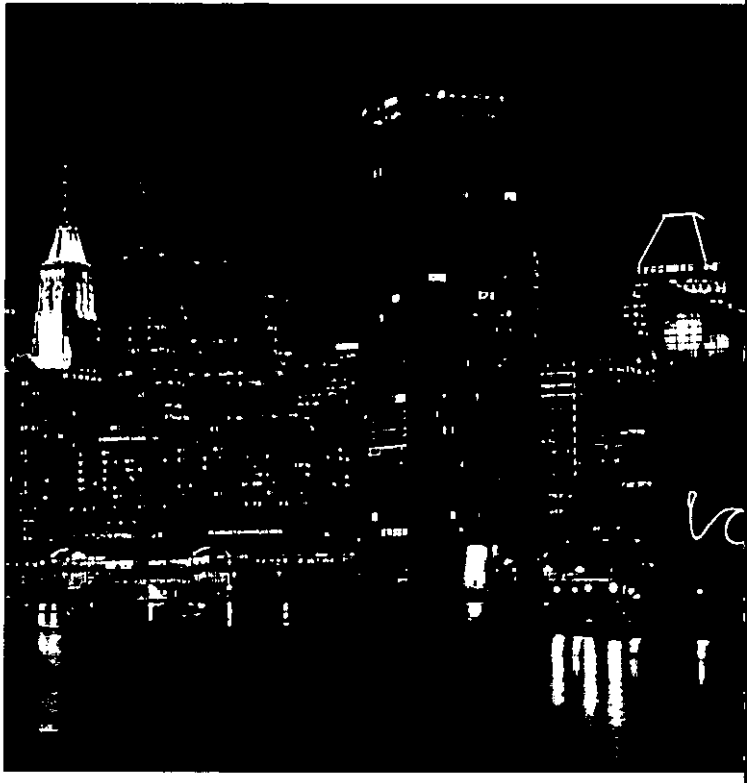
H. Peter Burg
Chairman and Chief Executive Officer

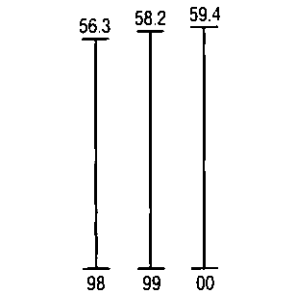
March 12, 2001

Enhancing value through strategic growth



FROM TOP LEFT: 2000 marked a year of growth in residential electric and natural gas customers; welding for a mechanical construction customer; JCPenney is among FirstEnergy Services' growing number of customers; customers signing up for FirstEnergy Services' natural gas offer; FirstEnergy Services has added hundreds of local government accounts, including many in the Baltimore, Maryland, area.





Regulated Retail Kilowatt-Hour Sales
(Billions)

Competing in Ohio's Electric Industry and Other Unregulated Markets

After years of debate and preparation, Ohio opened its electric generation business to competition in January 2001.

The state's deregulation law gives Ohioans – including customers of our subsidiaries, Ohio Edison, The Illuminating Company and Toledo Edison – the option of buying their electricity from suppliers other than their local electric companies.

The deregulated marketplace poses new challenges to our Company, but also presents growth opportunities. For instance, while rules governing how we operate in Ohio include a target that calls for 20 percent of our customers to switch to new suppliers during the next five years, they also enable our unregulated FirstEnergy Services subsidiary to add customers inside and outside our traditional service area.

We're confident that the unregulated sale of electricity – and other energy and related products and services – will help cover lost revenues from our traditional electric business.

Continuing to Grow our Unregulated Operations

FirstEnergy Services is building on a successful track record, with more than 130,000 electric customers in Ohio, Pennsylvania, New Jersey, Delaware and Maryland. Customers include JCPenney and Kroger facilities, and hundreds of local government accounts.

FirstEnergy Services is part of our new competitive business unit, under which we've consolidated many of our unregulated activities. In addition to electricity, FirstEnergy Services sells a variety of energy and energy-related products and services, including natural gas, mechanical and electrical contracting and telecommunications.

Our unregulated operations produced revenues of $1.6 billion in 2000, including $582 million from our natural gas operations. That's more than triple the natural gas revenues generated in 1999. And, we've added nearly 140,000 residential and small business natural gas customers in Ohio, bringing our total number of retail natural gas customers to more than 170,000.

As one of the largest natural gas producers in the Appalachian Basin, our resources include more than 7,900 oil and gas wells, drilling rights to nearly one million acres, 4,800 miles of pipelines and proved reserves of 480 billion cubic feet equivalent of natural gas and oil.

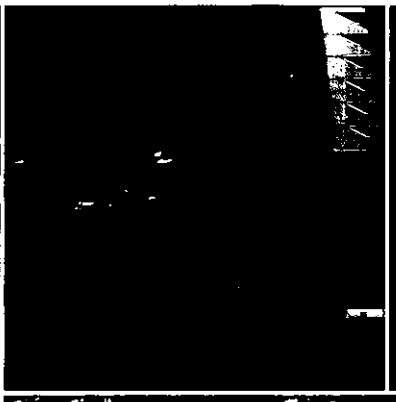
Our Facilities Services Group also posted an increase in revenues to $563 million in 2000, compared with approximately $500 million in 1999. Its 11 companies, which provide a variety of mechanical and electrical contracting and construction services, continue to serve an impressive list of customers, including Kodak, Xerox, Toyota and Nabisco.

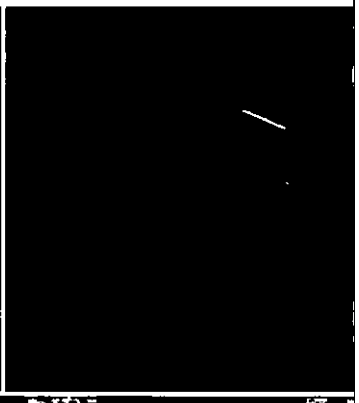
Entering Other Competitive Businesses

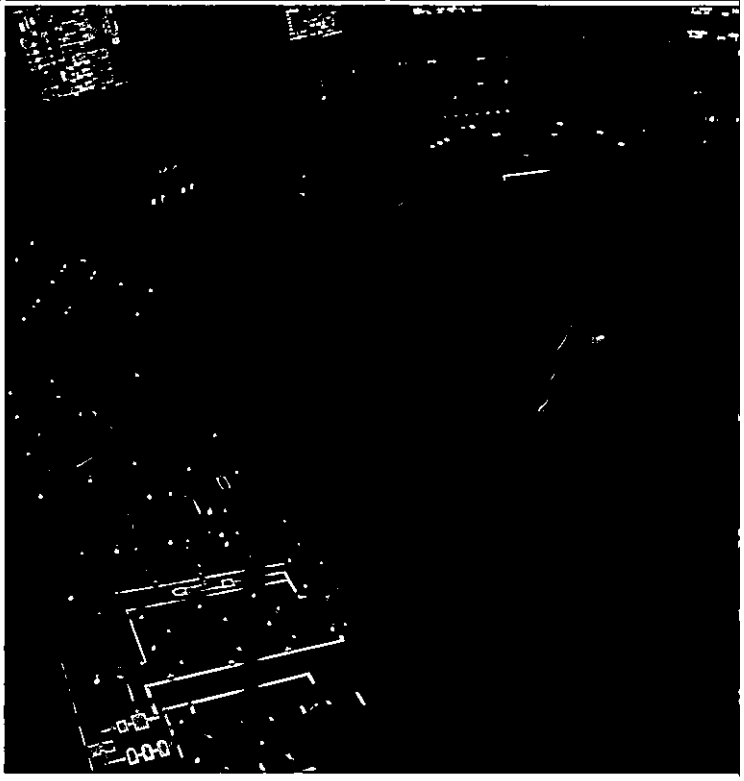
We're also expanding our telecommunications activities. For example, our FirstEnergy Telecommunications subsidiary has been certified by the state of Ohio to sell advanced communications services to retail and wholesale customers.

By tapping our existing fiber-optic network, FirstEnergy Telecommunications will support the efforts of FirstEnergy Services by targeting customers with high demand for data transfer services, such as banks, universities, hospitals and other telecommunications companies. We've also entered the telecommunications business on other fronts through our ownership interests in two enterprises – America's Fiber Network, LLC, (AFN), and First Communications.

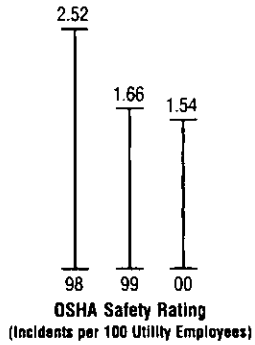
Exploring new business opportunities in competitive markets







FROM TOP LEFT: FirstEnergy Services now serves as energy manager for The University of Akron; an operator at our First Communications affiliate; construction of a new natural-gas-fired peaking unit; monitoring operations at the Perry Nuclear Power Plant.



AFN is a high-speed, fiber-optic based network services provider that is being positioned to reach one-third of the nation's wholesale telecommunications market, serving customers such as Internet service providers, local and long-distance telephone companies and wireless communication companies. Upon completion of the merger with GPU, which also has an interest in AFN, we'll own more than 30 percent of the venture and its 140,000 fiber miles. AFN complements our ownership position in First Communications, a provider of long-distance telephone, data and Internet services, with 40,000 customers and offices in Akron, Chicago and Indianapolis.

We also own an interest in another venture called Pantellos Corporation, which we co-founded in 2000 with 20 other energy and utility companies, including GPU. This independent, for-profit enterprise is operating an Internet marketplace for buyers and sellers in the $130-billion energy market. It provides companies in the energy industry and their suppliers with a centralized location for the purchase of goods and services, from transformers and wire to turbines and equipment repairs.

Meeting our Customers' Energy Needs

Our diverse mix of products and services is at the core of a growing number of master energy services agreements our FirstEnergy Services subsidiary is signing with large public and private sector customers, under which we provide comprehensive energy and related services.

For instance, FirstEnergy Services is now the energy manager for the Cleveland-based National City Corp., an $85-billion financial holding company. Under the long-term contract, we're helping the company secure competitive prices for electricity, natural gas and energy-efficiency projects for 1,300 branches, operations centers and other facilities throughout its six-state region. FirstEnergy Services also is serving as energy manager for other organizations, including Kent State University and The University of Akron.

Improving Power Plant Performance

2000 marked another year of milestones by our power plants, which are supplying electricity to our regulated and unregulated customers.

Our plants set an all-time record for their highest level of output – 69.7 million megawatt hours. Our largest plant, Bruce Mansfield, generated a record 16.4 million megawatt hours – nearly 24 percent of our total generation. And, our Beaver Valley, Davis-Besse, and Perry nuclear plants recorded a 21-percent increase in generation output.

Other accomplishments included Beaver Valley's refueling outage completion in just 32 days, the shortest in the plant's history; and Perry's completion of one of the best operating years since starting up in 1987, including achieving an availability factor of nearly 97 percent.

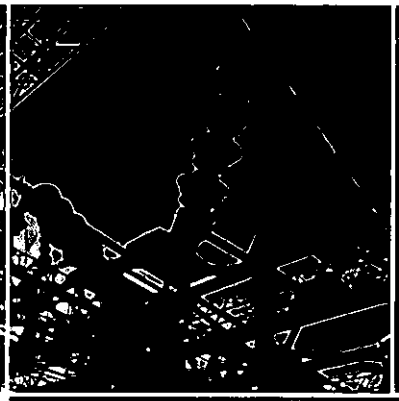
Plant employees also posted impressive safety records. For example, during the year, Davis-Besse and Mansfield plant employees reached the 4 million and 2.5 million hour marks, respectively, without a lost-time accident.

And, our Occupational Safety and Health Administration (OSHA) incident rate of 1.54 per 100 electric utility employees – a 7-percent improvement compared with 1999 – ranks us among our industry's leaders in safety.

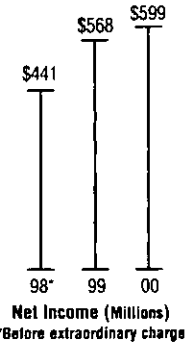
These accomplishments are important because they contribute to the safe and efficient operation of our plants, which – with competition in effect – is more important than ever. We'll rely even more on the skills and expertise of plant employees as we work to meet the needs of our expanded service area upon completion of our merger with GPU.

In addition to our some 12,000 megawatts of capacity, we're adding 425 megawatts from new natural-gas-fired peaking plants this year, and another 340 megawatts by the summer of 2002. With our existing

Focusing on the reliability of our electric service



FROM TOP LEFT: Maintenance at a transmission tower; our state-of-the-art Call Center in Akron; a transmission substation; production of our new unbundled electric bill, which provides more details to help customers make shopping decisions.



and planned generation resources – and our expertise in securing and managing cost-competitive, short- and long-term power-supply agreements – we're confident we can meet the increased power supply needs of our customers.

However, as evidenced by electricity shortages in California and other states, it is critical that new generating capacity be built in the region to meet growing customer demand and to eventually replace existing base-load power plants.

Continuing to Improve our Transmission and Distribution Businesses

While we've diversified into other energy-related areas, electricity remains our core business. And, regardless of whether customers of our Ohio electric utility operating companies switch suppliers under the state's deregulation law, our still-regulated transmission and distribution businesses will continue to deliver power and provide other services, such as meter reading, billing and service maintenance and repairs.

Competition in Ohio's electric generation business is being phased in during a five-year market development period, through 2005. It is designed to provide an adequate amount of time for competition to develop and to educate consumers, who are protected during this period from volatile price fluctuations through rate caps.

The market development period also marks the beginning of transition cost recovery for our electric operating companies. These costs reflect expenses incurred to serve customers in a regulated environment. Under our state-approved transition plan, our operating companies have the opportunity to recover $6.9 billion through 2008. Recovery of these costs provides us with the cash needed to pay down related debt.

Improving Customer Service

As part of our ongoing commitment to provide superior customer service, we spent approximately $120 million on transmission and distribution improvements, including new substations, overhead and underground lines and equipment designed to enhance circuit reliability.

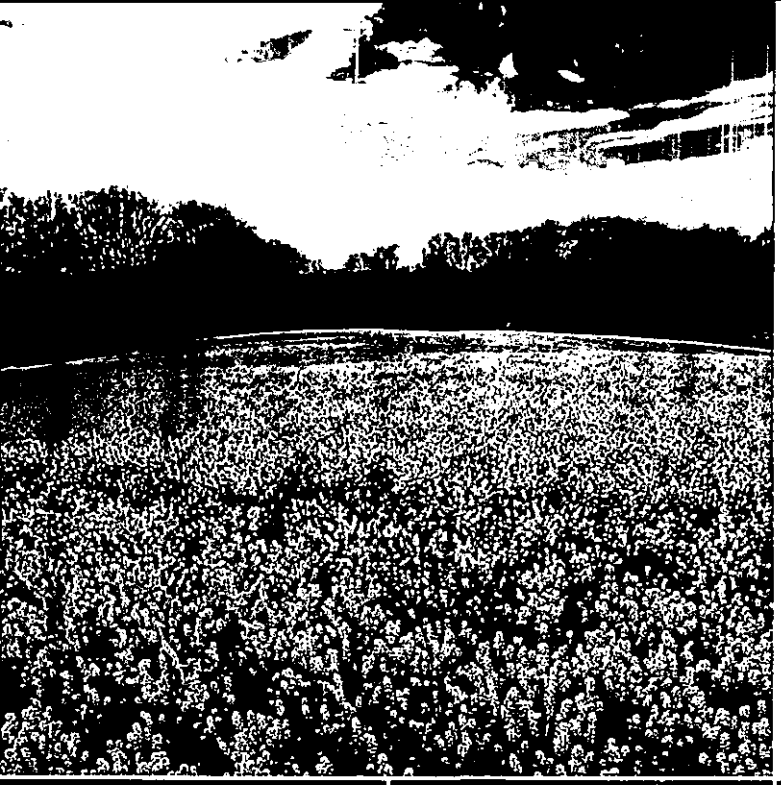
We're also continuing to use Internet technology to make it easier for customers to do business with us. Our Customer Care site, *www.firstenergycorp.com*, offers customers the opportunity to pay their bills online; request service connection or disconnection; enter meter readings; and access energy efficiency tips and electric deregulation information.

And, our high-tech Interactive Voice Response System is enabling our customer service representatives to respond faster to customer calls. This provides a tremendous value, especially when severe weather occurs. For example, when hurricane-force winds caused power outages for nearly 300,000 of our electric customers last December, the system helped crews track more quickly the location of downed poles and power lines. As a result, service was restored to 90 percent of those customers within 24 hours.

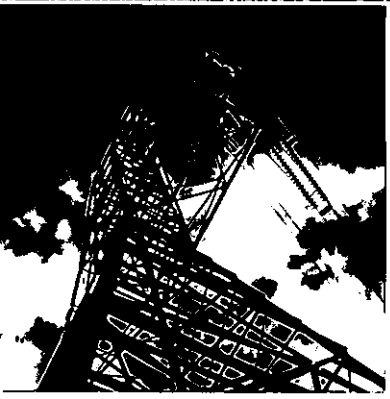
We've also designed a new bill format that itemizes generation, delivery and transition charges, as well as a price to compare, which customers can use to shop for other suppliers. In doing so, we met rules that require our electric operating companies to unbundle the price of electricity to reflect the cost of regulated and unregulated services.

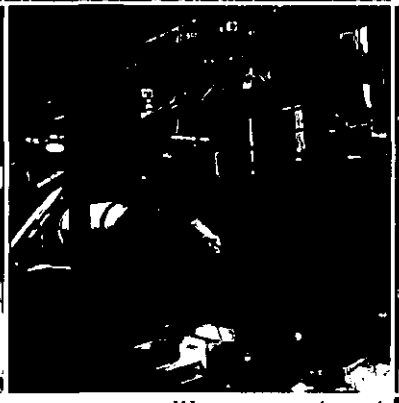
Repositioning our Transmission Business

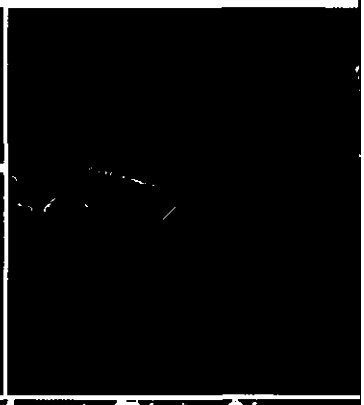
In 2000, we made significant progress in positioning our transmission operations to succeed in the competitive market, including transferring $1.2 billion in transmission assets to a new subsidiary, American Transmission Systems, Incorporated. The subsidiary



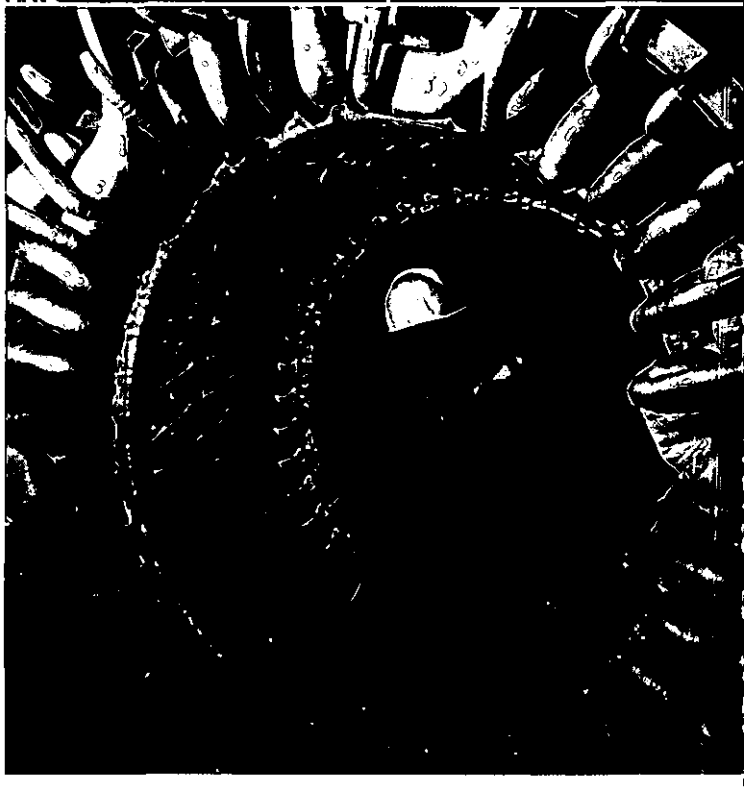
Providing customers with affordable electricity while protecting the environment

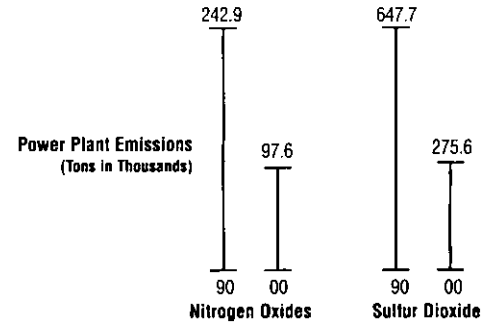






FROM TOP LEFT: We support parks and nature preserves that contribute to the quality of life in our service area; major high-voltage facilities, including transmission towers, are now part of our new American Transmission Systems, Incorporated, subsidiary; low-NOx burners at our Sammis Plant; skyline of Toledo, home of our Toledo Edison subsidiary; inspection of a power plant generator.





owns and operates our major high-voltage transmission facilities – approximately 7,100 circuit miles of transmission lines with voltages of 69 kilovolts and higher, 37 interconnections with 6 neighboring utilities and approximately 120 transmission substations.

The transfer was the first step toward our participation in a regional transmission organization that meets a Federal Energy Regulatory Commission (FERC) mandate that transmission systems be operated separately from power plants in order to ensure non-discriminatory access to the transmission grid. We formed such an organization – called the Alliance Regional Transmission Organization (RTO) – along with American Electric Power, Consumers Energy, Detroit Edison and Dominion Virginia Power.

Approved by FERC in January 2001, the Alliance RTO will operate – and ultimately could own – the transmission systems of participating companies. Ameren, Commonwealth Edison, Dayton Power & Light, Illinois Power and Northern Indiana Public Service Company also have signed the Alliance RTO agreement. The Alliance RTO – expected to be operational in late 2001– will be the country's largest independent RTO.

Protecting the Environment

We continue to demonstrate our commitment to protecting the environment while providing our customers with a reliable and affordable electricity supply.

By restructuring our generation portfolio and investing nearly $1.5 billion in new environmental protection systems and emerging technologies, in the last decade alone we've reduced emissions of nitrogen oxides (NOx) by 60 percent and sulfur dioxide (SO_2) by 57 percent.

Our environmental stewardship does not stop there. We continue working to further reduce emissions. In 2000, we installed low-NOx burners at our 2,233-megawatt W. H. Sammis Plant that will cut NOx emissions at the plant to less than half of 1990 levels. We're also installing other equipment to reduce NOx emissions at our largest coal-fired generating units.

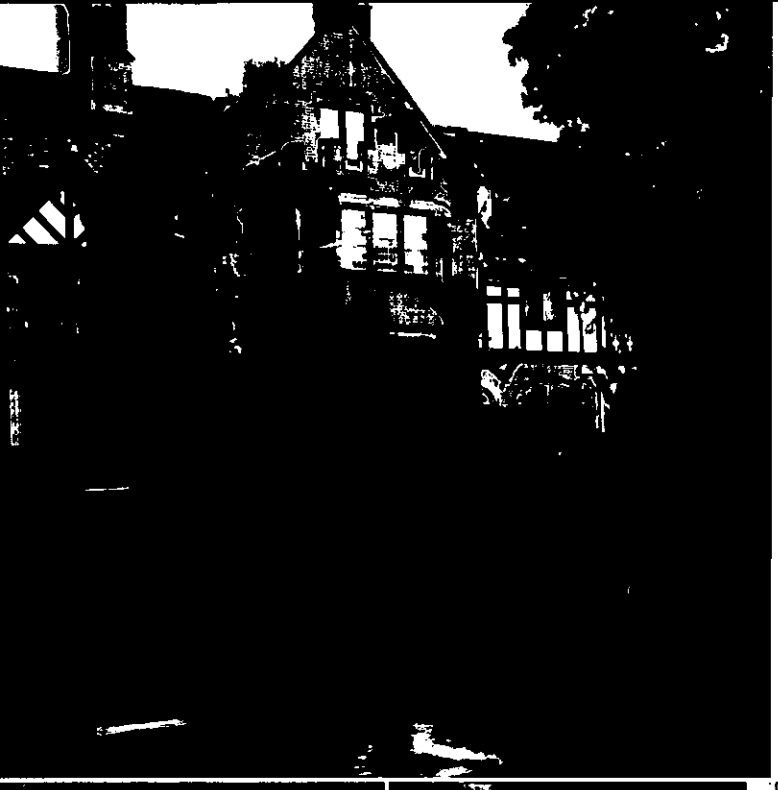
Despite these and other environmental protection efforts, legal action is pending against more than 40 plants in the Midwest and South, including our Sammis Plant, by the U.S. Environmental Protection Agency. The agency claims that routine maintenance, repairs and replacements of plant equipment triggered provisions of the Clean Air Act that require additional environmental controls – an unprecedented interpretation of the law.

We've spent a total of $4.6 billion on environmental protection efforts since passage of the Clean Air Act, and remain confident that all our plants – including Sammis – are in compliance.

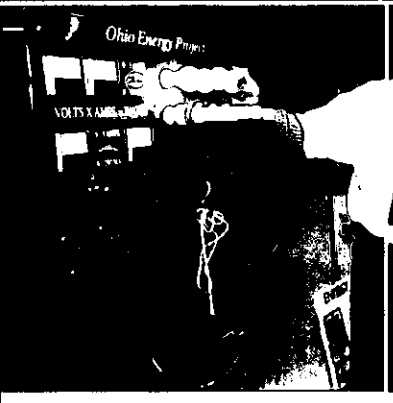
Exploring New Environmental Protection Measures

We continue to explore new ways to minimize the impact of our plants on the environment. For example, we're testing a new air emission reduction technology designed to simultaneously cut emissions of NOx, SO_2, fine particulate matter, mercury and other substances, at our R. E. Burger Plant. We intend to further test this technology on a larger scale at another of our coal-fired power plants.

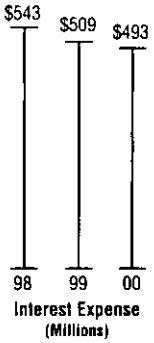
Developed by New Hampshire-based Powerspan Corp., this technology – Electro-Catalytic Oxidation™ – breaks down gases that result from the combustion of coal into compounds that can be captured as by-products in electrostatic precipitators, a lower-cost control option that can also produce commercial-grade sulfuric and nitric acids.



Helping make our communities better places to live and work



FROM TOP LEFT: Akron landmark Stan Hywet Hall & Gardens is among the organizations supported by The FirstEnergy Foundation; supporting energy education with our Cycle Science program; teaching children about electrical safety; nearly 70 employees are supporting FirstEnergy's leadership role in AkronReads.



Recycling Projects

We're developing uses for recycled materials. In fact, we've started operation of a new circulating fluidized bed boiler at our Bay Shore Plant that is reducing fuel costs and emissions by using a by-product, petroleum coke, from the neighboring BP Oil Toledo Refinery as fuel. The boiler is generating low-cost steam to make electricity at our plant and petroleum products at the refinery.

In addition, we're continuing to supply by-products from the air-quality-control system at our Bruce Mansfield Plant to produce wallboard at a state-of-the-art facility adjacent to the plant.

Supporting our Communities

While our Company has changed significantly, our commitment to supporting the communities we serve has not. We continue to support economic development efforts in our communities through programs that promote the location, retention and expansion of businesses in our service area. For example, through Export Now, we help local businesses access resources they need to increase international sales in Canada and Mexico. In 2000, this program – and others we support – helped attract $1 billion in business projects in our service area that will retain and create more than 8,800 jobs.

We're proud to support other programs and organizations that also make our communities better places to live and work. The FirstEnergy Foundation continues its tradition of providing direct financial support to hundreds of non-profit organizations based on our community involvement priorities:

- To ensure the safety and health of the community
- To promote economic development
- To advance professional development
- To support employee involvement

FirstEnergy also offers program support to schools and social service agencies that are working to improve the quality of life in our cities and towns. Among our most important initiatives is providing educational and electricity safety materials to schools. For example, in an effort to further educate elementary school children on the potential dangers of electricity and electrical equipment, we shipped more than 1,000 safety videos to local elementary schools and media centers in 2000. And, we've recently introduced an electrical safety video for middle school students.

Education is a cornerstone of our community support efforts. For example, we've taken a leadership role in AkronReads – an outgrowth of Governor Bob Taft's OhioReads initiative. Through this program, nearly 70 FirstEnergy employees are helping improve the reading skills of area students by tutoring them one hour a week.

Glenn H. Meadows

We are saddened to report the passing of Board member Glenn H. Meadows in June. Mr. Meadows, retired president and chief executive officer of McNeil Corporation, Akron, Ohio, was elected to the Board of Ohio Edison Company in 1981. He was a trusted counselor, and his knowledge and good judgement will be missed by the Board.

Board of Directors

H. Peter Burg, 54
Chairman of the Board and Chief Executive Officer of FirstEnergy Corp. Director of FirstEnergy Corp. since 1997 and of Ohio Edison since 1989.

Anthony J. Alexander, 49
President of FirstEnergy Corp. and Director of FirstEnergy Corp. since 2000.

Dr. Carol A. Cartwright, 59
President, Kent State University, Kent, Ohio. Chair, Nominating Committee; Member, Finance Committee. Director of FirstEnergy Corp. since 1997 and of Ohio Edison from 1992-1997.

William F. Conway, 70
President of William F. Conway & Associates, Inc., Scottsdale, Arizona. Chair, Nuclear Committee; Member, Audit Committee. Director of FirstEnergy Corp. since 1997 and of the former Centerior Energy Corporation from 1994-1997.

Robert B. Heisler, Jr., 52
Group Executive Vice President of KeyCorp, Cleveland, Ohio. Member, Compensation and Nominating committees. Director of FirstEnergy Corp. since 1998.

Robert L. Loughhead, 71
Retired, formerly Chairman of the Board, President and Chief Executive Officer of Weirton Steel Corporation, Weirton, West Virginia. Chair, Compensation Committee; Member, Audit Committee. Director of FirstEnergy Corp. since 1997 and of Ohio Edison from 1980-1997.

Russell W. Maier, 64
Retired, formerly Chairman of the Board and Chief Executive Officer of Republic Engineered Steels, Inc., Massillon, Ohio. Member, Compensation and Nuclear committees. Director of FirstEnergy Corp. since 1997 and of Ohio Edison from 1995-1997.

Paul J. Powers, 66
Retired, formerly Chairman of the Board and Chief Executive Officer of Commercial Intertech Corp., Youngstown, Ohio. Chair, Finance Committee; Member, Compensation Committee. Director of FirstEnergy Corp. since 1997 and of Ohio Edison from 1992-1997.

Robert C. Savage, 63

Management Report

The consolidated financial statements were prepared by the management of FirstEnergy Corp., who takes responsibility for their integrity and objectivity. The statements were prepared in conformity with accounting principles generally accepted in the United States and are consistent with other financial information appearing elsewhere in this report. Arthur Andersen LLP, independent public accountants, have expressed an unqualified opinion on the Company's consolidated financial statements.

The Company's internal auditors, who are responsible to the Audit Committee of the Board of Directors, review the results and performance of operating units within the Company for adequacy, effectiveness and reliability of accounting and reporting systems, as well as managerial and operating controls.

The Audit Committee consists of four nonemployee directors whose duties include: consideration of the adequacy of the internal controls of the Company and the objectivity of financial reporting; inquiry into the number, extent, adequacy and validity of regular and special audits conducted by independent public accountants and the internal auditors; recommendation to the Board of Directors of independent accountants to conduct the normal annual audit and special purpose audits as may be required; and reporting to the Board of Directors the Committee's findings and any recommendation for changes in scope, methods or procedures of the auditing functions. The Committee also reviews the results of management's programs to monitor compliance with the Company's policies on business ethics and risk management. The Audit Committee held five meetings in 2000.

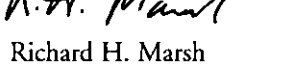
Report of Independent Public Accountants

To the Stockholders and Board of Directors of FirstEnergy Corp.:

We have audited the accompanying consolidated balance sheets and consolidated statements of capitalization of FirstEnergy Corp. (an Ohio corporation) and subsidiaries as of December 31, 2000 and 1999, and the related consolidated statements of income, common stockholders' equity, preferred stock, cash flows and taxes for each of the three years in the period ended December 31, 2000. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of FirstEnergy Corp. and subsidiaries as of December 31, 2000 and 1999, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2000, in conformity with accounting principles generally accepted in the United States.



Arthur Andersen LLP
Cleveland, Ohio
February 16, 2001

HOLDERS OF COMMON STOCK

There were 167,912 and 166,966 holders of 224,531,580 and 223,981,580 shares of the Company's Common Stock as of December 31, 2000 and January 31, 2001, respectively. Information regarding retained earnings available for payment of cash dividends is given in Note 4A.

Management's Discussion and Analysis of Results of Operations and Financial Condition

This discussion includes forward-looking statements based on information currently available to management that is subject to certain risks and uncertainties. Such statements typically contain, but are not limited to, the terms anticipate, potential, expect, believe, estimate and similar words. Actual results may differ materially due to the speed and nature of increased competition and deregulation in the electric utility industry, economic or weather conditions affecting future sales and margins, changes in markets for energy services, changing energy and commodity market prices, legislative and regulatory changes (including revised environmental requirements), the availability and cost of capital, inability to accomplish or realize anticipated benefits of strategic goals (including our merger with GPU, Inc.) and other similar factors.

Proposed Business Combination

On August 8, 2000, FirstEnergy entered into an agreement to merge with GPU, Inc. (GPU), a Pennsylvania corporation, headquartered in Morristown, New Jersey. Subsequently, the agreement was overwhelmingly approved by the shareholders of both companies. All regulatory filings necessary to complete the merger have since been made. Our target to complete the merger is by the end of the second quarter of 2001.

Under the merger agreement, we would acquire all the outstanding shares of GPU's common stock for approximately $4.5 billion in cash and FirstEnergy common stock. Our cash investment would be financed through the issuance of about $2.2 billion of new debt. Also, approximately $7.4 billion of debt and preferred stock of GPU's subsidiaries would remain outstanding. The transaction would be accounted for by the purchase method. The combined company's principal electric utility operating companies would include Ohio Edison Company (OE), The Cleveland Electric Illuminating Company (CEI), The Toledo Edison Company (TE), Pennsylvania Power Company (Penn) and American Transmission Systems, Incorporated (ATSI), as well as GPU's electric utility operating companies – Jersey Central Power & Light Company, Metropolitan Edison Company and Pennsylvania Electric Company, which serve customers in Pennsylvania and New Jersey.

The merger is expected to provide enhanced opportunities for financial growth, greater scope and size, improved generation efficiency and broadened unregulated opportunities. The combination will provide a significant market for our generating capacity and value-added services and will support our strategic vision of being the premier retail energy and related services provider in our targeted area for growth – a thirteen-state region in the northeastern quadrant of the nation.

Competition

We continue to face many competitive challenges as consumers are provided increasing opportunities to select their electricity suppliers. As our industry changes to a more competitive environment, we continue to take actions designed to create a larger, stronger enterprise that will be better positioned to compete in the changing energy marketplace. As Ohio approached a new era of customer choice in the selection of energy suppliers, we continued to develop our regionally-focused retail sales strategy.

Results of Operations

Net income increased to $599.0 million in 2000, compared to $568.3 million in 1999 and $410.9 million in 1998. The increase in 2000 resulted primarily from lower fuel costs and increased generation output, reduced financing costs and gains realized on the sales of emission allowances. In 1999, higher sales revenues, the absence of unusually high purchased power costs experienced in 1998 and lower interest costs contributed to the increase in net income from the prior year.

Additional sales by our unregulated businesses resulted in a $709.3 million increase in total revenues in 2000 compared to the prior year. The increase resulted from an expansion of both gas and electric sales. In 1999, the $444.7 million increase in revenues resulted substantially from contributions of the Electric Utility Operating Companies (EUOC) and increases in newly acquired businesses, which were partially offset by reduced revenues from FirstEnergy Trading Services, Inc. (FETS) compared to the prior year's

results. The sources of the changes in revenues during 2000 and 1999 are summarized in the following table.

Sources of Revenue Changes	2000	1999
Increase (Decrease)	*(In millions)*	
EUOC:		
Electric sales	**$ (38.5)**	$213.2
Other electric utility revenues	**6.4**	3.1
Total EUOC	**(32.1)**	216.3
Unregulated Businesses:		
Retail electric sales	**170.7**	54.0
FETS	**211.5**	(220.1)
Other businesses	**359.2**	394.5
Total Unregulated Businesses	**741.4**	228.4
Net Revenue Increase	**$709.3**	$444.7

Electric Sales

EUOC electric sales revenues decreased by $32.1 million in 2000, compared to 1999, as a result of lower unit prices which were partially offset by increased generation sales volume. Despite a milder summer, retail electric generation sales were 2.0% higher in 2000 than the previous year. Total electric generation sales (including unregulated sales) increased 8.4% in 2000, compared to 1999. Unregulated retail sales more than tripled from the prior year reflecting continued progress in our marketing efforts to expand retail electric sales to our targeted unregulated markets in the eastern seaboard states. Sales to commercial customers accounted for most of the increase. The cooler summer weather reduced retail customer demand, making more of our energy available to serve the wholesale market. As a result, we were able to achieve moderate growth in kilowatt-hour sales to that market in 2000. EUOC kilowatt-hour deliveries (to customers in our franchise areas) increased in 2000 from the prior year due to additional sales to commercial and industrial customers. Kilowatt-hour sales to residential customers declined. Other electric utility revenues increased in 2000 from the previous year primarily due to additional transmission service revenues.

EUOC revenues increased $216.3 million in 1999, compared to 1998, benefiting from increases in kilowatt-hour sales, which were only partially offset by reduced unit prices. Retail kilowatt-hour sales increased 2.3%. Total electric generation sales increased 8.0% in 1999 from the prior year due to additional unregulated sales reflecting our initial expansion into targeted eastern markets and weather-induced demand in the wholesale market. EUOC kilowatt-hour deliveries to residential, commercial and industrial customers increased in 1999, compared to 1998, reflecting a strong consumer-driven economy and warmer weather than the preceding year.

Changes in electric generation sales and kilowatt-hour deliveries in 2000 and 1999 are summarized in the following table:

Changes in KWH Sales	2000	1999
Increase (Decrease)		
Electric Generation Sales:		
EUOC – Retail	**2.0%**	2.3%
Unregulated	**50.4%**	52.0%
Total Electric Generation Sales	**8.4%**	8.0%
EUOC Distribution Deliveries:		
Residential	**(1.2)%**	5.5%
Commercial	**2.5%**	2.8%
Industrial	**3.2%**	2.5%
Total Distribution Deliveries	**1.7%**	3.4%

Other Sales

Retail natural gas revenues were the largest source of increase in other business revenues in 2000, compared to 1999. Collectively, three gas acquisitions in 1999 (Atlas Gas Marketing Inc., Belden Energy Services Company and Volunteer Energy LLC), as well as increased retail marketing efforts, significantly expanded retail gas revenues in 2000. Margins were held down by higher natural gas supply costs but increased activities in our natural gas exploration and production joint venture, Great Lakes Energy Partners, helped to offset the lower gas sales margins. FETS also expanded its wholesale electric and gas revenues in 2000 from prior year levels. In 1999, FETS revenues decreased significantly compared to the prior year because of refocusing its activities on supporting our retail marketing activities. New acquisitions and a one-time gain of $53 million from the sale of a partnership investment contributed to the increase in other business revenues in 1999, compared to 1998.

Operating Expenses

Total expenses increased $739.8 million in 2000 and $255.5 million in 1999, compared to the prior year, primarily reflecting higher levels of other expenses for EUOC and unregulated operations, offset in part by lower EUOC fuel and purchased power costs.

Fuel and purchased power decreased $75.7 million in 2000, compared to 1999. Lower fuel expense accounted for all of the reduction, declining $103.6 million from 1999, despite a 7% increase in output

from our generating units. Factors contributing to lower fuel expense in 2000 included:

- A higher proportion of nuclear generation (which has lower unit fuel costs than fossil fuel) due to improved nuclear availability and increased nuclear ownership from the exchange of generating assets with Duquesne Light Company (Duquesne) in December 1999;
- The expiration of an above-market coal contract at the end of 1999; and
- Continued improvement of coal-blending strategies, which resulted in the use of additional lower-cost western coal and enhanced the efficiency and cost-competitiveness of our fossil generation fleet.

Purchased power costs increased $27.9 million in 2000 from the prior year due to higher average prices and to additional megawatt-hours purchased. In 1999, fuel and purchased power costs were down $106.7 million, compared to 1998. The EUOC purchased power costs accounted for all of the reduction. Much of the improvement was due to the absence in 1999 of unusual conditions experienced in 1998, which resulted in an additional $77.4 million of purchased power costs in that year. The costs were incurred during a period of record heat and humidity in late June 1998, which coincided with a regional power shortage resulting in high prices for purchased power. Unscheduled outages at several of our power plants at that time required the EUOC to purchase significant amounts of power on the spot market. Although above normal temperatures were also experienced in 1999, the EUOC maintained a stronger capacity position compared to the previous year and better met customer demand from their own generation resources.

Other expenses for the EUOC rose $26.6 million in 2000, compared to 1999, primarily due to additional nuclear refueling costs associated with three refueling outages in 2000 versus two during the previous year and increased nuclear ownership resulting from the Duquesne asset swap. Costs incurred to improve the availability of our fossil generation fleet and leased portable diesel generators, acquired as part of our summer supply strategy, added to other expenses for the EUOC in 2000, compared to 1999. Also, we incurred unusual charges in 2000 for early retirement program costs, as well as increased reserves for potentially uncollectible accounts for customers in the steel sector who are experiencing significant financial pressures from foreign steel competition. Partially offsetting the higher costs were increased gains of $38.5 million realized from the sale of emission allowances in 2000 as well as nonrecurring costs recorded in the prior year.

In 1999, other expenses for the EUOC increased from 1998 due to several factors. Similar to 2000, refueling outage costs and incremental expenses related to the asset swap, which occurred in early December 1999, contributed to increase other expenses in 1999 compared to 1998. Additionally, nuclear costs in 1999 included nonrecurring swap-related liabilities assumed. Also contributing to the increase were higher customer, sales and marketing expenses resulting from marketing programs and information system costs; higher distribution expenses from storm damage, as well as line and meter maintenance; and a nonrecurring expense related to a change in employee vacation benefits.

Other expenses for unregulated businesses rose $789.6 million in 2000, compared to 1999. FETS contributed to the increase with its other expenses rising in line with its higher revenues, reflecting the continued expansion of its operations to support our retail marketing efforts. FETS expenses were significantly lower in 1999 due to the absence of costs incurred in 1998 associated with credit losses and replacement power costs resulting from the period of sharp price increases in the spot market for electricity in late June 1998. Refocusing FETS activities in 1999 on supporting our retail market activities also reduced expenses from the preceding year.

Acquisitions of three natural gas companies in 1999 and a general expansion of unregulated sales activity combined to increase the scope, and therefore, the operating expenses of our unregulated business activities in 2000. Also, increased reserves for potential uncollectible accounts were established for customers in the steel sector. In addition, a $10.5 million reserve was recognized in 2000 for potential construction contract losses. The acquisitions in the facilities services and natural gas businesses, as well as costs attributable to unregulated sales activity, combined to increase other expenses in 1999, compared to the previous year.

Depreciation and amortization was reduced by $9.8 million in the second half of 2000, following approval by the Public Utilities Commission of Ohio (PUCO) of the Ohio transition plan (see Outlook).

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR (Continued)

5. If any tax (exclude Federal and State income taxes)- covers more then one year, show the required information separately for each tax year, identifying the year in column (a).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (i) through (l) how the taxes were distributed. Report in column (l) only the amounts charged to Accounts 408.1 and 409.1 pertaining to electric operations. Report in column (l) the amounts charged to Accounts 408.1 and 109.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (l) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.

NONUTILITY PROPERTY (Account 121)

1. Give a brief description and state the location of Nonutility property included in Account 121.
2. Designate with a double asterisk any property which is Leased to another company. State name of Lessee and whether Lessee is an associated company.
3. Furnish particulars (details) concerning sales, purchases, or transfers of Nonutility Property during the year.
4. List separately all property previously devoted to public service and give date of transfer to Account 121, Nonutility Property.
5. Minor Items (5% of the Balance at the End of the Year), for Account 121 or $100,000, whichever is Less) may be-grouped by (1) previously devoted to public service (Line 44), or (2) other Nonutility property (Line 45).

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

Section A. Balances and Changes During Year

Injuries and Damages

(a) The Company carries only excess insurance coverage for injuries and damages and makes direct settlement for all claims of employees and the public except for the amount of such claims coming under the excess policy. An amount is charged to construction based on actual experience, to reflect the entire costs with respect to claims in connection with construction. The amount so charged is adjusted as necessary, based on experience.

(b) Each month the amount so determined to be applicable to construction is distributed pro rata to construction projects, on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects, which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Taxes

Payroll Taxes

(a) Federal and state payroll taxes are charged to construction on the basis of total salaries and wages charged thereto.

(b) Each month the amount so charged is distributed pro rata to construction projects on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Sales and Excise Taxes

Sales and excise taxes charged to construction are recorded as part of the costs of materials and equipment.

Legal Expenses

Legal services and expenses applicable to specific construction projects are charged directly to such construction projects.

Schedule Page: 218 Line No.: 1 Column: OH exp

Engineering and Supervision

(a) The actual time of employees devoted to the planning, design and supervision of construction projects, together with amounts paid for outside professional engineering services, is charged to such projects to the extent possible.

(b) Other actual time of employees devoted to the engineering of construction, together with amounts paid for outside professional engineering services, is accumulated in distributable construction work in progress (projects functionalized by transmission, distribution, etc.) by direct charges from payrolls, invoices, vouchers, etc. Each month such charges to the distributable projects are distributed to each construction project included in such functional group on the basis of a percentage of direct labor and material charges to each construction project, except that no distribution is made to projects which are direct purchases of equipment only.

(c) The portion of engineering and construction supervision salaries not specifically chargeable to projects covered in (a) and (b), together with clerical salaries and expenses which are applicable to construction, are accumulated in a construction work in progress project and distributed each month to all construction projects on the basis of a percentage of labor charges.

(d) The amount of engineering and supervision so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

General Administration

Administrative Expenses

(a) Based on a study with respect to work performed by general officers and other general employees who devote a portion of their time to construction, or matters pertaining thereto, a portion of their salaries and expenses and general office supplies and expenses considered to be applicable to construction is charged thereto.

(b) Each month the amount so determined is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Employee Pensions and Benefits

(a) A study is made to determine the percentage of the total salaries and wages for the year which is applicable to construction, and such percentage is applied to the total pension and benefit costs for the year to determine the amount thereof applicable to construction.

(b) Each month, (i) the applicable portion of the amount determined to be applicable to construction, exclusive of the amount related to the salaries transferred from Administrative Expenses, is distributed pro rata to construction projects on the basis of payroll charges thereto and (ii) the applicable portion of the amount related to the salaries of employees transferred from Administrative Expenses is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering and supervision except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

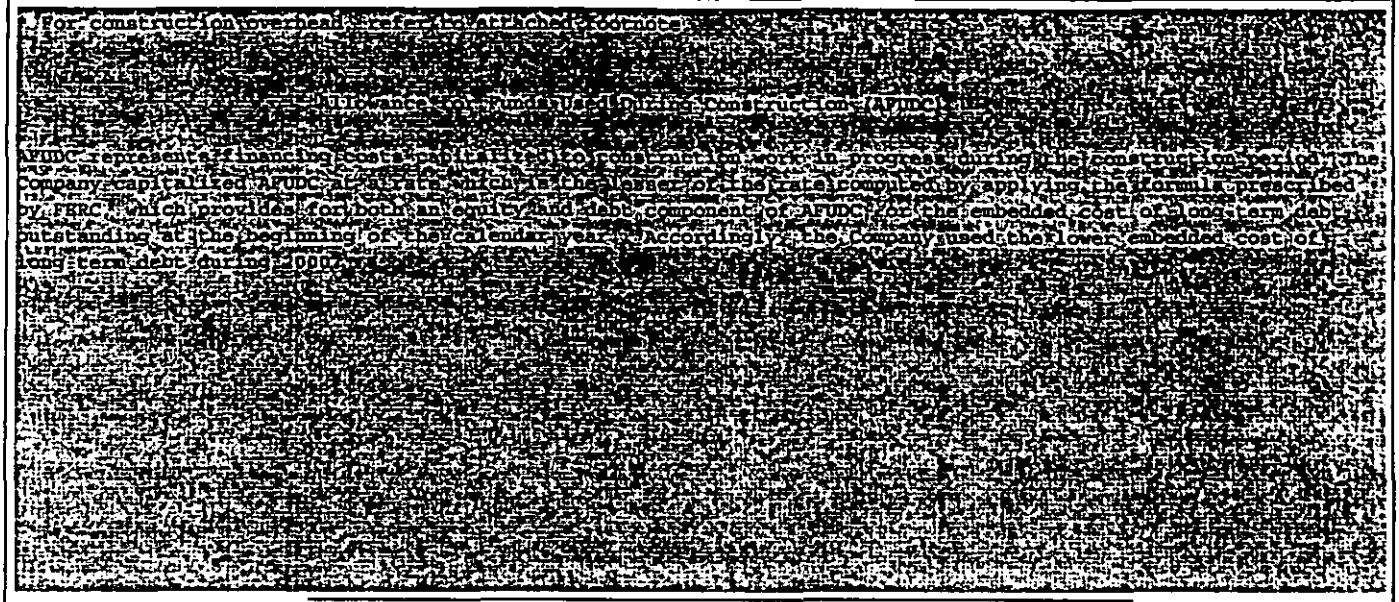
GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.



COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)		Amount (b)	Capitalization Ratio(Percent) (c)		Cost Rate Percentage (d)
1	Average Short-Term Debt & Computation of Allowance text	S	322,440,570			
2	Short-term Interest				s	6.68
3	Long-Term Debt	D	2,120,901,674	40.75	d	7.18
4	Preferred Stock	P	295,065,000	5.66	p	7.80
5	Common Equity	C	2,795,218,550	53.64	c	13.21
6	Total Capitalization		5,211,185,224	100%		
7	Average Construction Work in Progress Balance	W	176,309,741			

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ 9.79

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ 0.00

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 7.18
   b. Rate for Other Funds - 0.00

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

Line No.	Description of overhead (a)	Total amount charged for the year (b)

CONSTRUCTION WORK IN PROGRESS - - ELECTRIC (Account 107)

1. Report below descriptions and balances at end of year of projects in process of construction (107)
2. Show items relating to "research, development, and demonstration" projects last, under a caption Research, Development, and Demonstrating (see Account 107 of the Uniform System of Accounts)
3. Minor projects (5% of the Balance End of the Year for Account 107 or $100,000, whichever is less) may be grouped.

Line No.	Description of Project (a)	Construction work in progress - Electric (Account 107) (b)

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

The FirstEnergy plan's health care trend rate assumption is 7.2% in 2001, 7.0% in 2002 and 6.5% in 2003, trending to 5.0% - 5.5% in later years. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plan. An increase in the health care trend rate assumption by one percentage point would increase the total service and interest cost components by $7,493,646 and the postretirement benefit obligation by $94,415,205. A decrease in the same assumption by one percentage point would decrease the total service and interest cost components by $8,541,955 and the postretirement benefit obligation by $111,015,529.

18 - BASIS OF FINANCIAL STATEMENT PRESENTATION

The accompanying financial statements were prepared in accordance with the accounting requirements set forth in the Uniform System of Accounts and published accounting releases of the FERC, which is a comprehensive basis of accounting other than GAAP. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses during the reporting period.

Recognized net actuarial loss (gain)	(9,095,535)	--	--	--
Voluntary early retirement program expense	17,243,000	--	--	--
Net benefit cost	$ (42,844,413)	$ (40,044,599)	$ 68,981,112	$ 62,119,270
Company's share of total plan costs	$ (15,496,620)	$ (12,119,498)	$ 17,186,568	$ 18,041,301

Company has recovered approximately $83,000,000 for decommissioning through its electric rates from customers through December 31, 2000. The Company has also recognized an estimated liability of approximately $8,200,000 related to decontamination and decommissioning of nuclear enrichment facilities operated by the DOE, as required by the Energy Policy Act of 1992.

DOE special assessment activities during 2000 and 1999, respectively, were: Account 518 expenses: $1,167,108 and $1,141,268; payments: $1,206,922 and $1,167,108; and refunds: $0 for both years.

The Financial Accounting Standards Board (FASB) issued a proposed accounting standard for nuclear decommissioning costs in 1996. If the standard is adopted as proposed: (1) annual provisions for decommissioning could change; (2) the net present value of estimated decommissioning costs could be recorded as a liability; and (3) income from the external decommissioning trusts could be reported as investment income. The FASB subsequently expanded the scope of the proposed standard to include other closure and removal obligations related to long-lived assets. A final pronouncement is expected in the second quarter of 2001 and is anticipated to be implemented on January 1, 2002.

17 - RETIREMENT BENEFITS

FirstEnergy's trusteed, noncontributory defined benefit pension plan covers almost all of the Company's full-time employees. Upon retirement, employees receive a monthly pension based on length of service and compensation. The Company uses the projected unit credit method for funding purposes and was not required to make pension contributions during the two years ended December 31, 2000. The assets of the FirstEnergy pension plan consist primarily of common stocks, United States government bonds and corporate bonds.

The Company provides a minimum amount of noncontributory life insurance to retired employees in addition to optional contributory insurance. Health care benefits, which include certain employee deductibles and copayments, are also available to retired employees, their dependents and, under certain circumstances, their survivors. The Company pays insurance premiums to cover a portion of these benefits in excess of set limits; all amounts up to the limits are paid by the Company. The Company recognizes the expected cost of providing other postretirement benefits to employees and their beneficiaries and covered dependents from the time employees are hired until they become eligible to receive those benefits.

The following sets forth the funded status of the plans and amounts recognized on FirstEnergy's Consolidated Balance Sheets as of December 31:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Change in benefit obligation:				
Benefit obligation as of January 1	$1,394,106,439	$1,500,134,952	$608,426,051	$601,269,566
Service cost	27,421,692	28,296,067	11,349,407	9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Plan amendments	41,347,358	--	--	--
Actuarial loss (gain)	17,264,015	(155,585,368)	121,680,323	(17,583,693)
Net increase from asset swap	--	14,800,000	--	12,524,600
Voluntary early retirement program expense	23,353,000	--	--	--
Benefits paid	(102,221,644)	(95,534,268)	(35,097,490)	(37,818,560)
Benefit obligation as of December 31	1,506,055,538	1,394,106,439	752,028,957	608,426,051

2006 for the Company, except where a longer period of recovery is provided for in the settlement agreement. The Company will also give preferred access over FirstEnergy's subsidiaries to nonaffiliated marketers, brokers and aggregators to 560 megawatts of generation capacity through 2005 at established prices for sales to the Company's retail customers. The base electric rates for distribution service for the Company under its prior regulatory plan will be extended from December 31, 2005 through December 31, 2007. The transition rate credits for customers under its prior regulatory plan will also be extended through the transition cost recovery period.

The application of Statement of Financial Accounting Standards (SFAS) No. 71, "Accounting for the Effects of Certain Types of Regulation" (SFAS 71), to the Company's generation business was discontinued with the issuance of the PUCO transition plan order. The Securities and Exchange Commission (SEC) issued interpretive guidance regarding asset impairment measurement that concluded any supplemental regulated cash flows such as a competitive transition charge (CTC) should be excluded from the cash flows of assets in a portion of the business not subject to regulatory accounting practices. If those assets are impaired, a regulatory asset should be established if the costs are recoverable through regulatory cash flows. Consistent with the SEC guidance $1,200,000,000 of impaired plant investments were recognized by the Company as regulatory assets recoverable as transition costs through future regulatory cash flows.

The settlement agreement provides to the Company's customers an additional incentive applied to the generation shopping credit of 45% for residential customers, 30% for commercial customers and 15% for industrial customers as reductions from their bills, when they select alternative energy providers (the credits exceed the price the Company will be offering to electricity suppliers relating to the 560 megawatts described above). The amount of the incentive will serve to reduce the amortization of transition costs during the market development period and will be recovered over the remaining transition cost recovery period. If the customer switching targets established in the settlement agreement are not achieved by the end of 2005, the transition cost recovery period could be shortened for the Company to reduce recovery by as much as $250,000,000, but any such adjustment would be computed on a class-by-class and pro-rata basis.

Net assets included in utility plant relating to the operations for which the application of SFAS 71 was discontinued were $1,075,000,000, compared to the Company's total assets as of December 31, 2000 of $7,422,000,000.

All of the Company's regulatory assets will continue to be recovered under provisions of the Ohio transition plan. Under the previous regulatory plan, the PUCO had authorized the Company to recognize additional capital recovery related to its generating assets (which was reflected as additional depreciation expense) and additional amortization of regulatory assets during the prior regulatory plan period of at least $2,000,000,000. These additional amounts were being recovered through rates. As of December 31, 2000, the Company's cumulative additional capital recovery and regulatory asset amortization amounted to $1,158,000,000.

16 - DEPRECIATION

The Company provides for depreciation on a straight-line basis at various rates over the estimated lives of property included in plant in service. The annual composite rate for the Company's electric plant was approximately 2.8% in 2000 and 3.0% in 1999. In addition to the straight-line depreciation recognized in 2000 and 1999, the Company recognized additional capital recovery of $106,000,000 and $92,000,000, respectively, as additional depreciation expense in accordance with its regulatory plan. This amount was included in the 2000 transfer of accumulated depreciation included in the Company's impaired plant investment recognized as regulatory assets as discussed in "Regulatory Plan" above.

Annual depreciation expense in 2000 included approximately $6,200,000 for future decommissioning costs applicable to the Company's ownership and leasehold interests in three nuclear generating units. Annual decommissioning costs will increase by approximately $28,000,000 from implementing the Company's transition plan in 2001. The Company's share of the future obligation to decommission these units is approximately $462,000,000 in current dollars and (using a 4.0% escalation rate) approximately $1,205,000,000 in future dollars. The estimated obligation and the escalation rate were developed based on site specific studies. Payments for decommissibning are expected to begin in 2016, when actual decommissioning work begins. The

The fair values of long-term debt and preferred stock reflect the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective year. The yields assumed were based on securities with similar characteristics offered by a corporation with credit ratings similar to the Company's ratings.

The fair value of investments other than cash and cash equivalents represent cost (which approximates fair value) or the present value of the cash inflows based on the yield to maturity. The yields assumed were based on financial instruments with similar characteristics and terms. Investments other than cash and cash equivalents include decommissioning trust investments. Unrealized gains and losses applicable to the decommissioning trust have been recognized in the trust investment with corresponding changes to the decommissioning liability. The Company has no securities held for trading purposes.

15 - REGULATORY PLAN

The Public Utilities Commission of Ohio (PUCO) approved the Company's Rate Reduction and Economic Development Plan in 1995. This regulatory plan was to maintain then current base electric rates for the Company through December 31, 2005. At the end of the regulatory plan period, the Company's base rates were to be reduced by $300,000,000 (approximately 20 percent below then current levels). The plan also revised the Company's fuel cost recovery method so that the Company's fuel rates would be frozen through the regulatory plan period, subject to limited periodic adjustments. As part of the Company's regulatory plan, transition rate credits were implemented for customers, which were expected to reduce operating revenues for the Company by approximately $600,000,000 during the regulatory plan period. The regulatory plan was terminated at the end of 2000 concurrent with the implementation of the FirstEnergy transition plan as described further below.

In July 1999, Ohio's electric utility restructuring legislation, which allowed Ohio electric customers to select their generation suppliers beginning January 1, 2001, was signed into law. Among other things, the legislation provides for a five percent reduction on the generation portion of residential customers' bills and the opportunity to recover transition costs, including regulatory assets, from January 1, 2001 through December 31, 2005. The period for the recovery of regulatory assets only can be extended up to December 31, 2010. The PUCO was authorized to determine the level of transition cost recovery, as well as the recovery period for the regulatory assets portion of those costs, in considering each Ohio electric utility's transition plan application.

FirstEnergy, on behalf of its Ohio electric utility operating companies -- the Company, CEI and TE -- filed its transition plan under Ohio's new electric utility restructuring law in late 1999. The filing also included additional information on FirstEnergy's plans to turn over control, and perhaps ownership, of its transmission assets to the Alliance Regional Transmission Organization. The transition plan itemized, or unbundled, the current price of electricity into its component elements -- including generation, transmission, distribution and transition charges. As required by the PUCO's rules, FirstEnergy's transition plan also included its proposals on corporate separation of its regulated and unregulated operations, operational and technical support changes needed to accommodate customer choice, an education program to inform customers of their options under the new law, and how FirstEnergy's transmission system will be operated to ensure access to all users. Customer prices would be frozen through a five-year market development period (2001-2005), except for certain limited statutory exceptions including the five percent reduction in the price of generation for residential customers. The plan proposed recovery of the Company's generation-related transition costs of approximately $1,769,245,000 ($1,608,448,000, net of deferred income taxes) and its transition costs related to regulatory assets aggregating approximately $1,505,540,000 ($1,004,721,000, net of deferred income taxes).

On July 19, 2000, the PUCO approved FirstEnergy's transition plan as modified by a settlement agreement with major parties to the transition plan. Major parties to the settlement agreement included the PUCO staff, the Ohio Consumers' Counsel, the Industrial Energy Users-Ohio, certain power marketers and others. Major provisions of the settlement agreement consisted of approval of recovery of transition costs in the amounts filed in the transition plan through no later than

Notes Common to Balance Sheet, Income Statement and Statement of Cash Flows

14 - SUPPLEMENTAL CASH FLOWS INFORMATION

Cash and Cash Equivalents at December 31, 2000:

Account	Account Title	
131	Cash	$ 13,080,058
134	Special Deposits	22,530
135	Working Funds	175,287
136	Temporary Cash Investments	314,800
		$ 13,592,675

Operating Activities:

Interest Paid (net of amounts capitalized	$ 160,695,901
Income Taxes Paid	$ 262,224,707

Investing Activities:

Gross Additions to Utility Plant	$ 192,011,652
Capital Leases - Electric	1,310,503
	$ 193,322,155
Capital Leases - Nuclear Fuel	$ 36,595,055
Gross Reductions to Nonutility Plant	$ 167,583

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Balance Sheets. The Company reflects temporary cash investments at cost, which approximates their market value.

All borrowings with initial maturities of less than one year are defined as financial instruments under accounting principles generally accepted in the United States (GAAP) and are reported on the Balance Sheets at cost, which approximates their fair market value. The following sets forth the approximate fair value and related carrying amounts of all other long-term debt, preferred stock subject to mandatory redemption and investments other than cash and cash equivalents as of December 31:

	2000		1999	
	Carrying Value	Fair Value	Carrying Value	Fair Value
	(In thousands)			
Long-term debt	$ 1,951,601	$ 1,993,878	$ 2,200,112	$ 2,180,005
Preferred stock	$ 5,000	$ 4,850	$ 10,000	$ 10,242
Investments other than cash and cash equivalents				
Debt securities				
- Maturity (5-10) years	$ 181,659	$ 185,430	$ 197,636	$ 184,430
- Maturity (more than 10 years)	430,008	477,779	257,630	266,749
All other	203,305	204,114	172,815	174,968
	$ 814,972	$ 867,323	$ 628,081	$ 626,147

Notes to Income Statement

9 - REVENUES

The Company's principal business is providing electric service to customers in central and northeastern Ohio. The Company's retail customers are metered on a cycle basis. Revenue is recognized for unbilled electric service through the end of the year.

10 - NUCLEAR FUEL

The Company amortizes the cost of nuclear fuel based on the rate of consumption.

