09:15 09 Sep RNS-REG-British Energy PLC <BGY.L> Government Discussions Update

RNS Number:9015A
British Energy PLC
09 September 2002

Receipt of Immediate Financial Support

British Energy ("BE") announces that it has today entered into a facility agreement with the UK Government for up to £410 million to provide working capital for BE's immediate requirements and to allow BE to stabilise its trading position in the UK and North America. These arrangements provide collateral, where appropriate, for BE's trading counterparties and will allow BE to continue to trade in the electricity markets in which it operates.

This agreement matures on 27th September 2002. It is expected that discussions regarding longer term restructuring will commence shortly. The Board has reasonable grounds for believing that these discussions will be successful but there can be no certainty that this will preserve value for investors. The Board anticipates that if these discussions are not successful, the company may be unable to meet its financial obligations as they fall due and therefore the company may have to take appropriate insolvency proceedings.

The facility agreement is cross-guaranteed by the principal group entities (excluding Eggborough Power (Holdings) Limited, Eggborough Power Limited and the AmerGen interests) and contains a requirement to provide security as required by the Government and where the provision of such security would not cause a material default under any contract.

British Energy has a common interest with the Government in maintaining safety and security of electricity supply.

5 September 2002

Discussions with Government
Statement Regarding Financial Position

British Energy ("BE") announces that it has initiated discussions with the UK Government with a view to seeking immediate financial support and to enable a longer term restructuring to take place.

The Government has informed BE that it is willing to enter into such discussions in which considerations of safety and security of supply will be paramount.

The Board has reasonable grounds for believing that these discussions will be successful but there can be no certainty that this will preserve value for investors. The Board anticipates that if these discussions are not successful, the company may be unable to meet its financial obligations as they fall due and therefore the company may have to take appropriate insolvency proceedings.

These discussions follow commercial negotiations with BNFL. BNFL yesterday delivered its formal proposals to BE and the terms offered by BNFL fell short of those which BE requires.

The Board is progressing the discussions for immediate financial support. However, the discussions over a longer term restructuring will be complex and are unlikely to be concluded in the near future. Any support from the Government will need to take into account both UK and EU regulations.

BE continues to operate its power stations in the UK and in North America to supply electricity and comply with all safety and other regulatory requirements.

Robin Jeffrey, Executive Chairman commented "Over the past several months we have worked hard to negotiate improved arrangements for waste management services and to lobby Government for a level playing field. It is now clear that there will be no prompt resolution to these issues. Having reviewed the longer term prospects for the business, the Board has concluded that we had no alternative other than to seek Government support. I will be working with my colleagues to secure the best outcome for everyone involved."

In addition, BE confirms that it is in the preliminary stages of exploring the possibility of a sale of its interest in Amergen Energy Company LLC.

rmances of most of British Energy's reactors both in the UK and North
re well on track, after allowing for the higher number of planned
n the current year.

ust 2002, the Company announced that, following the unplanned outages
s, the target for nuclear output in the UK had been reduced from 67.5
TWh (plus or minus 1 TWh).

load factor for Bruce Power for the year to date in 2002/2003 is due
t being on planned maintenance outage for most of this period. The
or the year to date in 2001 cover a shorter period from Financial Close

2001.

UTAGES

r

utory outage was completed at Hunterston B and another started at
ness B.
age was carried out on one reactor at Dungeness B for refuelling and
ne work on plant systems.
oad refuelling was carried out on both reactors at Heysham 2 and
y Point B and on one reactor each at Hunterston B and Torness.

nit at Eggborough remained on outage in connection with the
llation of flue lining as part of the FGD programme. Another unit was
age for planned maintenance work.

er

returned to service from its planned maintenance outage and is
ed to be at full power later this week.

OUTAGES

.

s - As previously reported, one unit, which has been shutdown since
y, remained on outage to replace a gas circulator and to investigate
use of failure and the second unit was shut down in mid August to
igate vibrations in one of its gas circulators and to carry out a
mme of inspection.

August 2002 15:50:34
SS1423A]

17:30 13 Aug REG-British Energy PLC <BGY.L> UK Nuclear Generation-Replcmt

RNS Number:9332Z
British Energy PLC
13 August 2002

The issuer advises that the following replaces the UK Nuclear Generation announcement released on 13 August 2002 at 16:15hrs under RNS: 9264Z.

In the penultimate paragraph, the issuer would like to clarify that it is now forecast that the generation from the BE nuclear power plants will be in the region of 63 plus or minus 1 TWh in the year 2002/3. This was previously reported as 63 + 1 TWh.

All other details remain unchanged. The full amended text appears below.

13th August 2002

BRITISH ENERGY PLC
OUTLOOK FOR UK NUCLEAR GENERATION

British Energy has reviewed its projected UK nuclear output for the current financial year. Currently 12 of the Company's 15 reactors are operating in line with plan. The position on the other three plants is;

a) As reported in the monthly production statements, Torness Reactor 2 has been shut down since mid-May. This was subsequent to vibration problems in one gas circulator, the replacement of which is currently underway. As outlined in the earlier announcement today, Torness Reactor 1 was taken out of service on 12th August to investigate vibrations in one of its gas circulators and a programme of inspection work has commenced. Although it is too early to conclude whether the problems experienced in unit 2 are similar to those in unit 1, as a matter of prudence we have included an allowance in our generation estimates to inspect all gas circulators in both units and to replace both of the defective circulators. The design of the Heysham 2 circulators is the same as those at Torness. Although there are no indications of unacceptable vibration on these units and they are currently both operating safely, again as a matter of prudence we have assumed a lost generation allowance for further investigation. The cost of the additional circulator work at Torness and Heysham is estimated to be up to £25m some of which may fall in 2003/04.

b) One unit at Dungeness B was shut down earlier this month for unplanned maintenance. Since the statutory 2-yearly planned maintenance programme was scheduled to start on 15th August, the start of this has now been brought forward to allow the repair work to be done in parallel with the other planned activities.

For the reasons outlined above, it is now forecast that the generation from the BE nuclear plants will be in the region of 63 plus or minus 1 TWh in the year 2002/03 compared with the originally planned generation of 67.5TWh. The cost of the lost generation will be partially offset by business interruption insurance. Our future generation plans are unchanged by these events.

There will be a teleconference for analysts and institutions hosted by Robin Jeffrey at 10.30am tomorrow, Wednesday, 14 August, details of which will be issued separately.
