EAST CORNING PROJECT UPDATE

For Immediate Release

Olympic reports flow test results from the third well of a multiple well drill program on the East Corning Property in Tehama County, California. Results from two zones tested at sustained commercial rates. Results from the two previous wells have also tested at commercial rates.

The Company also confirms gas sales from the first well have commenced with production at approximately 2,000 MCFPD. The other two wells are now shut in and awaiting a pipeline connection.

The fourth well of the program has finished drilling. Production casing was run after encouraging gas shows and electric log profiles were obtained. Flow testing is expected shortly.

Due to the sensitive, confidential nature of the geological and engineering details surrounding the East Corning project, the partners have agreed to release information of a more general nature until a brief production history makes possible a more accurate assessment of the full potential of this project.

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

RESULTS FROM EAST CORNING PROJECT

For Immediate Release

Olympic reports flow test results from the second well of a multiple well drill program on the East Corning Property in Tehama County, California. Combined results from both the upper and lower zones tested at sustained commercial rates.

The Company also confirms flow test operations on the first well have been completed. Gas sales from this well are expected to begin later this month and production is anticipated to be approximately 2,000 MCFPD. Both tested wells are now shut in and awaiting a pipeline connection.

The replacement well for the third well, which was ultimately plugged due to mechanical problems, has finished drilling. Production casing was run in this fourth well after encouraging gas shows and electric log profiles were obtained. Flow testing is expected shortly.

The rig will be moving to the fifth location and will commence drilling in a few days.

Due to the sensitive, confidential nature of the geological and engineering details surrounding the East Corning project, the partners have agreed to release information of a more general nature until a brief production history makes possible a more accurate assessment of the full potential of this project.

RE: PRIVATE PLACEMENT

FOR IMMEDIATE RELEASE

Further to the news release dated April 9, 2002, the Company has completed a private placement of 1,200,000 units at \$0.25 per unit. Each unit consists of one common share of the Company and one two-year non-transferable share purchase warrant. Each warrant entitles the holder to purchase one additional common share of the Company for \$0.35

Proceeds of this placement will be used to advance the Company's primary oil and gas properties located in California, new properties that the Company is considering, and for working capital purposes.

OLYMPIC ANNOUNCES A SIGNIFICANT GAS DISCOVERY AT EAST CORNING

For Immediate Release

Olympic confirms initial flow test results from the second well of a multiple well drill program on the East Corning Property in Tehama County, California. Initial flow test results from the upper Forbes zone tested at a sustained rate in excess of 3,000 MCFPD. High winds and dry conditions in the area suspended testing operations on the lower Forbes zone which are expected to resume immediately pending favorable weather.

The Company also confirms flow test operations on the first well have been completed. Gas sales from this well are expected to begin later this month and production is anticipated to be in excess of 2,000 MCFPD.

The operator has also advised that the replacement well for the third well has been spudded. The recently drilled third well of this program had very encouraging gas shows in the Kione and the deeper Forbes formation but suffered mechanical problems due to gas pressures (up to 1,800 units) in the hole prior to running electric logs. It became prudent to abandon and shut-in this well to avoid serious injury or a potential gas blowout.

"We are obviously very pleased with these flow test results since it confirms our belief that there is significant untapped potential in the East Corning field" says Daryl Pollock. "We are confirming the northerly extension of the Rice Creek field as it continues northward through Olympic's large 6,500 acre property. With these early positive results, we look forward to a highly successful drilling program over the coming months."

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

EAST CORNING WELL FLOW TESTS AT 1,500 MCFPD

For Immediate Release

Olympic and partners are pleased to announce that flow test results have been received from the first well of a multiple well drill program on the East Corning Property in Tehama County, California. The uppermost zone tested with a sustained rate of 800 MCF per day and similar rates are expected from the lower zone for combined anticipated production in excess of 1500 MCF per day. This well encountered five separate approximately 10 foot gas-charged intervals in addition to several other lesser intervals of potentially economic gas.

Flow testing of the second well in this program will commence immediately and results should be available within one week.

The recently drilled third well of this program had very encouraging gas shows in the Kione and the deeper Forbes formation but suffered mechanical problems due to gas pressures (up to 1,800 units) in the hole prior to running electric logs. It became prudent to abandon this well to avoid serious injury or a potential gas blowout and start anew with a twin well nearby. Construction for a replacement well is presently underway and drilling will commence as soon as possible.