11 - RENTAL PAYMENTS

Consistent with the regulatory treatment, the rentals for capital and operating leases are charged to operating expenses on the Statements of Income. Such costs for the two years ended December 31, 2000, are summarized as follows:

	2000	1999
Operating leases		
Interest element	$106,637,886	$107,897,500
Other	34,190,197	32,801,046
Capital leases		
Interest element	2,175,726	4,694,734
Other	2,335,175	3,861,609
Total rental payments	$145,338,984	$149,254,889

12 - ANNUAL REPORT TO STOCKHOLDERS

Following are the reclassification entries which have been reflected in the Company's Income Statements for the years ended December 31, 2000 and 1999, in the 2000 Annual Report to Stockholders:

	December 31,			
	2000		1999	
	Dr.	Cr.	Dr.	Cr.
Regulatory credits	$ 8,922,333		$ 9,606,485	
Provision for deferred income taxes - operating income	46,939,863		30,896,140	
Regulatory debits		$ 55,862,196		$ 40,502,625

To reclassify deferred taxes related to the amortization of net regulatory assets.

13 - TRANSACTIONS WITH AFFILIATED COMPANIES

Operating revenues and operating expenses include transactions with Penn Power, CEI and The Toledo Edison Company (TE), which were primarily for electric sales and ATSI transmission rent expense of $27,331,530 starting in 2000. The amounts related to Penn Power, CEI and TE were $1,079,187, $20,870,004 and $6,565,962, respectively, for 2000 and $5,613,752, $23,394,266 and $16,422,762, respectively, for 1999. Other income included $4,475,128 of interest income from ATSI beginning in 2000.

FirstEnergy provides support services at cost to the Company, for which the Company was billed $91,625,000 and $89,881,000 in 2000 and 1999, respectively.

	December 31, 2000 Dr.	2000 Cr.	1999 Dr.	1999 Cr.

To net postretirement benefit asset (Voluntary Employee Benefit Trust) with obligation.				

and the NOV and complaint are without merit. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while these proceedings are pending.

In December 2000, the EPA announced it would proceed with the development of regulations regarding hazardous air pollutants from electric power plants. The EPA identified mercury as the hazardous air pollutant of greatest concern. The EPA established a schedule to propose regulations by December 2003 and issue final regulations by December 2004. The future cost of compliance with these regulations may be substantial.

As a result of the Resource Conservation and Recovery Act of 1976, as amended, and the Toxic Substances Control Act of 1976, federal and state hazardous waste regulations have been promulgated. Certain fossil-fuel combustion waste products, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation. The EPA has issued its final regulatory determination that regulation of coal ash as a hazardous waste is unnecessary. On April 25, 2000, the EPA announced that it will develop national standards regulating disposal of coal ash under its authority to regulate nonhazardous waste.

8 - ANNUAL REPORT TO STOCKHOLDERS

Following are the reclassification entries which have been reflected in the Company's Balance Sheets as of December 31, 2000 and 1999 in the 2000 Annual Report to Stockholders.

	December 31, 2000 Dr.	December 31, 2000 Cr.	December 31, 1999 Dr.	December 31, 1999 Cr.
Long-term debt	$303,212,717		$385,370,312	
Preferred stock	5,000,000		5,000,000	
Currently payable long-term debt and preferred stock		$308,212,717		$390,370,312
To reclassify long-term debt and sinking fund requirements for preferred stock due within one year.

Other deferred credits		138,861,590		131,274,501
To reclassify accumulated provision for injuries and damages, pensions and benefits, United States Department of Energy (DOE) Decommissioning and Decontamination, and energy efficient provisions to other deferred credits.				

Environmental Matters --

Various federal, state and local authorities regulate the Company with regard to air and water quality and other environmental matters. In accordance with the Ohio transition plan discussed in "Regulatory Plan" in Note 15, generation operations and any related additional capital expenditures for environmental compliance are the responsibility of FirstEnergy's competitive services business unit.

The Company is required to meet federally approved sulfur dioxide (SO2) regulations. Violations of such regulations can result in shutdown of the generating unit involved and/or civil or criminal penalties of up to $27,500 for each day the unit is in violation. The Environmental Protection Agency (EPA) has an interim enforcement policy for SO2 regulations in Ohio that allows for compliance based on a 30-day averaging period. The Company cannot predict what action the EPA may take in the future with respect to the interim enforcement policy.

The Company is in compliance with the current SO2 and nitrogen oxides (NOx) reduction requirements under the Clean Air Act Amendments of 1990. SO2 reductions are being achieved by burning lower-sulfur fuel, generating more electricity from lower-emitting plants, and/or using emission allowances. NOx reductions are being achieved through combustion controls and the generation of more electricity at lower-emitting plants. In September 1998, the EPA finalized regulations requiring additional NOx reductions from the Company's Ohio and Pennsylvania facilities. The EPA's NOx Transport Rule imposes uniform reductions of NOx emissions (an approximate 85% reduction in utility plant NOx emissions from projected 2007 emissions) across a region of twenty-two states and the District of Columbia, including Ohio and Pennsylvania, based on a conclusion that such NOx emissions are contributing significantly to ozone pollution in the eastern United States. In March 2000, the U.S. Court of Appeals for the D.C. Circuit upheld EPA's NOx Transport Rule except as applied to the State of Wisconsin and portions of Georgia and Missouri. By October 2000, states were to submit revised State Implementation Plans (SIP) to comply by May 31, 2004 with individual state NOx budgets established by the EPA. Pennsylvania recently submitted a SIP that requires compliance with the NOx budgets at the Company's Pennsylvania facilities by May 1, 2003 and Ohio submitted a "draft" SIP that requires compliance with the NOx budgets at the Company's Ohio facilities by May 31, 2004. A Federal Implementation Plan accompanied the NOx Transport Rule and may be implemented by the EPA in states which fail to revise their SIP. In another separate but related action, eight states filed petitions with the EPA under Section 126 of the Clean Air Act seeking reductions of NOx emissions which are alleged to contribute to ozone pollution in the eight petitioning states. The EPA position is that the Section 126 petitions will be adequately addressed by the NOx Transport Program, but a December 17, 1999 rulemaking established an alternative program which would require nearly identical 85% NOx reductions at 392 utility plants, including the Company's Ohio and Pennsylvania plants, by May 2003, in the event implementation of the NOx Transport Rule is not implemented by a state. Additional Section 126 petitions were filed by New Jersey, Maryland, Delaware and the District of Columbia in mid-1999 and are still under evaluation by the EPA. FirstEnergy continues to evaluate its compliance plans and other compliance options.

In July 1997, the EPA promulgated changes in the National Ambient Air Quality Standard (NAAQS) for ozone emissions and proposed a new NAAQS for previously unregulated ultra-fine particulate matter. In May 1999, the U.S. Court of Appeals found constitutional and other defects in the new NAAQS rules. In February 2001, the U.S. Supreme Court upheld the new NAAQS rules regulating ultra-fine particulates but found defects in the new NAAQS rules for ozone and decided that the EPA must revise those rules. The future cost of compliance with these regulations may be substantial and will depend on the manner in which they are ultimately implemented, if at all, by the states in which the Company operates affected facilities.

In 1999 and 2000, the EPA issued Notices of Violation (NOV) or a Compliance Order to nine utilities covering 44 power plants, including the W. H. Sammis Plant. In addition, the U.S. Department of Justice filed eight civil complaints against various investor-owned utilities, which included a complaint against the Companies in the U.S. District Court for the Southern District of Ohio. The NOV and complaint allege violations of the Clean Air Act based on operation and maintenance of the Sammis Plant dating back to 1984. The complaint requests permanent injunctive relief to require the installation of "best available control technology" and civil penalties of up to $27,500 per day of violation. Although unable to predict the outcome of these proceedings, the Company believes the Sammis Plant is in full compliance with the Clean Air Act

6 - SHORT-TERM BORROWINGS

Short-term borrowings outstanding as of December 31, 2000, consisted of $47,500,000 of bank borrowings and $248,800,000 of borrowings from associated companies.

The Company has lines of credit with domestic banks that provide for borrowings of up to $55,000,000 under various interest rate options. Short-term borrowings may be made under these lines of credit on its unsecured notes. To assure the availability of these lines, the Company is required to pay annual commitment fees of 0.15% to 0.20%. These lines expire at various times during 2001.

The Company has a credit agreement with Pennsylvania Power Company (Penn Power) whereby either company can borrow funds from the other by issuing unsecured notes at the prevailing prime or similar interest rate. Under the terms of this agreement the maximum borrowing is limited only by the availability of funds; however, Penn Power's borrowing under this agreement is currently limited by the Pennsylvania Public Utility Commission to a total of $50,000,000. Either company can terminate the agreement with six months' notice.

The Company has a loan agreement with OES Fuel whereby the Company may borrow funds from OES Fuel as long as OES Fuel's total debt outstanding does not exceed its $180,500,000 long-term bank credit agreement which expires March 31, 2001. The Company intends to extend the credit agreement through March 31, 2002. As of December 31, 2000, OES Fuel had no financing available to the Company under this agreement.

7 - COMMITMENTS AND CONTINGENCIES

Capital Expenditures --

The Company's current forecast reflects expenditures of approximately $360,000,000 for property additions and improvements from 2001-2005, of which approximately $90,000,000 is applicable to 2001. Investments for additional nuclear fuel during the 2001-2005 period are estimated to be approximately $106,000,000, of which approximately $17,000,000 applies to 2001. During the same periods, the Company's nuclear fuel investments are expected to be reduced by approximately $126,000,000 and $27,000,000, respectively, as the nuclear fuel is consumed.

Nuclear Insurance --

The Price-Anderson Act limits the public liability relative to a single incident at a nuclear power plant to $9,500,000,000. The amount is covered by a combination of private insurance and an industry retrospective rating plan. Based on its ownership and leasehold interests in the Beaver Valley Station and the Perry Plant, the Company's maximum potential assessment under the industry retrospective rating plan (assuming the other affiliate co-owners contribute their proportionate shares of any assessments under the retrospective rating plan) would be $94,200,000 per incident but not more than $10,700,000 in any one year for each incident.

The Company is also insured as to its respective interest in Beaver Valley and Perry under policies issued to the operating company for each plant. Under these policies, up to $2,750,000,000 is provided for property damage and decontamination and decommissioning costs. The Company has also obtained approximately $210,000,000 of insurance coverage for replacement power costs for its respective interests in Beaver Valley and Perry. Under these policies, the Company can be assessed a maximum of approximately $10,300,000 for incidents at any covered nuclear facility occurring during a policy year which are in excess of accumulated funds available to the insurer for paying losses.

The Company intends to maintain insurance against nuclear risks as described above as long as it is available. To the extent that replacement power, property damage, decontamination, decommissioning, repair and replacement costs and other such costs arising from a nuclear incident at any of the Company's plants exceed the policy limits of the insurance in effect with respect to that plant, to the extent a nuclear incident is determined not to be covered by the Company's insurance policies, or to the extent such insurance becomes unavailable in the future, the Company would remain at risk for such costs.

Company Obligated Mandatorily Redeemable Preferred Securities of Subsidiary Trust Holding Solely Company Subordinated Debentures --

Ohio Edison Financing Trust, a wholly owned subsidiary of the Company, has issued $120,000,000 of 9% Cumulative Trust Preferred Capital Securities. The Company purchased all of the Trust's Common Securities and simultaneously issued to the Trust $123,711,350 principal amount of 9% Junior Subordinated Debentures due 2025 in exchange for the proceeds that the Trust received from its sale of Preferred and Common Securities. The sole assets of the Trust are the Subordinated Debentures whose interest and other payment dates coincide with the distribution and other payment dates on the Trust Securities. Under certain circumstances the Subordinated Debentures could be distributed to the holders of the outstanding Trust Securities in the event the Trust is liquidated. The Subordinated Debentures may be optionally redeemed by the Company at a redemption price of $25 per Subordinated Debenture plus accrued interest, in which event the Trust Securities will be redeemed on a pro rata basis at $25 per share plus accumulated distributions. The Company's obligations under the Subordinated Debentures along with the related Indenture, amended and restated Trust Agreement, Guarantee Agreement and the Agreement for expenses and liabilities, constitute a full and unconditional guarantee by the Company of payments due on the Preferred Securities.

Long-Term Debt --

The first mortgage indenture and its supplements, which secure all of the Company's first mortgage bonds, serve as direct first mortgage liens on substantially all property and franchises, other than specifically excepted property, owned by the Company.

Based on the amount of bonds authenticated by the Trustee through December 31, 2000, the Company's annual sinking and improvement fund requirement for all bonds issued under the mortgage amounts to $30,056,000. The Company expects to deposit funds in 2001 that will be withdrawn upon the surrender for cancellation of a like principal amount of bonds, which are specifically authenticated for such purposes against unfunded property additions or against previously retired bonds. This method can result in minor increases in the amount of the annual sinking fund requirement.

Sinking fund requirements for first mortgage bonds and maturing long-term debt (excluding capital leases) for the next five years are:

2001	$303,213,000
2002	423,027,000
2003	206,691,000
2004	216,342,000
2005	134,409,000

The Company's obligations to repay certain pollution control revenue bonds are secured by several series of first mortgage bonds. Certain pollution control revenue bonds are entitled to the benefit of irrevocable bank letters of credit of $214,709,000 and noncancelable municipal bond insurance policies of $136,500,000 to pay principal of, or interest on, the pollution control revenue bonds. To the extent that drawings are made under the letters of credit, the Company is entitled to a credit against its obligation to repay those bonds. The Company pays annual fees of 0.60% to 1.25% of the amounts of the letters of credit to the issuing banks and are obligated to reimburse the banks for any drawings thereunder.

The Company had unsecured borrowings of $100,000,000 at December 31, 2000, supported by a $250,000,000 long-term revolving credit facility agreement which expires November 18, 2002. The Company must pay an annual facility fee of 0.20% on the total credit facility amount. In addition, the credit agreement provides that the Company maintain unused first mortgage bond capability for the full credit agreement amount under the Company's indenture as potential security for the unsecured borrowings.

The future minimum rental commitments for all leases as of December 31, 2000, are:

	Capital Leases	Operating Leases: Lease Payments	Operating Leases: PNBV Capital Trust	Operating Leases: Net
		(In thousands)		
2001	$ 10,226	$ 127,015	$ 59,463	$ 67,552
2002	9,679	130,276	60,981	69,295
2003	9,496	136,756	62,621	74,135
2004	9,600	137,627	58,282	79,345
2005	9,599	138,529	56,341	82,188
Years thereafter	112,582	1,550,894	474,605	1,076,289
Total minimum lease payments	161,182	$2,221,097	$772,293	$1,448,804
Executory costs	10,167			
Net minimum lease payments	151,015			
Interest portion	8,394			
Present value of net minimum lease payments	$142,621			

The Company invested in the PNBV Capital Trust, which was established to purchase a portion of the lease obligation bonds issued on behalf of lessors in the Company's Perry Unit 1 and Beaver Valley Unit 2 sale and leaseback transactions. The PNBV capital trust arrangement effectively reduces lease costs related to those transactions.

OES Finance, Incorporated (OES Finance), a wholly owned subsidiary of the Company, maintains deposits pledged as collateral to secure reimbursement obligations relating to certain letters of credit supporting the Company's obligations to lessors under the Beaver Valley Unit 2 sale and leaseback arrangements. The deposits pledged to the financial institution providing those letters of credit are the sole property of OES Finance. In the event of liquidation, OES Finance, as a separate corporate entity, would have to satisfy its obligations to creditors before any of its assets could be made available to the Company as sole owner of OES Finance common stock.

5 - CAPITALIZATION

Retained Earnings --

Under the Company's first mortgage indenture, the Company's retained earnings unrestricted for payment of cash dividends on the Company's common stock were $391,443,000 at December 31, 2000.

Preferred and Preference Stock --

The Company's 8.45% series of preferred stock has no optional redemption provision. All other preferred stock may be redeemed by the Company in whole, or in part, with 30-60 days' notice.

The Company has 8,000,000 authorized and unissued shares of preference stock having no par value.

The Company's 8.45% series of preferred stock has an annual sinking fund requirement for 50,000 shares.

The Company's preferred shares are retired at $100 per share plus accrued dividends. Annual sinking fund requirements are $5,000,000 in 2001.

Notes to Balance Sheet

1 - UTILITY PLANT

Utility plant reflects the original cost of construction, (except for the Ohio Edison Company's (Company) nuclear generating units which were adjusted to fair value as discussed in "Regulatory Plan" in Note 15), including payroll and related costs such as taxes, employee benefits, administrative and general costs, and interest costs.

On September 1, 2000, the Company sold its transmission assets to FirstEnergy Corp.'s (FirstEnergy) wholly owned subsidiary, American Transmission Systems, Incorporated (ATSI). As a result, ATSI owns and operates FirstEnergy's major high-voltage transmission facilities and has interconnections with other regional utilities.

2 - NUCLEAR FUEL

OES Fuel, Incorporated (OES Fuel), a wholly owned subsidiary of the Company, is the sole lessor for the Company's nuclear fuel requirements. Minimum lease payments during the next five years are estimated to be as follows:

2001	$26,100,000
2002	19,792,000
2003	9,764,000
2004	5,577,000
2005	1,481,000

3 - ACCOUNTS RECEIVABLE

OES Capital, Incorporated (OES Capital), a wholly owned subsidiary of the Company, finances a portion of the Company's receivables. The Company received approximately $1,967,971,000 and $1,963,111,000 in 2000 and 1999, respectively, from the sale of receivables to OES Capital. The balance of receivables sold to OES Capital that remained uncollected at December 31, 2000, was approximately $201,800,000. Under terms of the sales agreement, the Company could be required to repurchase certain of the receivables.

Receivables from customers include sales to residential, commercial and industrial customers located in the Company's service area and sales to wholesale customers. There was no material concentration of receivables at December 31, 2000 or 1999, with respect to any particular segment of the Company's customers.

4 - LEASES

The Company leases certain generating facilities, office space and other property and equipment under cancelable and noncancelable leases.

The Company sold portions of its ownership interest in Perry Unit 1 and Beaver Valley Unit 2 and entered into operating leases on the portions sold for basic lease terms of approximately 29 years. During the terms of the leases, the Company continues to be responsible, to the extent of its individual combined ownership and leasehold interest, for costs associated with the units including construction expenditures, operation and maintenance expenses, insurance, nuclear fuel, property taxes and decommissioning. The Company has the right, at the end of the respective basic lease terms, to renew the leases for up to two years. The Company also has the right to purchase the facilities at the expiration of the basic lease term or renewal term (if elected) at a price equal to the fair market value of the facilities. The basic rental payments are adjusted when applicable federal tax law changes.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

STATEMENT OF RETAINED EARNINGS FOR THE YEAR

1. Report all changes in appropriated retained earnings, unappropriated retained earnings, and unappropriated undistributed subsidiary earnings for the year.
2. Each credit and debit during the year should be identified as to the retained earnings account in which recorded (Accounts 433, 436 - 439 inclusive). Show the contra primary account affected in column (b)
3. State the purpose and amount of each reservation or appropriation of retained earnings.
4. List first account 439, Adjustments to Retained Earnings, reflecting adjustments to the opening balance of retained earnings. Follow by credit, then debit items in that order.
5. Show dividends for each class and series of capital stock.
6. Show separately the State and Federal income tax effect of items shown in account 439, Adjustments to Retained Earnings.
7. Explain in a footnote the basis for determining the amount reserved or appropriated. If such reservation or appropriation is to be recurrent, state the number and annual amounts to be reserved or appropriated as well as the totals eventually to be accumulated.
8. If any notes appearing in the report to stockholders are applicable to this statement, include them on pages 122-123.

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.

7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.

B. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.

9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.

10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

1. None

2. On August 8, 2000, FirstEnergy Corp. (FirstEnergy), the parent of Ohio Edison Company (Company), and GPU, Inc. (GPU), a Pennsylvania corporation, entered into an Agreement and Plan of Merger. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4,500,000,000 in cash and FirstEnergy common stock. The transaction would be accounted for by the purchase method. The merger has been approved by the respective shareholders of FirstEnergy and GPU, the Federal Energy Regulatory Commission (FERC) on March 15, 2001 in Docket No. EC01-22-000, the Nuclear Regulatory Commission, the New York Public Service Commission and the Federal Communications Commission. Other regulatory approvals are pending before the Pennsylvania Public Utility Commission, the New Jersey Board of Public Utilities and the Securities and Exchange Commission.

3. None

4. None

5. On October 27, 1999, the FERC in Docket No. EC99-53-000 approved FirstEnergy's request for an intra-corporate transfer of ownership and operational control of jurisdictional transmission facilities of its electric utility operating companies (Company, Pennsylvania Power Company (Penn), The Cleveland Electric Illuminating Company and The Toledo Edison Company) and the assignment of rights under certain FERC-jurisdictional agreements to a newly formed affiliated company, American Transmission Systems, Inc. (ATSI). On September 1, 2000, the major high-voltage transmission facilities, which consist of approximately 7,100 circuit miles of transmission lines with nominal voltages of 345 Kv, 138 Kv and 69 Kv were sold to ATSI. These facilities will be included in the FERC Form 1 filed by ATSI.

6. See Notes 5 and 6 of Notes to Balance Sheets on pages 123.1 through 123.3 and pages 256 and 257 of this report and footnotes thereof.

7. None

8. The Company granted increases to employees represented by unions which provided for wage adjustments of 2.75% in July and August of 2000. These changes plus changes in salaries of supervisory, administrative and professional employees resulted in an estimated annual wage increase of $2,551,745.

9. In 1999 and 2000, the U.S. Environmental Protection Agency issued Notices of Violation (NOV) or a Compliance Order to nine utilities covering 44 power plants, including the W.H. Sammis Plant. In addition, the U.S. Department of Justice filed eight civil complaints against various investor-owned utilities, which included a complaint against the Company and Penn in the U.S. District Court for the Southern District of Ohio. The NOV and complaint allege violations of the Clean Air Act based on operation and maintenance of the Sammis Plant dating back to 1984. The complaint requests permanent injunctive relief to require the installation of "best available control technology" and civil penalties of up to $27,500 per day of violation. Although unable to predict the outcome of these proceedings, the Company believes the Sammis Plant is in full compliance with the Clean Air Act and the NOV and complaint are without merit. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while these proceedings are pending.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

PAGE 108 INTENTIONALLY LEFT BLANK
SEE PAGE 109 FOR REQUIRED INFORMATION.

Schedule Page: 106 Line No.: 4 Column: d

Whenever four quarterly dividends payable on the Preferred Stock or Class A Preferred Stock of any series shall be in default, in whole or in part, the holders of such issues have the exclusive right to elect the smallest number of Directors which shall constitute a majority of the then authorized number of Directors of the Corporation, and vote in all matters with respect to the governing of the affairs of the Corporation other than the election of Directors.

Schedule Page: 106 Line No.: 4 Column: e

Whenever six quarterly dividends payable on the Preference Stock of any series shall be in default, in whole or in part, the Preference Stockholders, subject to any right of the holders of Preferred Stock and the Class A Preferred Stock to elect a majority of Directors (as discussed above), shall have the exclusive right to elect two Directors of the Corporation, and vote in all matters with respect to the governing of the affairs of the Corporation other than the election of Directors.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
The company did not close the stock book in 2000.	Total: 100 By Proxy: 100	December 19, 2000 FirstEnergy Corp. 76 South Main Street Akron, Ohio 44308

CORPORATIONS CONTROLLED BY RESPONDENT

1. Report below the names of all corporations, business trusts, and similar organizations, controlled directly or indirectly by respondent at any time during the year. If control ceased prior to end of year, give particulars (details) in a footnote.
2. If control was by other means than a direct holding of voting rights, state in a footnote the manner in which control was held, naming any intermediaries involved.
3. If control was held jointly with one or more other interests, state the fact in a footnote and name the other interests.

Definitions
1. See the Uniform System of Accounts for a definition of control.
2. Direct control is that which is exercised without interposition of an intermediary.
3. Indirect control is that which is exercised by the interposition of an intermediary which exercises direct control.
4. Joint control is that in which neither interest can effectively control or direct action without the consent of the other, as where the voting control is equally divided between two holders, or each party holds a veto power over the other. Joint control may exist by mutual agreement or understanding between two or more parties who together have control within the meaning of the definition of control in the Uniform System of Accounts, regardless of the relative voting rights of each party.

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the repondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiearies for whom trust was maintained, and purpose of the trust.

Ohio Edison Company is a wholly owned subsidiary of FirstEnergy Corp., an exempt utility holding company.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Harvey L. Wagner, Controller
76 South Main Street
Akron, Ohio 44308

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Ohio
July 5, 1930

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric Service - Ohio

Title 18, U.S.C. 1001 makes it a crime for any person to knowingly and willingly to make to any Agency or Department of the United States any false, fictitious or fraudulent statements as to any matter within its jurisdiction.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;

(4) "Person" means an individual or a corporation;

(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;

(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."

(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:

(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information.. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

III. What and Where to Submit (Continued)

(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

ARTHUR ANDERSEN

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

To the Board of Directors and Management of Ohio Edison Company:

We have audited the balance sheets - regulatory basis of Ohio Edison Company as of December 31, 2000 and 1999, and the related statements of income - regulatory basis for the years then ended, and the statements of retained earnings - regulatory basis and cash flows - regulatory basis for the year ended December 31, 2000, included on pages 110 through 123.14 of the accompanying Federal Energy Regulatory Commission Form 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 18 these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States.

In our opinion, the financial statements referred to above present fairly, in all material respects, the assets, liabilities and proprietary capital of Ohio Edison Company as of December 31, 2000 and 1999, and the results of its operations for the years then ended, and its cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is intended solely for the information and use of the board of directors and management of Ohio Edison Company and for filing with the Federal Energy Regulatory Commission and should not be used for any other purpose.

ARTHUR ANDERSEN LLP

Cleveland, Ohio,
February 16, 2001.

Total accelerated cost recovery in connection with OE's rate reduction plan and Penn's restructuring plan are summarized by income statement caption in the table below:

Regulatory Plan Accelerations	2000	1999	1998
		(In millions)	
Depreciation and amortization	**$332.6**	$333.3	$172.9
Income tax amortization	**42.6**	18.7	18.5
Total Accelerations	**$375.2**	$352.0	$191.4

The impact of OE's rate reduction plan and Penn's restructuring plan on depreciation and amortization was relatively unchanged in 2000 from 1999. In 1999, accelerated cost recovery in connection with the OE rate reduction plan was the primary factor contributing to the increase in depreciation and amortization, compared to 1998.

Net Interest Charges

We continue to redeem and refinance our outstanding debt and preferred stock, thus maintaining the downward trend in our financing costs during 2000. Interest charges decreased by $43.2 million in 2000 and $28.7 million in 1999, compared to the prior year. Net redemptions of long-term debt and preferred stock totaled $405.9 million and refinancings totaled $284.7 million in 2000.

Effects of SFAS 71 Discontinuation

The application of Statement of Financial Accounting Standards No. (SFAS) 71, "Accounting for the Effects of Certain Types of Regulation," was discontinued for OE's generation business and the nonnuclear generation businesses of CEI and TE effective with the PUCO approval of the Ohio transition plan. Beginning June 30, 2000, the balance sheets of our Ohio EUOC reflected that discontinuance with $1.6 billion of impaired generating plant investment recognized as regulatory assets which will be recovered as transition costs. We expect the incremental amortization of transition costs in 2001 for the Ohio EUOC to be lower than the depreciation and amortization accelerated under OE's former regulatory plan in 2000. The application of SFAS 71 to CEI's and TE's nuclear operations was discontinued in connection with the implementation of their regulatory plan in 1997.

On June 18, 1998, the Pennsylvania Public Utility Commission authorized Penn's rate restructuring plan that resulted in the discontinuation of SFAS 71 to Penn's generation business. Under the plan, Penn's rates were restructured to establish separate charges for transmission and distribution services; generation (which is subject to competition); and stranded cost recovery. A total of $215.4 million of impaired nuclear generating plant investments were recognized as regulatory assets to be recovered through the stranded cost recovery charge. The portion of generating plant investment not recovered through future customer rates resulted in a $30.5 million extraordinary after-tax write-down, or $.13 per FirstEnergy common share.

The EUOC continue to bill and collect cost-based rates for transmission and distribution services, which remain subject to cost-based regulation; accordingly, it is appropriate that they continue the application of SFAS 71 to those operations.

Capital Resources and Liquidity

We continued to pursue cost efficiencies to fund strategic investments while also strengthening our financial position in 2000. Net security redemptions and refinancings in 2000 should generate annual financing cost savings of about $33 million. Also, approval by the PUCO of our transition plan on July 19, 2000 (see Outlook), was cited as an important reason that Moody's Investors Service and Fitch upgraded our EUOC debt ratings during the second half of 2000. Moody's ratings for senior secured debt of OE and Penn were raised from Baa2 to Baa1, and for CEI and TE from Ba1 to Baa3. Fitch's rating for senior secured debt of OE was raised from BBB to BBB+ (Penn's remained at BBB+) and for CEI and TE from BB+ to BBB-. Ratings of many of the junior securities of the EUOC were upgraded to conform to rating relationships typical of investment grade issuers. Those improved ratings should help to enhance our opportunities for further savings in the future. As of December 31, 2000, our common equity as a percentage of capitalization increased to nearly 42% from 38% at the end of 1998.

We had approximately $49.3 million of cash and temporary investments and $699.8 million of short-term indebtedness on December 31, 2000. Our unused borrowing capability included $242.5 million under revolving lines of credit. At the end of 2000, the EUOC had the capability to issue $2.7 billion of additional first mortgage bonds on the basis of property additions and retired bonds. Based upon applicable earnings coverage tests and their respective charters, OE, Penn and TE could issue $2.3 billion of preferred stock (assuming no additional debt was issued). CEI has no restrictions on the issuance of preferred stock.

Our cash requirements in 2001 for operating expenses, construction expenditures, scheduled debt

maturities, preferred stock redemptions and common stock repurchases are expected to be met without increasing our net debt and preferred stock outstanding. However, our anticipated merger with GPU (see Proposed Business Combination) is expected to require the issuance of approximately $2.2 billion of acquisition-related debt. During 2000, we reduced our total debt by approximately $250.3 million. We have cash requirements of approximately $2.6 billion for the 2001-2005 period to meet scheduled maturities of long-term debt and sinking fund requirements of preferred stock (before giving effect to the GPU acquisition). Of that amount, approximately $193 million applies to 2001. During 2000, we repurchased and retired 7.9 million shares of our common stock at an average price of $24.51 per share. As of December 31, 2000, we had repurchased 12.5 million of the 15 million shares authorized by our Board of Directors under the three-year program, which began in March 1999.

Our capital spending (before giving effect to the GPU acquisition) for the period 2001-2005 is expected to be about $3.0 billion (excluding nuclear fuel), of which approximately $683 million applies to 2001. Capital spending in 2001 includes expenditures to complete five combustion turbines expected to provide 425 megawatts (MW) of additional peaking generation capacity to our system by mid-year 2001. Investments for additional nuclear fuel during the 2001-2005 period are estimated to be approximately $380 million, of which about $54 million applies to 2001. During the same period, our nuclear fuel investments are expected to be reduced by approximately $460 million and $100 million, respectively, as the nuclear fuel is consumed. Also, we have operating lease commitments, net of trust cash receipts, of nearly $821 million for the 2001-2005 period, of which approximately $161 million relates to 2001.

We invested $4.4 million in 2000 by joining with 20 other leading energy and utility companies (including GPU) to form Pantellos Corporation (Pantellos). Pantellos manages an online, independent marketplace for buyers and sellers from the $130 billion North American utility and energy supply market, which opened for business on January 1, 2001. We expect to realize savings by using the e-market site and to benefit from our ownership interest in this new venture.

Interest Rate Risk

Our exposure to fluctuations in market interest rates is reduced since a significant portion of our debt has fixed interest rates, as noted in the table below. We are subject to the inherent interest rate risks related to refinancing maturing debt by issuing new debt securities. As discussed in Note 3, our investments in capital trusts effectively reduce future lease obligations, also reducing interest rate risk. Changes in the market value of our nuclear decommissioning trust funds are recognized by making corresponding changes to the decommissioning liability, as described in Note 1.

COMPARISON OF CARRYING VALUE TO FAIR VALUE

	2001	2002	2003	2004	2005	There-after	Total	Fair Value
				(Dollars in millions)				
Investments other than Cash and Cash Equivalents:								
Fixed Income	$ 87	$ 84	$ 97	$ 314	$ 58	$1,402	**$2,042**	**$2,086**
Average interest rate	5.1%	7.7%	7.7%	7.8%	7.9%	7.4%	7.4%	
Liabilities								
Long-term Debt:								
Fixed rate	$106	$721	$460	$591	$436	$2,460	**$4,774**	**$4,932**
Average interest rate	8.6%	7.9%	8.0%	7.7%	8.8%	7.3%	7.7%	
Variable rate	$ 1	$101	$ 1		$ 1	$ 975	**$1,079**	**$1,078**
Average interest rate	8.2%	7.4%	8.0%		8.7%	4.8%	5.1%	
Short-term Borrowings	$700						**$ 700**	**$ 700**
Average interest rate	7.9%						7.9%	
Preferred Stock	$ 85	$ 20	$ 2	$ 2	$ 2	$ 135	**$ 246**	**$ 243**
Average dividend rate	8.9%	8.9%	7.5%	7.5%	7.5%	8.8%	8.8%	

Market Risk – Commodity Prices

We are exposed to market risk due to fluctuations in electricity, natural gas, coal and oil prices. To manage the volatility relating to these exposures, we use a variety of derivative instruments, including forward contracts, options, futures contracts and swaps. These derivatives are used principally for hedging purposes and, to a much lesser extent, for trading purposes. We performed a sensitivity analysis to estimate our exposure to the market risk of our commodity posi-

tion. A hypothetical 10% adverse shift in quoted market prices in the near term on both our trading and nontrading instruments would not have had a material effect on our consolidated financial position, results of operations or cash flows as of or for the year ended December 31, 2000.

Outlook

On July 19, 2000, the PUCO approved our plan for transition to customer choice in Ohio (see Note 1). As part of its authorization, the PUCO approved a settlement agreement between us and major groups representing most of our Ohio customers regarding the transition to customer choice in selection of electricity suppliers. On January 1, 2001, electric choice became available to our Ohio customers. Under the plan, OE, CEI and TE continue to deliver power to homes and businesses through their existing distribution systems, which remain regulated. Their rates have been restructured to establish separate charges for transmission and distribution, transition cost recovery and a generation-related component. When one of our Ohio customers elects to obtain power from an alternative supplier, the regulated utility company reduces the customer's bill with a "generation shopping credit," based on the regulated generation component plus an incentive, and the customer receives a generation charge from the alternative supplier.

The transition cost portion of rates provides for recovery of certain amounts not otherwise recoverable in a competitive generation market (such as regulatory assets). The transition costs will be paid by all customers regardless of whether or not they choose an alternative supplier. Under the plan, we assume the risk of not recovering up to $500 million of transition revenue if the rate of customers (excluding contracts and full-service accounts) switching their service from OE, CEI and TE has not reached an average of 20% over any consecutive twelve-month period by December 31, 2005 – the end of the market development period. We are also committed under the transition agreement to make available 1,120 MW of our generating capacity to marketers, brokers and aggregators at set prices, to be used for sales only to retail customers in our Ohio service areas. Through February 8, 2001, approximately 794 MW of the 1,120 MW supply commitment had been secured by alternative suppliers. We began accepting customer applications for switching to alternative suppliers on December 8, 2000; as of February 8, 2001 our Ohio EUOC had been notified that about 108,000 of their customers requested generation services from other authorized suppliers, including FirstEnergy Services Corp. (FE Services), a wholly owned subsidiary.

Beginning in 2001, Ohio utilities that offer both competitive and regulated retail electric services must implement a corporate separation plan approved by the PUCO – one which provides a clear separation between regulated and competitive operations. Since our regionally-focused retail sales strategy envisions the continued operation of both regulated and competitive operations, our transition plan included details for our corporate separation. The approved plan is consistent with the way we managed our businesses in 2000, through a competitive services unit, a utility services unit and a corporate support services unit. FE Services provides competitive retail energy services while the EUOC continue to provide regulated transmission and distribution services. FirstEnergy Generation Corp. (FE Generation), a wholly owned subsidiary of FE Services, leases fossil and hydroelectric plants from the EUOC and operates those plants. We expect that the transfer of ownership of the EUOC fossil and hydroelectric generating assets to FE Generation will be completed by the end of the market development period. All of the EUOC power supply requirements are provided by FE Services to satisfy the EUOC "provider of last resort" obligation under the transition plan, as well as grandfathered wholesale contracts. The reportable segments in 2000 under SFAS 131, "Disclosures about Segments of an Enterprise and Related Information," reflect the management of these businesses as "Regulated Services" and "Competitive Services." The "Corporate Support Services" is included in "Other".

In 1999, we received notification of pending legal actions based on alleged violations of the Clean Air Act at our W. H. Sammis Plant involving the states of New York and Connecticut as well as the U.S. Department of Justice. The civil complaint filed by the U.S. Department of Justice requests installation of "best available control technology" as well as civil penalties of up to $27,500 per day. We believe the Sammis Plant is in full compliance with the Clean Air Act and the legal actions are without merit. We are unable, however, to predict the outcome of this litigation. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while the matter is being decided.

Under federal environmental law and related federal and state waste regulations, certain fossil-fuel combustion waste products, such as coal ash, were exempted from hazardous waste disposal requirements pending the Environmental Protection Agency's (EPA) evaluation of the need for future regulation. The EPA has issued its final regulatory determination that regulation of coal ash as a hazardous waste is unnecessary. On April 25, 2000, the EPA announced that it will develop national standards regulating disposal of coal ash as a nonhazardous waste.

In December 2000, the EPA announced it would proceed with the development of regulations regarding hazardous air pollutants from electric power plants. The EPA identified mercury as the hazardous air pollutant of greatest concern. The EPA established a schedule to propose regulations by December 2003 and issue final regulations by December 2004. The future cost of compliance with these regulations may be substantial.

We are in compliance with current sulfur dioxide and nitrogen oxides (NOx) reduction requirements under the Clean Air Act Amendments of 1990. In 1998, the EPA finalized regulations requiring additional NOx reductions in the future from our Ohio and Pennsylvania facilities (see Note 6). We continue to evaluate our compliance plans and other compliance options.

In July 1997, the EPA changed the National Ambient Air Quality Standard (NAAQS) for ozone emissions and proposed a new NAAQS for previously unregulated ultra-fine particulate matter. In May 1999, the U.S. Court of Appeals found constitutional and other defects in the new NAAQS rules. In February 2001, the U.S. Supreme Court upheld the new NAAQS rules regulating ultra-fine particulates but found defects in the new NAAQS rules for ozone and decided that the EPA must revise those rules. The future cost of compliance with these regulations may be substantial and will depend on the manner in which they are ultimately implemented, if at all, by the states in which we operate affected facilities.

CEI and TE have been named as "potentially responsible parties" (PRPs) at waste disposal sites which may require cleanup under the Comprehensive Environmental Response, Compensation and Liability Act of 1980. Allegations of disposal of hazardous substances at historical sites and the liability involved are often unsubstantiated and subject to dispute. Federal law provides that all PRPs for a particular site be held liable on a joint and several basis. CEI and TE have accrued liabilities totaling $3.7 million as of December 31, 2000, based on estimates of the total costs of cleanup, the proportionate responsibility of other PRPs for such costs and the financial ability of other PRPs to pay. CEI and TE believe that waste disposal costs will not have a material adverse effect on their financial condition, cash flows, or results of operations.

Recently Issued Accounting Standards

SFAS 133 establishes accounting and reporting standards requiring that every derivative instrument (including certain derivative instruments embedded in other contracts) be recognized on the balance sheet as either an asset or liability measured at its fair value. The Statement requires that changes in the derivative instrument's fair value be recognized currently in earnings unless specific hedge accounting criteria are met. Special accounting for qualifying hedges allows a derivative instrument's gains and losses to partially or wholly offset related results on the hedged item in the income statement, and requires that a company must formally document, designate and assess the effectiveness of transactions that receive hedge accounting.

We adopted SFAS 133, as amended, on January 1, 2001. Prior to adoption, we reviewed all outstanding contracts to determine if they were derivatives or contained embedded derivatives. Derivatives involved in "normal-purchase/normal-sale" transactions were documented and excluded from further treatment under SFAS 133. The remaining derivatives were either documented as cash flow hedges or treated as non-hedge derivatives.

In January 2001, we recorded assets and liabilities representing the difference between the derivatives' previous carrying amounts and their fair values under SFAS 133. Related amounts were recorded in net income and other comprehensive income. For derivatives that had previously been treated as hedges of forecast transactions, the difference between the derivatives' previous carrying amount and their fair value under SFAS 133 was an adjustment of accumulated other comprehensive income. For derivatives not previously designated as hedges, the difference was an adjustment to net income. These amounts will be reported separately in results for the first quarter of 2001 as a "cumulative effect of a change in accounting principle." The cumulative effect increases assets by $108.3 million, liabilities by $72.6 million and common stockholders' equity by $35.7 million – other comprehensive income increases by $44.2 million and net income is reduced by $8.5 million.

The accompanying Notes to Consolidated Financial Statements are an integral part of these statements.

1. Summary of Significant Accounting Policies:

The consolidated financial statements include FirstEnergy Corp. (Company) and its principal electric utility operating subsidiaries, Ohio Edison Company (OE), The Cleveland Electric Illuminating Company (CEI), Pennsylvania Power Company (Penn) and The Toledo Edison Company (TE). These utility subsidiaries are referred to throughout as "Companies." On September 1, 2000, the Companies transferred their transmission assets to the Company's wholly owned subsidiary, American Transmission Systems, Inc. (ATSI). As a result, ATSI owns and operates the Company's major high-voltage transmission facilities and has interconnections with other regional utilities. The consolidated financial statements also include the Company's other principal subsidiaries: FirstEnergy Services Corp. (FE Services); FirstEnergy Facilities Services Group, LLC (FE Facilities); FirstEnergy Trading Services, Inc. (FETS), which merged into FE Services on January 1, 2001; and MARBEL Energy Corporation (MARBEL). FE Services provides energy-related products and services primarily on a regional basis and has two subsidiaries, Penn Power Energy, Inc., which provides electric generation services and other energy services to Pennsylvania customers and FirstEnergy Generation Corp., which operates the nonnuclear generation businesses of the Companies. FE Facilities is the parent company of several heating, ventilating, air conditioning and energy management companies. FETS had primarily acquired and arranged for the delivery of electricity and natural gas to FE Services' retail customers. MARBEL is a fully integrated natural gas company. Significant intercompany transactions have been eliminated.

The Companies follow the accounting policies and practices prescribed by the Public Utilities Commission of Ohio (PUCO), the Pennsylvania Public Utility Commission (PPUC) and the Federal Energy Regulatory Commission (FERC). The preparation of financial statements in conformity with accounting principles generally accepted in the United States (GAAP) requires management to make periodic estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses. Certain prior year amounts have been reclassified to conform with the current year presentation.

Revenues –

The Companies' principal business is providing electric service to customers in central and northern Ohio and western Pennsylvania. The Companies' retail customers are metered on a cycle basis. Revenue is recognized for unbilled electric service through the end of the year.

Receivables from customers include sales to residential, commercial and industrial customers located in the Companies' service area and sales to wholesale customers. There was no material concentration of receivables at December 31, 2000 or 1999, with respect to any particular segment of the Companies' customers.

CEI and TE sell substantially all of their retail customer receivables to Centerior Funding Corp. (CFC), a wholly owned subsidiary of CEI. CFC subsequently transfers the receivables to a trust under an asset-backed securitization agreement. The trust completed a public sale of $150 million and private sales of $50 million of receivables-backed investor certificates in 1996 and 2000, respectively, in transactions that qualified for sale accounting treatment. CFC's retained interest in the pool of receivables held by the trust (15.15% as of December 31, 2000) is stated at fair value, reflecting adjustments for anticipated credit losses. Collections of receivables previously transferred to the trust used to purchase new receivables from CFC during 2000, totaled approximately $2.5 billion. Expenses associated with the factoring discount related to the sale of receivables were $13 million in 2000. As of December 31, 2000, receivables recorded on the Consolidated Balance Sheet were reduced by $193 million due to these sales.

Regulatory Plans –

The PUCO approved OE's Rate Reduction and Economic Development Plan in 1995 and FirstEnergy's Rate Reduction and Economic Development Plan for CEI and TE in January 1997. These regulatory plans were to maintain then current base electric rates for OE, CEI and TE through December 31, 2005. At the end of the regulatory plan periods, OE base rates were to be reduced by $300 million (approximately 20 percent below then current levels) and CEI and TE base rates were to be reduced by a combined $310 million (approximately 15 percent below then current levels). The plans also revised the Companies' fuel cost recovery methods so that OE's, CEI's and TE's fuel rates would be frozen through the regulatory plan period, subject to limited periodic adjustments. As part of OE's and FirstEnergy's regulatory plans, transition rate credits were implemented for customers, which were expected to reduce operating revenues for OE by approximately $600 million and CEI and TE by approximately $391 million during the regulatory plan period. The regulatory plans were terminated at the end of 2000 concurrent with the implementation of the FirstEnergy transition plan as described further below.

In July 1999, Ohio's electric utility restructuring legislation, which allowed Ohio electric customers to select their generation suppliers beginning January 1, 2001, was signed into law. Among other things, the legislation provides for a five percent reduction on the generation portion of residential customers' bills and the opportunity to recover transition costs, including regulatory assets, from January 1, 2001 through December 31, 2005. The period for the recovery of regulatory assets only can be extended up to December 31, 2010. The PUCO was authorized to determine the level of transition cost recovery, as well as the recovery period for the regulatory assets portion of those costs, in considering each Ohio electric utility's transition plan application.

The Company, on behalf of its Ohio electric utility operating companies – OE, CEI and TE – filed its transition plan under Ohio's new electric utility restructuring law in late 1999. The filing also included additional information on FirstEnergy's plans to turn over control, and perhaps ownership, of its transmission assets to the Alliance Regional Transmission Organization. The transition plan itemized, or unbundled, the current price of electricity into its component elements – including generation, transmission, distribution and transition charges. As required by the PUCO's rules, the Company's transition plan also included its proposals on corporate separation of its regulated and unregulated operations, operational and technical support changes needed to accommodate customer choice, an education program to inform customers of their options under the new law, and how the Company's transmission system will be operated to ensure access to all users. Customer prices would be frozen through a five-year market development period (2001-2005), except for certain limited statutory exceptions including the five percent reduction in the price of generation for residential customers. The plan proposed recovery of generation-related transition costs of approximately $4.5 billion ($4.0 billion, net of deferred income taxes) and transition costs related to regulatory assets aggregating approximately $4.2 billion ($2.9 billion, net of deferred income taxes).

On July 19, 2000, the PUCO approved the Company's transition plan as modified by a settlement agreement with major parties to the transition plan. Major parties to the settlement agreement included the PUCO staff, the Ohio Consumers' Counsel, the Industrial Energy Users-Ohio, certain power marketers and others. Major provisions of the settlement agreement consisted of approval of recovery of transition costs in the amounts filed in the transition plan through no later than 2006 for OE, mid-2007 for TE and 2008 for CEI, except where a longer period of recovery is provided for in the settlement agreement. The Company will also give preferred access over the Company's subsidiaries to nonaffiliated marketers, brokers and aggregators to 1,120 megawatts of generation capacity through 2005 at established prices for sales to the Ohio operating companies' retail customers. The base electric rates for distribution service for OE, CEI and TE under their prior respective regulatory plans will be extended from December 31, 2005 through December 31, 2007. The transition rate credits for customers under their prior regulatory plans will also be extended through the Companies' respective transition cost recovery periods.

The application of Statement of Financial Accounting Standards (SFAS) No. 71, "Accounting for the Effects of Certain Types of Regulation" (SFAS 71), to OE's generation business and the nonnuclear generation businesses of CEI and TE was discontinued with the issuance of the PUCO transition plan order. The Securities and Exchange Commission (SEC) issued interpretive guidance regarding asset impairment measurement that concluded any supplemental regulated cash flows such as a competitive transition charge (CTC) should be excluded from the cash flows of assets in a portion of the business not subject to regulatory accounting practices. If those assets are impaired, a regulatory asset should be established if the costs are recoverable through regulatory cash flows. Consistent with the SEC guidance $1.6 billion of impaired plant investments ($1.2 billion, $304 million and $53 million for OE, CEI and TE, respectively) were recognized as regulatory assets recoverable as transition costs through future regulatory cash flows.

The settlement agreement provides to the Company's Ohio customers an additional incentive applied to the generation shopping credit of 45% for residential customers, 30% for commercial customers and 15% for industrial customers as reductions from their bills, when they select alternative energy providers (the credits exceed the price the Company will be offering to electricity suppliers relating to the 1,120 megawatts described in a previous paragraph). The amount of the incentive will serve to reduce the amortization of transition costs during the market development period and will be recovered over the remaining transition cost recovery periods. If the customer switching targets established in the settlement agreement are not achieved by the end of 2005, the transition cost recovery periods could be shortened for OE, CEI and TE to reduce recovery by as much as $500 million (OE-$250 million, CEI-$170 million and

TE-$80 million), but any such adjustment would be computed on a class-by-class and pro-rata basis.

In June 1998, the PPUC authorized a rate restructuring plan for Penn which essentially resulted in the deregulation of Penn's generation business as of June 30, 1998. Penn was required to remove from its balance sheet all regulatory assets and liabilities related to its generation business and assess all other assets for impairment. In accordance with the SEC guidance, Penn reduced its nuclear generating unit investments by approximately $305 million, of which approximately $227 million was recognized as a regulatory asset to be recovered through a CTC over a seven-year transition period; the remaining net amount of $78 million was written off. The charge of $51.7 million ($30.5 million after income taxes) for discontinuing the application of SFAS 71 to Penn's generation business was recorded as a 1998 extraordinary item on the Consolidated Statement of Income.

All of the Companies' regulatory assets will continue to be recovered under provisions of the Ohio transition plan and the Pennsylvania rate restructuring plan. Under the previous regulatory plan, the PUCO had authorized OE to recognize additional capital recovery related to its generating assets (which was reflected as additional depreciation expense) and additional amortization of regulatory assets during the prior regulatory plan period of at least $2 billion, and the PPUC had authorized Penn to accelerate at least $358 million, more than the amounts that would have been recognized if the prior regulatory plans were not in effect. These additional amounts are being recovered through current rates. As of December 31, 2000, OE's and Penn's cumulative additional capital recovery and regulatory asset amortization amounted to $1.424 billion (including Penn's impairment discussed above and CTC recovery). CEI and TE recognized a fair value purchase accounting adjustment of $2.55 billion in connection with the FirstEnergy merger; that fair value adjustment recognized for financial reporting purposes satisfied the $2 billion asset reduction commitment contained in the CEI and TE regulatory plan. For regulatory purposes, CEI and TE recognized the accelerated amortization over the period that their rate plan was in effect.

Application of SFAS 71 was discontinued in 1997 with respect to CEI's and TE's nuclear operations (see "Regulatory Assets" below); in 1998 with respect to Penn's generation operations (as described above) and in mid-2000, as discussed above, with respect to OE's generation business and the nonnuclear generation businesses of CEI and TE effective with the issuance of the PUCO transition plan order. The following summarizes net assets included in property, plant and equipment relating to operations for which the application of SFAS 71 was discontinued, compared with the respective company's total assets as of December 31, 2000.

	SFAS 71 Discontinued Net Assets	Total Assets
	(In millions)	
OE	$1,075	$7,422
CEI	1,556	5,965
TE	623	2,652
Penn	92	989

Property, Plant and Equipment –

Property, plant and equipment reflects original cost (except for the Companies' nuclear generating units which were adjusted to fair value), including payroll and related costs such as taxes, employee benefits, administrative and general costs, and interest costs.

The Companies provide for depreciation on a straight-line basis at various rates over the estimated lives of property included in plant in service. The annual composite rate for OE's electric plant was approximately 2.8% in 2000 and 3.0% in 1999 and 1998. The annual composite rate for Penn's electric plant was approximately 2.6% in 2000, 2.5% in 1999 and 3.0% in 1998. CEI's and TE's composite rates were both approximately 3.4% in 2000, 1999 and 1998. In addition to the straight-line depreciation recognized in 2000, 1999 and 1998, OE and Penn recognized additional capital recovery of $105 million, $95 million and $141 million (excluding Penn's impairment), respectively, as additional depreciation expense in accordance with their regulatory plans. These amounts were included in the 2000 transfer of accumulated depreciation included in OE's impaired plant investment recognized as regulatory assets as discussed in "Regulatory Plans" above.

Annual depreciation expense in 2000 included approximately $29.3 million for future decommissioning costs applicable to the Companies' ownership and leasehold interests in four nuclear generating units. Annual decommissioning costs will increase by approximately $66 million from implementing the Ohio utilities' transition plan in 2001. The Companies' future decommissioning costs reflect the 1999 increase in their ownership interests related to the exchange of certain generating assets with Duquesne Light Company. The Companies' share of the future obligation to decommission these units is approximately $1.9 billion in current dollars and (using a 4.0% escalation rate) approximately $4.5 billion in future dollars. The estimated obligation and the escalation rate were developed based on site specific studies. Payments for decommissioning are expected to begin in 2016, when actual decommissioning work begins. The Companies have recovered approximately $342 million for decommissioning through their electric rates from customers through

December 31, 2000. The Companies have also recognized an estimated liability of approximately $31.6 million related to decontamination and decommissioning of nuclear enrichment facilities operated by the United States Department of Energy (DOE), as required by the Energy Policy Act of 1992.

The Financial Accounting Standards Board (FASB) issued a proposed accounting standard for nuclear decommissioning costs in 1996. If the standard is adopted as proposed: (1) annual provisions for decommissioning could change; (2) the net present value of estimated decommissioning costs could be recorded as a liability; and (3) income from the external decommissioning trusts could be reported as investment income. The FASB subsequently expanded the scope of the proposed standard to include other closure and removal obligations related to long-lived assets. A final pronouncement is expected in the second quarter of 2001 and is anticipated to be implemented on January 1, 2002.

Nuclear Fuel –

OE's and Penn's nuclear fuel is recorded at original cost, which includes material, enrichment, fabrication and interest costs incurred prior to reactor load. CEI and TE severally lease their respective portions of nuclear fuel and pay for the fuel as it is consumed (see Note 3). The Companies amortize the cost of nuclear fuel based on the rate of consumption.

Income Taxes –

Details of the total provision for income taxes are shown on the Consolidated Statements of Taxes. Deferred income taxes result from timing differences in the recognition of revenues and expenses for tax and accounting purposes. Investment tax credits, which were deferred when utilized, are being amortized over the recovery period of the related property. The liability method is used to account for deferred income taxes. Deferred income tax liabilities related to tax and accounting basis differences are recognized at the statutory income tax rates in effect when the liabilities are expected to be paid. Alternative minimum tax credits of $32 million, which may be carried forward indefinitely, are available to reduce future federal income taxes.

Retirement Benefits –

The Companies' trusteed, noncontributory defined benefit pension plan covers almost all full-time employees. Upon retirement, employees receive a monthly pension based on length of service and compensation. The Companies use the projected unit credit method for funding purposes and were not required to make pension contributions during the three years ended December 31, 2000. The assets of the pension plan consist primarily of common stocks, United States government bonds and corporate bonds.

The Companies provide a minimum amount of noncontributory life insurance to retired employees in addition to optional contributory insurance. Health care benefits, which include certain employee deductibles and copayments, are also available to retired employees, their dependents and, under certain circumstances, their survivors. The Companies pay insurance premiums to cover a portion of these benefits in excess of set limits; all amounts up to the limits are paid by the Companies. The Companies recognize the expected cost of providing other postretirement benefits to employees and their beneficiaries and covered dependents from the time employees are hired until they become eligible to receive those benefits.

The following sets forth the funded status of the plans and amounts recognized on the Consolidated Balance Sheets as of December 31:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
	(In millions)			
Change in benefit obligation:				
Benefit obligation as of January 1	$1,394.1	$1,500.1	$ 608.4	$ 601.3
Service cost	27.4	28.3	11.3	9.3
Interest cost	104.8	102.0	45.7	40.7
Plan amendments	41.3	—	—	—
Actuarial loss (gain)	17.3	(155.6)	121.7	(17.6)
Net increase from asset swap	—	14.8	—	12.5
Voluntary early retirement program expense	23.4	—	—	—
Benefits paid	(102.2)	(95.5)	(35.1)	(37.8)
Benefit obligation as of December 31	1,506.1	1,394.1	752.0	608.4
Change in plan assets:				
Fair value of plan assets as of January 1	1,807.5	1,683.0	4.9	3.9
Actual return on plan assets	0.7	220.0	(0.2)	0.6
Company contribution	—	—	18.3	0.4
Benefits paid	(102.2)	(95.5)	—	—
Fair value of plan assets as of December 31	1,706.0	1,807.5	23.0	4.9
Funded status of plan	199.9	413.4	(729.0)	(603.5)
Unrecognized actuarial loss (gain)	(90.9)	(303.5)	147.3	24.9
Unrecognized prior service cost	93.1	57.3	20.9	24.1
Unrecognized net transition obligation (asset)	(2.1)	(10.1)	110.9	120.1
Prepaid (accrued) benefit cost	$ 200.0	$ 157.1	$(449.9)	$(434.4)
Assumptions used as of December 31:				
Discount rate	7.75%	7.75%	7.75%	7.75%
Expected long-term return on plan assets	10.25%	10.25%	10.25%	10.25%
Rate of compensation increase	4.00%	4.00%	4.00%	4.00%

Net pension and other postretirement benefit costs for the three years ended December 31, 2000 were computed as follows:

	Pension Benefits			Other Postretirement Benefits		
	2000	1999	1998	2000	1999	1998
	(In millions)					
Service cost	$ 27.4	$ 28.3	$ 25.0	$11.3	$ 9.3	$ 7.5
Interest cost	104.8	102.0	92.5	45.7	40.7	37.6
Expected return on plan assets	(181.0)	(168.1)	(152.7)	(0.5)	(0.4)	(0.3)
Amortization of transition obligation (asset)	(7.9)	(7.9)	(8.0)	9.2	9.2	9.2
Amortization of prior service cost	5.7	5.7	2.3	3.2	3.3	(0.8)
Recognized net actuarial loss (gain)	(9.1)	—	(2.6)	—	—	—
Voluntary early retirement program expense	17.2	—	—	—	—	—
Net benefit cost	$ (42.9)	$ (40.0)	$ (43.5)	$68.9	$62.1	$53.2

The health care trend rate assumption is 7.2% in 2001, 7.0% in 2002 and 6.5% in 2003, trending to 5.0% – 5.5% in later years. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plan. An increase in the health care trend rate assumption by one percentage point would increase the total service and interest cost components by $7.5 million and the postretirement benefit obligation by $94.4 million. A decrease in the same assumption by one percentage point would decrease the total service and interest cost components by $8.5 million and the postretirement benefit obligation by $111.0 million.

Supplemental Cash Flows Information –

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Consolidated Balance Sheets. As of December 31, 1999, cash and cash equivalents included $83 million used for the redemption of long-term debt in the first quarter of 2000. The Companies reflect temporary cash investments at cost, which approximates their fair market value. Noncash financing and investing activities included capital lease transactions amounting to $89.3 million, $36.2 million and $61.8 million for the years 2000, 1999 and 1998, respectively. Commercial paper transactions of OES Fuel, Incorporated (OES Fuel) (a wholly owned subsidiary of OE) that have initial maturity periods of three months or less are reported net within financing activities under long-term debt and are reflected as long-term debt on the Consolidated Balance Sheets (see Note 4G).

All borrowings with initial maturities of less than one year are defined as financial instruments under GAAP and are reported on the Consolidated Balance Sheets at cost, which approximates their fair market value. The following sets forth the approximate fair value and related carrying amounts of all other long-term debt, preferred stock subject to mandatory redemption and investments other than cash and cash equivalents as of December 31:

	2000		1999	
	Carrying Value	Fair Value	Carrying Value	Fair Value
	(In millions)			
Long-term debt	$5,853	$6,010	$6,381	$6,331
Preferred stock	$ 247	$ 243	$ 295	$ 280
Investments other than cash and cash equivalents:				
Debt securities				
– Maturity (5-10 years)	$ 460	$ 441	$ 475	$ 476
– Maturity (more than 10 years)	1,026	1,051	1,068	1,013
Equity securities	16	16	17	17
All other	924	935	852	874
	$2,426	$2,443	$2,412	$2,380

The fair values of long-term debt and preferred stock reflect the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective year. The yields assumed were based on securities with similar characteristics offered by a corporation with credit ratings similar to the Companies' ratings.

The fair value of investments other than cash and cash equivalents represent cost (which approximates fair value) or the present value of the cash inflows based on the yield to maturity. The yields assumed were based on financial instruments with similar characteristics and terms. Investments other than cash and cash equivalents include decommissioning trust investments. Unrealized gains and losses applicable to the decommissioning trusts have been recognized in the trust investment with a corresponding change to the decommissioning liability. The Companies have no securities held for trading purposes.

Effective December 31, 1998, the Company began accounting for its commodity price derivatives, entered into specifically for trading purposes, on a mark-to-market basis in accordance with Emerging Issues Task Force Issue 98-10, "Accounting for Energy Trading and Risk Management Activities," with gains and losses recognized currently in the Consolidated Statements of Income. The contracts that were marked to market are included in the Consolidated Balance Sheets as Deferred Charges and Deferred Credits at their fair values. The impact on the consolidated financial statements was immaterial.

On January 1, 2001, the Company adopted SFAS 133, "Accounting for Derivative Instruments and Hedging Activities," as amended by SFAS 138, "Accounting for Certain Derivative Instruments and Certain Hedging Activities – an amendment of FASB Statement No. 133." The cumulative effect of adopting SFAS 133, as amended, increases assets by $108.3 million, liabilities by $72.6 million and common stockholders' equity by $35.7 million – other comprehensive income increases by $44.2 million and net income is reduced by $8.5 million.

Regulatory Assets –

The Companies recognize, as regulatory assets, costs which the FERC, PUCO and PPUC have authorized for recovery from customers in future periods. Without such authorization, the costs would have been charged to income as incurred. All regulatory assets will continue to be recovered from customers under the Companies' respective transition and rate restructuring plans. Based on those plans, the Companies continue to bill and collect cost-based rates for their transmission and distribution services, which remain regulated; accordingly, it is appropriate that the Companies continue the application of SFAS 71 to those operations. OE and Penn recognized additional cost recovery of $270 million, $257 million and $50 million in 2000, 1999 and 1998, respectively, as additional regulatory asset amortization in accordance with their regulatory plans. The application of SFAS 71 to OE's generation business and the nonnuclear generation businesses of CEI and TE was discontinued effective with the PUCO's approval of the Company's transition plan. The effect of such discontinuance was reflected on the financial statements as of June 30, 2000, with the reduction of plant investment and the corresponding recognition of regulatory assets recoverable through future regulatory cash flows for generating assets that were impaired of approximately $1.6 billion ($1.2 billion, $304 million and $53 million for OE, CEI and TE, respectively).

Net regulatory assets on the Consolidated Balance Sheets are comprised of the following:

	2000	1999
	(In millions)	
Nuclear unit expenses	$1,081.1	$1,123.0
Customer receivables for future income taxes	173.5	444.3
Rate stabilization program deferrals	400.0	420.1
Sale and leaseback costs	8.0	17.8
Competitive transition charge	230.9	280.4
Loss on reacquired debt	167.1	173.9
Employee postretirement benefit costs	20.7	24.8
DOE decommissioning and decontamination costs	26.8	29.5
Impaired generating assets	1,595.5	—
Other	24.1	29.6
Total	$3,727.7	$2,543.4

2. Merger Agreement:

On August 8, 2000, FirstEnergy and GPU, Inc. (GPU), a Pennsylvania corporation, entered into an Agreement and Plan of Merger. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4.5 billion in cash and FirstEnergy common stock. Approximately $7.4 billion of debt and preferred stock of GPU's subsidiaries would remain outstanding. The transaction would be accounted for by the purchase method. The combined company's principal electric utility operating companies would include OE, CEI, TE, Penn and ATSI, as well as GPU's electric utility operating companies – Jersey Central Power & Light Company, Metropolitan Edison Company and Pennsylvania Electric Company, which serve customers in New Jersey and Pennsylvania.

