### **NEWS RELEASE**

January 28, 2002

CDNX Trading Symbol: **FNC**  
S.E.C. Exemption: 12(g)3-2(b)

The Company is pleased to announce that recently completed reconnaissance soil sampling over its large property position east of Freewest Resources Canada Inc.'s Clarence Stream gold discoveries in southwestern New Brunswick has outlined a wide scatter of gold-in-soil anomalies. Some are associated with the granite contacts, and topographic lineaments at a distance from the contacts in the country rocks, as on the 39 claim Fancamp/Golden Hope Mines Ltd. Nason Brook property, and similar associations were noted on Fancamp's 100% owned claims. The largest anomaly occurs on Fancamp's 124 claim West Long Lake block and has a strike length of at least 1,500 metres and a width of up to 800 metres. The anomaly area is overburden covered, and detailed soil sampling has begun over this and the other newly defined targets.

#### **ON BEHALF OF THE BOARD**

"Peter H. Smith", President
