SOURCE: Alvarion Ltd.

**Alvarion Receives Follow-On Order From Connex,
Romania's Largest Cellular Operator**

TEL - AVIV, Israel--(BUSINESS WIRE)--May 14, 2002--Alvarion Ltd. (NASDAQ:
ALVR - News):

To Date, Connex (of the Vodafone Group) Has Purchased Alvarion
Equipment Totaling Over \$6M To Bring Internet Access and VPNs To
Business & Residential Customers

Alvarion Ltd. (NASDAQ: ALVR - News), a leading provider of Broadband Wireless
Access (BWA) solutions, today announced the receipt of a follow-on order for additional
fixed wireless equipment from Connex, the leader of mobile communications in
Romania.

Including this order, Connex has now purchased Alvarion equipment worth a total of
more than \$6 million.

Connex is a trademark of MobiFon S.A., which is a member of the Vodafone Group, one
of the world's leading telecommunication consortiums. Connex is the leader of the mobile
communications market in Romania, providing GSM services to more than two million
customers and covering 95% of the Romanian territory, as of the end of 2001. To
increase the revenue potential of its cellular network assets, including rooftop rights and
towers, know-how, brand recognition, etc., Connex reused them to deploy fixed wireless
networks nationwide. With a nationwide license in the 3.5 GHz band, and using the
license-free 2.4GHz bands, Connex currently uses its Alvarion networks to deliver an
extensive range of IP-based broadband services such as Internet access and VPNs to
thousands of customers, primarily businesses. In the near future, Connex plans to launch
additional services over the Alvarion network.

Commenting on the news, Vishant Vora, CTO of Connex, said, "The deployment of our
BWA networks was a logical next step which leverages on the success of our cellular
business. Fixed wireless infrastructure is ideal for Romania, whose existing cable
infrastructure is insufficient to support broadband services. In addition, the network
enabled us to capitalize on many of the assets that we had established for our cellular
services, including real estate throughout Romania and an extensive marketing and
support organization. With these in place, it was easy and cost-effective to add
complementary fixed wireless equipment and to begin offering IP-based services. The
services that we provide over our Alvarion networks help us improve our competitive
positioning. As a result, we are now expanding our BWA capabilities, and look forward
to continued long-term cooperation with Alvarion."

Tzvika Friedman, President & COO of Alvarion, added, "In Romania, as in so many emerging markets, demand for broadband Internet access and data services is growing rapidly. Connex is a great example of a savvy service provider that uses a mix of technologies to cost-effectively meet the demands of a diverse user base. In establishing its BWA services, Connex took advantage of its existing cellular infrastructure and was able to achieve an extremely fast return-on-investment. We are pleased that our cutting-edge technologies have contributed to Connex's success, and look forward to continued future cooperation."

About Connex

Connex is the registered trademark of MobiFon S.A., the company that launched the first GSM network in Romania, on April 15, 1997. At that time, Connex introduced voice services based on the GSM system on the Romanian market, but during its almost five years of existence, the company permanently extended its range of services, including data and fax services, and became an Internet service provider (ISP) with Xnet. Connex, the only Romanian GSM operator that also offers Internet services, leads the Romanian market, with 2,003,600 GSM customers and over 150,000 Xnet users as of December 31, 2001.

The Connex network covers 95% of the Romanian population and Connex customers benefit from roaming in 90 countries/areas, through 208 operators. This spectacular evolution was possible due to Connex's main shareholders, which are two world leaders of the market of mobile communication services, namely, Telesystem International Wireless (TIW) and Vodafone.

About Alvarion

Alvarion is a premier provider of solutions based on Point-to-Multipoint (PMP) Broadband Wireless Access (BWA) used by telecom carriers, service providers, and enterprises worldwide. Alvarion systems provide Internet access and voice and data services in the last mile, cellular network feeding, building-to-building and wireless local area network (LAN) connectivity.

Alvarion offers the broadest range of BWA solutions by market segment and frequency band, designed to address all carriers' and service providers' business models. With its combined market experience, strong customer base, diversified distribution channels and field-proven deployments, Alvarion is a leading BWA pure play provider for every end user profile, from residential subscribers to business customers.

Alvarion Announces BreezeNET DS.5800 Wireless Bridging System

Enables Long-Range Backhauls And Campus WLAN Bridging Using 5GHz At A Fraction Of The Cost Of Conventional Systems

TEL-AVIV, Israel--(BUSINESS WIRE)--May 21, 2002--Alvarion Ltd. (NASDAQ: ALVR - News), a leading provider of Broadband Wireless Access (BWA) solutions, today announced the commercial launch of its BreezeNET(TM) DS.5800 wireless bridging system, making the Company's line of wireless networking products one of the most diversified in the world.

The solution, which operates in unlicensed 5.8 GHz bands, is ideal for enterprises and operators looking for cost-competitive, point-to-point and point-to-multipoint solutions. The DS.5800 enables wireless Internet backhauls for wireless Internet service providers (WISPs) and campus bridging for enterprises without exposure to interference from more common 2.4GHz systems, such as WiFi networks. It can also be used to add capacity and scalability to existing networks.

The system offers extensive overall cost savings. Until today, companies were forced to choose much more expensive systems if they needed an alternative to the 2.4GHz band. Moreover, like Alvarion's legendary BreezeNET DS.11 system, the highly integrated outdoor form factor DS.5800 is designed to keep installation costs low. For example, the DS.5800 is available with built-in antennas, and features integrated power over Ethernet (PoE) and lightning protection, precluding the need for additional hardware. This integrated indoor-outdoor architecture drastically reduces the skill level and time required to install a connection.

The DS.5800's integrated high power provides for ranges of up to 30 miles at data rates of up to 11 Mbps. It is compatible with any standard Ethernet switch and router and features full LED diagnostics with a 10-LED RSSI bar display for easy antenna alignment. The DS.5800 also includes local or remote SNMP management, making it immediately deployable and scalable as the network environment changes. The firmware has the advanced capabilities expected of an Alvarion product, such as local or remote batch configuration and upgradeability, making the addition of new users and system management a snap.

"The BreezeNET DS.5800 is the first of multiple product releases in 5GHz for Alvarion this year," said Rudy Leser, Vice President Marketing, Alvarion Ltd. "It marks the initial

step toward our mixed spectrum model, which will give operators and enterprises maximum flexibility and choice."