Under the agreement, GPU shareholders would receive the equivalent of $36.50 for each share of GPU common stock they own, payable in cash or in FirstEnergy common stock, as long as FirstEnergy's common stock price is between $24.2438 and $29.6313. Each GPU shareholder would be able to elect the form of consideration they wish to receive, subject to proration so that the aggregate consideration to all GPU shareholders will be 50 percent cash and 50 percent FirstEnergy common stock. Each GPU share converted into FirstEnergy common

stock would receive not less than 1.2318 and not more than 1.5055 shares of FirstEnergy common stock, depending on the average closing price of FirstEnergy stock during the 20-day trading period ending on the seventh trading date prior to the merger closing. The stock portion of the consideration is expected to be tax-free to GPU shareholders.

The merger has been approved by the respective shareholders of the Company and GPU and is expected to close promptly after all of the conditions to the consummation of the merger, including the receipt of all necessary regulatory approvals, are fulfilled or waived. The receipt of all necessary regulatory approvals, including, but not limited to, the FERC, the Nuclear Regulatory Commission, the Federal Communications Commission, and the SEC, are expected by the end of the second quarter of 2001.

3. Leases:

The Companies lease certain generating facilities, nuclear fuel, office space and other property and equipment under cancelable and noncancelable leases.

OE sold portions of its ownership interests in Perry Unit 1 and Beaver Valley Unit 2 and entered into operating leases on the portions sold for basic lease terms of approximately 29 years. CEI and TE also sold portions of their ownership interests in Beaver Valley Unit 2 and Bruce Mansfield Units 1, 2 and 3 and entered into similar operating leases for lease terms of approximately 30 years. During the terms of their respective leases, OE, CEI and TE continue to be responsible, to the extent of their individual combined ownership and leasehold interests, for costs associated with the units including construction expenditures, operation and maintenance expenses, insurance, nuclear fuel, property taxes and decommissioning. They have the right, at the end of the respective basic lease terms, to renew their respective leases. They also have the right to purchase the facilities at the expiration of the basic lease term or renewal term (if elected) at a price equal to the fair market value of the facilities. The basic rental payments are adjusted when applicable federal tax law changes.

OES Finance, Incorporated (OES Finance), a wholly owned subsidiary of OE, maintains deposits pledged as collateral to secure reimbursement obligations relating to certain letters of credit supporting OE's obligations to lessors under the Beaver Valley Unit 2 sale and leaseback arrangements. The deposits pledged to the financial institution providing those letters of credit are the sole property of OES Finance. In the event of liquidation, OES Finance, as a separate corporate entity, would have to satisfy its obligations to creditors before any of its assets could be made available to OE as sole owner of OES Finance common stock.

Nuclear fuel is currently financed for CEI and TE through leases with a special-purpose corporation. As of December 31, 2000, $142 million of nuclear fuel was financed under a lease financing arrangement through $150 million of bank credit arrangements. The bank credit arrangements expire in August 2001. Lease rates are based on bank rates and commercial paper rates.

Consistent with the regulatory treatment, the rentals for capital and operating leases are charged to operating expenses on the Consolidated Statements of Income. Such costs for the three years ended December 31, 2000, are summarized as follows:

	2000	1999	1998
		(In millions)	
Operating leases			
Interest element	$202.4	$208.6	$201.2
Other	111.1	110.3	147.8
Capital leases			
Interest element	12.3	17.5	17.6
Other	64.2	76.1	66.3
Total rentals	$390.0	$412.5	$432.9

The future minimum lease payments as of December 31, 2000, are:

		Operating Leases		
	Capital Leases	Lease Payments	Capital Trusts	Net
		(In millions)		
2001	$ 74.3	$ 306.8	$ 146.0	$ 160.8
2002	50.1	317.9	169.5	148.4
2003	32.9	326.1	176.5	149.6
2004	19.6	291.3	110.7	180.6
2005	9.6	310.1	128.8	181.3
Years thereafter	17.7	3,321.2	1,235.6	2,085.6
Total minimum lease payments	204.2	$4,873.4	$1,967.1	$2,906.3
Executory costs	10.6			
Net minimum lease payments	193.6			
Interest portion	30.4			
Present value of net minimum lease payments	163.2			
Less current portion	52.0			
Noncurrent portion	$111.2			

OE invested in the PNBV Capital Trust, which was established to purchase a portion of the lease obligation bonds issued on behalf of lessors in OE's Perry Unit 1 and Beaver Valley Unit 2 sale and leaseback transactions. CEI and TE established the Shippingport Capital Trust to purchase the lease obligation bonds issued on behalf of lessors in their Bruce Mansfield Units 1, 2 and 3 sale and leaseback transactions. The PNBV and Shippingport capital trust arrangements effectively reduce lease costs related to those transactions.

4. Capitalization:

(A) Retained Earnings –

There are no restrictions on retained earnings for payment of cash dividends on the Company's common stock.

(B) Employee Stock Ownership Plan –

The Companies fund the matching contribution for their 401(k) savings plan through an ESOP Trust. All full-time employees eligible for participation in the 401(k) savings plan are covered by the ESOP. The ESOP borrowed $200 million from OE and acquired 10,654,114 shares of OE's common stock (subsequently converted to FirstEnergy common stock) through market purchases. Dividends on ESOP shares are used to service the debt. Shares are released from the ESOP on a pro rata basis as debt service payments are made. In 2000, 1999 and 1998, 826,873 shares, 627,427 shares and 423,206 shares, respectively, were allocated to employees with the corresponding expense recognized based on the shares allocated method. The fair value of 5,952,032 shares unallocated as of December 31, 2000, was approximately $187.8 million. Total ESOP-related compensation expense was calculated as follows:

	2000	1999	1998
		(In millions)	
Base compensation	$ 18.7	$ 18.3	$ 13.5
Dividends on common stock held by the ESOP and used to service debt	(6.4)	(4.5)	(3.9)
Net expense	$ 12.3	$ 13.8	$ 9.6

(C) Stock Compensation Plans –

On April 30, 1998, the Company adopted the Executive and Director Incentive Compensation Plan (FE Plan). The FE Plan permits awards to be made to key employees in the form of restricted stock, stock options, stock appreciation rights, performance shares or cash. Common stock granted under the FE Plan may not exceed 7.5 million shares. No stock appreciation rights or performance shares have been issued under the FE Plan. Restricted common stock shares were granted under the FE Plan in 1998, 1999 and 2000 for various vesting periods ranging from six months to eight years. The restricted common stock shares were purchased in the open market and have full voting and dividend rights. There were no exercise prices related to these shares. Restricted common stock grants were as follows:

	2000	1999	1998
Restricted common shares granted	208,400	8,000	20,000
Weighted average market price	$ 26.63	$ 30.89	$ 30.78
Weighted average vesting period	3.8	5.8	4.0
Dividends restricted	Yes	Yes	No

FE Plan options were granted in 1998, 1999 and 2000 and are exercisable after four years from the date of grant with some acceleration of vesting possible based on performance. Stock options, which were granted prior to 1998, expire on or before February 25, 2007. Stock option activity was as follows:

Stock Option Activity	Number of Options	Weighted Average Exercise Price
Balance at December 31, 1997 (517,388 options exercisable)	517,388	$ 24.59
Options granted	189,491	29.82
Options exercised	335,058	24.67
Options forfeited	7,535	29.82
Balance at December 31, 1998 (182,330 options exercisable)	364,286	27.13
Options granted	1,811,658	24.90
Options exercised	22,575	21.42
Balance at December 31, 1999 (159,755 options exercisable)	2,153,369	25.32
Options granted	3,011,584	23.24
Options exercised	90,491	26.00
Options forfeited	52,600	22.20
Balance at December 31, 2000 (473,314 options exercisable)	5,021,862	24.09

As of December 31, 2000, the weighted average remaining contractual life of outstanding stock options was 8.4 years.

Under the Executive Deferred Compensation Plan, adopted January 1, 1999, employees can direct a portion of their Annual Incentive Award and/or Long Term Incentive Award into an unfunded FirstEnergy Stock Account to receive vested stock units. An additional 20% premium is received in the form of stock units based on the amount allocated to the

FirstEnergy Stock Account. Dividends are calculated quarterly on stock units outstanding and are paid in the form of additional stock units. Upon withdrawal, stock units are converted to FirstEnergy shares. Payout occurs three years from the date of deferral. As of December 31, 2000, there were 123,787.48 stock units outstanding.

The Company continues to apply Accounting Principles Board Opinion 25, "Accounting for Stock Issued to Employees." As required by SFAS 123, "Accounting for Stock-Based Compensation," the Company has determined pro forma earnings as though the Company had accounted for employee stock options under the fair value method. The weighted average assumptions used in valuing the options and their resulting fair values are as follows:

	2000	1999	1998
Valuation assumptions:			
Expected option term (years)	7.6	6.4	10
Expected volatility	21.77%	20.03%	15.50%
Expected dividend yield	6.68%	5.97%	5.68%
Risk-free interest rate	5.28%	5.97%	5.65%
Fair value per option	$2.86	$3.42	$3.25

The following table summarizes the pro forma effect of applying fair value accounting to the Company's stock options.

	2000	1999	1998
Net Income (000)			
As Reported	$598,970	$568,299	$410,874
Pro Forma	$597,378	$567,876	$410,839
Earnings Per Share of Common Stock – Basic and Diluted			
As Reported	$2.69	$2.50	$1.82
Pro Forma	$2.69	$2.50	$1.81

(D) Preferred and Preference Stock –

Penn's 7.75% series of preferred stock has a restriction which prevents early redemption prior to July 2003. OE's 8.45% series of preferred stock has no optional redemption provision. CEI's $88.00 Series R preferred stock is not redeemable before December 2001 and its $90.00 Series S has no optional redemption provision. All other preferred stock may be redeemed by the Companies in whole, or in part, with 30-90 days' notice.

Preference stock authorized for the Companies are 8 million shares without par value for OE; 3 million shares without par value for CEI; and 5 million shares, $25 par value for TE. No preference shares are currently outstanding.

(E) Preferred Stock Subject to Mandatory Redemption –

Annual sinking fund provisions for the Companies' preferred stock are as follows:

	Series	Shares	Redemption Price Per Share	Date	Beginning
OE	8.45%	50,000	$ 100		(i)
CEI	$ 7.35C	10,000	100		(i)
	91.50Q	10,714	1,000		(i)
	90.00S	18,750	1,000		(i)
	88.00R	50,000	1,000	December 1	2001
Penn	7.625%	7,500	100	October 1	2002

(i) Sinking fund provisions are in effect.

Annual sinking fund requirements for the next five years are $85 million in 2001, $19 million in 2002 and $2 million in each year 2003-2005.

(F) Ohio Edison Obligated Mandatorily Redeemable Preferred Securities of Subsidiary Trust Holding Solely Ohio Edison Subordinated Debentures –

Ohio Edison Financing Trust, a wholly owned subsidiary of OE, has issued $120 million of 9% Cumulative Trust Preferred Capital Securities. OE purchased all of the Trust's Common Securities and simultaneously issued to the Trust $123.7 million principal amount of 9% Junior Subordinated Debentures due 2025 in exchange for the proceeds that the Trust received from its sale of Preferred and Common Securities. The sole assets of the Trust are the Subordinated Debentures whose interest and other payment dates coincide with the distribution and other payment dates on the Trust Securities. Under certain circumstances, the Subordinated Debentures could be distributed to the holders of the outstanding Trust Securities in the event the Trust is liquidated. The Subordinated Debentures may be optionally redeemed by OE at a redemption price of $25 per Subordinated Debenture plus accrued interest, in which event the Trust Securities will be redeemed on a pro rata basis at $25 per share plus accumulated distributions. OE's obligations under the Subordinated Debentures along with the related Indenture, amended and restated Trust Agreement, Guarantee Agreement and the Agreement for expenses and liabilities, constitute a full and unconditional guarantee by OE of payments due on the Preferred Securities.

(G) Long-Term Debt –

The first mortgage indentures and their supplements, which secure all of the Companies' first mortgage bonds, serve as direct first mortgage liens on substantially all property and franchises, other than specifically excepted property, owned by the Companies.

Based on the amount of bonds authenticated by the Trustees through December 31, 2000, OE's, TE's and Penn's annual sinking and improvement fund requirements for all bonds issued under the mortgage amounts to $31.4 million. OE, TE and Penn expect to deposit funds in 2001 that will be withdrawn upon the surrender for cancellation of a like principal amount of bonds, which are specifically authenticated for such purposes against unfunded property additions or against previously retired bonds. This method can result in minor increases in the amount of the annual sinking fund requirement.

Sinking fund requirements for first mortgage bonds and maturing long-term debt (excluding capital leases) for the next five years are:

	(In millions)
2001	$399.0
2002	945.0
2003	460.1
2004	833.9
2005	436.3

The Companies' obligations to repay certain pollution control revenue bonds are secured by several series of first mortgage bonds. Certain pollution control revenue bonds are entitled to the benefit of irrevocable bank letters of credit of $341.2 million and noncancelable municipal bond insurance policies of $280 million to pay principal of, or interest on, the pollution control revenue bonds. To the extent that drawings are made under the letters of credit, the Companies are entitled to a credit against their obligation to repay those bonds. The Companies pay annual fees of 0.60% to 1.375% of the amounts of the letters of credit to the issuing banks and are obligated to reimburse the banks for any drawings thereunder.

OE had unsecured borrowings of $100 million as of December 31, 2000, supported by a $250 million long-term revolving credit facility agreement which expires November 18, 2002. OE must pay an annual facility fee of 0.20% on the total credit facility amount. In addition, the credit agreement provides that OE maintain unused first mortgage bond capability for the full credit agreement amount under OE's indenture as potential security for the unsecured borrowings.

CEI and TE have letters of credit of approximately $222 million in connection with the sale and leaseback of Beaver Valley Unit 2 that expire in May 2002. The letters of credit are secured by first mortgage bonds of CEI and TE in the proportion of 40% and 60%, respectively (see Note 3).

OE's and Penn's nuclear fuel purchases are financed through the issuance of OES Fuel commercial paper and loans, both of which are supported by a $180.5 million long-term bank credit agreement which expires March 31, 2001. The Company intends to extend the credit agreement through March 31, 2002. Accordingly, a portion of the commercial paper and loans is reflected as long-term debt on the Consolidated Balance Sheets. OES Fuel must pay an annual facility fee of 0.20% on the total line of credit and an annual commitment fee of 0.0625% on any unused amount.

(H) Comprehensive Income –

Comprehensive income includes net income as reported on the Consolidated Statements of Income and all other changes in common stockholders' equity except those resulting from transactions with common stockholders. As of December 31, 2000, accumulated other comprehensive income (loss) consisted of a minimum liability for unfunded retirement benefits of $(329,000) and an unrealized gain on investment of securities available for sale of $922,000.

5. Short-Term Borrowings and Bank Lines of Credit:

Short-term borrowings outstanding as of December 31, 2000, consisted of $539.8 million of bank borrowings and $159.9 million of OES Capital, Incorporated (OES Capital) commercial paper. OES Capital is a wholly owned subsidiary of OE whose borrowings are secured by customer accounts receivable. OES Capital can borrow up to $170 million under a receivables financing agreement at rates based on certain bank commercial paper and is required to pay an annual fee of 0.20% on the amount of the entire finance limit. The receivables financing agreement expires in 2002.

The Companies have various credit facilities with domestic banks that provide for borrowings of up to $505 million under various interest rate options. OE's short-term borrowings may be made under its lines of credit on its unsecured notes. To assure the availability of these lines, the Companies are required to pay annual commitment fees that vary from 0.15% to 0.375%. These lines expire at various times during 2001. The weighted average interest rates on short-term borrowings outstanding as of December 31, 2000 and 1999, were 7.92% and 6.51%, respectively.

6. Commitments and Contingencies:

Capital Expenditures –

The Company's current forecast reflects expenditures of approximately $3.0 billion for property additions and improvements from 2001-2005, of which approximately $683 million is applicable to 2001. Investments for additional nuclear fuel during the 2001-2005 period are estimated to be approximately $380 million, of which approximately $54 million applies to 2001. During the same periods, the Companies' nuclear fuel investments are expected to be reduced by approximately $460 million and $100 million, respectively, as the nuclear fuel is consumed.

Stock Repurchase Program –

On November 17, 1998, the Board of Directors authorized the repurchase of up to 15 million shares of the Company's common stock over a three-year period beginning in 1999. Repurchases are made on the open market, at prevailing prices, and are funded primarily through the use of operating cash flows. During 2000 and 1999, the Company repurchased and retired 7.9 million shares (average price of $24.51 per share) and 4.6 million shares (average price of $28.08 per share), respectively.

Nuclear Insurance –

The Price-Anderson Act limits the public liability relative to a single incident at a nuclear power plant to $9.5 billion. The amount is covered by a combination of private insurance and an industry retrospective rating plan. The Companies' maximum potential assessment under the industry retrospective rating plan would be $352.4 million per incident but not more than $40 million in any one year for each incident.

The Companies are also insured under policies for each nuclear plant. Under these policies, up to $2.75 billion is provided for property damage and decontamination and decommissioning costs. The Companies have also obtained approximately $789 million of insurance coverage for replacement power costs. Under these policies, the Companies can be assessed a maximum of approximately $38 million for incidents at any covered nuclear facility occurring during a policy year which are in excess of accumulated funds available to the insurer for paying losses.

The Companies intend to maintain insurance against nuclear risks as described above as long as it is available. To the extent that replacement power, property damage, decontamination, decommissioning, repair and replacement costs and other such costs arising from a nuclear incident at any of the Companies' plants exceed the policy limits of the insurance in effect with respect to that plant, to the extent a nuclear incident is determined not to be covered by the Companies' insurance policies, or to the extent such insurance becomes unavailable in the future, the Companies would remain at risk for such costs.

Environmental Matters –

Various federal, state and local authorities regulate the Companies with regard to air and water quality and other environmental matters. The Companies estimate additional capital expenditures for environmental compliance of approximately $201 million, which is included in the construction forecast provided under "Capital Expenditures" for 2001 through 2005.

The Companies are required to meet federally approved sulfur dioxide (SO_2) regulations. Violations of such regulations can result in shutdown of the generating unit involved and/or civil or criminal penalties of up to $27,500 for each day the unit is in violation. The Environmental Protection Agency (EPA) has an interim enforcement policy for SO_2 regulations in Ohio that allows for compliance based on a 30-day averaging period. The Companies cannot predict what action the EPA may take in the future with respect to the interim enforcement policy.

The Companies are in compliance with the current SO_2 and nitrogen oxides (NOx) reduction requirements under the Clean Air Act Amendments of 1990. SO_2 reductions are being achieved by burning lower-sulfur fuel, generating more electricity from lower-emitting plants, and/or using emission allowances. NOx reductions are being achieved through combustion controls and the generation of more electricity at lower-emitting plants. In September 1998, the EPA finalized regulations requiring additional NOx reductions from the Companies' Ohio and Pennsylvania facilities. The EPA's NOx Transport Rule imposes uniform reductions of NOx emissions (an approximate 85% reduction in utility plant NOx emissions from projected 2007 emissions) across a region of twenty-two states and the District of Columbia, including Ohio and Pennsylvania, based on a conclusion that such NOx emissions are contributing significantly to ozone pollution in the eastern United States. In March 2000, the U.S. Court of Appeals for the D.C. Circuit upheld EPA's NOx Transport Rule except as applied to the State of Wisconsin and portions of Georgia and Missouri. By October 2000, states were

to submit revised State Implementation Plans (SIP) to comply by May 31, 2004 with individual state NOx budgets established by the EPA. Pennsylvania recently submitted a SIP that requires compliance with the NOx budgets at the Companies' Pennsylvania facilities by May 1, 2003 and Ohio submitted a "draft" SIP that requires compliance with the NOx budgets at the Companies' Ohio facilities by May 31, 2004. A Federal Implementation Plan accompanied the NOx Transport Rule and may be implemented by the EPA in states which fail to revise their SIP. In another separate but related action, eight states filed petitions with the EPA under Section 126 of the Clean Air Act seeking reductions of NOx emissions which are alleged to contribute to ozone pollution in the eight petitioning states. The EPA position is that the Section 126 petitions will be adequately addressed by the NOx Transport Program, but a December 17, 1999 rulemaking established an alternative program which would require nearly identical 85% NOx reductions at 392 utility plants, including the Companies' Ohio and Pennsylvania plants, by May 2003, in the event implementation of the NOx Transport Rule is not implemented by a state. Additional Section 126 petitions were filed by New Jersey, Maryland, Delaware and the District of Columbia in mid-1999 and are still under evaluation by the EPA. The Companies continue to evaluate their compliance plans and other compliance options.

In July 1997, the EPA promulgated changes in the National Ambient Air Quality Standard (NAAQS) for ozone emissions and proposed a new NAAQS for previously unregulated ultra-fine particulate matter. In May 1999, the U.S. Court of Appeals found constitutional and other defects in the new NAAQS rules. In February 2001, the U.S. Supreme Court upheld the new NAAQS rules regulating ultra-fine particulates but found defects in the new NAAQS rules for ozone and decided that the EPA must revise those rules. The future cost of compliance with these regulations may be substantial and will depend on the manner in which they are ultimately implemented, if at all, by the states in which the Companies operate affected facilities.

In 1999 and 2000, the EPA issued Notices of Violation (NOV) or a Compliance Order to nine utilities covering 44 power plants, including the W. H. Sammis Plant. In addition, the U.S. Department of Justice filed eight civil complaints against various investor-owned utilities, which included a complaint against OE and Penn in the U.S. District Court for the Southern District of Ohio. The NOV and complaint allege violations of the Clean Air Act based on operation and maintenance of the Sammis Plant dating back to 1984. The complaint requests permanent injunctive relief to require the installation of "best available control technology" and civil penalties of up to $27,500 per day of violation. Although unable to predict the outcome of these proceedings, the Company believes the Sammis Plant is in full compliance with the Clean Air Act and the NOV and complaint are without merit. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while these proceedings are pending.

In December 2000, the EPA announced it would proceed with the development of regulations regarding hazardous air pollutants from electric power plants. The EPA identified mercury as the hazardous air pollutant of greatest concern. The EPA established a schedule to propose regulations by December 2003 and issue final regulations by December 2004. The future cost of compliance with these regulations may be substantial.

As a result of the Resource Conservation and Recovery Act of 1976, as amended, and the Toxic Substances Control Act of 1976, federal and state hazardous waste regulations have been promulgated. Certain fossil-fuel combustion waste products, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation. The EPA has issued its final regulatory determination that regulation of coal ash as a hazardous waste is unnecessary. On April 25, 2000, the EPA announced that it will develop national standards regulating disposal of coal ash under its authority to regulate nonhazardous waste.

CEI and TE have been named as "potentially responsible parties" (PRPs) at waste disposal sites which may require cleanup under the Comprehensive Environmental Response, Compensation and Liability Act of 1980. Allegations of disposal of hazardous substances at historical sites and the liability involved, are often unsubstantiated and subject to dispute. Federal law provides that all PRPs for a particular site be held liable on a joint and several basis. CEI and TE have accrued liabilities totaling $3.7 million as of December 31, 2000, based on estimates of the total costs of cleanup, the proportionate responsibility of other PRPs for such costs and the financial ability of other PRPs to pay. CEI and TE believe that waste disposal costs will not have a material adverse effect on their financial condition, cash flows or results of operations.

7. Segment Information:

The Company operates under the following reportable segments: regulated services, competitive services and other (primarily corporate support services). The Company's primary segment is its regulated services, which include five electric utility operating companies that formerly provided bundled electric service in Ohio and Pennsylvania. Its other material business segment consisted of the subsidiaries that operate unregulated businesses. During 2000, the Company made certain organizational changes to further align its business units to accommodate its retail strategy and the impact of its plan to move the generation portion of its electricity services from the regulated segment to the competitive segment as reflected in its approved Ohio transition plan. These reportable segments are strategic businesses, which are managed and operated differently based on the degree of regulation, and the products and services offered.

The regulated services segment designs, constructs, operates and maintains our regulated transmission and distribution systems. It also provides generation services to regulated franchise customers who have not chosen an alternative, competitive generation supplier. The regulated services segment obtains generation through power supply agreements with the competitive services segment.

The competitive services segment includes all unregulated energy and energy-related services including commodity sales (both electricity and natural gas) in the retail and wholesale markets, marketing, generation, trading and sourcing of commodity requirements, as well as other competitive energy application services. Competitive products are increasingly marketed to customers as bundled services.

Reconciling adjustments to segment operating results from internal management reporting to consolidated external financial reporting:

(A) Principally interest income and revenues related to gross receipts taxes which are excluded for internal management reporting purposes.

(B) Elimination of intersegment revenues.

(C) Reclassification for amortization of tax regulatory assets included in income taxes for external financial reporting; reduction for depreciation expense recognized for internal management reporting for assets subject to sale and leaseback transactions (see Note 3); and recognition of goodwill amortization which is excluded for internal management reporting.

(D) Income tax effects of the differences described above and the tax benefit of interest expense not otherwise included in the computation of net operating profit after taxes.

(E) The net effect from the differences described above and the recognition of interest costs not included in net operating profit after taxes for internal management reporting purposes.

Shareholder Information

Investor Services, Transfer Agent and Registrar

We act as our own transfer agent and registrar for all stock issues of FirstEnergy and its subsidiaries. Shareholders wanting to transfer stock, or who need assistance or information, can send their stock or write to Investor Services, FirstEnergy Corp., 76 South Main Street, Akron, Ohio 44308-1890. Shareholders also can call the following toll-free telephone number, which is valid in the United States, Canada, Puerto Rico and the Virgin Islands, weekdays between 8 a.m. and 4:30 p.m., Eastern time: 1-800-736-3402. For Internet access to general shareholder information and useful forms, visit our Internet site at *www.firstenergycorp.com/ir.*

Stock Listings and Trading

Newspapers generally report FirstEnergy common stock under the abbreviation FSTENGY, but this can vary depending upon the newspaper. The common stock of FirstEnergy and preferred stock of its electric utility subsidiaries are listed on the following stock exchanges:

Company	Stock Exchange	Symbol
FirstEnergy	New York	FE
The Illuminating Company	New York, OTC	CVX
Ohio Edison	New York	OEC
Pennsylvania Power	Philadelphia	PPC
Toledo Edison	New York, OTC, American	TED

Dividends

Proposed dates for the payment of FirstEnergy common stock dividends in 2001 are:

Ex-Dividend Date	Record Date	Payment Date
February 5	February 7	March 1
May 3	May 7	June 1
August 3	August 7	September 1
November 5	November 7	December 1

Direct Dividend Deposit

Shareholders can have their dividend payments automatically deposited to checking and savings accounts at any financial institution that accepts electronic direct deposits. Use of this free service ensures that payments will be available to you on the payment date, eliminating the possibility of mail delay or lost checks.

Stock Investment Plan

Shareholders and others can purchase or sell shares of FirstEnergy common stock through the Company's Stock Investment Plan. Investors who are not registered shareholders can enroll with an initial cash investment of $250. Participants may invest all or some of their dividends or make optional cash payments at any time of at least $25 per payment up to $100,000 annually.

Safekeeping of Shares

Shareholders can request that the Company hold their shares of FirstEnergy common stock in safekeeping. To take advantage of this service, shareholders should forward their stock certificate(s) to the Company along with a signed letter requesting that the Company hold the shares. They should also state whether future dividends for these shares are to be reinvested or paid in cash. The certificate(s) should not be endorsed, and registered mail is suggested. The shares will be held in uncertificated form and we will make certificate(s) available to shareholders upon request at no cost. Shares held in safekeeping will be reported on dividend checks or Stock Investment Plan statements.

Combining Stock Accounts

If you have more than one stock account and want to combine them, please write or call Investor Services and specify the account that you want to retain as well as the registration of each of your accounts.

Duplicate Mailings of the Annual Report

If you hold stock in more than one registration and do not wish to combine accounts, you can eliminate duplicate mailings of our annual report by informing us when voting your shares for the Annual Meeting of Shareholders. You also can send a written request to Investor Services, including the exact registration of the account for which you want the mailing discontinued.

Form 10-K Annual Report

Form 10-K, the Annual Report to the Securities and Exchange Commission, will be sent without charge by writing to Nancy C. Ashcom, Corporate Secretary, FirstEnergy Corp., 76 South Main Street, Akron, Ohio 44308-1890.

Institutional Investor and Security Analyst Inquiries

Institutional investors and security analysts should direct inquiries to: Kurt E. Turosky, Manager, Investor Relations, 1-330-384-5500.

Annual Meeting of Shareholders

Shareholders are invited to attend the 2001 Annual Meeting of Shareholders on Tuesday, May 15, at 10 a.m., at the John S. Knight Center in Akron, Ohio. Registered holders of common stock not attending the meeting can appoint a proxy and vote on the items of business by telephone, Internet or mail. Shareholders whose shares are held in the name of a broker can attend the meeting if they present a letter from their broker indicating ownership of FirstEnergy common stock on the record date of March 21, 2001.

Letter from the Chairman

FELLOW SHAREHOLDERS:

Evolution is as natural in business and industry as it is in nature. The process of adaptation to constant change is inevitable. And in business, as in nature, survival depends on successful adaptation.

In recent years, the global electric utility industry has experienced an intense period of evolution. During this time, I have spoken often of the need for our corporations to adapt to new markets, new rules, and new customer preferences. I am proud of the effort that our employees have made in working diligently to prepare GPU for these changes, focusing both on the creation of a new culture and the use of new technology. Having evolved from a rich, diverse heritage, we are now preparing for the next natural chapter in our transformation: our planned merger with FirstEnergy Corp.

I have had the privilege of seeing nearly 40 years of GPU's adaptive responses to industry change, and I reflect upon our accomplishments with great pride. We have led our industry in a number of significant areas. One prime example is nuclear power. GPU built the nation's first large-scale, commercial nuclear generating station, our former Oyster Creek plant in Lacey Township, New Jersey, in 1969. Our Saxton, Pennsylvania experimental nuclear facility, completed in 1962, was one of the very first of its kind in our industry. Saxton incorporated unique engineering features and became a training facility for nuclear plant personnel from all over the world. GPU Nuclear Corporation, formed after the 1979 incident at our Three Mile Island Unit 2 plant, became the industry model for the safe, efficient operation of nuclear power plants.

We can also point with particular pride to GPU's long tradition of forming close partnerships with our customers and with our communities. Although these initiatives have been supported by management and the board of directors, the real credit goes to the women and men throughout GPU who thrive on service to customers, involvement in communities, and stewardship of the environment. It is no surprise that many of our employees take this commitment beyond the workday and into their personal lives, where volunteerism has become a way of life. GPU encourages people at all levels to get involved in community activities and recognizes them when they do.

As we become a part of FirstEnergy, we expect not only to retain GPU's culture of supporting our communities, but to build upon it. FirstEnergy, too, has an impressive record of community service and supports our continued dedication to that mission.

PROGRESS IN 2000

As GPU continued to keep pace with changing markets in 2000, we concentrated on our core domestic transmission and distribution business and on building non-regulated enterprises related to that business. Consistent with that strategy, we also disposed of businesses that no longer effectively supported our core focus. For example:

- We took a major step in our expansion in the non-regulated area when we completed the purchase of MYR Group, a specialty infrastructure construction company. This acquisition of the country's fifth largest construction company of its type offers growth opportunities as utilities increasingly outsource services under continuing industry restructuring.

- We sold GPU PowerNet, our electric transmission subsidiary in Australia, for US$1.26 billion. While the sale resulted in a $277 million after-tax loss, we were able to usefully employ the cash proceeds towards reducing debt.

- We concluded the sale of GPU International, including its interest in six independent generating plants and a development project in the U.S., for $225 million, recording an after-tax gain of $89 million.

We have been working to build a winning culture at GPU in which our people are challenged to stretch their capabilities and take pride in, and ownership of, everything they do. This focus on building a winning culture has been a central element in the strategic repositioning underway at GPU Energy, which operates our domestic core business. GPU Energy is taking initiatives to position itself for the increasingly competitive marketplace for energy services and for the opportunities presented by the quickening pace of technological progress. More about those efforts in the pages that follow.

The states of Pennsylvania and New Jersey have distinguished themselves as national leaders in the evolution to a competitive electric industry. GPU has been an active participant in that process and continues to support competition as being in the long-term public interest. However, as well conceived and implemented as the process has been in our service areas, predictably, some mid-course corrections are needed. As the restructuring of the industry continues to evolve, regulation must evolve with it. As a result of the provider of last resort (PLR) obligation in Pennsylvania, GPU must purchase electricity at prevailing prices on the wholesale market and resell it at prices that are considerably lower, due to a regulatory cap on our rates. Since independent suppliers have not offered prices lower than the company's capped generation rates, and because many suppliers have withdrawn from the retail market altogether, most of our customers have no shopping opportunities available. Consequently, they have either remained or have returned to the "safe haven" of our low, fixed rates. As a result, GPU lost $47 million on power sales in Pennsylvania in 2000. We have asked the Pennsylvania Public Utility Commission for financial relief from what we believe is an unsustainable situation.

FIRSTENERGY MERGER: THE NEXT STEP

The most significant news of the year, of course, was our agreement to merge with FirstEnergy. As noted earlier in this letter, we see our combination with FirstEnergy as another step in GPU's natural evolution.

The consolidation taking place in the electric utility industry is a logical consequence of ongoing industry restructuring, which creates the need for larger, more competitive companies. While our initial efforts were to have GPU acquire a smaller company, we have always recognized that the better choice might be for our company to be on the other side of that equation. Our primary focus was on what option was best for GPU's shareholders, employees and communities, not on what name went over the door. GPU's management looked to partner with a strong company that had complementary assets and a similar culture that, together with GPU, would create a powerful entity. It was this thinking that led us to enter into an agreement with FirstEnergy...one more step in GPU's century-long history of dozens of mergers and acquisitions involving more than 100 small and medium-sized companies.

The new FirstEnergy organization will, with the addition of GPU, have a powerful U.S. electric utility network serving an area that embraces more than 37,000 square miles stretching from northern and central Ohio, through Pennsylvania, to the New Jersey shore. The new company will serve a base of 4.3 million customers, making it the sixth largest investor-owned system in the country.

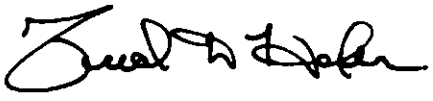
Naturally, there will be many things that are new and different about the larger FirstEnergy company that is being formed. For GPU, this will mean not only a new name, but also the exciting prospect of new resources and expanded thinking. But under the umbrella of a new name, we will see a thread of continuity as many of the same dedicated employees remain at the backbone of our Pennsylvania and New Jersey operations. Those employees, many of whom began their professional careers with Met-Ed, Penelec, Jersey Central, GPU Service, or one of the other GPU System companies, will have opportunities to share their skills and expertise as they contribute to bringing success to the new FirstEnergy organization.

I continue to be proud of the many committed employees throughout the GPU System. I have valued my time with them and will cherish the many memories we have created together. It is to that special group of individuals that I dedicate this annual report.

GREATER VALUE, BETTER OPPORTUNITIES

The respective shareholders of GPU and FirstEnergy approved the proposed merger of the two companies last November. At the writing of this report, the transaction still awaits a number of additional approvals from state and federal agencies. In anticipation of the receipt of the requisite approvals, employees from both companies have been working diligently on an integration plan designed to create a combined corporation stronger than either of the two stand-alone companies. We are hopeful that the remaining regulatory approvals will be forthcoming on a reasonable time schedule so that we can complete the transaction by mid-year 2001 and begin harvesting the benefits of the merger.

As I close what will likely be my last annual letter to you, I do so with the belief that our combination with FirstEnergy will provide far more value and better opportunities than either company could realize independently — value and opportunities for our customers, for our employees and for you, our shareholders. I have spent all of my professional life with the GPU System, and I am pleased to have been a part of what will become one more very important step in the long and proud history of GPU.



Fred D. Hafer
Chairman, President and
Chief Executive Officer
February 12, 2001

— **Scott Lowry,** Manager,
Business Case Initiatives,
GPU Energy

"We are making major strides in restoring customer outages using a new web-based technology. In situations like major storms, which create widespread outages, this technology transfers responsibility from heavily burdened central offices to 59 district locations. These offices then take full ownership for restoring power at the local level, where we are closest to the customer."

**BERNIE SMITH, MANAGER,
SAFETY & HEALTH,
GPU ENERGY**

"Utilities with excellent safety records also have high productivity, great morale, and tend to perform at top levels in every part of their business. That's why we've made 'Safety #1 in 2001' a top priority at GPU."

Achieving Reliability Excellence

Although GPU's overall goal of supplying reliable electric service hasn't changed in more than a hundred years, the manner in which we attempt to achieve the levels of service our customers expect has evolved considerably. The ongoing deregulation of the utility industry, together with the progress of the information age, has hastened the pace of change significantly.

MARC TROUTMAN, MANAGER, MAINTENANCE & SERVICE RESPONSE, GPU ENERGY

"GPU makes real headway in boosting the confidence of our customers when we place special emphasis on correcting recurring service problems. Our Community Connections program does just that, and we're seeing our standing at the local level go up several notches as a result."

A fast-paced economy that relies more and more on electronic technology, has caused the customers' needs for reliable electric service to increase substantially. Economic growth in the regions we serve has placed additional load on our electrical system. GPU is responding to these challenges by combining two powerful assets - technology and people.

In recent years, GPU has invested heavily in technology and systems to improve our operations. For example, we have extended our Intranet-based capabilities to shift responsibility for restoring power in high outage situations to district offices close to our customers.

Our union leadership and employees are strong partners with us as we respond to the increasing demands on our electric delivery system. We will meet our commitment with ongoing investment to replace and improve our system infrastructure, expand and improve our customer communications, and renew our focus on developing our people.

We have given our employees new tools to improve service and reliability and have given them more direct control in serving customers. We are firm believers that, even in a high-tech world, it will be the people of GPU who will be the key to providing the levels of service that our customers demand in the future.

— **Steve Nicholl,** Regional Vice President, Customer Focus, GPU Energy

"Being an active partner with every community in which we operate is critical to GPU's success. My passion is forming close relationships for GPU within its communities. Of course, these relationships include local governments and civic groups. But it's just as important that we enthusiastically support the many causes and non-profit organizations, like Daytop-New Jersey, that benefit our communities."

Serving Our Communities

Enthusiastically supporting our communities is a valued tradition for GPU and for our people. GPU employees find it natural to volunteer for worthwhile activities in the towns and cities where they live and work. It is a source of pride for them, and it heightens their pride in GPU. We are proud of the generosity and caring spirit of our employees, and we assist them in their efforts through corporate sponsorship and charitable contributions.

CRYSTAL SEITZ, MANAGER, CULTURE TRAINING, LABOR & DIVERSITY, GPU ENERGY

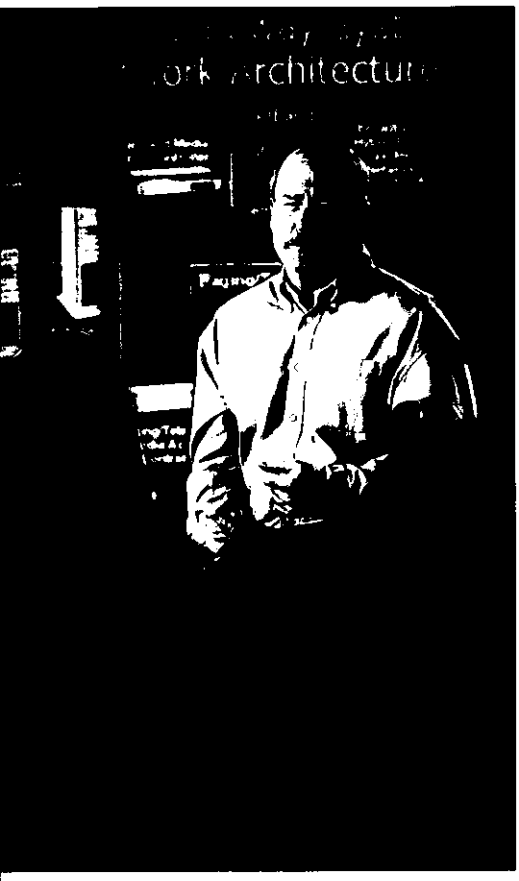
"At GPU, we know that supporting the needs of our communities plays a vital role in our success. When our employees volunteer for community causes, they feel good about what they're doing and they know that GPU is behind their efforts 100 percent."

Community service will continue to play an important role at GPU as our business environment evolves. In fact, as our industry becomes increasingly competitive, community service is becoming nothing less than a compelling business imperative.

GPU's dedicated local involvement has placed us in an enviable position in the communities we serve. Frequently, it is GPU people who provide the leadership in local government and for causes like education, helping those less fortunate, dealing with issues like chemical dependency and in local efforts to support education, social welfare and cultural activities. Our goal is to continue to build on that foundation.

GPU's active involvement in our communities is not only the right thing to do, but has the potential of providing a powerful strategic marketing advantage as well.

Our decision to merge with FirstEnergy was influenced by many factors, not the least of which was choosing to partner with a company whose corporate culture included a strong focus on dedication to the community. The evolution of GPU into a larger company will not cause us to forget our local connections.



— **James Torpey**, Director, Distributed Technologies, GPU Energy

"As daily living becomes ever more complex, GPU has exciting opportunities for providing the simplicity customers seek. Our gateway into homes and businesses will enable us to offer a number of value-added services allowing customers to do everything from automatically scheduling appliance use to save on their bills, to being alerted when their air conditioners are ready for maintenance."

RON BURTON, LINE CONSTRUCTION & MAINTENANCE, GPU ENERGY

"What if we could learn, even before a customer calls, that there's a power outage and immediately start fixing it? Technologies like Bluetooth™ give us the opportunity to do that and more, and we're actively pursuing them."

Using Our Assets Creatively

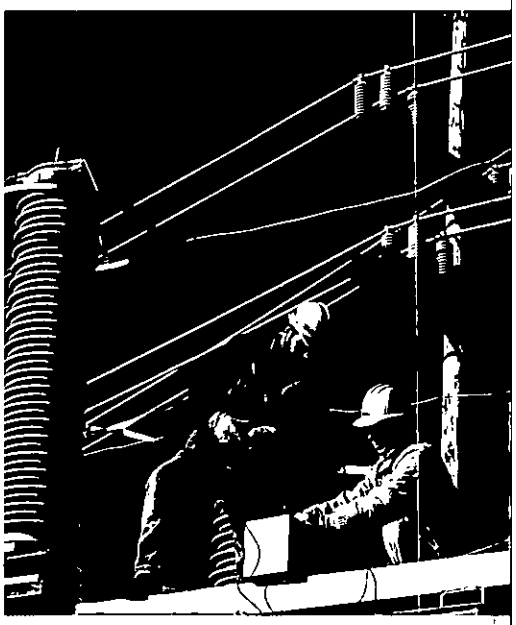
To be successful in the evolving electric utility industry environment, GPU must find new and better ways to get maximum use of our assets. Not only do we need to continually improve the reliability of our electric distribution system, but we must improve the efficient use of this system. We must recognize the value of the gateway we naturally have into customers' homes and businesses, and capitalize on that phenomenon by providing new, value-added services.

GPU and its people are engaged in several initiatives aimed at substantially enhancing the utilization of our distribution system. Dedicated teams are finding innovative ways to employ existing techniques. At the same time, they are investigating new technologies that can make our existing system more efficient.

SAM THOMAS, DIRECTOR, TRANSMISSION SYSTEMS, GPU ENERGY

"The utilization rate of our transmission and distribution system is low and needs to be improved. We're doing so by enlisting new and existing technology and working with customers to manage the electrical load better."

We are also applying technology to enable our system to better manage the demands placed on it. We are installing a special software system that will give our customers and us new information during periods of peak demand. This data will allow customers to make ongoing, timely and informed decisions on such alternatives as whether to continue receiving GPU service, to switch to backup generation, or opt for voluntary curtailment. Our objective is to manage service by partnering with our customers to provide workable options, based on the customers' determination of the most economic solutions.



The gateway our electrical wires provide into customers' premises presents us with opportunities to offer additional high value services. This unique competitive advantage associated with the customer connection will enable us to learn what types of new energy-related services customers would like.

We anticipate that our load management software system and our customer gateway will provide the foundations upon which to build platforms for new, non-regulated businesses.

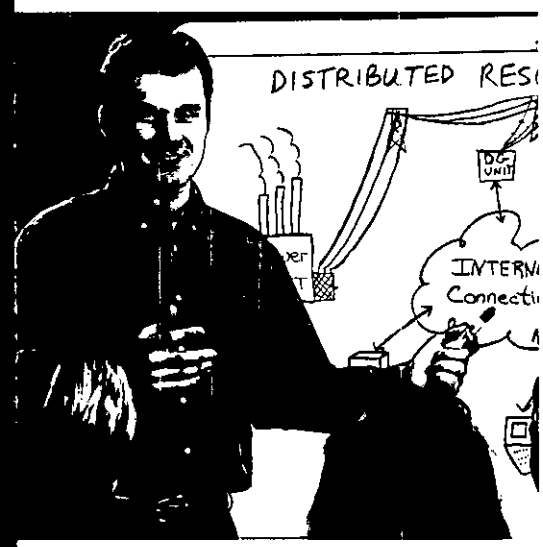
"The 375-mile fiber optic transmission line we are installing along the Amtrak right-of-way between New York and Washington, D.C., and west to Harrisburg, is an exciting step for GPU Telcom. It will be a key building block in achieving our overall strategy of connecting tier 2, 3 and 4 cities to the major tier 1 markets in the Mid-Atlantic region."

— Eric Pierce,
Director of Sales and Marketing,
GPU Telcom Services

BILL GREEN, GROUP VICE PRESIDENT, MYR GROUP

"Being part of GPU is opening up new opportunities for MYR Group. We are extending GPU Energy's own construction and storm restoration capabilities and installing most of the new fiber capacity for GPU Telcom Services."

Non-Regulated Businesses Hold Promise



PAUL GRIGAUX, DIRECTOR, STRATEGIC INITIATIVES, GPU SERVICE

"Encouraging distributed generation — and using state-of-the-art software to gain the most from it — will be critical as demands on the electrical grid increase. Through our partnerships with Silicon Energy and Ballard Generating Systems, we are taking a leadership role in this area."

An exciting aspect of GPU's evolution is that our expertise in a number of disciplines has given us the basis for entering promising non-regulated businesses. Today, we have an active presence in infrastructure construction, through our MYR Group subsidiary, and in telecommunications, through our GPU Telcom Services unit. Soon, we expect to add distributed generation-based services and a number of value-added offerings made possible by our unique gateway connection with our customers.

MYR Group, our specialty infrastructure construction subsidiary, recorded healthy increases in revenues and profits in the year 2000. Acquired in April, MYR benefited from the continuing deregulation of the electric utility industry, in that providing construction and storm restoration services to utility companies represents its primary market.

GPU Telcom Services made major strides in 2000 as it announced three ventures and partnerships aimed at furthering its mission of providing valuable communications services to under-served markets in the Mid-Atlantic region. It became a co-founder of America's Fiber Network, a new fiber optics company serving markets in the eastern United States; partnered to form Telergy Mid-Atlantic, which is offering value-added services to customers in New Jersey and Pennsylvania; and formed a strategic partnership with Sting Communications, a broadband and wireless service provider. Early in 2001, Telcom entered into an agreement to construct a 375-mile fiber optic installation along Amtrak's Northeast Corridor between New York City and Washington, D.C., and its Keystone line between Philadelphia and Harrisburg, PA.

As utility deregulation continues to test the capabilities of the electrical grid, distributed generation (power generated in smaller increments closer to where it will be consumed) will play an increasingly important role. GPU intends to have an important presence in this evolving market. As noted in the previous section, we are implementing a software system that will enable us to enhance the capacity of our current distribution network by adding power generated by customers' systems when it is advantageous to do so.

In 2001 we plan to offer this system, established through a strategic partnership with Silicon Energy Corp., to others in our industry. We will make electrical customers aware of the economic advantages of installing distributed generation, as well as providing consulting services and generating equipment.

GPU has a 12.6 percent ownership in Ballard Generation Systems, which develops stationary fuel cells for residential and commercial use. As Ballard fuel cells move to commercial production, we plan to market them as part of our load management/distributed generation service offering.

Through our gateway into our customers' homes and businesses, GPU has the opportunity to provide valuable, new services. Our customer connection provides a wealth of information about our customers, gives us the ability to learn even more, and will enable us to tailor specific offerings to different groups of customers based on what we discover about their needs and preferences.

Summary Management Discussion and Financial Information

INTRODUCTION GPU has prepared the financial section of its 2000 Annual Report using a summary approach. We hope that you find this abbreviated format easy to read and understand; however, it is not a substitute for the full financial statements contained in the 2000 Financial Report, which is also provided to GPU shareholders. GPU's full financial statements will also be filed with the Securities and Exchange Commission (SEC) in March 2001 in its annual Form 10-K.

In connection with the safe harbor provisions of the Private Securities Litigation Reform Act of 1995, GPU is hereby filing cautionary statements identifying important factors that could cause its actual results to differ materially from those projected in forward-looking statements (as that term is defined in the Private Securities Litigation Reform Act of 1995) made by or on behalf of GPU which are made in this Summary Management Discussion. Any statements that express, or involve discussions as to, expectations, beliefs, plans, objectives, assumptions or future events or performance (often, but not always, through the use of words or phrases such as "anticipates," "believes," "estimates," "expects," "intends," "plans," "projects," "will likely," "result," "will continue" or similar expressions) are not statements of historical facts and may be forward-looking. A description of the types of those forward-looking statements is contained within Management's Discussion and Analysis in GPU's 2000 Financial Report.

Any forward-looking statement speaks only as of the date on which that statement is made, and GPU undertakes no obligation to update any forward-looking statement to reflect events or circumstances after the date on which that statement is made or to reflect the occurrence of unanticipated events. New factors emerge from time to time and it is not possible for management to predict all of those factors, nor can it assess the impact of each of those factors on the business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statement.

BUSINESS OUTLOOK In August 2000, GPU entered into an agreement to merge with FirstEnergy Corp. (FirstEnergy), an Ohio corporation, headquartered in Akron, Ohio. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4.5 billion in cash and FirstEnergy common stock. This merger will enable GPU to be part of an organization with a substantially larger customer base and market capitalization necessary to compete in today's market, which is consolidating into a small number of big players with critical mass and strength. FirstEnergy provides a good fit with GPU in terms of strategic objectives, geography, facilities and culture.

The merger has been approved by the Boards of Directors and stockholders of GPU and FirstEnergy and is expected to close promptly after all of the conditions to the consummation of the merger, including the receipt of all necessary regulatory approvals, are fulfilled or waived. The receipt of all necessary regulatory approvals is expected to take approximately nine to twelve months from the date of the merger agreement.

During 2000, GPU moved ahead with its strategy for building shareholder value with a steady focus on the transmission and distribution of electricity. A key element of GPU's focus is improving customer service and service reliability in its domestic markets. GPU Energy is committed to providing high quality transmission and distribution service to its customers and, to this end, has committed to making additional investments in this business. In addition, in 2000 GPU Energy reorganized the structure of its operational divisions with a focus on regional authority. Under the new organizational design, each of four newly created regions is accountable for customer satisfaction, employee satisfaction, asset management, process excellence and operational excellence. In January 2001, GPU Energy announced that it was offering Voluntary Enhanced Retirement Programs (VERP) to certain bargaining unit employees in Pennsylvania. Approximately 240 employees are eligible for the VERP. If all of the eligible employees accept the offer, a pre-tax charge of approximately $53 million would be recorded in 2001 earnings for the cost of pension and other post retirement benefits, exclusive of any severance benefits that would be paid to those employees.

In addition, GPU initiated a program in 1999 to enhance shareholder returns through planned cost reductions of $100 million. A significant portion of these planned cost reductions were achieved in 2000, and the remaining reductions will be implemented in 2001.

Another key element of GPU's strategy is to pursue opportunities in non-regulated businesses related to its core utility infrastructure business. To this end, GPU completed the acquisition of MYR Group Inc. (MYR), a specialty construction company, for approximately $218 million in April. MYR, which is based near Chicago, provides a complete range of power line and commercial/industrial electrical construction services for electric utilities, telecommunications providers, commercial and industrial facilities and government agencies across the US. MYR also builds cellular towers for the wireless communications market. MYR complements GPU's utility services business and provides a platform for building its non-regulated activities.

In addition, GPU capitalized on several telecommunications opportunities related to its core utility infrastructure business during the year. In March, GPU announced its participation in America's Fiber Network LLC (AFN), of which GPU anticipates owning 25%. AFN is a high-speed fiber optics company with a network of more than 7,000 route miles, or 140,000 fiber miles, connecting major markets in the eastern US to secondary markets with a growing need for broadband access. GPU anticipates investing cash, as well as existing and new fiber routes and electronic equipment, in AFN. As of December 31, 2000, GPU had invested $5.3 million in AFN.

In April, GPU also announced the formation of Telergy Mid-Atlantic (TMA), a joint venture between GPU Telcom and Telergy, Inc. TMA combines established telecommunications services and marketing expertise with utilities' existing fiber networks. TMA's initial target market includes both New Jersey and Pennsylvania, with future expansions planned for contiguous regions currently served by the network of GPU Telcom. TMA plans to offer telecommunications service, and ultimately electricity, marketing them jointly to businesses, hospitals and educational institutions, among others. As of December 31, 2000, GPU Telcom had acquired $20 million of Telergy, Inc. convertible preferred securities.

In 2000, GPU proceeded with its plan to reduce ownership in non-core and under-performing assets. In June, GPU completed the sale of GPU PowerNet, its Australian electric transmission company, to Singapore Power International for A$2.1 billion (US $1.26 billion). In addition, GPU completed the sale of GPU International, Inc., its domestic independent power production business, to Aquila Energy Corporation for $225 million in December. These assets were chosen for sale since they were expected to experience only limited growth and the proceeds from the sales could be used to reduce debt and fund other investments with higher return and growth potential. GPU was unable, however, to dispose of GPU GasNet, its Australian gas transmission business, and it will retain that business pending improvement in local market conditions.

In August 2000, GPU completed the final significant step in its strategy of exiting the generation business with the sale of the Oyster Creek Nuclear Generating Station to AmerGen Energy Company, for $10 million. It was GPU's judgment that only very large generators with the resources to absorb market risk could be successful in this arena, and that GPU did not have sufficient size or resources to compete successfully as a major energy supplier.

Condensed Consolidated Balance Sheets

DECEMBER 31,	2000	1999
	(IN THOUSANDS)	
ASSETS		
Utility plant in service	**$10,138,233**	$11,766,446

TOTAL LIABILITIES AND CAPITALIZATION	**$19,262,461**	$21,697,832

COMPETITIVE BUSINESS RISKS GPU Energy expects that it will continue to serve customers in markets where there will be capped rates for varying periods and its ability to seek rate increases will be limited. In addition, as a result of Restructuring Orders issued by the New Jersey Board of Public Utilities (NJBPU) and Pennsylvania Public Utility Commission (PaPUC), GPU Energy is required to supply electricity to customers who do not choose an alternate supplier. Given that GPU Energy has essentially exited the generation business and will have to supply electricity to non-shopping customers almost entirely from contracted and open market purchases, there will be increased risks associated with supplying that electricity.

In recent months, certain aspects of California's restructuring plan have created instability and price volatility in the electricity market, which have resulted in the rapid deterioration of the credit quality of California's electric utilities, including the default on various contractual and financial obligations. The financial markets have reacted negatively to this situation; this reaction includes a careful review of overall credit exposure to the electric utility industry. As a result, the amount of new financing capacity available to GPU may be less than it had previously been and renewal or refinancing of existing credit facilities may require GPU's acceptance of higher pricing and / or more restrictive terms and conditions.

GPU has made significant investments in foreign businesses and facilities through its subsidiaries, GPU Electric and GPU Power. At December 31, 2000, GPU's investments in GPU Electric and GPU Power were $881 million and $139 million, respectively. As of that date, GPU had also guaranteed an additional $899 million and $21 million of GPU Electric and GPU Power outstanding .

obligations, respectively. Although management attempts to mitigate the risks of investing in certain foreign countries by, among other things, securing political risk insurance, GPU faces additional risks inherent to operating in such locations, including foreign currency fluctuations.

RESTRUCTURING ACTIONS With the transition to a competitive marketplace for generation service in New Jersey and Pennsylvania, certain generation-related costs, which generally would be recoverable in a regulated environment, may no longer be recoverable. These costs are generally referred to as stranded costs.

In 1999, the NJBPU issued a Summary Restructuring Order (Summary Order) with respect to Jersey Central Power & Light's (JCP&L) rate unbundling, stranded cost and restructuring filings. JCP&L is awaiting a final NJBPU order. The Summary Order provides for, among other things, full recovery of what otherwise would have become stranded costs, as well as customer choice of electric generation supplier beginning August 1, 1999 and rate reductions for all consumers. In addition, the NJBPU issued separate Orders approving the sales of JCP&L's generating assets; however, the NJBPU deferred making a final determination of the net proceeds and stranded costs related to the generating asset divestitures until an Internal Revenue Service (IRS) ruling regarding the treatment of associated federal income tax benefits is received.

In 1998, the PaPUC issued amended Restructuring Orders approving Settlement Agreements entered into by Metropolitan Edison (Met-Ed) and Pennsylvania Electric (Penelec) which, among other things, provide for customer choice of electric generation supplier beginning January 1, 1999 and a one-year (1999) reduction in retail distribution rates for all consumers. The Orders also provide for recovery of a substantial portion of what otherwise would have become stranded costs, subject to Phase II proceedings following the completion of Met-Ed's and Penelec's generating asset divestitures, to make a final determination of the extent of that stranded cost recovery. In 2000, Met-Ed and Penelec submitted Phase II Reports to the PaPUC supporting their actual net divestiture proceeds and providing a reconciliation of stranded costs pursuant to the 1998 Restructuring Orders.

On December 20, 2000, the PaPUC issued a Phase II Order which disallows $28 million of the requested $304 million of additional stranded costs above those amounts granted in the 1998 orders. Met-Ed and Penelec had anticipated a disallowance of a portion of stranded costs, and established a $25 million reserve in 1999. In addition, as a result of the Phase II Order, Met-Ed and Penelec recognized pre-tax income of $66 million due primarily to pension curtailment gains associated with employees terminated as a result of the sale of generating facilities in 1999, and the reversal of certain liabilities and changes in estimates and assumptions related to Met-Ed's leasehold interest in the Merrill Creek Reservoir project. The Phase II Order also deferred a decision on Met-Ed's requested increase in rates, beginning in 2006, for recovery of Met-Ed's generation-related stranded costs. In addition, the order requires Met-Ed and Penelec to seek an IRS ruling regarding the return of certain unamortized investment tax credits and excess deferred income tax benefits to ratepayers.

DOMESTIC ENERGY SUPPLY JCP&L is required to provide basic generation services (BGS) to retail customers who choose to remain with JCP&L as generation customers for a three-year period ending July 31, 2002. Thereafter, BGS service will be bid out at BGS rates, which are predetermined through July 31, 2003. Under its Summary Order, JCP&L is permitted to defer for future recovery the amount by which its reasonable and prudently incurred costs associated with providing BGS to non-shopping customers exceeds amounts currently reflected in its rates for BGS.

The PaPUC has approved a competitive bid process designed to assign provider of last resort (PLR) service to licensed generation suppliers, referred to as Competitive Default Service (CDS), for 20% of Met-Ed's and Penelec's retail customers on June 1, 2000, 40% on June 1, 2001, 60% on June 1, 2002 and 80% on June 1, 2003.

However, in 2000, GPU Energy did not receive any bids for the initial 20% of CDS, and, as a result, it increased its forward purchasing of electric power to accommodate these customers for whom it now continues to be the default supplier. In addition, customers requiring approximately 600 MW of power returned to Met-Ed and Penelec from their alternate suppliers for the peak summer months. During that same period, market prices at which Met-Ed and Penelec were required to purchase electricity for their retail supply customers at times substantially exceeded the amounts Met-Ed and Penelec were allowed to charge for that electricity under their capped generation rates. This situation resulted in GPU's Pennsylvania supply business recording a loss for 2000 of approximately $28 million after-tax, or $0.22 per share.

Under the terms of their restructuring settlements, Met-Ed and Penelec are required to seek alternative providers through a CDS bidding process for a portion of their customers again in 2001. Should the 2001 CDS bidding process be successful, then up to 40% of Met-Ed's and Penelec's customers would be served by third party energy providers starting on June 1, 2001. However, if the bidding process is not successful and wholesale energy prices remain high, and Met-Ed and

Penelec are not granted state regulatory relief, the companies expect substantial earnings losses to continue, as well as a reduction of cash flow. Based on their current projection of returning customers to whom they must supply electricity under their PLR obligations, Met-Ed and Penelec presently estimate approximately 800 MW of additional load will return to them by June 1, 2001. If this projection ultimately is correct, Met-Ed and Penelec estimate that the cost of providing energy to Pennsylvania customers, including the returning 800 MW of load, could result in GPU's Pennsylvania supply business recording a loss for 2001 of approximately $120 million after-tax, or $1 per share, based on the companies' current assessment of market energy prices. Met-Ed and Penelec also estimate that if all their shopping customers were to return by June 1, 2001, their supply business losses could be up to approximately $150 million after-tax, or $1.25 per share.

To this end, on November 29, 2000, Met-Ed and Penelec filed a petition with the PaPUC seeking permission to defer for future recovery their energy costs in excess of established generation rate caps. On January 24, 2001, the PaPUC recommended that the companies address the mandatory language of a rate cap exception set forth in the Customer Choice and Competition Act, and consolidated the petition with the GPU/FirstEnergy merger proceeding for consideration and resolution in accord with the merger procedural schedule, which establishes a May 2001 date for a PaPUC order in both cases. In February 2001, Met-Ed and Penelec filed a supplement to their petition and supporting testimony which they believe establish that the PaPUC should grant them exceptions to their rate caps. In addition, Met-Ed and Penelec stated that as an alternative to the deferral mechanism they previously proposed, the circumstances warrant an immediate increase in their present rate caps. There can be no assurance regarding the degree, if any, to which Met-Ed and Penelec may be able to recover their costs to supply electricity in excess of their capped rates.

GPU Energy has 285 MW of generation capacity and related energy remaining to meet customer needs. GPU Energy also has power purchase agreements with nonutility generators totaling 1,600 MW and contracts with other parties to provide varying amounts of capacity through May 31, 2004. These capacity amounts from third parties vary from a monthly high of approximately 1,740 MW in 2001 to 500 MW in May 2004. Based on the exercise of call options, GPU Energy may take the energy associated with up to 150 MW of this capacity through May 2003. GPU Energy has also purchased all of the capacity and energy from TMI-1 and Oyster Creek through December 31, 2001 and March 31, 2003, respectively. In addition, GPU Energy has the right to the capacity of the Homer City station (942 MW) through May 31, 2001 and the right to the capacity of the generating stations it sold in 1999 (3,970 MW) through May 31, 2002. GPU Energy's remaining capacity and energy needs will be met by short- to intermediate-term commitments (one month to three years). Any residual needs will be purchased from the short-term market (one hour to one month).

COMMITMENTS AND CONTINGENCIES As a result of existing and proposed legislation and regulations, and ongoing legal proceedings dealing with environmental matters, including, but not limited to, air and water quality, global warming, electromagnetic fields, and storage and disposal of hazardous and/or toxic wastes, GPU may be required to incur substantial additional costs to construct new facilities; modify or replace existing and proposed equipment; or remediate, decommission or clean up waste disposal and other sites currently or formerly used by it, including formerly owned manufactured gas plants, coal mine refuse piles and generation facilities.

During the normal course of the operation of its businesses, in addition to the matters described below, GPU is from time to time involved in disputes, claims and, in some cases, as a defendant in litigation in which compensatory and punitive damages are sought by the public, customers, contractors, vendors and other suppliers of equipment and services and by employees alleging unlawful employment practices. While management does not expect that the outcome of these matters will have a material effect on GPU's financial position or results of operations, there can be no assurance that this will continue to be the case.