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

Initial flow test results from the upper Forbes zone tested at a sustained rate in excess of 3,000 MCFPD. High winds and dry conditions in the area suspended testing operations on the lower Forbes zone which are expected to resume immediately pending favorable weather.

The Company also confirms flow test operations on the first well have been completed. Gas sales from this well are expected to begin later this month and production is anticipated to be in excess of 2,000 MCFPD.

The operator has also advised that the replacement well for the third well has been spudded. The recently drilled third well of this program had very encouraging gas shows in the Kione and the deeper Forbes formation but suffered mechanical problems due to gas pressures (up to 1,800 units) in the hole prior to running electric logs. It became prudent to abandon and shut-in this well to avoid serious injury or a potential gas blowout.

"We are obviously very pleased with these flow test results since it confirms our belief that there is significant untapped potential in the East Corning field" says Daryl Pollock. "We are confirming the northerly extension of the Rice Creek field as it continues northward through Olympic's large 6,500 acre property. With these early positive results, we look forward to a highly successful drilling program over the coming months."

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

EAST CORNING WELL FLOW TESTS AT 1,500 MCFPD

For Immediate Release

Olympic and partners are pleased to announce that flow test results have been received from the first well of a multiple well drill program on the East Corning Property in Tehama County, California. The uppermost zone tested with a sustained rate of 800 MCF per day and similar rates are expected from the lower zone for combined anticipated production in excess of 1500 MCF per day. This well encountered five separate approximately 10 foot gas-charged intervals in addition to several other lesser intervals of potentially economic gas.

Flow testing of the second well in this program will commence immediately and results should be available within one week.

The recently drilled third well of this program had very encouraging gas shows in the Kione and the deeper Forbes formation but suffered mechanical problems due to gas pressures (up to 1,800 units) in the hole prior to running electric logs. It became prudent to abandon this well to avoid serious injury or a potential gas blowout and start anew with a twin well nearby. Construction for a replacement well is presently underway and drilling will commence as soon as possible.

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

EAST CORNING PROJECT UPDATE

For Immediate Release

Olympic reports flow test results from the third well of a multiple well drill program on the East Corning Property in Tehama County, California. Results from two zones tested at sustained commercial rates. Results from the two previous wells have also tested at commercial rates.

The Company also confirms gas sales from the first well have commenced with production at approximately 2,000 MCFPD. The other two wells are now shut in and awaiting a pipeline connection.

The fourth well of the program has finished drilling. Production casing was run after encouraging gas shows and electric log profiles were obtained. Flow testing is expected shortly.

Due to the sensitive, confidential nature of the geological and engineering details surrounding the East Corning project, the partners have agreed to release information of a more general nature until a brief production history makes possible a more accurate assessment of the full potential of this project.

The Company also confirms flow test operations on the first well have been completed. Gas sales from this well are expected to begin later this month and production is anticipated to be approximately 2,000 MCFPD. Both tested wells are now shut in and awaiting a pipeline connection.

The replacement well for the third well, which was ultimately plugged due to mechanical problems, has finished drilling. Production casing was run in this fourth well after encouraging gas shows and electric log profiles were obtained. Flow testing is expected shortly.

The rig will be moving to the fifth location and will commence drilling in a few days.

Due to the sensitive, confidential nature of the geological and engineering details surrounding the East Corning project, the partners have agreed to release information of a more general nature until a brief production history makes possible a more accurate assessment of the full potential of this project.

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

RE: PRIVATE PLACEMENT

FOR IMMEDIATE RELEASE

Further to the news release dated April 9, 2002, the Company has completed a private placement of 1,200,000 units at \$0.25 per unit. Each unit consists of one common share of the Company and one two-year non-transferable share purchase warrant. Each warrant entitles the holder to purchase one additional common share of the Company for \$0.35

Proceeds of this placement will be used to advance the Company's primary oil and gas properties located in California, new properties that the Company is considering, and for working capital purposes.

OLYMPIC ANNOUNCES A SIGNIFICANT GAS DISCOVERY AT EAST CORNING

For Immediate Release

Olympic confirms initial flow test results from the second well of a multiple well drill program on the East Corning Property in Tehama County, California. Initial flow test results from the upper Forbes zone tested at a sustained rate in excess of 3,000 MCFPD. High winds and dry conditions in the area suspended testing operations on the lower Forbes zone which are expected to resume immediately pending favorable weather.

