\* Reverse Circulation \*\* Diamond Drill Azi = Azimuth

The majority of results reported are in-fill drilling based on recommendations by our consultants, Watts Griffis and McOuat ("WGM"). WGM is an independent geological and engineering firm based in Toronto, Ontario, with considerable experience in West Africa. WGM recently prepared an independent resource estimate on the Adoikrom, Father Brown and Dabokrom, (the southern targets), in accordance with National Instrument 43-101. The purpose of the drilling at the southern targets was to upgrade the quality of some of the resources from the inferred to the measured and indicated category. It should be noted that the above results are "uncut", rendering some of the composite grades quite high. A statistical analysis of these grades will be completed to determine if cutting will be required to calculate the updated resource.

All drill results are being evaluated by our geological staff for follow up exploration. Assaying of drill samples was conducted and reported by Transworld Laboratories (Aust.) with checks by SGS Laboratories (Belg.) and both from their facilities in Ghana.

The results set out above are consistent with, and in some cases, more encouraging than previous drilling. These drill results will be plotted and interpreted, in conjunction with the previous results, for the purpose of arriving at an updated resource estimate.

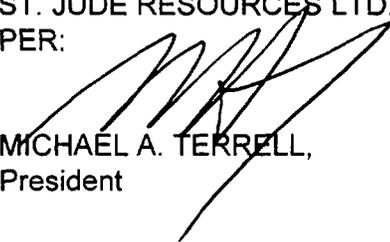

The company is also encouraged by the results from the Abada target which has yet to be considered as a resource. The above results will be considered along with earlier drill results from this target and the company expects to be in a position to complete a further phase of drilling at the Abada target later this season.

St. Jude is the operator of this project and all drill results reported have been verified and interpreted by the company's Exploration Manager, Mr. George Flach, who is a Qualified Person pursuant to National Instrument 43-101.

The company is presently in the process of an extensive trenching and drilling program on its South Benso project, which is directly north of and adjacent to the Hwini-Butre project. The results from this program, as well as those from the Hwini-Butre project, will be reported as they become available.

ST. JUDE RESOURCES LTD.