GPU has exposure to a number of significant commitments and contingencies which are described in the full Notes to the Consolidated Financial Statements in the 2000 Financial Report and annual SEC Form 10-K. The following is a listing of significant commitments and contingencies: the pending merger of GPU and FirstEnergy; provider of last resort responsibility in Pennsylvania, and the inability for Met-Ed and Penelec to recover their energy costs in excess of established rate caps; Three Mile Island Unit 2 accident litigation; the pending class action litigation in New Jersey relating to the July 1999 heat storm; and class action litigation in Australia due to a fire and explosion at Esso's Longford natural gas plant.

Results of Operations

EARNINGS PER SHARE CONTRIBUTION	2000	1999	CHANGE
OPERATIONS:			
GPU Energy	**$ 2.21**	$ 3.51	$(1.30)
GPU Electric	**0.61**	0.38	0.23
GPU Power and GPU International	**0.14**	0.15	(0.01)
GPU Advanced Resources	**(0.01)**	(0.04)	0.03
GPU Telcom	**(0.02)**	–	(0.02)
MYR Group	**0.04**	–	0.04
GPU, Inc. (Corporate)	**(0.19)**	(0.14)	(0.05)
TOTAL OPERATIONS	**2.78**	3.86	(1.08)
NON-RECURRING ITEMS:			
GPU Energy	**0.47**	(0.25)	0.72
GPU Electric	**(2.28)**	0.05	(2.33)
GPU International	**0.22**	–	0.22
GPU, Inc.	**0.73**	–	0.73
TOTAL	**$ 1.92**	$ 3.66	$(1.74)

GPU's 2000 earnings were $233.5 million, or $1.92 per share, compared with earnings of $459 million, or $3.66 per share, for 1999. Both periods reflect non-recurring items. GPU's return on average common equity was 6.9% in 2000, compared to 13% in 1999. Excluding the non-recurring items discussed below, return on average common equity for 2000 and 1999 would have been 9.6% and 13.7%, respectively.

GPU's earnings for 2000 would have been $337.4 million, or $2.78 per share, if the following non-recurring items are excluded: the loss of $276.6 million after-tax, or $2.28 per share, on the sale of GPU PowerNet; the gain of $89.2 million after-tax, or $0.73 per share, on the sale of GPU International, Inc.; the net increase in income of $40.8 million, or $0.34 per share, for the impact of the PaPUC Phase II Order; the net gain of $26.2 million after-tax, or $0.22 per share, primarily related to a restructured power supply agreement between a GPU independent power project and Niagara Mohawk Corporation; and the gain of $16.5 million, or $0.13 per share, for the reversal of certain deferred taxes and realization of an investment tax credit related to the sale of Oyster Creek.

Excluding the following non-recurring items, earnings for 1999 would have been $484.1 million, or $3.86 per share: the net gain of $36.1 million after-tax, or $0.29 per share, for the sales of GPU Energy's generating facilities related to wholesale operations; the non-recurring charge of $68 million after-tax, or $0.54 per share, resulting from a Summary Order issued to JCP&L by the NJBPU; and the gain on the sale of the GPU Power UK supply business of $6.8 million after-tax, or $0.05 per share.

The $1.08 per share earnings decrease for 2000 versus 1999, excluding non-recurring items, was primarily due to the impact of electric utility restructuring in New Jersey and Pennsylvania; increased energy costs for Met-Ed and Penelec due to their need to purchase substantially all their energy requirements following the sales of their generating facilities in 1999, and the absence of deferred accounting treatment for these costs; and lower electric rates charged to customers in New Jersey. Partially offsetting the decrease was lower operation and maintenance and depreciation expenses at GPU Energy, and increased GPU Electric earnings primarily due to the acquisition of the remaining 50% ownership interest of GPU Power UK in July 1999.

Responsibility Statements

STATEMENT OF MANAGEMENT The 2000 GPU, Inc. (GPU) Summary Annual Report contains condensed consolidated financial statements derived from the consolidated financial statements that appear in GPU's 2000 Financial Report. The management of GPU is responsible for the information and representations contained in the condensed consolidated financial statements and other sections of this summary report. The consolidated financial statements contained in GPU's 2000 Financial Report have been prepared in conformity with generally accepted accounting principles. To fulfill its responsibilities for the reliability of the consolidated financial statements, GPU's management has established and maintains a system of internal control.

A description of these controls, along with management's opinion about their overall effectiveness, is contained within the Statement of Management included in GPU's 2000 Financial Report. The consolidated financial statements were audited by GPU's independent public accountants, whose opinion on the condensed consolidated financial statements appears below.

REPORT OF INDEPENDENT ACCOUNTANTS

To the Board of Directors and Stockholders of GPU, Inc.:

We have audited, in accordance with auditing standards generally accepted in the United States of America, the consolidated financial statements of GPU, Inc. and Subsidiary Companies as of December 31, 2000 and 1999, and for each of the three years in the period ended December 31, 2000, appearing in the GPU, Inc. 2000 Financial Report (which statements are not presented herein); and in our report dated January 31, 2001, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated balance sheets as of December 31, 2000 and 1999, and the related condensed consolidated statements of income and cash flows for each of the two years in the period ended December 31, 2000 is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

Shareholder Notes

GPU, Inc. is listed as GPU on the New York Stock Exchange.

2001 Annual Meeting
The Annual Meeting of Stockholders of GPU will be held at 10 a.m. EDT, May 3, 2001 at the F.M. Kirby Shakespeare Theatre, Drew University, 36 Madison Avenue, Madison, New Jersey.

Dividends
Dividend action is considered by the Board of Directors at its meetings on the first Thursday of December, April, June and October. Dividends are paid four times per year and fall on the last Wednesday of February, May, August and November. The record date is normally the last Friday of the month preceding the dividend payment date.

If you do not receive your dividend check within two weeks after the payment date, or if your check is lost, destroyed or stolen, please contact our Investor Relations Department or the Transfer Agent, Mellon Investor Services LLC, for a replacement.

Your dividends may be reinvested or deposited electronically to your bank account. For an authorization form, please contact GPU's Investor Relations Department or our Transfer Agent, Mellon Investor Services LLC.

Dividend Reinvestment
GPU's Dividend Reinvestment and Stock Purchase Plan (DRIP) is available to all registered shareholders. (You are a registered shareholder if the stock is registered in your name, not held in a broker's name.) DRIP participants may purchase additional shares of GPU common stock at market price without paying a brokerage fee or service charge. Plan features include:

- Full reinvestment of dividends
- Purchase of shares through optional cash payments
- Safekeeping services for stock certificates

For additional information, please contact GPU's Investor Relations Department or the Transfer Agent.

Transfer Agent
Mellon Investor Services LLC
Overpeck Centre
85 Challenger Road
Ridgefield Park, NJ 07660
(800) 263-1310
http://www.melloninvestor.com

Transfers may be hand-delivered to:
Mellon Investor Services LLC
120 Broadway, 13th Floor
New York, NY 10271

Remember
...to let us know if you move. Many states have enacted abandoned property laws which require the Transfer Agent, on behalf of GPU, to remit to the state of last known residence all stock and dividends for those accounts for which they cannot locate the owner. Therefore, it is important for shareholders to advise the Transfer Agent or GPU of any address changes.

Preferred Stock Trustee
Please direct all inquiries regarding JCP&L, Met-Ed or Penelec Preferred Stock to:
Mellon Investor Services LLC
Overpeck Centre
85 Challenger Road
Ridgefield Park, NJ 07660
(800) 756-3353

Missing Stock Certificates
If your stock certificate is lost, destroyed, or stolen, please notify the Investor Relations Department or the Transfer Agent as soon as possible to begin the replacement process. Please note that a fee may be charged to replace a missing stock certificate.

More Information
Copies of GPU's 2000 Annual Report to the Securities and Exchange Commission on Form 10-K will be available after March 31, 2001.

FERC Form No. 1:
ANNUAL REPORT OF MAJOR ELECTRIC UTILITIES, LICENSEES AND OTHERS

This report is mandatory under the Federal Power Act, Sections 3, 4(a), 304 and 309, and 18 CFR 141.1. Failure to report may result in criminal fines, civil penalties and other sanctions as provided by law. The Federal Energy Regulatory Commission does not consider this report to be of a confidential nature.

Exact Legal Name of Respondent (Company)	Year of Report
Cleveland Electric Illuminating Company, The	Dec. 31, 2000

ARTHUR ANDERSEN

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

To the Board of Directors and Management of The Cleveland Electric Illuminating Company:

We have audited the balance sheets - regulatory basis of The Cleveland Electric Illuminating Company as of December 31, 2000 and 1999, and the related statements of income - regulatory basis for the years then ended, and the statements of retained earnings - regulatory basis and cash flows - regulatory basis for the year ended December 31, 2000, included on pages 110 through 123.12 of the accompanying Federal Energy Regulatory Commission Form 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 18, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States.

In our opinion, the financial statements referred to above present fairly, in all material respects, the assets, liabilities and proprietary capital of The Cleveland Electric Illuminating Company as of December 31, 2000 and 1999, and the results of its operations for the years then ended, and its cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is intended solely for the information and use of the board of directors and management of The Cleveland Electric Illuminating Company and for filing with the Federal Energy Regulatory Commission and should not be used for any other purpose.

ARTHUR ANDERSEN LLP

Cleveland, Ohio,
February 16, 2001.

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)
(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;

(4) "Person" means an individual or a corporation;

(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;

(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."

(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:

(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Harvey L. Wagner, Controller
76 South Main Street
Akron, Ohio 44308

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Ohio
September 29, 1892

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric Service - Ohio

5. Have you engaged as the principle accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the repondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiearies for whom trust was maintained, and purpose of the trust.

The Cleveland Electric Illuminating Company is a wholly owned subsidiary of FirstEnergy Corp., an exempt utility holding company.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CORPORATIONS CONTROLLED BY RESPONDENT

1. Report below the names of all corporations, business trusts, and similar organizations, controlled directly or indirectly by respondent at any time during the year. If control ceased prior to end of year, give particulars (details) in a footnote.
2. If control was by other means than a direct holding of voting rights, state in a footnote the manner in which control was held, naming any intermediaries involved.
3. If control was held jointly with one or more other interests, state the fact in a footnote and name the other interests.

Definitions
1. See the Uniform System of Accounts for a definition of control.
2. Direct control is that which is exercised without interposition of an intermediary.
3. Indirect control is that which is exercised by the interposition of an intermediary which exercises direct control.
4. Joint control is that in which neither interest can effectively control or direct action without the consent of the other, as where the voting control is equally divided between two holders, or each party holds a veto power over the other. Joint control may exist by mutual agreement or understanding between two or more parties who together have control within the meaning of the definition of control in the Uniform System of Accounts, regardless of the relative voting rights of each party.

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
The Company did not close the stock book in 2000.	Total: 79,590,689 By Proxy: 79,590,689	December 19, 2000 FirstEnergy Corp. 76 South Main Street Akron, Ohio 44308

FOOTNOTE DATA

Schedule Page: 106 Line No.: 4 Column: d

If, and so often as, the Corporation shall be in default in the payment of the equivalent of the full dividends for a number of dividend payment periods (whether or not consecutive) which in the aggregate contain at least 540 days of any series of Preference Stock at the time outstanding, whether or not earned or declared, the holders of Preference Stock of all series, voting separately as a class, shall be entitled to elect, two members of the Board of Directors of the Corporation, subject to the prior rights of the holders of Serial Preferred Stock.

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

PAGE 108 INTENTIONALLY LEFT BLANK
SEE PAGE 109 FOR REQUIRED INFORMATION.

IMPORTANT CHANGES DURING THE YEAR (Continued)

1. None

2. On August 8, 2000, FirstEnergy Corp. (FirstEnergy), the parent of Cleveland Electric Illuminating Company (Company), and GPU, Inc. (GPU), a Pennsylvania corporation, entered into an Agreement and Plan of Merger. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4,500,000,000 in cash and FirstEnergy common stock. The transaction would be accounted for by the purchase method. The merger has been approved by the respective shareholders of FirstEnergy and GPU, the Federal Energy Regulatory Commission (FERC) on March 15, 2001 in Docket No. EC01-22-000, the Nuclear Regulatory Commission, the New York Public Service Commission and the Federal Communications Commission. Other regulatory approvals are pending before the Pennsylvania Public Utility Commission, the New Jersey Board of Public Utilities and the Securities and Exchange Commission.

3. None

4. None

5. On October 27, 1999, the FERC in Docket No. EC99-53-000 approved FirstEnergy's request for an intra-corporate transfer of ownership and operational control of jurisdictional transmission facilities of its electric utility operating companies (Company, Ohio Edison, Pennsylvania Power Company (Penn) and The Toledo Edison Company) and the assignment of rights under certain FERC-jurisdictional agreements to a newly formed affiliated company, American Transmission Systems, Inc. (ATSI). On September 1, 2000, the major high-voltage transmission facilities, which consist of approximately 7,100 circuit miles of transmission lines with nominal voltages of 345 Kv, 138 Kv and 69 Kv were sold to ATSI. These facilities will be included in the FERC Form 1 filed by ATSI.

6. See Notes 5 and 6 of Notes to Balance Sheets on pages 123.1 through 123.3 and pages 256 and 257 of this report and footnotes thereof.

7. None

8. The Company granted increases to employees represented by unions which provided for wage adjustments of 3.00% and 2.00% in May of 2000. These changes plus changes in salaries of supervisory, administrative and professional employees resulted in an estimated annual wage increase of $2,367,130.

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.
7. If any notes appearing in the report to stockholders are applicable tc this Statement of Income, such notes may be included on pages 122-123.
B. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.
9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.
10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF RETAINED EARNINGS FOR THE YEAR

1. Report all changes in appropriated retained earnings, unappropriated retained earnings, and unappropriated undistributed subsidiary earnings for the year.
2. Each credit and debit during the year should be identified as to the retained earnings account in which recorded (Accounts 433, 436 - 439 inclusive). Show the contra primary account affected in column (b)
3. State the purpose and amount of each reservation or appropriation of retained earnings.
4. List first account 439, Adjustments to Retained Earnings, reflecting adjustments to the opening balance of retained earnings. Follow by credit, then debit items in that order.
5. Show dividends for each class and series of capital stock.
6. Show separately the State and Federal income tax effect of items shown in account 439, Adjustments to Retained Earnings.
7. Explain in a footnote the basis for determining the amount reserved or appropriated. If such reservation or appropriation is to be recurrent, state the number and annual amounts to be reserved or appropriated as well as the totals eventually to be accumulated.
8. If any notes appearing in the report to stockholders are applicable to this statement, include them on pages 122-123.

STATEMENT OF CASH FLOWS

1. If the notes to the cash flow statement in the respondents annual stockholders report are applicable to this statement, such notes should be included in page 122-123. Information about non-cash investing and financing activities should be provided on Page 122-123. Provide also on pages 122-123 a reconciliation between "Cash and Cash Equivalents at End of Year" with related amounts on the balance sheet.
2. Under "Other" specify significant amounts and group others.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show on Page 122-123 the amount of interest paid (net of amounts capitalized) and income taxes paid.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

Notes to Balance Sheet

1 - UTILITY PLANT:

Utility plant reflects the original cost of construction (except for The Cleveland Electric Illuminating Company's (Company) nuclear generating units which were adjusted to fair value), including payroll and related costs such as taxes, employee benefits, administrative and general costs, and interest costs. On September 1, 2000, the Company sold its transmission assets to an affiliate, American Transmission Systems, Inc. (ATSI). As a result, ATSI owns and operates the Company's and its affiliates' major high-voltage transmission facilities and has interconnections with other regional utilities.

2 - NUCLEAR FUEL:

The Company leases its nuclear fuel and pays for the fuel as it is consumed.

3 - ACCOUNTS RECEIVABLE:

Receivables from customers include sales to residential, commercial and industrial customers located in the Company's service area and sales to wholesale customers. There was no material concentration of receivables at December 31, 2000 or 1999, with respect to any particular segment of the Company's customers.

The Company and The Toledo Edison Company (TE) sell substantially all of their retail customer receivables to Centerior Funding Corporation (CFC), a wholly owned subsidiary of the Company. CFC subsequently transfers the receivables to a trust under an asset-backed securitization agreement. The Company sold approximately $1,540,631,000 and $1,588,789,000 of accounts receivable to CFC in 2000 and 1999, respectively. The trust completed a public sale of $150,000,000 and private sales of $50,000,000 of receivables-backed investor certificates in 1996 and 2000, respectively, in transactions that qualified for sale accounting treatment. CFC's retained interest in the pool of receivables held by the trust (15.15% as of December 31, 2000) is stated at fair value reflecting adjustments for anticipated credit losses. Collections of receivables previously transferred to the trust used to purchase new receivables from CFC during 2000 totaled approximately $2,500,000,000. Expenses associated with the factoring discount related to the sale of receivables were $13,000,000 in 2000. As of December 31, 2000, the Company's receivables recorded on its Balance Sheet were reduced by $90,000,000 due to these sales.

4 - LEASES:

The Company leases certain generating facilities, nuclear fuel, office space and other property and equipment under cancelable and noncancelable leases.

The Company and TE sold their ownership interests in Bruce Mansfield Units 1, 2 and 3 and TE sold a portion of its ownership interest in Beaver Valley Unit 2. In connection with these sales, which were completed in 1987, the Company and TE entered into operating leases for lease terms of approximately 30 years as co-lessees. During the terms of the leases, the Company and TE continue to be responsible, to the extent of their combined ownership and leasehold interest, for costs associated with the units including construction expenditures, operation and maintenance expenses, insurance, nuclear fuel, property taxes and decommissioning. The Company and TE have the right, at the end of the respective basic lease terms, to renew the leases. The Company and TE also have the right to purchase the facilities at the expiration of the basic lease term or renewal term (if elected) at a price equal to the fair market value of the facilities.

As co-lessee with TE, the Company is also obligated for TE's lease payments. If TE is unable to make its payments under the Beaver Valley Unit 2 and Bruce Mansfield Plant leases, the Company would be obligated to make such payments. No such payments have been made on behalf of TE. (TE's future minimum lease payments as of December 31, 2000 were approximately $1,200,000,000, net of trust cash receipts.)

Nuclear fuel is currently financed for the Company and TE through leases with a special-purpose corporation. As of December 31, 2000, $142,000,000 of nuclear fuel ($86,000,000 for the Company) was financed under a lease financing arrangement totaling $150,000,000 from bank credit arrangements. The bank credit arrangements expire in August 2001. Lease rates are based on bank rates and commercial paper rates.

The future minimum lease payments as of December 31, 2000 are:

		Operating Leases		
	Capital Leases	Lease Payments	Capital Trust	Net
2001	$ 41,000,000	$ 71,700,000	$ 50,200,000	$ 21,500,000
2002	28,100,000	76,400,000	70,600,000	5,800,000
2003	17,300,000	77,500,000	77,900,000	(400,000)
2004	10,200,000	55,700,000	28,200,000	27,500,000
2005	3,700,000	66,700,000	47,500,000	19,200,000
Years thereafter	8,400,000	653,800,000	488,700,000	165,100,000
Total minimum lease payments	108,700,000	$1,001,800,000	$763,100,000	$238,700,000
Interest portion	15,300,000			
Present value of net minimum lease payments	93,400,000			
Less current portion	28,700,000			
Noncurrent portion	$ 64,700,000			

The Company and TE refinanced high-cost fixed obligations related to their 1987 sale and leaseback transaction for the Bruce Mansfield Plant through a lower cost transaction in June and July 1997. In a June 1997 offering (Offering), the two companies pledged $720,000,000 aggregate principal amount ($575,000,000 for the Company and $145,000,000 for TE) of first mortgage bonds due through 2007 to a trust as security for the issuance of a like principal amount of secured notes due through 2007. The obligations of the two companies under these secured notes are joint and several. Using available cash, short-term borrowings and the net proceeds from the Offering, the two companies invested $906,488,000($569,389,000 for the Company and $337,099,000 for TE) in a business trust, in June 1997. The trust used these funds in July 1997 to purchase lease notes and redeem all $873,200,000 aggregate principal amount of 10-1/4% and 11-1/8% secured lease obligation bonds (SLOBs) due 2003 and 2016. The SLOBs were issued by a special-purpose-funding corporation in 1988 on behalf of lessors in the two companies' 1987 sale and leaseback transaction. The Shippingport capital trust arrangement effectively reduces lease costs related to that transaction.

5 - CAPITALIZATION:

(A) RETAINED EARNINGS-

There are no restrictions on retained earnings for payment of cash dividends on the Company's common stock. The 1997 FirstEnergy merger purchase accounting adjustments included resetting the retained earnings balance to zero at the November 8, 1997 merger date.

(B) PREFERRED AND PREFERENCE STOCK-

The Company's $88.00 Series R preferred stock is not redeemable before December 2001 and its $90.00 Series S has no optional redemption provision. All other preferred stock may be redeemed by the Company in whole, or in part, with 30-90 days' notice.

The preferred dividend rate on the Company's Series L fluctuates based on prevailing interest rates and market conditions. The dividend rate for this issue was 7% in 2000.

The Company has three million authorized and unissued shares of preference stock having no par value.

(C) PREFERRED STOCK SUBJECT TO MANDATORY REDEMPTION-

Annual sinking fund provisions for preferred stock are as follows:

Series	Shares	Redemption Price Per Share	Date	Beginning
$ 7.35 C	10,000	$ 100		(i)
91.50 Q	10,714	1,000		(i)
90.00 S	18,750	1,000		(i)
88.00 R	50,000	1,000	December 1	2001

(i) Sinking fund provisions are in effect.

Annual sinking fund requirements for the next five years are $80,500,000 in 2001, $18,000,000 in 2002 and $1,000,000 in each year 2003-2005.

(D) LONG-TERM DEBT-

The first mortgage indenture and its supplements, which secure all of the Company's first mortgage bonds, serve as direct first mortgage liens on substantially all property and franchises, other than specifically excepted property, owned by the Company.

Sinking fund requirements for first mortgage bonds and maturing long-term debt (excluding capital leases) for the next five years are:

2001	$ 56,500,000
2002	228,000,000
2003	115,000,000
2004	307,700,000
2005	300,000,000

The Company's obligations to repay certain pollution control revenue bonds are secured by several series of first mortgage bonds. Certain pollution control revenue bonds are entitled to the benefit of an irrevocable bank letter of credit of $48,100,000 and noncancelable municipal bond insurance policies of $112,600,000 to pay principal of, or interest on, the pollution control revenue bonds. To the extent that drawings are made under the letter of credit, the Company is entitled to a credit against its obligation to repay that bond. The Company pays an annual fee of 1.375% of the amount of the letter of credit to the issuing bank and is obligated to reimburse the bank for any drawings thereunder.

The Company and TE have letters of credit of approximately $222,252,000 in connection with the sale and leaseback of Beaver Valley Unit 2 that expire in May 2002. The letters of credit are secured by first mortgage bonds of the Company and TE in the proportion of 40% and 60%, respectively.

6 - SHORT-TERM BORROWINGS:

The Company may borrow from its affiliates on a short-term basis. As of December 31, 2000, the Company had total short-term borrowings of $28,600,000 from its affiliates with a weighted average interest rate of approximately 6.4%.

7 - COMMITMENTS AND CONTINGENCIES:

CAPITAL EXPENDITURES-

The Company's current forecast reflects expenditures of approximately $455,000,000 for property additions and improvements from 2001-2005, of which approximately $103,000,000 is applicable to 2001. Investments for additional nuclear fuel during the 2001-2005 period are estimated to be approximately $114,000,000, of which approximately $8,000,000 applies to 2001. During the same periods, the Company's nuclear fuel investments are expected to be reduced by approximately $144,000,000 and $32,000,000, respectively, as the nuclear fuel is consumed.

NUCLEAR INSURANCE-

The Price-Anderson Act limits the public liability relative to a single incident at a nuclear power plant to $9,500,000,000. The amount is covered by a combination of private insurance and an industry retrospective rating plan. Based on its ownership and leasehold interests in Beaver Valley Unit 2, the Davis-Besse Station and the Perry Plant, the Company's maximum potential assessment under the industry retrospective rating plan (assuming the other affiliate co-owners contribute their proportionate shares of any assessments under the retrospective rating plan) would be $106,300,000 per incident but not more than $12,100,000 in any one year for each incident.

The Company is also insured as to its respective interests in Beaver Valley Unit 2, Davis-Besse and Perry under policies issued to the operating company for each plant. Under these policies, up to $2,750,000,000 is provided for property damage and decontamination and decommissioning costs. The Company has also obtained approximately $255,200,000 of insurance coverage for replacement power costs for its respective interests in Beaver Valley Unit 2, Davis-Besse and Perry. Under these policies, the Company can be assessed a maximum of approximately $11,800,000 for incidents at any covered nuclear facility occurring during a policy year which are in excess of accumulated funds available to the insurer for paying losses.

The Company intends to maintain insurance against nuclear risks as described above as long as it is available. To the extent that replacement power, property damage, decontamination, decommissioning, repair and replacement costs and other such costs arising from a nuclear incident at any of the Company's plants exceed the policy limits of the insurance in effect with respect to that plant, to the extent a nuclear incident is determined not to be covered by the Company's insurance policies, or to the extent such insurance becomes unavailable in the future, the Company would remain at risk for such costs.

ENVIRONMENTAL MATTERS-

Various federal, state and local authorities regulate the Company with regard to air and water quality and other environmental matters. The Company estimates additional capital expenditures for environmental compliance of approximately $41,000,000, which is included in the construction forecast provided under "Capital Expenditures" for 2001 through 2005.

The Company is required to meet federally approved sulfur dioxide (SO2) regulations. Violations of such regulations can result in shutdown of the generating unit involved and/or civil or criminal penalties of up to $27,500 for each day the unit is in violation. The Environmental Protection Agency (EPA) has an interim enforcement policy for SO2 regulations in Ohio that allows for compliance based on a 30-day averaging period. The Company cannot predict what action the EPA may take in the future with respect to the interim enforcement policy.

The Company is in compliance with the current SO2 and nitrogen oxides (NOx) reduction requirements under the Clean Air Act Amendments of 1990. SO2 reductions are being achieved by burning lower-sulfur fuel, generating more electricity from lower-emitting plants, and/or using emission allowances. NOx reductions are being achieved through combustion controls and the generation of more electricity at lower-emitting plants. In September 1998, the EPA finalized regulations requiring additional NOx reductions from the Company's Ohio and Pennsylvania facilities. The EPA's NOx Transport Rule imposes uniform reductions of NOx emissions (an approximate 85% reduction in utility plant NOx emissions from projected 2007 emissions) across a region of twenty-two states and the District of Columbia, including Ohio and Pennsylvania, based on a conclusion that such NOx emissions are contributing significantly to ozone pollution in the eastern United States. In March 2000, the U.S. Court of Appeals for the D.C. Circuit upheld EPA's NOx Transport Rule except as applied to the State of Wisconsin and portions of Georgia and Missouri. By October 2000, states were to submit revised State Implementation Plans (SIP) to comply by May 31, 2004 with individual state NOx budgets established by the EPA. Pennsylvania recently submitted a SIP that requires compliance with the NOx budgets at the Company's Pennsylvania facilities by May 1, 2003 and Ohio submitted a "draft" SIP that requires compliance with the NOx budgets at the Company's Ohio facilities by May 31, 2004. A Federal Implementation Plan accompanied the NOx Transport Rule and may be implemented by the EPA in states which fail to revise their SIP. In another separate but related action, eight states filed petitions with the EPA under Section 126 of the Clean Air Act seeking reductions of NOx emissions which are alleged to contribute to ozone pollution in the eight petitioning states. The EPA position is that the Section 126 petitions will be adequately addressed by the NOx Transport Program, but a December 17, 1999 rulemaking established an alternative program which would require nearly identical 85% NOx reductions at 392 utility plants, including the Company's Ohio and Pennsylvania plants, by May 2003, in the event implementation of the NOx Transport Rule is not implemented by a state. Additional Section 126 petitions were filed by New Jersey, Maryland, Delaware and the District of Columbia in mid-1999 and are still under evaluation by the EPA. FirstEnergy continues to evaluate its compliance plans and other compliance options.

In July 1997, the EPA promulgated changes in the National Ambient Air Quality Standard (NAAQS) for ozone emissions and proposed a new NAAQS for previously unregulated ultra-fine particulate matter. In May 1999, the U.S. Court of Appeals found constitutional and other defects in the new NAAQS rules. In February 2001, the U.S. Supreme Court upheld the new NAAQS rules regulating ultra-fine particulates but found defects in the new NAAQS rules for ozone and decided that the EPA must revise those rules. The future cost of compliance with these regulations may be substantial and will depend on the manner in which they are ultimately implemented, if at all, by the states in which the Company operates affected facilities.

In December 2000, the EPA announced it would proceed with the development of regulations regarding hazardous air pollutants from electric power plants. The EPA identified mercury as the hazardous air pollutant of greatest concern. The EPA established a schedule to propose regulations by December 2003 and issue final regulations by December 2004. The future cost of compliance with these regulations may be substantial.

As a result of the Resource Conservation and Recovery Act of 1976, as amended, and the Toxic Substances Control Act of 1976, federal and state hazardous waste regulations have been promulgated. Certain fossil-fuel combustion waste products, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation. The EPA has issued its final regulatory determination that regulation of coal ash as a hazardous waste is unnecessary. On April 25, 2000, the EPA announced that it will develop national standards regulating disposal of coal ash under its authority to regulate nonhazardous waste.

The Company has been named as a "potentially responsible party" (PRP) at waste disposal sites which may require cleanup under the Comprehensive Environmental Response, Compensation and Liability Act of 1980. Allegations of disposal of hazardous substances at historical sites and the liability involved, are often unsubstantiated and subject to dispute. Federal law provides that all PRPs for a particular site be held liable on a joint and several basis. The Company has accrued a liability of $3,400,000 as of December 31, 2000, based on estimates of the total costs of cleanup, the proportionate responsibility of other PRPs for such costs and the financial ability of other PRPs to pay. The Company believes that waste disposal costs will not have a material adverse effect on its financial condition, cash flows or results of operations.

8 - ANNUAL REPORT TO STOCKHOLDERS:

	December 31, 2000 Dr.	December 31, 2000 Cr.	December 31, 1999 Dr.	December 31, 1999 Cr.

Notes to Income Statement

9 - REVENUES:

The Company's principal business is providing electric service to customers in northeastern Ohio. The Company's retail customers are metered on a cycle basis. Revenue is recognized for unbilled electric service through the end of the year.

10 - NUCLEAR FUEL:

The Company amortizes the cost of nuclear fuel based on the rate of consumption.

11 - RENTAL PAYMENTS:

Consistent with the regulatory treatment, the rentals for capital and operating leases are charged to operating expenses on the Statements of Income. Such costs for the two years ended December 31, 2000 and are summarized as follows:

	2000	1999
Operating leases		
Interest element	$ 36,800,000	$ 38,643,000
Other	29,800,000	30,679,000
Capital leases		
Interest element	5,900,000	6,926,000
Other	37,400,000	41,328,000
Total rentals	$ 109,900,000	$ 117,576,000

12 - ANNUAL REPORT TO STOCKHOLDERS:

	December 31,			
	2000		1999	
	Dr.	Cr.	Dr.	Cr.
Regulatory credits	$30,908,256		$30,908,256	
Provision for deferred income taxes - operating income	1,082,424		1,082,424	
Regulatory debits		$31,990,680		$31,990,680

To reclassify deferred taxes related to the amortization of net regulatory assets.

13 - TRANSACTIONS WITH AFFILIATED COMPANIES:

Operating revenues, operating expenses and interest charges include transactions with TE, OE, Penn and ATSI. Primary transactions include purchased power and transmission facilities rent expenses of $15,000,000 from ATSI starting in 2000. CFC serves as the transferor in connection with the accounts receivable securitization for the Company and TE.

The Company is buying 150 megawatts of TE's Beaver Valley Unit 2 leased capacity entitlement. Purchased power expense for this transaction was $104,000,000 and $104,301,983 in 2000 and 1999, respectively. This purchase is expected to continue through the end of the lease period.

Fuel and purchased power expenses on the Statements of Income include the total costs of power purchased from TE of $106,800,000 and $106,069,635 in 2000 and 1999, respectively.

FirstEnergy provides support services at cost to the Company and other affiliated companies, for which the Company was billed $97,900,000 in 2000 and $109,100,000 in 1999.

Notes Common to Balance Sheet, Income Statement and Statement of Cash Flows

14 - SUPPLEMENTAL CASH FLOWS INFORMATION:

Cash and Cash Equivalents at December 31, 2000:

Account	Account Title	
131	Cash	$ 2,716,894
135	Working Fund	9,144
136	Temporary Cash Investments	128,455
		$ 2,854,493

Operating Activities:	
Interest Paid (net of amounts capitalized)	$208,085,000
Income Taxes Paid	$109,212,000
Investing Activities:	
Gross Additions to Utility Plant	$ 96,236,249
Capital Lease - Nuclear Fuel	$ 51,958,751

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Balance Sheets. The Company reflects temporary cash investments at cost, which approximates their fair market value.

All borrowings with initial maturities of less than one year are defined as financial instruments under accounting principles generally accepted in the United States (GAAP) and are reported on the Balance Sheets at cost, which approximates their fair market value. The following sets forth the approximate fair value and related carrying amounts of all other long-term debt, preferred stock subject to mandatory redemption and investments other than cash and cash equivalents as of December 31:

	2000		1999	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Long-term debt	$2,563,000,000	$2,655,000,000	$2,738,278,000	$2,711,200,000
Preferred stock	$ 107,000,000	$ 105,000,000	$ 149,710,000	$ 138,551,000
Investments other than cash and cash equivalents:				
Debt securities				
- (Maturing in more than 10 years)	$ 585,000,000	$ 568,000,000	$ 516,973,000	$ 476,460,000
All other	202,000,000	210,000,000	193,362,000	200,379,000
	$ 787,000,000	$ 778,000,000	$ 710,335,000	$ 676,839,000

The fair values of long-term debt and preferred stock subject to mandatory redemption reflect the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective year. The yields assumed were based on securities with similar characteristics offered by a corporation with credit ratings similar to the Company's ratings.

The fair value of investments other than cash and cash equivalents represent cost (which approximates fair value) or the present value of the cash inflows based on the yield to maturity. The yields assumed were based on financial instruments with similar characteristics and terms. Investments other than cash and cash equivalents include decommissioning trust investments. Unrealized gains and losses applicable to the decommissioning trusts have been recognized in the trust investment with corresponding changes to the decommissioning liability. The Company has no securities held for trading purposes.

15 - REGULATORY PLAN:

The Public Utilities Commission of Ohio (PUCO) approved FirstEnergy's Rate Reduction and Economic Development Plan for the Company in January 1997. The regulatory plan was to maintain then current base electric rates for the Company through December 31, 2005. At the end of the regulatory plan period, the Company's base rates were to be reduced by $217,000,000 (approximately 15 percent below then current levels). The regulatory plan also revised the Company's fuel cost recovery method such that the Company's fuel rate would be frozen through the regulatory plan period, subject to limited periodic adjustments. As part of the regulatory plan, transition rate credits were implemented for customers, which were expected to reduce operating revenues for the Company by approximately $280,000,000 during the regulatory plan period. The regulatory plan was terminated at the end of 2000 concurrent with the implementation of the FirstEnergy transition plan as described further below.

In July 1999, Ohio's electric utility restructuring legislation, which allowed Ohio electric customers to select their generation suppliers beginning January 1, 2001, was signed into law. Among other things, the legislation provides for a five percent reduction on the generation

portion of residential customers' bills and the opportunity to recover transition costs, including regulatory assets, from January 1, 2001 through December 31, 2005. The period for the recovery of regulatory assets only can be extended up to December 31, 2010. The PUCO was authorized to determine the level of transition cost recovery, as well as the recovery period for the regulatory assets portion of those costs, in considering each Ohio electric utility's transition plan application.

FirstEnergy, on behalf of its Ohio electric utility operating companies -- the Company, OE and TE --filed its transition plan under Ohio's new electric utility restructuring law in late 1999. The filing also included additional information on FirstEnergy's plans to turn over control, and perhaps ownership, of its transmission assets to the Alliance Regional Transmission Organization. The transition plan itemized, or unbundled, the current price of electricity into its component elements --including generation, transmission, distribution and transition charges. As required by the PUCO's rules, FirstEnergy's transition plan also included its proposals on corporate separation of its regulated and unregulated operations, operational and technical support changes needed to accommodate customer choice, an education program to inform customers of their options under the new law, and how FirstEnergy's transmission system will be operated to ensure access to all users. Customer prices would be frozen through a five-year market development period (2001-2005), except for certain limited statutory exceptions including the five percent reduction in the price of generation for residential customers. The plan proposed recovery of generation-related transition costs of approximately $1,900,000,000 ($1,600,000,000, net of deferred income taxes) and transition costs related to regulatory assets aggregating approximately $1,900,000,000($1,400,000,000, net of deferred income taxes).

On July 19, 2000, the PUCO approved FirstEnergy's transition plan as modified by a settlement agreement with major parties to the transition plan. Major parties to the settlement agreement included the PUCO staff, the Ohio Consumers' Counsel, the Industrial Energy Users-Ohio, certain power marketers and others. Major provisions of the settlement agreement consisted of approval of recovery of transition costs in the amounts filed in the transition plan through no later than 2008 for the Company, except where a longer period of recovery is provided for in the settlement agreement. The Company will also give preferred access over FirstEnergy's subsidiaries to nonaffiliated marketers, brokers and aggregators to 400 megawatts of generation capacity through 2005 at established prices for sales to the Company's retail customers. The base electric rates for distribution service for the Company under its prior regulatory plan will be extended from December 31, 2005 through December 31, 2007. The transition rate credits for customers under its prior regulatory plan will also be extended through the transition cost recovery period.

The application of Statement of Financial Accounting Standards (SFAS) No. 71, "Accounting for the Effects of Certain Types of Regulation" (SFAS 71), to the nonnuclear generation business of the Company was discontinued with the issuance of the PUCO transition plan order. The Securities and Exchange Commission (SEC) issued interpretive guidance regarding asset impairment measurement that concluded any supplemental regulated cash flows such as a competitive transition charge (CTC) should be excluded from the cash flows of assets in a portion of the business not subject to regulatory accounting practices. If those assets are impaired, a regulatory asset should be established if the costs are recoverable through regulatory cash flows. Consistent with the SEC guidance $304,000,000 of impaired plant investments were recognized by the Company as regulatory assets recoverable as transition costs through future regulatory cash flows.

The settlement agreement provides to the Company's customers an additional incentive applied to the generation shopping credit of 45% for residential customers, 30% for commercial customers and 15% for industrial customers as reductions from their bills, when they select alternative energy providers (the credits exceed the price the Company will be offering to electricity suppliers relating to the 400 megawatts described above). The amount of the incentive will serve to reduce the amortization of transition costs during the market development period and will be recovered over the remaining transition cost recovery period. If the customer switching targets established in the settlement agreement are not achieved by the end of 2005, the transition cost recovery periods could be shortened for the Company to reduce recovery by as much as $170,000,000, but any such adjustment would be computed on a class-by-class and pro-rata basis.

All of the Company's regulatory assets will continue to be recovered under provisions of the Ohio transition plan. The Company recognized a fair value purchase accounting adjustment to reduce nuclear plant by $1,710,000,000 in connection with the 1997 FirstEnergy merger; that fair value adjustment recognized for financial reporting purposes satisfied the $1,400,000,000 asset

reduction commitment contained in the regulatory plan. For regulatory purposes, the Company recognized the applicable accelerated amortization over the period that its rate plan was in effect.

Application of SFAS 71 was discontinued in 1997 with respect to the Company's nuclear operations and in mid-2000, as discussed above, with respect to the Company's nonnuclear generation business. The Company's net assets included in utility plant relating to operations for which the application of SFAS 71 was discontinued were $1,556,000,000 as of December 31, 2000.

16 - DEPRECIATION:

The Company provides for depreciation on a straight-line basis at various rates over the estimated lives of property included in plant in service. The annualized composite rate was approximately 3.4% in 2000 and 1999.

Annual depreciation expense includes approximately $11,700,000 for future decommissioning costs applicable to the Company's ownership interests in three nuclear generating units. Annual decommissioning costs will increase by approximately $17,000,000 from implementing the Company's transition plan in 2001. The Company's future decommissioning costs reflect the 1999 increase in its ownership interests related to the exchange of certain generating assets with Duquesne Light Company. The Company's share of the future obligation to decommission these units is approximately $606,000,000 in current dollars and (using a 4.0% escalation rate) approximately $1,600,000,000 in future dollars. The estimated obligation and the escalation rate were developed based on site specific studies. Payments for decommissioning are expected to begin in 2016, when actual decommissioning work begins. The Company has recovered approximately $134,000,000 for decommissioning through its electric rates from customers through December 31, 2000. The Company has also recognized an estimated liability of approximately $9,000,000 related to decontamination and decommissioning of nuclear enrichment facilities operated by the DOE, as required by the Energy Policy Act of 1992.

DOE special assessment activities during 2000 and 1999 respectively, were Account 518 expenses: $1,327,603 and $2,357,560; payments: $1,483,875 and $1,411,450; and refunds: $0 for both years.

The Financial Accounting Standards Board (FASB) issued a proposed accounting standard for nuclear decommissioning costs in 1996. If the standard is adopted as proposed: (1) annual provisions for decommissioning could change; (2) the net present value of estimated decommissioning costs could be recorded as a liability; and (3) income from the external decommissioning trusts could be reported as investment income. The FASB subsequently expanded the scope of the proposed standard to include other closure and removal obligations related to long-lived assets. A final pronouncement is expected in the second quarter of 2001 and is anticipated to be implemented on January 1, 2002.

17 - RETIREMENT BENEFITS:

FirstEnergy's trusteed, noncontributory defined benefit pension plan covers almost all of the Company's full-time employees. Upon retirement, employees receive a monthly pension based on length of service and compensation. The Company uses the projected unit credit method for funding purposes and was not required to make pension contributions during the three years ended December 31, 2000. The assets of the FirstEnergy pension plan consist primarily of common stocks, United States government bonds and corporate bonds.

The Company provides a minimum amount of noncontributory life insurance to retired employees in addition to optional contributory insurance. Health care benefits, which include certain employee deductibles and copayments, are also available to retired employees, their dependents and, under certain circumstances, their survivors. The Company pays insurance premiums to cover a portion of these benefits in excess of set limits; all amounts up to the limits are paid by the Company. The Company recognizes the expected cost of providing other postretirement benefits to

employees and their beneficiaries and covered dependents from the time employees are hired until they become eligible to receive those benefits.

The following sets forth the funded status of the plans and amounts recognized on FirstEnergy's Consolidated Balance Sheets as of December 31:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Change in benefit obligation:				
Benefit obligation as of January 1	$1,394,106,439	$1,500,134,952	$608,426,051	$601,269,566
Service cost	27,421,692	28,296,067	11,349,407	9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Plan amendments	41,347,358	--	--	--
Actuarial loss (gain)	17,264,015	(155,585,368)	121,680,323	(17,583,693)
Net increase from asset swap	--	14,800,000	--	12,524,600
Voluntary early retirement program expense	23,353,000	--	--	--
Benefits paid	(102,221,644)	(95,534,268)	(35,097,490)	(37,818,560)
Benefit obligation as of December 31	1,506,055,538	1,394,106,439	752,028,957	608,426,051
Change in plan assets:				
Fair value of plan assets as of January 1	1,807,458,798	1,682,987,392	4,917,191	3,906,528
Actual return on plan assets	768,878	220,005,674	(178,534)	621,633
Company contribution	--	--	18,344,187	402,444
Benefits paid	(102,221,644)	(95,534,268)	--	--
Administrative expenses	--	--	(42,480)	(13,414)
Fair value of plan assets as of December 31	1,706,006,032	1,807,458,798	23,040,364	4,917,191
Funded status of plan	199,950,494	413,352,359	(728,988,593)	(603,508,860)
Unrecognized actuarial Loss (gain)	(90,915,998)	(303,535,599)	147,307,299	24,881,450
Unrecognized prior service cost	93,063,964	57,382,039	20,909,717	24,158,510
Unrecognized net transition obligation (asset)	(2,106,408)	(10,051,160)	110,841,109	120,077,867
Prepaid (accrued) benefit cost	$ 199,992,052	$ 157,147,639	$(449,930,468)	$(434,391,033)
Company's share of prepaid (accrued) benefit cost	$ (34,578,574)	$ (39,851,021)	$(188,784,072)	$(179,022,426)
Assumptions used as of December 31:				
Discount rate	7.75%	7.75%	7.75%	7.75%
Expected long-term return on plan assets	10.25%	10.25%	10.25%	10.25%
Rate of compensation increase	4.00%	4.00%	4.00%	4.00%

FirstEnergy's net pension and other postretirement benefit costs for the two years ended December 31, 2000 were computed as follows:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Service cost	$ 27,421,692	$ 28,296,067	$ 11,349,407	$ 9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Expected return on plan assets	(180,918,929)	(168,056,403)	(524,512)	(400,419)
Amortization of transition obligation (asset)	(7,944,752)	(7,944,752)	9,236,758	9,236,758
Amortization of prior service cost	5,665,433	5,665,433	3,248,793	3,248,793
Recognized net actuarial loss (gain)	(9,095,535)	--	--	--
Voluntary early retirement program expense	17,243,000	--	--	--
Net benefit cost	$ (42,844,413)	$(40,044,599)	$ 68,981,112	$ 62,119,270
Company's share of total plan costs	$ (5,272,447)	$(14,394,031)	$ 21,303,939	$ 22,012,063

The FirstEnergy plan's health care trend rate assumption is 7.2% in 2001, 7.0% in 2002 and 6.5% in 2003, trending to 5.0%-5.5% in later years. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plan. An increase in the health care trend rate assumption by one percentage point would increase the total service and interest cost components by $7,500,000 and the postretirement benefit obligation by $94,400,000. A decrease in the same assumption by one percentage point would decrease the total service and interest cost components by $8,500,000 and the postretirement benefit obligation by $111,000,000.

18 - BASIS OF FINANCIAL STATEMENT PRESENTATION:

The accompanying financial statements were prepared in accordance with the accounting requirements set forth in the Uniform System of Accounts and published accounting releases of the Federal Energy Regulatory Commission, which is a comprehensive basis of accounting other than GAAP. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses during the reporting period.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

Line No.	Description of overhead (a)	Total amount charged for the year (b)

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

[redacted]

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)		Amount (b)	Capitalization Ratio(Percent) (c)		Cost Rate Percentage (d)
1	Average Short-Term Debt & Computation of Allowance text	S				
2	Short-term Interest				s	
3	Long-Term Debt	D	2,668,732,862	66.13	d	7.92
4	Preferred Stock	P	400,400,000	9.92	p	8.35
5	Common Equity	C	966,616,251	23.95	c	12.59
6	Total Capitalization		4,035,749,113	100%		
7	Average Construction Work in Progress Balance	W	68,549,095			

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ 5.24

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ 3.84

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 7.92
   b. Rate for Other Funds - 0.00

Schedule Page: 218 Line No.: 1 Column: OH exp

Engineering and Supervision

(a) The actual time of employees devoted to the planning, design and supervision of construction projects, together with amounts paid for outside professional engineering services, is charged to such projects to the extent possible.

(b) Other actual time of employees devoted to the engineering of construction, together with amounts paid for outside professional engineering services, is accumulated in distributable construction work in progress (projects functionalized by transmission, distribution, etc.) by direct charges from payrolls, invoices, vouchers, etc. Each month such charges to the distributable projects are distributed to each construction project included in such functional group on the basis of a percentage of direct labor and material charges to each construction project, except that no distribution is made to projects which are direct purchases of equipment only.

(c) The portion of engineering and construction supervision salaries not specifically chargeable to projects covered in (a) and (b), together with clerical salaries and expenses which are applicable to construction, are accumulated in a construction work in progress project and distributed each month to all construction projects on the basis of a percentage of labor charges.

(d) The amount of engineering and supervision so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

General Administration

Administrative Expenses

(a) Based on a study with respect to work performed by general officers and other general employees who devote a portion of their time to construction, or matters pertaining thereto, a portion of their salaries and expenses and general office supplies and expenses considered to be applicable to construction is charged thereto.

(b) Each month the amount so determined is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Employee Pensions and Benefits

(a) A study is made to determine the percentage of the total salaries and wages for the year which is applicable to construction, and such percentage is applied to the total pension and benefit costs for the year to determine the amount thereof applicable to construction.

(b) Each month, (i) the applicable portion of the amount determined to be applicable to construction, exclusive of the amount related to the salaries transferred from Administrative Expenses, is distributed pro rata to construction projects on the basis of payroll charges thereto and (ii) the applicable portion of the amount related to the salaries of employees transferred from Administrative Expenses is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering and supervision except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Schedule Page: 218 Line No.: 1 Column: OH exp

injuries and Damages

(a) The Company carries only excess insurance coverage for injuries and damages and makes direct settlement for all claims of employees and the public except for the amount of such claims coming under the excess policy. An amount is charged to construction based on actual experience, to reflect the entire costs with respect to claims in connection with construction. The amount so charged is adjusted as necessary, based on experience.

(b) Each month the amount so determined to be applicable to construction is distributed pro rata to construction projects, on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects, which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Taxes

Payroll Taxes

(a) Federal and state payroll taxes are charged to construction on the basis of total salaries and wages charged thereto.

(b) Each month the amount so charged is distributed pro rata to construction projects on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Sales and Excise Taxes

Sales and excise taxes charged to construction are recorded as part of the costs of materials and equipment.

Legal Expenses

Legal services and expenses applicable to specific construction projects are charged directly to such construction projects.

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.

FOOTNOTE DATA

Schedule Page: 250 Line No.: 5 Column: a

Series on lines 6, 7, 9 and 13 are listed on the New York Stock Exchange. Series on lines 8 and 10 through 12 are not listed.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

ELECTRIC OPERATING REVENUES (Account 400)

1. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The -average number of customers means the average of twelve figures at the close of each month.
3. If increases or decreases from previous year (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.

Line 12, column (d) includes -124,450 MWH relating to unbilled revenues

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW) Average Monthly NCP Demand (e)	Actual Demand (MW) Average Monthly CP Demand (f)

	Subtotal non-RQ			0	0	0
	Total			**0**	**0**	**0**

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,iine 24.
10. Footnote entries as required and provide explanations following all required data.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	11/01/2000
2. Total Regular Full-Time Employees	1,608
3. Total Part-Time and Temporary Employees	8
4. Total Employees	1,616

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW)

	Total					

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows:
LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

A. Summary of Depreciation and Amortization Charges

Line No.	Functional Classification (a)	Depreciation Expense (Account 403) (b)	Amortization of Limited Term Electric Plant (Acc 404) (c)	Amortization of Other Electric Plant (Acc 405) (d)	Total (e)

B. Basis for Amortization Charges

Column C represents amortization of the following:

Leasehold improvements over the life of the lease; Davis Besse intangible engineering costs over the remaining life, software costs amortized over a seven year period; and AFUDC - debt gross-up pursuant to SFAS 109, amortized using the composite functional rates of the associated property.

No change in basis or method of amortization has been made from the preceding year.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 425.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

Line No.	Item (a)	Amount (b)
1	Interest on Debt to Associated Companies	
2	(Account 430)	
3	FirstEnergy Corp. -	
4	Notes Payable - 5.81% - 6.65%	1,660,018
5	Ohio Edison Company -

REGULATORY COMMISSION EXPENSES

1. Report particulars (details) of regulatory commission expenses incurred during the current year (or incurred in previous years, if being amortized) relating to format cases before a regulatory body, or cases in which such a body was a party.
2. Report in columns (b) and (c), only the current year's expenses that are not deferred and the current year's amortization of amounts deferred in previous years.

Line No.	Description (Furnish name of regulatory commission or body the docket or case number and a description of the case) (a)	Assessed by Regulatory Commission (b)	Expenses of Utility (c)	Total Expense for Current Year (b) + (c) (d)	Deferred in Account 182.3 at Beginning of Year (e)

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show below costs incurred and accounts charged during the year for technological research, development, and demonstration (R, D & D) project initiated, continued or concluded during the year. Report also support given to others during the year for jointly-sponsored projects.(Identify recipient regardless of affiliation.) For any R, D & D work carried with others, show separately the respondent's cost for the year and cost chargeable to others (See definition of research, development, and demonstration in Uniform System of Accounts).
2. Indicate in column (a) the applicable classification, as shown below:

Classifications:

A. Electric R, D & D Performed Internally:
(1) Generation
a. hydroelectric
i. Recreation fish and wildlife
ii Other hydroelectric
b. Fossil-fuel steam
c. Internal combustion or gas turbine
d. Nuclear
e. Unconventional generation
f. Siting and heat rejection
(3) Transmission
a. Overhead
b. Underground
(4) Distribution
(5) Environment (other than equipment)
(6) Other (Classify and include items in excess of $5,000.)
(7) Total Cost Incurred
B. Electric, R, D & D Performed Externally:
(1) Research Support to the electrical Research Council or the Electric Power Research Institute

Line No.	Classification (a)	Description (b)
1	A. Electric R, D & D Performed Internally	
2	(1) Generation	Eastlake Unit #3 Combustion Optimization

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES (Continued)

(2) Research Support to Edison Electric Institute
(3) Research Support to Nuclear Power Groups
(4) Research Support to Others (Classify)
(5) Total Cost Incurred

3. Include in column (c) all R, D & D items performed internally and in column (d) those items performed outside the company costing $5,000 or more, briefly describing the specific area of R, D & D (such as safety, corrosion control, pollution, automation, measurement, insulation, type of appliance, etc.). Group items under $5,000 by classifications and indicate the number of items grouped. Under Other, (A (6) and B (4)) classify items by type of R, D & D activity.
4. Show in column (e) the account number charged with expenses during the year or the account to which amounts were capitalized during the year, listing Account 107, Construction Work in Progress, first. Show in column (f) the amounts related to the account charged in column (e)
5. Show in column (g) the total unamortized accumulating of costs of projects. This total must equal the balance in Account 188, Research, Development, and Demonstration Expenditures, Outstanding at the end of the year.
6. If costs have not been segregated for R, D &D activities or projects, submit estimates for columns (c), (d), and (f) with such amounts identified by "Est."
7. Report separately research and related testing facilities operated by the respondent.

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

Line No.	Classification (a)	Direct Payroll Distribution (b)	Allocation of Payroll charged for Clearing Accounts (c)	Total (d)
1	Electric

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirments Sales for Resale & Associated Losses (c)	MONTHLY PEAK

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants) *(Continued)*

9. Items under Cost of Plant are based on U. S. of A. Accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses. 10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 24 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 31, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants. 11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant. 12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants) *(Continued)*

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

PUMPED STORAGE GENERATING PLANT STATISTICS (Large Plants)

1. Large plants and pumped storage plants of 10,000 Kw or more of installed capacity (name plate ratings)
2. If any plant is leased, operating under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, indicate such facts in a footnote. Give project number.
3. If net peak demand for 60 minutes is not available, give the which is available, specifying period.
4. If a group of employees attends more than one generating plant, report on line 8 the approximate average number of employees assignable to each plant.
5. The items under Cost of Plant represent accounts or combinations of accounts prescribed by the Uniform System of Accounts. Production Expenses do not include Purchased Power System Control and Load Dispatching, and Other Expenses classified as "Other Power Supply Expenses."

PUMPED STORAGE GENERATING PLANT STATISTICS (Large Plants) (Continued)

6. Pumping energy (Line 10) is that energy measured as input to the plant for pumping purposes.
7. Include on Line 35 the cost of energy used in pumping into the storage reservoir. When this item cannot be accurately computed leave Lines 35, 36 and 37 blank and describe at the bottom of the schedule the company's principal sources of pumping power, the estimated amounts of energy from each station or other source that individually provides more than 10 percent of the total energy used for pumping, and production expenses per net MWH as reported herein for each source described. Group together stations and other resources which individually provide less than 10 percent of total pumping energy. If contracts are made with others to purchase power for pumping, give the supplier contract number, and date of contract.

GENERATING PLANT STATISTICS (Small Plants)

1. Small generating plants are steam plants of, less than 25,000 Kw; internal combustion and gas turbine-plants, conventional hydro plants and pumped storage plants of less than 10,000 Kw installed capacity (name plate rating). 2. Designate any plant leased from others, operated under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, and give a concise statement of the facts in a footnote. If licensed project, give project number in footnote.

GENERATING PLANT STATISTICS (Small Plants) (Continued)

3. List plants appropriately under subheadings for steam, hydro, nuclear, internal combustion and gas turbine plants. For nuclear, see instruction 11, Page 403. 4. If net peak demand for 60 minutes is not available, give the which is available, specifying period. 5. If any plant is equipped with combinations of steam, hydro internal combustion or gas turbine equipment, report each as a separate plant. However, if the exhaust heat from the gas turbine is utilized in a steam turbine regenerative feed water cycle, or for preheated combustion air in a boiler, report as one plant.

FOOTNOTE DATA

Schedule Page: 410 Line No.: 3 Column: a

Represents an aggregate of 82 temporary leased diesel generators installed at various Company locations in 2000. Each individual generator has a maximum generator nameplate rating of 1.25 MW.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Cleveland Electric Illuminating Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SUBSTATIONS (Continued)

5. Show in columns (I), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.

6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

SUBSTATIONS (Continued)

5. Show in columns (i), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.
6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Line No.	Item (a)	Number of Watt-hour Meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (in (MVa) (d)
1	Number at Beginning of Year	802,622	152,389	9,165
2	Additions During Year			
3	Purchases	18,692	3,061	222
4	Associated with Utility Plant Acquired

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities	6,927,958	-344	17,928,009	439,826,779	439,826,779
2	Water Pollution Control Facilities	274,943	3,685	5,090,202	112,075,850	112,075,850
3	Solid Waste Disposal Costs	282,504		56,928	129,103,563	129,103,563
4	Noise Abatement Equipment				995,761	995,761
5	Esthetic Costs				20,566,677	20,566,677
6	Additional Plant Capacity			40,000	1,779,571	
7	Miscellaneous (Identify significant)				200,156	200,156
8	TOTAL (Total of lines 1 thru 7)	7,485,405	3,341	23,115,139	704,548,357	702,768,786
9	Construction Work in Progress	8,855,746			21,146,420	21,146,420

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	24,598,868	24,598,868
2	Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs	14,671,087	14,671,087
3	Fuel Related Costs		
4	Operation of Facilities		
5	Fly Ash and Sulfur Sludge Removal	6,826,681	6,826,681
6	Difference in Cost of Environmentally Clean Fuels	4,892,770	4,892,770
7	Replacement Power Costs	4,158,650	
8	Taxes and Fees		
9	Administrative and General		
10	Other (Identify significant)		
11	TOTAL	55,148,056	50,989,406

Schedule Page: 431 Line No.: 11 Column: b

Engineers' cost estimates were used for those facilities where actual production costs were not available. Expenses for lines 2 through 10 are not available for the Perry Power Plant nor are they available from the operating companies of the Beaver Valley and Davis Besse Power Plants.

Schedule Page: 431 Line No.: 11 Column: c

Toledo Edison Company, The	Dec. 31, 2000

ARTHURANDERSEN

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

To the Board of Directors and Management of The Toledo Edison Company:

We have audited the balance sheets - regulatory basis of The Toledo Edison Company as of December 31, 2000 and 1999. and the related statements of income - regulatory basis for the years then ended, and the statements of retained earnings - regulatory basis and cash flows - regulatory basis for the year ended December 31, 2000. included on pages 110 through 123.12 of the accompanying Federal Energy Regulatory Commission Form 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 18, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States.

In our opinion, the financial statements referred to above present fairly, in all material respects, the assets, liabilities and proprietary capital of The Toledo Edison Company as of December 31, 2000 and 1999, and the results of its operations for the years then ended, and its cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is intended solely for the information and use of the board of directors and management of The Toledo Edison Company and for filing with the Federal Energy Regulatory Commission and should not be used for any other purpose.

ARTHUR ANDERSEN LLP

Cleveland, Ohio,
February 16, 2001.

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)
(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shalt not include 'municipalities, as hereinafter defined;

(4) "Person" means an individual or a corporation;

(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;

(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."

(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:

(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Harvey L. Wagner, Controller
76 South Main Street
Akron, Ohio 44308

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Ohio
July 1, 1901

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric Service - Ohio

5. Have you engaged as the principle accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Toledo Edison Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the repondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiearies for whom trust was maintained, and purpose of the trust.

The Toledo Edison Company is a wholly owned subsidiary of FirstEnergy Corp., an exempt utility holding company.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Toledo Edison Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CORPORATIONS CONTROLLED BY RESPONDENT

1. Report below the names of all corporations, business trusts, and similar organizations, controlled directly or indirectly by respondent at any time during the year. If control ceased prior to end of year, give particulars (details) in a footnote.
2. If control was by other means than a direct holding of voting rights, state in a footnote the manner in which control was held, naming any intermediaries involved.
3. If control was held jointly with one or more other interests, state the fact in a footnote and name the other interests.

Definitions
1. See the Uniform System of Accounts for a definition of control.
2. Direct control is that which is exercised without interposition of an intermediary.
3. Indirect control is that which is exercised by the interposition of an intermediary which exercises direct control.
4. Joint control is that in which neither interest can effectively control or direct action without the consent of the other, as where the voting control is equally divided between two holders, or each party holds a veto power over the other. Joint control may exist by mutual agreement or understanding between two or more parties who together have control within the meaning of the definition of control in the Uniform System of Accounts, regardless of the relative voting rights of each party.

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
The Company did not close the stock book in 2000.	Total: 39,133,887 By Proxy: 39,133,887	December 19, 2000 FirstEnergy Corp. 76 South Main Street Akron, Ohio 44308

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

1. None

2. On August 8, 2000, FirstEnergy Corp. (FirstEnergy), the parent of Ohio Edison Company (Company), and GPU, Inc. (GPU), a Pennsylvania corporation, entered into an Agreement and Plan of Merger. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4,500,000,000 in cash and FirstEnergy common stock. The transaction would be accounted for by the purchase method. The merger has been approved by the respective shareholders of FirstEnergy and GPU, the Federal Energy Regulatory Commission (FERC) on March 15, 2001 in Docket No. EC01-22-000, the Nuclear Regulatory Commission, the New York Public Service Commission and the Federal Communications Commission. Other regulatory approvals are pending before the Pennsylvania Public Utility Commission, the New Jersey Board of Public Utilities and the Securities and Exchange Commission.

3. None

4. None

5. On October 27, 1999, the FERC in Docket No. EC99-53-000 approved FirstEnergy's request for an intra-corporate transfer of ownership and operational control of jurisdictional transmission facilities of its electric utility operating companies (Company, Pennsylvania Power Company (Penn), The Cleveland Electric Illuminating Company and The Toledo Edison Company) and the assignment of rights under certain FERC-jurisdictional agreements to a newly formed affiliated company, American Transmission Systems, Inc. (ATSI). On September 1, 2000, the major high-voltage transmission facilities, which consist of approximately 7,100 circuit miles of transmission lines with nominal voltages of 345 Kv, 138 Kv and 69 Kv were transferred to ATSI. These facilities will be included in the FERC Form 1 filed by ATSI.

6. See Notes 5 through 7 to Balance Sheet on pages 123.1 through 123.4 and pages 256 and 257 of this report and footnotes thereof.

7. None

8. The Company granted wage increases to employees represented by unions which provided for adjustments in hourly rates in 2000. These increases plus changes in wages of supervisory, administrative and professional employees resulted in an estimated annual wage increase of $758,850.

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.

7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.

8. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.

9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.