The Company also confirms flow test operations on the first well have been completed. Gas sales from this well are expected to begin later this month and production is anticipated to be in excess of 2,000 MCFPD.

The operator has also advised that the replacement well for the third well has been spudded. The recently drilled third well of this program had very encouraging gas shows in the Kione and the deeper Forbes formation but suffered mechanical problems due to gas pressures (up to 1,800 units) in the hole prior to running electric logs. It became prudent to abandon and shut-in this well to avoid serious injury or a potential gas blowout.

"We are obviously very pleased with these flow test results since it confirms our belief that there is significant untapped potential in the East Corning field" says Daryl Pollock. "We are confirming the northerly extension of the Rice Creek field as it continues northward through Olympic's large 6,500 acre property. With these early positive results, we look forward to a highly successful drilling program over the coming months."

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

EAST CORNING WELL FLOW TESTS AT 1,500 MCFPD

For Immediate Release

Olympic and partners are pleased to announce that flow test results have been received from the first well of a multiple well drill program on the East Corning Property in Tehama County, California. The uppermost zone tested with a sustained rate of 800 MCF per day and similar rates are expected from the lower zone for combined anticipated production in excess of 1500 MCF per day. This well encountered five separate approximately 10 foot gas-charged intervals in addition to several other lesser intervals of potentially economic gas.

Flow testing of the second well in this program will commence immediately and results should be available within one week.

The recently drilled third well of this program had very encouraging gas shows in the Kione and the deeper Forbes formation but suffered mechanical problems due to gas pressures (up to 1,800 units) in the hole prior to running electric logs. It became prudent to abandon this well to avoid serious injury or a potential gas blowout and start anew with a twin well nearby. Construction for a replacement well is presently underway and drilling will commence as soon as possible.

This multiple well drill program is designed to test the results of the Company's recent 3D seismic shoot over the 6,500 acre East Corning land package. In keeping with its corporate strategy, Olympic has farmed out a portion of its interest in these wells. Olympic holds a 17% working interest in the initial wells of this program.

INSTRUCTIONS:

1. If the space provided for any answer is insufficient, additional sheets may be used. Each sheet must be cross-referenced to the relevant section of the report and signed by the person who signs the report.
2. In answer to question 3, provide a full description of the security, including any underlying securities into which the security is convertible or exchangeable and, if applicable, state the expiry date of the security.
3. In answer to question 8, compensation includes discounts, commissions or other fees or payments of a similar nature directly related to the distribution of the security but does not include payments for services incidental to the distribution of the security such as clerical, printing, legal or accounting services. If compensation is to be paid to the agent by way of a distribution of securities of the issuer under an exemption on a later date, the issuer may be required to file a separate BC Form 45-902F together with the applicable filing fee.
4. If the distribution of the security is made to a purchaser under section 128(a), (b), (c) or (h) of the *Rules*, or to a purchaser that is an individual under section 74(2)(4) of the *Act*, in respect of which this report is filed, the issuer must obtain from the purchaser, before an agreement of purchase and sale is entered into, an acknowledgment of the purchaser in the required form as required by section 135 of the *Rules* and retain the acknowledgment for a period of 6 years. The required form is BC Form 45-902FA(IP) for an individual purchaser and BC Form 45-902FA(NIP) for a non-individual purchaser.
5. Where an offering memorandum is required to be delivered in connection with a distribution of the security under section 74(2)(4) of the *Act*, or section 128(a), (b) or (c) of the *Rules*, or is delivered in connection with a distribution of the security under section 128(h) of the *Rules*, a copy of the offering memorandum must be filed with the Commission on or before the 10th day after the distribution of the security.
6. The report must be filed with the Commission on or before the 10th day after the distribution of the security.
7. File one originally signed report with the completed Fee Checklist and the required fee. In order to determine the fee payable, consult item 26 of section 22 of the *Securities Regulation*, R.B.C. Reg. 196/97. Cheques should be made payable to the "*British Columbia Securities Commission*".

The undersigned hereby certifies that the statements made in this report are true and correct.

Dated at Vancouver, British Columbia on this 24th day of June 2002.
