## **Supply Agreement with Eurallumina SPA Finalised**

Virotec is pleased to announce that it has finalised its agreement with Eurallumina SPA of Sardinia, Italy for the supply of red mud residue to Virotec for the purpose of making its Bauxsol™ products. This formalises the agreement in principle announced on 14 June 2001.

With the assistance of Eurallumina, all necessary regulatory requirements are being addressed and planning for the establishment of facilities where Bauxsol™ products will be made and prepared for dispatch, adjacent to the Eurallumina site, is proceeding.

Sardinia is geographically very suitable, because of its close proximity to the dry Mediterranean countries, many of which have historically supported a mining industry and issues such as water scarcity and acid mine drainage are major problems. Virotec's treatment can alleviate these problems by cleaning the water in contaminated tailings dams and pit lakes. Sardinia is a location from which it is relatively easy to transport Bauxsol™ products to other European countries.

Executive Chairman of Virotec, Brian Sheeran commented; "This is an important step in establishing the necessary infrastructure required for Virotec to supply its Bauxsol™ products to the European market. Virotec has formed an excellent relationship with Eurallumina and looks forward to a long and successful association."

### *Notes to editors*

Bauxsol™ Technology is a fast and cost-effective green technology. Developed in Australia from a by-product of aluminium mining, it simultaneously neutralizes acid and extracts heavy metals from contaminated water and soils.