10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF RETAINED EARNINGS FOR THE YEAR

1. Report all changes in appropriated retained earnings, unappropriated retained earnings, and unappropriated undistributed subsidiary earnings for the year.
2. Each credit and debit during the year should be identified as to the retained earnings account in which recorded (Accounts 433, 436 - 439 inclusive). Show the contra primary account affected in column (b)
3. State the purpose and amount of each reservation or appropriation of retained earnings.
4. List first account 439, Adjustments to Retained Earnings, reflecting adjustments to the opening balance of retained earnings. Follow by credit, then debit items in that order.
5. Show dividends for each class and series of capital stock.
6. Show separately the State and Federal income tax effect of items shown in account 439, Adjustments to Retained Earnings.
7. Explain in a footnote the basis for determining the amount reserved or appropriated. If such reservation or appropriation is to be recurrent, state the number and annual amounts to be reserved or appropriated as well as the totals eventually to be accumulated.
8. If any notes appearing in the report to stockholders are applicable to this statement, include them on pages 122-123.

STATEMENT OF CASH FLOWS

1. If the notes to the cash flow statement in the respondents annual stockholders report are applicable to this statement, such notes should be included in page 122-123. Information about non-cash investing and financing activities should be provided on Page 122-123. Provide also on pages 122-123 a reconciliation between "Cash and Cash Equivalents at End of Year" with related amounts on the balance sheet.
2. Under "Other" specify significant amounts and group others.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show on Page 122-123 the amount of interest paid (net of amounts capitalized) and income taxes paid.

Line No.	Description (See Instruction No. 5 for Explanation of Codes) (a)	Amounts (b)

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commmission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

Notes to Balance Sheet

1 - UTILITY PLANT

Utility plant reflects the original cost of construction (except for The Toledo Edison Company's (Company) nuclear generating units which were adjusted to fair value), including payroll and related costs such as taxes, employee benefits, administrative and general costs, and interest costs. On September 1, 2000, the Company sold its transmission assets to an affiliate, American Transmission Systems, Inc. (ATSI). As a result, ATSI owns and operates the Company's and its affiliates' major high-voltage transmission facilities and has interconnections with other regional utilities.

2 - NUCLEAR FUEL

The Company leases its nuclear fuel and pays for the fuel as it is consumed.

3 - ACCOUNTS RECEIVABLE

Receivables from customers include sales to residential, commercial and industrial customers located in the Company's service area and sales to wholesale customers. There was no material concentration of receivables at December 31, 2000 or 1999, with respect to any particular segment of the Company's customers.

The Company and The Cleveland Electric Illuminating Company (CEI) sell substantially all of their retail customer receivables to Centerior Funding Corporation (CFC), a wholly owned subsidiary of CEI. CFC subsequently transfers the receivables to a trust under an asset-backed securitization agreement. The Company sold approximately $761,351,000 and $782,372,000 of accounts receivable to CFC in 2000 and 1999, respectively. The trust completed a public sale of $150,000,000 and private sales of $50,000,000 of receivables-backed investor certificates in 1996 and 2000, respectively, in transactions that qualified for sale accounting treatment. CFC's retained interest in the pool of receivables held by the trust (15.15% as of December 31, 2000) is stated at fair value reflecting adjustments for anticipated credit losses. Collections of receivables previously transferred to the trust used to purchase new receivables from CFC during 2000, totaled approximately $2,500,000,000. Expenses associated with the factoring discount related to the sale of receivables were $13,000,000 in 2000. As of December 31, 2000, the Company's receivables recorded on its Balance Sheet were reduced by $103,000,000 due to these sales.

4 - LEASES

The Company leases certain generating facilities, nuclear fuel, office space and other property and equipment under cancelable and noncancelable leases.

The Company and CEI sold their ownership interests in Bruce Mansfield Units 1, 2 and 3 and the Company sold a portion of its ownership interest in Beaver Valley Unit 2. In connection with these sales, which were completed in 1987, the Company and CEI entered into operating leases for lease terms of approximately 30 years as co-lessees. During the terms of the leases, the Company and CEI continue to be responsible, to the extent of their combined ownership and leasehold interest, for costs associated with the units including construction expenditures, operation and maintenance expenses, insurance, nuclear fuel, property taxes and decommissioning. The Company and CEI have the right, at the end of the respective basic lease terms, to renew the leases. The Company and CEI also have the right to purchase the facilities at the expiration of the basic lease term or renewal term (if elected) at a price equal to the fair market value of the facilities.

As co-lessee with CEI, the Company is also obligated for CEI's lease payments. If CEI is unable to make its payments under the Bruce Mansfield Plant lease, the Company would be obligated to make such payments. No such payments have been made on behalf of CEI. (CEI's future minimum lease payments as of December 31, 2000 were approximately $200,000,000, net of trust cash receipts.)

Nuclear fuel is currently financed for the Company and CEI through leases with a special-purpose corporation. As of December 31, 2000, $142,314,436 of nuclear fuel ($56,163,244 for the Company) was financed under a lease financing arrangement totaling $150,000,000 from bank credit arrangements. The bank credit arrangements expire in August 2001. Lease rates are based on bank rates and commercial paper rates.

The future minimum lease payments as of December 31, 2000 are:

		Operating Leases		
	Capital Leases	Lease Payments	Capital Trust	Net
		(In thousands)		
2001	$ 28,016	$ 108,029	$ 36,368	$ 71,661
2002	17,191	111,042	37,930	73,112
2003	11,034	111,745	35,966	75,779
2004	5,032	97,864	24,272	73,592
2005	1,513	104,832	24,941	79,891
Years thereafter	786	1,115,618	272,262	843,356
Total minimum lease payments	63,572	$1,649,130	$431,739	$1,217,391
Interest portion	6,713			
Present value of net minimum lease payments	$ 56,859			

The Company and CEI refinanced high-cost fixed obligations related to their 1987 sale and leaseback transaction for the Bruce Mansfield Plant through a lower cost transaction in June and July 1997. In a June 1997 offering (Offering), the two companies pledged $720,000,000 aggregate principal amount ($145,000,000 for the Company and $575,000,000 for CEI) of first mortgage bonds due through 2007 to a trust as security for the issuance of a like principal amount of secured notes due through 2007. The obligations of the two companies under these secured notes are joint and several. Using available cash, short-term borrowings and the net proceeds from the Offering, the two companies invested $906,488,000 ($337,099,000 for the Company and $569,389,000 for CEI) in a business trust, in June 1997. The trust used these funds in July 1997 to purchase lease notes and redeem all $873,200,000 aggregate principal amount of 10-1/4% and 11-1/8% secured lease obligations bonds (SLOBs) due 2003 and 2016. The SLOBs were issued by a special-purpose funding corporation in 1988 on behalf of lessors in the two companies' 1987 sale and leaseback transaction. The Shippingport capital trust arrangement effectively reduces lease costs related to that transaction.

5 - CAPITALIZATION

Retained Earnings --

Under the Company's first mortgage indenture, the Company's retained earnings unrestricted for payment of cash dividends on the Company's common stock were $81,307,735 at December 31, 2000.

Preferred Stock and Preference Stock --

Preferred stock may be redeemed by the Company in whole, or in part, with 30-90 days' notice.

The preferred dividend rates on the Company's Series A and Series B fluctuate based on prevailing interest rates and market conditions. The dividend rates for these issues averaged 7.00% and 7.42%, respectively, in 2000.

The Company has 5,000,000 authorized and unissued shares of $25 par value preference stock.

Long-Term Debt --

The first mortgage indenture and its supplements, which secure all of the Company's first mortgage bonds, serve as direct first mortgage liens on substantially all property and franchises, other than specifically excepted property, owned by the Company.

Based on the amount of bonds authenticated by the Trustee through December 31, 2000, the Company's annual sinking and improvement fund requirements for all bonds issued under the mortgage amounts to $400,000. The Company expects to deposit funds in 2001 that will be withdrawn upon the surrender for cancellation of a like principal amount of bonds, which are specifically authenticated for such purposes against unfunded property additions or against previously retired bonds. This method can result in minor increases in the amount of the annual sinking fund requirement.

Sinking fund requirements for first mortgage bonds and maturing long-term debt (excluding capital leases) for the next five years are:

2001	35,130,000
2002	196,030,000
2003	96,155,000
2004	268,680,000
2005	0

The Company's obligations to repay certain pollution control revenue bonds are secured by several series of first mortgage bonds. Certain pollution control revenue bonds are entitled to the benefit of irrevocable bank letters of credit of $68,000,000 and a noncancelable municipal bond insurance policy of $30,900,000 to pay principal of, or interest on, the pollution control revenue bonds. To the extent that drawings are made under the letters of credit, the Company is entitled to a credit against its obligation to repay those bonds. The Company pays an annual fee of 1.375% of the amounts of the letters of credit to the issuing bank and is obligated to reimburse the bank for any drawings thereunder.

The Company and CEI have letters of credit of approximately $222,252,000 in connection with the sale and leaseback of Beaver Valley Unit 2 that expire in May 2002. The letters of credit are secured by first mortgage bonds of the Company and CEI in the proportion of 60% and 40%, respectively.

6 - SHORT-TERM BORROWINGS

The Company may borrow from its affiliates on a short-term basis. At December 31, 2000, the Company had total short-term borrowings of $65,399,185 from its affiliates.

7 - COMMITMENTS AND CONTINGENCIES

Capital Expenditures --

The Company's current forecast reflects expenditures of approximately $218,000,000 for property additions and improvements from 2001-2005, of which approximately $49,000,000 is applicable to 2001. Investments for additional nuclear fuel during the 2001-2005 period are estimated to be approximately $79,000,000, of which approximately $7,000,000 applies to 2001. During the same periods, the Company's nuclear fuel investments are expected to be reduced by approximately $99,000,000 and $22,000,000, respectively, as the nuclear fuel is consumed.

Nuclear Insurance --

The Price-Anderson Act limits the public liability relative to a single incident at a nuclear power plant to $9,500,000,000. The amount is covered by a combination of private insurance and an industry retrospective rating plan. Based on its ownership and leasehold interests in Beaver Valley Unit 2, the Davis Besse Station and the Perry Plant, the Company's maximum potential assessment under the industry retrospective rating plan (assuming the other affiliate co-owners contribute their proportionate shares of any assessments under the retrospective rating plan) would be $77,900,000 per incident but not more than $8,800,000 in any one year for each incident.

The Company is also insured as to its respective interests in Beaver Valley Unit 2, Davis-Besse and Perry under policies issued to the operating company for each plant. Under these policies, up to $2,750,000,000 is provided for property damage and decontamination and decommissioning costs. The Company has also obtained approximately $176,100,000 of insurance coverage for replacement power costs for its respective interests in Beaver Valley Unit 2, Davis-Besse and Perry. Under these policies, the Company can be assessed a maximum of approximately $8,100,000 for incidents at any covered nuclear facility occurring during a policy year which are in excess of accumulated funds available to the insurer for paying losses.

The Company intends to maintain insurance against nuclear risks as described above as long as it is available. To the extent that replacement power, property damage, decontamination, decommissioning, repair and replacement costs and other such costs arising from a nuclear incident at any of the Company's plants exceed the policy limits of the insurance in effect with respect to that plant, to the extent a nuclear incident is determined not to be covered by the Company's insurance policies, or to the extent such insurance becomes unavailable in the future, the Company would remain at risk for such costs.

Environmental Matters --

Various federal, state and local authorities regulate the Company with regard to air and water quality and other environmental matters. The Company estimates additional capital expenditures for environmental compliance of approximately $16,000,000, which is included in the construction forecast provided under "Capital Expenditures" for 2001 through 2005.

The Company is required to meet federally approved sulfur dioxide (SO_2) regulations. Violations of such regulations can result in shutdown of the generating unit involved and/or civil or criminal penalties of up to $27,500 for each day the unit is in violation. The Environmental Protection Agency (EPA) has an interim enforcement policy for SO_2 regulations in Ohio that allows for compliance based on a 30-day averaging period. The Company cannot predict what action the EPA may take in the future with respect to the interim enforcement policy.

The Company is in compliance with the current SO_2 and nitrogen oxides (NO_x) reduction requirements under the Clean Air Act Amendments of 1990. SO_2 reductions are being achieved by burning lower-sulfur fuel, generating more electricity from lower-emitting plants, and/or using emission allowances. NO_x reductions are being achieved through combustion controls and the generation of more electricity at lower-emitting plants. In September 1998, the EPA finalized regulations requiring additional NO_x reductions from the Company's Ohio and Pennsylvania facilities. The EPA's NO_x Transport Rule imposes uniform reductions of NO_x emissions (an approximate 85% reduction in utility plant NO_x emissions from projected 2007 emissions) across a region of twenty-two states and the District of Columbia, including Ohio and Pennsylvania, based on a conclusion that such NO_x emissions are contributing significantly to ozone pollution in the eastern United States. In March 2000, the U.S. Court of Appeals for the D.C. Circuit upheld EPA's NO_x Transport Rule except as applied to the State of Wisconsin and portions of Georgia and Missouri. By October 2000, states were to submit revised State Implementation Plans (SIP) to comply by May 31, 2004 with individual state NO_x budgets established by the EPA. Pennsylvania recently submitted a SIP that requires compliance with the NO_x budgets at the Company's Pennsylvania facilities by May 1, 2003 and Ohio submitted a "draft" SIP that requires compliance with the NO_x budgets at the Company's Ohio facilities by May 31, 2004. A Federal Implementation Plan accompanied the NO_x Transport Rule and may be implemented by the EPA in states which fail to revise their SIP. In another separate but related action, eight states filed petitions with the EPA under Section 126 of the Clean Air Act seeking reductions of NO_x emissions which are alleged to contribute to ozone pollution in the eight petitioning states. The EPA position is that the Section 126 petitions will be adequately addressed by the NO_x Transport Program, but a December 17, 1999 rulemaking established an alternative program which would require nearly identical 85% NO_x reductions at 392 utility plants, including the Company's Ohio and Pennsylvania plants, by May 2003, in the event implementation of the NO_x Transport Rule is not implemented by a state. Additional Section 126 petitions were filed by New Jersey, Maryland, Delaware and the District of Columbia in mid-1999 and are still under evaluation by the EPA. FirstEnergy continues to evaluate its compliance plans and other compliance options.

In July 1997, the EPA promulgated changes in the National Ambient Air Quality Standard (NAAQS) for ozone emissions and proposed a new NAAQS for previously unregulated ultra-fine particulate matter. In May 1999, the U.S. Court of Appeals found constitutional and other defects in the new NAAQS rules. In February 2001, the U.S. Supreme Court upheld the new NAAQS rules regulating ultra-fine particulates but found defects in the new NAAQS rules for ozone and decided that the EPA must revise those rules. The future cost of compliance with these regulations may be substantial and will depend on the manner in which they are ultimately implemented, if at all, by the states in which the Company operates affected facilities.

In December 2000, the EPA announced it would proceed with the development of regulations regarding hazardous air pollutants from electric power plants. The EPA identified mercury as the hazardous air pollutant of greatest concern. The EPA established a schedule to propose regulations by December 2003 and issue final regulations by December 2004. The future cost of compliance with these regulations may be substantial.

As a result of the Resource Conservation and Recovery Act of 1976, as amended, and the Toxic Substances Control Act of 1976, federal and state hazardous waste regulations have been promulgated. Certain fossil-fuel combustion waste products, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation. The EPA has issued its final regulatory determination that regulation of coal ash as a hazardous waste is unnecessary. On April 25, 2000, the EPA announced that it will develop national standards regulating disposal of coal ash under its authority to regulate nonhazardous waste.

The Company has been named as a "potentially responsible party" (PRP) at waste disposal sites which may require cleanup under the Comprehensive Environmental Response, Compensation and Liability Act of 1980. Allegations of disposal of hazardous substances at historical sites and the liability involved, are often unsubstantiated and subject to dispute. Federal law provides that all PRPs for a particular site be held liable on a joint and several basis. The Company has accrued a liability of $200,000 as of December 31, 2000, based on estimates of the total costs of cleanup, the proportionate responsibility of other PRPs for such costs and the financial ability of other PRPs to pay. The Company believes that waste disposal costs will not have a material adverse effect on its financial condition, cash flows or results of operations.

8 - ANNUAL REPORT TO STOCKHOLDERS

Following are the reclassification entries which have been reflected in the Company's Balance Sheets as of December 31, 2000 and 1999 in the 2000 Annual Report to Stockholders.

	December 31,			
	2000		1999	
	Dr.	Cr.	Dr.	Cr.
Long-term debt	$ 35,130,000		$ 76,030,000	
Currently payable long-term debt		$ 35,130,000		$ 76,030,000
To reclassify long-term debt due within one year.				
Other regulatory liabilities	312,736,527		337,730,921	
Other regulatory assets		312,736,527		337,730,921
To net regulatory liabilities with regulatory assets.				

	December 31, 2000		1999

Misc. deferred debits	7,613,284		11,951,483	
Accounts receivable		7,613,284		11,951,483
To reclassify sale of receivables suspense account to accounts receivable.				
Accounts receivable	--		11,951,483	
Current liabilities-other		--		11,951,483
To reclassify accounts receivable suspense account from accounts receivable to other current liabilities.				
Notes receivable-associated companies	161,866		--	
Investments in associated companies		161,866		--
To reclassify investments in associated companies due within one year.				
Other investments	878,087		--	
Other deferred credits		878,087		--
To reclassify prepaid pension costs from deferred credits to other investments.				

Notes to Income Statement

9 - REVENUES

The Company's principal business is providing electric service to customers in northwestern Ohio. The Company's retail customers are metered on a cycle basis. Revenue is recognized for unbilled electric service through the end of the year.

10 - NUCLEAR FUEL

The Company amortizes the cost of nuclear fuel based on the rate of consumption.

11 - RENTAL PAYMENTS

Consistent with the regulatory treatment, the rentals for capital and operating leases are charged to operating expenses on the Statements of Income. Such costs for the two years ended December 31, 2000 are summarized as follows:

	2000	1999
Operating leases		
Interest element	$ 58,646,953	$ 61,414,982
Other	46,222,425	45,281,522
Capital leases		
Interest element	3,905,036	5,264,587
Other	24,114,843	30,428,155
Total rentals	$132,889,257	$142,389,246

12 - ANNUAL REPORT TO STOCKHOLDERS

Following are the reclassification entries which have been reflected in the Company's Income Statements for the years ended December 31, 2000 and 1999 in the 2000 Annual Report to Stockholders.

	December 31,			
	2000		1999	
	Dr.	Cr.	Dr.	Cr.
Regulatory credits	$ 20,093,268		$ 20,093,268	
Regulatory debits		$ 17,363,292		$ 17,363,292
Provision for deferred income taxes - operating income		2,729,976		2,729,976

To reclassify deferred taxes related to the amortization of net regulatory assets.

13 - TRANSACTIONS WITH AFFILIATED COMPANIES

Operating revenues, operating expenses and interest charges include transactions with CEI, Ohio Edison Company (OE), Pennsylvania Power Company and ATSI. Primary transactions include electric sales (see following paragraph), purchased power and transmission facilities rent expenses of $9,400,000 from ATSI starting in 2000. CFC serves as the transferor in connection with the accounts receivable securitization for the Company and CEI.

The Company is selling 150 megawatts of its Beaver Valley Unit 2 leased capacity entitlement to CEI. Operating revenues for this transaction were $103,956,881 and $104,301,983 in 2000 and 1999, respectively. This sale is expected to continue through the end of the lease period.

FirstEnergy provides support services at cost to the Company and other affiliated companies, for which the Company was billed $36,000,000 in 2000 and $59,400,000 in 1999.

Notes Common to Balance Sheet, Income Statement and Statement of Cash Flows

14 - SUPPLEMENTAL CASH FLOWS INFORMATION

Cash and Cash Equivalents at December 31, 2000:

Account	Account Title	
131	Cash	$ 1,172,700
135	Working Fund	201,631
136	Temporary Cash Investments	1,130
		$ 1,375,461

Operating Activities:	
Interest Paid (net of amounts capitalized	$ 71,009,000
Income Taxes Paid	$ 65,553,000
Investing Activities:	
Gross Additions to Utility Plant	$ 92,860,916
Capital Leases - Nuclear Fuel	$ 36,052,388

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Balance Sheets. The Company reflects temporary cash investments at cost, which approximates their fair market value.

All borrowings with initial maturities of less than one year are defined as financial instruments under accounting principles generally accepted in the United States (GAAP) and are reported on the Balance Sheets at cost, which approximates their fair market value. The following sets forth the approximate fair value and related carrying amounts of all other long-term debt and investments other than cash and cash equivalents as of December 31:

	2000		1999	
	Carrying Value	Fair Value	Carrying Value	Fair Value
	(In thousands)			
Long-term debt	$ 918,596	$ 952,068	$ 994,626	$ 1,002,103
Investments other than cash and cash equivalents:				
Debt securities - (Maturing in more than 10 years)	$ 316,685	$ 307,121	$ 292,911	$ 270,030
Equity securities	2,577	2,577	2,543	2,543
All other	133,025	136,572	124,031	128,388
	$ 452,287	$ 446,270	$ 419,485	$ 400,961

The fair value of long-term debt reflects the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective year. The yields assumed were based on securities with similar characteristics offered by a corporation with credit ratings similar to the Company's ratings.

The fair value of investments other than cash and cash equivalents represent cost (which approximates fair value) or the present value of the cash inflows based on the yield to maturity. The yields assumed were based on financial instruments with similar characteristics and terms. Investments other than cash and cash equivalents include decommissioning trust investments. Unrealized gains and losses applicable to the decommissioning trusts have been recognized in the trust investment with corresponding changes to the decommissioning liability. The Company has no securities held for trading purposes.

15 - REGULATORY PLAN

The Public Utilities Commission of Ohio (PUCO) approved FirstEnergy Corp's (FirstEnergy) Rate Reduction and Economic Development Plan for the Company in January 1997. The regulatory plan was to maintain then current base electric rates for the Company through December 31, 2005. At the end of the regulatory plan period, the Company's base rates were to be reduced by $93,000,000 (approximately 15 percent below then current levels). The regulatory plan also revised the Company's fuel cost recovery method so that the Company's fuel rate would be frozen through the regulatory plan period, subject to limited periodic adjustments. As part of the regulatory plan, transition rate credits were implemented for customers, which were expected to reduce operating revenues for the Company by approximately $111,000,000 during the regulatory plan period. The regulatory plan was terminated at the end of 2000 concurrent with the implementation of the FirstEnergy transition plan as described further below.

In July 1999, Ohio's electric utility restructuring legislation, which allowed Ohio electric customers to select their generation suppliers beginning January 1, 2001, was signed into law. Among other things, the legislation provides for a five percent reduction on the generation portion of residential customers' bills and the opportunity to recover transition costs, including regulatory assets, from January 1, 2001 through December 31, 2005. The period for the recovery of regulatory assets only can be extended up to December 31, 2010. The PUCO was authorized to determine the level of transition cost recovery, as well as the recovery period for the regulatory assets portion of those costs, in considering each Ohio electric utility's transition plan application.

FirstEnergy, on behalf of its Ohio electric utility operating companies -- the Company, CEI and OE -- filed its transition plan under Ohio's new electric utility restructuring law in late 1999. The filing also included additional information on FirstEnergy's plans to turn over control, and

perhaps ownership, of its transmission assets to the Alliance Regional Transmission Organization. The transition plan itemized, or unbundled, the current price of electricity into its component elements -- including generation, transmission, distribution and transition charges. As required by the PUCO's rules, the Company's transition plan also included its proposals on corporate separation of its regulated and unregulated operations, operational and technical support changes needed to accommodate customer choice, an education program to inform customers of their options under the new law, and how the Company's transmission system will be operated to ensure access to all users. Customer prices would be frozen through a five-year market development period (2001-2005), except for certain limited statutory exceptions including the five percent reduction in the price of generation for residential customers. The plan proposed recovery of generation-related transition costs of approximately $859,000,000 ($764,000,000, net of deferred income taxes) and transition costs related to regulatory assets aggregating approximately $842,000,000 ($573,000,000, net of deferred income taxes).

On July 19, 2000, the PUCO approved FirstEnergy's transition plan as modified by a settlement agreement with major parties to the transition plan. Major parties to the settlement agreement included the PUCO staff, the Ohio Consumers' Counsel, the Industrial Energy Users-Ohio, certain power marketers and others. Major provisions of the settlement agreement consisted of approval of recovery of transition costs in the amounts filed in the transition plan through no later than mid-2007 for the Company, except where a longer period of recovery is provided for in the settlement agreement. The Company will also give preferred access over FirstEnergy's subsidiaries to nonaffiliated marketers, brokers and aggregators to 160 megawatts of generation capacity through 2005 at established prices for sales to the Company's retail customers. The base electric rates for distribution service for the Company under its prior regulatory plan will be extended from December 31, 2005 through December 31, 2007. The transition rate credits for customers under its prior regulatory plan will also be extended through the transition cost recovery period.

The application of Statement of Financial Accounting Standards (SFAS) No. 71, "Accounting for the Effects of Certain Types of Regulation" (SFAS 71), to the nonnuclear generation business of the Company was discontinued with the issuance of the PUCO transition plan order. The Securities and Exchange Commission (SEC) issued interpretive guidance regarding asset impairment measurement that concluded any supplemental regulated cash flows such as a competitive transition charge (CTC) should be excluded from the cash flows of assets in a portion of the business not subject to regulatory accounting practices. If those assets are impaired, a regulatory asset should be established if the costs are recoverable through regulatory cash flows. Consistent with the SEC guidance $53,000,000 of impaired plant investments were recognized by the Company as regulatory assets recoverable as transition costs through future regulatory cash flows.

The settlement agreement provides to the Company's Ohio customers an additional incentive applied to the generation shopping credit of 45% for residential customers, 30% for commercial customers and 15% for industrial customers as reductions from their bills, when they select alternative energy providers (the credits exceed the price the Company will be offering to electricity suppliers relating to the 160 megawatts described above). The amount of the incentive will serve to reduce the amortization of transition costs during the market development period and will be recovered over the remaining transition cost recovery period. If the customer switching targets established in the settlement agreement are not achieved by the end of 2005, the transition cost recovery period could be shortened for the Company to reduce recovery by as much as $80,000,000, but any such adjustment would be computed on a class-by-class and pro-rata basis.

All of the Company's regulatory assets will continue to be recovered under provisions of the Ohio transition plan. The Company recognized a fair value purchase accounting adjustment to reduce nuclear plant by $842,000,000 in connection with the 1997 FirstEnergy merger; that fair value adjustment recognized for financial reporting purposes satisfied the $647,000,000 asset reduction commitment contained in the regulatory plan. For regulatory purposes, the Company recognized the applicable accelerated amortization over the period that its rate plan was in effect.

Application of SFAS 71 was discontinued in 1997 with respect to the Company's nuclear operations and in mid-2000, as discussed above, with respect to the Company's nonnuclear generation business. The Company's net assets included in utility plant relating to operations for which the application of SFAS 71 was discontinued were $623,000,000 as of December 31, 2000.

16 - DEPRECIATION

The Company provides for depreciation on a straight-line basis at various rates over the estimated lives of property included in plant in service. The annualized composite rate was approximately 3.4% in 2000 and 1999.

Annual depreciation expense includes approximately $9,800,000 for future decommissioning costs applicable to the Company's ownership interests in three nuclear generating units. Annual decommissioning costs will increase by approximately $20,000,000 from implementing the Company's transition plan in 2001. The Company's share of the future obligation to decommission these units is approximately $422,000,000 in current dollars and (using a 4.0% escalation rate) approximately $1,031,000,000 in future dollars. The estimated obligation and the escalation rate were developed based on site specific studies. Payments for decommissioning are expected to begin in 2016, when actual decommissioning work begins. The Company has recovered approximately $111,000,000 for decommissioning through its electric rates from customers through December 31, 2000. The Company has also recognized an estimated liability of approximately $6,900,000 related to decontamination and decommissioning of nuclear enrichment facilities operated by the DOE, as required by the Energy Policy Act of 1992.

DOE special assessment activities during 2000 and 1999 respectively, were Account 518 expenses: $1,112,432 and $1,085,734; payments: $1,143,877 and $1,106,143; and refunds: $0 for both years.

The Financial Accounting Standards Board (FASB) issued a proposed accounting standard for nuclear decommissioning costs in 1996. If the standard is adopted as proposed: (1) annual provisions for decommissioning could change; (2) the net present value of estimated decommissioning costs could be recorded as a liability; and (3) income from the external decommissioning trusts could be reported as investment income. The FASB subsequently expanded the scope of the proposed standard to include other closure and removal obligations related to long-lived assets. A final pronouncement is expected in the second quarter of 2001 and is anticipated to be implemented on January 1, 2002.

17 - RETIREMENT BENEFITS

FirstEnergy's trusteed, noncontributory defined benefit pension plan covers almost all of the Company's full-time employees. Upon retirement, employees receive a monthly pension based on length of service and compensation. The Company uses the projected unit credit method for funding purposes and was not required to make pension contributions during the three years ended December 31, 2000. The assets of the FirstEnergy pension plan consist primarily of common stocks, United States government bonds and corporate bonds.

The Company provides a minimum amount of noncontributory life insurance to retired employees in addition to optional contributory insurance. Health care benefits, which include certain employee deductibles and copayments, are also available to retired employees, their dependents and, under certain circumstances, their survivors. The Company pays insurance premiums to cover a portion of these benefits in excess of set limits; all amounts up to the limits are paid by the Company. The Company recognizes the expected cost of providing other postretirement benefits to employees and their beneficiaries and covered dependents from the time employees are hired until they become eligible to receive those benefits.

The following sets forth the funded status of the plans and amounts recognized on the Consolidated Balance Sheets as of December 31:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Change in benefit obligation:				
Benefit obligation as of January 1	$1,394,106,439	$1,500,134,952	$608,426,051	$ 601,269,566
Service cost	27,421,692	28,296,067	11,349,407	9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Plan amendments	41,347,358	--	--	--
Actuarial loss (gain)	17,264,015	(155,585,368)	121,680,323	(17,583,693)
Net increase from asset swap	--	14,800,000	--	12,524,600
Voluntary early retirement program expense	23,353,000	--	--	--
Benefits paid	(102,221,644)	(95,534,268)	(35,097,490)	(37,818,560)
Benefit obligation as of December 31	1,506,055,538	1,394,106,439	752,028,957	608,426,051
Change in plan assets:				
Fair value of plan assets as of January 1	1,807,458,798	1,682,987,392	4,917,191	3,906,528
Actual return on plan assets	768,878	220,005,674	(178,534)	621,633
Company contribution	--	--	18,344,187	402,444
Benefits paid	(102,221,644)	(95,534,268)	--	--
Administrative expenses	--	--	(42,480)	(13,414)
Fair value of plan assets as of December 31	1,706,006,032	1,807,458,798	23,040,364	4,917,191
Funded status of plan	199,950,494	413,352,359	(728,988,593)	(603,508,860)
Unrecognized actuarial loss (gain)	(90,915,998)	(303,535,599)	147,307,299	24,881,450
Unrecognized prior service cost	93,063,964	57,382,039	20,909,717	24,158,510
Unrecognized net transition obligation (asset)	(2,106,408)	(10,051,160)	110,841,109	120,077,867
Prepaid (accrued) benefit cost	$199,992,052	$157,147,639	$(449,930,468)	$(434,391,033)
Company's share of prepaid (accrued) benefit cost	$ 878,087	$(11,800,000)	$(117,120,939)	$(110,200,000)
Assumptions used as of December 31:				
Discount rate	7.75%	7.75%	7.75%	7.75%
Expected long-term return on plan assets	10.25%	10.25%	10.25%	10.25%
Rate of compensation increase	4.00%	4.00%	4.00%	4.00%

FirstEnergy's net pension and other postretirement benefit costs for the two years ended December 31, 2000 were computed as follows:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Service cost	$ 27,421,692	$ 28,296,067	$ 11,349,407	$ 9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Expected return on plan assets	(180,918,929)	(168,056,403)	(524,512)	(400,419)
Amortization of transition obligation (asset)	(7,944,752)	(7,944,752)	9,236,758	9,236,758
Amortization of prior service cost	5,665,433	5,665,433	3,248,793	3,248,793
Recognized net actuarial loss (gain)	(9,095,535)	--	--	--
Voluntary early retirement program expense	17,243,000	--	--	--
Net benefit cost	$(42,844,413)	$(40,044,599)	$ 68,981,112	$ 62,119,270
Company's share of total plan costs	$(12,661,572)	$ (8,323,000)	$ 15,063,137	$ 12,648,000

The FirstEnergy plan's health care trend rate assumption is 7.2% in 2001, 7.0% in 2002 and 6.5% in 2003, trending to 5.0%-5.5% in later years. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plan. An increase in the health care trend rate assumption by one percentage point would increase the total service and interest cost components by $7,500,000 and the postretirement benefit obligation by $94,400,000. A decrease in the same assumption by one percentage point would decrease the total service and interest cost components by $8,500,000 and the postretirement benefit obligation by $111,000,000.

18 - BASIS OF FINANCIAL STATEMENT PRESENTATION

The accompanying financial statements were prepared in accordance with the accounting requirements set forth in the Uniform System of Accounts and published accounting releases of the Federal Energy Regulatory Commission, which is a comprehensive basis of accounting other than GAAP. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses during the reporting period.

Schedule Page: 202 Line No.: 12 Column: f

Quantities of net unamortized leased fuel at December 31, 2000 were as follows:

Lbs U308		0
Kgs UF6		0
Enriched U-Kgs	(Estimated)	10,870
Fabricated U-Kgs	(Estimated)	21,546

During 2000, the Company consumed 69,461,876 MMBTU's of leased nuclear fuel.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

[redacted]

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)		Amount (b)	Capitalization Ratio(Percent) (c)	Cost Rate Percentage (d)
1	Average Short-Term Debt & Computation of Allowance text	S			
2	Short-term Interest				s
3	Long-Term Debt	D	979,741,029	56.26	d 8.01
4	Preferred Stock	P	210,000,000	12.06	p 7.83
5	Common Equity	C	551,704,367	31.68	c 12.59
6	Total Capitalization		1,741,445,396	100%	
7	Average Construction Work in Progress Balance	W	97,990,064		

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ 4.51

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ 4.93

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 8.01
   b. Rate for Other Funds - 0.00

Schedule Page: 218 Line No.: 1 Column: OH exp

Engineering and Supervision

(a) The actual time of employees devoted to the planning, design and supervision of construction projects, together with amounts paid for outside professional engineering services, is charged to such projects to the extent possible.

(b) Other actual time of employees devoted to the engineering of construction, together with amounts paid for outside professional engineering services, is accumulated in distributable construction work in progress (projects functionalized by transmission, distribution, etc.) by direct charges from payrolls, invoices, vouchers, etc. Each month such charges to the distributable projects are distributed to each construction project included in such functional group on the basis of a percentage of direct labor and material charges to each construction project, except that no distribution is made to projects which are direct purchases of equipment only.

(c) The portion of engineering and construction supervision salaries not specifically chargeable to projects covered in (a) and (b), together with clerical salaries and expenses which are applicable to construction, are accumulated in a construction work in progress project and distributed each month to all construction projects on the basis of a percentage of labor charges.

(d) The amount of engineering and supervision so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

General Administration

Administrative Expenses

(a) Based on a study with respect to work performed by general officers and other general employees who devote a portion of their time to construction, or matters pertaining thereto, a portion of their salaries and expenses and general office supplies and expenses considered to be applicable to construction is charged thereto.

(b) Each month the amount so determined is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Employee Pensions and Benefits

(a) A study is made to determine the percentage of the total salaries and wages for the year which is applicable to construction, and such percentage is applied to the total pension and benefit costs for the year to determine the amount thereof applicable to construction.

(b) Each month, (i) the applicable portion of the amount determined to be applicable to construction, exclusive of the amount related to the salaries transferred from Administrative Expenses, is distributed pro rata to construction projects on the basis of payroll charges thereto and (ii) the applicable portion of the amount related to the salaries of employees transferred from Administrative Expenses is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering and supervision except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Injuries and Damages

(a) The Company carries only excess insurance coverage for injuries and damages and makes direct settlement for all claims of employees and the public except for the amount of such claims coming under the excess policy. An amount is charged to construction based on actual experience, to reflect the entire costs with respect to claims in connection with construction. The amount so charged is adjusted as necessary, based on experience.

(b) Each month the amount so determined to be applicable to construction is distributed pro rata to construction projects, on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects, which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Taxes

Payroll Taxes

(a) Federal and state payroll taxes are charged to construction on the basis of total salaries and wages charged thereto.

(b) Each month the amount so charged is distributed pro rata to construction projects on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Sales and Excise Taxes

Sales and excise taxes charged to construction are recorded as part of the costs of materials and equipment.

Legal Expenses

Legal services and expenses applicable to specific construction projects are charged directly to such construction projects.

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

Section A. Balances and Changes During Year

Line No.	Item (a)	Total (c+d+e) (b)	Electric Plant in Service (c)	Electric Plant Held for Future Use (d)	Electric Plant Leased to Others (e)

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.

CAPITAL STOCKS (Account 201 and 204) (Continued)

3. Give particulars (details) concerning shares of any class and series of stock authorized to be issued by a regulatory commission which have not yet been issued.
4. The identification of each class of preferred stock should show the dividend rate and whether the dividends are cumulative or non-cumulative.
5. State in a footnote if any capital stock which has been nominally issued is nominally outstanding at end of year.
Give particulars (details) in column (a) of any nominally issued capital stock, reacquired stock, or stock in sinking and other funds which is pledged, stating name of pledgee and purposes of pledge.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR (Continued)

5. If any tax (exclude Federal and State income taxes)- covers more then one year, show the required information separately for each tax year, identifying the year in column (a).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (i) through (l) how the taxes were distributed. Report in column (l) only the amounts charged to Accounts 408.1 and 409.1 pertaining to electric operations. Report in column (l) the amounts charged to Accounts 408.1 and 109.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (l) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

ELECTRIC OPERATING REVENUES (Account 400)

1. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The -average number of customers means the average of twelve figures at the close of each month.
3. If increases or decreases from previous year (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for unbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Toledo Edison Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,iine 24.
10. Footnote entries as required and provide explanations following all required data.

MegaWatt Hours Sold (g)	REVENUE			Total ($) (h+i+j) (k)	Line No.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	11/01/2000
2. Total Regular Full-Time Employees	936
3. Total Part-Time and Temporary Employees	30
4. Total Employees	966

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Toledo Edison Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW)

	Total					

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropnate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows:
LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

Line No.	Payment By (Company of Public Authority) (Footnote Affiliation) (a)	Energy Received From (Company of Public Authority) (Footnote Affiliation) (b)	Energy Delivered To (Company of Public Authority) (Footnote Affiliation) (c)	Statistical Classification (d)

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

(Including transactions reffered to as 'wheeling')

8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (11011) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. Provide total amounts in column (i) through (n) as the last Line. Enter "TOTAL" in column (a) as the Last Line. The total amounts in columns (i) and (j) must be reported as Transmission Received and Delivered on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

A. Summary of Depreciation and Amortization Charges

Line No.	Functional Classification (a)	Depreciation Expense (Account 403) (b)	Amortization of Limited Term Electric Plant (Acc 404) (c)	Amortization of Other Electric Plant (Acc 405) (d)	Total (e)

8	Distribution Plant	18,355,986	193,560		18,549,546
9	General Plant	1,217,425	475,412		1,692,837
10	Common Plant-Electric				
11	TOTAL	58,701,249	6,495,111		65,196,360

B. Basis for Amortization Charges

Column C represents amortization of the cost of the following:

Leasehold improvements over the life of the lease; Davis Besse intangible engineering costs over the remaining life; software costs amortized over a seven year period; and AFUDC - debt gross-up pursuant to SFAS 109, amortized using the composite functional rates of the associated property.

No change in basis or method of amortization has been made from preceding year.

Schedule Page: 336 Line No.: 3 Column: b

Includes nuclear plant decommissioning in the amount of $9,837,612.

Schedule Page: 336 Line No.: 11 Column: c

Includes $3,094,573 for amortization of the gross-up to plant-in-service for the debt component of AFUDC recorded net-of-tax.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) – For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) – Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show below costs incurred and accounts charged during the year for technological research, development, and demonstration (R, D & D) project initiated, continued or concluded during the year. Report also support given to others during the year for jointly-sponsored projects.(Identify recipient regardless of affiliation.) For any R, D & D work carried with others, show separately the respondent's cost for the year and cost chargeable to others (See definition of research, development, and demonstration in Uniform System of Accounts).
2. Indicate in column (a) the applicable classification, as shown below:

Classifications:

A. Electric R, D & D Performed Internally:
- (1) Generation
  - a. hydroelectric
    - i. Recreation fish and wildlife
    - ii Other hydroelectric
  - b. Fossil-fuel steam
  - c. Internal combustion or gas turbine
  - d. Nuclear
  - e. Unconventional generation
  - f. Siting and heat rejection
- (3) Transmission
  - a. Overhead
  - b. Underground
- (4) Distribution
- (5) Environment (other than equipment)
- (6) Other (Classify and include items in excess of $5,000.)
- (7) Total Cost Incurred

B. Electric, R, D & D Performed Externally:
- (1) Research Support to the electrical Research Council or the Electric Power Research Institute

Line No.	Classification (a)	Description (b)

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES (Continued)

(2) Research Support to Edison Electric Institute
(3) Research Support to Nuclear Power Groups
(4) Research Support to Others (Classify)
(5) Total Cost Incurred

3. Include in column (c) all R, D & D items performed internally and in column (d) those items performed outside the company costing $5,000 or more, briefly describing the specific area of R, D & D (such as safety, corrosion control, pollution, automation, measurement, insulation, type of appliance, etc.). Group items under $5,000 by classifications and indicate the number of items grouped. Under Other, (A (6) and B (4)) classify items by type of R, D & D activity.
4. Show in column (e) the account number charged with expenses during the year or the account to which amounts were capitalized during the year, listing Account 107, Construction Work in Progress, first. Show in column (f) the amounts related to the account charged in column (e)
5. Show in column (g) the total unamortized accumulating of costs of projects. This total must equal the balance in Account 188, Research, Development, and Demonstration Expenditures, Outstanding at the end of the year.
6. If costs have not been segregated for R, D &D activities or projects, submit estimates for columns (c), (d), and (f) with such amounts identified by "Est."
7. Report separately research and related testing facilities operated by the respondent.

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

Line No.	Classification (a)	Direct Payroll Distribution (b)	Allocation of Payroll charged for Clearing Accounts (c)	Total (d)
1	Electric			
2	Operation

Toledo Edison Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirments Sales for Resale & Associated Losses (c)	MONTHLY PEAK

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)*(Continued)*

9. Items under Cost of Plant are based on U. S. of A. Accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses. 10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 24 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 31, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants. 11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant. 12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)*(Continued)*

9. Items under Cost of Plant are based on U. S. of A. Accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses. 10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 24 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 31, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants. 11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant. 12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

Toledo Edison Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SUBSTATIONS (Continued)

5. Show in columns (I), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.
6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Line No.	Item (a)	Number of Watt-hour Meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (in (MVa) (d)
1	Number at Beginning of Year	315,709	78,403	3,972
2	Additions During Year			
3	Purchases	8,580	1,976	135
4	Associated with Utility Plant Acquired

Schedule Page: 429 Line No.: 14 Column: b

The "In Customers' Use" data was adjusted in order to reconcile the total meters with the meters purchased and retired.

Schedule Page: 429 Line No.: 14 Column: c

The "In Customers' Use" data was adjusted in order to reconcile the total transformers with the transformers purchased and retired.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Toledo Edison Company, The	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities	1,871,980	7,237,526		144,229,032	144,229,032
2	Water Pollution Control Facilities		-14,832		29,394,066	29,394,066
3	Solid Waste Disposal Costs		343,682		15,750,466	15,750,466
4	Noise Abatement Equipment				2,241	2,241

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	7,241,651	7,241,651
2	Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs	5,813,310	5,813,310
3	Fuel Related Costs		
4	Operation of Facilities		
5	Fly Ash and Sulfur Sludge Removal	1,544,553	1,544,553
6	Difference in Cost of Environmentally Clean Fuels		
7	Replacement Power Costs	1,751,789	
8	Taxes and Fees		
9	Administrative and General		
10	Other (Identify significant)		
11	TOTAL	16,351,303	14,599,514

Schedule Page: 431 Line No.: 11 Column: b

Engineers' cost estimates were used for those facilities where actual production costs were not available. Expenses for lines 2 through 10 are not available for the Davis Besse Power Plant nor are they available from the operating companies of the Beaver Valley and Perry Power Plants.

Schedule Page: 431 Line No.: 11 Column: c

ELECTRIC OPERATING REVENUES (Account 400)

1. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts: except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The -average number of customers means the average of twelve figures at the close of each month.
3. If increases or decreases from previous year (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.

Line No.	Title of Account (a)	OPERATING REVENUES

ELECTRIC OPERATING REVENUES (Account 400)

4. Commercial and industrial Sales, Account 442, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 1000 Kw of demand. (See Account 442 of the Uniform System of Accounts. Explain basis of classification in a footnote.)
5. See pages 108-109, Important Changes During Year, for important new territory added and important rate increase or decreases.
6. For Lines 2,4,5,and 6, see Page 304 for amounts relating to unbilled revenue by accounts.
7. Include unmetered sales. Provide details of such Sales in a footnote.

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,iine 24.
10. Footnote entries as required and provide explanations following all required data.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	11/01/2000
2. Total Regular Full-Time Employees	1,725
3. Total Part-Time and Temporary Employees	23
4. Total Employees	1,748

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW) Average Monthly NCP Demand (e)	Actual Demand (MW) Average Monthly CP Demand (f)

	Total					

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows: LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

(Including transactions referred to as 'wheeling')

8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (11011) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. Provide total amounts in column (i) through (n) as the last Line. Enter "TOTAL" in column (a) as the Last Line. The total amounts in columns (i) and (j) must be reported as Transmission Received and Delivered on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

A. Summary of Depreciation and Amortization Charges

Line No.	Functional Classification (a)	Depreciation Expense (Account 403) (b)	Amortization of Limited Term Electric Plant (Acc 404) (c)	Amortization of Other Electric Plant (Acc 405) (d)	Total (e)
1	Intangible Plant				
2	Steam Production Plant	49,241,581	726,814		49,968,395
3	Nuclear Production Plant	159,275,635	12,432,914		171,708,549
4	Hydraulic Production Plant-Conventional				
5	Hydraulic Production Plant-Pumped Storage				
6	Other Production Plant	1,674,570	583		1,675,153
7	Transmission Plant	9,171,490	129,561		9,301,051
8	Distribution Plant	31,439,559	125,475		31,565,034
9	General Plant	11,234,124	4,948,810		16,182,934
10	Common Plant-Electric				
11	TOTAL	262,036,959	18,364,157		280,401,116

B. Basis for Amortization Charges

Column C represents amortization of the cost of the following:

Leasehold improvements over the life of the lease; software costs amortized over a seven year period; and AFUDC - debt gross-up pursuant to SFAS 109, amortized using the composite functional rates of the associated property.

No change in basis or method of amortization has been made from the preceding year.

Schedule Page: 336 Line No.: 3 Column: b

Includes nuclear plant decommissioning in the amount of $6,234,780.

Schedule Page: 336 Line No.: 11 Column: b

Includes amortization of ACRS tax benefits sold in the amount of $769,599.

Includes $2,629,723 for depreciation expense associated with Balance Sheet Account 102.

Schedule Page: 336 Line No.: 11 Column: c

Includes amortization of leasehold improvements made in connection with the leased portion of Perry Unit 1 and Beaver Vally 2 in the amount of $3,742,896. Such sale and leaseback arrangements are for approximately 29 years.

Also, includes amortization of the gross-up to plant-in-service for the debt component of AFUDC recorded net-of-tax for the years 1979-1987 in the amount of $11,583,191 which includes additional amortization of $2,458,200 applicable to nuclear production accounts in accordance with the Company's Comprehensive Rate Reduction and Economic Development Plan approved by the PUCO.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show below costs incurred and accounts charged during the year for technological research, development, and demonstration (R, D & D) project initiated, continued or concluded during the year. Report also support given to others during the year for jointly-sponsored projects.(Identify recipient regardless of affiliation.) For any R, D & D work carried with others, show separately the respondent's cost for the year and cost chargeable to others (See definition of research, development, and demonstration in Uniform System of Accounts).
2. Indicate in column (a) the applicable classification, as shown below:

Classifications:

A. Electric R, D & D Performed Internally:
- (1) Generation
  - a. hydroelectric
    - i. Recreation fish and wildlife
    - ii Other hydroelectric
  - b. Fossil-fuel steam
  - c. Internal combustion or gas turbine
  - d. Nuclear
  - e. Unconventional generation
  - f. Siting and heat rejection
- (3) Transmission
  - a. Overhead
  - b.. Underground
- (4) Distribution
- (5) Environment (other than equipment)
- (6) Other (Classify and include items in excess of $5,000.)
- (7) Total Cost Incurred

B. Electric, R, D & D Performed Externally:
- (1) Research Support to the electrical Research Council or the Electric Power Research Institute

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c)
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirments Sales for Resale & Associated Losses (c)	MONTHLY PEAK

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants) *(Continued)*

9. Items under Cost of Plant are based on U. S. of A. Accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses. 10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 24 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 31, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants. 11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant. 12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants) *(Continued)*

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

GENERATING PLANT STATISTICS (Small Plants)

1. Small generating plants are steam plants of, less than 25,000 Kw; internal combustion and gas turbine-plants, conventional hydro plants and pumped storage plants of less than 10,000 Kw installed capacity (name plate rating). 2. Designate any plant leased from others, operated under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, and give a concise statement of the facts in a footnote. If licensed project, give project number in footnote.

GENERATING PLANT STATISTICS (Small Plants) (Continued)

3. List plants appropriately under subheadings for steam, hydro, nuclear, internal combustion and gas turbine plants. For nuclear, see instruction 11, Page 403. 4. If net peak demand for 60 minutes is not available, give the which is available, specifying period. 5. If any plant is equipped with combinations of steam, hydro internal combustion or gas turbine equipment, report each as a separate plant. However, if the exhaust heat from the gas turbine is utilized in a steam turbine regenerative feed water cycle, or for preheated combustion air in a boiler, report as one plant.

Represents an aggregate of 38 temporary leased diesel generators installed at various Company locations in 2000. Each individual generator has a maximum generator nameplate rating of 1.25 MW.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Line No.	DESIGNATION		VOLTAGE (KV) (Indicate where other than 60 cycle, 3 phase)		Type of Supporting	LENGTH (Pole miles) (In the case of underground lines report circuit miles)		Number Of Circuits

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Ohio Edison Company leased various transmission line facilities associated with jointly-owned power plants to its subsidiary, Pennsylvania Power Company (PP), Duquesne Light Company (DL), Cleveland Electric Illuminating Company (CEI), and Toledo Edison Company (TE) per agreements as follows. The corresponding lease revenue represents payments received from January through August 2000. These leases ceased on September 1, 2000.

Ohio Edison Company leased various transmission line facilities associated with jointly-owned power plants from its subsidiary, Pennsylvania Power Company (PP), Duquesne Light Company (DL), Cleveland Electric Illuminating Company (CEI), and Toledo Edison Company (TE) per agreements as follows. The corresponding lease payments represent payments made from January through August 2000. These leases ceased on September 1, 2000.

Lessor	Line No.	Inception Date	Duration of Lease	Annual Rent
CEI	2	09/01/81	540 mos.	$ 65,099
DL	3	11/30/82	540 mos.	180,795
CEI	4	11/01/78	540 mos.	37,254

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

SUBSTATIONS (Continued)

5. Show in columns (i), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.

6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

SUBSTATIONS (Continued)

5. Show in columns (i), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.

6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

Line No.	Item (a)	Number of Watt-hour Meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (in (MVa) (d)
1	Number at Beginning of Year	1,021,743	286,014	10,244
2	Additions During Year			
3	Purchases	33,104	7,052	353
4	Associated with Utility Plant Acquired			
5	TOTAL Additions (Enter Total of lines 3 and 4)	33,104	7,052	353
6	Reductions During Year			
7	Retirements	13,963	1,546	41
8	Associated with Utility Plant Sold		513	64
9	TOTAL Reductions (Enter Total of lines 7 and 8)	13,963	2,059	105
10	Number at End of Year (Lines 1 + 5 - 9)	1,040,884	291,007	10,492
11	In Stock	29,945	7,073	460
12	Locked Meters on Customers' Premises	11,305		
13	Inactive Transformers on System		1,400	51
14	In Customers' Use	999,425	282,534	9,981
15	In Company's Use	209		
16	TOTAL End of Year (Total 11 to 15. This should equal line 10)	1,040,884	291,007	10,492

FOOTNOTE DATA

Schedule Page: 429 Line No.: 14 Column: b

The "In Customer Use" data was adjusted in order to reconcile the total meters with the meters purchased and retired.

Schedule Page: 429 Line No.: 14 Column: c

The "In Customer Use" data was adjusted in order to reconcile total transformers with the transformers purchased and retired.

Ohio Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities	82,226			962,466,541	962,466,541
2	Water Pollution Control Facilities	4,100	-33,096		222,582,928	222,582,928
3	Solid Waste Disposal Costs				134,341,128	134,341,128
4	Noise Abatement Equipment				1,809,636	1,809,636
5	Esthetic Costs				8,449,458	8,449,458
6	Additional Plant Capacity				8,463,744	8,463,744
7	Miscellaneous (Identify significant)				2,257,406	2,257,406
8	TOTAL (Total of lines 1 thru 7)	86,326	-33,096		1,340,370,841	1,340,370,841

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	36,790,182	36,790,182
2	Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs	30,608,864	30,608,864
3	Fuel Related Costs		
4	Operation of Facilities		
5	Fly Ash and Sulfur Sludge Removal	11,912,476	11,912,476
6	Difference in Cost of Environmentally Clean Fuels	8,009,384	8,009,384
7	Replacement Power Costs	7,864,904	1,139,756
8	Taxes and Fees		
9	Administrative and General		
10	Other (Identify significant)		
11	TOTAL	95,185,810	88,460,662

Schedule Page: 431 Line No.: 11 Column: b

Engineers' cost estimates were used for those facilities where actual production costs were not available. Expenses for lines 2 through 10 are not available from the operating companies of the Beaver Valley and Perry Power Plants.

ANNUAL REPORT OF MAJOR ELECTRIC UTILITIES, LICENSEES AND OTHERS

G4

This report is mandatory under the Federal Power Act, Sections 3, 4(a), 304 and 309, and 18 CFR 141.1. Failure to report may result in criminal fines, civil penalties and other sanctions as provided by law. The Federal Energy Regulatory Commission does not consider this report to be of a confidential nature.

Exact Legal Name of Respondent (Company)	Year of Report
Pennsylvania Power Company	Dec. 31, 2000

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)
(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shall not include 'municipalities, as hereinafter defined;
(4) "Person" means an individual or a corporation;
(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;
(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."
(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:
(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites;
... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid., depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

FERC FORM NO. 1:
ANNUAL REPORT OF MAJOR ELECTRIC UTILITIES, LICENSEES AND OTHER

IDENTIFICATION	
01 Exact Legal Name of Respondent Pennsylvania Power Company	02 Year of Report Dec. 31, 2000
03 Previous Name and Date of Change *(if name changed during year)* / /	
04 Address of Principal Office at End of Year *(Street, City, State, Zip Code)* 1 East Washington Street, P.O. 891, New Castle, PA 16103

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Harvey L. Wagner, Controller
76 South Main Street
Akron, Ohio 44308

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Pennsylvania
May 31, 1930

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric Service - Pennsylvania

5. Have you engaged as the principle accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the repondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiearies for whom trust was maintained, and purpose of the trust.

Pennsylvania Power Company is a wholly owned subsidiary of Ohio Edison Company, a regulated electric utility company. Ohio Edison Company is a wholly owned subsidiary of FirstEnergy Corp., an exempt utility holding company.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

OFFICERS

1. Report below the name, title and salary for each executive officer whose salary is $50,000 or more. An "executive officer" of a respondent includes its president, secretary, treasurer, and vice president in charge of a principal business unit, division or function (such as sales, administration or finance), and any other person who performs similar policy making functions.
2. If a change was made during the year in the incumbent of any position, show name and total remuneration of the previous incumbent, and the date the change in incumbency was made.

Line No.	Title (a)	Name of Officer (b)	Salary for Year (c)
1	Chairman of the Board	H. P. Burg	[redacted]
2	President	R. Joseph Hrach	
3	President	J. A. Elser	
4	Executive Vice President and General Counsel	A. W. Alexander	This data has been purposely omitted herefrom

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
The Company did not close the stock book in 2000.	Total: 6,290,000 By Proxy: 6,290,000	December 19, 2000 FirstEnergy Corp. 76 South Main Street Akron, OH 44308

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

PAGE 108 INTENTIONALLY LEFT BLANK
SEE PAGE 109 FOR REQUIRED INFORMATION.

1. None

2. On August 8, 2000, FirstEnergy Corp. (FirstEnergy), the parent of Ohio Edison Company (Edison), and GPU, Inc. (GPU), a Pennsylvania corporation, entered into an Agreement and Plan of Merger. Edison is the parent company of Pennsylvania Power Company (Company). Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4,500,000,000 in cash and FirstEnergy common stock. The transaction would be accounted for by the purchase method. The merger has been approved by the respective shareholders of FirstEnergy and GPU, the Federal Energy Regulatory Commission (FERC) on March 15, 2001 in Docket No. EC01-22-000, the Nuclear Regulatory Commission, the New York Public Service Commission and the Federal Communications Commission. Other regulatory approvals are pending before the Pennsylvania Public Utility Commission, the New Jersey Board of Public Utilities and the Securities and Exchange Commission.

3. None

4. None

5. On October 27, 1999, the FERC in Docket No. EC99-53-000 approved FirstEnergy's request for an intra-corporate transfer of ownership and operational control of jurisdictional transmission facilities of its electric utility operating companies (Company, Edison, The Cleveland Electric Illuminating Company and The Toledo Edison Company) and the assignment of rights under certain FERC-jurisdictional agreements to a newly formed affiliated company, American Transmission Systems, Inc. (ATSI). On September 1, 2000, the major high-voltage transmission facilities, which consist of approximately 7,100 circuit miles of transmission lines with nominal voltage of 345 Kv, 138 Kv and 69Kv were sold to ATSI. These facilities will be included in the FERC Form 1 filed by ATSI.

6. See Notes 5 and 6 of Notes to Balance Sheet on pages 123.1 and 123.2 and pages 256 and 257 of this report and footnotes thereof.

7. None

8. The Company granted wage increases to employees represented by unions which provided for adjustments in hourly rates in 2000. These increases plus changes in wages of supervisory, administrative and professional employees resulted in an annual wage increase of approximately $1,518,138.

9. In 1999 and 2000, the U.S. Environmental Protection Agency issued Notices of Violation (NOV) or a Compliance Order to nine utilities covering 44 power plants, including the W.H. Sammis Plant. In addition, the U.S. Department of Justice filed eight civil complaints against various investor-owned utilities, which included a complaint against the Company and Edison in the U.S. District Court for the Southern District of Ohio. The NOV and complaint allege violations of the Clean Air Act based on operation and maintenance of the Sammis Plant dating back to 1984. The complaint requests permanent injunctive relief to require the installation of "best available control technology" and civil penalties of up to $27,500 per day of violation. Although unable to predict the outcome of these proceedings, the Company believes the Sammis Plant is in full compliance with the Clean Air Act and the NOV and complaint are without merit. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while these proceedings are pending.

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.
7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.
B. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.
9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.
10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF RETAINED EARNINGS FOR THE YEAR

1. Report all changes in appropriated retained earnings, unappropriated retained earnings, and unappropriated undistributed subsidiary earnings for the year.
2. Each credit and debit during the year should be identified as to the retained earnings account in which recorded (Accounts 433, 436 - 439 inclusive). Show the contra primary account affected in column (b)
3. State the purpose and amount of each reservation or appropriation of retained earnings.
4. List first account 439, Adjustments to Retained Earnings, reflecting adjustments to the opening balance of retained earnings. Follow by credit, then debit items in that order.
5. Show dividends for each class and series of capital stock.
6. Show separately the State and Federal income tax effect of items shown in account 439, Adjustments to Retained Earnings.
7. Explain in a footnote the basis for determining the amount reserved or appropriated. If such reservation or appropriation is to be recurrent, state the number and annual amounts to be reserved or appropriated as well as the totals eventually to be accumulated.
8. If any notes appearing in the report to stockholders are applicable to this statement, include them on pages 122-123.

STATEMENT OF CASH FLOWS

1. If the notes to the cash flow statement in the respondents annual stockholders report are applicable to this statement, such notes should be included in page 122-123. Information about non-cash investing and financing activities should be provided on Page 122-123. Provide also on pages 122-123 a reconciliation between "Cash and Cash Equivalents at End of Year" with related amounts on the balance sheet.
2. Under "Other" specify significant amounts and group others.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show on Page 122-123 the amount of interest paid (net of amounts capitalized) and income taxes paid.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commmission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

Notes to Balance Sheet

1 - UTILITY PLANT

Utility plant reflects the original cost of construction (except for nuclear generating units which were adjusted to fair value in 1998), including payroll and related costs such as taxes, employee benefits, administrative and general costs, and interest costs (see Note 15).

On September 1, 2000, Pennsylvania Power Company (Company) sold its transmission assets to an affiliate, American Transmission Systems, Inc. (ATSI). As a result, ATSI owns and operates the Company's and its affiliates' major high-voltage transmission facilities and has interconnections with other regional utilities.

2 - NUCLEAR FUEL

The Company leases all of its nuclear fuel requirements from OES Fuel, Incorporated (OES Fuel), a wholly owned subsidiary of Ohio Edison Company (Edison).

Minimum lease payments during the next five years are estimated to be as follows:

2001	$18,888,000
2002	12,787,000
2003	4,683,000
2004	1,720,000
2005	152,000

3 - ACCOUNTS RECEIVABLE

Receivables from customers include sales to residential, commercial and industrial customers located in the Company's service area and sales to wholesale customers. There was no material concentration of receivables at December 31, 2000 or 1999, with respect to any particular segment of the Company's customers.

4 - LEASES

The Company leases office space and other property and equipment under cancelable and noncancelable leases.

The future minimum lease payments as of December 31, 2000, are:

	Capital Leases	Operating Leases
2001	$142,000	$ 118,000
2002	148,000	118,000
2003	111,000	118,000
2004	--	118,000
2005	--	118,000
Years thereafter	--	749,000
Total minimum lease payments	401,000	$1,339,000
Executory costs	219,000	
Net minimum lease payments	182,000	
Interest portion	12,000	
Present value of net minimum lease payments	$170,000	

5 - CAPITALIZATION

Retained Earnings --

Under the Company's Charter, the Company's retained earnings unrestricted for payment of cash dividends on the Company's common stock were $18,348,000 as of December 31, 2000.

Preferred Stock --

The Company's 7.75% series of preferred stock has a restriction which prevents early redemption prior to July 2003. All other preferred stock may be redeemed by the Company in whole, or in part, with 30-60 days' notice.

The Company's 7.625% series has an annual sinking fund requirement for 7,500 shares beginning on October 1, 2002.

Long-Term Debt --

The first mortgage indenture and its supplements, which secure all of the Company's first mortgage bonds, serve as a direct first mortgage lien on substantially all property and franchises, other than specifically excepted property, owned by the Company.

Based on the amount of bonds authenticated by the Trustee through December 31, 2000, the Company's annual sinking and improvement fund requirements for all bonds issued under the mortgage amounts to $974,000. The Company expects to deposit funds in 2001 that will be withdrawn upon the surrender for cancellation of a like principal amount of bonds, which are specifically authenticated for such purposes against unfunded property additions or against previously retired bonds. This method can result in minor increases in the amount of the annual sinking fund requirement. Sinking fund requirements for first mortgage bonds and maturing long-term debt (excluding capital leases) during the next five years are $974,000 in 2001, $974,000 in 2002, $40,974,000 in 2003, $40,674,000 in 2004 and $974,000 in 2005.

The Company's obligations to repay certain pollution control revenue bonds are secured by a series of first mortgage bonds. The $10,300,000 pollution control revenue bond is entitled to the benefit of irrevocable bank letters of credit of $10,423,600. To the extent that drawings are made under the letters of credit to pay principal of, or interest on, the pollution control revenue bond, the Company is entitled to a credit against its obligation to repay this bond. The Company pays an annual fee of 1.25% of the amount of the letters of credit to the issuing bank and is obligated to

reimburse the bank for any drawings thereunder.

