NEWS RELEASE
STAMPEDE TURNER VALLEY 2-34-20-3 W5M
COMMENCEMENT OF PRODUCTION OPERATIONS

CALGARY, ALBERTA – April 9, 2002, Stampede Oils Inc., the operator of the Stampede Turner Valley 2-34-20-3 W5M well, advises that trading in the shares of the Company was halted on Friday, April 5th, pending results from production operations for the subject well. The Canadian Venture Exchange has now been requested to approve a reinstatement of share trading today.

The production operation commenced at 9:40 a.m. Friday, April 5th with an initial flow rate in excess of 800 barrels per day of 42.5° gravity oil. This production flow rate was interrupted subsequently with the entrance into the wellbore of remaining load fluid yet to be recovered from the reservoir. To facilitate complete recovery of this load fluid, along with attendant oil and gas, the well has now been put on pump. This operation should take only a few days and the well is then expected to re-establish significant oil production flow rates on an on-going basis.

It should be noted that when the well cleanup operation was suspended on July 18th of last year, oil recovery content at that time was over 50% but it was apparent that a fair amount of load fluid would still have to be recovered from the reservoir in due course.

To date, the results of this production commencement operation are as expected. Detailed update information will be forthcoming.

For further information contact J. McLeod or P. de Bruycker (403) 265-6166
