SJD \ News Release #119

The Subriso East target consists of a series of hills that generally extend in a N-S direction. Exploration at Subriso East has been focused on two areas that are referred to as Hill B and Hill C. Most of these drill results are from Hill B, however, drill holes SJB-20, 21 and 22 are from Hill C which is south of Hill B. Drill holes SJB-19, 29, 30 and 31 are exploratory holes and are outside of the Hill B and Hill C zones.

Encouraged by the significant drill intersections that we have encountered from the South Benso project, the company has recently started a new drill program focused on in-fill and step-out drilling on both the Subriso East and Subriso West targets. The company is also proceeding aggressively with a geochemical soil sampling program and follow up trenching to establish new exploration targets on this project.

St. Jude is the operator of this project and all drill results reported have been verified and interpreted by the company's Exploration Manager, Mr. George Flach, who is a Qualified Person pursuant to National Instrument 43-101.

The South Benso concession is contiguous to, and directly north of, St. Jude's Hwini-Butre property where the company has already reported a significant gold resource. Together, these two concessions incorporate approximately 30 contiguous kilometers of the prevailing strike of the prolific Ashanti gold belt. Exploration activity is presently underway on both the South Benso and Hwini-Butre projects.

Further results will be reported as they become available.

ST. JUDE RESOURCES LTD