6 - SHORT-TERM BORROWINGS

The Company has a credit agreement with Edison whereby either company can borrow funds from the other by issuing unsecured notes at the prevailing prime or similar interest rate. Under the terms of this agreement, the maximum borrowing is limited only by the availability of funds; however, the Company's borrowing under this agreement is currently limited by the Pennsylvania Public Utility Commission (PPUC) to a total of $50,000,000. Either company can terminate the agreement with six months' notice.

7 - COMMITMENTS AND CONTINGENCIES

Capital Expenditures --

The Company's current forecast reflects expenditures of approximately $153,000,000 for property additions and improvements from 2001-2005, of which approximately $28,000,000 is applicable to 2001. Investments for additional nuclear fuel during the 2001-2005 period are estimated to be approximately $81,000,000, of which approximately $22,000,000 applies to 2001. During the same periods, the Company's nuclear fuel investments are expected to be reduced by approximately $91,000,000 and $18,000,000, respectively, as the nuclear fuel is consumed.

Nuclear Insurance --

The Price-Anderson Act limits the public liability relative to a single incident at a nuclear power plant to $9,500,000,000. The amount is covered by a combination of private insurance and an industry retrospective rating plan. Based on its ownership interests in the Beaver Valley Station and the Perry Plant, the Company's maximum potential assessment under the industry retrospective rating plan (assuming the other affiliate co-owners contribute their proportionate shares of any assessments under the retrospective rating plan) would be $74,000,000 per incident but not more than $8,400,000 in any one year for each incident.

The Company is also insured as to its interest in Beaver Valley and Perry under policies issued to the operating company for each plant. Under these policies, up to $2,750,000,000 is provided for property damage and decontamination and decommissioning costs. The Company has also obtained approximately $148,000,000 of insurance coverage for replacement power costs for its interests in Beaver Valley and Perry. Under these policies, the Company can be assessed a maximum of approximately $7,400,000 for incidents at any covered nuclear facility occurring during a policy year which are in excess of accumulated funds available to the insurer for paying losses.

The Company intends to maintain insurance against nuclear risks as described above as long as it is available. To the extent that replacement power, property damage, decontamination, decommissioning, repair and replacement costs and other such costs arising from a nuclear incident at any of the Company's plants exceed the policy limits of the insurance in effect with respect to that plant, to the extent a nuclear incident is determined not to be covered by the Company's insurance policies, or to the extent such insurance becomes unavailable in the future, the Company would remain at risk for such costs.

Environmental Matters --

Various federal, state and local authorities regulate the Company with regard to air and water quality and other environmental matters. Generation operations and any related additional capital expenditures for environmental compliance are the responsibility of the competitive services business unit of FirstEnergy Corp. (FirstEnergy), the parent company of Edison.

The Company is required to meet federally approved sulfur dioxide (SO2) regulations. Violations of such regulations can result in shutdown of the generating unit involved and/or civil or criminal penalties of up to $27,500 for each day the unit is in violation. The Environmental Protection Agency (EPA) has an interim enforcement policy for SO2 regulations in Ohio that allows for compliance based on a 30-day averaging period. The Company cannot predict what action the EPA may take in the future with respect to the interim enforcement policy.

The Company is in compliance with the current SO2 and nitrogen oxides (NOx) reduction requirements under the Clean Air Act Amendments of 1990. SO2 reductions are being achieved by burning lower-sulfur fuel, generating more electricity from lower-emitting plants, and/or using emission allowances. NOx reductions are being achieved through combustion controls and the generation of more electricity at lower-emitting plants. In September 1998, the EPA finalized regulations requiring additional NOx reductions from the Company's Pennsylvania facilities. The EPA's NOx Transport Rule imposes uniform reductions of NOx emissions (an approximate 85% reduction in utility plant NOx emissions from projected 2007 emissions) across a region of twenty-two states and the District of Columbia, including Ohio and Pennsylvania, based on a conclusion that such NOx emissions are contributing significantly to ozone pollution in the eastern United States. In March 2000, the U.S. Court of Appeals for the D.C. Circuit upheld EPA's NOx Transport Rule except as applied to the State of Wisconsin and portions of Georgia and Missouri. By October 2000, states were to submit revised State Implementation Plans (SIP) to comply by May 31, 2004 with individual state NOx budgets established by the EPA. Pennsylvania recently submitted a SIP that requires compliance with the NOx budgets at the Company's Pennsylvania facilities by May 1, 2003. A Federal Implementation Plan accompanied the NOx Transport Rule and may be implemented by the EPA in states which fail to revise their SIP. In another separate but related action, eight states filed petitions with the EPA under Section 126 of the Clean Air Act seeking reductions of NOx emissions which are alleged to contribute to ozone pollution in the eight petitioning states. The EPA position is that the Section 126 petitions will be adequately addressed by the NOx Transport Program, but a December 17, 1999 rulemaking established an alternative program which would require nearly identical 85% NOx reductions at 392 utility plants, including the Company's Ohio and Pennsylvania plants, by May 2003, in the event implementation of the NOx Transport Rule is not implemented by a state. Additional Section 126 petitions were filed by New Jersey, Maryland, Delaware and the District of Columbia in mid-1999 and are still under evaluation by the EPA. FirstEnergy continues to evaluate its compliance plans and other compliance options.

In July 1997, the EPA promulgated changes in the National Ambient Air Quality Standard (NAAQS) for ozone emissions and proposed a new NAAQS for previously unregulated ultra-fine particulate matter. In May 1999, the U.S. Court of Appeals found constitutional and other defects in the new NAAQS rules. In February 2001, the U.S. Supreme Court upheld the new NAAQS rules regulating ultra-fine particulates but found defects in the new NAAQS rules for ozone and decided that the EPA must revise those rules. The future cost of compliance with these regulations may be substantial and will depend on the manner in which they are ultimately implemented, if at all, by the states in which the Company operates affected facilities.

In 1999 and 2000, the EPA issued Notices of Violation (NOV) or a Compliance Order to nine utilities covering 44 power plants, including the W.H. Sammis Plant. In addition, the U.S. Department of Justice filed eight civil complaints against various investor-owned utilities, which included a complaint against the Company and Edison in the U.S. District Court for the Southern District of Ohio. The NOV and complaint allege violations of the Clean Air Act based on operation and maintenance of the Sammis Plant dating back to 1984. The complaint requests permanent injunctive relief to require the installation of "best available control technology" and civil penalties of up to $27,500 per day of violation. Although unable to predict the outcome of these proceedings, the Company and Edison believe the Sammis Plant is in full compliance with the Clean Air Act and the NOV and complaint are without merit. Penalties could be imposed if the Sammis Plant continues to operate without correcting the alleged violations and a court determines that the allegations are valid. The Sammis Plant continues to operate while these proceedings are pending.

In December 2000, the EPA announced it would proceed with the development of regulations regarding hazardous air pollutants from electric power plants. The EPA identified mercury as the hazardous air pollutant of greatest concern. The EPA established a schedule to propose regulations by December 2003 and issue final regulations by December 2004. The future cost of compliance with these regulations may be substantial.

As a result of the Resource Conservation and Recovery Act of 1976, as amended, and the Toxic Substances Control Act of 1976, federal and state hazardous waste regulations have been promulgated. Certain fossil-fuel combustion waste products, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation. The EPA has issued its final regulatory determination that regulation of coal ash as a hazardous waste is unnecessary. On April 25, 2000, the EPA announced that it will develop national standards regulating disposal of coal ash under its authority to regulate nonhazardous waste.

8 - ANNUAL REPORT TO STOCKHOLDERS

Following are the reclassification entries which have been reflected in the Company's Balance Sheets as of December 31, 2000 and 1999 in the 2000 Annual Report to Stockholders.

Notes to Income Statement

9 - REVENUES

The Company's principal business is providing electric service to customers in western Pennsylvania. The Company's retail customers are metered on a cycle basis. Revenue is recognized for unbilled electric service through the end of the year.

10 - NUCLEAR FUEL

The Company amortizes the cost of nuclear fuel based on the rate of consumption.

11 - RENTAL PAYMENTS

Consistent with the regulatory treatment, the rentals for capital and operating leases are charged to operating expenses on the Statements of Income. Such costs for the two years ended December 31, 2000, are summarized as follows:

	2000	1999
Operating leases		
Interest element	$ 318,344	$ 635,750
Other	867,693	1,588,593
Capital leases		
Interest element	365,554	576,051
Other	288,610	519,534
Total rental payments	$1,840,201	$3,319,928

12 - ANNUAL REPORT TO STOCKHOLDERS

Income Statement reclassifications which have been reflected in the Company's 2000 Annual Report to Stockholders are as follows:

	December 31,			
	2000		1999	
	Dr.	Cr.	Dr.	Cr.
Regulatory Credits	$ 643,584		$ 692,131	
Provision for Deferred Income Taxes - Operating Income	3,354,690		3,312,582	
Regulatory Debits		$3,998,274		$4,004,713

To reclassify deferred taxes related to the amortization of net regulatory assets.

13 - TRANSACTIONS WITH AFFILIATED COMPANIES

Operating revenues and operating expenses include transactions with Edison, The Cleveland Electric Illuminating Company, The Toledo Edison Company and ATSI. Operating revenue transactions with affiliates were primarily for electric sales of $57,616,465 and $12,635,538 in 2000 and 1999, respectively; Bruce Mansfield Plant administrative and general charges of $2,909,789 and $5,329,588 in 2000 and 1999, respectively; and ground lease revenues of $654,273 from ATSI which began in 2000.

Operating expense transactions with affiliates were primarily for nuclear fuel leased from OES Fuel of $20,266,126 and $8,758,952 in 2000 and 1999, respectively; purchased power of $7,111,364 and $12,884,679 in 2000 and 1999, respectively; transmission facilities rentals (including ATSI rents which began in 2000) of $5,703,240 and $1,320,310 in 2000 and 1999, respectively; and nuclear operations administrative and general charges of $14,993,203 and $2,134,526 in 2000 and 1999, respectively. The increase in 2000 nuclear administrative and general charges reflect the Company's increased nuclear assets ownership due to the exchange of certain generating assets with Duquesne Light Company (Duquesne) in 1999.

FirstEnergy provides support services at cost to the Company and other affiliated companies, for which the Company was billed $27,400,000 and $28,300,000 in 2000 and 1999, respectively.

Notes Common to Balance Sheet, Income Statement and Statement of Cash Flows

14 - SUPPLEMENTAL CASH FLOWS INFORMATION

Cash and Cash Equivalents at December 31, 2000:

Account	Account Title	
131	Cash	$3,454,809
135	Working Funds	20,523
		$3,475,332

Operating Activities:	
Interest Paid (net of amounts capitalized)	$18,803,534
Income Taxes Paid	$39,703,593
Investing Activities:	
Gross Additions to Utility Plant	$32,274,558
Capital Leases - Nuclear Fuel	$21,212,490
Gross Additions (Reductions) to Nonutility Plant	$(2,418,827)

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Balance Sheets. As of December 31, 1999, cash and cash equivalents included $5,225,365 used for the redemption of long-term debt in the first quarter of 2000. The Company reflects temporary cash investments at cost, which approximates their market value.

All borrowings with initial maturities of less than one year are defined as financial instruments under accounting principles generally accepted in the United States (GAAP) and are reported on the Balance Sheets at cost, which approximates their fair market value. The following sets forth the approximate fair value and related carrying amounts of all other long-term debt, preferred stock subject to mandatory redemption and investments other than cash and cash equivalents as of December 31:

	2000		1999	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Long-term debt	$253,468,470	$263,451,585	$282,642,470	$278,897,936
Preferred stock	$ 15,000,000	$ 14,587,500	$ 15,000,000	$ 14,100,000
Investments other than cash and cash equivalents	$154,541,392	$152,930,568	$107,991,345	$116,218,926

The fair values of long-term debt and preferred stock reflect the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective year. The yields assumed were based on securities with similar characteristics offered by a corporation with credit ratings similar to the Company's ratings.

The fair value of investments other than cash and cash equivalents represent cost (which approximates fair value) or the present value of the cash inflows based on the yield to maturity. The yields assumed were based on financial instruments with similar characteristics and terms. Investments other than cash and cash equivalents consist primarily of decommissioning trust investments. Unrealized gains and losses applicable to the decommissioning trusts have been recognized in the trust investment with a corresponding change to the decommissioning liability. The Company has no securities held for trading purposes.

15 - REGULATORY PLAN

In December 1996, Pennsylvania enacted "The Electricity Generation Customer Choice and Competition Act," which permitted customers, including the Company's customers, to choose their electric generation supplier, while transmission and distribution services would continue to be supplied by their current providers. The phase in of customer choice was completed on January 1, 2001.

In June 1998, the PPUC authorized the Company's rate restructuring plan, which essentially resulted in the deregulation of the Company's generation business as of June 30, 1998. The Company is entitled to recover $236,000,000 of stranded costs through the competitive transition charge that began in 1999 and ends in 2006. The Company's net assets included in utility plant relating to the operations for which the application of Statement of Financial Accounting Standards (SFAS) No. 71, "Accounting for the Effects of Certain Types of Regulation" (SFAS 71), was previously discontinued in 1998 were $91,605,236 as of December 31, 2000. All of the Company's regulatory assets continue to be recovered under provisions of the rate restructuring plan.

Under the rate restructuring plan, the Company continues to deliver power to homes and businesses through its distribution system, which remains regulated by the PPUC. The Company's rates have been restructured to establish separate charges for transmission and distribution; generation, which is subject to competition; and stranded cost recovery. In the event customers obtain power from an alternative source, the generation portion of the Company's rates is excluded from their bill and the customers receive a generation charge from the alternative supplier. The stranded cost recovery portion of rates provides for recovery of certain amounts not otherwise considered recoverable in a competitive generation market, including regulatory assets.

16 - DEPRECIATION

The Company provides for depreciation on a straight-line basis at various rates over the estimated lives of property included in plant in service. The annual composite rate for electric plant was approximately 2.6% in 2000 and 2.5% in 1999. The Company has recognized additional cumulative capital recovery of $143,000,000, as of December 31, 2000, as additional depreciation expense in accordance with its former regulatory plan.

Annual depreciation expense includes approximately $1,600,000 for future decommissioning costs applicable to the Company's ownership interest in three nuclear generating units. The Company's future decommissioning costs reflect the 1999 increase in its ownership interests related to the exchange of certain generating assets with Duquesne described in Note 13. The Company's share of the future obligation to decommission these units is approximately $314,540,000 in current dollars and (using a 4.0% escalation rate) approximately $695,214,000 in future dollars. The estimated obligation and the escalation rate were developed based on site specific studies. Payments for decommissioning are expected to begin in 2016, when actual decommissioning work begins. The Company has recovered approximately $14,000,000 for decommissioning through its electric rates from customers through December 31, 2000. The Company has also recognized an estimated liability of approximately $7,500,000 related to decontamination and decommissioning of nuclear enrichment facilities operated by the DOE, as required by the Energy Policy Act of 1992. DOE special assessment activities during 2000 and 1999, respectively, were: Account 518 expenses: $(322,471)

and $7,079,486; payments $1,095,750 and $1,146,602; and refunds $0 for both years.

The Financial Accounting Standards Board (FASB) issued a proposed accounting standard for nuclear decommissioning costs in 1996. If the standard is adopted as proposed: (1) annual provisions for decommissioning could change; (2) the net present value of estimated decommissioning costs could be recorded as a liability; and (3) income from the external decommissioning trusts could be reported as investment income. The FASB subsequently expanded the scope of the proposed standard to include other closure and removal obligations related to long-lived assets. A final pronouncement is expected in the second quarter of 2001 and is anticipated to be implemented on January 1, 2002.

17 - RETIREMENT BENEFITS

FirstEnergy's trusteed, noncontributory defined benefit pension plan covers almost all of the Company's full-time employees. Upon retirement, employees receive a monthly pension based on length of service and compensation. The Company uses the projected unit credit method for funding purposes and was not required to make pension contributions during the two years ended December 31, 2000. The assets of the FirstEnergy pension plan consist primarily of common stocks, United States government bonds and corporate bonds.

The Company provides a minimum amount of noncontributory life insurance to retired employees in addition to optional contributory insurance. Health care benefits, which include certain employee deductibles and copayments, are also available to retired employees, their dependents and, under certain circumstances, their survivors. The Company pays insurance premiums to cover a portion of these benefits in excess of set limits; all amounts up to the limits are paid by the Company. The Company recognizes the expected cost of providing other postretirement benefits to employees and their beneficiaries and covered dependents from the time employees are hired until they become eligible to receive those benefits.

The following sets forth the funded status of the plans and amounts recognized on FirstEnergy's Consolidated Balance Sheets as of December 31:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Change in benefit obligation:				
Benefit obligation as of January 1	$1,394,106,439	$1,500,134,952	$ 608,426,051	$ 601,269,566
Service cost	27,421,692	28,296,067	11,349,407	9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Plan amendments	41,347,358	--	--	--
Actuarial loss (gain)	17,264,015	(155,585,368)	121,680,323	(17,583,693)
Net increase from asset swap	--	14,800,000	--	12,524,600
Voluntary early retirement program expense	23,353,000	--	--	--
Benefits paid	(102,221,644)	(95,534,268)	(35,097,490)	(37,818,560)
Benefit obligation as of December 31	1,506,055,538	1,394,106,439	752,028,957	608,426,051
Change in plan assets:				
Fair value of plan assets as of January 1	1,807,458,798	1,682,987,392	4,917,191	3,906,528
Actual return on plan assets	768,878	220,005,674	(178,534)	621,633
Company contribution	--	--	18,344,187	402,444
Benefits paid	(102,221,644)	(95,534,268)	--	--
Administrative expenses	--	--	(42,480)	(13,414)
Fair value of plan assets as of December 31	1,706,006,032	1,807,458,798	23,040,364	4,917,191
Funded status of plan	199,950,494	413,352,359	(728,988,593)	(603,508,860)
Unrecognized actuarial loss (gain)	(90,915,998)	(303,535,599)	147,307,299	24,881,450
Unrecognized prior service cost	93,063,964	57,382,039	20,909,717	24,158,510
Unrecognized net transition obligation (asset)	(2,106,408)	(10,051,160)	110,841,109	120,077,867
Prepaid (accrued) benefit cost	$ 199,992,052	$ 157,147,639	$(449,930,468)	$(434,391,033)
Company's share of prepaid (accrued) benefit costs	$ 21,074,393	$ 13,837,630	$ (35,143,044)	$ (31,707,916)

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Assumptions used as of December 31:				
Discount rate	7.75%	7.75%	7.75%	7.75%
Expected long-term return on plan assets	10.25%	10.25%	10.25%	10.25%
Rate of compensation increase	4.00%	4.00%	4.00%	4.00%

FirstEnergy's net pension and other postretirement benefit costs for the two years ended December 31, 2000 were computed as follows:

	Pension Benefits		Other Postretirement Benefits	
	2000	1999	2000	1999
Service cost	$ 27,421,692	$ 28,296,067	$11,349,407	$ 9,268,918
Interest cost	104,784,678	101,995,056	45,670,666	40,765,220
Expected return on plan assets	(180,918,929)	(168,056,403)	(524,512)	(400,419)
Amortization of transition obligation (asset)	(7,944,752)	(7,944,752)	9,236,758	9,236,758
Amortization of prior service cost	5,665,433	5,665,433	3,248,793	3,248,793
Recognized net actuarial gain	(9,095,535)	--	--	--
Voluntary early retirement program expense	17,243,000	--	--	--
Net benefit cost	$ (42,844,413)	$ (40,044,599)	$68,981,112	$62,119,270
Company's share of total plan costs	$ (3,576,763)	$ (4,805,352)	$ 7,496,867	$ 7,454,312

The FirstEnergy plan's health care trend rate assumption is 7.2% in 2001, 7.0% in 2002 and 6.5% in 2003, trending to 5.0%-5.5% in later years. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plan. An increase in the health care trend rate assumption by one percentage point would increase the total service and interest cost components by $7,493,646 and the postretirement benefit obligation by $94,415,205. A decrease in the same assumption by one percentage point would decrease the total service and interest cost components by $8,541,955 and the postretirement benefit obligation by $111,015,529.

18 - BASIS OF FINANCIAL STATEMENT PRESENTATION

The accompanying financial statements were prepared in accordance with the accounting requirements set forth in the Uniform System of Accounts and published accounting releases of the Federal Energy Regulatory Commission, which is a comprehensive basis of accounting other than GAAP. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses during the reporting period.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
5. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) reversals of tentative distributions of prior year of unclassified retirements. Show in a footnote the account distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

6. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

7. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

8. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date of such filing.

CONSTRUCTION OVERHEADS - ELECTRIC

1. List in column (a) to kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items. 2. On Page 218 furnish information concerning construction overheads. 3. A respondent should not report "none" to the page if no overhead apportionments are made, but rather should explain on Page 218 the accounting procedures, employed and the amounts of engineering, supervision and administrative costs, etc. which are directly charged to construction. 4. Enter on this page engineering, supervision, administrative, and allowance for funds used during construction, etc., which are first assigned to a blanket work order and then prorated to construction jobs.

GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

*For construction overhead refer to attached footnote.

Allowance for Funds Used During Construction (AFUDC)

AFUDC represents financing costs capitalized to construction work in progress during the construction period. The Company capitalized AFUDC at a rate which is the lesser of the rate computed by applying the formula prescribed by FERC, which provides for both an equity and debt component of AFUDC, or the embedded cost of long-term debt outstanding at the beginning of the calendar year. Accordingly, the Company used the lower embedded cost of long-term debt rate during 2000.

COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Components of Formula (Derived from actual book balances and actual cost rates):

Line No.	Title (a)	Amount (b)		Capitalization Ratio(Percent) (c)	Cost Rate Percentage (d)	
1	Average Short-Term Debt & Computation of Allowance text	S				
2	Short-term Interest				s	
3	Long-Term Debt	D	276,195,253	52.12	d	7.64
4	Preferred Stock	P	54,104,900	10.21	p	6.91
5	Common Equity	C	199,607,010	37.67	c	12.91
6	Total Capitalization		529,907,163	100%		
7	Average Construction Work in Progress Balance	W	22,433,666			

2. Gross Rate for Borrowed Funds $s(\frac{S}{W}) + d(\frac{D}{D+P+C})(1 - \frac{S}{W})$ 3.98

3. Rate for Other Funds $[1 - \frac{S}{W}][p(\frac{P}{D+P+C}) + c(\frac{C}{D+P+C})]$ 5.57

4. Weighted Average Rate Actually Used for the Year:
   a. Rate for Borrowed Funds - 7.64
   b. Rate for Other Funds - 0.00

Schedule Page: 218 Line No.: 1 Column: OH exp

Engineering and Supervision

(a) The actual time of employees devoted to the planning, design and supervision of construction projects, together with amounts paid for outside professional engineering services, is charged to such projects to the extent possible.

(b) Other actual time of employees devoted to the engineering of construction, together with amounts paid for outside professional engineering services, is accumulated in distributable construction work in progress (projects functionalized by transmission, distribution, etc.) by direct charges from payrolls, invoices, vouchers, etc. Each month such charges to the distributable projects are distributed to each construction project included in such functional group on the basis of a percentage of direct labor and material charges to each construction project, except that no distribution is made to projects which are direct purchases of equipment only.

(c) The portion of engineering and construction supervision salaries not specifically chargeable to projects covered in (a) and (b), together with clerical salaries and expenses which are applicable to construction, are accumulated in a construction work in progress project and distributed each month to all construction projects on the basis of a percentage of labor charges.

(d) The amount of engineering and supervision so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

General Administration

Administrative Expenses

(a) Based on a study with respect to work performed by general officers and other general employees who devote a portion of their time to construction, or matters pertaining thereto, a portion of their salaries and expenses and general office supplies and expenses considered to be applicable to construction is charged thereto.

(b) Each month the amount so determined is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Employee Pensions and Benefits

(a) A study is made to determine the percentage of the total salaries and wages for the year which is applicable to construction, and such percentage is applied to the total pension and benefit costs for the year to determine the amount thereof applicable to construction.

(b) Each month, (i) the applicable portion of the amount determined to be applicable to construction, exclusive of the amount related to the salaries transferred from Administrative Expenses, is distributed pro rata to construction projects on the basis of payroll charges thereto and (ii) the applicable portion of the amount related to the salaries of employees transferred from Administrative Expenses is distributed pro rata to all construction projects on the basis of charges thereto for direct labor, material and engineering and supervision except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Injuries and Damages

(a) The Company carries only excess insurance coverage for injuries and damages and makes direct settlement for all claims of employees and the public except for the amount of such claims coming under the excess policy. An amount is charged to construction based on actual experience, to reflect the entire costs with respect to claims in connection with construction. The amount so charged is adjusted as necessary, based on experience.

(b) Each month the amount so determined to be applicable to construction is distributed pro rata to construction projects, on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects, which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Taxes

Payroll Taxes

(a) Federal and state payroll taxes are charged to construction on the basis of total salaries and wages charged thereto.

(b) Each month the amount so charged is distributed pro rata to construction projects on the basis of charges thereto for salaries and wages of company employees, except that no distribution is made to projects which are direct purchases of equipment only. The amount so charged to each construction project is distributed pro rata to the classified plant accounts for such project at the time the project is cleared from construction work in progress, on the basis of total direct labor and material charges thereto.

Sales and Excise Taxes

Sales and excise taxes charged to construction are recorded as part of the costs of materials and equipment.

Legal Expenses

Legal services and expenses applicable to specific construction projects are charged directly to such construction projects.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

OTHER PAID-IN CAPITAL (Accounts 208-211, inc.)

Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as total of all accounts for reconciliation with balance sheet, Page 112. Add more columns for any account if deemed necessary. Explain changes made in any account during the year and give the accounting entries effecting such change.

(a) Donations Received from Stockholders (Account 208)-State amount and give brief explanation of the origin and purpose of each donation.

(b) Reduction in Par or Stated value of Capital Stock (Account 209): State amount and give brief explanation of the capital change which gave rise to amounts reported under this caption including identification with the class and series of stock to which related.

(c) Gain on Resale or Cancellation of Reacquired Capital Stock (Account 210): Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.

(d) Miscellaneous Paid-in Capital (Account 211)-Classify amounts included in this account according to captions which, together with brief explanations, disclose the general nature of the transactions which gave rise to the reported amounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by balance sheet account the particulars (details) concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other long-Term Debt.
2. In column (a), for new issues, give Commission authorization numbers and dates.
3. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds.
4. For advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received.
5. For receivers, certificates, show in column (a) the name of the court -and date of court order under which such certificates were issued.
6. In column (b) show the principal amount of bonds or other long-term debt originally issued.
7. In column (c) show the expense, premium or discount with respect to the amount of bonds or other long-term debt originally issued.
8. For column (c) the total expenses should be listed first for each issuance, then the amount of premium (in parentheses) or discount. Indicate the premium or discount with a notation, such as (P) or (D). The expenses, premium or discount should not be netted.
9. Furnish in a footnote particulars (details) regarding the treatment of unamortized debt expense, premium or discount associated with issues redeemed during the year. Also, give in a footnote the date of the Commission's authorization of treatment other than as specified by the Uniform System of Accounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR (Continued)

5. If any tax (exclude Federal and State income taxes)- covers more then one year, show the required information separately for each tax year, identifying the year in column (a).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (i) through (l) how the taxes were distributed. Report in column (l) only the amounts charged to Accounts 408.1 and 409.1 pertaining to electric operations. Report in column (l) the amounts charged to Accounts 408.1 and 109.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (l) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are know, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.

ELECTRIC OPERATING REVENUES (Account 400)

1. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The -average number of customers means the average of twelve figures at the close of each month.
3. If increases or decreases from previous year (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.

ELECTRIC OPERATING REVENUES (Account 400)

4. Commercial and industrial Sales, Account 442, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 1000 Kw of demand. (See Account 442 of the Uniform System of Accounts. Explain basis of classification in a footnote.)
5. See pages 108-109, Important Changes During Year, for important new territory added and important rate increase or decreases.
6. For Lines 2,4,5,and 6, see Page 304 for amounts relating to unbilled revenue by accounts.
7. Include unmetered sales. Provide details of such Sales in a footnote.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Pages 310-311.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300-301. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
LF - for long-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW) Average Monthly NCP Demand (e)	Actual Demand (MW) Average Monthly CP Demand (f)

14						
	Subtotal RQ			0	0	0
	Subtotal non-RQ			0	0	0
	Total			**0**	**0**	**0**

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.
AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP)
demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,iine 24.
10. Footnote entries as required and provide explanations following all required data.

NUMBER OF ELECTRIC DEPARTMENT EMPLOYEES

1. The data on number of employees should be reported for the payroll period ending nearest to October 31, or any payroll period ending 60 days before or after October 31.

2. If the respondent's payroll for the reporting period includes any special construction personnel, include such employes on line 3, and show the number of such special construction employees in a footnote.

3. The number of employees assignable to the electric department from joint functions of combination utilities may be determined by estimate, on the basis of employee equivalents. Show the estimated number of equivalent employees attributed to the electric department from joint functions.

1. Payroll Period Ended (Date)	11/01/2000
2. Total Regular Full-Time Employees	779
3. Total Part-Time and Temporary Employees	13
4. Total Employees	792

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

PURCHASED POWER (Account 555)
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

Line No.	Name of Company or Public Authority (Footnote Affiliations) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Average Monthly Billing Demand (MW) (d)	Actual Demand (MW) Average Monthly NCP Demand (e)	Actual Demand (MW) Average Monthly CP Demand (f)

14						
	Total					

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)
(Including transactions referred to as 'wheeling')

1. Report all transmission of electricity, i. e., wheeling, provided for other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)
4. In column(d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows: LF - for Long-term firm transmission service. "Long-term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.
SF - for short-term firm transmission service. Use this category for all firm services, where the duration of each period of commitment for service is less than one year.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456)(Continued)
(Including transactions reffered to as 'wheeling')

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all nonfirm service regardless of the length of the contract and service from, designated units of less than one year. Describe the nature of the service in a footnote for each adjustment.
AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.
5. In column (e), identify the FERC Rate Schedule or Tariff Number. On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456) (Continued)
(Including transactions referred to as 'wheeling')

8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (11011) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. Provide total amounts in column (i) through (n) as the last Line. Enter "TOTAL" in column (a) as the Last Line. The total amounts in columns (i) and (j) must be reported as Transmission Received and Delivered on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405)
(Except amortization of aquisition adjustments)

1. Report in Section A for the year the amounts for: (a) Depreciation Expense (Account 403); (b) Amortization of Limited-Term Electric Plant (Account 404); and (c) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

A. Summary of Depreciation and Amortization Charges

Line No.	Functional Classification (a)	Depreciation Expense (Account 403) (b)	Amortization of Limited Term Electric Plant (Acc 404) (c)	Amortization of Other Electric Plant (Acc 405) (d)	Total (e)
1	Intangible Plant				
2	Steam Production Plant	3,932,712	32,371		3,965,083
3	Nuclear Production Plant	207,979	26,063		234,042
4	Hydraulic Production Plant-Conventional				
5	Hydraulic Production Plant-Pumped Storage				
6	Other Production Plant	7,330			7,330

9	General Plant	484,793	36,424		521,217
10	Common Plant-Electric				
11	TOTAL	12,701,974	113,932		12,815,906

B. Basis for Amortization Charges

Column C represents amortization of the cost of the following:

Leasehold improvements over the life of the lease and AFUDC - debt gross-up pursuant to SFAS 109, amortized using the composite functional rates of the associated property.

No change in basis or method of amortization has been made from the preceding year.

FOOTNOTE DATA

Schedule Page: 336 Line No.: 3 Column: b

Includes nuclear plant decommissioning in the amount of $-984,988.

Schedule Page: 336 Line No.: 11 Column: b

Includes $1,295,821 for depreciation expense associated with the Balance Sheet Account 102.

Schedule Page: 336 Line No.: 11 Column: c

Includes $77,708 for amortization of the gross-up to plant-in-service for the debt component of AFUDC recorded net-of-tax.

PARTICULARS CONCERNING CERTAIN INCOME DEDUCTIONS AND INTEREST CHARGES ACCOUNTS

Report the information specified below, in the order given, for the respective income deduction and interest charges account. Provide a subheading for each account and a total for the account. Additional columns may be added if deemed appropriate with respect to any account.

(a) Miscellaneous Amortization (Account 425): Describe the nature of items included in this account, the contra account charged, the total of amortization charges for the year, and the period of amortization.

(b) Miscellaneous Income Deductions: Report the nature, payee, and amount of other income deductions for the year as required by Accounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; 426.4, Expenditures for Certain Civic Political and Related Activities; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than 5% of each account total for the year (or $1,000, whichever is greater) may be grouped by classes within the above accounts.

(c) Interest on Debt to Associated Companies (Account 430) -- For each associated company to which interest on debt was incurred during the year, indicate the amount and interest rate respectively for (a) advances on notes, (b) advances on open account, (c) notes payable, (d) accounts payable, and (e) other debt, and total interest. Explain the nature of other debt on which interest was incurred during the year.

(d) Other Interest Expense (Account 431) -- Report particulars (details) including the amount and interest rate for other interest charges incurred during the year.

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show below costs incurred and accounts charged during the year for technological research, development, and demonstration (R, D & D) project initiated, continued or concluded during the year. Report also support given to others during the year for jointly-sponsored projects.(Identify recipient regardless of affiliation.) For any R, D & D work carried with others, show separately the respondent's cost for the year and cost chargeable to others (See definition of research, development, and demonstration in Uniform System of Accounts).
2. Indicate in column (a) the applicable classification, as shown below:

Classifications:

A. Electric R, D & D Performed Internally:
- (1) Generation
  - a. hydroelectric
    - i. Recreation fish and wildlife
    - ii Other hydroelectric
  - b. Fossil-fuel steam
  - c. Internal combustion or gas turbine
  - d. Nuclear
  - e. Unconventional generation
  - f. Siting and heat rejection
- (3) Transmission
  - a. Overhead
  - b. Underground
- (4) Distribution
- (5) Environment (other than equipment)
- (6) Other (Classify and include items in excess of $5,000.)
- (7) Total Cost Incurred

B. Electric, R, D & D Performed Externally:
- (1) Research Support to the electrical Research Council or the Electric Power Research Institute

Line No.	Classification (a)	Description (b)

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES (Continued)

(2) Research Support to Edison Electric Institute
(3) Research Support to Nuclear Power Groups
(4) Research Support to Others (Classify)
(5) Total Cost Incurred

3. Include in column (c) all R, D & D items performed internally and in column (d) those items performed outside the company costing $5,000 or more, briefly describing the specific area of R, D & D (such as safety, corrosion control, pollution, automation, measurement, insulation, type of appliance, etc.) Group items under $5,000 by classifications and indicate the number of items grouped. Under Other, (A (5) and B (4)) classify items by type of R, D & D activity.
4. Show in column (e) the account number charged with expenses during the year or the account to which amounts were capitalized during the year, listing Account 107, Construction Work in Progress, first. Show in column (f) the amounts related to the account charged in column (e)
5. Show in column (g) the total unamortized accumulating of costs of projects. This total must equal the balance in Account 188, Research, Development, and Demonstration Expenditures, Outstanding at the end of the year.
6. If costs have not been segregated for R, D &D activities or projects, submit estimates for columns (c), (d), and (f) with such amounts identified by "Est."
7. Report separately research and related testing facilities operated by the respondent.

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

MONTHLY PEAKS AND OUTPUT

1. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report in column (b) the system's energy output for each month such that the total on Line 41 matches the total on Line 20.
3. Report in column (c) a monthly breakdown of the Non-Requirements Sales For Resale reported on Line 24. include in the monthly amounts any energy losses associated with the sales so that the total on Line 41 exceeds the amount on Line 24 by the amount of losses incurred (or estimated) in making the Non-Requirements Sales for Resale.
4. Report in column (d) the system's monthly maximum megawatt Load (60-minute integration) associated with the net energy for the system defined as the difference between columns (b) and (c).
5. Report in columns (e) and (f) the specified information for each monthly peak load reported in column (d).

NAME OF SYSTEM:

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 37) and average cost per unit of fuel burned (Line 40) must be consistent with charges to expense accounts 501 and 547 (Line 41) as show on Line 19. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants) *(Continued)*

9. Items under Cost of Plant are based on U. S. of A. Accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses. 10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 24 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 31, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants. 11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant. 12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

GENERATING PLANT STATISTICS (Small Plants)

1. Small generating plants are steam plants of, less than 25,000 Kw; internal combustion and gas turbine-plants, conventional hydro plants and pumped storage plants of less than 10,000 Kw installed capacity (name plate rating). 2. Designate any plant leased from others, operated under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, and give a concise statement of the facts in a footnote. If licensed project, give project number in footnote.

GENERATING PLANT STATISTICS (Small Plants) (Continued)

3. List plants appropriately under subheadings for steam, hydro, nuclear, internal combustion and gas turbine plants. For nuclear, see instruction 11, Page 403. 4. If net peak demand for 60 minutes is not available, give the which is available, specifying period. 5. If any plant is equipped with combinations of steam, hydro internal combustion or gas turbine equipment, report each as a separate plant. However, if the exhaust heat from the gas turbine is utilized in a steam turbine regenerative feed water cycle, or for preheated combustion air in a boiler, report as one plant.

Pennsylvania Power Company	(1) [X] An Origina (2) [ ] A Resubm ssion	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

Line No.	DESIGNATION		VOLTAGE (KV) (Indicate where other than 60 cycle, 3 phase)		Type of Supporting	LENGTH (Pole miles) (In the case of underground lines report circuit miles)		Number Of Circuits

Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

TRANSMISSION LINE STATISTICS (Continued)

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).

ELECTRIC DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Include watt-hour demand distribution meters, but not external demand meters.
3. Show in a footnote the number of distribution watt-hour meters or line transformers held by the respondent under lease from others, jointly owned with others, or held otherwise than by reason of sole ownership by the respondent. If 500 or more meters or line transformers are held under a lease, give name of lessor, date and period of lease, and annual rent. If 500 or more meters or line transformers are held other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of accounting for expenses between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

13	Inactive Transformers on System		821	29
14	In Customers' Use	165,965	56,335	1,587
15	In Company's Use	24		
16	TOTAL End of Year (Total 11 to 15. This should equal line 10)	174,067	58,429	1,699

FOOTNOTE DATA

Schedule Page: 429 Line No.: 14 Column: b

The "In Customers' Use" data was adjusted in order to reconcile the total meters with the meters purchased and retired.

Schedule Page: 429 Line No.: 14 Column: c

The "In Customers' Use" data was adjusted in order to reconcile the total transformers with the transformers purchased and retired.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Pennsylvania Power Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:

A. Air pollution control facilities:
(1) Scrubbers, precipitators, tall smokestacks, etc.
(2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment
(3) Monitoring equipment
(4) Other.

B. Water pollution control facilities:
(1) Cooling towers, ponds, piping, pumps, etc.
(2) Waste water treatment equipment
(3) Sanitary waste disposal equipment
(4) Oil interceptors
(5) Sediment control facilities
(6) Monitoring equipment
(7) Other.

C. Solid waste disposal costs:
(1) Ash handling and disposal equipment
(2) Land
(3) Settling ponds
(4) Other.

D. Noise abatement equipment:
(1) Structures
(2) mufflers
(3) Sound proofing equipment
(4) Monitoring equipment
(5) Other.

E. Esthetic costs:
(1) Architectural costs
(2) Towers
(3) Underground lines
(4) Landscaping
(5) Other.

F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.

G. Miscellaneous:
(1) Preparation of environmental reports
(2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335.
(3) Parks and related facilities
(4) Other.

5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost	CHANGES DURING YEAR			Balance at End of Year	Actual Cost
		Additions	Retirements	Adjustments		
	(a)	(b)	(c)	(d)	(e)	(f)
1	Air Pollution Control Facilities	15,275			167,804,430	167,804,430
2	Water Pollution Control Facilities		-6,555		32,766,513	32,766,513
3	Solid Waste Disposal Costs				16,101,669	16,101,669
4	Noise Abatement Equipment				329,577	329,577
5	Esthetic Costs				125,427	125,427
6	Additional Plant Capacity				1,278,392	1,278,392
7	Miscellaneous (Identify significant)				522,217	522,217
8	TOTAL (Total of lines 1 thru 7)	15,275	-6,555		218,928,225	218,928,225
9	Construction Work in Progress	8,230,352			11,122,003	11,122,003

ENVIRONMENTAL PROTECTION EXPENSES

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

Line No.	Classification of Expenses (a)	Amount (b)	Actual Expenses (c)
1	Depreciation	9,644,904	9,644,904
2	Labor, Maint, Mtrls, & Supplies Cost Related to Env Fac & Programs	7,184,115	7,184,115
3	Fuel Related Costs		
4	Operation of Facilities		
5	Fly Ash and Sulfur Sludge Removal	1,644,058	1,644,058
6	Difference in Cost of Environmentally Clean Fuels	251,846	251,846
7	Replacement Power Costs	2,308,754	
8	Taxes and Fees		
9	Administrative and General		
10	Other (Identify significant)		
11	TOTAL	21,033,677	18,724,923

Schedule Page: 431 Line No.: 11 Column: b

Engineers' cost estimates were used for those facilities where actual production costs were not available. Expenses for lines 2 through 10 are not available for the Beaver Valley Power Plant nor are they available from the operating company of the Perry Power Plant.

Schedule Page: 431 Line No.: 11 Column: c

See above note.

ANNUAL REPORT

OF

PENNSYLVANIA POWER COMPANY
Exact Name of Respondent as Shown on Charter)

1 East Washington Street, P. O. Box 891, New Castle, Pennsylvania 16103
(Principal Business Office Address of Respondent)

TO THE

PENNSYLVANIA PUBLIC UTILITY COMMISSION

FOR THE YEAR ENDED DECEMBER 31, 2000

Harvey L. Wagner
(Officer having custody of general books of account)

Controller
(Title)

76 South Main Street, Akron, Ohio 44308
(Address of office where general books of accounts are kept)

330-384-5296
Telephone Number

NOTICE TO THE ACCOUNTING OFFICER OF THE UTILITY
RECEIVING THIS REPORT FORM

ACTING UNDER THE AUTHORITY VESTED IN IT BY SECTION 504, OF THE PUBLIC UTILITY CODE 66, PA C.S., THE PENNSYLVANIA PUBLIC UTILITY COMMISSION HAS APPROVED THIS ANNUAL REPORT FORM AS THAT ON WHICH YOUR COMPANY SHALL REPORT ANNUALLY TO THE COMMISSION.

EXCERPTS FROM THE PUBLIC UTILITY CODE APPROVED JULY 1, 1978

SECTION 504:

Reports by Public Utilities. -- The Commission may require any public utility to file periodical reports, at such times, and in such form, and of such content, as the Commission may prescribe ***. All reports shall be under oath or affirmation when required by the Commission.

SECTION 501:

(c) Compliance.--Every public utility, its officers, agents and employees, and every other person or corporation subject to the provision of this part affected by or subject to any regulations or orders of the Commission or of any Court made, issued, or entered under the provisions of this part, shall observe, obey, and comply with such regulations or orders, and the terms and conditions thereof.

SECTION 3301:

Civil Penalties for Violations by Public Utilities. --(a) General Rule. If any public utility shall *** violate any of the provisions of this part; or shall do any matter or thing herein prohibited; or shall fail, omit, neglect, or refuse to perform any duty enjoined upon it by this part, or shall fail, omit, neglect, or refuse to obey, observe, and comply with any regulation or final direction, requirement, determination or order made by the Commission *** such public utility *** for such violation, omission, failure, neglect or refusal shall forfeit and pay to the Commonwealth of Pennsylvania a sum not exceeding One Thousand Dollars; to be recovered by an Action of Assumpsit instituted in the name of the Commonwealth of Pennsylvania in the Commonwealth Court. In construing and enforcing the provisions of this section, the violation, omission , failure, neglect or refusal of any officer, agent or employee acting for or employed by any such public utility, person or corporation shall, in every case be deemed to be the violation, omission, failure, neglect, or refusal of such public utility, person or corporation.

(b) Continuing Offenses – Each and every day's continuance in the violation of any regulation or final direction, requirement, determination or order of the Commission *** shall be a separate and distinct offense.

SECTION 3302.

Penalties for Violations by Officers, Agents or Employees – Any person (whether or not an officer, agent, or employee, of any public utility) or any corporation, who or which shall knowingly fail, omit, neglect, or refuse to obey, observe, and comply with any regulation or final order, direction, or requirement of the Commission *** or who shall knowingly procure, aid, or abet any such violation, omission, failure, neglect, or refusal, shall be guilty of a misdemeanor, and upon conviction thereof, shall be sentenced to pay the costs of prosecution and a fine of not more than Five Thousand Dollars, or undergo imprisonment for not less than one month nor more than one year, or both, at the discretion of the court; and upon conviction of any subsequent offense shall be sentenced to pay the costs of prosecution and a fine of not more than Ten Thousand Dollars, or undergo imprisonment for not less than three months nor more than two years, or both, at the discretion of the court.

GENERAL INSTRUCTIONS

1 The word "respondent", wherever used in this report, means the person, firm, association or corporation in whose behalf the report is made

2 The respondent shall make its annual report on this form in duplicate and file the original, duly verified, with the Commission not later than March thirty-first of the year immediately following the reporting year. The remaining copy of the report is for respondent's files Additional copies shall be filed if required by the Commission

3 This form of annual report is prepared in conformity with the uniform systems of accounts prescribed by this Commission and all accounting words and phrases are to be interpreted in accordance with the said systems of accounts.

4 The spaces provided in this report are designed to be filled in on a typewriter having elite size type, and such a typewriter shall be used where available.

5 All entries shall be made in permanent ink Reports made out with pencil, in hectigraph impression, or by other means which does not result in a permanent record will not be accepted

6 Entries of a contrary or opposite character (such as decreases reported in a column providing for both increases and decreases) shall be shown in red ink, or in black if followed by the symbol "R"

7 Instructions should be carefully observed. Each question should be answered fully and accurately, whether or not it has been answered in a previous annual report, so that this annual report will, in all particulars, be complete in itself Reference to returns of previous years or to other reports shall not be made in lieu of required entries, except as otherwise specifically authorized

8 Where the word "none" truly and completely states the fact, it should be given to any particular inquiry Dates, where called for shall include the day, month and year Customary abbreviations may be used in stating dates

9 If any schedule does not apply to the respondent, such fact shall be shown on the schedule by the words "not applicable".

10 Wherever schedules call for figures of a previous year the figures reported must be consistent with those shown by the annual report of the previous year, or an appropriate explanation given of any differences

11 Additional statements inserted for the purpose of further explanation of accounts or schedules should be made on durable paper conforming to this form in size and width of margin, such inserts to be securely bound in the report All inserts shall bear the schedule numbers and titles of the schedules to which the inserts pertain Additional schedule forms will be furnished on request.

12 If the respondent makes a report for a period other than a calendar year, the beginning and end of the period covered must be clearly stated throughout the report in the spaces provided therefore.

13 The respondent shall file with this report a copy of its latest printed annual report to stockholders If its annual reports to stockholders are not printed, that fact should be stated at the bottom of this page

14 Omit cents in schedules so marked and adjust items to reconcile with totals Detailed schedules should agree with summary schedules

100 GENERAL INFORMATION

1. Name of State under the laws of which respondent is incorporated and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and date organized.
2. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.
3. State the classes of utility and other services furnished by respondent during the year in each state in which the respondent operated.

This information is furnished on page 101.

101 CONTROL OVER RESPONDENT

If any corporation, business trust, or similar organization, held control over the respondent at the end of the year, state name of the controlling corporation or organization, manner in which control was held and extent of control. If control was in a holding company organization show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiaries for whom the trust was maintained, and purpose of the trust. Give particulars as to any change during the year in control over respondent.

This information is furnished on page 102.

308 COAL RECEIVED DURING YEAR

1. Give below the details called for concerning coal received by respondent during the year.
2. Minor purchases from non-affiliated interests may be grouped by kinds of coal received.

	Received from (a)	Kind of Coal (b)	Quantity (Tons-2000 lbs) (c)	Base Cost (d)	Freight (e)	Total Cost (f)	Cost Per Ton (g)
1	Mines of Respondent or Affiliated Interests:

310 GENERATING STATION STATISTICS

(except nuclear generation)

1. If any plant is leased, operated under a license from the Federal Power Commission, or operated as a joint facility, indicate such facts by the use of asterisks and footnotes.
2. Specify if total plant capacity is reported in kva instead of kilowatts as called for on line 5.
3. If peak demand for 60 minutes is not available, give that which is available, specifying period.
4. If a group of employees attends more than one generating station, report on line 11 the approximate average number of employees assignable to each station.
5. If gas is used and purchased on a therm basis, the B.t.u. content of the gas should be given and the quantity of fuel consumed converted to M cu. ft.
6. If any plant is equipped with combinations of steam, hydro, internal combustion engine or gas turbine equipment, each should be reported as a separate plant. However, if a gas turbine unit functions in a combined operation with a conventional steam unit, the gas turbine should be included with the steam station.

Line No.	Item (a)	Plant (b)	Plant (c)	Plant (d)	Plant (e)	Plant (f)	Plant (g)	Plant (h)
1	Kind of plant (steam, hydro, int. comb., gas turb.)		This information is furnished on pages 402, 402.1, 403, 410 and 411.					
2	Type of plant construction (conventional, outdoor boiler, full outdoor, etc.)							
3	Year originally constructed							
4	Year last unit was installed							
5	Total inst. cap. (name plate ratings in kw)							
6	Net peak demand on plant-kilowatts (60 minutes)							
7	Plant hours connected to load							
8	Net continuous plant capability, kilowatts:							
9	(a) When not limited by condenser water							
10	(b) When limited by condenser water							
11	Average number of employees							
12	Net generation, exclusive of station use							
13								
14	Fuel: Kind							
15	Unit: (Coal-tons of 2,000 lb.) (Oil-barrels of 42 gals.)							
16	(Gas-M cu.ft.)							
17	Quantity (units) of fuel consumed							
18	Average heat content of fuel (B.t.u. per lb. of coal)							
19	per gal. of oil, or per cu. ft. of gas)							
20	Average cost of fuel per unit; as delivered							
21	f.o.b. plant							
22	Average cost of fuel per unit consumed							
23	Avg. cost of fuel consumed per million B.t.u.							
24	Avg. cost of fuel consumed per kwh net gen							
25	Average B.t.u. per kwh net generation							

311 NUCLEAR POWER GENERATING STATIONS

Report for each nuclear power generating station. (a) a brief explanatory statement concerning accounting for the cost of power generated including any attribution of excess costs to research and development expenses; (b) a brief explanation of the fuel accounting specifying the accounting methods and types of cost units used with respect to the various components of the fuel cost, and (c) such additional information as may be informative concerning the type of plant, kind of fuel used, and other physical and operating characteristics of the plant.

This information is furnished on pages 402, 402.1 and 403.

312 TRANSMISSION LINES

1. Report below each transmission line of 110,000 V. and over, and group those under 110,000 on line 1.
2. The type of supporting structure reported in column (d) shall indicate whether (1) single pole, wood or steel, (2) H-frame, wood or steel poles, (3) tower, or (4) underground construction. If a transmission line has more than one type of supporting structure indicate the mileage of each type of construction by the use of brackets and extra lines in the schedule. Minor portion of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
3. Report in columns (e) and (f) the total pole miles of each transmission line. It is intended that column (e) shall show the pole miles of line on structures the cost of which is reported for the line designated, and conversely, that column (f) shall show the pole miles of line on structures the cost of which is reported for another line. Pole miles of line on lease or partly owned structures shall be reported in column (f) with appropriate designation and footnote explaining the basis of such occupancy.
4. Designate any transmission line or portion of a transmission line held under any title other than full ownership and in a footnote state name of owner or co-owner, the nature of the respondent's title, and per cent ownership, if jointly owned.
5. Transmission line structures which also support a line of lower voltage shall be included with the line of higher voltage. Designate if such is not the case with respect to any transmission line reported in this schedule. Transmission line structures which also support a line of the same voltage shall be included with the line most appropriate. The pole miles of such structures for the line in which included shall be reported in column (e) and for the other line in column (f).

	LINE DESIGNATION		Voltage	Type of Supporting Structure	LENGTH (POLE MILES)		Number of Circuits	Wires Per Circuit
	From (a)	To (b)	(c)	(d)	On Structures of Line Designated (e)	On Structures of Another Line (f)	(g)	(h)

313 DISTRIBUTION METERS AND LINE TRANSFORMERS

1. Report below the information called for concerning distribution watt-hour meters and line transformers.
2. Watt-hour demand distribution meters should be included below but external demand meters should not be included.

	Item (a)	Number of watt-hour meters (b)	LINE TRANSFORMERS	
			Number (c)	Total capacity (kva) (d)
1	Number at beginning of year	This information is furnished on page 429.		
2	Additions during year:			
3	Purchases			
4	Associated with utility plant acquired			
5	Total additions			
6	Reductions during year:			
7	Retirements			
8	Associated with utility plant sold			
9	Total reductions			
10	Number at end of year			
11	In stock			
12	Locked meters on customers' premises			
13	Inactive transformers on system			
14	In customers' use			
15	In company's use			
16	Total End Of Year (as above)			

314 LOAD STATISTICS DURING HOUR OF PEAK SALES TO ULTIMATE CUSTOMERS DURING YEAR

1. As used herein, the term "firm" power means power which one company undertakes to deliver to another as and when called for, including reserve capacity which the receiving company is committed to pay for whether or not deliveries are made.
2. In completing Section I, generating stations having capacities of less than 1,000 KW may be grouped by kinds, indicated the number of stations included in each grouping.
3. Column (c) under Sections II and III shall designate the kinds of power (such as firm, reserve, economy, dump, etc.) received or delivered during the peak hour. Separate entries shall be made for each kind of power received from each vendor or delivered to each vendor during the peak hour.
4. Column (d) shall show, as appropriate, the reliable production capacities of all generating stations owned and operated by respondent, the maximum kilowatts of firm power procurable by respondent, during the hour of peak sales, under all purchase and interchange contracts, and the maximum kilowatts of firm power deliverable by respondent, during the hour of peak sales, under all sales for resale and interchange contracts regardless of whether or not such stations or contracts constituted a part of the supply or distribution of power during the peak hour. If quantities of firm or reserve power are unlimited under a contract, state the maximum one-hour delivery or receipt thereunder during the past two years.
5. Designate affiliated interests under Section II and III by an asterisk following the name of the company.

HOUR OF PEAK SALES TO ULTIMATE CUSTOMERS DURING YEAR

Date: **June 13, 2000** Day of Week: **Tuesday** Hour: From **1300** to **1400**

	Particulars (a)	Kind of Station (Steam Hydro, etc) (b)	Name Plate Capacity of Stations (c)	Available Capacities (See Instr. 4) (d)	Kilowatts (e)

HOUR OF PEAK SALES TO ULTIMATE CUSTOMERS DURING LIFETIME OF RESPONDENT

Date: **June 13, 2000** Day of Week: **Tuesday** Hour: From **1300** to **1400** KW Sales: **865,000**

(a) West Lorain was reported on AFRAP Report, although Penn Power does not have any ownership in the unit.

315 GENERATING STATION STATISTICS - JOINTLY OWNED OR OPERATED

1. If power was obtained by respondent during the year from a generating station operated by another entity solely for the benefit of respondent or for the mutual benefit of respondent and others, give below the information called for with respect to each such station.
2. Set forth in a footnote a brief description of the terms and conditions under which the station is operated, giving the name of the operating intermediary, if any, and the names of the mutual beneficiaries under the arrangement.
3. If any costs of operating a station, absorbed by respondent during the year were charged to accounts other than 555. Purchase Power, attach hereto a statement showing the complete accounting distribution of al costs absorbed by respondent, including any revenue or income derived by respondent, incident to the station operation.

	Item (a)	(b)		Item (c)	(b)
1	Kind of station (steam, hydro, etc.)		30	Fixed costs (State amounts and percentages)	
2	Location		31	Interest or return on investment	
3	Year station originally constructed		32	Depreciation	
4	Number of Units		33	Interest on working capital	
5	Year last unit installed		34	Other fixed costs	
6	Installed Generating Capacity - KW		35	Total	
7	Owned by respondent		36	Total Cost of Generation	
8	Owned by affiliated interest		37	Fuel	
9	Owned by others		38	Kind	
10	Total		39	Unit (Ton - 2000 lbs; gal.; M. Cu. Ft.; etc.)	
11	Maximum demand on station during year:		40	Average BTU per unit	
12	By respondent		41	Quantity (Units) of fuel consumed	
13	By others		42	Average cost per unit of fuel consumed	
14	Total		43	Average cost per million BTU	
15	Plant hours connected to load of respondent		44	Fuel cost per net kwh generated	
16	Net Generation (excluding station use)		45	Average BTU per kwh generated	
17	Original cost of plant (omit cents):		46	Kwh received by respondent	
18	Owned by respondent		47	Cost of power received by respondent

26	Other operating costs				
27	Maintenance				
28	Other				
29	Total				

This information is furnished on pages 402, 402.1, 403, 410 and 411.

701-A CONSTRUCTION OVERHEADS

1. Report below the information called for concerning construction overheads for the year.
2. List I column (a) the kinds of overheads according to the titles used by the respondent. Charges for outside professional services for engineering fees and management or supervision fees capitalized should be shown as separate items.
3. On the lower section of this schedule furnish the requested explanatory information concerning construction overheads.
4. A respondent should not report "none" to this schedule if no overhead apportionments are made, but rather should explain on the lower section of this schedule that only such engineering, supervision and administrative costs, etc., which are directly chargeable to construction are charged to construction, if this is the case. Engineering, supervision, administrative, and interest costs, etc., which are first assigned to a blanked work order and when prorated to construction jobs shall be considered overheads for the purposes of formulating a response to this schedule.
5. Group the data by departments and show separate totals for each department.

Name of overhead (a)	Total overheads cleared to Construction (b)	Cost of construction to which overheads were charged (exclusive of overhead charges) (c)	Percent overheads to construction Cost (d)
Company Engineering & Supervision	$2,471,323	$38,499,494	6.42%
Contract Engineering by Outside Companies	0	38,499,494	0.00%
Total Engineering & Supervision	2,471,323		
Administrative and General	2,065,657	38,499,494	5.37%
Pensions, Benefit Costs 7 Payroll Taxes	2,132,779	5,017,251	42.51%
Total	$6,669,759		

701 - B GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE

1. For each construction overhead for _____ plant, explain (a) nature of the engineering, supervisory, or administrative work, etc., the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) percentages applied to different types of construction, (e) basis of differentiation in percentages for different types of construction, and (f) amounts capitalized for each overhead for the year for which this report is submitted.
2. In addition to other information concerning engineering and superintendence or other such overheads, explain whether the amounts treated as overheads include all engineering and superintendence cost or only such portions as are not directly chargeable to specific jobs.
3. For interest during construction state the interest rate used, the basic charges to which applied, in addition to the amounts capitalized for the year for which this report is submitted.

This information is furnished on page 218 and footnote thereof.

702 MISCELLANEOUS GENERAL EXPENSES (Account 930)

Report below the information called for concerning items included in miscellaneous general expenses.
Show allocation to other departments, if any.

Line No.	Description of Item (a)	Amount (b)
	Industry association dues	
	Nuclear power research expenses	
	Other experimental and general research expenses	
	Trustee, registrar, and transfer agent fees and expenses	
	Publishing and distributing annual reports to stockholders	
	Other expenses of servicing outstanding securities of utility	
	National institutional advertising expenses	
	Local institutional advertising expenses	
	Directors' fees and expenses	
	Other expenses (List major items)	
	This information is furnished on pages 335 and 335.1	
	TOTAL	

703 EMPLOYEE & PAYROLL STATISTICS

1. Section A shall be itemized according to the departmental payroll classification maintained by respondent at the end of the year. (For example, executive, accounting, treasury, engineering, etc.)

2. Operation and maintenance, under Section B, shall be summarized according to the functional groups of accounts prescribed in the Uniform Systems of Accounts applicable to respondent.

	Payroll Classification (a)	Number Beginning of year (b)	Number End of year (c)
1	Executive	2	3
2	Treasury and Legal	0	0
3	Marketing	66	0

Annual Report of PENNSYLVANIA POWER COMPANY For Year Ended December 31, 2000

Commonwealth of Pennsylvania

} SS

County of Lawrence

We the undersigned Jeffrey A. Elser (Name of President or Other Chief Officer) President (Title)

and Harvey L. Wagner (Name of Officer in Charge of Accounts) Controller (Title)

of the Pennsylvania Power Company,

on our oath do severally say that the foregoing return has been prepared, under our direction, from the original books, papers and records of said company; that we have carefully examined the same and declare the same to be a complete and correct statement of the business and affairs of said company in respect to each and every matter and thing therein set forth to the best of our knowledge, information and belief; and we further say that no deductions were made before stating the gross earnings or receipts set forth except those shown in the foregoing accounts; and that the accounts and figures contained in the foregoing return embrace all of the financial transactions of said company during the period for which said return is made.

/s/ Jeffrey A. Elser
(President or Other Chief Officer)
President

/s/Harvey L. Wagner
(Name and Title of Officer in Charge of the Accounts)
Controller

Subscribed and sworn to before me this 27th

day of April 2001

/s/Karen L. Pope

REPORT OF INDEPENDENT ACCOUNTANTS

To the Board of Directors
Metropolitan Edison Company
Reading, Pennsylvania

We have audited the balance sheets of Metropolitan Edison Company as of December 31, 2000 and 1999, and the related statements of income for the years then ended, and the statements of retained earnings and of cash flows for the year ended December 31, 2000 included on pages 110 through 123.57 of the accompanying Federal Energy Regulatory Commission Form No. 1. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 1, these financial statements were prepared in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States of America.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Metropolitan Edison Company as of December 31, 2000 and 1999, the results of its operations for the years then ended, and its changes in retained earnings and in cash flows for the year ended December 31, 2000, in accordance with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

This report is solely intended for the information and use of the board of directors and management of Metropolitan Edison Company and the Federal Energy Regulatory Commission.

PricewaterhouseCoopers LLP

January 31, 2001

INSTRUCTIONS FOR FILING THE FERC FORM NO. 1

GENERAL INFORMATION

I. Purpose

This form is a regulatory support requirement (18 CFR 141.1). It is designed to collect financial and operational information from major electric utilities, Licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. This report is also secondarily considered to be a nonconfidential public use form supporting a statistical publication (Financial Statistics of Selected Electric Utilities), published by the Energy Information Administration.

II. Who Must Submit

Each major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of The Federal Power Act (18 CFR 101), must submit this form.

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds
one of the following:

(1) one million megawatt hours of total annual sales,
(2) 100 megawatt hours of annual sales for resale,
(3) 500 megawatt hours of annual power exchanges delivered, or
(4) 500 megawatt hours of annual wheeling for others (deliveries plus Losses).

III. What and Where to Submit

(a) Submit this form electronically through the Form 1 Submission Software and an original and six (6) conformed paper copies, properly filed in and attested, to:

Office of the Secretary
Federal Energy Regulatory Commission
888 First Street, NE.
Room 1A
Washington, DC 20426

Retain one copy of this report for your files.

Include with the original and each conformed paper copy of this form the subscription statement required by 18 C.F.R. 385.2011(c)(5). Paragraph (c)(5) of 18 C.F.R. 385.2011 requires each respondent submitting data electronically to file a subscription stating that the paper copies contain the same information as the electronic filing, that the signer knows the contents of the paper copies and electronic filing, and that the contents as stated in the copies and electronic filing are true to the best knowledge and belief of the signer.

(b) Submit, immediately upon publication, four (4) copies of the Latest annual report to stockholders and any annual financial or statistical report regularly prepared and distributed to bondholders, security analysts, or industry associations. (Do not include monthly and quarterly reports. Indicate by checking the appropriate box on Page 4, List of Schedules, if the reports to stockholders will be submitted or if no annual report to stockholders is prepared.) Mail these reports to:

Chief Accountant
Federal Energy Regulatory Commission
888 First Street, NE.
Washington, DC 20426

(c) For the CPA certification, submit with the original submission, or within 30 days after the filing date for this form, a Letter or report (not applicable to respondents classified as Class C or Class D prior to January 1, 1984):

(i) Attesting to the conformity, in all material aspects, of the below listed (schedules and) pages with the Commission's applicable Uniform Systems of Accounts (including a plicable notes relating thereto and the Chief Accountant's published accounting releases), and

(ii) Signed by independent certified public accountants or an independent Licensed public accountant certified or Licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 CFR 41.10-41.12 for specific qualifications.)

