BENNETT Update

Oakville, Ontario – July 17, 2002 – This update is being released in order to inform shareholders of recent progress made by BENNETT on several fronts.

The three for two stock split has taken place, and shareholders should receive their additional shares shortly. Shareholders who have not informed their brokers should do so.

The Company has started buying back some of its stock under the normal course issuer bid, which expires in October 2002.

The Company expects that it will meet, or be close to achieving, its 2002 guidance estimate of Can \$0.93 earnings on a post share-split basis.

SALES

BENNETT has a current backlog of approximately one year of production or Can \$60 million. All the jobs in this backlog, and other substantial jobs that are being bid, have adequate budgets, and have been fully funded.

Shipments from Phase II of the Federal Creosote contract in New Jersey will commence within a week.

Recent discussions with the Canadian Department of National Defense have indicated that the only other qualified bidder for the Saglek project in Labrador has not been able to comply with all the contract requirements, and BENNETT should be awarded the contract shortly.

PERMITS

The permit for the new facility in Kirkland Lake, Ontario is on schedule for approval by the end of 2002. As reported in a recent article in the Globe & Mail newspaper, the majority of citizens in the area firmly back the project.

Permission has been received from the local community of Saint-Ambroise, Quebec to expand the storage at our Quebec plant. This will further improve our competitive position.

The Company will release its Quarter 2 results on July 30, 2002 and will follow with an investor conference call. Details to follow.

About Bennett Environmental Inc.:

Bennett Environmental is a North American leader in high temperature treatment services for the remediation of contaminated soil and has provided thermal solutions to contamination problems throughout Canada and the U.S. Bennett Environmental's proprietary Thermal Oxidizer technology provides for the safe, economical and permanent solution to contaminated soil.
