NEW GOLD DISCOVERY AT ASSEAN LAKE

International Curator Resources Ltd. (the "Company") is pleased to announce a new gold discovery at the Company's Assean Lake Project near Thompson, Manitoba. Hole HT-02-60 intersected a 4.0 metre interval grading 10.2 g/t gold. Hole HT-02-60 is located approximately 3.5 kilometres from and on strike with the Hunt gold zone discovered last year.

ASSEAN LAKE DRILL RESULTS						
Drill Hole	Coordinates	Azimuth	Dip	From/to(m)	Width (m)*	Gold (g/t)
HT-02-60	5200E 240N	330 ⁰	-45 ⁰	42.0-46.0	4.00	10.20
Incl.				42.0-43.5	1.50	23.94

*The widths listed are drilled widths. The strike and dip of the zone are unknown, true widths cannot be estimated until more drilling has been done.

This new discovery was targeted on one of several IP and MMI anomalies being tested along strike of the Hunt gold zone (8 kilometre strike length).

There are 2 drills on site, one testing the Hunt zone to a depth of 350 metres and the other drilling reconnaissance geophysical and geochemical (IP/MMI) targets, including follow-up drilling on HT-02-60. A total of approximately 5,000 metres is being drilled in the current program. Assay results will be reported as they become available. These results were compiled by R.J. Bailes, P. Geol., Vice President of International Curator, who is an appropriately qualified person as defined by National Instrument 43-101.

Please visit International Curator's web site www.intlcurator.com for complete project details, photos and maps.

International Curator has an option with Rare Earth Metals Corp., a private company, to acquire a 60% interest in the Hunt property.

On behalf of the Board