III. What and Where to Submit (Continued)

(c) Continued

Schedules	Reference Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

When accompanying this form, insert the Letter or report immediately following the cover sheet. When submitting after the filing date for this form, send the letter or report to the office of the Secretary at the address indicated at III (a).

Use the following format for the Letter or report unless unusual circumstances or conditions, explained in the Letter or report, demand that it be varied . Insert parenthetical phrases only when exceptions are reported.

In connection with our regular examination of the financial statements of _____ for the year ended on which we have reported separately under date of _____. We have also reviewed schedules _____ of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases.

State in the letter or report, which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

(d) Federal, State and Local Governments and other authorized users may obtain additional blank copies to meet their requirements free of charge from:

Public Reference and Files Maintenance Branch
Federal Energy Regulatory Commission
888 First Street, NE. Room 2A ES-1
Washington, DC 20426
(202) 208-2474

IV. When to Submit

Submit this report form on or before April 30th of the year following the year covered by this report.

V. Where to Send Comments on Public Reporting Burden

The public reporting burden for this collection of information is estimated to average 1,217 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any aspect of this collection of information, including suggestions for reducing this burden, to the Federal Energy Regulatory Commission, 888 First Street N.E., Washington, DC 20426 (Attention: Mr. Michael Miller, CI-1); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if this collection of information does not display a valid control number. (44 U.S.C. 3512(a)).

GENERAL INSTRUCTIONS

I. Prepare this report in conformity with the Uniform System of Accounts (18 CFR 101) (U.S. of A.). Interpret all accounting words and phrases in accordance with the U. S. of A.

II. Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting year, and use for statement of income accounts the current year's amounts.

III. Complete each question fully and accurately, even if it has been answered in a previous annual report. Enter the word "None" where it truly and completely states the fact.

IV. For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2, 3, and 4.

V. Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below). The date of the resubmission must be reported in the header for all form pages, whether or not they are changed from the previous filing.

VI. Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Resubmissions must be numbered sequentially on the cover page of the paper copies of the form. In addition, the cover page of each paper copy must indicate that the filing is a resubmission. Send the resubmissions to the address indicated at instruction III (a).

VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

IX. Wherever (schedule) pages refer to figures from a previous year, the figures reported must be based upon those shown by the annual report of the previous year, or an appropriate explanation given as to why the different figures were used.

DEFINITIONS

I. Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

II. Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

Federal Power Act, 16 U.S.C. 791a-825r)

"Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to wit:
...(3) "Corporation" means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shall not include 'municipalities, as hereinafter defined;
(4) "Person" means an individual or a corporation;
(5) "Licensee" means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;
(7) "Municipality" means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry an the business of developing, transmitting, unitizing, or distributing power;..."
(11) "Project" means a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or Lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered:
(a) To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites;
... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304. (a) Every Licensee and every public utility shall file with the Commission such annual and other periodic or special reports as the Commission may be rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission my prescribe the manner and form in which such reports shalt be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies."

"Sec. 309. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed..."

General Penalties

"Sec. 315. (a) Any licensee or public utility which willfully fails, within the time prescribed by the Commission, to comply with any order of the Commission, to file any report required under this Act or any rule or regulation of the Commission thereunder, to submit any information of document required by the Commission in the course of an investigation conducted under this Act ... shall forfeit to the United States an amount not exceeding $1,000 to be fixed by the Commission after notice and opportunity for hearing..."

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

P. R. Chatman
Assistant Comptroller- Metropolitan Edison Company
310 Madison Avenue
Morristown, NJ 07962-1957

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Commonwealth of Pennsylvania
July 24, 1922

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric Service in the Commonwealth of Pennsylvania.

5. Have you engaged as the principal accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) [ ] Yes...Enter the date when such independent accountant was initially engaged:
(2) [X] No

Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the repondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiearies for whom trust was maintained, and purpose of the trust.

GPU, Inc., parent company, owns 100% of the issued and outstanding common stock of the respondent.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

CORPORATIONS CONTROLLED BY RESPONDENT

1. Report below the names of all corporations, business trusts, and similar organizations, controlled directly or indirectly by respondent at any time during the year. If control ceased prior to end of year, give particulars (details) in a footnote.
2. If control was by other means than a direct holding of voting rights, state in a footnote the manner in which control was held, naming any intermediaries involved.
3. If control was held jointly with one or more other interests, state the fact in a footnote and name the other interests.

Definitions
1. See the Uniform System of Accounts for a definition of control.
2. Direct control is that which is exercised without interposition of an intermediary.
3. Indirect control is that which is exercised by the interposition of an intermediary which exercises direct control.
4. Joint control is that in which neither interest can effectively control or direct action without the consent of the other, as where the voting control is equally divided between two holders, or each party holds a veto power over the other. Joint control may exist by mutual agreement or understanding between two or more parties who together have control within the meaning of the definition of control in the Uniform System of Accounts, regardless of the relative voting rights of each party.

EXECUTIVE COMPENSATION

The following table sets forth remuneration paid to the Chief Executive Officer and the four other most highly compensated executive officers of JCP&L, Met-Ed and Penelec for the year ended December 31, 2000.

The managements of JCP&L, Met-Ed and Penelec were combined in a 1996 reorganization. Accordingly, the amounts shown below represent the aggregate remuneration paid to such executive officers by JCP&L, Met-Ed and Penelec during 1999, 1998 and 1997.

Remuneration of Executive Officers

SUMMARY COMPENSATION TABLE

		Annual Compensation			Long-Term Compensation Awards	Long-Term Compensation Payouts	
Name and Principal Position	Year	Salary($)	Bonus($)	Other Annual Compensation($)(1)	Securities Underlying Options Granted(#)	LTIP Payouts ($)(2)	All Other Compensation ($)
M. J. Chesser	2000	252,404	-	-	27,600	-	57,605(3)
President and Chief	1999	-	-	-	-	-	-
Executive Officer	1998	-	-	-	-	-	-

(1) Consists of earnings on "Long-Term Incentive Plan" ("LTIP") compensation paid in the year the award vests.

(2) Amounts reported in this column for the year 2000 represent each Named Executive Officer's 1995 performance-based restricted stock award that vested on June 4, 2000, at 90% of target, in accordance with the 1990 Stock Plan. The restricted units issued each year since 1995 under the 1990 Stock Plan have been performance based. Dividends are earned on the aggregate restricted units awarded under the 1990 Stock Plan and reinvested in additional units.

Amounts reported in this column for the years 1998 and 1999 consist of Performance Cash Incentive Awards paid on the 1993 and 1994 restricted unit awards, respectively, which vested under the 1990 Stock Plan. These amounts were designed to compensate recipients of restricted unit awards for the amount of federal and state income taxes that are payable upon vesting of such awards. There was no Performance Cash Incentive Award associated with the vesting of the restricted units awarded in 1995 that vested in 2000.

The aggregate number and value (based on the stock price per share at December 31, 2000) of unvested and deferred vested stock-equivalent restricted units (including reinvested dividend equivalents) at the end of 2000 were:

	Aggregate Units	Aggregate Value
M. J. Chesser	4,032	$148,428
M. J. Connolly	2,254	82,975
R. S. Zechman	8,125	299,102
C. A. Mascari	9,313	342,835
C. Brooks	7,572	278,744

(3) Consists of GPU's matching contributions under the non-qualified deferred compensation plan ($3,296), above-market interest accrued on the retirement portion of deferred compensation ($16), earnings on LTIP compensation not paid in the current year ($4,293), and signing bonus received upon employment ($50,000).

(4) Mr. Connolly was compensated by GPU Service, Inc. for his overall service on behalf of GPU and accordingly was not compensated directly by the other subsidiary companies for his services.

(5) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,785), above-market interest accrued on the retirement portion of deferred compensation ($83), and earnings on LTIP compensation not paid in the current year ($3,651).

(6) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($5,385), above-market interest accrued on the retirement portion of deferred compensation ($1,036), and earnings on LTIP compensation not paid in the current year ($15,951).

(7) Consists of GPU's matching contributions under the Savings Plan ($6,800), matching contributions under the non-qualified deferred compensation plan ($4,480), above-market interest accrued on the retirement portion of deferred compensation ($7,045), and earnings on LTIP compensation not paid in the current year ($18,550).

(8) Consists of GPU's matching contributions under the Savings Plan ($6,800), above-market interest accrued on the retirement portion of deferred compensation ($1,136), and earnings on LTIP compensation not paid in the current year ($15,007).

SECURITY HOLDERS AND VOTING POWERS

1. Give the names and addresses of the 10 security holders of the respondent who, at the date of the latest closing of the stock book or compilation of list of stockholders of the respondent, prior to the end of the year had the highest voting powers in the respondent, and state the number of votes which each would have had the right to cast on that date if a meeting were then in order. If any such holder held in trust, give in a footnote the known particulars of the trust(whether voting trust, etc.) duration of trust, and principal holders of beneficiary interests in the trust. If the stock book was not closed or a list of stockholders was not compiled within one year prior to the end of the year, or if since the previous compilation of a List of stockholders, some other class of security has become vested with voting rights, then show such 10 security holders as of the close of the year. Arrange the names of the security holders in the order of voting power, commencing with the highest. Show in column (a) the titles of officers and directors included in such list of 10 security holders.
2. If any security other than stock carries voting rights, explain in a footnote the circumstances whereby such security became vested with voting rights give other important particulars (details) concerning voting rights of such security. State whether voting right are actual or contingent; if contingent, describe the contingency.
3. If any class or issue of security has any special privileges in the election of directors, trustees or managers, or in the determination of corporate action by any method explain briefly in a footnote.
4. Furnish particulars (details) concerning any options warrants, or rights outstanding at the end of the year others to purchase securities of the respondent or any securities or other assets owned by the respondent, including prices, expiration dates, and other material information relating to exercise of the options, warrants, or right the amount of such securities or assets so entitled to purchased by any officer, director, associated company, or of the ten largest security holders. This instruction is inapplicable to convertible securities or to any securities substantially all of which are outstanding in the hands of the public where the options, warrants, or rights were issued prorata basis.

1. Give the date of the latest closing of the stock book prior to end of year, and state the purpose of such closing:	2. State the total number of votes cast at the latest general meeting prior to end of year for election of directors of the respondent and number of such votes cast by proxy	3. Give the date and place of such meeting
STOCK BOOK NOT CLOSED	Total: 859,500 By Proxy: 859,500	5-16-00 Morristown, NJ

IMPORTANT CHANGES DURING THE YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 106, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.

3. None

4. None

5. None

6. Met-Ed has authorization from the Pennsylvania Public Utility Commission (PaPUC) to issue and sell up to $150 million of Senior Notes. The Company has authorization to issue through December 31,2002.

7. None

8. The Company's contract with the International Brotherhood of Electrical Workers (IBEW) was negotiated in 2000 (May) for a three year period which will end on April 30, 2003. The agreement provides for an annual base increase for all non-Meter Reader bargaining unit employees, and is as follows:

   May 1, 2000; 3.5% base wage increase
   May 1, 2001; 2.5% base wage increase
   May 1, 2002; 2.0% base wage increase

   The three year agreement also provides for two distinct and separate incentive compensation plans; one for non-Meter Readers and the other for Meter Readers, as follows:

   Non-Meter Reader ICP: For the year 2000 the award was 2% which was payable in March of 2001; however, since the Company goals were not achieved, no incentive compensation was paid. For the year 2001, the award will be 4%, which will be payable in March 2002, subject to performance. For the year 2002, the award will be 6%, which will be payable in March 2003, subject to performance.

   Meter Reader ICP: For the year 2000, the award for the months of January through April was 2%, which was payable in March 2001, and a 6% award for the months of May through December. Since Company goals were not achieved, no incentive compensation was paid for the months January through April. An incentive compensation payment was made in September 2000 for four months (May-August) at 6%. Another incentive compensation was made in January 2001 for a four month period (Sept-Dec). This payment was at 6% for the month of September and an average of 7.32% for the months of October through December. Thereafter, the Meter Reader ICP awards will be paid out on a quarterly basis, in the month following the quarter. The ICP percentage for the year 2001 will be 7% and for the year 2002 will be 8%,payable subject to performance.

   Lump sum payment was also received by the bargaining unit members in June 2000, and was $500 to all non-Meter Reader employees and $1,100 for all Meter Reader employees.

   Voluntary Enhanced Retirement Program: Met-Ed d/b/a GPU Energy and IBEW negotiated a Voluntary Enhanced Retirement Program (VERP) effective December 29, 2000. The VERP was offered to regular employees who were at least age fifty-five and had at least five years of creditable service as of March 31, 2001. This program will be applied retroactively to employees who retired or terminated (not for cause) on or

after December 1, 1999. The VERP will add five years to an employee's age and five years to an employee's creditable years of service for the purpose of calculating his or her pension benefit, in accordance with the existing provisions of the pension plan. To ensure continuity of operations and service, the company maintains the right to retain certain employees until March 31, 2002.

9. For information with respect to material legal proceedings, reference is made to Note 12(Commitments and Contingencies) of the Notes to Financial Statements beginning on Page 122.

FOOTNOTE DATA

Schedule Page: 112 Line No.: 68 Column. d

The Notes to Financial Statements beginning on page 122 are an integral part of this Balance Sheet.

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
Metropolitan Edison Company	(1) [X] An Original (2) [ ] A Resubmission	/ /	Dec. 31, 2000

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another Utility column (i, k, m, o) in a similar manner to a utility department. Spread the amount(s) over Lines 02 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.
2. Report amounts in account 414, Other Utility Operating income, in the same manner as accounts 412 and 413 above.
3. Report data for lines 7,9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1 and 407.2.
4. Use pages 122-123 for important notes regarding the statement of income or any account thereof.
5. Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in a material refund to the utility with respect to power or gas purchases. State for each year affected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power and gas purchases.
6. Give concise explanations concerning significant amounts of any refunds made or received during the year

STATEMENT OF INCOME FOR THE YEAR (Continued)

resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.

7. If any notes appearing in the report to stockholders are applicable to this Statement of Income, such notes may be included on pages 122-123.

8. Enter on pages 122-123 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also give the approximate dollar effect of such changes.

9. Explain in a footnote if the previous year's figures are different from that reported in prior reports.

10. If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles, lines 2 to 23, and report the information in the blank space on pages.122-123 or in a footnote.

STATEMENT OF CASH FLOWS

4. Investing Activities include at Other (line 31) net cash outflow to acquire other companies. Provide a reconciliation of assets acquired with liabilities assumed on pages 122-123. Do not include on this statement the dollar amount of Leases capitalized per US of A General Instruction 20; instead provide a reconciliation of the dollar amount of Leases capitalized with the plant cost on pages 122-123.
5. Codes used:
(a) Net proceeds or payments. (c) Include commercial paper.
(b) Bonds, debentures and other long-term debt. (d) Identify separately such items as investments, fixed assets, intangibles, etc.
6. Enter on pages 122-123 clarifications and explanations.

Line No.	Description (See Instruction No. 5 for Explanation of Codes) (a)	Amounts (b)
46	Loans Made or Purchased	
47	Collections on Loans	
48		
49	Net (Increase) Decrease in Receivables

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

GPU, Inc. owns all the outstanding common stock of three domestic electric utilities -- Jersey Central Power & Light Company (JCP&L), Metropolitan Edison Company (Met-Ed) and Pennsylvania Electric Company (Penelec). These electric utilities are conducting business under the name GPU Energy and considered together are referred to as the "GPU Energy companies." GPU Capital, Inc. and GPU Electric, Inc. and their subsidiaries own, operate and fund the acquisition of electric distribution and gas transmission systems in foreign countries, and are referred to as "GPU Electric." GPU Electric's foreign utility companies include Midlands Electricity plc (conducting business as GPU Power UK); Empresa Distribuidora Electrica Regional S.A. (Emdersa); and GPU GasNet. GPU Power, Inc. and its subsidiaries (GPU Power) develop, own and operate generation facilities in foreign countries. Other subsidiaries of GPU, Inc. include GPU Advanced Resources, Inc. (GPU AR), which is involved in retail energy sales; GPU Telcom Services, Inc. (GPU Telcom), which is engaged in telecommunications-related businesses; MYR Group Inc. (MYR), which is a utility infrastructure construction services company; GPU Service, Inc. (GPUS), which provides legal, accounting, financial and other services to the GPU companies; GPU Diversified Holdings LLC; and GPU Nuclear, Inc. (GPUN). All of these companies considered together are referred to as "GPU."

In 2000, GPU, Inc. sold GPU PowerNet, its Australian electric transmission company, to Singapore Power International (SPI). In addition, GPU, Inc. sold GPU International, Inc. (GPUI) to Aquila Energy Corporation (Aquila). This sale included GPUI's interests in six domestic electric generating plants, and one development stage project. For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and revenues and expenses during the reporting period. Actual results could differ from those estimates.

SYSTEM OF ACCOUNTS

Certain reclassifications of prior years' data have been made to conform with the current presentation. The GPU Energy companies' accounting records are maintained in accordance with the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission (FERC) and adopted by the Pennsylvania Public Utility Commission (PaPUC) and the New Jersey Board of Public Utilities (NJBPU). GPU's accounting records also comply with the Securities and Exchange Commission's (SEC) rules and regulations.

CONSOLIDATION

The GPU consolidated financial statements include the accounts of its wholly-owned subsidiaries and any affiliates in which it has a controlling financial interest (generally evidenced by a greater than 50% ownership interest). All significant intercompany transactions and accounts are eliminated in consolidation. GPU also uses the equity method of accounting for investments in affiliates in which it has the ability to exercise significant influence.

GPU began accounting for GPU Power UK as a consolidated entity in the third quarter

of 1999, following its acquisition of the remaining 50% ownership interest from Cinergy Corp. (Cinergy).

REGULATORY ACCOUNTING

Statement of Financial Accounting Standards No. 71 (FAS 71), "Accounting for the Effects of Certain Types of Regulation," applies to regulated utilities that have the ability to recover their costs through rates established by regulators and charged to customers. The GPU Energy companies' transmission and distribution operations are currently accounted for under the provisions of FAS 71. In accordance with FAS 71, GPU has deferred certain costs pursuant to actions of the NJBPU and PaPUC and is recovering or expects to recover such costs in regulated rates charged to customers. Regulatory assets and liabilities are reflected net in the Deferred Debits and Other Assets section of the Consolidated Balance Sheets. For additional information about regulatory assets and liabilities, see Note 12, Commitments and Contingencies.

With the receipt of the NJBPU Summary Restructuring Order (Summary Order) in 1999 and the PaPUC Restructuring Orders (Restructuring Orders) in 1998, GPU determined that the GPU Energy companies' electric generation operations no longer met the criteria for the continued application of FAS 71, and therefore adopted, for that portion of its business, the provisions of Statement of Financial Accounting Standards No. 101 (FAS 101), "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71" and Emerging Issues Task Force Issue 97-4 (EITF)(Issue 97-4), Deregulation of the Pricing of Electricity - Issues Related to the Application of FASB Statement No. 71 "Accounting for the Effects of Certain Types of Regulation" and No. 101 "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71."

CURRENCY TRANSLATION

In accordance with Statement of Financial Accounting Standards No. 52 (FAS 52), "Foreign Currency Translation," balance sheet accounts of foreign operations are translated from foreign currencies into US dollars at year-end rates, while income statement accounts are translated at the average month-end exchange rates for the relevant period. The resulting translation adjustments are included in Accumulated other comprehensive income/(loss), net of deferred taxes, on the Consolidated Balance Sheets. Gains and losses resulting from foreign currency transactions are included in Net Income.

REVENUES

GPU recognizes operating revenues for services rendered to the end of the relevant accounting period. Therefore, the electric operating revenues of GPU Electric and the GPU Energy companies include an estimate for unbilled revenues.

MYR recognizes revenue on construction contracts using the percentage-of-completion accounting method determined in each case by the ratio of cost incurred to date on the contract (excluding uninstalled direct materials) to management's estimate of the contract's total cost. Contract cost includes all direct material, subcontract and labor costs and those indirect costs related to contract performance, such as supplies, tool repairs and depreciation. MYR charges selling, general and administrative costs, including indirect costs associated with maintaining district offices, to expense as incurred.

Provisions for estimated losses on uncompleted contracts are recorded in the period in which such losses are determined. Changes in estimated revenues and costs are recognized in the periods in which such estimates are revised. Significant claims are included in revenue in accordance with industry practice.

The asset, "Costs and estimated earnings in excess of billings on uncompleted contracts," represents revenues recognized in excess of amounts billed. The liability, "Billings in excess of costs and estimated earnings on uncompleted contracts," represents amounts billed in excess of revenues recognized.

CLASSIFICATION OF CURRENT ASSETS AND CURRENT LIABILITIES

The length of MYR's contracts vary, with some larger contracts exceeding one year. In accordance with industry practice, MYR includes in current assets and current liabilities amounts realizable and payable under contracts which may extend beyond one year.

DEFERRED COSTS

JCP&L recovers its prudently incurred generation-related costs, including nonutility generation (NUG) costs, through a Basic Generation Service (BGS) charge and a Market Transition Charge (MTC), and defers any differences between actual costs and amounts recovered from customers through rates. Met-Ed and Penelec use deferred accounting for the above-market portion of NUG costs which are collected through the Competitive Transition Charge (CTC).

On November 29, 2000, Met-Ed and Penelec filed a petition with the PaPUC seeking recovery of their power purchase costs in excess of established rate caps. Currently, Met-Ed and Penelec do not have authority to defer these costs for future recovery. The PaPUC consolidated this petition for consideration with the GPU/FirstEnergy Corp. (FirstEnergy) merger proceeding, which establishes a May 2001 date for a PaPUC order in both cases, based on the current merger procedural schedule.

UTILITY PLANT

Prior to the sale of the Oyster Creek Nuclear Generation Station (Oyster Creek) in 2000, the plant was written down to its sale price of $10 million. All other utility plant, including the GPU Energy companies' remaining generation plants, and additions are valued at cost. The assets of acquired companies are carried at their fair value as of the acquisition date, less accumulated depreciation.

DEPRECIATION

GPU generally provides for depreciation at annual rates determined and revised periodically, on the basis of studies, to be sufficient to depreciate the original cost of depreciable property over estimated remaining service lives, which are generally longer than those employed for tax purposes.

These rates, on an aggregate composite basis, resulted in annual rates as follows:

	GPU	JCP&L	Met-Ed	Penelec
2000	3.16%	3.30%	2.87%	2.72%
1999	2.96%	2.94%	3.01%	2.81%
1998	3.43%	3.65%	3.53%	3.25%

GPU GasNet uses the volumetric depreciation method to amortize the cost of its gas pipeline.

AMORTIZATION POLICIES

Accounting for TMI-2 and Forked River Investments:

At December 31, 2000, $55 million is included in Regulatory assets, net on the Consolidated Balance Sheets for JCP&L's investment in Three Mile Island Unit 2 (TMI-2). JCP&L is collecting annual revenues for the amortization of TMI-2 of $9.6 million. This level of revenue will be sufficient to recover the remaining investment by 2008. Met-Ed and Penelec have collected all of their TMI-2 investment attributable to retail customers. At December 31, 2000, $48 million is included in Regulatory assets, net on the Consolidated Balance Sheets for JCP&L's Forked River project. JCP&L is collecting annual revenues for the amortization of this project of $11.2 million, which will be sufficient to recover its remaining investment by 2006. Because JCP&L has not been provided revenues for a return on the unamortized balances of the damaged TMI-2 facility and the cancelled Forked River project, these investments are being carried at their discounted present values.

Nuclear Fuel:

Prior to the sale of Three Mile Island Unit 1 (TMI-1) in 1999 and Oyster Creek in 2000, the GPU Energy companies amortized nuclear fuel on a unit-of-production basis and rates were determined and periodically revised to amortize the cost of the fuel over its useful life.

At December 31, 2000 and 1999, the liability of the GPU Energy companies for future contributions to the Federal Decontamination and Decommissioning Fund for the cleanup of uranium enrichment plants operated by the Federal Government amounted to $22 million (JCP&L $14 million; Met-Ed $5 million; Penelec $3 million) and $25 million (JCP&L $15 million; Met-Ed $7 million; Penelec $3 million), respectively, and is primarily reflected in Deferred Credits and Other Liabilities - Other. Annual contributions, which began in 1993, are being made over a 15-year period. JCP&L is recovering these costs from customers through its BGS and MTC rates. Met-Ed and Penelec are not recovering these costs in rates.

Goodwill:

Goodwill, resulting from GPU's purchase of various businesses, is recorded on the Consolidated Balance Sheets and amortized to expense, on a straight-line basis, over its useful life not to exceed 40 years. Goodwill amortization expense amounted to $54.7 million, $51.6 million and $14 million for the years ended December 31, 2000, 1999 and 1998, respectively. GPU periodically reviews undiscounted projections of future cash flows from operations to assess whether any potential intangible impairment exists on its goodwill. For additional information of goodwill resulting from acquisitions, see Note 7, Acquisitions.

NUCLEAR FUEL DISPOSAL FEE

The GPU Energy companies are providing for estimated future disposal costs for spent nuclear fuel at Oyster Creek and TMI-1 in accordance with the Nuclear Waste Policy Act of 1982. The GPU Energy companies entered into contracts in 1983 with the US Department of Energy (DOE) for the disposal of spent nuclear fuel. For a discussion of the DOE's current inability to begin acceptance of spent nuclear fuel from the GPU Energy companies and other standard contract holders, see Note 12, Commitments and Contingencies.

The total liability under these contracts, including interest, at December 31, 2000, all of which relates to spent nuclear fuel from nuclear generation through April 1983, amounted to $210.1 million (JCP&L $157 million; Met-Ed $35.4 million; Penelec $17.7 million), and is reflected in Deferred Credits and Other Liabilities - Other. As the actual liability is substantially in excess of the amount recovered to date from ratepayers, the GPU Energy companies have reflected such excess in Regulatory assets, net.

The distribution rates presently charged to customers provide for the collection of these costs, plus interest, over a remaining period of seven years for JCP&L. For Met-Ed and Penelec, these costs are a component of their respective CTC. The GPU Energy companies' current rates provide for the recovery of costs for spent nuclear fuel disposal costs resulting from nuclear generation subsequent to April 1983.

INCOME TAXES

GPU files a consolidated federal income tax return. All participants are jointly and severally liable for the full amount of any tax, including penalties and interest, which may be assessed against the group.

Deferred income taxes, which result primarily from purchase accounting adjustments, liberalized depreciation methods, deferred costs, decommissioning funds and discounted Forked River and TMI-2 investments, reflect the impact of temporary differences between the amounts of assets and liabilities recognized for financial reporting purposes and the amounts recognized for tax purposes. Investment tax credits (ITC) are amortized over the estimated service lives of the related facilities.

CARRYING AMOUNTS OF FINANCIAL INSTRUMENTS

The carrying amounts of Temporary cash investments, Special deposits, Securities due within one year and Notes payable on the Consolidated Balance Sheets approximate fair value due to the short period to maturity. The carrying amounts of the Nuclear decommissioning trusts and Nuclear fuel disposal trust, whose assets are invested in cash equivalents and debt and equity securities, also approximate fair value.

DERIVATIVE INSTRUMENTS

GPU's use of derivative instruments is intended to manage the risk of price, interest rate and foreign currency fluctuations. GPU does not intend to hold or issue derivative instruments for trading purposes.

Commodity Derivatives:

The GPU Energy companies use New York Mercantile Exchange (NYMEX) futures and Over-the-Counter (OTC) forward contracts and options on forward contracts to manage the risk of fluctuations in the market price of electricity. The GPU Energy companies also manage the natural gas requirements of certain NUG facilities that generate and sell energy to JCP&L under long-term contracts. These commodity derivatives qualify for hedge accounting treatment under current accounting rules since price movements of the commodity derivatives are highly correlated with the underlying hedged commodities and the transactions are designated as hedges at inception. Accordingly, under the deferral method of accounting, gains and losses related to commodity derivatives are recognized in Power purchased and interchanged in the Consolidated Statements of Income when the hedged transaction closes or if the commodity derivative is no longer sufficiently correlated. Prior to income or loss recognition, deferred gains and losses relating to these transactions are recorded in Current Assets or Current Liabilities in the Consolidated Balance Sheets.

Interest Rate Swap Agreements:

Penelec and GPU Electric (through GPU GasNet and GPU Power UK) use interest rate swap agreements to manage the risk of increases in variable interest rates. As of December 31, 2000, these agreements covered approximately $528 million (Penelec $50 million; GPU Electric $478 million) of debt, and were scheduled to expire on various dates through June 2006. Differences between the amounts paid and received under interest rate

swaps are recorded as adjustments to the interest expense of the underlying debt since the swaps are related to specific assets, liabilities or anticipated transactions. All of the agreements effectively convert variable rate debt to fixed rate debt. For the year ended December 31, 2000, fixed rate interest expense exceeded variable rate interest by approximately $0.3 million (Penelec $0.1 million; GPU Electric $0.2 million).

Currency Swap Agreements:

GPU Electric uses currency swap agreements to manage currency risk caused by fluctuations in the US dollar exchange rate related to debt issued in the US by Avon Energy Partners Holdings (Avon). These swap agreements effectively convert principal and interest payments on this US dollar debt to fixed sterling principal and interest payments, and expire on the maturity dates of the bonds. Interest expense is recorded based on the fixed sterling interest rate. As of December 31, 2000, these currency swap agreements covered £517 million (US $850 million) of debt. Interest expense would have been £37.8 million (US $57.3 million) as compared to £38.6 million (US $58.4 million) for the year ended December 31, 2000 had these agreements not been in place.

ENVIRONMENTAL LIABILITIES

GPU may be subject to loss contingencies resulting from environmental laws and regulations, which include obligations to mitigate the effects on the environment of the disposal or release of certain hazardous wastes and substances at various sites. GPU records liabilities (on an undiscounted basis) for hazardous waste sites where it is probable that a loss has been incurred and the amount of the loss can be reasonably estimated and adjusts these liabilities as required to reflect changes in circumstances.

STATEMENTS OF CASH FLOWS

For the purpose of the consolidated statements of cash flows, temporary investments include all unrestricted liquid assets, such as cash deposits and debt securities, with maturities generally of three months or less. Cash flows are reported using the US dollar equivalent of the functional currencies in effect at the time of the cash transaction. The effect of exchange rate changes on cash balances held in foreign currencies are reported as a separate line item on the Consolidated Statements of Cash Flows.

Avon and GPU Power UK have a formal agreement with a United Kingdom bank, under which they maintain available cash balances in a number of subsidiary bank accounts and an overdraft in the main GPU Power UK operating account. The overdraft balance was $276.5 million as of December 31, 2000, while total cash at GPU Power UK was $314.3 million. Since GPU Power UK manages the overdraft balance in such a way that it does not exceed the available cash balances in the other associated accounts, no interest or fees are paid under this arrangement. In effect, GPU Power UK uses the overdraft facility to utilize the available cash in the other bank accounts. The overdraft position and the offsetting cash balances subject to this arrangement are shown on the Consolidated Balance Sheets in Bank overdraft and Cash and temporary cash investments, respectively.

2. SHORT-TERM BORROWING ARRANGEMENTS

At December 31, 2000 and 1999, short-term debt outstanding consisted of the following:

		2000		1999	
Company	Facility	Balance Outstanding (in millions)	Weighted Avg. Rate	Balance Outstanding (in millions)	Weighted Avg. Rate

GPU, Inc.	Bank Loans	$ 113	7.2%	$ 123	7.0%
JCP&L	Bank Loans	2	7.0	-	-
	Commercial Paper	27	7.4	-	-
Met-Ed	Commercial Paper	47	6.8	-	-
Penelec	Commercial Paper	56	6.7	54	6.9
MYR	Bank Loans	36	7.2	-	-
GPU Electric	Bank Loans	476	7.0	366	6.1
	Commercial Paper/ Medium Term Notes	724	8.0	1,218	6.5
	Total	$1,481		$1,761	

GPU's weighted average interest rate on the short-term borrowings was 7.5% and 6.5% at December 31, 2000 and 1999, respectively.

GPU has various credit facilities in place, the most significant of which are discussed below. These credit facilities generally provide GPU bank loans at negotiated market rates. In addition, commitment fees or facility fees are determined by market rates at the time the facility is put in place, and can change based on the borrower's current bond rating.

In recent months, certain aspects of California's restructuring plan have created instability and price volatility in the electricity market, negatively affecting the California electric utilities. These utilities have defaulted on various contractual and financial obligations and have experienced rapid deterioration of their credit quality. Reaction of the financial markets, which did not anticipate the rapid deterioration of the California utilities' financial condition, has included a careful review of overall credit exposure to the electric utility industry.

Furthermore, Met-Ed's and Penelec's energy cost exposure related to their provider of last resort (PLR) obligation in Pennsylvania has negatively affected Met-Ed's and Penelec's earnings. Consequently, the amount of new financing capacity available to GPU, Inc. or its subsidiaries may be less than it had previously been and renewal or refinancing of existing credit facilities will likely require GPU's acceptance of higher pricing and/or more restrictive terms and conditions. The credit facilities that expire in 2001 include: $465 million available to GPU, Inc. and the GPU Energy companies under a $250 million revolving credit agreement and various committed bank lines of credit; $1 billion under GPU Capital, Inc.'s (GPU Capital) senior revolving credit agreement; $180 million under GPU Australia Holdings, Inc.'s (GPU Australia Holdings) senior revolving credit agreement; and $366 million under EI UK Holdings, Inc.'s two year term loan agreement.

In addition, primarily as a result of these conditions (the companies' PLR exposure and the negative publicity surrounding the California utilities), in early 2001 Met-Ed and Penelec began experiencing difficulty in selling their commercial paper with maturities longer than overnight. Under normal circumstances, they issue commercial paper having maturities of up to 30 days or longer, if desired. As a result, Met-Ed and Penelec have temporarily withdrawn from the commercial paper market, and instead have resorted to borrowing against their various bank lines of credit.

GPU, Inc. and GPU Energy companies

GPU, Inc. and the GPU Energy companies have available $465 million of short-term borrowing facilities, which include a $250 million revolving credit agreement and various bank lines of credit. In addition, GPU, Inc., JCP&L, Met-Ed and Penelec can issue commercial paper in amounts of up to $100 million, $150 million, $75 million and $100 million, respectively. From these sources, GPU, Inc. has regulatory authority to have $250 million outstanding at any one time. JCP&L, Met-Ed and Penelec are limited by their

charters or SEC authorization to $266 million, $150 million and $150 million, respectively, of short-term debt outstanding at any one time. As of December 31, 2000, GPU, Inc. and the GPU Energy companies had $113 million and $132 million (JCP&L $29 million; Met-Ed $47 million; Penelec $56 million), respectively, of short-term debt outstanding.

GPU Electric

GPU Capital has a $1 billion 364-day senior revolving credit agreement due in November 2001 supporting the issuance of commercial paper for its $1 billion commercial paper program, which has been established to fund GPU, Inc. and GPU Electric acquisitions. GPU, Inc. has guaranteed GPU Capital's obligations under this program. At December 31, 2000 and 1999, $633 million and $768 million was outstanding under this commercial paper program, respectively, and included in Notes payable on the Consolidated Balance Sheets. In early 2001, GPU Capital refinanced the majority of this outstanding commercial paper through its standby revolving credit agreement.

GPU Electric has a $150 million credit facility due in May 2002 to accommodate short-term borrowing needs. The facility is guaranteed by GPU, Inc. and there were no outstanding borrowings as of December 31, 2000.

GPU Australia Holdings has $180 million available under its senior revolving credit facility, which expires in November 2001. This facility is guaranteed by GPU, Inc. In 2000, GPU Australia Holdings borrowed $176 million under this facility, which is included in Notes payable on the Consolidated Balance Sheet, to repay all outstanding obligations under its $180 million commercial paper program. There were no outstanding borrowings under this revolving credit facility as of December 31, 1999.

The above-mentioned GPU Australia Holdings commercial paper program is supported by GPU, Inc. credit facilities and GPU, Inc. has also guaranteed all obligations under this program. At December 31, 1999, $182 million was outstanding under this commercial paper program and included in Notes payable on the Consolidated Balance Sheet. No borrowings were outstanding at December 31, 2000.

In August 2000, GPU GasNet entered into a A$750 million (US $417 million) commercial paper program to refinance maturing bank debt. In addition, GPU GasNet established a A$750 million (US $417 million) credit facility to serve as a backstop for this commercial paper program. At December 31, 2000, there was A$250 million (US $139 million) of commercial paper outstanding under this program and included in Long-term debt on the Consolidated Balance Sheet since it is management's intent to reissue this amount of commercial paper on a long-term basis.

GPU Power UK maintains a £150 million (approximately US $224 million) revolving credit facility with six banks for working capital purposes, which expires at various dates through June 2005. At December 31, 2000 and 1999, there was £60 million (US $90 million) and £87 million (US $140 million) outstanding under this facility, respectively, which is included in Notes payable on the Consolidated Balance Sheets.

In addition, GPU Power UK maintains an ongoing £75 million (US $112 million) bank facility for working capital purposes. Outstanding borrowings are collateralized by portions of trade accounts receivable. At December 31, 2000 and 1999, £75 million (US $112 million) and £75 million (US $121 million) was outstanding under this facility, respectively, which is included in Notes payable on the Consolidated Balance Sheets.

MYR

MYR maintains a $50 million revolving credit facility, which expires in November

2003, of which up to $10 million is available for the issuance of standby letters of credit. As of December 31, 2000, $36 million was outstanding under this facility and included in Notes payable on the Consolidated Balance Sheet.

3. **LONG-TERM DEBT**

At December 31, 2000 and 1999, long-term debt outstanding consisted of the following:

GPU, Inc. and Subsidiary Companies

2000	Maturities	Interest Rates	(in millions) Total Debt Outstanding	Due Within One Year
GPU Energy companies, GPUS & GPU, Inc.:				
First mortgage bonds	2001-2027	5.35-9.20%	**$1,695** (1)	**$ 40**
Senior notes	2002-2019	5.75-7.77%	**441** (2)	**-**
Other long-term debt	2001-2039	7.05-7.69%	**334**	**22**
GPU Electric:				
Bank loans	2001-2014	5.98-10.5%	**1,184**	**912**
Bonds	2002-2008	7.38-7.46%	**983**	**-**
Commercial paper/Medium term notes	2001-2003	5.98-10.5%	**222** (3)	**-**

GPU, Inc.	-	-	-	-	300
GPUS	22	-	-	-	-
Total	$981	$573	$422	$342	$422

At December 31, 2000, EI UK Holdings, Inc. had long-term debt outstanding of £245 million (US $366 million) under its £245 million credit facility, a portion of which is guaranteed by GPU, Inc.

As discussed in Note 2, Short-Term Borrowing Arrangements, the amount of new financing capacity available to GPU, Inc. or its subsidiaries may be less than it had previously been and renewal or refinancing of existing credit facilities will likely require GPU's acceptance of higher pricing and/or more restrictive terms and conditions.

The fair value of long-term debt is estimated based on the quoted market prices for the same or similar issues or on the current rates offered to GPU for debt of the same remaining maturities and credit qualities. The estimated fair value of GPU's long-term debt, including amounts due within one year, as of December 31, 2000 and 1999 is as follows:

(in millions)

	2000		1999	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value

4. PREFERRED SECURITIES

Cumulative Preferred Stock: (a)

JCP&L

Cumulative preferred stock, without par value, 15,600,000 shares authorized, 748,334 and 965,000 shares issued and outstanding in 2000 and 1999, respectively.

	(in thousands) 2000	1999
Cumulative preferred stock - with mandatory redemption (b)(c)(d):		
8.65% Series J, 333,334 and 500,000 shares at 12/31/00 and 12/31/99, respectively	$33,333	$50,000
7.52% Series K, 290,000 and 340,000 shares at 12/31/00 and 12/31/99, respectively	29,000	34,000
Subtotal	62,333	84,000
Amounts due within one year (d)	(10,833)	(10,833)
Total cumulative preferred stock - with mandatory redemption	$51,500	$73,167
Cumulative preferred stock - without mandatory redemption (c)(e):		
4% Series, 125,000 shares, callable at $106.50 a share	$12,500	$12,500
Premium on cumulative preferred stock	149	149
Total cumulative preferred stock - without mandatory redemption	$12,649	$12,649

(a) In 1999, Met-Ed and Penelec redeemed all of their outstanding shares of cumulative preferred stock for $12.5 million and $17.4 million, respectively. At December 31, 2000 and 1999, the GPU Energy companies were authorized to issue 37,035,000 of cumulative preferred stock. If dividends on any of the cumulative preferred stock of JCP&L are in arrears for four quarters, the holders of cumulative preferred stock, voting as a class, are entitled to elect a majority of the Board of Directors until all dividends in arrears have been paid. If JCP&L has failed to pay dividends in full on any outstanding shares of cumulative preferred stock, thereafter and until dividends in full on all such shares of cumulative preferred stock have been paid, or declared and set apart for payment, for all past quarterly dividend periods, JCP&L shall not redeem any cumulative preferred stock unless all the shares of cumulative preferred stock outstanding are redeemed and shall not purchase or otherwise acquire for value any shares of cumulative preferred stock except in accordance with an offer (which may vary with respect to shares of different series) made to all holders of share of cumulative preferred stock.

(b) The 7.52% and 8.65% Series are callable at various prices above their stated values beginning in 2002 and 2000, respectively. Pursuant to mandatory sinking fund provisions, the 7.52% Series is to be redeemed ratably over the next fourteen years. The 8.65% Series is to be redeemed ratably over the next four years.

(c) During 2000, JCP&L redeemed $5 million stated value of its 7.52% cumulative preferred stock and $16.7 million stated value of its 8.65% cumulative preferred stock pursuant to mandatory and optional sinking fund provisions. During 1999, JCP&L redeemed all of its outstanding shares of 7.88% cumulative preferred stock with a stated value of $25 million and $5 million stated value of its 7.52% cumulative preferred stock pursuant to mandatory and optional sinking fund provisions. JCP&L's total redemption cost for 2000 and 1999 was $21.7 million and $30.9 million, respectively.

(d) The shares with mandatory redemption have redemption requirements of $10.8 million for each year of the next four years, and $2.5 million in year five. The fair value of the preferred stock with mandatory redemption, including amounts due within one year, based on market price quotations at December 31, 2000 and 1999, was $65.6 million and $86.5 million, respectively.

(e) The outstanding shares of preferred stock without mandatory redemption are callable at various prices above their stated values. At December 31, 2000, JCP&L could call the 4% Series for $13.3 million.

Subsidiary-Obligated Mandatorily Redeemable Preferred Securities:

JCP&L Capital, L.P., Met-Ed Capital, L.P. and Penelec Capital, L.P. are special-purpose partnerships in which a subsidiary of JCP&L, Met-Ed and Penelec, respectively, is the sole general partner. In 1995, JCP&L Capital, L.P. issued $125 million at 8.56% (5 million shares at $25 per share) of mandatorily redeemable preferred securities (MIPS) and in 1994, Met-Ed Capital, L.P. and Penelec Capital, L.P. issued $100 million at 9% (4 million shares at $25 per share) and $105 million at 8.75% (4.2 million shares at $25 per share), respectively, of MIPS. The proceeds were loaned to JCP&L, Met-Ed and Penelec, respectively, which, in turn, issued their deferrable interest subordinated debentures to the partnerships. In 1999, Met-Ed and Penelec redeemed all of their outstanding shares of MIPS for $100 million and $105 million, respectively. At December 31, 2000, JCP&L's outstanding shares of MIPS had a fair value of $122.2 million.

The MIPS of JCP&L Capital, L.P. mature in 2044 and are redeemable at the option of JCP&L beginning in May of 2000 at 100% of their principal amount. JCP&L has fully and unconditionally guaranteed payment of distributions, to the extent there is sufficient cash on hand to permit such payments and legally available funds, and payments on liquidation or redemption of its Preferred Securities. Distributions on the MIPS (and interest on the subordinated debentures) may be deferred for up to 60 months, but JCP&L may not pay dividends on, or redeem or acquire, any of its cumulative preferred or common stock until deferred payments on its subordinated debentures are paid in full.

Subsidiary-Obligated Trust Preferred Securities:

In 1999, Met-Ed Capital Trust, a wholly-owned subsidiary of Met-Ed, issued $100 million of trust preferred securities (Met-Ed Trust Preferred Securities) at 7.35%, due 2039. The sole assets of Met-Ed Capital Trust are the 7.35% Cumulative Preferred Securities of Met-Ed Capital II, L.P. (Met-Ed Partnership Preferred Securities) and its only revenues are the quarterly cash distributions it receives on the Met-Ed Partnership Preferred Securities. Each Met-Ed Trust Preferred Security represents a Met-Ed Partnership Preferred Security. Met-Ed Capital II, L.P. is a wholly-owned subsidiary of Met-Ed and the sponsor of Met-Ed Capital Trust. The sole assets of Met-Ed Capital II, L.P. are Met-Ed's 7.35% Subordinated Debentures, Series A, due 2039, which have an aggregate principal amount of $103.1 million. Met-Ed has fully and unconditionally guaranteed the Met-Ed Partnership Preferred Securities, and, therefore, the Met-Ed Trust Preferred Securities.

million of trust preferred securities (Penelec Trust Preferred Securities) at 7.34%, due 2039. The sole assets of Penelec Capital Trust are the 7.34% Cumulative Preferred Securities of Penelec Capital II, L.P. (Penelec Partnership Preferred Securities) and its only revenues are the quarterly cash distributions it receives on the Penelec Partnership Preferred Securities. Each Penelec Trust Preferred Security represents a Penelec Partnership Preferred Security. Penelec Capital II, L.P. is a wholly-owned subsidiary of Penelec and the sponsor of Penelec Capital Trust. The sole assets of Penelec Capital II, L.P. are Penelec's 7.34% Subordinated Debentures, Series A, due 2039, which have an aggregate principal amount of $103.1 million. Penelec has fully and unconditionally guaranteed the Penelec Partnership Preferred Securities, and, therefore, the Penelec Trust Preferred Securities.

The fair value of the Met-Ed and Penelec Trust Preferred Securities at December 31, 2000 was $96.5 million and $97 million, respectively.

5. STOCKHOLDERS' EQUITY

The following table presents information relating to the common stock ($2.50 par value) of GPU, Inc.:

	2000	1999	1998
Authorized shares	**350,000,000**	350,000,000	350,000,000
Issued shares	**132,783,338**	132,783,338	132,783,338
Reacquired shares	**13,343,387**	11,017,798	4,787,657
Outstanding shares	**119,439,951**	121,765,540	127,995,681
Outstanding restricted units	**312,520**	283,602	268,360
Outstanding stock options	**1,175,069**	389,250	335,950

In 2000, GPU, Inc. reacquired 2.8 million shares of common stock at a total cost of $71.9 million.

At December 31, 2000 and 1999, the following issues of common stock were outstanding:

	(in thousands) 2000	1999
GPU, Inc.		
Common stock, par value $2.50 per share	**$331,958**	$331,958
JCP&L

Penelec		
Common stock, par value $20 per share,		

5,400,000 shares authorized, 5,290,596 shares issued and outstanding	$105,812	$105,812

Pursuant to the 1990 Employee Stock Plan (as restated to reflect amendments through June 1, 2000), awards may be granted in the form of incentive stock options, nonqualified stock options, restricted shares of common stock, performance units and stock appreciation rights, which may accompany options.

In 2000, GPU, Inc. granted stock options to officers and selected employees to purchase 722,700 shares at $29.25 per share. During the year, 17,100 of these options were forfeited leaving a total of 705,600 outstanding at December 31, 2000. Also in 2000, as part of the acquisition of MYR, options held by MYR employees to purchase MYR stock were converted to 97,524 options to purchase GPU, Inc. common stock. The average exercise price of the 97,524 options is $9.93 per share and 6,305 of these options were exercised at an average price of $4.90 during 2000. No additional options were exercised in 2000. In 1999, GPU, Inc. granted stock options to officers to purchase 90,600, 1,000 and 1,000 shares at $42.9375, $34.50 and $34.6875 per share, respectively. In 1998, GPU, Inc. granted stock options to officers to purchase 305,950 and 30,000 shares at $36.625 per share and $44.25 per share, respectively. In 2000, 7,300 and 3,700 options exercisable at $36.625 and $42.9375 per share, respectively, were forfeited. No options were exercised in 1999 and 1998.

At December 31, 2000 and 1999, there were 274,892 and 101,607 options exercisable at weighted average exercise prices of $32.66 and $37.38 per option, respectively. There were no options exercisable at December 31, 1998. All options, other than the MYR converted options have an exercise price equal to the fair market per share value of GPU, Inc. common stock on the grant date. All options vest in three equal annual installments, have a 10-year term and are exercisable in accordance with the terms set forth in the Stock Option Agreement. In the event of a change in control of GPU during the option term (which would include GPU, Inc.'s proposed merger with FirstEnergy), all options would immediately become exercisable. The weighted-average remaining contractual life of options outstanding as of December 31, 2000 was 8.7 years.

The weighted average fair value of options granted during 2000, 1999 and 1998 was $4.60, $6.60 and $4.41 per option, respectively. The options were valued using the Black-Scholes pricing model. For the years 2000, 1999 and 1998, the assumptions used in these valuations were as follows: a risk-free rate of return of 6.38%, 6.14% and 5.70%, respectively; a stock price volatility of 23.5%, 20.21% and 17.36%, respectively; an average dividend yield of 5.71%, 5.42% and 5.67%, respectively; and the exercise of all options on the final day of their 10-year terms.

Also pursuant to the 1990 Employee Stock Plan, in 2000, 1999 and 1998, GPU, Inc. issued performance units to officers and selected employees representing rights to receive shares of common stock, on a one-for-one basis, at the end of the restriction period. The number of shares eventually issued will depend upon the degree to which GPU's performance goals have been met for the performance period and could range from 0% to 200% of the originally awarded units plus additional units resulting from reinvested dividend equivalents. These performance units vest on a pro-rata basis over three or five years. In the event of a change in control of GPU during the performance period (which would include GPU, Inc.'s proposed merger with FirstEnergy), all performance units would immediately vest within the range of 100% to 200% of the original units awarded.

Since 1997, pursuant to the Deferred Stock Unit Plan for Outside Directors, restricted units were issued to outside directors representing rights to receive shares of GPU, Inc. common stock, on a one-for-one basis. All restricted units are considered common stock equivalents and, accordingly, are reflected in the computation of diluted

Penelec	2000	1999
Net unrealized gain on investments (1)	$ 23	$ 10,619
Minimum pension liability	-	-
Accumulated other comprehensive income	$ 23	$ 10,619

(1) The change in the net unrealized gain on investments includes the reclassification of previously unrealized gains totaling $31.8 million (Met-Ed $21.2 million; Penelec $10.6 million), from Accumulated other comprehensive income to Regulatory assets, net on the Consolidated Balance Sheets. See Nuclear Plant Retirement Costs section of Note 12, Commitments and Contingencies.

The components of the change in accumulated other comprehensive income/(loss), and the related tax effects, for the years 2000, 1999 and 1998 are as follows:

6. ACCOUNTING FOR EXTRAORDINARY AND NON-RECURRING ITEMS

GPU PowerNet Sale (2000):

In June 2000, GPU, Inc. sold GPU PowerNet, its Australian electric transmission company, to SPI for A$2.1 billion (approximately US $1.26 billion). As part of the sales price, SPI assumed liability for A$230 million (US $137.8 million) of medium term notes. A significant portion of the net proceeds from the sale were used to repay debt in 2000, and the remaining proceeds have been placed in a trust and will be used to further reduce debt. As a result of the sale, GPU recorded in Operating Income on the Consolidated Statement of Income, a pre-tax loss in the quarter ended June 30, 2000 of $372 million ($295 million after-tax, or $2.43 per share), including a $94 million foreign currency loss. During the fourth quarter 2000, there was a change in the estimated tax benefits, which reduced GPU's after-tax loss on the sale to $276.6 million, or $2.28 per share.

GPU International, Inc. (GPUI) Sale (2000):

In December 2000, GPU, Inc. sold GPUI to Aquila for $225 million. The sale included GPUI's interests in six domestic operating plants and one development stage project. The net proceeds from the sale were used primarily to reduce debt at GPU Capital.

As a result of the sale, GPU realized a pre-tax gain of $133 million ($89.2 million after-tax, or $0.73 per share).

Restructured Power Purchase Agreement (2000):

In June 1998, Onondaga Cogeneration L.P. (Onondaga), a GPUI independent power project, and Niagara Mohawk Power Corporation (NIMO) renegotiated their existing power purchase agreement and entered into a 10-year indexed swap agreement and power put.

In September 2000 (prior to the sale of GPUI), Onondaga terminated its rights under the power put thereby terminating all agreements Onondaga had with NIMO to sell energy and capacity under the restructured power purchase agreement. As a result, in 2000, a net pre-tax gain of $42.8 million ($27.8 million after-tax, or $0.23 per share) was recorded in Other Income and Deductions on the Consolidated Statement of Income, as follows: the deferred gain of $86.7 million pre-tax related to the restructured power purchase agreement with NIMO was recognized in income; and the indexed swap agreement was marked to market and the associated deferred revenue was taken to income resulting in a pre-tax gain of $90.8 million. In addition, as a result of terminating the power put with NIMO and based on information supplied by an outside independent expert, management determined that the Onondaga plant would not operate on an economically profitable basis in the merchant generation market, and that the equipment would be technologically obsolete. As the result of an impairment test performed under Statement of Financial Accounting Standards No. 121 (FAS 121), "Accounting for the Impairment of Long-Lived Assets and for Long-Lived

Assets to Be Disposed Of," using the undiscounted cash flows of the plant's operations, management determined that the plant was impaired, and the carrying value of the plant was written down by $69.1 million pre-tax. Also, as a result of the termination of Onondaga's rights under the power put, a review of firmly committed long-term executory gas transportation contracts was performed and the contracts were determined to be out of market, which resulted in a charge to income of $65.6 million. Management's analysis utilized gas and energy pricing supplied by an independent expert.

In addition, in 2000 a pre-tax charge of $2.5 million ($1.6 million after-tax, or $0.01 per share) was recorded in other operation and maintenance expense for settlement amounts paid in connection with the termination of Onondaga's steam supply agreement.

PaPUC Phase II Order (2000):

On December 20, 2000, the PaPUC issued a Phase II Order providing a final determination of Met-Ed's and Penelec's stranded cost recovery related to the divestiture of their generating assets. The net impact of the Phase II Order was a credit to income of $66.1 million pre-tax (Met-Ed $44.6 million; Penelec $21.5 million), or $40.8 million after-tax (Met-Ed $32 million; Penelec $8.8 million), or $0.34 per share, the major components of which are discussed below.

As a result of the sales of their generating facilities in 1999, Met-Ed and Penelec recognized a pension curtailment gain (per Statement of Financial Accounting Standards No. 88 (FAS 88), "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits," and Statement of Financial Accounting Standards No. 106 (FAS 106), "Employers' Accounting for Postretirement Benefits Other Than Pensions"), associated with employees who were terminated from the companies at the time of the sale. This gain, which amounted to $50.5 million pre-tax (Met-Ed $26.2 million; Penelec $24.3 million), was deferred pending the outcome of the Phase II proceedings. Upon receipt of the Phase II Order, the deferred gain was recognized in income.

In their Phase II filings, Met-Ed and Penelec requested recovery of an additional $303.8 million (Met-Ed $226.3 million; Penelec $77.5 million) of stranded costs. The Phase II Order disallows recovery of $27.9 million (Met-Ed $16 million; Penelec $11.9 million) of this amount. However, Met-Ed and Penelec anticipated a disallowance of a portion of their stranded costs, and established a reserve of $24.9 million (Met-Ed $18.7 million; Penelec $6.2 million) in 1999. Therefore, in 2000, the remaining disallowance of $3 million pre-tax (Met-Ed $(2.7) million; Penelec $5.7 million) was (credited)/charged to income.

Met-Ed requested recovery of stranded costs associated with its leasehold interest in the Merrill Creek Reservoir project. The Phase II Order granted Met-Ed full recovery of these costs. Met-Ed had previously recorded liabilities which were reversed upon review of the Phase II Order. In addition, during the proceedings, certain estimates and assumptions used in calculating the lease expense were revised. The reversal of related liabilities and the changes in estimates and assumptions resulted in a credit to income of $13.8 million pre-tax.

The Phase II Order deferred a decision on Met-Ed's requested rate increase in 2006 for future consideration. The Order also requires Met-Ed and Penelec to seek a ruling from the Internal Revenue Service (IRS) approving the credit to ratepayers of unamortized investment tax credits and excess deferred income tax benefits associated with their divested generating stations, which were recognized in operating income in 1999. If the IRS ruling ultimately supports returning these tax benefits to ratepayers, Met-Ed and Penelec would then reduce stranded costs by $40 million and record a corresponding charge to income.

Generation Asset Divestiture (2000 and 1999):

GPU Energy companies

During 2000 and 1999, the GPU Energy companies completed the sales of substantially all their electric generating facilities. The PaPUC has made a final determination of Met-Ed's and Penelec's stranded cost recovery, as discussed above. The NJBPU, however, has deferred making a final determination of the net proceeds and stranded cost recovery related to JCP&L's generating asset divestitures until an IRS ruling regarding the treatment of associated federal income tax benefits is received.

In August 2000, JCP&L sold Oyster Creek to AmerGen Energy Company, LLC (AmerGen), a joint venture of PECO Energy and British Energy, for approximately $10 million. As a result of the sale, a non-recurring gain of $16.5 million, or $0.13 per share, was recognized in income for the reversal of certain deferred taxes and realization of an investment tax credit related to the sale. If JCP&L receives an IRS ruling that supports returning these tax benefits to ratepayers, JCP&L would then reduce its stranded costs by this amount and record a corresponding charge to income. As part of the sale, AmerGen has assumed full responsibility for decommissioning the plant and JCP&L has transferred $440 million of Oyster Creek decommissioning trust funds to AmerGen, of which approximately $114 million was paid into the trust by JCP&L at closing. JCP&L has agreed to fund the station's outage cost (up to a maximum of $88 million), including the fuel reload, for the refueling outage completed in November 2000. Outage costs of approximately $88 million were incurred, and are presently being reviewed by GPU. AmerGen will repay these outage costs to JCP&L in nine equal annual installments without interest, beginning August 2001. As discussed below, the Oyster Creek plant was written down to its fair market value in 1999.

In 1999, the GPU Energy companies sold TMI-1 to AmerGen for a total purchase price of approximately $100 million. The sale did not have a significant impact on 1999 earnings since TMI-1 had been written down to its fair market value in 1998, resulting in a loss of $528.3 million pre-tax (JCP&L $133.1 million; Met-Ed $270.7 million; Penelec $124.5 million), which was deferred as a regulatory asset.

Penelec sold its 50% interest in the Homer City Station to a subsidiary of Edison Mission Energy for approximately $900 million in 1999. As a result, Penelec recorded a pre-tax gain of $38.2 million ($22.6 million after-tax, or $0.18 per share) for the portion of the gain related to wholesale operations and deferred as a regulatory liability the remaining pre-tax gain of $590.7.

Penelec sold its 20% interest in the Seneca Pumped Storage Hydroelectric Generating Station to The Cleveland Electric Illuminating Company for $43 million in 1999. The sale resulted in a pre-tax gain of $2 million ($1.2 million after-tax, or $0.01 per share) for the portion of the gain related to wholesale operations and the deferral of the remaining pre-tax gain of $30.2 million as a regulatory liability.

In addition, during 1999 the GPU Energy companies completed the sales of their remaining fossil fuel and hydroelectric generating facilities to Sithe Energies (Sithe) for approximately $1.6 billion (JCP&L $416 million; Met-Ed $641 million; Penelec $558 million) (JCP&L's Forked River combustion turbines and 50% interest in Yards Creek, as well as Met-Ed's York Haven hydroelectric station, were not included in the sales). The sales resulted in a pre-tax gain of $22.9 million (Met-Ed $2.4 million; Penelec $20.5 million), or $13.4 million after-tax (Met-Ed $1.4 million; Penelec $12 million), or $0.11 per share, for the portion of the gain related to wholesale operations, and deferral of the remaining pre-tax gain of $706.5 million (Met-Ed $89.1 million; Penelec $317.4 million) as a regulatory liability.

GPU Power UK

Prior to GPU's purchase of the 50% of GPU Power UK it did not already own, GPU Power UK sold its electric supply business to National Power plc for approximately $300 million. As a result, in 1999 GPU recorded a pre-tax gain on the sale of $10.5 million ($6.8 million after-tax, or $0.05 per share).

JCP&L Restructuring Order (1999):

In 1999, the NJBPU issued a Summary Order regarding JCP&L's unbundling, stranded cost and restructuring filings. Accordingly, in 1999 JCP&L discontinued the application of FAS 71 and adopted the provisions of FAS 101 and EITF Issue 97-4 with respect to its electric generation operations. The transmission and distribution operations of JCP&L continue to be subject to the provisions of FAS 71.

In 1999, JCP&L recorded a reduction in operating revenues of $115 million ($68 million after-tax, or $0.54 per share) relating to the Summary Order. This reduction reflects JCP&L's obligation to refund to customers 5% from rates in effect as of April 30, 1997. The refund will be made to customers from August 1, 2002 through July 31, 2003.

Since JCP&L is no longer subject to FAS 71 for the generation portion of its business, GPU performed an impairment test on Oyster Creek in accordance with FAS 121. Management determined that JCP&L's net investment in Oyster Creek, including plant, nuclear fuel and materials and supplies inventories, was impaired. This investment was written down by a total of $678 million pre-tax in 1999 to reflect the plant's fair market value. This impairment, which was recorded as an extraordinary deduction, was reversed and re-established as a regulatory asset since the NJBPU Summary Order provides for rate recovery.

Pennsylvania Restructuring Orders (1998):

In 1998, Met-Ed and Penelec received PaPUC Restructuring Orders which, among other things, essentially removed from regulation the costs associated with providing electric generation service to Pennsylvania consumers, effective January 1, 1999. Accordingly, in 1998 Met-Ed and Penelec discontinued the application of FAS 71 and adopted the provisions of FAS 101 and EITF Issue 97-4 with respect to their electric generation operations. The transmission and distribution operations of Met-Ed and Penelec continue to be subject to the provisions of FAS 71.

As a result of the Restructuring Orders, Met-Ed and Penelec recorded a pre-tax extraordinary charge of $42.1 million (Met-Ed $11.5 million; Penelec $30.6 million), or $25.8 million after-tax (Met-Ed $6.8 million; Penelec $19 million), or $0.20 per share, and a pre-tax non-recurring charge of $68.5 million (Met-Ed $32.9 million; Penelec $35.6 million), or $40 million after-tax (Met-Ed $19.2 million; Penelec $20.8 million), or $0.32 per share, for customer refunds of 1998 revenues and for the establishment of a sustainable energy fund.

In accordance with FAS 121, impairment tests were performed and determined that the net investment in TMI-1 was impaired at December 31, 1998, resulting in a write-down of $518 million pre-tax (JCP&L $134 million; Met-Ed $257 million; Penelec $127 million) to reflect TMI-1's fair market value. Of the amount written down for TMI-1, $508 million (JCP&L $134 million; Met-Ed $255 million; Penelec $119 million) was deferred as a regulatory asset pending the outcome of the Phase II proceedings and $10 million (Met-Ed $2 million; Penelec $8 million) (the FERC jurisdictional portion) was charged to expense as an extraordinary item in 1998.

7. ACQUISITIONS

MYR Group Inc.

In April 2000, GPU, Inc. acquired MYR for approximately $217.5 million. The fair value of the assets acquired totaled approximately $154.6 million and the amount of liabilities assumed totaled approximately $99.7 million.

