Drilling Commences on the Crystal Property

CALGARY, ALBERTA—TYLER RESOURCES INC. (TYS-CDNX) is pleased to announce that Navigator Exploration Corp. ("Navigator") has commenced drilling on the Crystal Property in which Navigator is currently earning an initial 50% interest with partner Wheaton River Minerals Ltd. As announced by Navigator in their March 28th exploration update, drilling over the next two weeks will test approximately five high-priority geophysical targets that model as near vertical discrete pipe-like features. The Crystal Property is located some 60 kilometers southeast of Lac De Gras in the heart of the Slave craton where several economic diamond deposits have been discovered in recent years.

Concurrently, Tyler's activities in Nunavut have commenced with a high resolution airborne geophysics program aimed at discovering geophysical signatures typical of kimberlite intrusions on the Keni property. Tyler is currently earning a 32.5% interest with its partner Northern Abitibi Mining Corp. (CDNX-NAI) (collectively earning a 65% interest in the property) in the approximately 113,000 acre property strategically located in the Coronation Gulf Diamond District. This survey will provide the necessary data to identify targets which will be followed up in a summer field program.

Several new kimberlites were discovered in the Coronation Gulf region last year by companies such as Ashton Mining of Canada and Kennecott and many have returned impressive initial diamond counts, including three pipes with stones greater than 1mm in size. The Keni Property is situated approximately 17 kilometers to the east of the Ashton/Northern Empire Kikerk property where the Potentilla kimberlite was discovered last year and some 30 kilometers east of the Ashton/Pure Gold KIM property where the diamondiferous Artemisia kimberlite was recently discovered.

All statements, other than statements of historical fact, in this news release are forward-looking statements that involve various risks and uncertainties, including, without limitation, statements regarding the potential extent of mineralization and reserves, exploration results and future plans and objectives of Tyler Resources Inc. These risks and uncertainties include, but are not restricted to, the amount of geological data available, the uncertain reliability of drilling results and geophysical and geological data and the interpretation thereof and the need for adequate financing for future exploration and development efforts. There can be no assurance that such statements will prove to be accurate. Actual results and future events could differ materially from those anticipated in such statements. These and all subsequent written and oral forward-looking statements are based on the estimates and opinions of management on the dates they are made and are expressly qualified in their entirety by this notice. The Company assumes no obligation to update forward-looking statements should circumstances or management's estimates or opinions change.