MYR, a suburban Chicago-based infrastructure construction services company, provides a complete range of power line and commercial/industrial electrical construction services for electric utilities, telecommunications providers, commercial and industrial facilities and government agencies across the US. MYR also builds cellular towers for the wireless communications market.

The acquisition was partially financed through the issuance of GPU, Inc. short-term debt and was accounted for under the purchase method of accounting. The total acquisition cost exceeded the estimated value of net assets acquired by approximately $162.9 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Empresa Distribuidora Electrica Regional, S.A.

In March 1999, GPU Electric acquired Empresa Distribuidora Electrica Regional, S.A. (Emdersa) for US $375 million. The fair value of the assets acquired totaled approximately $320 million and the amount of liabilities assumed totaled approximately $153 million, including debt of $76 million. Emdersa owns three electric distribution companies that serve three provinces in northwest Argentina.

The acquisition was financed through the issuance of commercial paper by GPU Capital, guaranteed by GPU, Inc., and a $50 million capital contribution from GPU, Inc.

The acquisition was accounted for under the purchase method of accounting. The total acquisition cost exceeded the estimated value of net assets by approximately $208 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Transmission Pipelines Australia

In June 1999, GPU Electric acquired Transmission Pipelines Australia (TPA), a natural gas transmission business, from the State of Victoria, Australia for A$1.025 billion (approximately US $675 million). TPA has been renamed GPU GasNet. The fair value of the assets acquired totaled approximately US $704 million and the amount of liabilities assumed totaled approximately US $116 million.

The acquisition was financed through: (1) an A$750 million (approximately US $495 million) senior credit facility, which is non-recourse to GPU, Inc.; and (2) an equity contribution from GPU Capital of A$275 million (approximately US $180 million) provided through the issuance of commercial paper guaranteed by GPU, Inc.

The acquisition was accounted for under the purchase method. The total acquisition cost exceeded the estimated value of net assets acquired by approximately $88 million. This excess is considered goodwill and is being amortized on a straight-line basis over 40 years.

Midlands Electricity plc (GPU Power UK)

In July 1999, GPU Electric acquired Cinergy's 50% ownership interest in Avon, which

owns GPU Power UK, for £452.5 million (approximately US $714 million). GPU and Cinergy had jointly formed Avon in 1996 to acquire GPU Power UK. The fair value of the assets acquired totaled approximately US $2.1 billion and the liabilities totaled approximately US $1.5 billion, including debt of US $1 billion.

GPU Electric financed the acquisition through a combination of equity and debt. The equity was funded from: (1) a US $250 million contribution from GPU, Inc., and (2) the issuance of US $50 million of commercial paper by GPU Capital, which is guaranteed by GPU, Inc. The debt has been provided through a two-year £245 million (approximately US $382 million) credit agreement entered into by EI UK Holdings, of which GPU, Inc. has guaranteed approximately US $100 million.

As a result of GPU's purchase of Cinergy's 50% ownership in GPU Power UK, effective in the third quarter of 1999, GPU began accounting for GPU Power UK as a consolidated entity, rather than under the equity method of accounting as was previously the practice. Consequently, Goodwill, net on the Consolidated Balance Sheet increased by approximately $1.8 billion in the third quarter of 1999. Of this amount, $1.7 billion relates to the previous 1996 acquisition of GPU Power UK by GPU and Cinergy and approximately $119 million represents goodwill resulting from GPU's purchase of Cinergy's 50% share of GPU Power UK. The goodwill is being amortized on a straight-line basis over 40 years.

Pro Forma Information (1999 Acquisitions)

The consolidated unaudited pro forma results of operations for 1999 and 1998 present information assuming Emdersa, GPU GasNet and the 50% of GPU Power UK (that GPU did not already own) were acquired January 1, 1998. The pro forma amounts include certain adjustments, primarily to recognize interest expense, amortization of goodwill and depreciation of assets having stepped-up bases, and are not necessarily indicative of the actual results that would have been realized had the acquisitions occurred on the assumed date of January 1, 1998, nor are they necessarily indicative of future results. The consolidated unaudited pro forma information is as follows for 1999 and 1998, respectively: operating revenues of $6 billion and $6.9 billion; income before extraordinary item of $493 million and $442 million; net income of $493 million and $416 million; basic and diluted earnings per share before extraordinary item of $3.94 and $3.47; and basic and diluted earnings per share of $3.94 and $3.27.

8. INCOME TAXES

As of December 31, 2000 and 1999, Regulatory assets, net on the Consolidated Balance Sheets reflected $301 million and $296 million, respectively, of Income taxes recoverable through future rates (primarily related to liberalized depreciation), and Income taxes refundable through future rates of $23 million and $28 million, respectively (related to unamortized ITC), substantially due to the recognition of amounts not previously recorded with the adoption of Statement of Financial Accounting Standards No. 109, "Accounting for Income Taxes," in 1993, as follows:

	(in millions) 2000	1999
Income Taxes Recoverable Through Future Rates:		
JCP&L	$ 18	$ 2
Met-Ed	124	124
Penelec	159	170
Total	$301	$296
Income Taxes Refundable Through Future Rates:

Amount Charged to Income	$109	$259	$170

For the years 2000, 1999 and 1998, JCP&L purchased $14 million, $22 million and $26 million, respectively, of energy from a cogeneration project in which an affiliate has a 50% partnership interest.

10. EMPLOYEE BENEFITS

Pension Plans and Other Postretirement Benefits:

GPU maintains defined benefit pension plans covering substantially all employees. GPU also provides certain retiree health care and life insurance benefits for substantially all US employees who reach retirement age while working for GPU. The following tables provide a reconciliation of the changes in the plans' benefit obligation and fair value of assets for the years ended December 31, 2000 and 1999, a statement of the funded status of the plans, the amounts recognized in the Consolidated Balance Sheets as of December 31, 2000 and 1999 and the weighted average assumptions used in the measurement of the benefit obligation. The pension benefit disclosure amounts for GPU, Inc. and Subsidiary Companies for the year 1999 reflect the acquisition of the remaining 50% of GPU Power UK by GPU in July of that year. Accordingly, the July 1999 benefit obligation and fair value of plan assets balances for GPU Power UK are shown next to the line items entitled "Acquisitions" and the post-acquisition amounts occurring in the second half of 1999 are included in the tables.

Expected return on plan assets	9.25%	8.5%	9.25%	8.5%
Rate of compensation increase	-	4.5%	-	-

The following tables provide the components of net periodic pension and other postretirement benefit costs. As previously discussed, the 1999 net periodic pension cost for GPU, Inc. and Subsidiary Companies reflects post-acquisition amounts related to GPU Power UK for the second half of the year.

Pension Plans:

GPU, Inc. and Subsidiary Companies

	(in millions) 2000	1999	1998
Service cost	$ 37.0	$ 46.2	$ 36.1
Interest cost	201.8	158.0	121.6
Expected return on plan assets	(273.9)	(198.0)	(140.1)
Amortization of transition (asset)/obligation	(0.5)	(0.5)	(0.5)
Other amortization	(12.0)	2.1	1.1
Net periodic pension cost	$ (47.6)	$ 7.8	$ 18.2

JCP&L

	(in millions) 2000	1999	1998
Service cost	$ 0.5	$ 0.1	$ 7.2
Interest cost	1.5	0.4	33.7
Expected return on plan assets	(2.2)	(0.3)	(39.6)
Amortization of transition (asset)/obligation	-	-	(0.3)
Other amortization	(0.3)	-	0.6
Net periodic pension cost	$ (0.5)	$ 0.2	$ 1.6

Met-Ed

	(in millions) 2000	1999	1998
Service cost	$ 0.2	$ 0.2	$ 6.3
Interest cost	0.8	0.5	23.4

Amortization of transition (asset)/obligation	-	-	(0.1)
Other amortization	-	-	0.4
Net periodic pension cost	$ 0.1	$ 0.2	$ 4.6

(in millions)

Penelec	2000	1999	1998
Service cost	$ -	$ -	$ 4.1
Interest cost	0.2	0.2	27.2
Expected return on plan assets	(0.1)	(0.1)	(33.1)
Amortization of transition (asset)/obligation	-	-	0.3
Other amortization	-	-	0.4
Net periodic pension cost	$ 0.1	$ 0.1	$ (1.1)

In 2000, the effects of lower than expected salary increases and the GPU PowerNet divestiture resulted in decreases in the benefit obligation as of December 31, 2000 of $30 million and $36 million, respectively. No significant portions of these amounts relate to JCP&L, Met-Ed or Penelec. In 1999, the effect of increasing the discount rate assumption for the US pension plans from 6.75% to 7.5% resulted in a $162 million (JCP&L $0.5 million; Met-Ed $1.0 million; Penelec $0.3 million; Other $160.2 million) decrease in the benefit obligation as of December 31, 1999.

The above net periodic pension cost amount for 2000 excludes pre-tax charges of $9 million related to JCP&L, which were deferred pending future rate recovery, resulting from employee terminations related to continuing generation asset divestiture. The above net periodic pension cost amount for 1999 excludes pre-tax credits of $31 million, of which $30 million was deferred for return to customers, resulting from employee terminations related to generation asset divestiture. No portion of these amounts relate to JCP&L, Met-Ed or Penelec. The above net periodic pension cost amount for 1998 excludes pre-tax charges of $30 million (JCP&L $8 million; Met-Ed $11 million; Penelec $9 million; Other $2 million), of which $22 million (JCP&L $6 million; Met-Ed $9 million; Penelec $7 million) was deferred pending future rate recovery, resulting from early retirement programs in 1998.

Other Postretirement Benefits:

GPU, Inc. and Subsidiary Companies	(in millions) 2000	1999	1998
Service cost	$ 11.4	$ 15.9	$ 16.4
Interest cost	53.9	52.2	54.4

	(in millions) 2000	1999	1998
Penelec			
Service cost	$ -	$ -	$ 2.0
Interest cost	-	-	15.1
Expected return on plan assets	-	-	(8.9)
Amortization of transition obligation	-	-	4.8
Other amortization	-	-	1.4
Net periodic postretirement benefit cost	$ -	$ -	$ 14.4

In 2000, lower than expected claims experience resulted in a $32 million decrease in the benefit obligation as of December 31, 2000. No significant portion of this amount relates to JCP&L, Met-Ed or Penelec. In 1999, the effect of increasing the assumption associated with medical inflation rates was partially offset by the effect of increasing the discount rate assumption from 6.75% to 7.5% and resulted in a $45 million increase in the benefit obligation as of December 31, 1999. No significant portion of this amount relates to JCP&L, Met-Ed or Penelec. The benefit obligation was determined by application of the terms of the medical and life insurance plans, including the effects of established maximums on covered costs, together with relevant actuarial assumptions and health-care cost trend rates of 9.5% for those not eligible for Medicare and 10.5% for those eligible for Medicare, then decreasing gradually to 6% in 2009 and thereafter. These costs also reflect the implementation of an annual cost-cap of 6% for individuals who retire after December 31, 1995 and reach age 65. The effect of a 1% change in these assumed cost trend rates would increase or decrease the benefit obligation by $36.9 million or $36.6 million, respectively. In addition, such a 1% change would increase or decrease the aggregate service and interest cost components of net periodic postretirement health-care cost by $3.4 million or $3.3 million, respectively. No significant portion of the effect of such a 1% change relates to JCP&L, Met-Ed or Penelec.

The above net periodic postretirement benefit cost amount for 2000 excludes pre-tax charges of $7 million, which were deferred pending future rate recovery, resulting from employee terminations related to continuing generation asset divestiture. No portion of this amount relates to JCP&L, Met-Ed or Penelec. The above net periodic postretirement benefit cost amount for 1999 excludes pre-tax charges of $3 million, which were deferred pending future rate recovery, resulting from employee terminations related to generation asset divestiture. No portion of this amount relates to JCP&L, Met-Ed or Penelec. The above net periodic postretirement benefit cost amount for 1998 excludes pre-tax charges of $20 million (JCP&L $6 million; Met-Ed $6 million; Penelec $7 million; Other $1 million), of which $12 million (JCP&L $3 million; Met-Ed $5 million; Penelec $4 million) was deferred pending future rate recovery, resulting from early retirement programs in 1998.

In JCP&L's 1993 base rate proceeding, the NJBPU allowed JCP&L to collect $3 million

annually for incremental postretirement benefit costs, charged to expense, and recognized as a result of FAS 106. Based on the final order, and in accordance with EITF Issue 92-12, "Accounting for OPEB Costs by Rate-Regulated Enterprises," JCP&L has deferred the amounts above that level. A 1997 Stipulation of Final Settlement (Final Settlement) allows JCP&L to recover and amortize the deferred balance at December 31, 1997 over a fifteen-year period. In addition, the Final Settlement allows JCP&L to recover current amounts accrued pursuant to FAS 106, including amortization of the transition obligation. Met-Ed has deferred the incremental postretirement benefit costs associated with the adoption of FAS 106 and in accordance with EITF Issue 92-12, as authorized by the PaPUC in its 1993 base rate order. In accordance with EITF Issue 92-12, effective January 1998, Met-Ed has ceased deferring these costs. The approximately one-third generation-related portion of the deferred balance at December 31, 1997 is to be recovered in rates over a twelve-year period pursuant to the PaPUC's Restructuring Orders. The remaining two-thirds for the transmission and distribution-related portion is to be amortized over a fourteen-year period beginning January 1999, pursuant to the Restructuring Orders. In 1994, Penelec determined that its FAS 106 costs, including costs deferred since January 1993, were not probable of recovery and charged those deferred costs to expense.

Certain employees of MYR are covered by union-sponsored collectively bargained defined benefit plans. Expenses for these plans amounted to approximately $26 million, $27 million and $26 million in 2000, 1999 and 1998, respectively, as determined in accordance with negotiated labor contracts.

Savings Plans:

GPU also maintains savings plans for substantially all US employees. These plans provide for employee contributions up to specified limits and various levels of employer matching contributions. The matching contributions for GPU were as follows:

	(in millions)		
Company	2000	1999	1998
JCP&L	$ 0.1	$ 0.1	$ 2.8
Met-Ed	0.1	0.1	3.4
Penelec	-	-	1.6
Other	10.8	13.8	5.8
Total	$11.0	$14.0	$13.6

11. LEASES

GPU Energy companies

Capital lease obligations at December 31, 2000 and 1999 totaled $2 million and $48 million (consisting primarily of Oyster Creek nuclear fuel, as discussed below), respectively.

Prior to the sales of TMI-1 and Oyster Creek to AmerGen in December 1999 and August 2000, respectively, the GPU Energy companies had nuclear fuel lease agreements with nonaffiliated fuel trusts for the plant. Upon the sales of TMI-1 and Oyster Creek, the related fuel leases were terminated and all outstanding amounts due under the related credit facilities were paid. Lease expense consists of an amount designed to amortize the cost of the nuclear fuel as consumed plus interest costs. For the years ended December 31, 2000, 1999 and 1998, these amounts were as follows:

	(in millions)		
Company	2000	1999	1998

JCP&L	$ 13	$ 34	$ 30
Met-Ed	-	13	16
Penelec	-	6	8
Total	$ 13	$ 53	$ 54

Met-Ed and JCP&L have sold and leased back a portion of their respective ownership interests in the Merrill Creek Reservoir project. The annual minimum lease payments under these operating leases, which have remaining terms of 32 years, range from approximately $3.6 million to $6.7 million (Met-Ed $1.6 million to $2.9 million; JCP&L $2 million to $3.8 million) over the next five years, net of reimbursements from sub-lessees. JCP&L is recovering its Merrill Creek lease payments, net of reimbursements, through distribution rates. Met-Ed's Merrill Creek lease payments were offset against the actual net divestiture proceeds received from the 1999 sales of its generation assets.

GPU, Inc.

A subsidiary of GPUI sold and leased back the Lake electric cogeneration facility for an initial term of eleven years, expiring in August 2004, for which GPU, Inc. has guaranteed payments of up to $8.1 million. Although GPU, Inc. sold GPUI (including Lake) in 2000, GPU, Inc. has remained on the guaranty, and has obtained an indemnity from Aquila's parent. In addition, a 20-year site lease was entered into for the Lake facility expiring in 2013. Prior to its sale to Aquila, GPUI accounted for these leases as operating leases and GPU's related rent expense for 2000 and 1999 totaled $11.3 million and $12.3 million, respectively.

12. COMMITMENTS AND CONTINGENCIES

PENDING MERGER OF FIRSTENERGY CORP. AND GPU

On August 8, 2000, GPU, Inc. entered into an agreement to merge with FirstEnergy, an Ohio corporation, headquartered in Akron, Ohio. Under the merger agreement, FirstEnergy would acquire all of the outstanding shares of GPU's common stock for approximately $4.5 billion in cash and FirstEnergy common stock.

Under the agreement, GPU stockholders would receive $36.50 for each share of GPU common stock they own, payable in cash or the equivalent of $36.50 per share in FirstEnergy common stock, as long as FirstEnergy's common stock price is between $24.24 and $29.63. Each GPU stockholder would be able to elect the form of consideration, subject to proration so that the aggregate consideration to all GPU stockholders will be 50 percent cash and 50 percent FirstEnergy common stock. Each GPU stockholder's share converted into FirstEnergy common stock would be exchanged for not less than 1.2318 and not more than 1.5055 shares of FirstEnergy common stock, depending on the average closing price of FirstEnergy stock during the 20-day trading period ending on the sixth trading date prior to the merger closing.

The merger has been approved by the Boards of Directors and stockholders of GPU, Inc. and FirstEnergy and is expected to close promptly after all of the conditions to the consummation of the merger (including the receipt of all necessary regulatory approvals, provided that such approvals will not impose terms and conditions that would reasonably be expected to result in a "material adverse effect," as defined in the merger agreement, on the combined company, and there being no "material adverse effect" on either GPU or FirstEnergy since June 30, 2000 or March 31, 2000, respectively), are fulfilled or waived. Relevant factors would include the nature of any order issued by the regulatory authorities, the financial and business conditions of each company, and whether, and the extent by which, any developments relate to general economic conditions. In testimony

before the PaPUC, FirstEnergy stated that FirstEnergy will carefully review the PaPUC's action with respect to GPU's requested PLR relief on the financial condition of GPU to determine whether the consequences would have a "material adverse effect" on GPU or the combined company. The receipt of all necessary regulatory approvals is expected to take approximately nine to twelve months from the date of the merger agreement. There can be no assurance as to the outcome of these matters.

COMPETITION AND THE CHANGING REGULATORY ENVIRONMENT

Stranded Costs and Regulatory Restructuring Orders:

With the transition to a competitive marketplace for generation service in New Jersey and Pennsylvania, certain generation-related costs, which generally would be recoverable in a regulated environment, may no longer be recoverable. These costs are generally referred to as stranded costs.

In 1999, the NJBPU issued a Summary Order with respect to JCP&L's rate unbundling, stranded cost and restructuring filings. JCP&L is awaiting a final NJBPU order. The Summary Order provides for, among other things, full recovery of what otherwise would have become stranded costs, as well as customer choice of electric generation supplier beginning August 1, 1999 and rate reductions for all consumers. In addition, the NJBPU issued separate Orders approving the sales of JCP&L's generating assets; however, the NJBPU deferred making a final determination of the net proceeds and stranded costs related to the generating asset divestitures until an IRS ruling regarding the treatment of associated federal income tax benefits is received.

In 1998, the PaPUC issued amended Restructuring Orders approving Settlement Agreements entered into by Met-Ed and Penelec which, among other things, provide for customer choice of electric generation supplier beginning January 1, 1999 and a one-year (1999) reduction in retail distribution rates for all consumers. The Orders also provide for recovery of a substantial portion of what otherwise would have become stranded costs, subject to Phase II proceedings following the completion of Met-Ed's and Penelec's generating asset divestitures, to make a final determination of the extent of that stranded cost recovery. In 2000, Met-Ed and Penelec submitted Phase II Reports to the PaPUC supporting their actual net divestiture proceeds and providing a reconciliation of stranded costs pursuant to the 1998 Restructuring Orders.

On December 20, 2000, the PaPUC issued a Phase II Order which disallows $28 million (Met-Ed $16 million; Penelec $12 million) of the requested $304 million (Met-Ed $226 million; Penelec $78 million) of additional stranded costs above those amounts granted in the 1998 Orders. Met-Ed and Penelec had anticipated a disallowance of a portion of stranded costs, and established a $25 million pre-tax (Met-Ed $19 million; Penelec $6 million) reserve in 1999. In addition, as a result of the Phase II Order, Met-Ed and Penelec recognized pre-tax income of $66 million (Met-Ed $45 million; Penelec $21 million) due primarily to pension curtailment gains associated with employees terminated as a result of the sale of generating facilities in 1999, and the reversal of certain liabilities and changes in estimates and assumptions related to Met-Ed's leasehold interest in the Merrill Creek Reservoir project. The Phase II Order also deferred a decision on Met-Ed's requested increase in rates, beginning in 2006, for recovery of Met-Ed's generation-related stranded costs. In addition, the Order requires Met-Ed and Penelec to seek an IRS ruling regarding the return of certain unamortized investment tax credits and excess deferred income tax benefits to ratepayers. If the IRS ruling ultimately supports returning these tax benefits to ratepayers, Met-Ed and Penelec would then reduce stranded costs by $40 million and record a corresponding charge to income. For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

Supply of Electricity:

As a result of the NJBPU's and the PaPUC's Restructuring Orders, the GPU Energy companies are required to supply electricity to customers who do not choose an alternate supplier. Given that the GPU Energy companies have essentially exited the generation business and will have to supply electricity to non-shopping customers almost entirely from contracted and open market purchases, there will be increased risks associated with supplying that electricity. JCP&L is permitted to defer for future recovery the amount by which its reasonable and prudently incurred costs associated with providing basic generation service to non-shopping customers exceed amounts currently reflected in its rates for basic generation service. Met-Ed and Penelec, however, are unable to recover energy costs in excess of their established rate caps, which are in effect for varying periods.

During 2000, market prices at which Met-Ed and Penelec were required to purchase electricity for their retail supply customers at times substantially exceeded the amounts Met-Ed and Penelec were allowed to charge for that electricity under their capped generation rates. This situation has resulted in a substantial loss of earnings for Met-Ed and Penelec in 2000, especially during the peak Summer months, and this condition is expected to continue so long as wholesale energy prices remain high, and Met-Ed and Penelec are not granted regulatory relief.

Given this situation, on November 29, 2000, Met-Ed and Penelec filed a petition with the PaPUC seeking permission to defer for future recovery their energy costs in excess of established generation rate caps. Various parties to the proceeding filed motions to dismiss the petition. On January 19, 2001, Met-Ed and Penelec made a further request that they be permitted to implement their proposed deferral mechanism pending the PaPUC's final action on their petition. On January 24, 2001, the PaPUC denied, without prejudice, the motions to dismiss Met-Ed's and Penelec's petition and recommended that the companies provide support for a rate cap exception based on the criteria in the Customer Choice and Competition Act. In addition, the PaPUC consolidated the petition with the GPU/FirstEnergy merger proceeding for consideration and resolution in accord with the merger procedural schedule, which establishes a May 2001 date for a PaPUC order in both cases. In February 2001, Met-Ed and Penelec filed a supplement to their petition and supporting testimony which they believe establish that the PaPUC should grant them exceptions to their rate caps. In addition, Met-Ed and Penelec stated that as an alternative to the deferral mechanism they previously proposed, the circumstances would warrant an immediate increase in their present rate caps. There can be no assurance regarding the degree, if any, to which Met-Ed and Penelec may be able to recover their costs to supply electricity in excess of amounts currently reflected in their capped rates.

Generation Agreements:

The evolving competitive generation market has created uncertainty regarding the forecasting of the GPU Energy companies' energy supply needs, which has caused the GPU Energy companies to seek shorter-term agreements offering more flexibility. The GPU Energy companies' supply plan focuses on short- to intermediate-term commitments (one month to three years), with any residual needs then being purchased from the short-term market (one hour to one month).

The GPU Energy companies have entered into agreements with third party suppliers to purchase capacity and energy through 2004. Payments pursuant to these agreements, which include firm commitments as well as certain assumptions regarding, among other things, call/put arrangements, are estimated to be $1.2 billion in 2001, $265 million in 2002, $92 million in 2003 and $5 million in 2004.

Pursuant to the mandates of the federal Public Utility Regulatory Policies Act and state regulatory directives, the GPU Energy companies were required to enter into power purchase agreements with nonutility generators (NUGs) for the purchase of energy and capacity, which agreements have remaining terms of up to 20 years. The rates under virtually all of the GPU Energy companies' NUG agreements are substantially in excess of current and projected prices from alternative sources. The following table shows actual payments from 1998 through 2000, and estimated payments thereafter through 2005:

Payments Under NUG Agreements
(in millions)

	Total	JCP&L	Met-Ed	Penelec
1998	$788	$403	$174	$211
1999	774	388	167	219
2000	734	364	153	217
2001	775	438	145	192
2002	804	466	148	190
2003	813	465	153	195
2004	816	458	157	201
2005	798	443	160	195

The NJBPU Summary Order provides JCP&L assurance of full recovery of its NUG costs (including above-market NUG costs and certain buyout costs); and the PaPUC Restructuring Orders provide Met-Ed and Penelec assurance of full recovery of their above-market NUG costs and certain NUG buyout costs. At December 31, 2000, the GPU Energy companies have recorded, on a present value basis, a total estimated liability of $3.3 billion (JCP&L $1.7 billion; Met-Ed $0.7 billion; Penelec $0.9 billion) on the Consolidated Balance Sheet for above-market NUG costs which is offset by corresponding regulatory assets. The GPU Energy companies are continuing efforts to reduce the above-market costs of these agreements. There can be no assurance as to the extent to which these efforts will be successful.

In 1997, the NJBPU approved a Stipulation of Final Settlement which, among other things, provided for the recovery of costs associated with the buyout of the Freehold Cogeneration power purchase agreement (Freehold buyout). The NJBPU approved the cost recovery of up to $135 million, over a seven-year period, on an interim basis subject to refund. The NJBPU's Summary Order provides for the continued recovery of the Freehold buyout in the MTC, but has not altered the interim nature of such recovery, pending a final decision by the NJBPU. There can be no assurance as to the outcome of this matter.

ACCOUNTING MATTERS

JCP&L, in 1999, and Met-Ed and Penelec in 1998, discontinued the application of Statement of Financial Accounting Standards No. 71 (FAS 71), "Accounting for the Effects of Certain Types of Regulation," and adopted the provisions of Statement of Financial Accounting Standards No. 101 (FAS 101), "Regulated Enterprises - Accounting for the Discontinuation of Application of FASB Statement No. 71," and Emerging Issues Task Force (EITF) Issue 97-4, "Deregulation of the Pricing of Electricity - Issues Related to the Application of FAS 71 and FAS 101," with respect to their electric generation operations. The transmission and distribution portion of the GPU Energy companies' operations continues to be subject to the provisions of FAS 71. Regulatory assets, net as reflected in the December 31, 2000 and December 31, 1999 Consolidated Balance Sheets in accordance with the provisions of FAS 71 and EITF Issue 97-4 were as follows:

(in thousands)

GPU, Inc. and Subsidiaries	2000	1999
Market transition charge (MTC) / basic generation service	$2,732,926	$2,397,071

Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities," as amended by FAS 137, "Accounting for Derivative Instruments and Hedging Activities - Deferral of the Effective Date of FASB Statement No. 133" and FAS 138, "Accounting for Certain Derivative Instruments and Certain Hedging Activities - An Amendment of FASB Statement No. 133" (collectively, FAS 133), establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. In general, FAS 133 requires that companies recognize all derivatives as either assets or liabilities on the balance sheet and measure those instruments at fair value. FAS 133 (as amended) provides an exemption for certain contracts that qualify as normal purchases and

sales. To qualify for this exclusion, certain criteria must be met, including that it must be probable that the contract will result in physical delivery. GPU adopted FAS 133 on January 1, 2001.

GPU's use of derivative instruments is intended to manage the risk of fluctuations in commodity prices, interest rates and foreign currencies. GPU does not intend to hold or issue derivative instruments for trading purposes. GPU enters into fixed-price contracts for future purchases of electricity and natural gas with individual counterparties or through traded exchanges. The majority of these commodity contracts entered into by GPU are considered "normal purchases," as defined by FAS 133, and, therefore, are excluded from the statement's scope. Commodity contracts accounted for as derivatives under FAS 133 are designated as cash flow hedges of the underlying commodity purchases, to the extent they qualify for such treatment. FAS 133 requires that the effective portion of the gain or loss on a derivative instrument designated and qualifying as a cash flow hedge be reported as a component of Other Comprehensive Income, net of tax. GPU also enters into third party energy option contracts. These derivative instruments are accounted for as cash flow hedges of the underlying commodity purchases, to the extent they are effective hedges. Upon adoption of this statement at January 1, 2001, the impact of FAS 133 as it relates to forward, futures and option contracts was immaterial to GPU's earnings or financial position.

To hedge against high transmission rates along certain routes during periods of high congestion, GPU enters into fixed transmission rights (FTRs) agreements. Upon adoption of FAS 133 at January 1, 2001, the impact of this statement as it relates to FTRs was immaterial to GPU's earnings or financial position.

GPU uses various types of interest rate swaps to convert floating-rate loans to fixed rates. These instruments are accounted for as cash flow hedges, to the extent they are effective hedges. Upon adoption of this statement on January 1, 2001, derivative liabilities of approximately $7 million (Penelec $1 million; GPU Power $1.5 million; GPU Electric $4.5 million) were recognized on the Consolidated Balance Sheet, with an offset, net of tax, of $5 million (Penelec $1 million; GPU Power $1.5 million; GPU Electric $2.5 million) to Accumulated other comprehensive income and a $2 million (GPU Electric) charge to income.

GPU uses currency swap agreements to manage currency risk caused by fluctuations in the US dollar exchange rate related to debt issued in the US by Avon Energy Partners Holdings. These instruments will be accounted for as cash flow hedges, to the extent they are effective hedges. Upon adoption of FAS 133 on January 1, 2001, derivative assets of approximately $54 million (GPU Power UK) were recognized on the Consolidated Balance Sheet, with an offset, net of tax, to Accumulated other comprehensive income.

NUCLEAR FACILITIES

Investments:

In December 1999, the GPU Energy companies sold TMI-1 to AmerGen for approximately $100 million. In August 2000, JCP&L sold Oyster Creek to AmerGen for approximately $10 million. As part of the sales, AmerGen has assumed full responsibility for decommissioning the plants, and the GPU Energy companies have transferred $320 million and $430 million of TMI-1 and Oyster Creek decommissioning trust funds, respectively, to AmerGen. JCP&L, Met-Ed and Penelec jointly own TMI-2, which was damaged during a 1979 accident, in the percentages of 25%, 50% and 25%, respectively. JCP&L's net investment in TMI-2 as of December 31, 2000 and December 31, 1999 was $55 million and $61 million, respectively. JCP&L is collecting revenues for TMI-2 on a basis which provides for the recovery of its remaining investment in the plant by 2008. Met-Ed's and Penelec's

remaining investments in TMI-2 were written off in 1998 after receiving the PaPUC's Restructuring Orders.

TMI-2:

As a result of the 1979 TMI-2 accident, individual claims for alleged personal injury (including claims for punitive damages), which are material in amount, were asserted against GPU, Inc. and the GPU Energy companies. Approximately 2,100 of such claims were filed in the US District Court for the Middle District of Pennsylvania. Some of the claims also seek recovery for injuries from alleged emissions of radioactivity before and after the accident.

At the time of the TMI-2 accident, as provided for in the Price-Anderson Act, the GPU Energy companies had (a) primary financial protection in the form of insurance policies with groups of insurance companies providing an aggregate of $140 million of primary coverage, (b) secondary financial protection in the form of private liability insurance under an industry retrospective rating plan providing for up to an aggregate of $335 million in premium charges under such plan and (c) an indemnity agreement with the Nuclear Regulatory Commission (NRC) for up to $85 million, bringing their total financial protection up to an aggregate of $560 million. Under the secondary level, the GPU Energy companies are subject to a retrospective premium charge of up to $5 million per reactor, or a total of $15 million (JCP&L $7.5 million; Met-Ed $5 million; Penelec $2.5 million).

In 1995, the US Court of Appeals for the Third Circuit ruled that the Price-Anderson Act provides coverage under its primary and secondary levels for punitive as well as compensatory damages, but that punitive damages could not be recovered against the Federal Government under the third level of financial protection. In so doing, the Court of Appeals referred to the "finite fund" (the $560 million of financial protection under the Price-Anderson Act) to which plaintiffs must resort to get compensatory as well as punitive damages.

The Court of Appeals also ruled that the standard of care owed by the defendants to a plaintiff was determined by the specific level of radiation which was released into the environment, as measured at the site boundary, rather than as measured at the specific site where the plaintiff was located at the time of the accident (as the defendants proposed). The Court of Appeals also held that each plaintiff still must demonstrate exposure to radiation released during the TMI-2 accident and that such exposure had resulted in injuries. In 1996, the US Supreme Court denied petitions filed by GPU, Inc. and the GPU Energy companies to review the Court of Appeals' rulings.

In 1996, the District Court granted a motion for summary judgment filed by GPU, Inc. and the GPU Energy companies, and dismissed the ten initial "test cases" which had been selected for a test case trial, as well as all of the remaining 2,100 pending claims. The Court ruled that there was no evidence which created a genuine issue of material fact warranting submission of plaintiffs' claims to a jury. The plaintiffs appealed the District Court's ruling to the Court of Appeals for the Third Circuit. In November 1999, the Third Circuit affirmed the District Court's dismissal of the ten "test cases," but set aside the dismissal of the additional pending claims, remanding them to the District Court for further proceedings. In remanding these claims, the Third Circuit held that the District Court had erred in extending its summary judgment decision to the other plaintiffs and imposing on these plaintiffs the District Court's finding that radiation exposures below 10 rems were too speculative to establish a causal link to cancer. The Court of Appeals stated that the non-test case plaintiffs should be permitted to present their own individual evidence that exposure to radiation from the accident caused their cancers. In June 2000, the US Supreme Court denied petitions for review filed by GPU, Inc., the GPU Energy companies and the plaintiffs.

In September 2000, the defendants filed a Motion for Summary Judgment in the District Court. Meanwhile, the plaintiffs have taken an interlocutory appeal to the Third Circuit seeking review of the District Court's determination that the remaining plaintiffs should be allowed to advance causation theories based only on the admissible evidence of record at the close of discovery in the case.

Oral arguments on the plaintiffs' appeal were held in January, 2001. There can be no assurance as to the outcome of this litigation.

GPU, Inc. and the GPU Energy companies believe that any liability to which they might be subject by reason of the TMI-2 accident will not exceed their financial protection under the Price-Anderson Act.

NUCLEAR PLANT RETIREMENT COSTS

Retirement costs for nuclear plants include decommissioning the radiological portions of the plants and the cost of removal of nonradiological structures and materials. The disposal of spent nuclear fuel is covered separately by contracts with the DOE.

In 1995, a consultant performed a site-specific study of TMI-2 that considered various decommissioning methods and estimated the cost of decommissioning the radiological portion and the cost of removal of the nonradiological portion of the plant, using the prompt removal/dismantlement method. Management has reviewed the methodology and assumptions used in this study, is in agreement with them, and believes the results are reasonable. The TMI-2 funding completion date is 2014, consistent with TMI-2 remaining in long-term storage. The retirement cost estimate under the 1995 site-specific study, assuming decommissioning of TMI-2 in 2014, is $450 million for radiological decommissioning and $36 million for non-radiological removal costs (net of $12.6 million spent as of December 31, 2000)(in 2000 dollars).

Each of the GPU Energy companies is responsible for retirement costs in proportion to its respective ownership percentage. The ultimate cost of retiring TMI-2 may be different from the cost estimate contained in this site-specific study. Also, the cost estimate contained in this site-specific study is significantly greater than the decommissioning funding targets established by the NRC.

The estimated liability for future TMI-2 retirement costs (reflected as Three Mile Island Unit 2 future costs on the Consolidated Balance Sheets) as of December 31, 2000 and December 31, 1999 is $515 million (JCP&L $129 million; Met-Ed $257 million; Penelec $129 million) and $497 million (JCP&L $124 million; Met-Ed $249 million; Penelec $124 million), respectively. This liability is based upon the 1995 site-specific study estimate (in 2000 and 1999 dollars, respectively) discussed above and an estimate for remaining incremental monitored storage costs of $29 million (JCP&L $7 million; Met-Ed $15 million; Penelec $7 million) and $27 million (JCP&L $7 million; Met-Ed $13 million; Penelec $7 million) as of December 31, 2000 and December 31, 1999, respectively, as a result of TMI-2 entering long-term monitored storage in 1993.

Offsetting the $515 million liability as of December 31, 2000 is $127 million (JCP&L $15 million; Met-Ed $93 million; Penelec $19 million), which management believes is probable of recovery from customers and included in Regulatory assets, net on the Consolidated Balance Sheet, and $374 million (JCP&L $115 million; Met-Ed $161 million; Penelec $98 million) in trust funds for TMI-2 and included in Nuclear decommissioning trusts, at market on the Consolidated Balance Sheet.

The NJBPU has granted JCP&L revenues for TMI-2 retirement costs based on the 1995

site-specific study estimate. In addition, JCP&L is recovering a portion of its share of TMI-2 incremental monitored storage costs. The PaPUC Restructuring Orders granted Met-Ed and Penelec recovery of TMI-2 decommissioning costs as part of the CTC; however, Penelec has recovered these costs through the divestiture of its generating assets. The 1996 Customer Choice Act also allows Met-Ed and Penelec to defer as a regulatory asset those amounts that are above the level provided for in the CTC for future recovery.

As of December 31, 2000, the accident-related portion of TMI-2 radiological decommissioning costs is estimated to be $80 million (JCP&L $20 million; Met-Ed $40 million; Penelec $20 million), which is based on the 1995 site-specific study (in 2000 dollars). In connection with rate case resolutions, JCP&L, Met-Ed and Penelec made contributions to irrevocable external trusts for their respective shares of the accident-related portion of the decommissioning liability in amounts of $15 million, $40 million and $20 million, respectively. These contributions were not recoverable from customers and were expensed in 1990, in the case of JCP&L, and in 1991 for Met-Ed and Penelec.

The GPU Energy companies intend to seek recovery for any increases in TMI-2 retirement costs, but recognize that recovery cannot be assured.

Prior to September 2000, increases in the accident-related portion of Met-Ed's and Penelec's TMI-2 decommissioning liability were charged to expense, in amounts totaling $23.2 million (Met-Ed $15.4 million; Penelec $7.8 million) through August 2000. Likewise, through August 2000, earnings on Met-Ed's and Penelec's contributions to external trusts, in amounts totaling $34.9 million (Met-Ed $23.3 million; Penelec $11.6 million), were taken to income, and the related unrealized gains and losses were accrued to Accumulated other comprehensive income on the Consolidated Balance Sheet.

During the course of ongoing regulatory proceedings in Pennsylvania, Met-Ed and Penelec determined, in the third quarter 2000, that a portion of their regulatory assets for TMI-2 decommissioning previously regarded as probable of recovery in rates, are now no longer deemed probable of recovery. As a result, in the third quarter 2000, Met-Ed and Penelec charged to income $11.7 million (Met-Ed $7.9 million; Penelec $3.8 million) pre-tax for the write-down of their respective regulatory assets for TMI-2 decommissioning, representing the net realized gain they previously recorded on the accident-related portion of the TMI-2 decommissioning trust. Furthermore, the unrealized gains or losses associated with the accident-related portion of the TMI-2 decommissioning trust (previously recorded in Accumulated other comprehensive income) were transferred to Regulatory assets, net on the Consolidated Balance Sheet, and will no longer be recorded in Accumulated other comprehensive income.

The GPU Energy companies own all of the common stock of the Saxton Nuclear Experimental Corporation, which owns a small demonstration nuclear reactor. Decommissioning of the plant is expected to be completed in 2002. In December 2000, based on new estimates to complete the decommissioning of the plant, the decommissioning liability was increased by $13 million, to $52 million (JCP&L $23 million; Met-Ed $17 million; Penelec $12 million) as of December 31, 2000. The GPU Energy companies do not believe this increase is probable of recovery, and have charged the entire amount to expense.

INSURANCE

GPU has insurance (subject to retentions and deductibles) for its operations and facilities including coverage for property damage, liability to employees and third parties, and loss of use and occupancy. There is no assurance that GPU will maintain all existing insurance coverages. Losses or liabilities that are not completely insured,

unless allowed to be recovered through ratemaking, could have a material adverse effect on the financial position of GPU.

GPU has purchased property and decontamination insurance coverage for TMI-2 totaling $150 million.

The Price-Anderson Act limits an owner's liability to third parties resulting from a nuclear incident to approximately $9.5 billion. Coverage for the first $200 million of such liability is provided by private insurance. The remaining coverage, or secondary financial protection, is provided by retrospective premiums payable by all nuclear reactor owners. Although TMI-2 is exempt from retrospective premium assessments, the plant is still covered by the provisions of the Price-Anderson Act. In addition, the GPU Energy companies are subject to other retrospective premium assessments related to policies applicable to TMI-1 prior to its sale to AmerGen.

ENVIRONMENTAL MATTERS

As a result of existing and proposed legislation and regulations, and ongoing legal proceedings dealing with environmental matters, including but not limited to acid rain, water quality, ambient air quality, global warming, electromagnetic fields, and storage and disposal of hazardous and/or toxic wastes, GPU may be required to incur substantial additional costs to construct new equipment, modify or replace existing and proposed equipment, remediate, decommission or cleanup waste disposal and other sites currently or formerly used by it, including formerly owned manufactured gas plants (MGP), coal mine refuse piles and generation facilities.

GPU has been formally notified by the EPA and state environmental authorities that it is among the potentially responsible parties (PRPs) who may be jointly and severally liable to pay for the costs associated with the investigation and remediation at 11 hazardous and/or toxic waste sites (in some cases, more than one company is named for a given site).

JCP&L	MET-ED	PENELEC	GPUN	GPU, INC.	TOTAL
7	4	2	1	1	11

In addition, certain of the GPU companies have been requested to participate in the remediation or supply information to the EPA and state environmental authorities on several other sites for which they have not been formally named as PRPs, although the EPA and/or state authorities may nevertheless consider them as PRPs. Certain of the GPU companies have also been named in lawsuits requesting damages (which are material in amount) for hazardous and/or toxic substances allegedly released into the environment. As of December 31, 2000, a liability of approximately $6 million (JCP&L $2.2 million; Met-Ed $0.6 million; Penelec $0.2 million; other $3 million) was recorded for PRP sites where it is probable that a loss has been incurred and the amount could be reasonably estimated.

The ultimate cost of remediation of all these and other hazardous waste sites will depend upon changing circumstances as site investigations continue, including (a) the existing technology required for site cleanup, (b) the remedial action plan chosen and (c) the extent of site contamination and the portion attributed to the GPU companies involved.

In 1997, the EPA filed a complaint against GPU, Inc. in the US District Court for the District of Delaware for enforcement of its Unilateral Order (Order) issued against GPU, Inc. to clean up the former Dover Gas Light Company (Dover) manufactured gas production site (Site) in Dover, Delaware. Dover was part of the AGECO/AGECORP group of companies from 1929 until 1942; GPU, Inc. emerged from the AGECO/AGECORP reorganization

proceedings in 1946. All of Dover's common stock, which was sold in 1942 to an unaffiliated entity, was subsequently acquired by Chesapeake Utilities Corporation (Chesapeake), which merged with Dover in 1960. Chesapeake is currently performing the cleanup at the Site. According to the complaint, the EPA is seeking (1) enforcement of the Order against GPU; (2) recovery of its past response costs; (3) a declaratory judgment that GPU is liable for any remaining cleanup costs of the Site; and (4) statutory penalties for noncompliance with the Order. The EPA has stated that it has incurred approximately $1.1 million of past response costs as of December 31, 2000. Chesapeake claims to have spent approximately $10 million in connection with remediation of the site. The EPA has more recently estimated the cost of ground water remediation to be on the order of $6 million. Consultants to Chesapeake have estimated the remaining remediation ground water costs to be approximately $12 million to $19 million. In accordance with its penalty policy, and in discussions with GPU, the EPA has demanded penalties calculated at a daily rate of $8,800, rather than the statutory maximum of $27,500 per day. As of December 31, 2000, if the statutory maximum were applied, the total amount of penalties would be approximately $44 million. GPU believes that it has meritorious defenses to the imposition of penalties, or that if a penalty is assessed, it should be at a lower daily rate. Chesapeake has also sued GPU, Inc. for contribution to the cleanup of the Dover Site. The US District Court for the District of Delaware has consolidated the case filed by Chesapeake with the case filed by the EPA and discovery is proceeding. There can be no assurance as to the outcome of these proceedings.

In August 2000, Rochester Gas & Electric Corporation (RG&E) filed suit against GPU, Inc. in the US District Court for the Western District of New York for the reimbursement of $5.2 million of costs and damages it has allegedly incurred, and a declaratory judgement with respect to future costs and damages, in connection with two former MGP sites and a third property where wastes from one of those sites were allegedly deposited. All of the properties are located in Rochester, New York. According to the complaint, RG&E was an indirect subsidiary of AGECO from May 1929 until January 1946, and a subsidiary of GPU, Inc. from January 1946 until October 1949, when it was divested by order of the SEC under the Public Utility Holding Company Act. There can be no assurance as to the outcome of this matter.

In connection with the 1999 sale of its Seward Generation Station to Sithe, Penelec has assumed up to $6 million of remediation costs associated with certain coal mine refuse piles which are the subject of an earlier consent decree with the Pennsylvania Department of Environmental Protection. Penelec received recovery of these remediation costs through a reduction of its liability to ratepayers, per the December 20, 2000 PaPUC Phase II Order.

JCP&L has entered into agreements with the New Jersey Department of Environmental Protection for the investigation and remediation of 17 formerly owned MGP sites. JCP&L has also entered into various cost-sharing agreements with other utilities for most of the sites. As of December 31, 2000, JCP&L has spent approximately $44.5 million in connection with the cleanup of these sites. In addition, JCP&L has recorded an estimated environmental liability of $50.2 million relating to expected future costs of these sites (as well as two other properties). This estimated liability is based upon ongoing site investigations and remediation efforts, which generally involve capping the sites and pumping and treatment of ground water. The cost to clean up these sites could be materially in excess of the $50.2 million due to significant uncertainties, including changes in acceptable remediation methods and technologies.

In 1997, the NJBPU approved JCP&L's request to establish a Remediation Adjustment Clause for the recovery of MGP remediation costs. As a result of the NJBPU's Summary Order, effective August 1, 1999, the recovery of these costs was transferred to the Societal Benefits Charge. As of December 31, 2000, JCP&L had recorded on its Consolidated Balance Sheet a regulatory asset of $51.6 million. JCP&L is continuing to pursue

reimbursement from its insurance carriers for remediation costs already spent and for future estimated costs. In 1994, JCP&L filed a complaint with the Superior Court of New Jersey against several of its insurance carriers, relating to these MGP sites, and has settled with all but one of those carriers.

OTHER COMMITMENTS AND CONTINGENCIES

Class Action Litigation:

GPU Energy

In July 1999, the Mid-Atlantic states experienced a severe heat storm which resulted in power outages throughout the service territories of many electric utilities, including the territory of JCP&L. Following these outages, the NJBPU initiated an investigation into the causes of the outages and the reliability of the transmission and distribution systems of all four New Jersey electric utilities. This investigation was essentially completed in May 2000, with the issuance of Phase I and Phase II reports and orders from the NJBPU. Both the Phase I and Phase II reports and orders contain, among other things, directions for JCP&L to undertake certain actions and report back to the NJBPU on the results. Additionally, the NJBPU Phase II order concluded that there is not a prima facie case demonstrating that, overall, JCP&L provided unsafe, inadequate or improper service to its customers.

Two class action lawsuits were commenced in New Jersey Superior Court in July 1999. These suits were subsequently consolidated into a single proceeding, and they seek compensatory and punitive damages arising from the service interruptions of July 1999 in the JCP&L territory. The GPU defendants named in these suits (i.e., GPU, Inc., JCP&L, GPUS and GPU Generation, Inc.) moved to dismiss or stay the litigation pending the NJBPU's exercise of its primary jurisdiction to investigate the causes of the outages. The trial court denied that motion, and also certified a plaintiff class consisting of JCP&L customers and their "dependents, tenants, employees and other intended beneficiaries of customers who suffered damages as a result" of the service interruptions.

In January 2000, the New Jersey Appellate Division granted the GPU defendants' motion for leave to take an interlocutory appeal of the trial court's decision on the issue of primary jurisdiction. On June 14, 2000, the Appellate Division affirmed the trial court but determined that the NJBPU's findings in the exercise of its "exclusive jurisdiction" could be "probative...but not determinative" of at least some of the issues in the litigation, and leaving it to the trial court to "decide in the first instance just what weight and validity to give the [NJBPU's] findings and conclusions."

In response to the GPU defendants' demand for a statement of damages, the plaintiffs have stated that they are seeking $700 million, subject to the results of pretrial discovery. JCP&L has notified its insurance carriers of the plaintiffs' allegations. The primary insurance carrier has stated that, while the substance of the plaintiffs' allegations is covered under the policy, it is reserving its rights concerning coverage as circumstances develop. In September 2000, JCP&L received from its primary insurance carrier the initial indemnification payment for certain expenses incurred by JCP&L relative to this action.

Discovery continues in the class action, and no trial date has been set. The GPU defendants filed a motion with the trial court seeking decertification of the class, and oral argument on the decertification was held in February 2001. There can be no assurance as to the outcome of these matters.

GPU Electric

As a result of the September 1998 fire and explosion at the Longford natural gas plant in Victoria, Australia, Victorian gas users (plaintiffs) have brought a class action in the Australian Federal Court against Esso Australia Limited and its affiliate (Esso), the owner and operator of the plant, for losses suffered due to the lack of natural gas supply and related damages. The plaintiffs claim that Esso was, among other things, negligent in designing, maintaining and operating the Longford plant, and also assert claims under Australian fair trade practices law.

Esso has joined as third party defendants the State of Victoria (State) and various State-owned entities which operated the Victorian gas industry prior to its privatization, including Transmission Pipelines Australia (TPA) and its affiliate Transmission Pipelines (Assets) Australia (TPAA). GPU, Inc., through GPU GasNet, acquired the assets of TPA and the shares of TPAA from the State in June 1999. Esso asserts that the State and the gas industry were negligent in that, among other things, they failed to ensure that the gas system would provide a secure supply of gas to users, and also asserts claims under the Australian fair trade practices law. In addition, GPU GasNet and other private entities (Buyers) that purchased the Victorian gas assets from the State have joined Esso as third party defendants. Esso asserts that if the gas industry is liable as alleged, that liability has been transferred to the Buyers as part of the State's privatization process.

Under the acquisition agreement with the State, GPU GasNet has indemnified TPA and the State against third party claims arising out of, among other things, the operation of TPA's business. TPA and the State have commenced proceedings against GPU GasNet to enforce the indemnity in respect of any liability that may flow to TPA as a result of Esso's claim.

GPU GasNet and TPAA have filed answers denying liability to Esso, the State and TPA, which could be material. GPU GasNet and TPAA have notified their insurance carriers of this action. The insurers have notified GPU GasNet that they have formed the preliminary view that GPU GasNet is not entitled to coverage under the liability policy. GPU GasNet believes that it is entitled to coverage, and discussions with the insurers are continuing. There can be no assurance as to the outcome of this matter.

Investments and Guarantees:

GPU, Inc.

GPU, Inc. has made significant investments in foreign businesses and facilities through its subsidiaries, GPU Electric and GPU Power. As of December 31, 2000, GPU, Inc.'s investments in GPU Electric and GPU Power were $881 million and $139 million, respectively. As of that date, GPU, Inc. has also guaranteed an additional $899 million and $21 million of GPU Electric and GPU Power outstanding obligations, respectively. Although management attempts to mitigate the risks of investing in certain foreign countries by, among other things, securing political risk insurance, GPU faces additional risks inherent to operating in such locations, including foreign currency fluctuations.

GPU Electric

In June 2000, GPU sold GPU PowerNet, its Australian electric transmission company, for A$2.1 billion (US $1.26 billion). For further information, see Note 6, Accounting for Extraordinary and Non-Recurring Items.

GPU Power UK has a 40% equity interest in a 586 MW power project in Pakistan (the Uch Power Project), which was originally scheduled to begin commercial operation in late 1998. In June 1999, certain Project lenders for the Uch Power Project issued notices of default to the Project sponsors (including GPU Power UK) for, among other things, failure

to pay principal and interest under various loan agreements. In November 1999, the Project sponsors and lenders reached an agreement under which repayment of the construction loan was extended, principal and interest payments deferred, and the sponsors agreed to fund the completion of the plant through the remaining equity contribution commitments. The plant commenced commercial operations in October 2000.

Uch has renegotiated several of the project agreements with the Government of Pakistan and its agencies, under which it agreed, among other things, to accept a reduction in the power purchase tariff averaging approximately 8% over the project term. The agreement includes options to extend the term of the project from 23 to 30 years.

GPU's investment in the Uch Power Project as of December 31, 2000 was approximately $37.9 million, plus a guaranty letter of credit of $3.6 million, and its share of the projected completion costs represents an additional $3.1 million commitment. Cinergy (the former owner of 50% of Midlands Electricity plc) agreed to fund up to an aggregate of $20 million of the required capital contributions, for a period of one year from July 15, 1999, and "cash losses," which could be incurred on the Uch Power Project, for a period of up to ten years from July 15, 1999. Cinergy has reimbursed GPU Electric for $4.9 million of capital contributions through December 31, 2000, leaving a remaining commitment of up to $15.1 million. There can be no assurance as to the outcome of this matter.

GPU Power UK also owns an 18.75% interest in Humber Power Limited (Humber). At December 31, 2000, GPU Power UK's equity in the project, which is located in England, was approximately $28 million. A number of investors in the project (not including GPU Power UK) also have purchase power agreements with Humber, which provide for the servicing of the project's debt and a return on equity. The purchasers are claiming that such contracts, which provide for prices of power in excess of current market prices, will become unenforceable under a proposed new UK regulatory scheme. Humber and the purchasers have agreed to submit the matter to arbitration as provided by the contracts. If the contracts cannot be satisfactorily reformed, the prices at which Humber can sell its energy may not be sufficient to provide an equity return to the investors or ultimately to service Humber's debt. There can be no assurance as to the outcome of this matter.

As part of the 1999 sale of the GPU Power UK supply business and the purchase of the 50% of GPU Power UK that GPU did not already own, certain long-term purchase obligations under natural gas supply contracts were retained. Most of these contracts, which extend to September 2005, were at fixed prices in excess of the market price of gas, and a liability had been established for the estimated loss under such contracts. However, as a result of increasing gas prices during the second quarter of 2000, GPU Power UK was able to enter into matching forward sale contracts for the majority of the gas purchases, resulting in a reduction in the estimated liability and a pre-tax credit to income of $15.9 million. Other open gas contracts, which extend to 2002, require GPU Power UK to purchase or to sell gas at fixed prices. The estimated out-of-market position of all contracts at December 31, 2000 was $22 million; however, the remaining open positions included both sales and purchases, thereby reducing the remaining exposure to future price changes.

In an English court decision involving two unaffiliated utilities (National Grid and National Power), the court held that utilities improperly used a pension plan surplus in the UK Electricity Supply Pension Scheme to eliminate scheduled payments in respect of early retirement costs and employer contributions. The court found that, in the case of National Grid and National Power, procedures had not been strictly followed, and as such, a liability may now exist. At a subsequent hearing, the court refused to consider the validity or effectiveness of retrospective amendments to the plan. National Grid and National Power have appealed the court's decision to the House of Lords. Pending the outcome of the Appeal, the requirement for any payments has been stayed. The appeal in the House of Lords is expected to be heard in the first quarter of 2001. If a similar

complaint were to be made against GPU Power UK, GPU Power UK's potential liability is estimated to be a maximum of £63 million (US $94 million), exclusive of any applicable interest charges or penalties. The GPU Power UK section of the Electricity Supply Pension Scheme remains in substantial surplus and any payment to the plan that might ultimately prove to be necessary would be accounted for as an increase in pension assets, and would not have an immediate impact on income. However, any related penalties or interest (which could be assessed, though none are currently proposed) may adversely affect income. There can be no assurance as to the outcome of this matter.

Emdersa's operating companies are subject to a number of government claims related to Value-added tax liabilities and to Social Security taxes collected in their electric rates, which aggregate approximately $21 million. The claims are generally related to transitional issues surrounding the privatization of Argentina's electricity industry. There can be no assurance as to the outcome of these matters.

GPU Power

On July 9, 1999, DIAN (the Colombian national tax authority) issued a "Special Requirement" on the Termobarranquilla S.A., Empresa de Servicios Publicos (TEBSA) 1996 income tax return, which challenges the exclusion from taxable income of an inflation adjustment related to the value of assets used for power generation (EI Barranquilla, a wholly owned subsidiary of GPU Power, ABB Barranquilla, Corporacion Electrica de la Costa Atlantica (CORELCA) and Distral Group have a 28.7%, 28.7%, 42.5% and 0.1% interest in TEBSA, respectively). The failure to give notice of this Special Requirement to the US Export Import Bank (EXIM Bank) is an event of default under the loan agreement. GPU Power also believes that other events of default exist under the loan agreements with project lenders including the Overseas Private Investments Corporation (OPIC), a commercial bank syndicate. As a result, certain required certifications have not been delivered to EXIM Bank, OPIC and the other project lenders, which failure is, itself, an event of default under the loan agreements. These issues are currently being discussed with EXIM Bank, the other project lenders, and the Government of Colombia, as well as the other partners in the TEBSA project. In addition, in January 2001 CORELCA advised GPU Power that it was conducting its own investigation of the matter. As of December 31, 2000, GPU Power has an investment of approximately $92 million in TEBSA and is committed to make additional standby equity contributions of $21.3 million, which GPU, Inc. has guaranteed. The total outstanding senior debt of the TEBSA project is $372 million at December 31, 2000, and, in addition, GPU, Inc. has guaranteed the obligations of the operators of the TEBSA project, up to a maximum of $5 million, under the project's operations and maintenance agreement. There can be no assurance as to the outcome of these matters.

With regard to the "Special Requirement" issued by DIAN, DIAN asserts that TEBSA should be liable for approximately $4.4 million consisting of $1.3 million in additional tax and $3.1 million in penalties and interest. TEBSA has filed both procedural and substantive objections to these assertions, the DIAN responded to these objections reiterating its previous position, and TEBSA, in turn, filed an appeal with the DIAN on June 2, 2000. A response is expected within one year.

In July 2000, the DIAN issued a "Special Requirement" on the 1997 income tax return of TEBSA challenging a tax exemption benefit under a Colombian income tax statute. The DIAN requested payment of approximately $1.2 million in additional tax, penalties and interest. On October 12, 2000, TEBSA filed a response with the DIAN stating arguments supporting its tax exemption benefit. There can be no assurance as to the outcome of these matters.

GPU Telcom

In March 2000, GPU, Inc. announced its participation in America's Fiber Network LLC

(AFN), of which GPU, Inc. anticipates owning 25%. AFN is a high-speed fiber optics company with a network of more than 7,000 route miles, or 140,000 fiber miles, connecting major markets in the eastern US to secondary markets with a growing need for broadband access. GPU, Inc. anticipates investing cash, as well as existing and new fiber routes and electronic equipment, in AFN through GPU Telcom. As of December 31, 2000, GPU Telcom had invested $5.3 million in AFN.

In April 2000, GPU, Inc. announced the formation of Telergy Mid-Atlantic (TMA), a joint venture between GPU Telcom and Telergy, Inc. TMA combines established telecommunications services and marketing expertise with utilities' existing fiber networks and natural positioning in serving retail markets. As of December 31, 2000 GPU Telcom had acquired $20 million of Telergy, Inc. convertible preferred securities.

Other:

JCP&L and Public Service Electric & Gas Company (PSE&G) each hold a 50% undivided ownership interest in Yards Creek Pumped Storage Facility (Yards Creek). In December 1998, JCP&L filed a petition with the NJBPU seeking a declaratory order that PSE&G's right of first refusal to purchase JCP&L's ownership interest at its current book value under a 1964 agreement between the companies is void and unenforceable. Management believes that the fair market value of JCP&L's ownership interest in Yards Creek is substantially in excess of its December 31, 2000 book value of $21 million. Negotiations to resolve this dispute are continuing; however, there can be no assurance as to the outcome of this matter.

In March 1999, Penelec and New York State Electric & Gas Corporation (NYSEG) each sold their 50% undivided ownership interests in the Homer City Station to a subsidiary of Edison Mission Energy (EME) for a total of $1.9 billion. In connection with the sale, Penelec and NYSEG indemnified the buyer with respect to certain contingent liabilities, including costs or expenses which the EPA might impose for failure to comply with New Source Performance Standards, Prevention of Significant Deterioration and New Source Review regulations under the Clean Air Act prior to the date of the sale. In 1998, the EPA had conducted inspections at Homer City with regard to the plant's compliance with these regulations. On October 30, 2000, EME notified Penelec and NYSEG that the EPA had concluded that these regulations applied to Homer City prior to the sale to EME and that Homer City was operating in violation of these Clean Air Act regulations. If it is ultimately determined that these regulations were applicable to Homer City, the EPA could assess substantial monetary penalties and require capital modifications to the plant, the costs of which would be material. To the extent Penelec and NYSEG are obligated to indemnify EME for any of these costs, they would each be severally liable for a 50% share. There can be no assurance as to the outcome of this matter.

Concurrent with GPU's July 1999 acquisition of the 50% of GPU Power UK which it did not already own, GPU began to evaluate existing restructuring plans and formulate additional plans to reduce operating expenses and achieve ongoing cost reductions. As of December 31, 1999, GPU had identified and approved a cost reduction plan. At the acquisition date, GPU Power UK had recorded a liability of $28.6 million related to previous cost reduction plans. GPU retained $25.7 million of this liability, related to contractual termination and other severance benefits for 276 employees identified in a 1999 business process reengineering project. GPU identified an additional 355 employees (234 in Engineering Services, 38 in Metering, 21 in Network Services and 62 from other specific functions) to be terminated as part of the plan and recorded an additional liability of $39.3 million. A net charge of $18.2 million for GPU's 50% share of these adjustments was included in expense in 1999 and the other 50% was recorded in Goodwill as a purchase accounting adjustment.

In 2000, a change in the investment return assumptions, due to better than expected

investment performance, resulted in a reduction of approximately $6.9 million, to $22.6 million, in the estimated liability for the remaining 459 employees. Consequently, goodwill was credited for $3.4 million (50% of the change in estimate) and $3.5 million was credited to income. During 2000, $16.9 million was paid to 399 employees. The remaining severance liability of $4.5 million at December 31, 2000 reflects the above transactions as well as currency translation adjustments and the impact of seven employees who were retained, and is included in Other current liabilities on the Consolidated Balance Sheet. Management expects the remaining employees to leave by June 30, 2001.

GPU AR has entered into contracts to supply electricity to retail customers through June 2001. In connection with meeting its supply obligations, GPU AR has entered into purchase commitments for energy and capacity with payment obligations totaling approximately $10.6 million as of December 31, 2000. GPU, Inc. has guaranteed these payments, as well as certain other obligations, up to a maximum of $19 million.

In accordance with the Nuclear Waste Policy Act of 1982 (NWPA), the GPU Energy companies have entered into contracts with, and have been paying fees to, the DOE for the future disposal of spent nuclear fuel in a repository or interim storage facility. In 1996, the DOE notified the GPU Energy companies and other standard contract holders that it would be unable to begin acceptance of spent nuclear fuel for disposal by 1998, as mandated by the NWPA. The DOE requested recommendations from contract holders for handling the delay. In June 1997, a consortium of electric utilities, including GPUN, filed a license application with the NRC seeking permission to build an interim above-ground disposal facility for spent nuclear fuel in Utah.

At December 31, 2000, GPU has recorded a liability of $210 million owed to the Nuclear Waste Fund, related to spent nuclear fuel generated prior to the sales of TMI-1 and Oyster Creek to AmerGen. AmerGen has assumed all liability for disposal costs related to spent nuclear fuel generated following its purchase of the plants.
